## BRAHMA SUTRA

### Class 1

#### Introduction

Brahma sutra classes will be based on Adhi Sankaracharya's bashyam. We will pray for the successful completion of the course, which will take more than three years.

### Class 2

#### Human goal

Many things are common between animal and human being and human being basically an animal only. Hunger, growth, procreation, sleep etc. are common to both. The evolved intellect or the power of reasoning is the extra faculty because of human being is different from all the other animals. If you take thinking faculty from human being there will be no different from human being and animal. He is able to reason out about himself and he has clear-cut goal in his life. Animals have no planned life or any goal to achieve,.

Human beings are able to achieve for the set goal. He is a thinker with clear set of ideas whatever be the level of thinking. Some dedicate their life and study to achieve their goal. An ordinary human being is a casual thinker and serious thinker studies analyses and form set of conclusions.

Six topics are important which are connected with human thinking. He should know about himself; next he should know about the universe; third is he should know about Isvara; fourth topic is bandha why human beings suffer and they are in bondage. Bondage and samsara and sufferings fall into this category. Fifth is moksa or mukti or freedom from bondage. Sixth and final topic is the means by which a person goes from bondage to the liberation/moksa. Jivat, Isvara, banda, moksa and sadhanani are the six topics a serious thinker studies.

Such a thinker who forms such a philosophy is darsanika and the philosophy is called darsanam. Others to follow such persons. Darsanika is propagator of his philosophy. The founders of the darsanams are called acharyas. We have twelve famous philosophies. Six of them are called nastika darsanani and six are called astika darsanani. Nastika darsanams are those, which do not accept vada pramanam. Their philosophies are based on perception, inference and reasoning. Astika darsanams are those which accept Veda as valid source of knowledge.

#### Caravaka darsanam

First is called carvaka darsanam or materialism. The source of this philosophy is brahaspati himself the deva guru. The purpose of this philosophy is to mislead asuras. So that asuras will follow and they will get punished. His sishya is carvakah who popularised this philosophy. It does not accept Atma, Vedas dharma etc. Modern science is close to this philosophy. Consciousness is temporary product of matter. Enjoy life is his motto. Enjoy even by borrowing money from other. He does not believe in the return of the body. None has seen sookshma sariram, karana sariram, no belief in scriptures etc. He believes in perception only,

which is nice to hear. It is not discussed in Brahma sutra. Other 10 darsanas are discussed in Brahma sutra.

### **Jaina darsanas.**

This is given by 24 acharyas called tirthankara. Starting from rishab acharya ending with varthamana mahavira. Varthamana is also called jinah and janah means one who has conquered himself. He has conquered his sense organs, mind etc. His teachings we will discuss as and when the topic comes in Brahma sutra. There are two groups space is sacred dhikambara and svetamabars. Difference is in the form of external practices.

### **Bouddha darsanam**

The founder of this is buddhah. He did not teach any systematic philosophy but he gave some stray statement that approached him. It was not well-developed system initially. Thereafter many followed including the kings of those days. Three books have been brought out and they are three pitakams. The three pitakams sutra pitakam, adhi dharma pitakam and vinaya pitakam. Also are called adhi damma pitakam, sutra pitakam and vinaya pitakam.

They contain the teachings in sutra form. First deals with statement of master, the second one the philosophy and the third one the conduct of the followers of the system. Later scholars analysed and brought their own books. Then came four branches of Buddhism. One is soutrantika based on the sutra books called suddha pitakam. sutra based philosophy is called soutrantika. Second one is based on adhi dhamma pitakam. Vibasa commentary and hence it got the name of ibashika. Third one is called yogachara and this gives emphasis on yoga and achara. Both are called madhyamika Buddhism. They claim to follow the medium path and avoidance of all extreme. I will deal with the teachings later.

### **Six asthika darsanam.**

Samkya, vaiseshika, nyaya, purva mimamsa and uttara mimamsa are the six falling under this category. All believe in Vedas of the six darsanam the first four accept Veda pramana but gives importance to tarka pramanam. Between tarka and Veda they will take tarka as important. Otherwise they are called tarikika darsanam.

Purva mimamsaka and uttara mimamsaka gives importance to Veda and tarka is secondary. Purva mimaska is based on Veda purva bagha or karma kanda based one. The upanisadic portion is less important for the purva mimamsaka. Uttara mimamsaka gives important to the Veda anta portion. Veda purva is not thrown away but it plays a supporting role.

All of the darsanams are formed in sutra form by the presenters. Sutra means a brief statement containing the packed ideas. Uttara mimamsaka sutra is known as Brahma sutra or Vedanta sutrani. Also it is called sariraka sutrani popular among Sanskrit commentators.

Another name is badarayana sutrani of these we will discuss the Brahma sutra. Even sentence will be incomplete. We have to complete the sentence and thereafter understand the meaning. Many have written the commentary on the Brahma sutram. There is ambiguity or doubt regarding the meaning of the sutrams, which is too brief. Veda talks about dvaidam,

advaidam etc. There are different types of teachings. Brahma sutra has given birth more than ten types of interpretations.

Of these several interpretations, three of them are very popular. Nirvishesha advaidam revealed by Adhi Sankaracharya; visistadvaidam is based on ramanujacharya [sri bashyam] and the third one is based on the commentary by madhyvacharya [anu bashyam]. Our discussion will be based on Adhi Sankaracharya's bashyam. Before learning the bashyam we have set method for study of this bashyam. We will chant mantras and thereafter we will take up the study.

## BRAHMA SUTRA

### Class 3

Now I will give the meaning of the shanti padas of the ten upanisads we have changed to day. I will give you the essence of the shanti padas.

#### **Brief analysis of ten principal shanti padas**

First shanti pada is om shano mitra, which occurs in Taittiriya upanisad. The essence of this is that student asks for auspicious. He offers prostrations to hiranyagarbha who is the embodiment of all the devatas. Then he glorifies the hiranyagarbha as the very vayu tattvam. Hiranyagarbha is also seen as embodiment of all the virtues. Then there is a prayer of guru sishya raksanam that protect guru sishya.

Second shanti pata occurs in Taittiriya upanisad Brahmananda valli. First teacher prays for guru sishya raksanam for communication. A prayer is to put forward sufficient effort for communication. Teacher and sishya are to put forward sufficient efforts to study. Homework has to be done both by teacher and sishya. Good homework on both guru and sishya to make the study effective. Also there is a prayer for mutual relationship between guru and sishya. Compassion on the part of teacher and trust on the part of sishya will make the study effective. Such relations are valid for family relationship also.

Third prayer is taken from taittiriya upanisad siksa valli to develop medha saksi. First he asks for grahanam saksi to grasp the teaching. Secondly he asks for jnanam jivatma paramatma jnanam and thirdly he wants his sthoola sariram and sookshma sariram fit enough to pursue the study and fourthly he asks for continuous sravanam without any obstacles. Finally student asks for retaining what he has learnt from the guru.

Fourth mantra is also taken from Taittiriya upanisad siksa valli meant for Atma jnana siddhi. Here we quote the statement of great Brahma jnani known as trisanku rishi. This statement comes after gaining the knowledge. He says i am as great as Isvara and i have Isvara saksi. I enliven and invigorate the whole creation. He says that he has the glories of Isvara. Thirdly he says i have got greatest wealth in the world, which is Brahma jnanam.

Fourth mantra states that I am as great as lord i am as glorious as lord and i am wealthiest in the world. Student will own up with the statement after gaining Atma jnanam. Jivatma and paramatma have got karana karya sambandha. First we talk of aikyam and then we talk of sambandha. Aikyam is from the standpoint of Atma and sambandha is from the standpoint of jivatma. Atma dristya aikyam and anatma dristya sambandha. Atma is sathyam if you remove Atma anatma cannot exist independently.

Sixth shanti mantra occurs in keno upanisad. First he asks for sarira yogyatha. Both sthoola sariram and sookshma sariram seventeen organs must be healthy. Then he asks for shraddha and faith in Brahman until he understands Brahman. Brahman cannot be known through sense organs, mind and not available for transactions and initially he may think Brahman is nonexistent. Student must believe in nirgunam Brahman even if he does not understand in the beginning. Next he wants Isvara anugraha. Let me not negate Isvara and let not Isvara negate me. The he wants all virtue required for assimilation for jnanam.

Seventh mantra belongs to rg Veda occurring in Aitreryea upanisad. He asks for following blessings. He asks for harmony of thought and word. Let there not be split between thought and need. Secondly he asks for grahanam capacity to grasp the teachings. Even if don't go in for Veda, let Veda come to me. Student ask for daranam which means retention of whatever he heard and fourthly let the life be in keeping with the learning and understudying and guru sishya raksanam so that the yagna continue.

Eighth one is prayer to lord to gently lead or gently take the mind to auspicious Brahman or Atman or truth. Second is addressed to the mind praying it to lead to Brahman. Either way the essence is that we should gain Brahma jnanam.

Ninth mantra relates to atharvana Veda. He asks for auspiciousness. Second prayer is for sarira yogyatha.

Tenth shanti pada occurs in svetasvara upasana. Here student says that he surrenders to the lord and it lord's job to save him from samsara and give liberation. All responsibility is passed on to Isvara. Jnana yoga is preceded by saranagathi. The lord is glorified. The lord is the one who creates Brahmaji or hiranyagarbha before creation. Hiranyagarbha is samasti sookshma sariram. Isvara is Hiranyagarbha's father.

That Isvara alone sends Vedas to hiranyagarbha. Hiranyagarbha is the disciple of Isvara. He gets Vedas from Isvara alone. Brahmanji does not require systematic teachings. He grasps the whole thing through tapas or intuition as it were. It is mouna vakyanam. That Isvara's name Atma buddhi prakasam. He is the one who reveals Atma jnanam. Students ask Isvara to reveal Brahma jnanam to him as he had done to Brahmaji.

Next prayer is the one directed to all the rishi parampara. There is vamsa Brahmanam given in Brihadaranyaka upanisad giving the details of gurus who have perpetuated the teaching from the beginning to date. You cannot compare one from the other. There is prostration for all the gurus. I am identical with Brahman with the blessings of all the rishis. Then prayers are offered to Dakshinamurthi. More in the next class

## BRAHMA SUTRA

### Class 5

#### Adhi Sankaracharya's views on bashyams

Brahman or Isvara are most auspicious thing i the world. Everyone is auspicious due to Brahma sambanda only. Merely hearing or remembering Isvara gains constant flow of auspiciousness. Brahman is adhi kalyana rupam, the most auspicious one. It bestows all the wishes of the devotee. Hence Brahman is known as mangala swarupam.

Adhi Sankaracharya in his bashyam says that the credit goes to Isvara for writing the whole commentary of the upanisad. He admits that it is not his original commentary but repeated only what have been stated by his previous commentators.

Vedic interpretations should be based on grammar [pada sastra], vakya sastra or mimamsa sastra, which is exclusively designed for interpretation of Vedas; this deals with sentences. The meaning of sentences change depends upon various factors. So many factors are taken in to account what is stated in the Vedas more so when the author is not there to cross check the intention of Vedic authors.

The third is the pramana sastra the science of logical thinking or tarka sastra. Adhi Sankaracharya says that he would only re-present the commentary in his own ways. Finally the glory of two words is mention that is 'om' and 'atha'. They are glorious because Brahmaji uttered the words before creation. These two words did not come from the mouth but came from throat directly breaking open. The idea is that Brahmaji uttered these words. Having uttered these words before creation, Brahmaji created the world successfully. With this prayer verses are also over.

#### Overview of Brahma sutra

Now I will give three outlines of the Brahma sutra. Four chapters or four adhyayas are there. Each chapter is subdivided onto four sections known as padas. There are sixteen sections in Brahma sutra. Each section is subdivided into adhi karanam. 192 adhikaranams are there in Brahma sutra. Each section consists number of adhikaranam, which are no uniform. All these topics are taken from Vedanta or upanisads. They are in the form of statements in the upanisads. Each topic is elaborately discussed in the Brahma sutra. Some topic has got one sutra while some have more than one sutra. Totally we have 592 sutras in Brahma sutra.

In the four chapters four topics are discussed. The first chapter deals with samanvayah. So it is called samanvayadhyayah. It is a technical word occurring in mimamsaka sastra, which means consistency. Samanvaya as prove that Brahman is central theme of the upanisad is established here. This we will see later. Vyasacharya has to prove this because other darsanas do not accept this particularly samkya and purva mimamsakas. Samkya have got their own intention and hence he refuted samkya philosophy and purva mimamsaka philosophy. Hence he uses samanvaya prove this.

Second chapter deals with avirodhah. Here he establishes that Brahma vidya does not have any contradictions. Contradiction is a defect in the teaching and he shows that teaching is

defect free. Three types of contradiction he refutes the internal contradiction within Vedas itself; Vedic statement do not contradict one another; that is sruti virodhah; the second contradiction is with regard to smriti gita, maha bhārata etc. Finally, sruti yukti virodhah nasti means it is not logically contradictory or illogical. He takes all nastika darsanams also like nyaya vaiseshika etc. He establishes that Brahma vidya is free of logical contradictions. The second chapter is heavily logic based.

The third chapter deals with sadhana preparatory disciple required to gain Brahma vidya. Those directly connected and indirectly connected are pointed out here. Rituals indirectly help to purify the mind. In fact everything connected with religion is useful it is said.

The fourth chapter discusses the benefit or fruit of Brahma vidya which is moksha or liberation. Karma mukti and sadhyo mukti are discussed. These four topics are subdivided into 592 sutras. Based on these only names of the adhyayas are based.

We use three common words while discussing Brahma sutra. One is sutram, second is bashyam and third is adhikaranam. Sutram or any aphorism should be concise and should not be long; it should be clear and it should not be unambiguous; it should deal with the essentials alone. It should be pregnant with meaning; it should have many facets if possible;

Sutra should not have unnecessary glorification; no extra decoration should be there. Saving one letter from the sutra gives so much pleasure to the sutrakaras as if he has got a putra. It should be defect free. There should not be any grammatical error in its construction; it should not have any logical mistake. 'man are' going or fire is cold etc., and such usages should be avoided. It should be free from sabda and artha dosah. Then only it is called sutram.

The word sutram has got literal meaning also and it is a thread. The second meaning is applicable in the case of Brahma sutra. It strings the upanishadic ideas into a mala. The beads in the form of sutra give a good garland of flowers in the forms of sutras. Vyasacharya has made the garland, a Vedanta sastra garland.

### **Definition of bashyam**

What is the definition of bashyam? The commentary should be in the same order in which sutras are there. The commentator may introduce technical word but he should explain the word. Such commentary is called bashyam.

Now, we will see adhikaranam or the topic. Every thing consists of five factors. First is the subject matter visayah; upanishad is the subject matter; second factor is samsayah what is the doubt in that statement. If there is no doubt there is no need for enquiry; what is evident need not be enquired into. What are the doubts expressed compared to other philosophies?

Third factor is purva paksha. The views of the non-vedantism mean all other people. They give their own logic. Fourth are siddhantah or the Vedantic conclusions, which has to be established by refuting all the views. Also our conclusion free from doubt should be established. The fifth factor is sangathih the link between previous and present topic. Next I will like to go through the Adhi Sankaracharya's introduction to Brahma sutra, which is adhyasa bashyam. This I will take up in the next class.

## BRAHMA SUTRA

### Class 6

#### **All about anumanam – general principle**

Brahma sutra uses the method of anumana to bring out the teachings of the upasana. Anumanam is inference based on pratyaksa or perception. Without perception data, inference will be an imagination and it will not be valid. Scientist cannot know the age of moon and he therefore collects the data from the moon before he infers the age of moon etc. Collect data based on data for any inference to be valid.

For any inference to be valid, it should be based on four factors. Four factors are required for inference are one is paksa, the second is sadhyam, the third is hetu and the fourth dristandah. The example generally taken in sastra is inference of fire on the mountain by seeing the smoke. It is taken in technical form is *parvadhah agniman doomavatvad yata maha nate*. This we should remember because throughout Brahma sutra we will use this. In this *parvatah* mountain is said to be paksah. The second *agniman* the mountain has fire is sadhyam; *doomavatvad* it is smoky it is called hetu; *yata maha nate* as seen in the olden day kitchen. This is the example.

The mountain is said to be paksa because it is the locus of discussion. In this example we know the unperceived fire in the hill through the perception of smoke and fire. There is first the knowledge or apprehension of smoke in it and the knowledge of an invariable relation between smoke and fire.

There is, first the knowledge or apprehension of smoke as a mark in the hill. Secondly there is a recollection of the relation of invariable concomitance between smoke and fire as we have observed in the past.

Thirdly we have the resulting knowledge of the existence of the apperceived fire in the hill. Now, the inference the hill is the paksa [minor term] since is subject under consideration in the course of the inference reasoning. Fire is the sadhya [major term] as that is something, which we want to prove or establish in relation to the hill by means of this inference.

Smoke is the linga [middle term] as it is mark or sign, which indicates the presence of fire. It is called the hetu or sadhana i.e., the reason or ground of inference. Thus corresponding to the minor, major and middle terms of the syllogism, inference in Indian logic contains three terms namely paksa, sadhya and hetu.

The paksa is the subject with which we are concerned in any reference. Sadhya is the object, which we want to know in relation to the subject with which we are concerned in any inference. The sadhya is the object, which we want to know in relation to the paksa or the inferable character of the paksa. The hetu is the reason for our relating the sadhya to the paksa. It is the ground of our knowledge of the sadhya as related to the paksa.

In the order of the events which take place when a certain thinker is inferring, the first step inference is the apprehension of the hetu [smoke] in the paksa [hill] the second, recollection of the universal relation between hetu and sadhya [smoke and fire] and the last is the

cognition of the sadhya [fire] as related to the paksa [hill] but as a matter of formal statement or verbal expression, the step in inference is the predication of the sadhya with regards to the paksa e.g, the hill is fiery.

The second is the affirmation of the hetu as related to the paksa. e.g., wherever there is smoke there is fire as in the kitchen, thus in inference we must have at least three propositions, all of which are categorical and one must be affirmative and the others may be affirmative or negative.

The first proposition corresponds to the conclusion of the syllogism, the second to the minor premise and the third to the major premise. Thus inference in Indian logic may be said to be a syllogism consisting of three categorical propositions. But the order of the propositions is reversed in Indian logic in so far as it puts the conclusion of the syllogism first and its usual major premise last in the formal statement of inference.

Wherever there is fire there is smoke. You should not say it otherwise. In the body agni is there. We do not develop smoke. We don't see the smoke coming from the head. Remember it is figurative expression. Yatra yatra doomah tatra tatra agni. This knowledge is called vyapti knowledge. The knowledge of invariable coexistence of the fire along with fire is vyapti knowledge. This will have two factors.

Yatra yatra doomah is one factor and tatra tatra agni is the second factor. The yatra yatra doomah [smoke] is called vyaptam and tatra tatra agni is called vyapagam. Their coexistence is called vyapti. If you study vyapti vakyam *yatra yatra doomah and tatra tatra agniman* the anumana vakyam, dooma is vapyam and agni is vyapakam. Vyapyam of the vyapti vakyam, vyapyam becomes hetu in the anumana vakyam. Vyapakam of vyapti vakyam becomes sadhyam of anumana vakyam.

We can put vyapti vakyam in two ways. Now we represent as yatra yatra hetu tatra tatra sadhyam. Only if this is proved anumana vakyam is valid. Only if this valid the anumana vakyam is valid. Only if the vyapti vakyam is valid the anumana vakyam will be valid. How do validate the vyapti vakyam. Only means of validating the vyapti vakyam is perception. Study the kitchen or yaga sala etc. Thus I show few standard cases to validate vyapti vakyam. Yatra yatra doomaha tatra tatra agniman. Whenever vyapti vakyam is disproved anumanam is disproved. Even the scientists use this method.

In fact, when the scientist studies the rocks of the moon he collects observed data. The observed data helps him arriving at the conclusion. The inference is based on observed data. Now we collect data through observation and arrive at conclusion. The conclusion will be about that object from where data has been collected. Suppose I collect data from the moon, the conclusion will be about the moon only and not about other planet. We call it data and conclusion will deal with the same object alone. Hetu and sadhyam will belong to the same paksa. If I collect some data from my blood, the findings will be about me alone. Once this is understood we will derive an important inference.

Scientist collects data from observed world. All data we collect is from anatma alone. All observed deal with anatma. If scientific reasoning is used the entire scientific conclusion will be about anatma because science collects data from anatma and they can have conclusion with regard to anatma. Sadhyam should deal with that paksa about which we have data.

All scientific reasoning process is called loukika anumanam. Therefore all loukika anumanam will deal with anatma jnanam apra vidya alone. Therefore loukika anumanam has no access to Atma vidya. This is proved by loukika anumanam. It cannot touch Atma vidya. Don't hope to arrive Atma jnanam through scientific process of reasoning because it has no access. It is like hearing through the eyes. If i try to know Atma it is abuse of pramanam and it is born of delusion. This is established in Brahma sutra.

We will see later. Tarka cannot prove anything about Atma. If tarka is used for Atma vidya we can never come to any conclusion. What is nyaya used in sastram? This must be different from loukika anumanam. Here we deal with different field. Loukika anumanam is based on data collected. The difference is with regard to the source of data. In loukika anumanam the data is collected through observation or pratyaksam.

The crucial thing to be noted is that data is based on pratyaksam. In sastra we cannot collect data through observation and the data is collected from sastram. It is sastra based data collection. We base the data collected through sastram while discussing Brahma sutra. We accept as asthikas sastram as valid means of collecting data just as scientist accept observation valid means for collecting data. No scientist negates observation but scientist may question conclusion. The whole science is based on that observation is valid pramanam and scientist's aim is to arrive at conclusions based on the observation.

Similarly, once we come to sastram, our basic assumption is that all sastram is valid source for the collection of data. The conclusion based on the sastric data may be questioned but the sastric data cannot be questioned. Dvaidam is the conclusion based on sastra. Advaidam is based on sastric data. Vishistadvaidam is based on the sastric data. We cannot question the sastric statement itself because sastram is as valid as pratyaksa or observation is valid for the scientists. So much validity is given to sastra vakyams.

### **Anumanam in sastric studies – an overview**

In Brahma sutra we collect the data from sastram and based on the sastric data alone, we arrive at the conclusions and establish the truth. Here hetu will be based on sastram. The reason is based on sastram. The student must be an asthika for sastric anumanam. For nasthika or scientist Brahma sutra is not applicable. Vedanta will be useful only for asthika and not a nasthika.

The next question is does it mean that loukika anumanam is not there in Brahma sutra. Do we have a role for loukika anumanam perception based anumanam in Brahma sutra. It is there. But it has got a different application. Loukika anumanam used in Brahma sutra is not for establishing Vedanta, the reason being loukika anumanam deals with anatma while Vedanta deals with Atma.

The regular reasoning is not used to establish in Brahma sutra. I said that scientific reasoning has no access to Atma because data is collected on anatma. Vedantic teaching is based on sastric anumanam. Since loukika anumanam has no access to Atma it cannot prove Vedantic teaching and it is equally important loukika anumanam, cannot disprove Vedantic anumanam.

For proving a colour or disproving eyes alone is used and you cannot use ear to prove or disprove the colour. Proving as also disproving required access. Loukika anumanam cannot

prove Vedantic teaching and logic cannot disprove Vedanta. Some nastika philosophers use loukika anumana to disprove Vedanta. If nastika uses loukika anumana to disprove Vedanta, he used the anumana wrongly. I know that there is some fallacy in his inference. We use logic not to prove Vedanta is logical, but to prove Vedanta is not illogical. It is one use of loukika anumana for our purpose. More in the next class.

## BRAHMA SUTRA

### Class 7

#### **Anumanam in sastric studies contd.**

The difference between loukika anumanam and sastriya anumanam there are common and uncommon features. Both are data based and data collected from other pramanam. Both are dependent on some data. Both of them do not question the validity of the data. For example scientist inference is based on perceptual data and he takes the sensory perception is valid and he does not question the data. A scientist can question the conclusion based on the data. In scriptural inference we don't question sastric data. Here also the conclusions based on the data are questioned.

Loukika anumanam is based on perception data and it deals with anatma. Whereas aloukika or sastric anumanam is based on scriptures and it deals with Atma. Scriptures especially Vedanta deals with Atma alone. It has functions in the fields of Atma. One has anatma as its field and the other Atma as its field. It is like eyes and ears. Both are pramanams all right but in different fields.

We arrive at some important conclusions. Loukika anumanam can never prove or disprove Atma gained through sastriya anumanam. It has no judging capacity either to disprove or prove Atma vidya. Eyes cannot question the information regarding the sound nor eyes can disprove the information gained through the ears. Extending this we say loukika anumanam cannot prove or disprove Vedantic knowledge. Here in Brahma sutra we deal with Atma jnanam and loukika anumanam has no role to play. This is called sruti sammada tarkah. That is what Adhi Sankaracharya says in sadhana panchakam in Vedana if you use loukika anumanam it is dry logic or wrong or misplaced logic.

Is there any utility for loukika anumanam in Brahma sutra discussion? Do we use loukika anumanam if you ask; loukika anumanam is used in Brahma sutra rarely. In this context loukika anumanam cannot be used for proving and disproving Vedanta. Some philosophers use loukika anumanam to disprove Vedanta and to say it illogical. To prove loukika anumanam is falsely proved we use loukika anumanam to prove the fallacy of loukika anumanam.

In this context, we say that your anumanam is wrong. Loukika anumanam is not used to disprove Vedanta anumanam is logical. Vedanta is beyond the field of logic and loukika anumanam. You cannot say that Vedanta is logical or illogical for it is supra logical. Don't use loukika logic to prove or disprove the Vedanta. This is done very efficiently in the second chapter. The entire discussion in the first chapter of Brahma sutra is based on sastric anumanam. In the second chapter we use loukika anumanam to disprove the loukika anumanam put forward by nasthika philosophers.

Certain nasthika philosophers they do not have sastriya anumanam because they don't accept sastram. They know only loukika anumanam. Based on that they try to arrive at the truth of Atma swarupam or the truth of the world. We want to establish that using loukika anumanam can never arrive at the truth. So we use loukika to disprove their conclusions. This we do to dismiss Buddhist and Jaina anumanams. I disprove their philosophies. Loukika anumanam

has no role to play in the field of Vedanta. Another logician who is more intelligent than the former can disprove one logician. He may say that I am the greatest.

Tarka can give functional information with which we can conduct vyavahara. Scientists have no courage to say this is the fact but they say this is my observation. Don't use logic or science to find the truth and truth is not accessible to the loukika anumana. In the creation there are many things, which are above logic and science. Every scientist should be humble to accept that there are many things which above science. He should not apply logic in the Vedantic field.

By using logic one has crossed the ocean of samsaya. By using perpetual data one confused becomes confounded. Vyasa dismisses all four types of Buddhism, Jaina theory etc. Our conclusions are based on sastra. Now we will go to the introduction given by Adhi Sankaracharya to Brahma sutra, which is called adhyasa bashyam.

### **Adhyasa Bashyam of Adhi Sankaracharya**

Adhyasa means an error or mistake. In this bashyam Adhi Sankaracharya establishes that the whole samsara is because of error or mistake. This is very important because once Adhi Sankaracharya proves that samsara is because of error he can say samsara nivritti is adhyasa nivritti. Once error vanishes, the error caused problems is gone. Now the question is at all we have the error or adhyasa. Any error is because of ignorance ajnanam. Ajnanam causes adhyasa and adhyasa causes samsara. This is the essence of adhyasa bashyam.

If samsara is to go adhyasa should go and if adhyasa should go jnanam should come. Therefore, it is jnanena eva moksah. Karmana na moksah, baktiya na moksah, upasana na moksah. You may do anything you cannot gain moksha. They prepare you to gain jnanam only and it will not take you to moksha. Ignorance based samsara will go only through knowledge alone. Therefore the Brahma sutra starts with 'atha tho Brahma jijnasa [now therefore desire to know Brahman].

For conveying this topic of adhyasa, we take the well known example of the rope and snake aniscita yatha rajjurandhakare vikalpita sarpa dharadibhir bhavais tadvad Atma vikalpita that says as the rope whose real nature when not known is imagined in the dark to be a snake, a water-line, etc., so also the Atman is imagined in various ways.

When there is a rope is in front of you there is a mistake of snake. Snake perception of rope is called an error. The panca bhutas are mistakes on Brahman so also snake on the rope. How the error takes place we will see now.

The error takes place only when the rope is not in complete darkness with partial light. So ignorance is bliss. In total knowledge there is no error. In total ignorance there is no error. When total ignorance or when total darkness prevail, we don't see anything; but where is total light and we are wise with knowledge we see things properly. Ignorance is bliss to a sleeper. Knowledge is bliss to the wise man.

Now the problem comes when there is partial light and partial darkness. You have seen the picture before. Snake picture is in the mind. Now in the twilight time when there is partial knowledge, we don't see things clearly. The error occurs.

What is that thing you dont know. It is samanya knowledge. Partial knowledge is that part of the snake that there is snake; that part of the rope is called samanya amsa. That 'thingness' is rope. This general feature is not covered. There is something real and that some thing is called sathya amsa.

Samanya amsa is general existence; anavruta amsa is uncovered part; and sathya amsa is the real part. Because of the partial light the sathya amsa is covered and samanya amsa is evident and hence the mistake takes place. Covered amsa is the specific feature. Ropeness, which is visesa amsa, is covered due to partial light. It is covered because of partial, light and it is avruta amsa.

Rope is a fact; of the total fact one part is covered and another part is uncovered. There is a part that is not covered. Rope is covered. There is part, which is samanya amsa. Rope is avruta amsa or visesa amsa. When visesa amsa is covered, I imagine things. Where visesa amsa is covered, I replace it with another visesa amsa. Ropeness visesa amsa is covered and I put in its place the snake visesa amsa and snakesness is replaces visesa amsa. We are not replacing samanya amsa. There is as it is.

Then we add another visesa amsa, the snake that is mithya or avrutam. It is unreal. When you say there is a snake, there are two parts samanya amsa expressed by 'there is' and one visesa amsa the snake, which is mithya visesa amsa. In every error, there are sathya samanya amsa and mithya visesa amsa.

In the whole discussion, we should take samanya means general and visesa means particular amsa. I say the unreal particular feature, because the real particular feature is covered due to bad light or ignorance. That is why, when I gain the knowledge, I see the error and when the error is removed I replace the statement.

Now, i say there is a rope. The correction is in visesa amsa and not in the samanya amsa because samanya is sathyam. Instead of saying snake, I say it is rope when the correction takes place. The fear caused by snake is gone one I know what it is whether it is rope or snake. In the same place, a person says I am a samsari, Adhi Sankaracharya says that there is samanya amsa and visesa amsa; I am samanya amsa 'chit', the consciousness being; it is anavruta amsa and also sathya amsaa; 'I am' is real, there is no covering; it is self-evident and ever-evident and jnana swarupah. There is visesa amsa that reveals that I am a samsari. Samsari is a visesa amsa, which is unreal like our snake.

This unreal visesa amsa has come because of the covering of the real visesa amsa. Unreal visesa amsa has come because of the covering of the real visesa amsa replaced by unreal visesa amsa. Samanya amsa remains in tack. Samanya visesa amsa is ananda amsa and anantatva amsa or purnatva amsa or Brahmatva amsa or asamsaritam amsa; when the visesa amsa is covered I become apurna, I become a samsari.

Aham samsari is an error that is the cause of the entire problem. You need not change the samanya amsa and you have to remove the visesa amsa of samsaritam by gaining the right knowledge to know the real truth. Guru is having *tat tvam asi* button of the upadesa torch light and then poornatva amsa becomes evident.

Aham Brahma asmi jnanam comes and it eliminates the visesa amsa or samsara amsa goes away. Aham mukta knowledge comes and that is the aim of prasthanatrayam. This error can

be defined differently from different angle. This science is called epistemology. This is the study of knowledge and error. Books and books are written on error. Adhi Sankaracharya writes a bashyam on error. There are erroneous opinions about error. It is called kyativada. I will give you the condensed form of error

Mistaking the rope is an error. The same error can be defined from the standpoint of snake. Error is superimposition of snake or non-existent snake is superimposed. It is called adhyaropah or adhyasah.

First it is anyata grahanam from the standpoint of rope. From the standpoint of snake it is superimposition or adhyasa. The third definition is a combination of a real rope and an unreal snake. When you say there is a snake, there is refers to the rope, that is samanya amsam; the visesa amsa is unreal in the form of snake. It is mixing up of sathyam and asathyam, sathya or mithya. More in the next class.

**BRAHMA SUTRA**

**Class 8**

**Anumanam in sastric studies contd.**

Adhi Sankaracharya introduces Brahma sutra discussions through adhyasa bashyam. The purpose is to show that samsara is based on the Self misjudgement and we see that the wrong conclusion is the cause of samsara and its problems. If the error is the cause of samsara, you have to remove it through knowledge. Self-error is corrected by self-knowledge. This is the aim of Adhi Sankaracharya in writing the bashyam. In the rope snake example, rope is erred because of partial knowledge. First the error is mistaken rope from the standpoint of rope; you miss the right and take the wrong is called mistake.

When you look at error from the snake point of view and it is superimposition of snake on rope. The first one is anyatha grahanam and snake one is superimposition or adhyasa. Third way of looking at is the rope is real snake is unreal and the error is mixing up of the real rope and the unreal snake.

The mixing up these two you creates a third entity, which is a singular entity where there is a real part as also unreal part. Error is mixing up of real and unreal. sathanruta mithnikaranam. I use this word because Adhi Sankaracharya has used that expression.

This person who commits a mistake makes a statement that there is a snake. He does not know there are two entities. As for as the mistaker is concerned, he is not aware that there are two things. In his cognition there is one entity only but on an analysis we find that there is the real as also the unreal part. This he takes it as one, which is a mixture of, real and unreal. There is the sathya amsa, which belongs to the rope. The existence part is sathyam. When we say the snake and the 'snake part' of the rope as seen by us is mithya.

The snake is frightening is anruta amsa which belongs to snake which is false. It is a long snake and it is sathya amsa. Length is sathya amsa; sanke is anruta amsa; frightening is anruta amsa. It is curved one and ti is sathya amsa because it belongs to the rope that is curved one. Some are sathya amsa and some are anruta amsa but the person who sees or mistakes does not know this.

If a person says I am so and so. He takes himself as unitary entity. There are two amsams in his statement sathya and anruta amsa. When he says I am conscious being. Conscious is sathya amsa. When he says that he is person, it is anruta amsa. I want to slim I am fat etc., are anruta amsa.

Jiva is neither pure Atma nor pure anatma sathya and anruta amsa and this 'sat'hanruta amsa strives for liberation. This sathanruta amsa is adhyasa. Mixing up of rope and snake is sathanruta mithunikanam. Sookshma sariram knot; sthoola sariram knot and karana sariram knot and disentangle and you gain moksa. This is adhyasa discussion in general.

This discussion of Adhi Sankaracharya is classified into six topics.

1. Adhyasa sankha; objection to the theory or idea of error raised by other systems of philosophy; answering the objection
2. Adhyasa sankha sampadhanam negating the objection;
3. Adhyasa laksanam definition of error;
4. Adhyasa sambhavana the possibility of error;
5. Adhyasa pramanam the proof for adhyasa; the pramanam and finally
6. Adhyasa upa samhara the conclusion of adhyasa topic.

For the sake of convenience i will rearrange the topics slightly. I will take the third topic first.

Adhi Sankaracharya gives two definitions to adhyasa directly and the third one is indirectly available. One definition is parastra purva drista ava basah adhyasah. It is perception of an experienced object on a wrong locus. One more word he adds smriti rupah. If you take rope snake example one perceives the snake already experienced before. I cannot superimpose a snake if i have no knowledge of snake. Here snake is an experienced snake. I perceive experienced snake on a wrong locus, which is the rope. It is called error here

The second definition is simpler and it is atasmin tad buddhih. Perception of an object is seen on a wrong locus. Here object is snake and it is seen on a rope, which is on wrong place as in the case of perception of silver on a shell.

Third indirect definition is sathya anruta mithunikanam mixing up of sathyam and anrutam the real and unreal. When I say I am the body. Mistake is seeing the body on a wrong locus. Atma is not the body but I see the body therefore it is an error. I the immortal is seen as mortal is an error. I the 'All Pervading' is seen as limited. This is adhyasa laksanam.

Now we will adhyasa sankha. This is raised by all other systems of philosophies. All bounce and say adhyasa introduction is proper. Atma anatma adhyasa they say is impossible. Rope snake adhyasa is possible I can accept but I cannot accept Atma anatma mixing or adhyasa. This is purva paksa's argument. He gives argument to establish his view

He says any superimposition like rope snake requires four conditions. If those conditions are fulfilled there will be this adhyasa. If the conditions are not fulfilled adhyasa will not take place. In the case of Atma anatma adhyasa all the four conditions are not fulfilled hence there is mistake.

Take rope snake example. Firstly rope is pratyaksa visaya, an object perceived in front. Pratyaksa visayatvam. Rope has to be here and also it should be within the range of perception. Secondly, that the rope should not be completely known and one should be ignorant of the fact that it is a rope. Ajnatatvam is the second condition; third condition is that sadrisyam.

There should be a similarity between what is superimposed and what is in front. I mistake a rope similar to the rope. I don't mistake a rope for a cucumber. There is no similarity. A shell

is mistaken as silver because shell and silver are similar. Shell shines and silver too shines. There is shell silver confusion. Sadrisyam similarity is the fourth condition.

Fourthly false snake is superimposed because I have experienced the pratyaksa visayatvam. In the case of Atma is it an object perceived in front to commit a mistake. Atma is aprathyaksa or avishayah. Pratyaksa visayatvam condition is not fulfilled. Atma is aprathyaksam. Pratyaksa visayatvam is not there.

Ajnatatvam ignorance with regards to rope is there. In the case of Atma you accept Atma is swayam prakasah nithya chaitanya swarupah. It is self-evident and ever evident. How can there be mistake with regard to self-evident Atma. How can there be mistake on swayam prakasa Atma. So there is superimposition. Then sadrisyam means similarity. Rope is not seen as a brinjal.

Between Atma and anatma tell me what similarity is there. In fact they are diagonally opposite. One is Atma and another is anatma. Atma is subject anatma is object Atma is chetanam and anatma is jadam; Atma is niravayanam and anatma is saguanm. They are diagonally opposite like light and darkness. Fourth condition is you say that anatma is unreal. Atma is real.

Satya anruta mithuniharannm. sathya mithya is mixed up. In the rope snake, unreal snake is possible. In the case of Atma anatma, the unreal anatma should be based on the experience of real unatma. In the case of unreal silver is possible because I have experienced real silver. Unreal dream is possible because I have experience real waking experience. Unreal snake is possible because I have experienced the real snake.

Unreal anatma you can talk about only when you experience real Atma. You say Atma is real and there is no real anatma at all. There is no vasana in this regard. So samskara the fourth condition is not there. Four conditions are not there and hence Atma anatma adhyasa is impossible. When you cannot adhyasa how you base all the teachings on the adhyasa. This is the first topic and it is called adhyasa sankha.

Third topic is adhyasa sankha sampadhanam and the fourth is adhyasa sambhavana. These two topics are very similar. Answering and showing the possibility are close topics. The third and fourth topic we will discuss. In this Adhi Sankaracharya answer the objection with regard to each condition. It is mistaken should be pratyaksa visaya objection perceived in front. Our answer is that if the condition is not exactly the same, we have to modify the first condition.

For a mistake to take place the object should be evident and it should be known object. Unknown object will not be mistaken. It need not be necessarily object in front. The condition is that it should be known object.

As regards Atma is concerned Atma is evident enough to commit the mistake. The first condition is that it should be evident. Atma should be evident as object or subject.

First condition is prakasamanatvam. It means it should be evident. First condition is fulfilled in both the cases. Therefore error is possible. Second condition is ajnatatvam. Rope is not known as rope. It is partially unknown. It is not fully known. Partial ignorance is the second condition. In the case of rope, it is partially known due to bad light. In the case of Atma it is partially known and partially unknown. The condition is fulfilled. Atma is partially known

aham asmi. I indicate the chit amsa and am indicate the 'sat' object but it is not fully known aham anandah asmi.

You see the vyavahara and they say I am and then they add the bio data, which is not real. Every jiva says *aham pariccinnah asmi* and there is self-ignorance. If it is not there, upanisad need not teach self-knowledge. In Chandogya upanisad there is a statement knower of self crosses over sorrow. Samsari don't have the self-knowledge. They instead have self-ignorance. This is the second condition of partial knowledge and partial ignorance.

Third condition similarity should be there between the rope and superimposed object the snake. For that our answer is similarity is the general condition but there are exceptions to the general condition. Isvara the lord both is intelligent and material cause. Generally both the causes are different.

But there is exception as in the case of spider. Sadrisyam is also a general condition but there is exception and adhyasa is possible for adhyasa. Atma anatma adhyasa comes under exception. This we will see in the next class.

**BRAHMA SUTRA**

**Class 9**

**Adhyasa bashyam of Adhi Sankaracharya contd**

Adhyasa bashyam is classified under six categories.

1. Adhyasa sankha; objection to the theory or idea of error raised by other systems of philosophy; answering the objection
2. Adhyasa sankha sampadhanam negating the objection;
3. Adhyasa laksanam definition of error;
4. Adhyasa sambhavana the possibility of error;
5. Adhyasa pramanam the proof for adhyasa; the pramanam and finally
6. Adhyasa upa samhara the conclusion of adhyasa topic.

We have discussed adhyasa laksanam, adhyasa sankha in the last class. We have taken up third and fourth topic together i.e., here we have said all that under the conditions such as pratyaksa visayatvam Atma available for adhyasa to take place; we have Atma that need not be prathyakswa as Atma is neither evident nor knowable through sense organs nor self evident as it is prakasamanatvam, it is an ideal locus to commit mistake.

Second condition is also fulfilled that even though Atma is self-evident it is only partially evident. I am conscious is evident and Brahmatva is not evident. 'sat' and chit amsa is evident but ananda amsa is not evident. Hence second condition for possible error is fulfilled.

The similarity between the shell and silver is mixed up and what similarity between Atma and anatma and for that we said that sadrisyam or similarity is a general condition but it is compulsory condition. Because we do have cases where error takes place without any similarity. Adhi Sankaracharya gives the example of blue sky. Sky is nothing but akasa. Blue sky is an error. Akasa is rupa rahitaha. When we use the expression we superimpose the blueness upon the sky. The sky seems to be a vessel turned upward.

This concavity and neelatvam blueness and also space pollution we talk about they are all falsely superimposed and when such an error takes place what kind similarity we can talk about between akasa and the blueness etc. for space what comparison is there. Space is like space. Ocean is like ocean there is no comparison. Akasa is not similar to anyone and with regard to akasa no sadrisyam is possible with anyone. Still adhyasa takes place. Third condition is not compulsory for possible error.

Fourth condition is samskarah. You said Atma anatma is mixing up of real Atma and unreal anatma. In the case of rope snake example I have already experienced real snake and because of that vasana I superimpose false snake. False snake is possible because of snake vasana. In

the case of Atma we have not experienced Atma and hence superimposition of anatma is not possible.

How can I have samskara and how can there be false anatma. False snake is possible and false anatma is not possible. We say samskara is required. Accepted. And samskara or vasana comes from the previous experience. It is the previous experience of snake. You say previous experience of real snake is required but it need not be a real snake. I can have previous experience of false snake and it can create an impression and it can produce another false snake. I experience a snake in a snake movie. Movie snake is not a real snake. I experienced a false snake in a movie and I do remember false snake. How does sarpa adhyasa come and it is because of purva anubhava and it is false snake experience.

Adhyasa is possible because of previous unreal snake. So in the case of anatma also it is possible. It comes because of previous anatma adhyasa and how did anatma adhyasa come and it is anadhi adhyasa. We never talk about the beginning of adhyasa. It is beginningless. It is because of samskara born out of previous adhyasa and it is born out of previous adhyasa and so it goes on.

Fourth condition is that samskara is gained by previous anatma anubhava. The real anatma is not there and unreal anatma is there from very the beginning.

Since all the conditions are fulfilled Atma anatma is possible. This is the first answer to the purva paksi. It is only a temporary answer. Then we have the second answer, which is the real answer. This we should know fully.

First we say adhyasa, which is Atma anatma about which we talk about, is based on the Veda pramanam. Rope snake example is given not for proving adhyasa. Adhyasa is derived from Veda pramanam. Rope snake example is given to show the secondary idea of adhyasa. Therefore one should not focus too much rope snake example because it is not to prove adhyasa. Proof is there in Vedanta. Many philosophers attach too much importance on the rope snake example and cross-examine the example without knowing that Atma anatma that we talk about is based on the Veda pramanam.

We say don't focus too much on that and even when rope snake example is dismissed adhyasa will be valid because it has the sruti pramanam.

Second point is that this adhyasa should not be questioned because purva paksi themselves have accepted adhyasa in their system which they are not aware of. Purva paksi means all the asthika purva paksi. Atma anatma is there. They all talk about an Atma and they accept it based on the Veda pramanam that Atma is nityah. They accept Veda pramanam; they accept karma kanda; they accept surviving the death and also the fact of *punarabi jananam punarabi maranam*. All believe in continuity of Atma.

All the philosophers say I the Atma is immortal based on Veda pramanam. Even though it is a fact accepted by purva paksi and even though it is a fact we say I am male I am husband I am a father. When a person says I am a human being what is the meaning of the word I. whether the 'I' belongs to the 'Atma' or the 'body' is the question.

Certainly it refers to the body only for Atma is not a father, not a mother, and not a human etc. According to yoga samkya and other systems of philosophies. I am a human being is

itself an error. Similarly I am mortal also is an error. It is dehatma buddhi error. It is an error accepted by all asthika systems. It is called sookshma sarira adhyasa. I don't talk about the nasthika system now. This I will discuss in the second chapter.

They have to say we accept sookshma sariram adhyasa. But they don't accept it as error and then they will become carvakas. Dehatma will become caravaka. To escape from carvaka philosophy they have to say that dehatma buddhi is an adhyasa. Purva pakshi already accepts adhyasa. Adhi Sankaracharya says not to harp on the rope snake example because adhyasa is based on the Veda pramanam.

Third point is that purva paksa should not question Atma anatma adhyasa because purva paksa already has got Atma sthoola sarira adhyasa. You should not ask for explanation. If you ask me questions I will ask for sthoola sarira adhyasa what conditions are fulfilled. Here adhyasa is sthoola sariram is superimposed on Atma even though Atma is not pratyaksa visaya. How do you accept sthoola sarira adhyasa.

Secondly when you talk about sthoola sariram adhyasa what similarity is there between Atma and sthoola sariram. All say Atma is all pervading and it is formless. But sthoola sariram is limited and it is formed and it has parts etc. Then accept adhyasa based on sruti pramanam that Atma is not the body for Atma is nithyam and body is anithyam. From anubhava we know that the body is anithyam. Still adhyasa takes place based on sruti pramanam. Therefore Atma anatma adhyasa based on sruti pramanam is acceptable to all of us. Don't bring loukika condition when we talk of Atma anatma adhyasa because it is based on sruti accepted by all.

Atma anatma is acceptable to you and in the same way rope snake adhyasa also cannot be questioned because that adhyasa is experienced by all of us. Anubhava based rope snake adhyasa also you cannot question. How it takes place different philosopher give different explanation. It is called kyadivadah. We say it is anirvacaniya kyati. Adhi Sankaracharya says whatever be the explanation you accept the error and you cannot question the adhyasa because it is based anubhava. Atma anatma adhyasa you accept and why you ask question. Therefore adhyasa is very much possible.

Then where is the problem? The problem is only in the extent of adhyasa. To what extent error has taken place. There is no problem regarding the existence. Extent of adhyasa is the problem faced by us. In this context different philosophers disagree.

Nyaya philosopher says mortality is superimposed is not a fact. Aham nithyah is correct. I am karta and I am bogta are fact. He accepts adhyasa partially, he says I am anithyah is adhyasah but I am karta and I am bogta he says are not acceptable as it is adhyasa to the nyaya philosophers.

Samkya philosopher says that aham anithyah is an error. I am karta is also an error. Therefore, he says anityatvam is adhyastam and kartritva adhyastam is an error. Atma they say is jnanam.

If you ask advaidins, they says that anityatvam, kartritvam and bogritvam are anityatvam. Our quarrel is not with regard to the presence of adhyasa but it is with regard to the extent of adhyasa. Therefore adhyasa is very much possible. With this the third and fourth topics i.e., adhyasa laksanam definition of error and the adhyasa sambhavana, the possibility of the error are over.

Now we will go to the fifth topic of adhyasa pramanam. What is the proof for adhyasa. I have already indicated that adhyasa is based on the sruti pramana, which the purva paksi also has accepted. Then, why cannot I quote sruti for basing adhyasa? The whole thing is based on arthapatti as also anumana pramanam. One is postulate and the other is inference. It is sastriya anumanam. Loukika anumanam will work only on anatma prapancha. In the case of sastra we have to take only sastriya anumanam.

Arthapatti means an idea postulated to explain a proven fact. It is postulate. For example I get up in the morning after sound sleep and I see plenty of water all over stree and I postulate that last night it must have rained. Night rain is a postulate. I had directly experienced downpour and then I don't require arthapatti for it is pratyaksa pramanam. Because of my being sleep, morning flooding is a fact and I had seen with my own eyes. Hence the question is whether it rained or not.

I cannot explain the fact without presuming the night rain. I cannot explain the flooded roads. Late rain is a postulate to explain a proven fact proven through pratyaksam next morning. On the basis of that I want to prove kartritvam, bokrtitvam etc., are errors. I am a bogta is error. I am karta bogta feeling in itself is adhyasa.

I go to sruti pramanam, which tells me a particular fact. In support of this I quote Kathopanisad sloka 1.2.19, which reads as *hanta cen manyate hantum, hatas-cen-manyate hatam; ubhau tau na vijanito, nayam hanti na hanyate*. The meaning of the mantra is if the slayer thinks 'I slay' and if the slain thinks 'I am slain' then both of them do not know well. This does not nor is. This claim. I quote Veda, which is superior pramanam. It says Atma is akarta and abokta. Purva paksi being an asthika, he has to accept the sastriya pramanam.

The killing refers not to Atma again in 5<sup>th</sup> chapter of Gita it is said Atma does not take punyam and papam if Atma is karta and bogta it has to undergo change for experience requires change. Atma is nirvikarah and it cannot be karta and bogta. Then I postulate that I am karta is error. Intelligent people do not wave means what unintelligent one wavers and it says Arjuna is ajnani. This is quoted from Gita. So I take aham karta bokta is an error. More in the next class.

**BRAHMA SUTRA**

Class 10

**Adhyasa bashyam of Adhi Sankaracharya contd**

We have seen adhyasa laksana, adhyasa sankha, adhyasa sankha samadanam, adhyasa sambavana. Having covered the four topics we have come to adhyasa pramanam the proof for adhyasa. It is based on sruti. It is twofold. One is arthapatti pramanam and the other is anumanam pramanam.

Arthapatti means postulation of an idea to establish a fact. Implication or presumption as an independent means of valid knowledge is arthapatti. Implication or presumption is the assumption without which the perception of a thing cannot be explained. The fact can be explained by postulating an idea, which becomes valid knowledge. I gave you the example that the road being flooded in the morning. Therefore we do not have any doubt of the flooded road. It is a fact. Here I postulate an idea that there was rain in the night because I had the experience it rained during my deep sleep. If I had experienced the rain in jagrat there is no need of postulation because I would have experienced the rain and it would have become a pratyakasa anubhava.

Even though it is postulate and it is not directly experienced by me it is a fact because it is based another pratyakasa experience. Knowledge gained by that is arthapatti prama. Night rain is known through arthapatti pramanam. Here we find that the night rain is postulated on pratyakasa anubhava.

Therefore this is pratyakasa based arthapatti pramanam. Whereas, when you postulate something to explain the scriptures then it is postulate based on the sruti and such an experience is called srutarthapatti pramanam. Adhi Sankaracharya points out that it is idea postulated to experience a sruti vakyam. It is not directly said in sruti.

At the same time it is not Adhi Sankaracharya projection or imagination and adhyasa is valid knowledge for it is based on sruti pramanam. How do we do that? We, alone do not take sruti pramanam but other philosophers also do it.

All the other people say that I am mortal. This notion is an error. Samkya naiyayika accept. They come to the conclusion that sruti says I am immortal. I the Atma is immortal and I go from body to body I take one body and I take to another body shows that I am immortal. I am mortal notion then must be an error. That I am mortal is an error a postulate based on the fact given by the sruti that I am immortal. Atma anitvatva adhyasa is based sruti vakyam Atma is nityah.

Therefore it is sruti arthapatti pramanam alone. If the other people accept mortality is error based on sruti we arrive some more conditions based on postulates. Others say Atma is karta. Atma is karta nyaya philosopher says. Adhi Sankaracharya says Atma is karta is error adhyasa. Adhi Sankaracharya says because sruti clearly points out that Atma is akarta.

If Atma is akarta is a fact Atma is karta must be adhyasa based on sruti arthapatti pramanam. When you go to samkya yoga philosophy they are little bit advanced and they say Atma is

karta is adhyasa. Kartritvam is adhyastam they accept. They say Atma is bogta is a fact. Now advaidam says that it is postulated on the basis of the fact sruti says Atma is abokta akarta. If Atma is abokta based on sruti, then Atma is bogta must be an error and therefore it is adhyasa.

Anityatvam adyastam, kartritvam is adyastam, bogrtitvam adyastam all based on sruti pramanam. Where do you find the sruti vakyam that Atma is akarta and abokta. We have got innumerable statements, which I said, in the last class. Atma does not kill, killing indicating all action. Therefore, Atma is not a killer and is not an actor. Similarly Atma is not killed means it is not an object of killing action which means it is not an object of any action and hence abokta.

Refer also to *Gita 5.14 na katrtrivam na karmani lokasya srjati prabhuh na karmaphalasyamyogam svabhavas tu pravartate* the sovereign self does not create for the people agency, nor does he act. Nor does he connect works with their fruits. It is nature that works out these.

There is another better sloka is there in Gita 5.13 *sarva karmani manasa samnyasya ste sukham vasi navadvare pure dehi nai va kurvan na karayan* the embodied soul who has controlled nature having renounced all actions by the mind inwardly dwell at ease in the city of the nine gates neither working nor causing work to be done. Atma does not do anything. Atma does not instigate anyone to do anything. Atma means I, I am never a doer and 'I am a doer' concept itself is an error. Therefore anityatvgam kartritvam bogrittam are superimposed as per Vedanta.

Similarly the next superimposition is the feeling that 'I am a knower'. This notion is also superimposed one. I am the consciousness is not superimposed. I am a knower is superimposed. Again it is postulation based on the sruti vakyam, which clearly says that Atma is not a knower. Atma is jnanam and not a jnata. Not pramata.

It is said in Mandukya upanisad *nanatah-prajnam na bahis-prajnam nobhayatah prajnam na prajana-ghanam na prajnam naprajnam,adrstam-avyavaharyam-agrahyam-alaksanam acintyam avyapadesyam-ekatma-pratyaya-saram prapanco-pasamam-santam sivam-advaitam caturtham manyante sa Atma sa vijneyah*. Here it is said Atma is unseen, incapable of being spoken of, ungraspable, without any distinctive marks, unthinkable, unnamable, the essence of the knowledge of the one self, that into which the world is resolved, the peaceful, the benign, the non-dual, such they think is the fourth quarter. He is the self; he is to be known. He is not a waking knower; not a dream knower and not a sleep knower. Waking knower is called visva; dream taijasa sleep knower is prajna.

Now you know why said upanisadic background is useful for Brahma sutra study.atma is visva jnata Atma is not taijasa jnata Atma is not even prajna jnata and Atma is non-knowing consciousness it is. Therefore Adhi Sankaracharya says I am a knower is also an adhyasa based on srudarthapatti pramanam. All these ideas can be derived from another sruti statement also. Anityatvam etc. are superimposed. All are adhyasa we can through another sruti vakyam also.

Atma nirvikarah. Atma is free from changes. If Atma is karta bogta or pramata then Atma becomes savikaram subject to change. If it is karta it is subject to modification. To be a bogta you have to undergo a change it is anubhava. Similarly to be a knower you have to undergo a

change. Kartritvam, bogritvam and knowing are process and it is subject to change. In English any suffix 'er' indicates modification. Any 'er' suffix indicates an action, action indicates a process and the process indicates a modification.

Therefore sruti says Atma is nirvikarah that means Atma is not a karta because it is nirvikaratvad. It is not bogta it is nirvakaratvad. From nirvikara statement we come to know that Atma is akarta apramata abokta etc. if I have known these does not belong to me then naturally anityatvam bogritvam and kartritvam is adhyasa and this is another method of deriving and proving adhyasa.

Then there is third method also. This Adhi Sankaracharya indicates in his adhyasa bashyam. Suppose Atma is karta bogta pramata, naturally you should know any karta has to be associated with a karanam an instrument. A doer cannot be a doer without associating without an instrument like the sense organs or anthakaranam or bashya karanam. The karta is associated with upa karanam while the bokta is associated with bojana karanam; Karta, bokta and pramata have sankha, the instrument. If I am karta I am sa sangah and if I am a bogta I am sa sangah. All these things require myself to be sangah.

Surti says Atma is asangah. If Atma is asangah can it be a pramata. it cannot be a pramata. If it is a pramata it has to be associated with pramanam. Similarly if Atma is asangah cannot be a bogta therefore Atma asangatvad Atma akarta abokta apramata. If Atma is agarta kartritvam is error. If Atma is abokta bogritvam is error if Atma apramata pramata is error. Anityatvam kartritvam pramatritvam four things are superimposed on Atma. I mistake myself as mortal I mistake myself as enjoyer knower. Then let us take two more adhyasa. Next one is paricchinatvam that I am limited finite I am here. This is also adhyasam.

When you say I am here automatically you say I am not elsewhere. That paricchinatvam is also adhyasah. Because sruti says Atma is aparicchinnah. Anadi anantam means limitless is Atma. If limitlessness is a fact limitation must be an error based on sruti arthapatti pramata. Limitlessness is called brahmatvam and limitness is jivatvam. Jivatvam is error. Anekatvam is also error. That there are many Atmas sitting in the class is error. Other philosophers accept this view.

Even after coming to Vedanta some have taken Atmas are many like vishistadvaidins. Anekatvam is superimposition based on sruti statement that Atma is ekah. When the wise man sees everything is ekah Atma *ekatvam* is a fact and Atma anekatvam must be error. This is another adhyasa. Adhi Sankaracharya thus shows kartritvam, bogritvam, anekatvam, anityatvam, pramatritvam paricchinatvam sarvam anithya. This is the first pramanam.

Second pramanam is anumanam pramanam inference. Anumanam pramana is based on vyaptih the coexistence of two things. Once we have vyapti jnanam we take the anumanam, when the mountain if fiery it is smoky. Similarly we prove adhyasa through anumanam and for that we need vyapti. Vyapti jnanam is yatra yatra vyavaharatvamtatra tatra adhyasa. Wherever there is transaction there is adhyasa.

The example is pasvadi vyavaharivad. Adhi Sankaracharya says Atma cannot do any transaction. Atma is different from the body. The cow is different from cow's body. He shows some fresh green grass to the cow. Cow comes towards the grass. Cow has the notion that I am the body and I am the body and grass is suitable to my body. If the cow is to face

the grass it is only because that it has the notion that I am the body and grass will 'satisfy my hunger.

Deha adhyasa eva pasuh trinam abimukhi karodi, this is called pravritti vyavahara. This cannot happen without deha adhyasa. If the cow has not notion I am the body it may not go towards the grass. The pasoho pravritti vyavaharah deha adhyasa bhavati.

Suppose the very same person puts the grass and take the stick and take to the cow, the cow knows that there is some danger and cow go away from that person and even the grass. This is nivritti vyavahara and it is because of adhyasa. *Sthoola sariram adhyasad nivrittade*. Both pravritti and nivritti vyavahara takes place only due to adhyasa. This we learn from cow.

We apply that to human beings also. He is not different from cow. He also gets away from coovam. *Manusyaha adhyasavan vyavaharatvad pasuvad*. Manusyaha is paksa hetu is vyavaharatvad dristanda is pasuvad. All human activities are based on adhyasa.

All human are either in the form of going after or going away; either getting or getting rid. Therefore Adhi Sankaracharya says all human beings have got adhyasa. With this adhyasa pramanam topic is also over. From this it is clear that we have adhyasa and all transactions have got Atma *anatma mithunikaranam*. Even though mixing up is taking place we do not know that two things are there. The person who commits the mistake does not that two things are there.

When i say i know, aham janami it looks as though there is one single entity knower there is knower one chetana tattvam, which belongs to Atma and knower vritti modification, involved and it belongs to anatma. Chetana Atma and achetana vritti combined we have knower mixture. Chetana Atma does not have modification; achetana vritti does not have consciousness chetana Atma is nirvikaraha and achetana vritti is savikarah jadam and the two mixed a single entity is born which we call 'knower'. Atma chit and anatma vritti both combined we get knower hood.

Similarly chit Atma belongs to Atma and changing 'sat' Atma belongs to anatma. Thus we have got all transaction based on anatma. Atma cannot be a knower for it cannot go through the knowing process. Anatma is jadam and it cannot know anything. By combining the two the knower is born the chetana Atma and achetana jadam. Then we come to the final topic adhyasa upasamhara the conclusion of the adhyasa bashyam.

In this Adhi Sankaracharya says that this adhyasa is dangerous and it is harmful to all. It is because adhyasa alone brings in anityatvam or mortality. There is fear of death due to this. On hearing death news I am frightened and I get constant fear of mortality. Money becomes very important because I get security with the help of money. Insecurity is due to adhyasa. Adhyasa alone is samsarasya karanam. Not only it is a problem for the; present and it is so for future also. Adhyasa alone is cause for pravritti and nivritti vyavahara.

All types of karmas are due to adhyasa alone and they produce punya papa phalam and it is the cause of punarabi jananam and punarabi maranam. Adhyasa is a problem for the present as also future. In short it is said that adhyasa eva samsara karanam. Adhyasa is the cause of samsara and once adhyasa goes samsara goes. Adhyasa goes only when adhyasa karanam goes away. The cause of adhyasa is ajnanam. Ajnanam goes atha to Brahma jinjnasa. Details in the next class.

## BRAHMA SUTRA

### Class 11

#### Adhyasa bashyam of Adhi Sankaracharya contd

The concluding part of adhyasa bashyam in which Adhi Sankaracharya has given elaborately that there is error in recognizing Atma. This is a fact revealed by the sruti. the notion that I am a karta bogta etc., are errors alone. In conclusion Adhi Sankaracharya points out that the samsara is due to basic error alone. Due to this error alone we enter into different types of activity. Because of I am bokta I am karta I enter into loukika karma and spiritual karmas. Both require kartritvam buddhi.

Therefore all karmas are based on error. Because of this only all errors take place. Because loukika karma alone one reaps karma phalam. Loukika karma will produce drista phalam and aloukika phalam will produce adrista phalam and because of this alone there is *punarabi jananam and punarabi maranam* cycle and because of this there is janma, jara, vyadhi, hence Adhi Sankaracharya points out that root cause of all problems is adhyasa. He also points out that this adhyasa or exists and the first adhyasa is mixing of Atma and anthakaranam and the primary adhyasa is the knower and it flows from sense organs also and there is mixing up of I and sense organs and therefore originates secondary error that i am blind; it is a problem of sense organs but i superimpose it on Atma and say i am blind etc.; it is secondary adhyasa.

Through the sense organs error further goes down to the level of the body also and the andhakarana adhyasa leads indriya adhyasa, which leads to sarira adhyasa and then comes down to the body level. Than I say aham vriddhah young diseased etc., and all belongs to the body. All are properties of the body and definitely not of the Atma. Atma is na sthree, na man na woman not knowing that there is error at sariram level and again the adhyasa goes further to the surrounding also like the root of a tree which gradually spread. Through the body, I get sambanda, all types of things; properties etc. Really speaking Atma being asangah asambandah Atma does not have any relation.

Therefore comes further adhyasa it spreads very much. Not only it spreads in india but also it spreads abroad. If there is earthquake in some corner of america, I get worried because my distant relation is settled there. So the relation has spread. A person constantly experiences janma, mrithyu jara dukha etc. It is called ahankara or mamakara adhyasa. I and mine relate to ahankara and mamakara. Adhi Sankaracharya points out since adhyasa is cause of anarthah or samsara and one has to remove anartha for samsara to go away. Anartha hetu is the cause of all the problems in life. Lone has to work for removal of adhyasa. How to remove adhyasa?

Adhi sankaracharya points out that adhyasa are product of some other cause. Even though adhyasa is cause of all problems and any error is born out of ignorance. The ignorance is with regard to self so adhyasa is centered on I and self-error is born out of self-ignorance. Any other knowledge we gain we are not able to remove self-ignorance. That is why one has got long degree but in spite of all knowledge samsara does not go and he is erudite samsari because he has got anatma knowledge, which cannot remove samsara. Samsara can be removed by Atma jnanam alone.

In Chandogya upanisad Narada goes to Sanatkumara for Brahma vidya. He is very learned but he is full of sokha and grief. He is worried. Then sanatkumara says that grief can go only by one method that is self-knowledge and it only will correct self-error and correction of self-error alone will remove samsara and take one to liberation.

All upanisad begins with intention of Atma jnanam. When I say Atma jnanam has to be gained to remove Atma ajnanam and adhyasa is due to ignorance and it is due to partial ignorance of adhistanam and it is not total ignorance. If the rope is not totally seen there will be no error. If it is seen clearly in daylight there is no error. I see partial knowledge of rope samanya jnanam and i do not know the specific nature of rope.

Self-error is because of not total ignorance of self not because total knowledge of self it is because of partial knowledge or partial ignorance. Which part I am not aware is the question. I know aham asmi. 'satt' part is known chit part is known sathyam part is known jnanam part is known hence I say *aham asmi. Aham Brahma asmi* I do not know. Brahman feature of mine is not known. Brahmanhood of mind is not known Brahman status is now known.

Whenever we say Brahma jnanam don't think we will learn a new things called Brahman. Brahma jnanam means knowing Brahman status of the mind. Brahma jnanam is equal to Brahman status of mind. We know only a new status of old I the familiar I the good old I. The status of mine is known. Because that Brahman status is not known commit a mistake with regard to the status, and when the real status is not known, the false status is taken up and it is the jivatvam status which is one familiar to all of us.

What we require is the self-correction, which involves knowing Brahman status and displacing it jivatma status with Brahman status. Therefore, Brahma sutra starts with the words '*athatho Brahma jijnasa*' which means now therefore the desire to know the Brahman so we study Brahma sutra. I should learn my own superior status and for this purpose alone all the upanisads begin. All sastrams are there. All sastrams take our inferior status as a fact. Jivatma is a fact. They assume inferior status as fact and prescribe methods of improving status and one of the methods is to earn money or mla., status. Therefore the whole life we have been working to improve the status, gain popularity etc.

All time I waste to improve the status and even karma kanda promote the mistake and assuming the inferior status as fact recommend method to gain indra status. That means all sciences take for granted inferior status as fact. Vedanta alone questions whether there is a need to improve the status. Is it a fact I have low status image. Upanisad says you need not work for improving the status. It says you be as you are. It says there is no competitor for you because your are 'ekah'. All are for self-correction.

Vedanta is not for image building and it is negation of superimposed low image. With this adhyasa bashyam is over. Now we will enter Brahma sutra proper.

Class 11 contd.

### **Sutra 1 part 1 adhyaya 1 [Jijnasadhikaranam Topic 1]**

*Atha atah; Brahma-jijnasa*

#### **Now therefore the desire to know the Brahman**

I pointed out in introduction that Brahma sutra has got four chapters known as adhyaya and each chapters have got four sections or padah and each section has got varying topics known as adhikaranam and each adhikaranam has got varying number of sutras.

This one is aththo Brahma jijnasa is firsts sutra of first pada of first chapter. It is known as samanvaya adhyaya. I will discuss the significance later. First pada is called spasta Brahma linga vakya samanvau pada. Each adhikaranam is also given a name. The name of the topic is based on the first sutram of the topic. Here, the first sutra is *athatho Brahma jijnasa*. First topic is jijnasadikaranam. Every topic is named after first sutra.

The first topic has got only one sutra. I will like to say how I propose to teach you. First I will analyse the sutra generally. Then I will do word analysis. Then conclusion of the sutra in which any general remarks will be detailed. Samanya vicara sabda vicara and upa samharah will be the way in which sutra will be taught.

First sutra is introduction to Vedanta sastram or Brahman vidya. In any book we see the forward or introduction. In Sanskrit we call upodgathah or anubandah. This introduction is required for every sastram. You cannot treat it as outside the sastram or inside the sastram. It is connecting link between outside and inside. It is like door of the house.

The door connects inside and outside. Introduction is door to enter the sastram; it is neither inside nor outside the sastram. That is why it is called appendix or anubandah. It is integral part but it is not within sastra. It is like first chapter of Gita. It is either inside or outside the main teaching.

Then the question is where does sastram begin. It begins from second sutra only like Gita begins from second chapter only. An introduction should present four factors known as anubanda chathustayam. We say first sutra presents anubanda chatustayam. What are the four factors introduced here.

I have discussed this before. First one is adhikari. It means the competent student. The second is called visayah the subject matter. Third one is prayojanam the benefit of the study of the sastram. Last factor is called sambandha the relationship. With regard to Brahma vidya the adhikari is one who is sadhana chadhustaya sambanna the four qualification, which we have seen in tattva bodha. In fact tattva bodha is based on Brahma sutra alone. The four fold qualification is vivekah discrimination; discrimination self-knowledge correction of self-error is important and all other knowledge only improve our image through dharma artha kama pursuits. Remove low image for moksa pursuit. Other methods will not work. It is called

vivekah. The capacity to discriminate between shreyas [spiritual path] and preyas [material way] is vivekah.

Second one is vairagyam or dispassion. Considering all other pursuits to be secondary subservient to the main pursuit. Earning money going through family life education of apara vidya is incidental. They are only means not the end. Seeing the means as the end is called passion. If you see means as means is dispassion. If you see means as not means is foolishness. If you see money as end is passion. If you see money as means it is dispassion. If you don't see money as means it is foolishness. Similarly, if you see family, as end it is problem family is useless means foolishness and if you see family as means it is dispassion.

Third one is shadka sambatti sixfold inner discipline. They are samah mind control, damah sense control; upamah reduction of extroverted ness; titiksa forbearance capacity to ignore discomforts in life; for life is full of discomforts. You choose certain discomfort but you should correct every pinprick. This is titiksa. Shradda means faith in guru scriptures and god. Baghavan comes under guru. Next is concentration commitment to achieve the goal.

Fourth is the desire for moksa or the liberation, which we will discuss, in the next class.

## BRAHMA SUTRA

Class 12

### **Sutra 1 part 1 adhyaya 1 [Jijnasadhikaranam Topic 1] contd**

#### **Anubanda chatustayam - four factors**

We are seeing the first adhikaranam that is the first topic of Brahma sutra known as jijnasa adhikaranam. It has one sutra. Athatho brahjna jijnasa. Now we do the general analysis. It is an introductory sutra. Introduction to any sastra should provide which are necessary for the study of the sastra. They are called anubanda chatustayam. The first sastra provides anubanda chatustayam. It can be called anubanda chatustaya sutram also.

Anubanda chatustayam consist of four factors, which we elaborated, in the last class. The benefit of the four factors is sastric study. Whenever an author writes a book, the author will a particular set of people in his mind whoare interested in the and competent enough to understand the writing. They are called the target group. The same thing is true in regard to the products also. Whether introduction of product or text and that group is called adhikari audience in the mind. The adhikari should have four qualifications viveka, vairagyam, samadhi shatka sambatti and mukuksutvam.

Next is subject matter the visayah. The subject of Vedanta sastram or Brahma sutra is as the very name shows Brahman is the subject matter of Vedanta. That is why it is called Brahma vidya. Brahman means we use it not as a new substance revealed by Vedanta and Brahman is new status of the listener the Atma. It talks about my own higher status para prakriti. Whenever I say Brahman you should understand, as Atmanah Brahmatvam is the subject matter. This alone is presented as Atma Brahma aikyam.

Third one is prayojanam or benefit. The benefit I get by study of Vedanta sastra is that I will negate abrahman [nonbrahman] status of mine, which is my misconception. When I say if I know it is rope I get the benefit of snakesness misconception. Similarly Brahmavam knowledge will displace jivatvam status of the jivatma misconception of mine. Jivatvam is samsara. Brahmavta jnanena samsara nivrutti is the phalam. Nivrutti means negation, sublation etc. Samsara nivrutti aline is called moksa or freedom. Prayojanam is moksa. Moksa is freedom from the sense of limitation, inadequacy, smallness, want etc.

Fourth factor is sambandha means relationship. The moment you say relationship between what and what. Relationship rests on two things. We can take any pair. Relationship is between the textbook and subject matter that is Brahma sutra and the contents. We call it pratipadya pratibadhaka sambandha. Brahman and upanisad have got pratipadya pratibadhaka sambandha. The significance of this is that a topic can be considered as subject matter of the book only if the topic is discussed as the central theme of the book. If a topic is discussed casually in a book it cannot be taken as subject matter.

In Gita there is a discussion on diet discipline regarding the rule of eating. Suppose someone asks the question what is the subject matter of Gita. The reason is even though diet is discussed it is not discussed as central theme. Similarly so many other things are discussed.

But Atma vidya is the central these of gita. If you translate into English revealer revealed relationship. This is *anubanda chatustayam* of Vedanta sastram.

The anubanda chatustayam is introduction and is the content of first sutram. It is directly revealed by the sutram. *Athatho Brahma jijnasa*. Therefore we say anubanda catustayam of first sutra and it is implied meaning of the first sutra. In Sanskrit we call arthika arthah indirect or implied meaning. If anubanda chatustayam is indirect meaning what is the direct meaning of the sutram. It is called srotah arthah.

Direct meaning of the sutra is this. Thereafter, therefore, Brahman enquiry should be done. This is the meaning of the sutram. Incidentally we should note a point here. Vyasacharya is not propounding new philosophy unlike other philosophies. His aim is to extract the philosophy, which is contained in the upanisads.

Atma jnanam is taken out of the upanisad. When he writes a sutra he has in mind a particular portion of upanisad. To understand the right meaning of the sutra we should know upanisadic portion, which he has kept in mind while writing the sutra. It is very much required because sutra is the critical analysis of the Brahman as defined in the upanisads.

Anything cryptic can present vagueness. The first job we do is that we try to find out which upanisadic statement Vyasacharya had in mind while writing the sutram. It called visaya vakyam corresponding upanisadic vakyam. Vyasacharya does not say that in his Brahma sutra. We are left in lurch as to what he wants to discuss. That is why we take the help of commentators. Without bashyam we will not know the visaya vakyam of every sutra. Here we have Adhi Sankaracharya's bashyam who gives all the details. Adhi Sankaracharya says he came to know from his teacher.

The visaya vakyam for the first sutra is Taittiriya upanisad sloka 3.1 *bhrgur vai varunih, varunam pilaram upasara, adhihi bhagavo brahmeti, tasma etat provaca annam pranam caksus srortram mano vacam iti tam havaca yato va imani bhutani jayate yena jatani jivanti yat prayanty abhisamvisanti tad vijijnasasva tad brahmeti sa tapo tapyata sa tapas taptva*. This is the first mantra of third section of Taittiriya. One sentence we have to note *tad vijijnasasva* and in Brahma sutra also *tad jijnasasva* is there. There to brigu it is stated you conduct Brahman enquiry for fulfillment in life. These are basic problems of life sense of in security etc. They are the fundamental problems it is a statement of commandment it is not ordinary statement. It is vidhi vakyam. It is commandment. You gain moksa only through jnanam. You cannot gain moksa through nama sangirthanam. What is said for all time and it is for all yuga. In any *yuga jnanad eva kaivalyam*. So upanisad says know Brahman.

Second one occurs in Chandogya upanisad. 8.7.1 *ya Atma apahata papma vijaro vimrtyur visoko vijighatso pipasah 'sat'ya kamah 'sat'ya samkalpah, sonvestavyah, so vijijnasitavyah sa sarvams ca lokan apnoti sarvams ca kaman yas tam Atmanam anuvidya vijanati; it ha praja patir uvaca*. In this mantra the whole matra is not relevant. Sada vijijnasi tavyah. Here tavyah means command you have to know and there is no short cut. This is the second quotation quoted by the commentator.

The third sruti vakyam is 2.4.5 of Brahadharaynaka upanisad where yajnavalkya gives a long mantra. He gives a big list nobody loves anybody but everybody loves self-alone and self-alone is ananda swarupa. Whatever is the object of love is in the nature of ananda. Upanisad says Atma alone loved by everyone. A person even gives up the children. They disown the

children. Husband disowns wife and wife husbands. Initially all are for my sake and afterwards I drop all of them like hot potato. Self-alone is loved by all.

Then yajnavalkya says to maitreyi Atma va srortavyaha mantaha and therefore Atma enquiry should be done. In the entire upanisadic portion Brahman enquiry is emphasized. In keeping with those upanisad portion condenses all and say *athatho Brahma jijnasa*. To show it is compulsory we supply the verb to the sutra, so we add a word kartavya. Brahman enquiry should be done to gain liberation.

This direct meaning let us analyse. You cannot Brahman enquiry independently as Brahman is not available as object for you to study, independent enquiry cannot be done without upanisad study. Brahman is given the title aupanisadam to indicate Brahman can be enquired through Vedanta alone. We revise the Brahman enquiry and replace it with Vedantic enquiry.

It is Vedanta sastra vicara. It is studies to gain Brahma jnanam. Thereafter, therefore Vedantic should be done Brahma jnanam. This is the revised direct meaning, Brahma sutra is a logical work and it will study on logical basis only. It should be a jnana vakyam. It is nyaya vakyam or anumanam vakyam, what is anumanam vakyam corresponding the sutra.

First sutra must be logically presented, it should be studied critically *anubanda chatustaya bakvad* the fourfold factors should also be studied. Drastanda is dharma sastravad. Vedanta *sastram arambaniyam anubhava chatustaya vatvad dharma sastravad*. For this vakyam there should be a vyapti.

A generalization where there is smoke there fire, it is a statement of coexistence, all the sastras are worth studying and we get prayojanam and prayojanam is moksa. This is the revised direct meaning of the first sutra. Here we saw implied meaning and direct meaning. Now i will do the word analysis. Three words are athah and Brahma jijnasa. It is common word consisting of Brahman and jijnasa and we will see the significance and corollary of the three statements.

## BRAHMA SUTRA

Class 13

### **Sutra 1 part 1 adhyaya 1 [Jijnasadhikaranam Topic 1] contd.**

#### **Anubanda chatustayam - four factors**

Until now we made the general analysis of the sutra. Athatho Brahma jijnasa. Now we will make a word analysis. Three words are there. While talking about sutra bashyam we made a condition that we should comment the word in the order in which it is stated. Adhi Sankaracharya does not alter the order of the word in his bashyam.

First word is atha. Adhi Sankaracharya points out the expression atha have twofold function. One is atha as sound. The second is atha as a word padha rupena. Suppose we are listening to the news from radio when we hear the news we hear the sound. The news is in the form of series of sound known by pratyaksa pramanam. Srortra indriya pramanam it is. It comes into our mind. The sound heard is a prameyam known through srortra indriyam. Prameyam means the object of any pramanam.

The sound functions as prameyam whoever has healthy ear. If he is a literate person who knows the language, then the very sound, which has entered into, his mind as prameyam begins to function as sabda pramanam. Not for all people only for the literate one who knows the language. Those who don't know the language the sound are not a pramanam for them. Every word has got two statuses prameyam as you listen and pramanam if you know the particular language. Prana rupa padham.

Adhi sankaracharya says when the teacher utters the word atha, the word atha has got two fold status. Whoever is not deaf hears the sound and it is prameya rupa for all the people. In a people is trained in language the word atha is sabda pramanam and it has got two functions as one as sabda and the other as padha. Sabda rupena mangala janakam. The very sound is the mere vibration sabda rupena mangala janakam bhavati. It produces auspiciousness.

When it is padham or language, it produces a particular meaning. Padha rupena artha bodhakam. Vyasacharya uses the word because he feels this is the first sutra we have to begin with mangalam auspiciousness. There is tradition of writing mangala sloka whenever any sacred book is written. It is to gain blessings of lord Isvara. He writes the work in sutra form. He has no opportunity to write a mangala sloka. So he has condensed it in one word. The sound atha is auspiciousness because we have got pramanam. The two words 'om' and 'atha' are mangala sabda. This is explained in dhyana sloka. It is mangalam because Brahmaji started creation of the world uttering these two words.

Panini the grammarian also does a similar way. Therefore it is auspicious word vritti in twofold function as sabda it is mangalam and as word it has technical meaning.

Second function conveys a meaning. Atha has many meaning. Adhi Sankaracharya analyses various possible meaning. He arrives at one particular meaning. The final meaning arrived at is anantaram. Anantaram means 'thereafter' or immediately after. Why he takes this particular meaning. If you take the meaning thereafter the question will come where after.

Vyasacharya by implication can convey the pre-requisite of the qualification. Because any study should be after preparation *yogya siddhi anantaram Brahma jijnasa*. This is the case with *apara vidya* also. We have qualifying round for entry of any study or any competitions. The qualification should invariably precede the study. What is the invariable necessity for the study of Vedanta?

Adhi sankaracharya says *sadhana chatustayam*. This is not directly mention by Vyasacharya. It is indirectly implied and he saves two words *sadhana chatustayam*. He has reduced the size of the sutra. Of this *anantaram* is directly mentioned and *sadhana chatustayam* is indirectly mentioned. After acquiring fourfold qualification is the meaning of *atha*.

How do you know *sadhana chatustayam* is the qualification? For that we have got two *pramanams*. The first *pramanam* is *yukti pramanam* the logic and it is called *anvaya vyatireka*. When you add milk is sweet and if you don't add it, it is not sweet. Sugar is the cause for sweetness. Whoever has got *sadhana chatustayam* derive the benefit of Vedantic study that is *moksa*.

Qualified student gets the benefit and the student with no qualification will not get any benefit from the study here Brahma sutra. Adhi Sankaracharya puts in *viveka cudamani* the wise people say four qualifications are required. Only if the qualification is there, one becomes a *mukta*. This is logical establishment. If we lack the qualification it becomes academic time pause. If preparation is not there the study of Brahma sutra will not transform you but you will be informed person.

Then we have *sruti pramanam* also. Refer to *Mundakopanisad sloka 1.2.12 pariksa lokan karma citan Brahmano nirvedam ayan nasty akrtah krtena tad vijnan artham sa guru mevabhi gacchet samit panih srotriyam Brahma nistham* which means 'having scrutinized the worlds won by the works let a Brahmana arrive at non-attachment. The world that is not made is not won by what is done. For the sake of this knowledge, let him only approach with sacrificial fuel in hand, a teacher who is learned in the scriptures and established in Brahman'. The *upanisad* indicates one should have *nithya anithya viveka*. He should know the hate for *anithya vastu* and be attracted to the *nithya vastu*. He should be tired of *samsara* and he should look for *vairagyam*.

Again refer to *Kathopanisad* *upanisad* presents more concretely. *1.ii.2 sreyas ca preyas ca manusyam etah tau samparitya vivinakti dhurah sreya hi dhiro bhi preyaso vrnite praeyo mando yoga ksemad vruite* *naciket* comes to have Brahma vidya but *yama* gives all *ika para loka sukha* but *naciket* gives a blank cheque for pleasure. *Naciket* has to choose between *dharma artha kama* and *moksa* but he chose the latter. Seek *shreyas* or *preyas*.

Refer to the *upanisad sloka 1.ii.3 'sat'van priyan priya rupams ca kaman abhidhyayan naciketo 'tyasraksih naitam srnkam vittamayam avapto yasyam majjanti bahavo manusyah and also* *naciket* has renounced all the desires and pleasurable objects of pleasant appearances, judging them by their real merits, you have not accepted this 'road of wealth' in which many mortals sink says *yama* to *naciket*.

The idea conveyed is that if I am to get the benefit of Vedanta study, I should throw *dharma artha kama* like *vairagyam* towards the droppings of the crow refer to *aparoksanadhi bhudhi*. We immediately wipe it out and then we don't claim it as an achievement. The fourteen *loksas* should become *kaka vrsta samanam*. It is *thivra vairagyam*. We get *shreyas* *preyas*

viveka we get from the study of this story. Of course in these two mantras we get viveka, vairagyam and mumuksutvam. In brahadharaynaka upanisad samadi shatka sambatti is given. Thus through yukti and sruti pramata sadhana chatustaya anantaram is established.

### **Adhi Sankaracharya condemnation of other views**

Another philosopher who comments upon Brahma sutra gives another meaning for 'atha' sabda. He says that should not be the meaning given by Adhi Sankaracharya. He says purva mimamsaka should be the meaning. He accepts anantaram. Others suggest purva mimamsa is anantaram. It should be studied after studying purva mimamsaka. Adhi Sankaracharya elaborately refutes this commentary. This is the next topic.

Purva mimamsaka is the analysis of the first portion of the Veda. Brahmins are called utara mimamsaka, which is the analysis of final portion of Veda. The first portion of the Veda deals with karma and upasana and the last portion deals with Brahman or jnanam. The word indicates purva mimamsaka should come first the very word utara mimamsaka should come later. Therefore atha should refer to purva mimamsaka only. The word clearly shows that. They have logical support. Purva mimamsaka deals with karma and upasana, which is the qualification for gaining jnanam.

Since everybody requires qualification and qualification requires purva mimamsaka you should translate atha as purva mimamsaka anantaram utara mimamsaka. This is krama and that is the procedure. Else it is akrama. It is not in order. Purva mimamsaka sutras are written by jaimini rishi. It has got twelve chapters.

Adhi sankaracharya gives both yukti and sruti support to refute the purva mimamsaka views. Adhi Sankaracharya gives four reasons to refute this view. After purva mimamsaka alone one should come to utara mimamsaka. First is lack of consistency.

Suppose the word atha is translated, as after study of purva mimamsaka then there will be two problems. He may study purva mimamsaka thoroughly. He will then say i have studied purva mimamsaka and i am ready to study utara mimamsaka. Even after study of purva mimamsaka, he may not have sadhana chadhustaya sambatti. He is a scholar of purva mimamsaka. Yet he may not have the qualification to take to Brahma vidya. After study of purva mimamsaka he may not have the basic qualification require for study of Brahma sutra. Therefore the chances are unqualified person will not understand the jnana kanda. More in the next class.

## BRAHMA SUTRA

Class 14

### **Sutra 1 part 1 adhyaya 1 [Jijnasadhikaranam Topic 1]contd.**

#### **Adhi sankaracharya condemnation of other views.**

We analyse the word 'atha;'. Adhi Sankaracharya said that the word atha refers to sadhana chadhustaya sambatthi that is after acquiring the fourfold qualification one should enquire Brahman. Adhi Sankaracharya has now taken up one of the view of the other commentators for the word 'atha'. This commentator accepts atha means anantaram. Instead of saying sadhana chadhustaya sambatthi anantaram he says it should be taken as 'purva mimamsaka. Purva mimamsaka means karma kanda analysis. Purva paksa contention is the very word purva mimamsaka shows it comes in the beginning. Vedanta vicara shows it comes later. Therefore it is common sense knowledge only after purva mimamsaka karma kanda vicara one should come to Vedanta vicara. Purva paksa hence says one should go to jnana kanda vicara after karma kanda vicara. Adhi Sankaracharya gives various reasons and also sruti contentions in support of his view.

Vipicara dosa Adhi Sankaracharya points out two fold problems in purva paksa views. If you say Vedanta vichara should come after karma kanda vichara and one may go through purva mimamsaka and completion of purva mimamsaka does not guarantee sadhana chadhustaya sambatthi. He may be ritual but that does not eman he has sadhana chadhustaya sambatthi. He need not develop vairagyam. He may be interested in swargam and various ika loka and para loka phalams. Ritualists have no interst in Vedanta and they want to perform more and more rituals. Hence he may be interested in rituals but he may not have qualification at all for study of Vedanta vicara. If such a person who has completed and not acquired sadhana chadhustaya sambatthi1 enters Vedanta vicara he may not benefit from the study.

Second problem also that there are some rare cases that persons are born with sadhana chadhustaya sambatthi because of purva janma sadhana some spiritual geniuses are born with sadhana chadhustaya sambatthi to a reasonable measure. They do not require purva mimamsa. Rituals are meant for sadhana chadhustaya sambatthi. These people are born with sadhana chadhustaya sambatthi. Why should they waste their time in rituals etc. In such cases he will waste his time studying purva mimamsa before taking up Vedanta vicara although he is otherwise qualified for such a study. Adhi Sankaracharya's statement sadhana chadhustaya sambatthi after acquiring the qualification either gained last birth or this birth. Sadhana chadhustaya sambatthi becomes compulsory for all. While purva mimamsa acquiring sadhana chadhustaya sambatthi is not compulsory for all. For the unprepared people purva mimamsaka is compulsory and for prepared mind purva mimamsaka is not necessary. He gives some more reasons.

To understand the three reasons you should know the background while writing the commentary. When this person says one should come to Vedanta after studying purva mimamsa and this philosopher has particular philosophy in his mind, which was prevalent in Adhi Sankaracharya's time. That is mere knowledge cannot give liberation. As an example philosopher quotes all Vedantic students who studied and if you see their behaviour they are worse than illiterates. He shows such philosopher and says that they studies Vedanta and they

have not benefited at all. Therefore jnanam must be combined with karma. This is needed to gain moksa. Jnana karma samuchaya vadi Adhi Sankaracharya is going to refute. His contention is that everyone should study purva mimamsa first and know all about the rituals. Thereafter wards he should practice that. While implementing it he should simultaneously do Vedantic enquiry and pursue jnana yoga. One should enter to Brahman enquiry while it goes on he should perform ritual and therefore purva mimamsa study is important to combine karma with jnanam. This is the contention of purva paksa.

Adhi Sankaracharya refutes this theory jnana karma samuchaya. He says he cannot agree with the theory of combining jnana with karma. He gives his reason.

The reasons are karma jnana kandaho visaya bedad; karma jnana kandayo prayojanam bedad and karma jnana kandaho pravritti bedad. The first reason subject matter of karma kanda and jnana kanda are diagonally opposite and therefore they cannot be combined. Combination is possible only when the subject matter is similar.

Grouping is possible only when they have common interest. Here these two have no similarity. Karma kanda deals with the unaccomplished goal whereas jnana kanda deals with goal already accomplished. One deals with sadhyam another with siddham. One deals with anatma and the other with Atma. One deals with extroverted dependence on the world while another introverted dependent on my self. One deals with anithya phalam while the other deals with nithya phalam. One is based on kartritvam and the other on akartritvam. One is full of relationship and the other is without relationship. One deals with sangha and the other is with 'self'. One deals with avidya and the other with vidya.

Refer to Kathopanisad mantra 1.ii.4 *duram ete viparite visuci avidya ya ca vidyete jnata vidyabhi psinam naciketasam manye na tva kama bahavo lolupanta*. This means widely apart and leading to divergent ends are these, difference and what is known as wisdom. I know thee naciketetus to be eager for wisdom, for even many desires did not distract thee. Karma and jnana. Karma is avidya and the other one is vidya. One is preyas and other is shreyas. Therefore you cannot say purva mimamsa is anantaram.

Next is prayojanam bedad. The benefit is also different. Karma kanda gives anitya phalam whereas jnana kanda gives moksa. One gives punar janma phalam another gives apunar janma phalam. One goes towards south and the other the north. South is presided over by yama and the north is by soma deva who has amrita kalasa compared to moksa. Karma kanda goes southwards jnana kanda goes northward the moksa. This is the second reason.

Third is pravritti bedad. The difference is found in their functions. Karma kanda teaches a person and it persuades or incites a person into action. It is to make a person active. It discusses swarga, which is the phalam of karma. After tempting karma kanda says you do jyotisyoma yaga. Readers will be tempted to do yagas. It achievement oriented. Jnana kanda does not tempt you by providing various goals.

All fulfillments are your very nature it says. One who has discovered Brahman has accomplished everything in life and he has nothing to accomplish. It reveals the nature it never pushes you into action. Even if you are tempted to do action, it will say you are akarta. By revealing purnatva nature jnana kanda is apravartakam and nivartakam and it make a man so much contented. How to be full and completing by knowing what i am is Vedanta teaches. Because of all these reasons you cannot say purva mimamsa anantaram.

Thus logically Adhi Sankaracharya has refuted purva mimamsa contention. Now we come to scriptural refutation of purva paksa views. This is very technical. He wants to establish Vedanta vichara need not be compulsorily preceded by purva mimamsa. He wants to establish that karma kanda study and jnana kanda study are not sequential. That is one first study and thereafter study jnana kanda is no compulsory for all. He says there is Veda pramanam for this sequence or that makes that karma kanda and jnana kanda are sequential. He goes to purva mimamsa of the Veda is to establish this fact. He applies certain purva mimamsa idea. In purva mimamsa naturally they have to analyse many rituals. One of the conditions is that few rituals in the Veda should they be done simultaneously or they should be done in order. This is the point of their discussion. To establish they put a particular condition. If many rituals are to be done simultaneously they have to be done by many people since one ritual can be done one person at a time.

Simultaneously four-purna ahuti ritual can be done because there are many priests. This requires many performers. But if many rituals have to be done by one person it cannot be simultaneous. They have to be done one after the other. The condition is there for krama eka kartritvam. One has to follow a krama to do more than one ritual. There is no other way. If it is simultaneous more than one will be there. How do we know whether the rituals have got *eka kartritvam* or *aneka kartritvam*. He says any one of three conditions indicate *eka kartritvam*.

First condition is eka pradana sesatvam; sesa sesatvam adhikrita adhikaratvam. The first one is if many rituals are subsidiary to one ritual it is called eka pradana seshatvam. If it is there only one person has to perform the main ritual. Then only his performance is complete. Second condition is if there are two rituals in which one is subsidiary and the other is main, sesa seshi sambanda then also both the ritual should be done one person only and it is sesa seshitvam.

Suppose there are two main rituals and if one is qualified to do one ritual only if he has done one main ritual then alone he can do other rituals. This is called adhikrita adhikaratvam. They cannot be done simultaneously but have to done one after the other. In purva mimamsa they group ritual and they say they have to be done together or in order. The next headache is what should be the order. For that they have got six pramanam to analyse or establish the order. Six methods they use to arrive at the order.

Adhi Sankaracharya's question is 'do we have any one of these conditions to prove that purva mimamsa and utara mimamsaka should be done in order'. Adhi Sankaracharya says that there is no order is there since none of the three conditions are there so you cannot say there is order in purva mimamsa or utara mimamsaka. This we will discuss in the next class.

## BRAHMA SUTRA

Class 15

### **Sutra 1 part 1 adhyaya 1 [Jijnasadhikaranam Topic 1] contd.**

#### **An analysis of the first sutra word by word.**

In the last class we saw that there is no eka pradana sesatvam relationship and sesa seshitvam relationship between purva mimamsa and Vedanta and therefore there is eka kartrikartritvam condition with regard to purva mimamsa and uttara mimamsaka and there is krama between Purva Mimamsa and Vedanta and they are of the view that 'atho' does not have the any order for teaching. There is Veda pramanam to prove that purva mimamsa is compulsory for study of Vedanta. This is the technical reason.

Another purva mimamsa reports that there is Veda pramanam for study of purva mimamsaka is compulsory. The brahadharaynaka upanisad says one has to go through three asramas to gain the qualification for Vedanta study. In another upanisad known javala upanisad it is stated more clearly. After completing student life one has to become grahastha. Then he should become vanaprasta. Then he should become sannyasi.

In javala upanisad also it is clearly said that one has to go through various stages before taking up Vedantic study. Purva mimamsa is compulsory we also say. It is because one has to practice karma and upasana in the first three asramas and gain sadhana chadhustaya sambatthi.

For this we answer you talk about jabala upanisad statement but the same jabala upanisad you don't read the next statement. That says 'athava' otherwise there is an option. Otherwise three asramas are not compulsory if one takes to sannyasa from Brahmacharya asrama itself. He need not take to grahasthasrama and vanaprastha. This person who takes to sannyasa direct from Brahmacharya does not require purva mimamsa and even though Veda pramanam says it is not asking it compulsory.

The next question is if purva mimamsa is not compulsory then what is compulsory. We have said sadhana chadhustaya sambatthi is compulsory and purva mimamsa is not compulsory. You say purva mimamsa is not compulsory and you say karma and upasana is not compulsory and sadhana chadhustaya sambatthi is compulsory but karma is not compulsory but unfortunately sadhana chadhustaya sambatthi is itself is possible because of karma alone and once you say sadhana chadhustaya sambatthi is compulsory and karma yoga alone give sadhana chadhustaya sambatthi and once you say sadhana chadhustaya sambatthi is compulsory the purva bagha of Veda is compulsory it is like saying your presence in asthika samaj is compulsory but your travel to the samaj is not compulsory. How is it possible how can one reach the samaj without traveling to the samaj? So they conclude sadhana chadhustaya sambatthi is not possible without going through purva mimamsa. For them if sadhana chadhustaya sambatthi is compulsory purva mimamsa are equally compulsory. We say that purva mimamsa is not compulsory for all.

Purva mimamsa is not compulsory for all people for majority it is compulsory at least for one it is not compulsory karma yoga is not compulsory upasana is not compulsory and these

people who are born with sadhana chadhustaya sambatthi because of their karma and upanisad of purva janma. When they are born with sadhana chadhustaya sambatthi why should we insist sadhana chadhustaya sambatthi for those people. We agree purva mimamsa is required for majority.

Three asramas are required for majority and for some few it is not required. Finally concludes 'atha' is sadhana chadhustaya sambatthi anantaram. Therefore we say word atha directly require sadhana chadhustaya sambatthi but indirectly the word atha require signifies adhikari. With this 'atha' sabda vicara is over. Now we will move to the second word 'athah'

The literal meaning of the word 'athah' is therefore. Therefore Brahman enquiry should be done. Therefore always indicates reason. I am sick therefore i require medicine. Sickness is the cause for taking medicine. Here therefore is reason for making Brahman enquiry to be conducted. Vyasacharya does not mention the reason being it is a sutram. We have to supply the reason and say therefore Brahman enquiry must be done.

Adhi sankaracharya gives two reasons. First is karma cannot give moksa. Second is Brahma jnanam alone gives moksa. Therefore Brahman enquiry should be done. First reason is karma cannot give moksa. It is because we have to recollect all the reasons why karma cannot give moksa. We can prove through yukti pramata through anubhava pramata and through sruti pramata.

By karma moksa cannot be attained. He gives one from chandogya upanisad. Karma phalam is anithyam ika karma phalam and para loka karma phalam anithyam sarvam karma phalam anithyam you cannot gain moksa through moksa even karma yoga cannot give moksa and it gives siddha suddhi.

What is the logic that karma cannot give moksa. Karma is anitya and anithya karma can give only give anithya karma phalam. Why karma is anithyam. It is so because karma is born out of ephemeral ingredients the perishable materials. Anithya karaga janyatvad kriya anithya bhavati. Since action is anithyam so also the phalam gained through action. This is the logic. Example is salary. Salary is karma phalam and salary born out of one-month work is also anithyam. Yukti pramanam shows karma will not gives moksa.

Anubhava pramanam also shows that karma is anithyam. All the materials made are anithyam. So through sruti, yukti and anubhava karma is anithyam and it cannot give moksa.

Second pramanam is that jnanam alone will give moksa. This we have to establish now. Sruti pramanams there are plenty. Through Brahma jnanam alone one gets moksa. Adhi Sankaracharya1 quotes Brahma vid apnoti param occurs in taittiriya upanisad. Thus sruti pramanam is there.

The logic is that moksa means samsara Nivrutti and it is freedom from samsara. Then we say samsara nivrutti can take place only through jnanam because samsra is superimposed. Samsara jnana nivruttiyah. Samsram will go only through jnanam alone because samsara is superimposition like rajju sarpavad. You destroy rope snake only through jnanam alone. The samsara superimposition is removed only through jnanam. How do you say samsara is superimposition? Adhi Sankaracharya says it is explained in adhyasa bashyam. This is yukti.

What is anubhava. Any superimposed problem goes only through knowledge as we see in the case of rope snake and mirage water. The person frightened by rope snake will go only if he goes near and sees it is nothing but rope. So also dream. Dream fear goes only on waking. The problems in dream also go on waking only. Thus it is proved through sruti yukti and anubhava jnanam only gives moksa and therefore continue the Vedanta vichara. With this athah sabda vicara is over.

Now the third word is jrahma jijnasa. The final meaning is Brahman enquiry. Brahman jnanaya Vedantic vichara. Vedantic enquiry is a must for gaining Brahma jnanam. This is the final meaning.

Brahma jijnasa has three parts. Brahma is first part jijna is second part and sa is the third part. Brahma means jagat karanam Brahma. Brahma has different meaning at different places. Brahma means Veda, omkara, Brahmana, sometimes it means hiranyagarbha. Brahma vid means knowing a Brahmana.

According to the context we have to take the word of the meaning. Based on the second sutra Brahman means sathyam jnanam anandam Brahman. Second part is jijna. Here it means jnanam. It is not vague jnanam. It is clear-cut jnanam. It is aparoksa jnanam of Brahman.

Sa means it is suffix. It means iccha or desire. That is the vachyartha. It is desire to know Brahman. Adhi Sankaracharya says desire is vachyartha of sa but here we have to take the implied meaning. Implied meaning is vicarah the connection between desire and enquiry. Iccha janyah vicara. Enquiry will lead to the knowledge. Now we have three words Brahma, j jnana and iccha and we call it Brahma vichara. Final meaning is Brahma jnanaya Vedanta vicara kartavyah.

Why Vedanta vicarah? Why make self-enquiry within myself? Therefore self-enquiry is enquiry of the self with the help of guru sastra. It is not self-enquiry without any help. One has to come to Vedanta to know anything about 'self'. More in the next class.

## BRAHMA SUTRA

Class 16

### **Sutra 1 part 1 adhyaya 1 [Jijnasadhikaranam Topic 1] contd.**

#### **An analysis of the first sutra word by word.**

We analyse the first sutra. The word iccha gives in the context the vicara. Brahma jnanam vicara means Brahma jnanaya Vedanta vicara. It is enquiry into Brahman to gain liberation. Vyasacharya only says Brahman enquiry and the question is why it Vedanta enquiry. Any knowledge can take place only through operation of pramanam.

We have got six pramanam enumerated. Pratyaksa, anumana, sabda, anupalapti, upamana etc are there but enquiry is not accepted under any of the above pramanam. If one goes on enquiring without using any pramanam will lead to speculative nature of philosophy and it cannot lead to knowledge. If it is to lead to knowledge it should involve pramanam.

In the case of Brahman we have only one pramanam, which is sabda pramanam. If we make independent enquiry it will not lead to Brahma jnanam. So vicara should be associated with sabda pramanam. Hence we supply the word Vedanta vicara. Vyasacharya tells in third sutra Vedanta enquiry is needed and it a pramanam.

Now one more important point makes clarification. Why say Brahma jnanam enquiry is required because we are interested in Brahma jnanam and why Brahma jnanam and it is because we are interested in samsara vritti. Why Brahma jnanam removes samsara? Why jnanam alone gives moksa? The logic is since samsara is superimposed, it can be removed by jnanam alone.

Now the question is any superimposition goes by knowledge like rope snake. When we say superimposed snake is removed knowledge and what knowledge removes the rope snake. Snake will be removed by the knowledge of the rope, which is the adhistanam of the snake. From this we get a rule any adhyasa is removed by adhistanam jnanam. Any superimposition is removed by the knowledge of its anityatvam. Whatever is superimposed is removed by its substratum. Applying this knowledge we say that samsara can be removed by its adhistanam that is Brahman knowledge like the rope knowledge removes the superimposed snake.

Now purva paksi attacks us. Adhi Sankaracharya points out that entire samsara or jivatvam is superimposed on the adhistanam of Atma. In adhyasa bashyam we saw the adhistanam of samsara is Atma. The entire jivatvam is superimposed on Atma and the adhistanam is Atma. If we have to remove samsara it will be removed by adhistanam jnanam and adhistanam is Atma and therefore we derive Atma jnanam alone will remove samsara.

Atma happens to be adhistanam of samsara. Therefore if I am interested in samsara nivritti and I should get adhistanam jnanam and adhistanam is Atma and for getting Atma jnanam and I should make Atman enquiry to gain Atma jnanam. Therefore purva paksi argues you must conduct Atma vicara and why Vyasacharya writes Brahma vicara. Atma vicara will give Atma jnanam.

How Brahma vicara will help you. Purva pakshi says we need Atma jnanam and why do you make Brahman enquiry. We give two answers. We say that Brahman is the same as Atman. That is what Vyasacharya means. So Brahman enquiry is Atman enquiry. Here indirectly it is confirmed that Brahman and Atman are one and the same.

Brahman Atman aikyam is confirmed by the first sutra of Brahma sutra. You can say this in different way also. Once we say Brahman enquiry we should not think it is something new. With scriptures for years after years we look for Brahman for meditation. Brahman is not a new substance and it indicates only a new status with already available status of mind 'aham'.

This is already available with us in the form of 'aham'. Therefore when we say Brahman knowledge the meaning it is the knowledge of Brahmatvam status of mind. I am lost in para prakriti and we look for apra prakriti that is Brahman status. Brahman enquiry is nothing but gaining Brahmatvam status of Atma.

The old status before enquiry is jivatvam. Jivatvam is present status by discovering Brahmatvam status I want to displace my jivatvam status. Therefore Vyasacharya has not committed any mistake. Athatha Atmanah Brahmatva jijnasa. This is the meaning of the word Brahma jijnasa. Here Vyasacharya reveals the subject matter of Brahma sutra.

The subject matter is jivatma paramatma aikyam. Atha revealed adhikari has been revealed prayojanam has been revealed.

Now there is a fourth word, which we have to supply to complete the sentence. Kartavya means should be done. Vedanta enquiry should be done for Brahma jnanam. Kartavya word is used because Vyasacharya wants to reveal the rule prescribed in the Veda Atma ve arey mantavyah srortavyaha nididysatavyah etc. All tavyas put together he uses the word kartavyaha. Tavya indicates the imperative mood and without that you cannot escape samsara.

For this one should do sravanam mananam nididysanam. The final meaning is through sadhana chadhustaya sambatthi you do sravanam mananam nididysanam you gain moksa through Brahma jnanam. After acquiring fourfold qualification one should do sravanam mananam nididysanam of Vedanta for the sake of Brahma jnanam because Brahma jnanam alone gives moksa not karma. This is the final expanded meaning of athatho Brahma jijnasa.

Suppose one asks Vyasacharya what should i do. Vyasacharya will ask whether you have done sadhana chadhustaya sambatthi. If you have done it he will say do Vedanta vicara. Suppose one says I have not acquired sadhana chadhustaya sambatthi then he will say through purva mimamsaka you gain sadhana chadhustaya sambatthi and come for Vedanta vicara. Either by studying purva mimamsa or aksing someone who has studied purva mimamsa, it is not compulsory to go through purva mimamsa. The idea is we have to follow the lifestyle namely karma yoga and upasana. Does that mean that we should stop Vedanta study now? Is it necessary to take to karma kada. We can continue the study of Vedanta and continue to intensify our sadhana chadhustaya sambatthi and this will become more and more significant as we acquire qualification. Let it start with academic study and as we acquire qualification it will be relevant to gain jnanam. We can continue our Vedanta study and continue our asrama dharma also. One side refines our qualification and on the other side continues our asrama dharma.

Now I will go to the final topic. I will present topic in technical format in which Brahma sutra should present. I will not give you any new idea. Each topic is called adhikaranam, in the first topic one sutra is there. It is the first topic also. The topic is jijnasa adhikaranam. Every adhikaranam is presented in a particular format. In this verse it is said that adhikaranam has got five factors. The first factor is vishyah subject matter, next visayah this means samsayah means doubt; the doubt is presented; next is the view of purva paksa the non-vedantin's view; he is opposed to Vedantins. fourth factor is siddhantah and what is our conclusion.

Next is sangathih the connection between this topic and the previous topic. This is called adhikarana nirnayah. For this jijnasa adhikaranam the first factor is Vedanta sastram. The whole Vedanta sastram is the subject matter; doubt is vicaraniyam va na vicaraniyam va. Whether it is worth studying or not worth studying. Should we attend the class or not. It is the question.

Third factor is purva paksa the view of the non-vedantins. He should not present his views with reasoning. It is in the form of anumanam always. Purva paksa anumanam we call it. His anumanam is Vedanta sastram need not be studied. Anubanda chatustaya abhavad. It does not have anubanda chatustayam unlike dharma or tarka sastram. According to purva paksi there is no anubanda chatustayam. He will say elaborately. He says no adhikari is possible viveka is impossible sadhana chadhustaya sambatthi is not there therefore sadhana chadhustaya sambatthi asambavad adhikari nasti. There is no adhikari in the world; who has got sama dama titiksa etc. There is no adhikari.

Similarly vishyah nasti. Who has seen Brahman? How can there be nirgunam vastu at all. You say you cannot know it. You see means you cannot see. It is consistent brain washing and they say it is only a brama between student and guru. If you say Atma, they say there is no Atma and there is no independent consciousness and matter alone is proved. Consciousness is illusion happening in brain matter. You talk of consciousness and there is no subject matter, no Brahman, and when Brahman is not there where is the prayojanam.

The whole Brahman seems to be emperor's cloth not visible to anyone when the emperor is going naked. Adhikari, vishaya and prayojanam is not there and how there be Brahman. Our siddhanta anumanam is our logical statement Vedanta sastram vicaraniyam. Dharma sastravad. It is like dharma sastra all are there including sambanda. Just because adhikari is few we cannot say adhikari is not there. Adhikaris are rare and don't say they are not there. Brahman is yourself and how can Brahman is not there. Brahman negation is self-negation. Many have attained moksa and you can also study and gain moksa.

Then the fifth factor connection with previous topic. In the case of first topic connection is not there. Second will have with one and third with second. Fifth factor is not there for the first adhikaranam. With this first sutra is over. More in the next class.

## BRAHMA SUTRA

Class 17

### **Sutra 2 part 1 adhyaya 1 [Janmadyadhikaranam Topic 2]**

#### **Definition of Brahman**

*Janmadi; asya yatha*

**[Brahman is that] from which [subsistence and dissolution] beginning with the origin of this [world proceed]**

We have completed the first sutra of Brahma Sutra. It gives introduction of the study. The first sutra indirectly presented anubanda chatustayam also. Now the stage is set for Brahma vicara. Now he enters the sastram proper. The second sutra is the beginning of the sastram. Just as in Gita second chapter alone is Gita sastram.

Here also the second sutra alone sastram begins. It happens to be second Adhikaranam also. There is only one sutram is there. This Adhikaranam is known as janmadi Adhikaranam. This sutra contains the word janmadi. The name of the Adhikaranam is based on the name of sutra. In this sutra or in this Adhikaranam the topic is Brahma laksanam or definition of Brahman. Therefore this sutra is called Brahma laksana sutram. Laksanam means definition.

There is a well-known statement in sastra laksana pranabyam vastu siddhih any object is established only through laksanam and pramanam. Pramanam meaning a means of knowledge and only if the object is established there is a possibility of enquiry of the object. When the object is not established where is question of making an enquiry.

The enquiry presupposes siddhi. Analysis presupposes the existence or knowledge of the vastu. First you require the laksanam of Brahman here. Once you know the laksanam you make the enquiry. Even for that enquiry you require a pramanam. If laksanam is there without pramanam it is useless. If pramanam is there laksanam is useless. Let us take an example. I ask the child whether there is moon in the sky. The child has got the eyes the pramanam.

Suppose the child does not know what the moon is. With the eyes he will see the moon, stars etc. But unless he knows the definition of moon he will look at the sky but will not be able to say whether the moon is there or not. Even with eyes I cannot talk about it. You have laksanam you should have eyes the pramanam. Without knowledge you cannot identify the moon. Definition and pramanam is there, there is the vastu. If moon is established with laksanam and pramanam, you can spend the lifetime on enquiry on the moon. Vicara is possible only when moon is established.

Vicara presupposes siddhi and siddhi presupposes laksanam and pramanam. This is development. Now we make enquiry into Brahman. Brahman and we only if Brahman is available know Brahma Vidya is possible. We require Brahman siddhi for the sake of enquiry. For Brahma siddhi we require Brahma laksanam and Brahma pramanam.

In second sutra Vyasacharya gives Brahma laksanam and in the third sutra Vyasacharya gives pramanam and in the fourth sutra we get Brahma vicara. Therefore the sutra is Brahma laksana sutram. In this context I will briefly mention the discussion Adhi Sankaracharya has at the end of first sutra commentary. It is relevant in this context.

Adhi Sankaracharya asks a question. Vyasacharya starts Brahman enquiry. Are you talking of Brahman unknown or Brahman known? He says either way enquiry is not required. If Brahman is unknown how can you make enquiry, which you don't know. Without knowing Brahman it is not possible to make enquiry. Unknown Brahman cannot be enquired into.

Suppose Brahman is known where is the need for enquiry into Brahman. Then Brahma Sutra need not be studied. This book is not required. Adhi Sankaracharya says Brahman is not unknown and it is known through Veda pramana. That is why word Brahman is familiar who are conversant with Vedas. If Vedas are not there you cannot talk about Brahman at all.

Adhi Sankaracharya says when vaidhika studies Veda he comes to know something called Brahman. Then he says the very word Brahman indicates the existence of a thing or an entity. The very word tells me that it is big infinitely. The word is derived from the word 'brih'. The word 'brih' means big. The word big is relative word and the meaning vary from situation to situation. Big mountain means it is very big. Also length must miles miles. A few miles of height is also seen. Suppose I say big mosquito in my net. Certainly it is not as big as mountain.

When a person says book is big it is different. The bigness is based on the noun. The adjective or dimension of adjective depends upon the type of noun. The upanisad uses the big not as an adjective but as the noun itself; Brahman is 'The Big'. There is no noun to condition bigness; because here big is used as noun Brahman. Since there is no noun to condition the bigness it is unconditionally big which means infinite. Existence is not as an adjective but as noun Brahman.

Adjectives are converted into noun in the scriptures. Similarly conscious we use adjective but in Vedanta it is Consciousness. Therefore Adhi Sankaracharya says at the end of first sutra I come to know there is infinitely big entity called Brahman. I doubt the very existence of the entity because I have never experienced such a big entity, which is infinite. So I get the doubt regarding its existence.

Scriptures say that Brahman is Atma and you 'yourself'. Since Brahman is I the self I should not doubt the Brahman existence and doubting existence of Brahman means I doubt the existence of my own self. We can never have doubt regarding my existence. Doubt presupposes my existence. Doubt cannot exist without doubter. Nobody says that I am not there. So there is no doubt regarding the existence of my 'self' that self is Brahman.

Such a Brahman I come to know through Veda pramanam. The enquiry is about known Brahman only. Purva Pakshi asks why should you make an enquiry. If you say Brahman is Atman and is very big then why enquiry. Adhi Sankaracharya says sastra says there is Brahman and that Brahman is Atma and my problem is what is that Atma and who am I is not clear. I don't know the clear knowledge of myself. It is because different philosophers have got different contention regarding 'the I', the self.

Carvaka says I am the body. He says who has seen the Sookshma Sariram. He says the mind is electric phenomenon of the brain and it is not the substance. Therefore what is thought what is thinking etc., are the brain's electric phenomenon is the argument of carvaka philosopher. You complicate by introducing Sookshma Sariram of which nobody knows. Individual is the body. Carvaka says that I am the body. Some others say sense organs are the Atma. Some say mind is the Atma. Some say buddhi is Atma.

Naiyayika says there is self, which is beyond mind, and it is Atma. Every individual has one Atma. So every one has one Atma each. Why Advaidins talk of one Atma. Thus they talk about many Atma and each Atma is infinite in size. Aneka vibu Atmanah. That Atma is karta bokta ca. All deal with who am I.

Then Samkya and yoga says there are many Atma but they say Atma is not karta but they are bokta. Body is karta and mind is karta but Atma will enjoy. It is like husband and wife and wife is the body and mind and Atma is husband. Whoever eats without cooking is Atma. Of course finally there is Vedanta Atma, which is real one that is Atma ekah sarvagatah. Regarding Atma there are so many confusions and therefore Adhi Sankaracharya concludes enquiry is required. Brahman is neither it is clearly known nor clearly unknown but it is unclearly known.

Abasa jnanam vartate. Abasa jnanam means partial knowledge or unclear knowledge or paroksa jnanam. Therefore Brahman being unclearly known Brahma Vidya is required to convert unclear knowledge into clear knowledge. There Adhi Sankaracharya shows there is pramana for Brahman and there is Veda pramanam is there. There is laksanam also. Now we will go to one more topics.

I give the general analysis for the second sutra. The laksanam or definition is of two types. One is called svarupa laksanam. The other is called tatastha laksanam. When an object is defined through intrinsic feature it is called svarupa laksanam. When an object is defined through incidental feature temporary feature, which is not intrinsic to object then it is called tatastha laksanam. Tatastha means banks of river. Sthah means remaining.

Tatastha means that which is not part of the river, or that which is not inside the river, but it relates to the one that is away from or aloof from the river. Here tatastha means something that is not intrinsic but that one which is aloof. One lokaik example that they give is that moon is that object most luminous in the night sky. That which is brightest in the sky is the moon. I use this definition for the moon. So many luminaries are there in the sky. The brightness of the moon I have defined the moon. Brightness of the moon is intrinsic feature of the moon because whenever I experience the moon in the sky so it is intrinsic.

In sastra when you say Brahman is jnanam that jnanam is intrinsic feature of Brahman so it is svarupa laksanam of Brahman. 'Sat' Brahman is svarupa laksanam of Brahman anandam Brahman is svarupa laksanam of Brahman. Therefore what is svarupa laksanam. Svarupa laksanam is that intrinsic feature of an object, which defines an object. I will give you an example for tatastha laksanam.

When you show Deva Dutta graham. Somebody wants to know the house of Deva Dutta. You can define by telling the features of the house. If you tell the intrinsic features it is svarupa laksanam. I see the crow is sitting on Deva Dutta's house and I have defined his house as the one in which the crow is sitting. Crow is incidental feature of the house. When

the crow goes away it will not be Deva Dutta's house. If the crow shifts that house will become Deva Dutta's house. In other words wherever in whichever house there is crow that house will become Deva Dutta's house. The crow is tata sitta of the house or svarupam of the house. The worldly example is kakavat graham Deva dutta graham.

Tatastha laksanam of Brahman is jagat karanam Brahman. Brahman is that which is cause of the universe. You should know it is tatastha laksanam or svarupa laksanam. Whether world is intrinsic feature or incidental feature of Brahman. Jnana anantaram sarvata nasti therefore it is tatastha laksanam of Brahman. Second sutra presents tatastha laksanam of Brahman. Brahma tatastha laksanam sutram is the second sutra.

The general meaning of the sutra is this. This sutra is grammatically incomplete. We supply two words to this sutram. We have to supply the missing word to complete the sutra grammatically. Tad Brahma two words we have to supply. *Janmadi asya yatha tad Brahma bhavati*. Brahman is that from which origin etc., of the world takes place. Final definition sristi sthithi karanam Brahman and Brahman is the origination, existence and destruction takes place. Details in the next class.

## BRAHMA SUTRA

Class 18

### Sutra 2 part 1 adhyaya 1 [Janmadyadhikaranam Topic 2] contd.

#### Definition of Brahman

*Janmadi; asya yatha*

We now analyse the second sutra. This sutra gives Brahman laksanam. To be specific we give the tatastha laksanam of Brahma. I gave you the general meaning of this sutra.

Janmadi means janma etc., etc., mean sristi sthithi laya the origin etc., which includes the existence and resolution. The word asya means 'of this'. He uses a pronoun. Asya means asya jagatah of this world. From which cause tad Brahma is our analysis. Final meaning is the cause from that causes the origin of the universe takes place. In simple language it is jagat sristi sthithi laya karanam Brahma. This is the general meaning of the whole sutra.

Before going to the word analysis two more points in general analysis itself. It is a nyaya grandha. That is every sutram presents a logical statement. This sutra also presents Nyaya and anumana vakyam. Brahma asti. Laksana tatvad dharmavad. Brahman exists because there is laksanam for Brahman just as dharma. Once we prove existence of Brahman then we can do enquiry of Brahman. Second sutra talks about Brahma siddhi. This is Nyaya vakyam.

Vishya vakyam of this sutra we will discuss now. Brahma Sutra is not independent work of Vyasacharya. This is Veda anta vakyani. No idea is Vyasacharya. He only analyse the Veda vakyam. He does not explicitly state in his sutra. Adhi Sankaracharya gives vishaya vakyam wherever it is there. Here the statement occurring in Brigu valli is kept in mind. Brigu valli 1<sup>st</sup> mantra is defined here. Refer Taittiriya upanisad Brigu Valli 3.i. *Yato va imani bhutani jayante, yen jatani jivanti, yat-prayantya-bhisamvisanti, tad vijijnasasya, tad brahmeti, sa tapo; tapyata, sa tapas taptva* the meaning of this mantra is **That, verily, from which these beings are born, That, by which, when born they live, That into which, departing, they enter, That, seek to know, That is Brahman.**

This brigu valli vakyam is Brahma tatastha laksanam vakyam. Brahman is sristi karanam Brahma is sthithi karanam and Brahma is laya karanam. So says the above mantra. This is the vishaya vakyam of the second sutra.

Now I will see the word analysis of this sutra. Janmadi consist of two words janma and adhi. Adhi Sankaracharya points out etc., includes two more phenomena sristi and laya of course of this universe. One Purva Paksi comes and gives another suggestion.

Adhi Sankaracharya has interpreted janmadi as sristi sthithi laya three phenomena to the universe. It refers to janmadi triyam sristi sthithi laya. Purva Paksi says that there is another book named as Niruttam, which is written by Yaska Muni. In that nirutta work Yaska points out that every object in the creation goes through sixfold phenomenon that he calls shad bhava vikara. Bhava means padarthah. Vikara means change. Six conditions or states or modifications take place.

After mentioning the six vikaras he enumerates them. He starts the enumeration first with asti [potential existence], jayate [is born], vardhate [grows] viparinamate [matures] apaksiyate [decays] and ends with vinasyati [dies]. This refers to Sthoola Sariram. First one is janma. From nirutta we come to know every object in the creation goes through janmadi shadkam.

Therefore the suggestion of Purva Paksi is in sutra when Vyasacharya writes janmadi Adhi Sankaracharya takes it as janmadi triyam Purva Paksi interprets as shatkam. Therefore Brahman is janmadi Shadka karanam not triya karanam. Adhi Sankaracharya gives two answers for that. By studying the Mundakopanisad I discussed the word Niruttam. Niruttam is sastram derivation of Vedic words.

Yaska writes the famous niruttam. Nirutta is pouruseya grandha. If he discusses modification, he can talk about objects within the creation alone. He cannot discuss the whole universe for human intellect does not have the access to the whole creation. He cannot talk about Akasa, vayu etc., utpatti at all and therefore his discussion is confined to bouthika Prapancha the object obtaining within the universe. Therefore janmadi shadkam he talks about only Boudhika Prapancha objects within the creation.

Here we discuss about the whole cosmos, which includes about Boudhika, bhuta desa kala utpatti. And therefore sicne context is samasti Prapancha since yaska deals with part of universe; yaska's discussion is irrelevant here in discussion of jagat karana Brahma. Why do you say yaska's work is pouruseya grandha?

Why cannot you say it si based on Smriti grandha. If nirutta is Smriti grandha the advantage is even though it is pouruseyam it gets the validity of apouruseya grandha for it is not intellectual knowledge but it is based on sruti pramanam.

All Smriti grandhas are pouruseya grandha but enjoys apouruseya grandha because they are based on sruti. So Purva Paksi says janmadi shatkam can be taken as dealing with entire cosmos. Even though he cannot discuss this, his discussion is based on sruti pramanam so yaska's views are relevant to us. What is the advantage? The meaning of janmadi will be janmadi shadkam instead of janmadi triyam. You say yaska vakyam is relevant because it has the borrowed validity.

Do you want yaska vakyam has borrowed validity but I have discussed based on original intrinsic validity. I am commenting based on sruti vakyam which has intrinsic validity but you ask me on yaska vakyam based on borrowed validity. Which one is better? Do you want to depend upon yaska who depends upon sruti? I depend directly on sruti and sruti talks about janmadi triyam only and not janmadi shadkam. Answer is yaska deasls with Boudhika Prapancha and we deal with bhuta Boudhika Prapancha and there we have to take the sruti pramana.

Second answer is simple and Vyasacharya has written the Brahma sutra to analyse the Brahman and Vedanta vakyams. That is why it is called Vedanta sutrani and it is also called Uttara Mimamsa sutrani. When Vyasa uses the word janmadi you should take the Vedanta vakyam not Yaskas grandha. Therefore also we should give the meaning with Vedanta vakyam and Vedanta vakyam deals with sristi sthithi laya of jagat only. Shat vikara shold be included in the three.

Therefore the primary meaning of the janmadi is sristi sthithi laya but by implication we may include other three also. With this first Purva Pakshi is answered.

Now comes the second Purva Pakshi. You say in Vedanta and sastra sristi sthithi laya are a cyclic process. You do not accept a linear creation. If this sristi is because of Purva karma and its Purva karma is because of its Purva karma then you will ask how the first Purva karma came. We circumvent that we say it is a cyclic process. All indicates that sristi sthithi laya is a cyclic process.

Having quoted our statement he says if sristi sthithi laya is a cyclic process you cannot say which one is beginning. The beginning point is an end point also. This being so Purva Pakshi asks how did Vyasacharya says janma adhi adhya jagatah. The word 'adhi' means beginning with. Janma adhi means begin with. So the translation would be three phenomena of the world beginning with janma and Purva Pakshi asks how it is taken as beginning with janma and why cannot we take it, as beginning with laya being the entire thing is a cyclic process.

Adhi Sankaracharya gives two answers. One answer is even though it is a cyclic process and therefore we cannot talk about beginning in these phenomena our comprehension goes in a particular order. In our understanding there is an order. If I have to talk about destruction of something the topic of death presupposes the existence of the thing. An existing thing alone can have resolution. If I have to talk about the existence of something the existence presupposes the origin of the thing. Understanding of laya presupposes the concept of sthithi and the understanding of sthithi presupposes the concept of sristi.

Once the child is born you can talk about existence and once existence is there you can talk about laya. The understanding requires this logical sequence. Born sristi is sthithi gone laya. Vyasacharya presents Pratipatti krama. This is the first answer. Janma adhi you should say not sthithi adhi and laya adhi.

Second answer is after all Vyasacharya writes a sutra keeping sruti vakyam in mind. His aim analysis is the upanisad vakyam. When he writes sutra he keeps sruti vakyam. Even though there is no order sruti gives a particular order. Therefore choice of the order is not of Vyasacharya and the choice of the order is that of sruti. If you have objection to the order you should ask Isvara who is the author of the srutis.

Not only Vyasacharya says and you will find anywhere also the phenomena that maintain this order. Gita says in sloka 11.2 *Bhavapyayau bhutanam srutau vistaraso maya tvattah kamalapatraksa mahatmyam api ca vyayam* Arjuna says that I have heard from you in detail about the origin and dissolution of beings and your immutable glory. In Gita sristi sthithi laya order is given. Bhagavatam deals with Brahman and Dharma. Therefore, all sruti Smriti Ithikasa and grandha talk about janmadi alone.

Now we comes to the word asya a simple pronoun which means 'of this' sristi sthithi laya of this. Pronoun can stand for any noun. We should include all nouns for this pronoun. Vyasacharya has used 'this' pronoun 'this' and not 'that'. According to pronoun 'this' for something 'that' is available in front and if it is not accessible we will use the pronoun 'that'. Final meaning is asya means pratyaksa Prapancha.

The sixth case of this should be connected with sristi sthithi laya. The origin etc., of this visible objectifiable universe takes place of which cause that cause is Brahma. With this the

meaning of the word 'asya' we have seen. Yathah means yasmad karanad. Of which cause all these takes place. All these mean pratyaksa Prapancha sristi sthithi laya.

Which karanam sruti refer to. The karnam is twofold. Niomitta and upadana karanam. The two are intelligent cause and material cause. Both are required for any thing to take place. Since Vyasacharya talks of sristi sthithi laya the karanam here refers to upadana karanam. The reason is that nimitta karanam or intelligent cause is for origination and it si not responsible for sristi and sthithi.

Nimitta karanam is defined as sristi karanam material cause is defined as sristi sthithi laya karanam. Details in the next class.

## BRAHMA SUTRA

Class 19

### **Sutra 2 part 1 adhyaya 1 [Janmadyadhikaranam Topic 2] contd.**

Definition of Brahman.

*Janmadi; asya yatha*

Now we do the word analysis of *janmadi asya yatha* instead of using the word *laya* he uses the word *janma sthithi bangam*. The word *asya* means of this and this refers to *pratyaksa Prapancha*. Or the sake of convenience we should take it *asya janmadi pratyaksa Prapanchasya sristi sthithi laya*. We analyse the word *yatha*. *Yatha* means from which cause that is *Brahma*.

*Brahma* is that from which takes place the *sristi* of whole creation naturally the question comes whether *Brahma* is *nimitta* or *upadana karanam*. In the last class I pointed out between the two. *Sristi matra karanam* is *nimitta karanam* and *upadana karanam* is *sristi sthithi laya karanam*. Pot maker creates the pot and he is not responsible for the maintenance of the pot.. Out of the material alone the product comes and because of the product alone material exists and unto the product alone the material resolves. We talk about *sristi sthithi laya karanam*. Therefore primarily *yathah* conveys the *upadana karanam*.

Thus the primary maning o *yathah* is *upadana karanam*. On enquiry we find *jagat* cannot have two *karanam*. In the case of worldly object we can have separate *nimitta karanam* and separate *upadana karanam* but we talk about the cause of the entire universe, which includes *desa* and *kala*. So we talk about *karanam*, which is above *desa* and *kala*. If we talk about that cause which beyond *desa kala* that *karanam* has to be one only. If it has to be one then we can say it should itself serve as *upadana karanam* as there is no second thing it itself is the *nimitta karanam* also.

Therefore the second meaning of the word *yathah* means *nimitta karanam* primary meaning is *upadana karanam*. Therefore the final meaning of *yathah* is *abinna nimitta upadana karanad*. That from which the world has been created is *Brahman*. In the definition *Brahman* ius that which *sristi sthithi laya* takes place. *Upanisad* uses the pronoun that from which but it does not say from which. That is the homework for *Brigu* it is said in *Taittiriya upanisad*. *Varuna* did not give complete teaching and he said that x from which *sristi sthithi laya* takes place is *Brahman*. He gave only *tatastha laksanam* and he did not give *svarupa laksanam*. That was left for *sishya* to enquire and find out. Here x is substituted by *annam*, *prana*, *vijnana* and finally he discovered *ananda* is *Brahman*.

*Taittiriya upanisad 2.iv.1* reads as *anando brahmeti vyajanat, anandad dhyeva khalvimani bhutani jayante, anandena jatani jivanti anandam prayanty abhisam visantiti sisa bhargavi varuni vidya parame vyoman pratisthita sa ya evam Veda pratitisthati, annavan annado bhavati, mahan bhavati prajaya pasubhir Brahma varcasena mahan kirtya* it is because of *ananda svarupam Brahma* because of which *sristi sthithi laya* takes place. The word *yathah* means *ananda svarua Brahma*. *Jagat karanam* is *tatastha laksanam Brahmam*. Therefore word *yathah* means *ananda svarupam*.

First we said yatha is upadana karanam and yathah means nimitta karanam and now we say it is ananda svarupam. The word yatha reveals both tatastha laksanam and svarupa laksanam of Brahman. Primarily it is tatastha laksanam and indirectly it is svarupa laksanam also. So this sutra is called tatastha laksana sutra. With this the analysis of the word athah is over.

Now two more words left which we have supplied tad Brahma. Adhi Sankaracharya adds one more feature of Brahma. We have seen three features. Adhi Sankaracharya arrives at one more features. It is based on the idea once we know the intelligent cause and the amount of intelligence can be inferred from the nature of the product. Greater the product is more intelligent one must be the greater.

Similarly from the nature of sishyas the capacity of the Guru is assessed. Therefore this is a general thing as the product is so much is the intelligence of the product. As you see the vibhuti of the world we can definitely conclude that Brahman the jagat karanam is sarvajnana and Sarva Saktiman. When Brahman is seen as karanam he gets the word Isvara. Therefore` we are in this context indiscriminately use the word Brahman and Isvara because we discuss the karanatvam. Adhi Sankaracharya talks about the glory of the universe by giving four adjectives.

Brahman has created well-designed universe. You cannot say it is some simple evolution has taken place. Here it is quoted that the entire Shakespeare work is not the creation of accident. All the English alphabets have not been thrown into a printing press and the words got arranged in a big bang and the entire work of Shakespeare got written of 'themselves'. How ridiculous it looks and how one will say it is the genius of Shakespeare who has written the whole work. It is said to be a grand design. When you are not be able to accept the ordinary work of a human being Shakespeare how can you say the whole world has accidentally taken place. Hence it has Chetana karta and intelligent person is required to create the universe. This universe has countless jivas who are kartas and boktas. Jivas falls within the creation, as product and therefore the producer must be a non-jiva. Therefore jiva binnatvam is shown.

Not only he is jivah binna but he is omniscient. We find that there is any accident and we see it is an incident with specific place and specific reason. It is cosmos and it si not chaos. Every event is specific desa, specific kala and specific reason is there. We do not know the reason. Countless number of jivas and every jiva experiences desa kala nimitta and there are countless jivas going through countless experiences and imagine the amount of knowledge require to run the mortal show of jiva, desa, kala and it require infinite intelligence and sarvajnatvam.

There are certain instances common to the jivas and Baghavan ahs to design in such a way one event to give punya phalam to one jivah and papa phalam to another jiva. The class itself is gone to one and not understandable to the other. So every action is good to one and bad to the other. That is how the Isvara designs the whole process. Class event remaining the same Baghavan makes it in such a way that for one person it is hood and for the other it is bad.

From one standpoint it is punyam and from another standpoint it is papam. One incident gives one to punyam and to another papam. Every event is designed according to karma phalam of countless jivas. Lord has to take into account of the other creations like animals and plants also. The whole creation comes under Hs regime. This can be done by sarvajnah only.

Then Adhi Sankaracharya uses the fourth adjective. A scientist can know how the brain functions. But he cannot create a brain. Therefore even if we know the functioning of many things in creation we have the knowledge of it but we cannot create it. We cannot reproduce any of the god's creation. Not only the Lord is omniscient but also Lord is omnipotent and He has enough power to create the whole world. The ants we can see and destroy but we cannot produce the ant.

Similarly we talk of producing rain. Then they write when there are clouds we will have rains. We admire scientist but we have understand the limitations of the scientists. Many things, inconceivable Baghavan has implemented it and hence He is Sarva Saktiman Sarva karanatvad vyatirekena gadavad. He is Sarva karanatvad vyatirekena gadavad. Sarvasya karta Sarvajna gadavad. He is Sarva Saktiman. This is the final meaning of the sutra.

Now he enters a discussion by introducing a Purva Pakshi. He is Naiyayika Purva Pakshi. Since this discussion is useful I will discuss it. First sutra we said we have to make Brahman enquiry. Then, we said that enquiry is possible only when we establish Brahman is there. Something is established only when we give its laksanam. The second sutra gives Brahma laksanam. The third sutra presents Brahma pramana the means of knowing. The pramanam for Brahman and jagat karanam is sastram. This is what we said earlier.

Naiyayika gives a suggestion, which we will refute later. He says why cannot we take the second sutra as pramanam for Brahman. It does not deal with laksanam. He explains that further. He says the second sutra defines Brahman or Isvara as jagat karanam. It is very simple. If dasarata is Ramas father, Rama is Dasaratha's son. Jagat karyam Isvara karanam. Since Isvara is karanam, world is karyam. The invisible Isvara can be inferred from the visible world. The invisible father who is in US can be inferred from the son. Invisible fire can be inferred from visible smoke. So invisible karana Isvara can be inferred from karya Prapancha.

The pramanam for Isvara is anumanam. This anumanam is popularly known in Tarka sastra as karya linga anumanam. The inference of karanam from karyam is karya linga anumanam. So he says sastram is not require for proving Isvara and logic can prove Isvara. The final idea is that Isvara can be established through reasoning. What are we going to do? We will say no. It is not possible. Isvara cannot be established through logic without the help of sastram. Isvara this is proved through sastram. There is radical difference between Vedantins and tarkikas. They say logic is necessary to prove Isvara but we say sastram is enough to prove the existence of Isvara.

## BRAHMA SUTRA

Class 20

### **Sutra 2 part 1 adhyaya 1 [Janmadyadhikaranam Topic 2] contd.**

#### **Definition of Brahman**

*Janmadi; asya yatha*

After commenting upon all the words of the second sutra Adhi Sankaracharya discusses two general points, which are very important/. I said in the introduction Brahma is established and pramanam. Anything is established only when it has specific definition and revealing pramanam. Therefore if Brahma vicara is to be done we have to establish Brahma with proper laksanam and proper pramanam.

Third sutra presents the pramana. Brahma laksanam as presented by the second sutra is jagat karanam Brahma; Brahma pramanam as presented by third sutra is sastram that is Brahma pramanam. Keeping this background we have to commence our discussion.

Now Adhi Sankaracharya raises a Purva Paksi raised by Naiyayika a Nyaya philosopher. He asks that you take second sastra as Brahma laksanam and why cannot you take this sutra as Brahma pramana also. He says you define Brahman as jagat karanam. Naiyayika does not use Brahman but he uses the word Isvara. He argues if Isvara is defined as jagat karanam and world is Isvara's karyam a product you can know Isvara through inference. That inference alone is famous as karya linga anumanam.

Karya linga anumanam inference of karanam from the karyam is karya linga anumanam. Whenever I see a person even though I don't see his parents I know he/she has got parents. Existence of parents is known through inference. If a product called product there must be a producer whose existence I can know from the parents. From the very existence of the world, I can infer the sristi karta in the form of Brahman.

Isvara can be established from the product. It is deduced through the method of inference. For establishing Brahma anumanam is sufficient and sastram is not required. This is Purva Paksi's argument. Adhi Sankaracharya says it is not so. Second sutra does not need anumanam pramanam for Isvara siddhi. Adhi Sankaracharya gives a simple reason for that. The simple reason given by Adhi Sankaracharya is that if the second sutra is providing anumana pramana for Brahman or Isvara Brahma Sutra cannot be called Vedanta sutra at all.

Vyasacharya does not propound a philosophy by using his reasoning power. All the other darsanam have propounded a philosophy by using the reasoning power. Samkya is anumanam based; yoga is anumanam based vysesika is anumanam based. That is Adhi Sankaracharya calls them as Tarkika based. Nastika do not accept sastra pramana all others accept sastra pramanam. They give a step motherly treatment to sastra pramana. He uses reasoning only to derive a philosophy from the Veda. It is not to propound a philosophy but to understand and to derive a cogent systematic philosophy out of the upanisad.

Every sutra has got Vedanta vakyam for analysis. Therefore if you say second sutra provides anumanam pramana for establishing Isvara or Brahman and the importance will go to anumanam and it will not be sastra based system. If we do so we will defeat the intention of Vyasacharya. He says every sutram provides an anumanam all right but this anumanam is not independent anumanam and this is used to bring out the Vedantic teaching in a cogent form. It is like a thread used to make a garland of sastra Vedanta darsanam made of the flowers of Vedanta vakyas.

Tarka is only hiding behind the flowers to keep them in orderly form. It is secondary thread. Therefore no sutra provides anumanam as a main thing. Therefore second sutra is independent vakyam. Therefore second sutra is lakshana sutra and not pramana sutra.

Sub-commentators of this Brahma Sutra go further and they bring out some more ideas. Naiyayika says second sutra says that anumanam is pramanam to establish Isvara. From this it is clear Naiyayika believes that Isvara can be logically established. Vedantins is against this view. Isvara can be established or revealed through sastra alone. Isvara, which is revealed through sastra, can be assimilated by logic.

When Naiyayika logically establishes Isvara Vedantins prove that logic is defective, when you see Vedantins argument it will look Vedantins is nastika. It will look as if we join nastika. We only argue Isvara is only revealed through sastra alone. We don't use logic to establish logic independently.

First we have to Naiyayika establishes logically. Thereafter wards we have to point out defects in their logic. Naiyayika is going to establish logically.

Naiyayika arrives at Isvara through three logical statements. All are clean anumanam. Firstly, jagat sakatritam karyatvad gadavad. This is anumanam one. In fact he does not use the word jagat. But he uses a technical word for the same. He says that the world must have a creator. It is because it has an effect and it has a created effect. Take the pot. He uses a Vyapti a generalization.

Whatever a product must have a producer. The world is a karyam and therefore it must have a karta. Through the first step he arrives at is that there is a creator.

Then he gives second anumanam.jagat karta Isvarah. Jiva binnatvesati chetanatvad. Vyatirekena kulalavad. In the first anumanam he said there must be a creator. Now he says the creator must be Isvara alone. It is because I know there is creator and I also know that no jiva has created the world. There is a creator other than jiva. Not only he is other than jiva and he is an intelligent creator. What is the intelligent being other than jiva? Only Isvara can do it. Jagat is other than jiva but is not intelligent.

Second anumanam is jagat karta Isvara unlike a pot maker. Yad jiva binnatved binn Achetanam Isvara. Whatever is Conscious other than jiva is Isvara. Then he gives another reasoning. Isvara sarvajnah. Sarvakartritvad vyatirekena kuallavad. He is omniscient the creator of everything unlike a pot maker. The Vyapti is yatra Sarva kartritvam tatra Sarvajna it vyaptah. Through these inferences Naiyayika logically establishes Sarvajna Isvara also. So they say we don't require Veda for Isvara siddhi. Scientists don't accept sastra. We say that we can establish Isvara through sastra. Naiyayika establish things through reasoning.

Now we want to negate this view. We say all anumanam are defective. First anumanam is world has a creator because it is a product like a pot. Whatever a product there must be a creator. Pot is product and there is a creator. World is a product and there is a creator. In anumana you require a Vyapti and the most important thing is Vyapti jnanam is gained through pratyaksa pramanam.

Vyapti jnanam has to be gathered by anumanam or sastram. Therefore Vyapti you have to prove pratyaksa alone. Mountain has fire because there is smoke wherever there is smoke there is fire. This Vyapti we have done by observation. Wherever there is a product there is a creator. Vyapti arrived at observation is acceptable only when it holds good in all the cases. Also exception should not be there. Then Vyapti will collapse. Suppose someone gives a Vyapti wherever there is fire there will be smoke. Will you accept this Vyapti? No.

There are exceptions because of our own perception. Vyapti has to be proved by perception. Vyapti proved by perception should not have any exception. Vedantins argues you say whatever product there is a creator. It is proved through perception. Vedantins say only in the case of artificial product you are able to prove a creator through perception whereas in the case of any natural product like a tree in a jungle etc., it is a product and can you prove a creator through perception in the case of natural product. Wherever there is a product there is a creator, the Vyapti is not perceptually proved.

Now let us come to the second anumanam. Jagat karta Isvarah. In this Vyapti he is assuming is whatever is conscious being other than jivah is involved that conscious being must be Isvara this is the Vyapti here. This is Naiyayika Vyapti jnanam. That means you talk of conscious being other than jiva. What is the rule and Vyapti jnanam must be gathered by perception alone and how can you talk about conscious being other than jivah because you cannot talk of person without perception other than jivah. Have you seen or perpetually seen Isvara. In the absence of perception of Isvara, this Vyapti is not acceptable for it is defective in the absence of perception of Isvara.

Now comes the third anumanam. Isvarah sarvajnah sarvakartritvad. Isvara is omniscient because he is the creator of everything. To negate this argument we should know some axiom Naiyayika has assumed. Naiyayika says any knowledge is born out of mind. He depends upon perception and anumanam. He has made another statement thoughtlessly. That is all logically derived systems and try to make consistent we will have problem. Science is good because it does not want to discuss Consciousness. Each system do not want to discuss Consciousness.

Similarly Consciousness whether it comes in any form of science each one is not able to make anything about Consciousness. All the darsanam are in problem when it comes to the question of Consciousness. The problem is Isvara is sarvajnah for he has taken away the mind in the case of Isvarah to save him from samsara. Third anumanam is also wrong. Establish Isvara with Sastric anumanam. More in the next class.

## BRAHMA SUTRA

### Class 21

#### **Sutra 2 part 1 adhyaya 1 [Janmadyadhikaranam Topic 2] contd.**

#### **Definition of Brahman**

*Janmadi; asya yatha*

After analyzing the second sutra Adhi Sankaracharya in commentary discusses two important points, which is based on the suggestion of Nyaya philosopher. The suggestion is the second sutra should be taken as pramana surta not only laksana sutra. As pramana sutra it is anumana sutra therefore his contention is Isvara can be proved logic and through different anumanam he arrives at Sarvajna Isvara.

In Vedanta we refute this contention of Naiyayika and points out that anumanam or logic cannot prove Isvara. Our logic is blessed by sastram alone. Sruti samana tarkena Isvara siddhi. Naiyayika contents Isvara siddhi possible with anumanam. Jagat karta Isvarah.

Third anumanam is Isvarah sarvajnah. Vedantins pointed out that in the first anumanam Vyapti is defective and you assume that all product has got creator and all artificial product there is creator and natural product is not perpetually proved and the Vyapti is always proved through perception. In second anumanam also there is defect in Vyapti.

Wherever conscious being involved it must be Isvara. Conscious being, which is other than jiva, creates the earth and then it must be Isvara. You assume there is conscious being other than Isvara and Isvara is not perpetually proved so the vyapti is defective.

Third is Isvara is omniscient being creator of all. Creator of something must be knower of something. Here defect is contradicting his own philosophy. The contradiction is that he has got two axioms, which are mutually contradictory. Any knowledge is born of mind. This is one of the axioms the basic assumption. The second basic assumption is that Isvarah is without Body Mind Complex. So Isvara is mindless.

The mind is part of sariram in Vedantic language Sookshma Sariram. Isvara has no mind and mind alone is creator of knowledge. Isvara cannot be even alpajnah like jivah. You are trying to give him higher status because you want to establish without sastram.

Therefore the defect is self-contradictory. Isvara's omniscience contradicts that knowledge is product of the mind. All the anumanam are defective and we say that Isvara cannot be established by anumanam. Isvara established purely by anumanam can be negated by anumanam. This is the job done by sub commentators. The upanisad tells never go to logic when the truth comes. When this is said we might get into misunderstanding that Tarka is totally useless we may conclude. We ever talk of the defect of Tarka.

Therefore Adhi Sankaracharya says it is not so. He says Tarka is very important in Vedanta. Total rejection is not correct. So sruti says srotavyah mantavyah the word matavyah indicates Tarka is important to understand Brahman. The whole Brahma Sutra is logical analysis of

Brahman said in Upanisads. Use Tarka as subservient means in understanding Vedanta. Use Tarka as a funnel for pouring Vedantic teaching. Our brain is too small therefore we require Tarka funnel to pour the Vedantic knowledge.

There are two types of tarkas one based on sastra and the Kevala or independent Tarka we don't accept.. Some misconceptions are removed by tarka. Adhi Sankaracharya compares or contrast Karma Kanda and jnana kanda. In Karma Kanda Tarka is not very important and it has limited role because in Karma Kanda the procedures of doing are important. We should have sufficient knowledge how to perform the ritual.

In Karma Kanda knowledge does not produce result and after knowledge performance is required. The action is required. I need not have knowledge but I should do. Knowing has indirect role in Karma Kanda and doing has direct role in Karma Kanda. In Karma Kanda benefit is a product to be accomplished in time. Keep on doing and one day the benefit will be enjoyed. It deals with something to be produced in future and doing is important and knowing is not so important.

By the study of Vedanta I know the procedure and after study I have to practise. This is not so. Here alone we commit a mistake Vedanta does not deal with a future event created or processed. We don't lean any technique through Vedanta no procedure we learn no method we learn we don't want to implement anything what Vedanta deals is it deals with a fact an accomplished fact of knowing Brahma. No moksa or event happens. No event no creation. An accomplished fact is moksa, which you have to understand.

The whole Vedanta process is process of understanding only. There is no need of any action. Pranayama learning is not sufficient but you have to implement that means knowledge should be followed by implementation for the learning to be effective e.g. Pranayama. In Vedanta we don't learn anything to be implemented.

Moksa is not to be accomplished because it is already an accomplished fact. There is nothing to be implemented. There is no need of any action to gain moksa once we own up with Brahman. In Vedanta understanding is an end in itself. Whatever obstacle in understanding should be knocked of. There is nothing to implement in Vedanta. One of the main obstructions comes from intellect in the form of samsaya or in the form of doubt. Therefore Tarka or mananam is very important not an independent Tarka but to assimilate the Vedantic teaching.

Never compare Vedanta to Karma Kanda. There is no implementation in Vedanta. Sruti is important Yukti is important anubhava is important in Vedanta to understand and once understanding is over there is nothing to be performed. The entire samsara is disturbance inadequacy etc. Moksa is freedom from samsara. If samsara is anubhava moksa is santi from sense of limitation.

Samsaratvam is also an anubhava that is the smallness limitation etc. The understanding is complete when the viparida Bhavana goes away. In Karma Kanda swarga anubhava is eternal hope. One has to wait for death to gain swarga loka. This is the plight of Karma Kandist. In Vedanta sruti Yukti anubhava pramana is there. All the benefits of Karma Kanda is gained only after death while the benefit of jnanam is gained when alive here and now. Adhi Sankaracharya establishes Sruti sammada Tarka in the second sutra.

Now I will give the conclusion of the second sutra wherein also we have to discuss many important points. First is the technical presentation of this topic. First you should know all about Adhikaranam. Five factors are there in technical presentation of Adhikaranam.

First step is subject matter; second is doubt, third view of Purva Paksi fourth our conclusion fifth is connection between previous and present topic. Here subject is Brahma laksanam. Definition of Brahma; doubt is astiva or nastiva. Is there definition or no definition? Purva Paksi takes wrong step. He says there is definition of Brahma. He says definition is given only through unique feature of the object. Therefore definition is defined as unique feature. Purva Paksi says definition has to be through unique feature and you say Brahman is featureless and how can the featureless Brahman have unique feature. Because it is said Brahman is attributeless. Upanisad says Brahman is undefinable. So Brahma laksanam nasti.

Siddhanta says Brahma laksanam asti. We say even though Brahma is really featureless we can define Brahman through superimposed/or mithya feature we can define Brahman. It is like defining rope of our snake. Even though rope is snakeless there is superimposed feature of snake I can define rope as adhistanam. Through superimposed universe Brahma can be defined as jagat karanam.

Fifth step is connection between this and previous topic. The previous topic is one should enquire Brahma. Here it is Brahma laksanam jagat karanam karanatvam. The connection is seen to be akseba sangathih. It is the first topic leads to an objection and that is answered in the second topic. What is the objection in the first topic? You enquire Brahman? One says Brahma you have not proved Brahman existence through laksanam or pramana. Without proving existence of Brahma how can you talk of enquiry of Brahman. In second topic we prove the existence of Brahman through laksanam. This connection is called akseba sangathih.

## BRAHMA SUTRA

Class 22

### **Sutra 2 part 1 adhyaya 1 [Janmadyadhikaranam Topic 2] contd.**

#### **Definition of Brahman**

*Janmad i; asya yatha*

We conclude the second sutra, which happens to be second Andhakaranam. This is a significant sutra and the foundation sutra of entire Vedanta sastam. I will now discuss some of the significant points of the sutra. This gives the definition of Brahman.

Brahman is the material cause of creation. This definition is called tatastha laksanam or indirect laksanam and not svarupa laksanam or direct laksanam. When you define a thing in terms of its own innate features it is called svarupa laksanam. But when define because of some reason, you define the thing through some extraneous features the hosue of Deva Dutta over which a crow is seated [crow is not innate feature of the house] here the house is defined through extrinsic feature is tatastha laksanam. Brahma also we have svarupa laksanam and tatastha laksanam.

The famous svarupa laksanam of Brahma is sathyam jnanam; jnandam Brahman the definition through intrinsic feature of Brahman, it is svarupa laksanam. Tatastha laksanam of Brahma is jagat adhistanam Brahman. In this second definition Brahman is revealed through jagat and you take the world feature as the feature to define Brahman. World is not intrinsic nature of Brahman.

If Brahman is compared to house world is like the crow. The world is reduced to crow. Just as crow disappears the crow also disappears in the Pralaya kale as also in Sushupti kalam also world disappears. Jagat karanam Brahma is tatastha laksanam, which revealed through sastram. The question is that may arise why Vyasacharya chose tatastha laksanam to define Brahman when both tatastha laksanam and svarupa laksanam were available before him.

The reason is this that in the case of Brahman tatastha laksanam is easier to understand than svarupa laksanam. It is because in tatastha laksanam we take the external features of a thing, which are clearly available and visible to assess the thing. Through we go from the known to the unknown. Through the known world to unknown Brahman is easier to understand. Jnanam anandam etc., is not easily understandable as they are subjective.

Jnanam is nirvishesha Chaitanyam and I do not know jnanam itself. I want to know Brahman. I chose to know jnanam to know Brahman. Brahman is attribute-less and one unknown to another unknown is very difficult to follow. What is Brahman and it is pure Consciousness. Definition of jnanam itself required tatastha laksanam.

Through vritti jnanam alone I can know svarupa laksanam. Svarupa laksanam jnanam required tatastha laksanam to know jnanam. Sathyam jnanam anandam is useful only after knowing tatastha laksanam. In the case of house svarupa laksanam is ok colour is visible area

is experienceable. In the case of Brahman sathyam is known jnanam is unknown and anandam is unknown hence Vyasacharya chose tatastha laksanam to define Brahman.

Here he has defined as jagat upadana karanam. Brahman is material cause of the jagat. In upanisad often we say Brahman is material cause of creation. Here Prakriti/maya is presented as material cause of the creation.

Svetasvatara upanisad mantra 4.10 reads as *mayam tu prakritim vidhi mayinam tu mahesvaram tasyavayava phutais tu vyaplam Sarvam idam jagat* that means know that prakriti is maya and the wielder of maya is the Great Lord. That whole world is pervaded by beings that are parts of Him. In Mahanarayana upanisad also Prakriti said to be the material cause. It is a famous quotation, which is going to be analysed later.

In 13<sup>th</sup> chapter sloka 19 of Gita reads *prakritm purusam caiva viddhy anadi ubhav api vikaramsca gunams caiva vidhi prakritisambhavan* it says the prakriti is said to be the cause of production of physical body and organs of perception and action; the purusa or the Consciousness is said to be cause of experiencing the pleasure and pains. Here also it says Prakriti is the material cause of creation. In Tattva Bodha also there is a mention of the maya is the material cause of creation.

Sometimes upanisad says Brahman is the material cause and sometimes upanisad says purusa is material cause of Brahma. If Brahman is material cause it is Chetanam and it Prakriti is material cause it is Achetanam. Vyasacharya has chosen to say that Brahman the Chetanam is material cause of Achetana creation. This cause has got lot of significance.

Between Chetanam or purusa or Achetanam Prakriti or maya Vyasacharya has chosen the former. Why he chose, I will give five reasons.

First reason is that Vyasacharya wants to clearly differentiate Vedantic teaching from Samkya philosophy. In fact in most of the Brahma Sutra Vyasacharya wants to criticize Samkya and separate himself from samkya. Predominantly Vyasacharya's attack has been against Samkya. Vyasacharya has to differentiate from Samkya for many words are common between Samkya and Veda. They also use the word purusah.

In Vedanta we use the word purusa. In Kathopanisad also purusa is used to denote Brahman. It is defined as asanga Chaitanya Atma. Prakriti also is used in Samkya and Vedanta. In both Prakriti is changing and the very word samkya is used to teach Vedantic teaching. In Gita 2<sup>nd</sup> chapter is called Samkya Yoga. In Bhagavatam Samkya Kapila Rishi gives his teaching. Vyasacharya wanted to show that Vedanta is different from Samkya. Samkya says Prakriti is material cause of the universe and Vyasacharya says Chetanam Brahman is material cause of the universe.

Second reason is that in all system of philosophies all talk of from where the world originated. Even scientists are interested to know about the creation. They want to arrive at the basic stuff of the matter. Even the energies are many.

As long as plurality they are not able to arrive at the basic stuff. Most of the philosophies arrive at the cause and all of them say that material cause is the material or matter principle only. For Samkya Achetana Prakriti is the material cause. If you take Nyaya and vaishesika the basic material cause is atom or paramanu vadah. They say during Pralayam only atom existed

and at appropriate time all atoms built up to get everything. They say the paramanus also Achetanam. Their theory is Achetana karana vada. If we go to nastika system also take to Achetana karya vada. They talk about asti kayas etc. All are reduced to Achetana matter is basic cause of creation.

Modern science also assumes matter alone is fundamental of all creation. They say Consciousness has originated recently and that came out of the matter. They say Consciousness is parallel reality equal to the matter. Or they say Consciousness is product of matter. Either Consciousness occupies equal importance of lesser importance.

Some say even Atma is one type of matter like any other matter. He talks of nine type of matter and in that nine types one is Atma. If Atma is matter it is Achetanam. Consciousness comes and goes in Atma. When Consciousness comes Atma becomes sentient and when Consciousness goes it becomes insentient. Vedantins teaches Consciousness is neither equal to matter nor subservient to matter but superior to the matter. Uniqueness of Vedanta is Chetana karana vada. This means Consciousness is the basic cause. It means it is the basic stuff or content. Chetana karana vada means Consciousness is the stuff of the universe.

Second sutra presents Chetana karana vada and Vyasacharya distinguishes Vedanta from all other philosophies. It is the second reason Vyasacharya gives.

The third reason is no doubt the upanisad points out Brahman is the material cause of creation and predominantly Brahman is presented as material cause in the upanisad except in few places. That Vyasacharya will show this in the entire first chapter. The Brahman is the material cause of the entire creation.

Fourth reason also is very important. In certain cases upanisad shows Prakriti also as material cause of the creation. Why upanisad contradicts is our question. If the upanisad present both it means upanisad is either contradicting or misleading us or upanisad itself is confused.

Brahman is upadana karanam and Prakriti is upadana karanam is also correct. According to upanisad Prakriti does not exist independent of purusa; maya does not independent of Brahman. It is asvatantram; since maya is non-separate from Brahman whatever is attributed to maya can be attributed to Brahman in the sense when you say Prakriti is karanam it is as good as saying Brahman is the karanam. Prakriti is based on Brahman. Prakriti borrows the very existence of Brahman. Prakriti is Parinami upadana karanam and Brahman is Vivartha upadana karanam. That which lends existence to Parinama karanam is Vivartha upadana karanam.

Therefore upanisad does not contradict because Prakriti does not exist separate from Brahman. In Samkya philosophy Prakriti is independent of Brahman. This is the basic difference between Vedanta and Samkya. Prakriti's action cannot be attributed to Brahman. Samkya has got disharmonious relation.

But Vedanta they have good relation. In Vedanta Prakriti does not exist separate from Brahma representing Arthanari Siva and Parvathi. World has come out of Brahman and Brahman lends existence to Prakriti and through Prakriti lends existence to the whole creation.

Fifth and final reason is the idea, which has come from Mundakopanisad and Chandogya upanisad. By knowing one you can know everything. upanisad says upadana karana vijnanena Sarva karyam vijnanam bhavati. By knowing one material cause all products are known. Because products do not exist separate from material cause.

What is that and the upanisad gives Brahma jnanam is given as the means of Sarva vijnanam. If Prakriti is the material cause the Prakriti vijnanena Sarva vijnanam should have been there. Therefore Brahma vijnanena Sarva vijnanam is said here. More in the next class.

## BRAHMA SUTRA

Class 23

### **Sutra 2 part 1 adhyaya 1 [Janmadyadhikaranam Topic 2] contd.**

#### **Definition of Brahman**

*Janmad i; asya yatha*

Through the second sutra that is Brahma laksana sutram Vyasacharya presents Chetana karana vada. It means a teaching in which the Consciousness is the ultimate cause of everything. By presenting this Chetana karana vada Vyasacharya accomplishes many things. Firstly he negates most of the other systems of philosophies, which claim Achetana matter as the cause of the universe. They say that matter is the material cause of the matter. But Vedanta says Consciousness is the material cause of the world.

Second point to be noted is Vyasacharya shows the difference between Samkya and Vedanta. Samkya is Achetana karana vada whereas Vedanta is Chetana karana vada.

Third accomplishment is Vyasacharya brings out the primary teaching of the Vedanta that Chetanam Brahma as the jagat karanam.

Fourthly there are cases where upanisad presents Achetana karanam as material cause of the world and Vyasacharya indicates even in such cases it only means Brahman is the material cause because Prakriti does not exist separate from Brahma. In Samkya system Prakriti is the material cause it means Prakriti and Brahman are totally different. In Vedanta both can be interchanged and ultimately no Prakriti/maya separate from Brahman.

Fifthly there is a technical idea conveyed and Brahman is presented as ultimate karanam Brahma jnanena Sarva jnanam bhavati in keeping with the law in Mundaka upanisad karana eka vijnanena karya aneka vijnanam bhavati. Eakjnaha Sarvajnaha bahavati. It is impossible in Samkya philosophy. In Samkya purusa is neither karanam nor karyam. This we will discuss later. Eka vijnanena Sarva vijnanam does not fit for Samkya philosophy. Chetana karana vada is unique in Vedanta darsanam. It is not there in any of the astika darsanam also. Now we will enter into third sutram.

### **Sutra 3 part 1 adhyaya 1 [Sastrayoniadhikaranam Topic 3]**

#### **Brahman is realizable only through scriptures**

*Sastra yonitvad – from its being the source of sruti; or sruti being the means of its knowledge.*

Here also there is only one Andhakaranam and it is called sastrayoni Andhakaranam. Sutra is *sastra yonitvad*.

Sutram should have minimum words and in this case there is only one word. We have two interpretations for this sutram. If one sutra can be interpreted in different ways it is supposed

to be the glory of the sutra, while defining sutra, it may have many faced the sutra may be. It may have many interpretations.

I will take up first interpretation for our study. I will give you the general analysis. The essence of this sutram is that it confirms the omniscience of Brahma, which is indirectly revealed in the second sutra. Brahma sarvajnatvam is confirmed here. This has been indicated in the second sutra. Now we will see how it is indicated in the second sutra. It says Brahma is jagat karanam. That means Sarva karanam. That is the explicit meaning of the second sutra.

From this direct meaning we can derive indirect meaning. Gadasya karta gadajnah Sarvasya karta sarvajnah. Brahma sarvajnam Sarva karanatvad. Brahman is omniscient because Brahman is the creator and is nimitta karanam of everything.

Vyasacharya confirms omniscience because Brahman is creator of Vedas also. Sastra yoni means Veda karta, the creator of Vedas. Karta means nimitta karanam. In the previous sutra Brahman is nimitta karanam of the world and now Brahman is creator of the Vedas.

In previous sutra Brahman is the creator of atha Prapancha, in the present sutra Brahman is creator sabda Prapancha. How does this statement Brahman being Veda karta reveals the omniscience of Brahman by pointing out Brahman is the author of Vedas.

Adhi Sankaracharya says Vedas contain all the knowledge. Veda consists of para as well as apara viday. Veda is considered to be sarvajnah. What we study is only a small part of Vedas. Vedas contains everything particularly Brahadharaynaka upanisad and Chandogya upanisad. Vedas available are only insignificant portion of the whole Vedas, which have become extinct now. Even from Adhi Sankaracharya's time and now many quotations Adhi Sankaracharya gives in Brahma Sutra are not available now. Even in this available Veda the information is so great and it has got all knowledge.

Adhi Sankaracharya makes a Vyapti. The author of a work always knows more than the content of the work because you can never express everything you know in verbal form. The expressed portion is less than the known portions. One who is the author of particular text knows more than the content of the text.

Adhi Sankaracharya gives an example. Yatha Paninih. Panini sutras are very famous. The Panini's work is so great and Patanjali wrote commentary on Panini sutras. More you study the sutras more mind boggling it is. If that is so Baghavan or Brahma is the author of Vedas what should be his knowledge and therefore Brahman is sarvajnan.

The general analysis of the sutra is Sarva sarvajnam Veda kartritvad. We should note that it is accepted by us the Vedantins that Vedas are apouruseyam not created by anyone. The question comes if Vedas are apouruseyam how can you Brahman has created the Vedas. For that we say Brahman created Vedas it does not mean Brahman intellectually created Vedas like Vyasacharya writing Maha Bharatam.

This Vedic teaching was already was there in manifest form and Brahman only manifested Vedas exactly like creation. When we say Brahman created the world means the world was in existence in Unmanifest or potential form before creation. So also Veda sastram was anadi and it was in avyakta rupa and Brahman changed the avyakruta Vedas into vyakta rupa.

Baghavan's job is only manifesting. In Nyaya philosophy they say Baghavan created Vedas. In Vedanta Baghavan does not create but manifest already existing Vedas.

The next topic is visaya vakyam. Everything is based on some statement. It is based on statement 2.4.10 of Brahadharaynaka upanisad known as Maitreyi Brahmanam. Brahman is logically revealed as sristi sthithi laya karanam by giving three examples. The mantra reads as *Sa yathardraidhagnerabhyahitatprthagdhuma viniscarantt, evam va aresya mahato bhutasya nisvasitam etad yadrgvedo Yajur Vedah samavedotharvangirasa itihisah puranam vidya upanisadah slokah sutranyanuvya khyananini vyakhyanani; asyaivattani nisvasttani*

For sristi karanam Agni example doomah the smoke comes out; for sthithi dhundubi drastanda and for laya Samudra drastanda is given. In the tenth mantra sristi karanam is talked about. What is the uniqueness of this mantra?

The uniqueness is that in all other sristi statement Brahman is stated as creator of the world and here in this mantra it is said Brahman is the creator of the Veda also. When there is wet fuel what happens is smoke comes out. All this is like the breathing of the Lord. Baghavan created the Vedas effortlessly as if breathing. We don't make any efforts for breathing. So Baghavan did everything effortlessly like normal breathing. Based on this mantra Vyasacharya writes sastra yonitvad.

First word here is sastram and second word is yoni and combined word is sastrayoni. Sastra means it includes entire Vedas Karma Kanda, upasana and jnana kanda of the Vedas. We get commandment in the Purva bagha of the Vedas. For violation of commandments we have punishment also. In Veda nata bagha sastra means revelation of a fact the fact here means you are Brahman. To realize Brahman you need not work. For moksa you need not prepare. Sasanam means commandment in Karma Kanda and in jnana kanda it is revelation.

The second word is yoni. Yoni means nimitta karanam karta creator or author. Sastra yoni means author of Vedas. With this word analysis is also over. Now I will come to the conclusion. Here I will discuss the five factors of the Andhakaranam.

Subject matter is Brahman. The doubt is, is Brahman is author of Vedas or not. Yes he is the creator of all including Vedas as elaborated in 2.4.10 of Brahadharaynaka upanisad. Purva Paksi says Brahman is not the creator of Vedas because Veda being eternal and anadi it need not be created at all. What is created is anithyam. Here Vedas are not created hence Vedas are eternal.

Siddhanta says even though Veda is anadi we talk about the beginning of Vedas because Vedas has unmanifestation and manifestation exactly like the creation. The whole Veda in Unmanifest state is Omkara. By churning the Vedas Brahmaji took the essence and that essence is Omkara. Avyakta sabdah is 'om'. It is Akasa guna. It remained in Akasa and that Akasa was in Brahman. Veda is eternal and still it is there.

What is the connection? Connection is this Adhikaranam answers an objection raised based on the previous Adhikaranam. The connection is supposed to be akseba sangathih. Previously Brahman is said to be the jagat karanam. Brahman is not Sarva karanam and he is not the author of Vedas. Because Veda is anadi. So Brahman is not Sarva karanam. In this sutra it is explained that Brahman is Sarva karanam including Vedas. Therefore Brahman is sarvajnah. Thus objection raised by Purva Mimamsa is rejected. More in the next class.

## BRAHMA SUTRA

Class 24

### **Sutra 3 part 1 adhyaya 1 [Sastrayoni Adhikaranam Topic 3 ]**

#### **Definition of Brahman**

*Sastra yonitvad* – **from its being the source of sruti; or sruti being the means of its knowledge.**

Now we are seeing the third sutra which happens to be third Adhikaranam and it is called sastrayoniadhikaranam. This is interpreted in two ways. We have seen the first interpretation in the last class. We took the meaning of sastra yoni as author of the Vedas and the final anumana is Veda sarvajnam sastra kartritvad. We had assumed that author of Vedas must be omniscience and Veda is as good as sarvajnam, and so Isvara should be sarvajnam being the author of Vedas. We will see the second interpretation.

In the previous Adhikaranam Brahman was seen as cause of the world or Brahman as jagat karanam. Some people had misunderstanding about the second sutra. It gave the anumana pramanam for Brahman. Some philosophers said that jagat karanam can be inferred from seeing the effect they can infer the cause of Brahman. They claimed that anumana is the means of knowledge.

Vyasacharya is worried about such an interpretation and does not anumana for Brahman being the follower of Vedas. The Veda clearly shows that Brahman can never be known through logic or inference and inference is pramana for Brahman and Vyasacharya wants to refute that idea.

Vyasacharya thus wants to say that sastram alone is the pramanam for Brahman. Veda sastram alone is a means for knowing Brahman. This is conveyed through the third sutra. The simple meaning of the sutras is sastra yonitvad means sastra vishayatvad. That means Brahman is the subject matter of Vedanta alone and it cannot be subject matter of logic. It is beyond the scope of logic. If you have to present in a logical form Brahma na anumana vishayah.

Sastra vishayatvad dharmavad like dharma. If you translate it Brahman cannot be subject matter of logic because it is subject matter of Veda alone. It is apouruseyam like punyam. Punyam cannot be known through logic. Punyam is a subject matter of sastra alone apurva vishayah etc. Just as dharma is Adristam apurva aouruseyam Brahma is also Adristam apurva apouruseyam. Now compare both the interpretation.

First interpretation we said Brahman sarvajnam sastra kartritvad. We have Brahma na anumana vishayatvad Brahma sastra vishayatvad. Sastra yoni is sastra karta and in the second interpretation it is sastra vishayatvad. First is Brahman is author of Vedas in the second interpretation Brahma is subject matter of Vedas. When I say vishaya vakyam, it means that sruti statement based on which sutra or topic is discussed.

For the first interpretation we gave one vishaya vakyam Brahadharaynaka upanisad 2.4.10. That Brahadharaynaka upanisad is the basis for first interpretation. Now the sruti vakyam for

second interpretation is Brahadharaynaka upanisad 3.9.26 that reads as *kasmin u tvam catma ca pratisthitau stha iti, prana iti, kasmin nu pranah pratisthita it, apana iti, kasmin nu Apanah pratisthita it, Vyana iti kasmin nu vyanah pratisthita iti, udana iti kasminn udanah pratisthita iti, samana iti, sa ena iti na ity Atma agrhyah na hi grhyate asryah na hi striate, asangah na hi sajyate, asito na vyathate na risyati etany astav dyalandni, astau lokah, astau devah, astau purusah, sa yas tan purusan niruhya pratyuhatyakramat, tam tva aupanissadam purusam prcchami, tam cen me na viveksyasi murda te vipatisyatiti, tam ha mene sakalyah, tasya ha murdha vipapata, api, hasya parinvmosinosthiny apajahruh, anyan manyamanah* it is another well known statement and it is the debate between Yajnavalkya and Sakalya.

Sakalya is one of the contesters in the debate as who is the greatest Vedic scholar and one of challengers is Sakalya and he asked Yajnavalkya questions about devatas especially Hiranyagarbha. Yajnavalkya at the end Yajnavalkya puts a counter question. The question Sakalya could not answer the question. Here the word purusa means Brahman. He asked about nirguanm Brahman that is known through 'neti neti'. While using the word purusa he uses the adjective to purusa, which is crucial to us, and that adjective is aupanisad, which means upanisad eka vedyam. It means that which can be known only through upanisad.

It not through anything it can be known is implied here. The rest of the upanisad is very disturbing portion. He says if you don't answer he says you will lose your head and Sakalya lost his ego. That is the Brihadaranyaka upanisad portion. It says Brahman can be known through sastra alone. It means sastra yoni Brahman. With this general analysis is over.

The sutra consists only one word but it consists of sastram and yoni. Sastram means sastrah and the second meaning is pramanam. Pramana means source of knowledge.

The first meaning means karta. Second meaning is pramanam. This is the first difference. There is second difference also which is purely grammatical difference. As per first interpretation it is Brahman is the author of sastram; in the second interpretation it is that Brahman is the subject matter of Brahman.

One poor Sanskrit poet went to the king and said that both of are the masters of the world. King immediately took the sword and wanted to see that he is the master of the world. He said tha loka natha means that you are the master of the world; but in my case I am the one for whom the world is the master. I am a begger who depends upon the world and I am the slave of the world. I am the protected by the world and you are the protector of the world.

In the same way sastra yoni mans sastrasya karta and second interpretation Brahman is that for which sastram is the pramanam. One is sastra pramanakam. Sastra vedyam; sastra vedyam means sastra vishayah. Final meaning is Brahman is the subject matter of sastram. By doing so the message conveyed is therefore it is not available for anumanam. This is the word analysis of the third sutra.

I will now conclude the sutra. Subject matter of controversy is vishayah. The subject matter is Brahman jagat karanam Brahman; the doubt is because there are more than one options. With regard to Brahman is Brahman knowable through anumanam or not. Does Brahman fall within the scope of logic or science? Can Consciousness be studied by any material science? All the scientists are doing an analysis on Consciousness. Can Brahman be subject matter of science? Purva Paksi says it can be. He says Brahman is anumana vishayah. He is within the

scope of science jagat karanatvad. It is the cause of the world like the clay, which is cause of the pot. He says you have accepted jagat karanam Brahman that you have accepted earlier. We say or Vyasacharya says Brahman is na anumana vishayah. Brahma is not subject matter of anumanam. It is sastra vishayatvad. It can be known through sastram alone like dharma.

The definition of Veda means that which gives the knowledge of such subject matter, which is not available for any other means of knowledge like paratyaksa, upamana, arthapatti anupalapti etc. This is the siddhanta. Finally sangathih it means connection between the second and third Adhikaranam. That connection is technically called eka phala kattva sangathih both Adhikaranam have common phalam or benefits that is Brahma siddhih.

First sutra is one should enquire into Brahman when the existence of Brahman is not clear. First Vyasacharya established Brahma siddhi and then enquire into that Brahman. He proved it through laksanam the definition and pramanam the means of knowledge. First you should know what you want and then only you can know about that thing.

This is discussed in the first mantra in detail. Laksanam and pramanam should be there to know about something. In the second sutra Brahma laksanena Brahma siddhi and in the third sutra it is pramanena Brahma siddhi. Jagat karanam is Brahma siddhi and in the third sastram is pramana is the Brahma siddhi. Both do the same job of Brahma siddhi. With this third sutram is over and third Adhikaranam is also over. One should enquire into Brahman that is the cause of the world and it should done so through sastras only. Therefore, Brahma jnanartham Vedanta vicharah kartavyah. That is why in one of the shanti pada it is said Sarvam aupanishad. Because Brahman is not available through science let me not negate Brahman. This is our development. The fourth sutra we will take up in the next class.

## **BRAHMA SUTRA**

### **Class 25**

Sutra 3 Adhyaya 1.Pada 1 [Sastrayoniadhikaranam Topic 3] contd

**Sastra yonitvat - from its being the source of sruti; or sruti being the means of its knowledge.**

We have seen the first three sutras and three Adhikaranam. Brahman has to be enquired into to become a competent student. Brahma is defined as the cause of the creation of the world. The pramana is also indicated as sastram and Brahman knowable through Vedanta sastra pramanam as it is not available for pouruseya pramanam with this background we will enter the fourth sutra and fourth Adhikaranam.

**Sutra 4 Adhyaya 1.Pada 1 [Samanvayadhikaranam topic 4]**

**Brahman the main purport of all Vedantic studies.**

*Tat tu Samanvayat – but that [Brahman is known from sruti]; is the result of harmony*

It is called Samanvayadhikaranam. I will take up general analysis. This sutra is the key or the important sutra based on which the entire first chapter of Brahma Sutra is developed. The following 130 sutras of first chapter is the development of this sutra alone. Based on this sutra first Adhikaranam is called Samanvaya Adhikaranam. Thus we know important of this sutra.

Second sutra is the foundation sutra on which the entire Brahma Sutra is resting. Jagat karanam Brahman is the foundation sutra. The second and fourth sutras are very important sutras. If one cannot study the entire Brahma Sutra one can compromise with the study of the first four sutras and they are put together is known as chatus sutri. There are many books dealing with Chatus Sutri alone.

In the third sutra Vyasacharya has mentioned sastra yonitvad. The first meaning was sastra karantvad and second meaning is sastra vishayatvad. We take the second meaning for further development. Sastra yonitvad means sastra pramana kartritvad and sastra prameyatvad means sastriya vishayatvad. It means Brahman is the central theme of Vedanta sastram is the content of the third sutram. How do you say Brahman is the central theme? When many topics are discussed in sastram how do you know which is the central topic is the question? Sometimes central theme will be evident and often it will not be very clear.

In Gita several topics are discussed. Karma is discussed; Bhakti is discussed from 7<sup>th</sup> chapter onwards; jnanam is discussed very elaborately in 13 and 14<sup>th</sup> chapter. Yet, central theme of Gita is karma and bhakti etc are subservient some people say; some say Bhakti is central theme and others are subservient and some claim jnanam is the central theme of Gita.

How to prove this is the central theme. If the author of the book is available the problem can be solved. But Krishna is not available. Sometimes author himself writes a commentary. We

have some such works also. In such cases author's commentary is most authentic. If you analyze all Sastras author is not available for transaction.

Hence, we have to arrive at the central these. Acharyas say that whichever subject matter fulfills the condition is the central theme. The condition that fulfills is called Samanvayah. Samanvaya means Tatparya vishayatvam. Samanvaya means consistency. Whichever subject matter maintains consistency is called Samanvaya. I will give another English word. That is importance.

Whichever theme enjoys importance is called the central theme in sastra. How do you know which theme enjoys importance. For that there is a method of finding. Whichever theme has got factors of proof that theme enjoys importance. Those proving factors are called lingani. Shad lingani is there to prove importance, consistency and once you prove importance of shad lingas that becomes important and becomes central theme.

Brahman enjoys all the six factors and Brahman is the central theme of the sastras. Brahman is the central theme of the sastra because it enjoys importance. It enjoys consistency; it enjoys harmony and it enjoys Tatparya vishayatvam and therefore it enjoys Samanvaya. This is the general meaning.

Since this is Nyaya sastram this idea should be presented in the form of anumanam and logic. The anumana vakyam is Brahma's Vedanta sastra vishayah Samanvaya dharmavad. Like dharma, which is the central theme of Karma Kanda, Brahman is the central theme of Vedanta. Vishaya vakyams are there in each of the sutras we have seen so far. The entire sastram have vishaya vakyams.

Now we will take up the word analysis. Tad tu Samanvayah. Three words are there in the sutram. Whatever noun is used in previous sutra has to be brought here and Brahman is the noun used in all the previous sutras. In the first sutra Brahman is object of enquiry; in second sutra Brahman is seen as jagat karanam Brahma; in the third sutra Brahman is sastra karta karanam and therefore only Brahman is seen as sarvajnam.

Vacaryam Brahman jagat karanam Brahman sarvajnam Sarva sakti Brahman and such a Brahman is discussed in the previous sutras and that in the fourth sutra indicates that Brahman alone. We supply a word to complete the sentence and that is sastra vishaya and is the central theme of the sastram. In sutra literature it is called anu vritti to shorten sentences. The advantage of anuvritti is saving words. In sutra literature authors use this method. With this we have seen the meaning of 'thad'.

The third word is 'samanvaya' because Brahma enjoys importance and Brahman enjoys consistency. Brahman enjoys importance is proved by six lingas six factors. Vyasacharya has to show that Brahman is the central theme of the Brahma Sutra through analysis by making use of six lingas. This Vyasacharya will do it from sutra number 5 to 134 by using shad lingas he prove Samanvaya. That means it requires lot of patience. This point Adhi Sankaracharya briefly establish that Brahman is central theme through shad lingas. Se will do such an analysis now.

What are the six lingas? I have discussed already the shad lingas in the upanisadic discussions. To establish the importance of the topic six indicators are there. Identity or oneness of beginning and the end, the repetition, apurvata whatever is the new topic, phalam

the fruitfulness or benefit; arthavadah sthuthi glorification whatever is glorified enjoys importance; upapattih the reason or logic whatever fulfills reason or logic is important. Whatever is irrational cannot be the central theme. In tradition the commentators takes one example for study. It is the sixth chapter of Chandogya Upanishad. It is called tat tvam asi prakaranam. When you take that chapter it indicates that Brahman is the central theme.

The chapter begins with Brahman and ends with Brahman. It is like radio news the first four sentences will give the headlines and also in the end it will give the main points. Upakrama Upasamhara proves Brahman is the central theme of the chapter. The teaching in Chandogya Upanishad begins with *sad eva idam agra asid ekam evaditiam, tadd haika ahuh, asad evedam agra asid ekam evadvitiam, tasmad asatah saj jayata* – he meaning being in the beginning, this was Being alone, one only without a second .

Some people say ‘in the beginning this was non-being alone, one only; without a second. From that non-being, being was produced. The chapter ends with *sa yatha tatra na dahyeta aitat atmyam idam Sarvam, tat satyam, sa Atma, tat tvam asi, svetaketo, iti, tadd hasya vijajnav iti vijajnav iti* – and so in this case he would not be burnt, thus has all this that for its Self. That is the true. That is the Self; that are thou; Svetaketu. Thus he understood it from him, yea, he understood.

In sixth chapter one subject tat tvam asi is repeated that is Brahman. It is repeated nine times indicating to stress or emphasize the importance.

Vedanta sastra wants to reveal Brahman the topic, which is new. New is defined as pramanantra avedyam not known through any other instruments of knowledge. Even Karma Kanda does not reveal Brahman. Brahman alone is to be revealed by Vedanta. Therefore central theme is Brahman alone not anything else.

## BRAHMA SUTRA

Class 26

### **Sutra 4 Adhyaya 1.Pada 1 [Samanvayadhikaranam Topic 4] contd.**

#### **Brahman the main purport of all Vedantic studies.**

*Tat tu Samanvayat – but that [Brahman is known from sruti]; is the result of harmony*

We see the meaning of the word Samanvaya. It means consistency, harmony, concordance or importance. Through the sutra Vyasacharya says Brahman is important in the entire Vedanta sastra and all other topics are secondary topic only. We know Brahman is important through technical analysis of shad lingani, which we took up in the last class. This is adapted by Vedanta sastram also. As a model we have taken sixth chapter in Chandogya Upanishad.

The beginning and Vedanta stresses Brahman. This is the first factor. We find that the statement tat tvam asi is repeated nine times indicating that it is not casual but committed remark. It is Brahma lingam. Brahman is unique which cannot be known by other pramanas or means of knowledge. What cannot be known by other pramanas alone is the subject matter of Veda. Veda need not teach you what you already know.

Brahma is not available for other pramanam. Brahman is not known through Purva bagha or Karma Kanda for it deals with para loka and rituals etc. Since Brahman is apurvam Vedanta chooses to talk about new subject called Brahman. It is indicated in sixth chapter of Chandogya Upanishad.

Here salt-water story is repeated. Salt water is tasted at various places and student says water is saltish. The teacher asks can you see the salt in water. Student says no. I know I can feel the taste and even though I know salt is there but I cannot see. Water is pervaded by something other than water yet I cannot see or which is not perceptible. In the same way body is bundle of matter, table is bundle of matter, physical body is also panca bouthikam.

You experience body to be sentient one such as saltish water. That means just as water is pervaded other than water body is also pervaded by something other than body. That extra something water saltish and extra something keep the body alive and active. It has form and colour so also the body. I know it is pervaded by something, which I do not know. The teacher says that it is Brahman. He says don't run after Brahman. Brahman is within you. You do not see Brahman but it is. By this example teacher says Brahman is therefore apurvam Brahman. Brahmanah apurva is established. From this we have to derive an important corollary. Brahman is vishayah or prameyah of the Vedanta. Brahman is unique subject matter of Vedanta. Brahman is known through Vedanta alone and not known through any other pramanam, if you reverse you can say Vedanta is unique pramanam for Brahman. Vedanta pramanam and Brahma prameyam are made for each other couple. Vedanta pramanam alone can reveal Brahman. When you say Brahman is unique Prameyam it is said 'sat'tu Samanvaya. Sastra yonitvad says Vedanta is unique pramanam for Brahma. Therefore fourth sutra corroborates with the third sutra.

Wherever phalam or prayojanam is mentioned that alone should get primary important. In Upanishad we say Brahma is apnoti param. Importance is given to Brahma jnanam. If you go to sixth chapter of Chandogya Upanishad the essence of this statement is Brahma jnani will jvian mukti and at the time death he will get Viveka mukti. He gets jivan mukti phalam and Viveka mukti phalam are given there and because of that Brahma jnanam is considered important. This is called phalam, which is also Brahma lingam.

Then comes the glorification. In the Upanishad Advaida jnanam is glorified by pointing out eka vijnanena Sarva vijnanam bhavati. This should be understood properly. Here Sarva jnanam means Sarva Atma Jnanam. This as good as knows everything. The sixth chapter glorifies Brahman only. Not only Brahma jnanam is glorified and it condemns other source of knowledge also. One who dies without gaining Brahma jnanam is an unfortunate person and the one who gains Brahma jnanam alone is Brahmana. None deserves the status Brahmana. Brahma jnanam is criticized and anya ninda is arthavada. Through both of them the Upanishad points out that Brahman is important.

Finally upapatti means logic. The Upanishad wants to show it is not illogical and it is not dogmatic. It is not blind belief and it has got support of logic. Upanishad says Brahma 'sat'hyam jagan mithya. It does not blindly asset but gives logical support. Upanishad reveals Brahman as karanam and Upanishad reveals world as Karyam and it shows that karanam, alone is 'sat'hya because it has independent existence.

Any Karyam, which means a product, and no product have got independent existence. This makes an anumana vakyam jagan mithya karanatvad. Brahma sathyam karanatvad. If this is not understood, Upanishad gives an example when there is an earthen product, a pot we know clay alone is 'sat'hyam and there is other substance called pot. There we shave to note that it says mrittika eva 'sat'hyam clay alone is sathyam. Pot is namke vaste 'sat'ta. There is no pot as such. Through that Upanishad reveals Brahma 'sat'hyam jagan mithya.

By taking the sixth chapter as model we have established that Brahman alone is important. The conclusion is that Brahman is sastra Prameyam because of consistency therefore Vedanta is pramanam for Brahman. We thus complete the word Samanvaya.

Now we will take up the word 'tu'. This is the most important word of this sutra. Maximum commentary is written on this word 'tu', tu means emphasis. We have Brahman is subject matter of Vedanta. By adding tu Vyasacharya says Brahman alone is subject matter of Vedanta. When he says Brahman alone is subject matter he says nothing else is the subject matter.

Anytime you emphasise something, indirectly you negate something. Rama alone visited temple means none visited the temple. If said Rama visited temple only means he has not visited any other place. Every emphasis of x implies the negation of 'non-x'. Adhi Sankaracharya says 'tu; is Purva Paksa and other interpretations all those who claim that subject matter of sastram is not Brahman.

Certainly Purva Paksas are those who analyse the sastram. We discuss subject matter is Brahman. Those who don't have belief in sastram are not taken into account. We negate Asthika Purva Paksa. Asthikas are those who have belief in Veda pramanam.

There are six Asthika darsanam Sankya-yoga, Nyaya, vaisesika, Purva Mimamsa, Uttara mimamsa, Vedanta and there are five Purva Paksas in Asthika darsanam. We reduce them into three. The Sankya and yoga have got common philosophy. They are practically same. Sankya practices in theory and yoga practices in practice. By negating Sankya philosophy we negate yoga philosophy also. That means both are one and the same.

In the same way Nyaya and Vaisesika are almost the same. We say Nyaya vaisesika system when we discuss the two. Tarka sangrah takes ideas both from Nyaya and Vaisesika. Thus we have second Purva Paksa. Then we have Purva Mimamsa. Three purva paksas are negated by the word 'tu' in this sutra.

Now he looks upon Sankya yoga as most powerful purva paksa. It appears Sankya yoga must have been most powerful to negate Sankya yoga purva paksa. From the fifth sutra onward, the entire first chapter establishes Vedanta and negating other darsanas. All are 'tu' vakyanam.

Even in the second chapter he goes on refuting Sankya yoga. He does not look upon Naiyayika and Vaisesika as not so powerful purva paksa. Purva paksa status is not given to Naiyayika and Vaisesika. Purva Mimamsa is ritualist section of Purva Mimamsa.

For Purva Mimamsa also there is a bashyam written by Sabara Swami and his bashyam is called Sabara Bashyam. Adhi Sankaracharya respects the above bashyam. Even he follows the style of this bashyam. Purva bagha of Veda is useful for two things. One is it is a means for dharma Artha and kamam or Karma Kanda. Even now we accept all ritual and it is based on Purva Mimamsa. It is useful to gain Siddha suddhi. That is why it is called dharma sastra, which alone gives Sadhana Chadhustaya Sambatthi.

Purva Mimamsa is really not a purva paksa. Purva Mimamsa cannot give moksa this we emphasise. This is our contention. According to us Jaimini also accepts. Vyasacharya is not angry with Jaimini. Even Sabara Swami also accepts this fact that Purva Mimamsa cannot give moksa. Some sub commentaries were written on Sabara Bashyam. They presented that Purva Mimamsa as a means of moksa. Later they started saying Purva Mimamsa alone gives moksa. Then they started saying Uttara Mimamsaka is useless. They said it is like barren land in a country. Purva Mimamsa as presented by the sub commentators has become our purva paksas. More in the next class.

## BRAHMA SUTRA

Class 27

### **Sutra 4 Adhyaya 1.Pada 1 [Samanvayadhikarnam Topic 4] contd.**

*Tat tu Samanvayat* – **but that [Brahman is known from sruti]; is the result of harmony**

The sutra reads as *tat tu Samanvayat sastra yoni* that Brahman is the subject matter of Vedanta because it has importance. We have commented ‘tat’ and ‘Samanvayat’ and now we have taken up the word ‘tu’ that emphasizes the Brahman alone is the subject matter of the Vedanta sastra and Vyasacharya indirectly negates the other systems of philosophies which claim anything other than Brahman is the central theme of Vedanta.

The purva paksis are broadly classified into three the first being Sankya yoga, Nyaya Vaisesika and Purva Mimamsa. Some may ask why you don’t talk about Vishistadvaida purva paksa and Dvaida purva paksa. You should note Vishistadvaidam and Dvaidam are two types of commentaries on Brahma sutra and as such they cannot become purva paksas. They have common parentage that is Vyasacharya. They are children of Vyasacharya as such.

All the three are one and the same Vedanta darsanam because they have common source of Brahma sutra. All the three are Vedantins. The aim of Vedantins together deal with non-vedantins like Sankya yoga, non-vedantins yoga and non-Vedantins Nyaya and we deal with non-Vedantins Vaisesika. We don’t deal with Vishistadvaidins and Dvaida Vedantins. Dispute is an internal one within the Vedantins is not discussed here.

We have Sankya yoga, Nyaya Vaisesika and Naiyayika. Of these three-purva paksa Vyasacharya deals with Sankya yoga in this chapter as also in the second chapter very elaborately. They are the main challengers to Vedantic teachings. Nyaya Vaisesika is dealt with in the second chapter. Vyasacharya does not deal with Purva Mimamsa. He takes the opportunity of ‘tu’ and comments upon ‘tu’ as Purva Mimamsa nishedartah. He writes an elaborate commentary on samanvaya Andhakaranam and negates Purva Mimamsa.

The main source of Purva Mimamsa is the sutras of Jaimini, which is considered to be the oldest one compared to the other sutras. Jaimini is considered to be the contemporary of Vyasacharya and also a disciple of Vyasacharya. He has written 12 chapters with more than 2000 sutra as compared to around 500 and odd sutras in the Brahma Sutra.

For these sutras there is a standard commentary written by Sabara Swami which is accepted by Adhi Sankaracharya himself. It is called Sabara bashyam and he quotes often. The original Jaimini sutrams and sabara bashyam and Vedanta accepts and we don’t consider the sutram and bashyam as purva paksa at all. We consider them as complementary to Vedanta sastra. Dharma sastra alone gives Sadhana Chadhustaya Sambatthi and the sutra starts ‘atha tho dharma sastra’ which means it aims at Artha kama and dharma sastra. It became purva paksa when two people wrote commentary upon Sabara bashyam.

The two commentators are called Kumarilla Kattah and Prabhakarah. They wrote commentaries with slight differences. Kumarilla Patta presented a commentary in varthiam and presented a Batta matham through his commentary. It gives a new version of Purva

Mimamsa. Prabhakara also through his prose commentary, he presents another version of Purva Mimamsa called Praabhakara matham. Thus, we have got two types of Purva Mimamsa. The version of Purva Mimamsa given by the above two people we don't agree. The Bhatta Purva Mimamsa matham and Praabhakara Purva Mimamsa matham Adhi Sankaracharya negates. What are their views of their mathams we may now analyse.

First I will talk about the basic rules of Purva Mimamsa, which is common to both the mathams, and then we will see the differences between them. The entire Veda or the Vedic statements can be broadly classified into two types. They are Siddha Bodhaka vakyani is one and Karya Bodhaka vakyani the other. Siddha Bodhaka vakyani means those statements, which talk about facts. Facts are the statements of the things as they are. They are called Siddha Bodhaka vakyani.

Karya Bodhaka vakyani are the statements of commandments which are injunctions persuading the people to do actions. They goad people into action. They are the statements containing imperative moods. They are known as Karya Bodhaka vakyani. Through the statements of fact, we will get the knowledge alone whereas the statement of action or commandments will lead to action. One leads to jnanam and the other leads to action.

Siddha Bodhaka vakyam gives only knowledge and it will not help to accomplish anything and the jnanam is otherwise useless.

Jnanam does not give any Purusartha therefore it is utterly useless. By knowing there is a heaven what use it is to me. You go to a doctor and the doctor diagnoses that this is the disease and have got clear knowledge about the disease. Tell how does the blessed knowledge help me to release me from pain. This knowledge neither gives Sukha prapti nor is there dukha Nivrutti or both. Jnanam does not you give any Purusartha or any benefit. In fact after gaining the knowledge one becomes more miserable when it does not give any benefit.

Siddha Bodhaka vakyani is aprayani and it is useless. The knowledge does not add to anything or add to our benefits and what use is to know 'aham Brahma asmi' and Vedantic jnanam. Whereas Karya Bodhaka vakyani makes you do something and by doing alone we get some Purusartha in the form of dukha nivrutti or sukha prapti. Medicine knowledge does not give you any benefit but the consumption of medicine alone helps me. The action of consuming medicine alone gives me some benefit. So also is the knowledge of heaven or swarga.

By knowing that what is the use of that knowledge. On the other hand if I do Jyothistoma yaga as directed by Karya Bodhaka vakyam will lead to swarga. He asserts that all Karya Bodhaka vakyam either helps to gain dukha nivrutti or sukha prapti.

From the above we derive that any amount of Vedantic study will not give any benefit since Vedantic study does not lead anyone to do any action. Both the mathams agree that action alone will give benefits and not knowledge. Purva Mimamsa also agrees with other asthikas that Veda is a pramanam unlike Bouddhas.

In fact it is said Bouddhas are driven out of India the credit goes to Purva Mimamsas by establishing the supremacy of Vedas. Purva Mimamsa accepts Veda pramanam. Pramanam means anathigatha abadita artha bodhakam pramanam. Pramanam is a revealer of something,

which is not revealed by other pramanams like eyes, tongue and skins and other logic and science. To enjoy the pramanam status, Veda should reveal something that is beyond even the science and all other pramanams.

Abatitam is something, which is not contradicted by the other pramanams. That means Veda should not reveal something that contradicts other pratyaksa pramanams. It should not contradict logic also and it should be beyond logic but should not illogical. It should not contradict pratyaksa and science. Veda should be un-contradicted and unrevealed by any other pramanams.

In this definition, Purva Mimamsa adds one more condition. Vedantins accept the third condition. He says that anatdikatha abahita phalavat artha bodhagam. It has got utility and it is useful. Pramanam is that which is useful and is unrevealed and un-contradicted by other pramanams. Now we have said that the statements of fact are useless and the statements of commandments are useful. Siddha Bodhaka vakyani are useless because it is Artha bodhakam. Karya Bodhaka vakyani is useful and it is pramanam.

The key sutram of Purva Mimamsa is that in Veda Karya bodhakatvad statements of injunctions being important. Only through this you can gain something. All other statements are apramanam. All of them are useless and they are invalid. In Siddha Bodhakanam statements are facts and they are invalid. But the statement of commandments is valid while all others are invalid. All these are based on Jaimini sutram.

In Veda Karya bodhakatvad statements of injunctions are important because you do something useful. All other statements are apramanam or invalid. Statements of commandments are valid and statements of facts are invalid more in the next class.

## BRAHMA SUTRA

Class 28

### **Sutra 4 Adhyaya 1.Pada 1 [Samanvayadhikaranam Topic 4] contd.**

*Tat tu Samanvayat* – **but that [Brahman is known from sruti]; is the result of harmony**

We analyse the meaning the word ‘tu’. Adhi Sankaracharya points out ‘tu’ indicated the negation of all the Purva Paksas. We have established Brahman is the subject matter of Vedanta. All other Asthika darsanams who don’t agree with our view are purva paksa. We see the views of Purva Mimamsa.

The first point we saw was Purva Mimamsa’s views are broadly divided as statement of facts and the statement of action. They also say they statement of facts give only knowledge and they are not of any use directly and on the other hand if do any ritual it will give me some benefit. Knowledge by itself of no use without any follow up action as the pure science is of no use unless there is application of science knowledge into technology.

Karya Bodhaka vakyas are commands for doing some action. By doing so we get something or we get rid of something. Thirdly since Siddhabodhaga vakyas are aprayojanam they are useless and invalid. Invalid because a pramanam is pramanam only when it reveals something that is useful. Since Siddha Bodhaka vakyams are aprayojana vakyam they are apramanam. Karya Bodhaka vakyas are useful and hence they are pramanam.

He says the entire jnana kandam deals with Siddhavastu and it talks about Atma and it does not talk about any karma to perform. Jnana kandam gives knowledge only and since Kevala jnanam is of no use we conclude that entire jnana kanda is apramanam and Siddhabodhana vakyatvad. What benefit I get whether we have panca kosas or that there is a sristi by knowing the nature of Brahman I don’t get any benefit as our knowledge is Siddha Bodhaka vakyani and such knowledge is compared to the barren land without any use.

Vedanta is compared to barren land and the Karma Kanda is compared to fertile land with all greeneries. Purva Mimamsa says there is a problem. All these ideas Jaimini present in one important sutra manayasya Kriya satvad anarsathyam atharthanam. They are Siddhabodhagka vakyanam. Since Karya Bodhaka vakyas are useful all Siddha Bodhaka vakyams are useless.

He takes to a new problem now. He accepts the whole Veda as pramanam. He says it is apouruseyam. It does not have any defect and therefore it is defect free pramanam. We accept God as revealer of Vedas but Purva Mimamsa doesn’t believe God as revealer of god and they say Veda is ultimate.

For Purva Mimamsa Vedas enjoy the status of God. If God did not reveal the Veda come, for this he says Vedas are anadhi and it never came as such. Anadi Veda apouruseya Vedas he accepts as pramanan. He says Siddha Bodhaka vakyams apramanam. Siddha Bodhaka protion of Vedas have become apramanam. If you accept the whole Vedas as pramanam how can you negate part of Vedas as apramanam?

For that he answers when I say Siddha Bodhaka vakyams are apramanam direct and directly they are not pramanam. It means indirectly they are useful like science. Siddha Bodhaka vakyams are indirectly useful. All such vakyams help in the implementation of Karya Bodhaka vakyams. Form example when Vedas glorifies swargam, we get the desire to go to swarga.

Once a desire comes, we act and do jyoditoma yaga to gain moksa. It is Karya Bodhaka vakyam and for doing it only when we read Siddha Bodhaka vakyam. Swarga glorification helps in the implementation of Karya Bodhaka vakyam of performing jyotisoma yaga. Here pramanam is useful. After Siddha Bodhaka vakyam, it says one should do a ritual of offering something to vayu devata; it is Karya Bodhaka vakyam. Karya Bodhaka vakyams are effective only with Siddha Bodhaka vakyams.

Siddha Bodhaka vakyams following by Karya Bodhaka vakyams are very useful. Railway coaches are compared to Siddha Bodhaka vakyam and Karya Bodhaka vakyams are compared to engine. Karya Bodhaka vakyam are direct pramana and Siddha Bodhaka vakyams fire indirect Bodhaka vakyam by assisting Karya Bodhaka vakyas Siddha Bodhaka vakyas becomes very useful. Siddha Bodhaka vakyams are sesha and Karya Bodhaka vakyams are seshi. By joining together the entire Vedas become pramanam. Entire jnana kanda consisting of Siddha Bodhaka vakyams are useful. All Veda vakyams are linked to one Karya Beda vakyams or the other.

What about Brahman? Either connects Brahman to devata or some karta or the other. People say Vedanta should be put to practice. In all the Upanishad Brahman has been revealed and they say that there is no such thing like Brahman at all. It is only a prama. According the Purva Mimamsa Brahman nasti. In both the mathams, there is such thing called Brahman. He says that Veda will not reveal Brahman because Veda is utterly useless, totally useless, what is the benefit of Brahman asks Purva Mimamsa for Brahman is neither attainable nor knowable. In what way Brahman is useful when not made non-available.

Some people are not useful but sometimes they are useful as an instrument, for attaining something else. Brahman is avyavakaram. It is not available for any transaction. That means it cannot be a subject, object or any locus. It is not karta karanam etc. It is neither an end nor a means to attain any end. Therefore, purva paksa concludes Brahman asti.

What about Atma jnanam? Self-jnanam is also useless. You accept it Self-evident and why Veda should reveal what is already known. A pramana should reveal which is not known otherwise. Since Atma is already evident why should Veda reveal what is already evident.

Then what is the use of Vedanta? Whenever Atma is talked about in Vedanta you should take it as glorifying statement glorifying the yejamana of the ritual. They are arthavada vakyams. By this yejamana will do the rituals? Similarly by saying that you are suddham you are sathyam etc., one will be happy and do the work properly. He says Atma Bodha vakyam should be taken as yejamana sthuthi vakyam.

Wherever Brahman is talked about we should know that there is no such thing called Brahmabut it should be taken as glorification of yaga devatas and you are encouraged to do yagas. Devatas sthuthi para vakyani. All jnana kanda vakyam should be connected with Karya bodha vakyams.

All Vedanta vakyams should be connected with Karya bodha vakyam. To which vakyam we will connect. Is there any rule for connection? This point the two mathams disagree. Up to this, they travel together. How should you connect that they have disagreement.

Bhatta madham says all jnana kanda vakyam should be connected to Karma Kanda vidhi [Kriya vakyani] vakyam. This is the opinion of Kumarilla Bhatta. Prabhakaran does not accept with that. You cannot connect Siddhavakya with Karya vakya and you should observe some rule. Suddha vakya should be connected to the nearest Karya vakya. He says kumarilla bhatta is wrong saying connecting jnana kanda vakyam with Karma Kanda vakyam when the Siddhavakyas of Karya vakyas of Karma Kanda. He says in the jnana kanda there are many Upasana vakyams.

And Upasanas are also Karya Bodhaka vakyam since something to be implemented and it is manasam karma. Instead of Siddhavakyam of jnana kanda and connect Siddhavakyam of jnana kanda to the Karya vakyam of jnana kanda. Therefore, he says that all the Brahma bodhaka vakyam should be connected to the Upasanas prescribed in the jnana kandam of Vedanta. Brahma vid should be Brahma upasanah. Aham Brahma asmi iti Upasanam kartavyah it is stressed by Purva Mimamsa that there is no Brahman. The Upasana you should practise. This is how Siddha Bodhaka vakyam should be validated. More in the next class

## BRAHMA SUTRA

Class 29

### **Sutra 4 Adhyaya 1.Pada 1 [Samanvayadhikaranam Topic 4] contd.**

*Tat tu Samanvayat* – **but that [Brahman is known from sruti]; is the result of harmony**

We see the significance of the word ‘tu’ that stands for negation of the Purva Mimamsa purva paksas. We see the salient features of Purva Mimamsa. They divide Veda into siddha Bodhaka vakyam with no use and karya Bodhaka vakyams that are useful. Since siddha Bodhaka vakyams are useless and the karya Bodhaka vakyams are useful. They also said that siddha Bodhaka vakyams should be connected to karya Bodhaka vakyams to be useful.

On the basis of this they analyse Veda vakyams also. They say Brahman is nonexistence and Brahman is neither a goal to be attained nor it serves as a means to achieve the goal. They say Brahman is non-existence. They also say all Vedanta vakyams are siddha Bodhaka vakyams statements of fact. We don’t get any benefits from them. They should be connected to karya Bodhaka vakyam else Vedanta vakyams will be invalid.

Which karya Bodhaka vakyam one should join? Here batta madhams and the praabakara mathams don’t agree. All the Veda vakyams they say are only glorification of Brahman to make one to do action enthusiastically. Vedanta inspires karta to do vaidhika karmas. Kumarilla Batta says this. Praabakara madhams says the siddha Bodhaka vakyams should be connected to Vedanta itself not as said by Batta madham that it should be connected to the karya Bodhaka vakyams of Karma Kanda.

The karya Bodhaka vakyasm are all the Upasana vakyams like aham Brahma asmi it is knowledge for Brahma is nonexistence. It is a Upasana to be regularly practiced. It is not a fact Upasana is defining as seeing something upon something. In jivah you have to imagine Brahman. Because of this action, a person will get Purusartha and this is the aim of Vedanta. There is no use of jnanam and you have to do something in the form of meditation, karma or Upasana and the action is the result of Veda. This is purva paksa contention.

Now let us what siddhanta has to say and how siddhanta refutes Purva Mimamsa in the form of purva paksa. The first point they said is all siddha Bodhaka vakyam alone that is useless. Siddha Bodhaka vakyams is statement of fact and karya bodhaka vakyams is statement of action. Karma alone can give result in the form of sukha prapti or dukha Nivrutti. Adhi Sankaracharya says that you are right. He says it is a general rule and there are many exceptions to the rule. Normally knowledge does not give any benefit.

By knowing yogasana will not give any benefit and one has to implement the knowledge for yoga to give benefit. Karma alone is Purusartha sadhanam. There are exceptions where Kevala jnanam alone without requiring any action we get the benefits. They are wherever there is problem caused by ignorance in that case mere knowledge alone can solve the problem. In the case of disease the problem is not the cause of ignorance but you have to take action to free from disease.

In the case of ignorance what you require is knowledge exactly in the case of rope snake example. All the problems of bhayam and palpitation are due to rajju ajnanam. If the fear is to go away what homa he has to perform and what Upasana he has to practise. Karma and Upasana will not solve the problem *rajju ajnana nivruttu sarpa adhyasa* Nivrutti sarpa adhyasa Nivrutti bhaya sambava Nivrutti. Here the very knowledge is sufficient to get rid of the Bhayam.

We say that there are many cases where ajnanam is source of problem where we require knowledge alone to solve the problem. Siddha Bodhaka vakyam are prayojanani and hence it is a pramanam. It produces knowledge and if gives prayojanam. Where siddha Bodhaka vakyam does not give benefit, then it may be joined with karya Bodhaka vakyam. This is general rule. The exception is the cases where the knowledge gives the benefit directly as is in the case of rope snake ignorance.

Now our question is Vedanta vakyams are exceptional category or it falls under general category. We say that Vedanta vakyams do give prayojanam directly without any action being necessary. We say Vedanta itself is pramanam for that. It makes it clear jnanam alone is sufficient to gain moksa. In every Upanishad it is said. The examples are;

Isavasya Upanishad manta 7 *Yasmin Sarvani bhutani Atmaiva-bhuta vijanatah tatra ho mohah kah soka edatva manu pasyatah* - when, to the knower, all beings have become one in his own Self [Atman] how shall he feel deluded thereafter? What grief can there be to him who sees everywhere oneness? When a person clearly knows Atma after that knowledge where is dukha or moha for him.

Kenopanisad 2.4 *Pratibodha viditam matam amrtatvam hi vindate. Atmana vidate viryam Vidyaya vidate'mrtam* indeed, he attains immortality, who intuits it in and through every modification of the mind. Through the Atman he obtains real strength and through knowledge immortality; when it is known through every state of cognition, it is rightly known, for [by such knowledge] one attains life eternal; through one's own Self one gains power and through wisdom one gains immortality. Not an iota of action one attains immortality.

Kathopanisad 2.v.12 *eko vasi Sarva bhut-antaratma ekam rupam bhudha yah karoti, tam Atma stham ye 'nupasyanti dhurah tesam sukham sasvatam netaresam* - [that] one [supreme] ruler the soul of all beings, who makes His one form manifold ....those wise men who perceive Him as existing in their own Self, to them belongs eternal happiness and to none else. The one who clearly recognizes Atman, gains moksa?

Mundakopanisad mantra III.ii.9 *sa yo ha vai tat paramam Brahma Veda Brahmaiva bhavati nasya Brahmavit kule bhavati tarati sokam tarati paptmanam guha granthibhyo vimukto 'mrto bhavati* – He who knows that Supreme Brahman becomes Brahman and in his line [family], none who knows not the Brahman will ever be born. He crosses grief, crosses sin, and being free from the knots of the heart becomes immortal.

Aitereya Upanishad III.1.3 *prajna pratistha prajnanam Brahma* the universe has Consciousness as its guide. Consciousness is the absis of all verily, Consciousness [prjnanam] is Brahman this is Maha vakyam].

Chandogya Upanishad the knower of Atma crosses over all the sorrows;

Brahadharaynaka upanisad one who has known Atma what action he has what suffering he has.

Kaivalya Upanishad 1.i.10 *sarva bhuta stham Atmanam Sarva bhutani catmani sampasyan Brahma paramam yati nayena hetuna* - experiencing one's own Self in all beings and all beings in the Self one attains the highest Brahma – and not by any other means. By knowing Brahman he gains moksa.

Gita chapter 5.15 & 16 *Nadatte kasyacit papam na caiva sukratam vbhuh ajnanena vrtam jnanam tena muhyanti jantavah jnanena tu tad ajnanam yesam nasitam Atmanah tesam adityavaj jnanam prakasayati tat param* The Lord does not take the responsibility for] good or evil deeds of anybody. The knowledge is covered by the veil of ignorance thereby people are deluded. But their jnana whose ignorance is destroyed by Self-knowledge reveals the Supreme like the sun [reveals the beauty of objects of the world]

Thus sruti, purana Smriti etc., say what you require is knowledge and through knowledge you gain moksa and therefore Vedanta vakyani are pramana vakyani. There are several instance and the entire Upanisads and other grandhas are full of instances supporting that knowledge alone give moksa and Vedantic knowledge alone give liberation.

The next is he said after studying Vedanta we have to use knowledge to perform action because mere knowledge is useless and the knowledge you have to do action. Adhi Sankaracharya says there is nothing ridiculous more than that. Vedanta jnanam is to be connection to karma and Upasana is impossible says Adhi Sankaracharya.

Now we say Vedanta jnanam cannot be connected with karma and Upasana. The reasons are; first Vedanta jnanam eliminates duality, which is the basis for karma and Upasana. Upasana also require beda karma also require beda and Vedanta knocks of all the duality. After the knowledge of Advaita can be applied in the field of Dvaitam. I apply Advaita knowledge to karma is contradiction.

In Vedanta jnanam Vedanta negates kartritvam and varnasrama status of a person, which are essential for karma. All karma require two basis qualification one is karta; second is Varna; should be Brahmana; raja suya yaga should be performed by raja alone; I have to keep asrama status for what grahastha can do Brahmacharya cannot do and what one can do the other cannot do. Having negated that how can it be combined karma and Upasana. This is the second argument.

Vedanta positively condemns karma and Upasana as banda hetu. Those who hold on to karma hoping to get liberation go to swarga loka come back to manusya loka and then go to swarga loka and thus the cycle continues without getting the real liberation. Refer to Mundakopanisad 1.ii.7 *plava hyete adrdha yajna rupa astadasoktam avaram yesu karma etac-chreyo ye 'bhinandanti mudha jara mrtym te punare vapi yant* undependable [frail] is this boat of yajna, is said to be manned by eighteen supporters on whom depend the lower ceremonials. Those ignorant persons who acclaim this as the highest are subject, again and again, to old age and death.

Similarly pasana also. Karma cannot give moksa therefore do moksa no one will say. Gita 18.66 *Sarvadharmam parityajya mam eam saranam vraja aham tva sarvapapebhyo moksyisyam ma sucah* setting aside all dharma just surrender completely to my will with firm

faith and living contemplation I shall liberate you from all sins or the bonds of karma and do not grieve.

Vedanta jnanam is contradictory to karma and it can never be combined with karma. Therefore you cannot say Vedanta is siddha bodhana vakyam and it has to be connected to karya bodhana vakyam.

Purva Mimamsa said Brahman is not there. He says Vedanta reveals Brahma. To find out what is revealed by sastra you have given the norm of shad linga. By the method of shad linga you have to accept what is based on shad linga. I have clearly shown applying shad linga you have to accept what I have said. When I have shown that Brahman is revealed how can you say that Brahman is not there. Then you have to negate swarga also. You accept swarga on what basis. Because Veda says Brahman is existent and Brahma is revealed by sastram how can you say Brahman is nonexistent?

You say Brahman is not there because it is neither useful as an end nor as a means because Vedanta says Brahman is not a goal nor it is not a sadhanam and means. Therefore you say Brahman is not there. Brahman is neither sadhyam nor sadhanam it means Brahman is something different from your goal and your means and it is very Sadhaka.

By negating sadhya and sadhana status, Upanishad says you the sadhaka is Brahman. If you say Brahman is nonexistent that means sadhaka is not there that mean you are not there. I may say that you have no brain but you are there. There are three things in creation Sadhaka, sadhya and sadhana. When Brahman is not sadhya and sadhana Brahma is Sadhaka the Atman.

Then Purva Mimamsa said Brahman is Atma then why sastra reveal Atma is ever evident. This sastra need not reveal. For that Adhi Sankaracharya reveals that it is well known as Jivatma and it is not clearly understood as Paramatma. Sastra has to reveal Atma as Paramatma. Therefore Brahma asti and that Brahman is I am. The last one more point we will see in the next class.

## BRAHMA SUTRA

Class 30

### **Sutra 4 Adhyaya 1.Pada 1 [Samanvayadhikaranam Topic 4] contd**

*Tat tu Samanvayat – but that [ Brahman is known from sruti]; is the result of harmony*

We see the significance of the word ‘tu’ in the fourth sutra. Adhi Sankaracharya points out signify the negation of all objections to Vedanta. Of various objections to Vedanta Adhi Sankaracharya has taken Purva Mimamsa of purva paksa in this commentary. They say Vedanta ahs to be connected to action in the form of ritual, upasana and Vedanta should have karma sambanda. Adhi Sankaracharya has negated this.

First we say Vedanta does not require karma sambanda and then said karma sambanda is not intended and karma sambanda is not possible. Karma sambanda is not required because Vedanta is capable of giving Purusartha by itself. Why should it be connected with karma? It is proved by anubhava and sruti pramanam. Rope snake jnanam gives benefit without connection to any action. Sruti also very clearly says mere jnanam is enough for moksa without any connection with karma. Examples from all Upanisads were quoted in the last class.

The scriptures do not intend karma sambanda. If Vedanta expects us to do this knowledge along with karma, karma becomes very important. Then Vedanta should have glorified karma. If Vedanta require intends alliance with karma Vedanta should have glorified karma. But it is not the case. In fact Vedanta condemns karma. The second argument we gave that karma sambanda is not intended but is condemned.

The karma sambanda is impossible because Vedanta negates all conditions required for karma and after the karma conditions are negated how can the karma sambanda come. I should be karta to become karma sambanda. I should have Varna and asrama. Without Varna asrama designation vaidhika karma is impossible. Duality or Dvaidam is negated. It requires object, karma locus etc. It is called karagam. Vedanta negates all the conditions.

Final condition is Dvaidam. It is negated. Vedanta cannot have karma sambanda and it is not intended and it is not possible and therefore Purva Mimamsa is wrong. Another condition was Brahman is non-existent. Such a Brahman is both sadhanam and sadhyam is not existent also. Brahman is neither sadhanam or sadhyam therefore it is nonexistent. There is third thing, which is other than sadhanm and sadhyam. Never search for that third entity. The very Sadhaka is other than sadhyam and sadhanam. Brahman is I myself and how can you say I am nonexistent. To say I am nonexistent I must be existent. No one can negate the existence of Brahman because the very negator is Brahman.

Brahman is useful also because when I know I am Brahman that Brahma jnanam negates my jivatvam status. Brahman is useful Aham Brahma asmi negates A Brahmatvam and ah Brahmatvam is negation of jivatvam. The very owning up with Brahman gives the greatest Purusartha called moksa.

The final condition is that if Brahman is Atma it should be Self-evident. If Brahman is Self-evident why should Vedanta should reveal Brahman. Pramana is meant to reveal not known and if Brahman is Atma where is the need for Brahman. Even though Brahman is evident it is not fully known. I know I am I know I am existence I know my 'sat' rupam I know my chit rupam but I don't know I am ananda swarupah. By seeing your face I know that you are not happy man.

Any superimposition requires samanvaya knowledge that there is something. I know that I am asmi and I should know I am Brahma asmi. I know myself as Ahankara I don't know myself saksi Chaitanyam. I know myself as tvam pada Vachyartha and I don't know my Self as tvam pada lakshyartha. Vedanta is required not only to give samanvaya jnanam but also to give visesha jnanam. Up to this we saw in the last class.

Purva Mimamsa said Karma Kanda alone id pramana and jnana kanda cannot be pramana and it can be only by giving Karma Kandam. He said Karma Kanda is like flower and jnana kanda is like thread. No body keeps the string but without flower the string has not value. According to Karma Kanda is valid and jnana kanda has no validity.

Vedantins says in fact it is the other way round. Karma Kandam is apramanam. Jnana kanda alone is pramanam. It is our offensive argument. If it gets validity it is because its association with jnana kanda. You say what is definition of pramanam. It should reveal something new, it should reveal something not negated by other pramanam and it should not be aprayojanam and it should be useful. We have proved Vedanta is pramanam aham Brahma asmi; it is not negated by any other pramanam and it is very useful jiva bhava will go and Brahma bhava will come and get moksa. Jnana kanda fulfills all conditions.

Karma Kanda doest it fulfill all the three conditions. First you claim it reveals something new. Punyam papam swarga loka all are new things. And also prayojanam dharma, Artha kama it gives. But now I will ask whether it fulfills second condition. Now we will see whether it fulfills the second condition.

The second condition of whether it is negated by any other condition. Karma Kanda is negated by jnana kandam of the Veda. Karma Kanda reveals duality, which is the main, these of Karma Kanda. It talks about plurality. Jnana kanda there is plurality at all. It talks of non-dual Brahman alone. The Upanishad says yatrava anadivasyad tatra anyavad anya pasye. Only when there seems duality he sees duality. When one recognizes Atma where is the question of duality? From this we come to know ajnana kale Dvaidam and jnana kale Advaidam.

Whatever obtains at the time of apramanam, at the time of ajnanam there is sarpa and at the time of jnanam rope is seen. Karma Kanda reveals invalid duality and therefore Karma Kanda is apramanam. One who says Dvaidam I am different he does not know; he is Devanam pasuh mean he is a mug and he is ignorant. Whoever sees Dvaidam is ignorant. If at all it should validity Karma Kanda has now become thread and jnana kanda has become flower. Karma Kanda has to be associated with jnana kanda.

If Karma Kanda is apramanam in what way it will be useful for jnana kanda. We say that karma kanda has not its own validity and it is a means to come to jnana kanda Karma Kanda is useful. How Karma Kanda will help as a means to help jnana kanda. Karma Kanda is useful only by giving Sadhana Chadhustaya Sambatthi. Vedantins say Karma Kanda is not

meant for Dharmartha kama Purusartha. Because we don't Dharmartha kama as Purusartha at all and they are only exalted samsara. It is like politician's A class prison.

We only tempt other people to go to Karma Kanda and it is only to gain Vairagyam and for Vairagyam alone swarga is prescribed for Vairagyam alone swarga is prescribed and for the Vairagyam pill we give sugar coated pill and Dharmartha kama is given only to get Vairagyam which is a must to come to jnana kanda. Karma Kanda is superficially Dharmartha kama Artham but really it is only to get Sadhana Chadhustaya Sambatthi Karma Kanda is prescribed. Having got kicked sufficiently and having got Vairagyam you come to jnana kanda. Whether you have pramanam?

To this question we say there is pramanam is there. Having experienced fully all the benefits of karma and Upasana one should know everything other than samsara one should get Vairagya. Suffer more in samsara and you will ultimately come to jnana kanda after getting Vairagyam.

All the karma and Upasana is to create interest Vedanta. Entire Karma Kanda and Upasana are to get interest in Vedanta. Interest in Vedanta is directly proportionate to the quantum of Vairagya. When everything fails the same old prayer continues and the intensity continues which directly proportionate towards Vairagya.

Therefore Karma Kanda and Upasana kanda is valid only when it is associated with Sadhana Chadhustaya Sambatthi. We don't condemn karma and the rituals get validated only when you come to jnana kanda. **Jnana kanda is impossible without Karma Kanda and Karma Kanda is incomplete without coming to jnana kanda.** One should not be content with Karma Kanda. He alone will be very successful in Vedanta. With this Purva Mimamsa condemnation is over. This is all as a part of the commentary upon the word 'tu'.

Now Adhi Sankaracharya introduces one more matham, which is more powerful than the other two, and he discusses and dismisses in the commentary. This is very close to Purva Mimamsa matham. That matham is called vrittikara matham. Vrittih means a small commentary like notes. The word vritti has several meaning. Thought is also vritti. A small commentary is also called vritti. It is a philosophy of one of the Brahma Sutra commentator.

Even before Adhi Sankaracharya prastanatriam existed. Several famous commentators are and vrittikara is one. It is not proper name. We do not know the name of the commentator. One vrittikara famous is jnana karma samuschayavadi at the time of Adhi Sankaracharya. Adhi Sankaracharya heavily criticized in Gita bashyam. More in the next class.

## BRAHMA SUTRA

### Class 31

#### **Sutra 4 Adhyaya 1.Pada 1 [Samanvayadhikaranam Topic 4] contd**

*Tat tu Samanvayat –*

But that [Brahman is known from sruti]; is the result of harmony

We see the significance of the word ‘tu’ in the fourth sutra *sattu samanvaya*. Adhi Sankaracharya pointed out that the word ‘tu’ signifies the negation of *purva paksas* and as an indication of that Adhi Sankaracharya takes certain *purva paksas* and negates them of which the *Purva Mimamsas* particularly the *praabakara matham*. That *purva paksa* is *vrittikara matham*. *Vrittikarah* means a commentator only. Adhi Sankaracharya takes a particular commentator and the name of the commentator is not told and therefore we will retain the name *vrittikara*. He does not come under exactly *Purva Mimamsa* and some of his views are close to *Purva Mimamsa* and therefore Adhi Sankaracharya discusses with their view. Now we will see what is *vrittikara madham*. He differs from *Purva Mimamsa* in saying that Brahman is existent. While *Purva Mimamsa* says that there is no such Brahman. *vrittikara* differs from *Purva Mimamsa* and they assert that there is Brahman and it is revealed by the *Upanishad*. It means that *Brahmana sastra yonitvam* he accepts. Brahman cannot be known through any other *pramana* and it can be known only through *Vedanta pramana Upanishad pramana* alone. He also agrees *upakrama shad linga vichara* Brahman is revealed by the *Upanishad*. thus *Brahmanah sastra pramanatvam* he accepts. Up to now he is one with *Advaidins*. Later alone he changes and he says even though *Upanishad* reveals Brahman, he says that the mere *Brahma jnanam* cannot give *moksa*. All are possible but through *Brahma jnanam* one cannot get *moksa*. He goes along with *Purva Mimamsa* once again, he says *kevala jnanam* cannot give any *purusartha* including *Brahma jnanam*. He says after gaining *Brahma jnanam* one has to do *Brahma Upasanam*. *Brahma Upasanam* alone give *moksa* is his argument. Therefore *Vedanta* reveals Brahman and asks one to do *Brahma Upasanam*. This *Brahma Upasanam* is a type of *karma* and through this he will get extraordinary *punyam* and through this *punyam* alone *moksa* is possible. In support of that he again quotes *Purva Mimamsa sutra*. The whole *veda* ask you to do something or the other. Mere learning will not do and after leaning you have to do something. In *karma* and *Upasana kanda* you learn and do various *Upasanas* to get the benefits or *phalams*. But in *Vedanta* we say mere Brahman knowledge will give *moksa*, which they do not accept. So they say do *Brahma Upasana* instead of *devata Upasanas* etc. they feel that *Brahma jnanam* itself will not be of any use to us. In support of this he quotes *Upanishad mantra*. *Atma iti eva upasita vrittikara* says *Upanishad* very clearly uses the word *upasita*. In another place *Atma eva lokam upasita* here also there is a clear expression *upasita* and what we require *Brahma Upasanam* or *Paramatma Upasanam* to gain *moksa*. Then we ask him the question what about the statement of *atmavid soham barati Brahma veda brahmaiva bhavati* etc. *jnena moksa* we find in almost all the *Upanisads*. For that he says you should carefully understand the *mantra*. Every word of indicating *jnanam* has got the meaning of the *Upasanam* also. In 3.iii.7 of *Siksa valli Taittiriya Upanishad* we see *ya evameta mahasagmhita vyakhyata veda, sandhiyate prajaya pasubhih Brahma varcasenana nadyena suvargena lokena* the word *veda* means *upasita* that means word *veda* has got two meanings one meaning is *jnanam* and the other meaning is *Upasanam* and *Birgu valli* also in III.x.2 we see *ya evam veda ksema iti vaci yaga ksema iti*

*prana panayoh karmeti kastayah gatih iti padayoh vimuktir iti payau iti manusih samjnah atha daivih trptir iti vrstau balam iti vidyuti* here also veda refers to Upasanam. Brahma jnani does not become Brahman Brahma upaste Brahma bhavati. Brahma vid apnoti Param means Brahma upasaka apnoti Param only Atma upasaka gains moksa so says vrittikara. Wherever jnanam comes you have to read it as Upasanam says vrittikara. In short take all the quotations in all of them wherever jnanam comes you have to take it as Upasanam and it is Upasana dvara you gain moksa and not through mere knowledge. we ask the question why do you say that. The general rule is jnanena phalam nasti and there are exceptional cases where the problem is due to ignorance and we gave the example of rope snake example. Why do you jnanena prayojanam nasti we ask vrittikara. He says yes I also accept this. But Brahma jnanam does not come under that exception. Don't bring Brahma jnanam under the category of exception and it comes under the regular rule and therefore after gaining Brahma jnanam you should do Upasanam. In support of this he gives examples of many people who have studied Vedanta. Many people who have mastered Vedanta and even after thorough study of Vedanta they continue to be ordinary people and they have not turned to be a Brahma jnani. There are many who know Vedanta and they continue to be samsari. What is the use of Vedanta jnanam and Brahma jnanam? From all the personal experiences it is very clear that Brahma jnanam does not transform a person. People are full of raga dvesa and they don't turn out to be wise even after studying and mastering Vedanta. he says none of them will give any benefit and he will be Vedantic educated samsari. This is one argument to sympathise with vrittikara. We know we don't change even after studying Vedanta. we continue to be samsaris also those who have learnt Vedanta. so Brahma jnanena na moksa.

Then he gives one more argument in support of that. Upanishad clearly says Atma va arey drastavyah mandavyah srortavyaha nididyasidavyaha Atma should be understood through sravanam; also by mananam and nididyasanam; through sravanam and mananam one gets Brahma jnanam. if Brahma jnanam can give moksa srortavyah and mandavyah is sufficient. Why nididyasanam to gain moksa. Upanishad should stop with sravanam and mananam. Then Upanishad prescribes nididyasanam. It means repeated thinking of that. What is repeated thinking is otherwise called Upasanam. And this Upasanam is a clean action. It is compulsory action. Srortavyah mandavyah in Sanskrit tavyah is a suffic indicating compulsory action. The very word nididyasanatavyah indicates Upasana action gives prayojanam and not Atma jnanam. without Upasana action will be like learning yogasana. Yogasana jnanam includes karmangam. Brahma jnanam means Brahma Upasanam is also included. Our conclusion is Brahma jnanam followed by Upasanam alone will give the prayojanam. This is vrittikara matham.

Now Adhi Sankaracharya will refute this matham very elaborately. He defines moksa from different angle. He asks the question what is moksa and he after defining moksa and establishes such a moksa is not possible from Upasana. Gauda pada says every upasaka is an unfortunate one. here also we will criticize Upasana. This may even disturb some people. Upasakas are very much glorified and Vedanta is going to criticize Upasanas. We don't criticize Upasana and we only criticize Upasana as a means of moksa, which comes after Brahma jnanam. as a means of moksa it is heavily criticized. Before Brahma jnanam Upasana is glorified for mental refinement. It is a means for mental refinement Upasana is glorified and it is compulsory also. vrittikara's Upasana is criticized and his Upasana is to be done after Brahma jnanam. Kindly don't think that Vedanta is against Upasana. Jnana anantara Upasana we criticize and jnana purva Upasana we glorify. Here Adhi Sankaracharya will heavily criticize the Upasana as presented by vrittikara. Asariratahi moksa. Moksa is freedom from sarira sambandha. Naturally samsara is sarira tahi samsara sarira sambandha is

samsara. Asariratahi mokshah. Where does he find these two definitions? Are these two definitions are Adhi Sankaracharya's own making. As long as sarira sambanda Sukha and dukha cannot be avoided. Therefore priyam will come apriyam will go and this cannot be avoided. Even when priyam comes we will not be happy and we will be worried that this priyam will go away. As long as we are in relative samsara we are worried when priyam comes or apriyam comes. This problem cannot be avoided. Then what is moksha. Asariram va vatantam na priya priye sambanda for one who does not sarira sambandha priya apriya will not affect him. Now Adhi Sankaracharya comes back to Upasana. He says karma and Upasana are both action. Karma is an action; Upasana is also an action. One is kayikam karma and one is manasam karma. One is physical action and the other is mental action., Adhi Sankaracharya argues wherever action is there, there will be taratamyam or gradation. That means a person action for one hour and another for two hours and there will be quantity difference. Yagas are different kinds and hence quantitative gradations are there. in the same way in the Upasanam also there is qualitative difference. Tara tamyam is there in karma and hence karma phalam also there will be taratamyam. when there is punyam gradation what can that punyam do. It can only give varieties of bodies depending upon the gradation of punyas. The type of body depends upon the type of punyam. Even in animals certain animals are in the temples carrying the god and some are in circus getting the beating to perform action. A little bit more punyam you can be a human beings. Punyam can only give different types of body. It can improve asariratvam and it cannot make you asarirah. It can give you exalted sariratvam or inferior sariratvam. You may get Indra sariram, Prajapathi sariram etc. any amount of karma and Upasana will keep you in sariratvam only. Therefore samsara cannot be avoided. Karma punyam sasaratvam and samsara go together. As long as you are in this circle and with punya papa karma you will continue to be a samsari. If you define moksha also an Upasana phalam and moksha will include punyam and it means sasaratvam and if it is sasaratvam means you continue to be samsari. The phalams of karma and Upasana may result in going to some loka where god is residing. This also is temporary stay as it lasts only up to the exhaustion of the punya and papa. We do not accept this as moksha. As long as one retains individuality and even if you go to another loka you will have sariram and you are possessed by sasaratvam. In vaikunta also you have to struggle to see the Lord. Some will be near him and some will be behind the Lord. Then you cannot see the Lord directly. You can hear the conversation. As long sasaratvam is there we are in a paritucular place means there will be gradation and where there is gradation comparison will come and where there is comparison jealousy will come. we do not accept any moksha so long as there is sasaratvam for anyone or even to the god. As long as asariratvam, there will be gradation of even the happiness one gains as benefit of karma and Upasana. Upasana phalam comes under sasaratvam. Why cannot you say Brahma Upasana gives asariratvam. Adhi Sankaracharya says it cannot be. That we will see in the next class.

## BRAHMA SUTRA

Class 32

### **Sutra 4 Adhyaya 1.Pada 1 [Samanvayadhikaranam Topic 4]**

*Tat tu Samanvayat – but that [ Brahman is known from sruti]; is the result of harmony*

We see the significance of the word tu in the fourth sutra. Adhi Sankaracharya pointed out signifies the negation of all the objections. In his commentary he negates some of the purva pakas. First he negated Purva Mimamsa purva paksa.

Now he has taken up vrittikara matha. According to them Brahma Upasana gives moksa and not hrahma jnanam. Unlike this vrittikara accepts the existence of Brahman and Brahman is revealed by Vedanta sastra. He says you should not stop with Brahma jnanam and you should practise Upasana and as a result of punyam gained through Upasana you gained moksa. Adhi Sankaracharya very elaborately refutes this matham. We will go stage by stage and it will become clear.

One cannot gain moksa cannot through Brahma Upasana for that matter by any Upasanam. To establish this particular fact he has taken a definition and in support of this he gets Chandogya statement. Sarira sambandha abhavah moksa and the presence of sarira sambanda is samsara and its absence is moksa. Then he points out that this moksa can never be without Upasana. All karma and Upasana can get a gradation in sariram only and retain the status of sariratvam.

Karma and Upasana cannot change my sariratvam status. As a result of karma from manusya I become manusya Gandharva and deva Gandharva and even Brahmaji status is only better sariratvam alone whether it is karma or Upasana. Moksa is asariratvam only. For that vritti kara raises another question. I accept asariratvam is moksa temporarily. And why cannot you say that Brahma Upasana is very potent Upasana. It is specially powerful Upasana and it can give asariratvam itself. Brahma Upasana gives asariratvam. This is purva paksa.

Now we have to see the answer. The answer is asarirata cannot be the result of any karma or Upasana. He says because asariratvam is the very nature of Atma. Whatever is the nature of thing is always there. This is the definition of nature. It is something, which intrinsic to particular thing and it is nithya siddham. Heat is the nature of the fire and fire is eternally hot. Adhi Sankaracharya says asariratvam is the very nature of every jiva and it is siddha svarupam and it is ever established. Any karma or Upasana phalam is not available now and they are available later after the practice of karma and Upasana. Whether it is siddham or sadhyam? Sadhyam is something to be achieved in future. Asarirata is equal to nithya siddham because it sis svarupam. How can be sadhyam and siddham be equated? Therefore siddha asarirata moksa cannot be in the form of sadhya Upasana phalam. How can it be the very svarupam of everything? He refers to the Upanishad to show that Atma is asariram.

Refer to Mundaka Upanishad II.i.2 says *divyo hyamurtah purusah sabahya bhyantaro hyajah aprano hyamanah subhro hy aksarat paratah parah* Self respelendent, formless, un-

originated and pure that all pervading Being is both within and without anterior both to life and mind. He transcends even the transcendent, unmanifested causal, state of universe.

In Mundaka itself we see *yat tad adresyam agrahyam agotram avarnam acaksuh srotram tad apani padam nityam vihum sarvagatam susuksmam tad avyayam vyad bhuta yonim pari pasyanti dhirah* which means that which is invisible, ungraspable, unoriginated and attributeless, that which has neither eyes nor hands nor legs – that is Eternal full of manifestations. All pervading, subtlest of the subtle – that Imperishable Being is what the wise perceive as the Source of all creation.

Isa Upanishad says Mantra 8 *sa paryagac chakram, avranam, asnaviram, suddham, apapviddham, kavir maisi, paribhuh, svayambhuh, yathatathyato'rthan, vyadadhac chasvatibhyas samabhyah* he has filled all, He is radiant, bodiless, invulnerable, devoid of sinews, pure, untouched by evil. He the seer, thinker, all pervading, Self-existent has duly distributed through endless years the objects according to their natures. Asarirah is not a goal to be accomplished but a fact to be recognized and therefore it is not a phalam at all. Asariratva is nityah.

Then somebody comes in between and raises an aside objection. He says how do you define asariratva as moksa. In Advaita asarirah should be defined as moksa. If Advaitin defines Asariratvam as moksa, jivan mukti is not possible. You will get moksa only after death.

Adhi Sankaracharya says do you think that I have not thought about that. He says that jivan mukti is possible even when we say moksa is asariratvam. The other people think jivan Mukta is asarirah. Upanishad reveals asariratvam as it is our very nature. If asariratvam is Atma swarupam then when am I asarirah. The Upanishad points out that I am asarirah all the time. Atma nitya asarirah. Sarira sambanda varjitah.

Why Atma is asariram all the time? First reason is that it is the very nature of myself. Kaivalya Upanishad mantra 21 states *apanipado 'ham acintya saktih pasyamy acaksuh sa srnomy akarnah aham vijanami vivikta rupo na casti vetta mama cit sada ham* – the mantra says 'I am without hands and legs, of incomprehensible power. I see without eyes, hear without ears. Devoid of all forms, I am knowing [everything] and there is none that knows me I am ever pure knowledge. I am eternally asarira because it is my very nature.

Atma is *asangah.asangohi ayam purusah* it cannot have any relationship with anything just as Akasa. Akasa is along with everything but it is not connected with anything. Atma is related to anything. Therefore Atma nityam asarirah.

Sarira sambanda comes as a result of karma phalam. Karma phalam comes to a karta Atmanah nitya akakritvad Atma being ever karta where is the question karma where is the question of karma sariram and where is the question of sarira sambandha. Therefore Atmanah asariratvam nitya siddham.

If Atma is asariratvam is nitya siddham why say asariratvam is samsara. Why Asariratvam moksa? Adhi Sankaracharya says Atma cannot become asarirah but Atma can be mistaken as asariraka. It is mistaken as asarirah. What can go wrong can go wrong. What can happen successfully happen. Asariratvam has happened because of mistake. *Sasariratvam adhyasa siddham*. It is an error that has happened. If asariratvam is because of error how do you get asariratvam.

How do you reconvert snake into rope. It is intellectual conversion that there was, there is and there will be a snake. Therefore Adhi Sankaracharya says asariratvam is error. What is required is know the fact that aham Atma nithya sarira sambandha asmi. I am ever free from sarira sambanda. Even at the time of samsara I am asarirah. Ajnani is also asarirah but Ajnani thinks he is sasarirah.

Therefore what we require is a shift in the understanding. When the shift takes place he becomes a jivan Mukta. Thus jivan mukti is possible. Snake removes the skin and skin continues to be there near the snake and whatever happens to the skin the snake is unaffected. So also the jnani is unaffected by what happens to his body after he own up with Atma. The body has got its own course. A jnani never claims body's pleasure and pain as his. This is the first argument.

Moksa cannot be Upasana phalam. Here he gives another definition of moksa. Brahma bhavah hi mokсах. Every philosopher accepts moksa is nithyah. They are already tired of other phalam. No one wants anithya phalam. And from scriptures we come to know that there is only one nithya vastu that is Brahma. All other things are mithya. Everybody wants moksa to be nithya. One thing that is nithya is Brahman. Hence moksa is nithyah. Moksa prapti is Brahma praptih. Can moksa be Upasana phalam. Can Brahman be Upasana phalam.

Our analysis is can Brahman be Upasana phalam. For this purpose Adhi Sankaracharya says any karma and Upasana can produce four types of phalam. The karma upasana phalam is apatih reaching by doing action we can reach a place; utpattih you can produce something farmer can produce crops; factories produce various things.

Vikaraha or modification or conversion; you convert one thing into another. From cow dung etc., into gobar gas. Next is samskara purification there is so many factories do purification it is not modified and only impurities are removed. Gold ore iron ore etc. Remove the dirt and get pure gold. These are the four types of karma phalam. Can Brahman come under any of the four things? Can Brahman come under any of the four? Brahman reaching is out of question. Brahman is sarvagatvad. Brahman is all pervading and moksa is to reach Brahman.

All pervasiveness and travel are contradiction. Brahma cannot be reached need not be reached. The second is production. By karma and Upanishad you can produce many thing. There is no question of utpatti in the case of Brahman. When we will attain moksa. When will I attain moksa? This is wrong. Second karma phala is not possible; vikaraha can Brahman be the result of modification.

No Brahman is not the end product of any process because Brahmanah avikaratvad. Refer to Gita 2.25 *Avyaktoyam acintyoyam avikaryoyam ucyate tasmad evam viditvaina na nusocitum arhasi* - which reads as Atma is said to have a transcendental form and is incomprehensible and unchanging. Knowing this Atma as such you should not grieve.

Samskara why cannot we take that you go on purifying by karma upasana. You go on removing impurities and then Jivatma becomes Paramatma. Here gold example is also given. The gold becomes shining one after removal of impurities etc.

Adhi Sankaracharya says Brahmanah is nithya suddhitvad. In the sastra samskara is divided into two one is removal of impurities and another additional of virtue. It is like sarira samskaram. We take bath by using soap etc. This is dosa apanayana and after finishing

the bath we do lot of other things and it is called Guna Adhanam and scent. In the case of Brahman there is no dosa apanayanam bhavati and it is nir dustadvad nir gunatvad. Therefore Brahman is not apti visayah, samskara visayah etc. Brahman is different type of karma phalam. Moksa is different from all karma Upasana phalam. More in the next class.

## BRAHMA SUTRA

Class 33

### **Sutra 4 Adhyaya 1.Pada 1 [Samanvayadhikaranam Topic 4]**

#### **Brahman the main purport of all Vedantic studies.**

*Tat tu Samanvayat – but that [Brahman is known from sruti]; is the result of harmony*

Adhi Sankaracharya points out 'tu' signifies the negation of all darsanams. As a part of the commentary he negated Purva Mimamsa in the form of batta matha and praabakara madha nishedah. The main feature of vrittikara is Brahma jnanam cannot give moksa and Brahma jnanam he has tom practice Upasana and he will gain punya and through that punya he gains moksa. Adhi Sankaracharya negates this view. Moksa cannot be attained through Brahma Upasana. He gave two definition of moksa and through both definition he said that cannot be effect of Upasanas. We saw elaborately if moksam is asariratvam and it cannot be attained through Upasana because asariratvam is our real nature.

The second definition he gave was moksa is identical with Brahman if Brahmanis in the form Brahman it cannot be Upasana phalam. It is either in the form of reaching, modifying, purifying or producing. In the case of Brahman all the four are not possible which we had seen in the last class.

Brahman being moksa and moksa is not Upasana phalam. Moksa is Brahma Upasana phalam. This is the first argument.

We go to the second argument. It is based on assumption. Assuming something we will show purva paksa is wrong. Suppose we say moksa is Upasana phalam, and then what will be the nature of moksa. If it be, moksa will have a beginning because the result is accomplished by following a sadhana. Before Upasana, moksa is not there. You get moksa only after completing the moksa as a result of punyam gained through moksa. Whatever has beginning will certainly have an end. It is therefore anithya mokсах.

Goudapada says in his Mandukya Karika No iv.30 says *anade rantavat tvam ca samsarasya na sesyati, anantata ca 'dimato moksasya na bhavisyati* in the opinion of the disputants, That which is unborn, The very nature of That is to be ever unborn, it is never possible for a thing to be ever other than what it is. Eternity is not possible for moksa, which has beginning, and therefore moksa will become anithyam.

All philosophers have agreed that moksa is nityah. All suffering due to mortality, comes to moksa and if he faces yama there what for all the sufferings. Whatever acquired through karma is destroyed here and whatever acquired through punyam is exhausted in the outer world and he is back to be reborn. Upasana phalam is also anithyatvad. In fact the word phalam itself means that which becomes rotten and gets destroyed during course of time is phalam. Then it will be anithyah. This is the second argument.

The third argument is upasana cannot be the theme of Vedanta. It is not the theme of Vedanta. The first reason is that mimasa and samanvaya shows that Tatparyam is not

Upasana. For this we already have used shad lingani we saw. It is very clear that Vedanta talks about owning up moksa which is here and now. It does not talk of accomplishing something new in future.

The Mahavakyam which is central part of Vedanta shows tat tvam asi and it says that moksa is here and now if it is not here and now it can never be anywhere at anytime. You can be either nithya Muktah nor nithya bandah. Not only that in Brahadharaynaka upanisad it talks about karma phalam and Upasana phalam. By having a child who is Asthika who believes in karma and performs karma for father through putra father can get manusya janma once again.

Then karmana Pitru lokah; and Vidyaya Upasanen Brahma lokah. Having enumerated karma upasana phalam the Brahadharaynaka upanisad glorifies a sannyasi and he says that I don't want any of the three phalams and he seeks moksa. That indicates that moksa does not come under Upasana phalam. Therefore Vedanta does not deal with karma phalam and it does not deal with Upasana phalam and Vedanta deals neither karma nor Upasana and therefore Upasana is not the Tatparyam.

Then the technical reason Adhi Sankaracharya gives is this that entire Veda is divided into two portions one is Karma Upasana Kanda and jnana kanda is Veda antah. Veda Purva is analysed by Jaimini maharishi and it begins with athatho dharma jijnasa. Veda anta analysed by Vyasacharya starts from athatho Brahma jijnana. All karma upasana should be analysed in Veda Purva or Vedanta and Adhi Sankaracharya says all karma upasana should be analysed in Veda Purva since they produce dharma or punya. Everything connected with dharma should be analysed in Purva bagha.

The introductory sutra says athatho dharma jijnasa. If Vedanta deals with moksa and if moksa is Upasana phalam if Vedanta also deals with Upasana it should have come under Veda Purva alone athatho dharma jijnasa. Therefore Adhi Sankaracharya says if it dealt with Upasana and punya, it would have become a part of Purva Mimamsa portion of Jaimini.

That will produce punya and punya the moksa. Here in Purva mimamsa there is no mention of Vedanta and it is because Vedanta has nothing to do with dharma. Vedanta deals with an Atma, which is anyatra dharmad anyatra adharmad. Vedanta does not have dharma or Adharma and it talks about Atma, which is beyond both.

Refer Mundakopanisad III.i.3 *yada pasyath pasyate rukma varnam kartaram isam purusam Brahma yonim tada Vidvan punya pape vidhuya niranjanah paramam samyam uapiti* when the seer realizes the Self effulgent supreme being – ruler, maker and source of the creator even – then that wise one, shaking of all deeds if merits and demerits becomes stainless and attains the supreme state of equipoise Vedanta deals with a moksa of Vidvan who renounces punya and papa.

In Gita 18.66 Krishna says *Sarvadarman parityajya mam ekam saranam vraja aham tva sarvapapebhyo moksayisyami ma sucah* which reads as abandoning all duties come to Me alone for shelter. Be not grieved, for I shall release thee from all evils. Vedanta does not deal with dharma. Karma upasana produces punya and papam how can that Upasana be part of Brahma jijnasa. Dharma vilaksanatvad is not the Tatparyam of Vedanta.

Brahma Upasana itself is not possible. The very question whether Brahma Upasana gives moksa or not depends whether Brahma Upasana is available or not. Upanishad clearly says

'tat tvam asi' Brahman itself you are yourself is Brahman which means Brahman is not an object at all. It is upasaka's svarupam. How can the upasaka Brahman become upasya Brahman. Subject can never be an object and object can never be the subject; subject ever the eternal and object ever mortal. Nobody can do Upasana on Brahman including God.

Baghavan also can see everything except his own eyes. Therefore Brahman cannot be an object of Upasana. Your basic topic has collapsed. Even if you don't accept the intellect Upanishad clearly says that whatever you meditate upon is not Brahman whether it is extraordinary or ordinary. Meditated upon is not Brahma because mediator is Brahman. Brahmanah avisayatvad.

Then purva paksa asks a very legitimate question. It is an extension of the fourth topic. He says you are in trouble. If you say Brahman is not an object and then I would say Brahma jnanam is not possible because jnanam indicate Brahman to become an object of knowledge. The Upanishad clearly says Brahman is not an object. How can you say Brahma jnanena moksah.

This is the argument of vrittikara. He says then you cannot say that Vedanta cannot be pramanam for moksa. If you say sastram is not pramana the very sutra itself will be in trouble. Sastram is pramanam for Brahman. Your interpretation of fourth sutra is cancellation of third sutra. Adhi Sankaracharya says that Brahma jnanam is not possible and in fact Brahma jnanam is not required. We have repeatedly said that in the form of Consciousness Brahman is Self-evident and svayam Jyoti bhavati.

In support of our argument Gita says in 13.17 *jyotissam api taj jyotis tamasah param ucyate jnanam jneyam jnagamyam hrdis Sarvasya dhrsthitam* I which reads as He is the light of lights, said to be beyond darkness knowledge, the object of knowledge and the good of knowledge – he is seated in the hearts of all. Nothing need reveal Consciousness because Consciousness reveals everything. It reveals sastram.

Therefore Gita repeatedly Adhi Sankaracharya says that in life you need not work for gaining Brahma jnanam alone. Of Atma is Self-evident and jnanam is not required and why do you say sastram is pramanam, Brahma jnanam is not necessary etc. Adhi Sankaracharya excels and he says our problem does not know and our problem is misunderstanding of Atman, which requires correction. Self-evident 'I' is mistaken; that mistake has to be eliminated.

When I use the word I, the 'I' is evident and at the same time I the Consciousness is Self-evident; Body Mind Complex is evident because of the Consciousness. Two things shine intimately the property of the body I throw on Consciousness the mud of Body Mind Complex. Sastram is required not to reveal Brahman but remove superimposed limitations. This removal of limitation is in the form of vritti a mode in the mind and that vritti is called aham Brahma asmi. When I say aham Brahma asmi I know nothing new but I know the limitation of Body Mind Complex and dropping the limitation is intellectual process and this process is called Atma jnanam. Here also I don't experience anything new; I don't gain anything new I only remove something old. I drop something and I don't see experience anything new.

Therefore Atma jnanam is possible intellectual elimination of pramata prameya Nivrutti eva Atma Jnanam. Such an Atma Jnanam can come through sastram. Therefore sanstram is pramana. Adhyasa nivartaka Rupena sastra pramanam. Brahma Rupena na sastra pramana.

Therefore Atma Jnanam is possible. Sastram is pramanam. Such a pramanam is called nisheda rupa pramana. With this the fourth argument is over. More in the next class.

## BRAHMA SUTRA

Class 34

### **Sutra 4 Adhyaya 1.Pada 1 [Samanvayadhikaranam Topic 4]**

#### **Brahman the main purport of all Vedantic studies.**

*Tat tu Samanvayat – but that [Brahman is known from sruti]; is the result of harmony*

We see the significance of the word tu in the fourth sutra and Adhi Sankaracharya points out that tu signifies the negation of all purva pakshas and he negated two types of Purva Mimamsa mathams and now he negates vrittikara matham. This vritti kara matham he negates elaborately. Firstly Adhi Sankaracharya said moksa couldn't be Upasana phalam. Then he pointed out if moksa is taken Upasana phalam then that moksa will be perishable and anithya.

Thirdly he pointed out Upasana cannot be central theme of the Vedanta. If Upasana is central theme it would have be independent sastra. Finally all sannyanis renounce all the Upasana phalam. Hence Upasana cannot be the central theme of Vedanta. Finally he said Brahman Upasana is not possible. Therefore Brahma Upasana is not possible.

Until now Adhi Sankaracharya had given his own arguments. Now he refutes some of his specific statements and specific questions. Brahma jnanam cannot give moksa because cannot give any benefit and jnanam has to be put into some kind of action similar to batta and praabakara matham. Science should be followed by application. He also said that Jaimini has clearly pointed out in his sutra.

Veda will be useful only when that instigates you to one action or the other. Therefore if there are any statements in Veda, which do not involve any action, are apramanam. Therefore its main contention, which does not involve any action, is useless knowledge. Therefore he said vidhi vakyani are pramanam and all commandments involve action. Avidhi vakyani non-commanding statements are apramanam because there is no action involved. They are called arthavadha vakyanam.

Adhi Sankaracharya negates him with wonderful argument. He asks do you accept nisheda vakyams in Veda like you should not harm anyone. You should not eat meat. You should not eat liquor. Are they pramana vakyam. They are as valid as vidhi vakyams. Now Adhi Sankaracharya you accept nisheda vakyams as pramanam and tell me what action is involved in nisheda vakyam.

After knowing that I should not drink water what I should do is that I should not drink. Is it an action? Avoidance of something is not an action and it is but absence of action therefore nisheda vakyam do not produce any action at all. Avoidance is but audasinyam. We use the word I do nothing and it is not a type of action. Nisheda vakyam retains actionlessness and do not produce any action. Nisheda vakyams are pramanam even though Kriya sambandam is not there. Vedanta vakyams are also pramanam eva saprayojantvad. Here jaimini strotram will not apply here.

Then they asked you say Brahma jnanam eva moksa and after Brahma jnanam Upasana is not required. Then they ask if it be so all students Vedanta gain knowledge by the study of Vedanta and all must be liberated people. I have interviewed several students of Vedanta. I asked them are you free or are you jivan Mukta.

Always they started with if and but etc. From this we know mere Vedanta jnanam is not enough and no one claims I am Mukta even after long time training. Who will be Viveka Mukta after maranam. No one answers straightaway sravanam will give moksa. This is vrittikara statement. Adhi Sankaracharya answers I never said that the student of Vedanta will be free.

A listener of Veda will not gain moksa. A knower of Vedanta is definitely free. I ask the question to a student will you get punar janma. He says I know I am Atma and I know Atma is birthless and I don't know whether I will have rebirth or not. He says I know Atma is birthless I am not sure whether I am Atma or not.

If I know I am Atma and I know Atma is birthless then I should ask where is the question of rebirth after knowing Atma. I am not bothered about the sarirams and I have nothing to do with sarirams and I am the sariri who is ajah nithyaha. As long as I doubt my freedom, my knowledge is doubtful; as long as knowledge is clear freedom cannot be doubted. Knowledge and banda cannot go together.

I should be very clear that I am Atma. Listeners are many and knower is few; knower will say I am free and it is Upanisadic information and it is an eternal fact. Where there is jnanam there is no question of samsara. Where there is samsara or doubt, you can never be free. Adhi Sankaracharya says listeners can be samsari and they cannot be knowers. Therefore jnanat kaivalyam and after jnanam no Upasana is required.

Then comes the next question. If you say Vedanta jnanam or aham Brahma asmi jnanam gives moksa why should Vedanta prescribe nididyanam after the study? Nididyanam means meditation. After practice I should practise meditation. You call that as nididyanam. Meditation must be there after the study. These are the arguments of vrittikara.

Adhi Sankaracharya says yes; Upanishad says and stipulates Sravanam Mananam Nididyanam. I say Sravanam Mananam Nididyanam all these three are meant for jnanam only. They are not practiced after jnanam and they are practiced for jnanam. How do you say that all these three are meant for jnanam. For that we say sravanam is main sadhana, which gives jnanam. Sravanam reveals my nature. It is called angi sadhana, which produces knowledge.

Scriptural study is most important sadhana. That alone produces jnanam. Even though jnanam takes place, obstructing jnanam to give moksa there are obstacles in giving moksa. Not that jnanam has any capacity but there are obstacles are there. One is doubt in the form of obstacles, which come from my own intellect or other darsanams. They say you be a part of Brahman. If you accept Dvaidam you cannot accept Advaidam. If you accept Advaidam you cannot accept Dvaidam.

If I am whole Brahman I cannot be part Brahman. If I accept one system presupposes negation of the other. I can be diplomatic externally. If someone asks whether you are Brahman, you cannot answer the question when you have lingering doubt. In Advaidam jivan

mukti is possible. In other system it is not possible. Therefore doubt should be there even an iota.

The second obstacle is habitual notion that Atma is something else and I am something else. I should be free and certain that I am Brahman. We always contradict our statement and on the other we complain at anatma level. We should not take Atma as third entity and it is called viparita Bhavana.

Sapratibanda jnanam is as good as ajnanam and it cannot give any benefit. Sravanam gives jnanam and mananam and nididyasanam removes the obstacles of doubt whether I am part of Brahman etc. Inside in the heart of hearts I can accept only one and I should reject improper things.

Mananam is aimed at to eliminate all the systems of philosophy. I should be doubt free doubt free knowledge means I should know what is right; I should know what is wrong. Right is right I should know and also I should know what is wrong and I should know why the wrong is wrong. Respecting a person is one thing and accepting a philosophy is another. Respecting is duty of a gentle man and accepting everything is sign of a confused man.

Mananam removes samsaya pratibanda. Finally comes nididyasanam and it removes that of looking Atma as third person. Start looking at Atma as first person. Atma as third person attitude should go. It is called reorientation of the ways of thinking. It is called nididyasanam and it does not give jnanam and it does not give moksa. It removes obstacles. It converts knowledge with obstacles into obstacles free knowledge. Then you gain moksa.

Imagine there is a bulb; there is a switch. Connection is Sadhana Chadhustaya Sambatthi. Switching on is sravanam. Sadhana Chadhustaya Sambatthi is wire connection. Bulb burns and it destroys ignorance. I switch on light yet it is dark. You check everything. All are ok. Why it is dark. Two thick black clothes cover the bulb.

Suppose someone asks can light remove darkness. Light can remove darkness. It is not affected. But between the light and removal of darkness, what you have to do is to remove the dark pieces of cloth, which are compared to the darkness. Did the light remove the darkness or removal of the cloth removed the darkness. Removal of dark is removal of obstacles and ultimately the light alone removed the darkness.

Unobstructed knowledge gives moksa. After jnanam nothing is to be done to attain moksa. Sravanam Mananam Nididyasanam gives unobstructed knowledge and unobstructed knowledge gives moksa. More in the next class.

## BRAHMA SUTRA

Class 35

### **Sutra 4 Adhyaya 1.Pada 1 [Samanvayadhikaranam Topic 4]**

#### **Brahman the main purport of all Vedantic studies.**

*Tat tu Samanvayat* – but that [Brahman is known from sruti]; is the result of harmony

We see the significance of the word ‘tu’ which occurs in the fourth sutra. Adhi Sankaracharya points out the word tu signify the negation of all the purva pakshas. One purva paksha negated was Purva Mimamsa mathams and another he negates is vrittikara matham. Vrittikaras’ main argument is that one should do Upasana after gaining jnanam for moksa. He says that the Brahma Upasana is a type of karma.

This Brahma Upasana karma is capable of producing a special type of punyam, which cannot be obtained by doing any other karma. This special punya will give moksa. Adhi Sankaracharya refutes their claim and he asserts that Brahma Upasana cannot give moksa. We are liberated and we will ever be liberated and no Upasana needs produced moksa and if moksa is produced it will not be eternal. He said that Brahma Upasana is not possible because Brahma is not an object for Upasana.

Whatever you do by way of Upasana upon is not Brahman. Vrittikara claims that meditation after jnanam is prescribed the Upanishad. Only through sravanam and mananam only we gain knowledge. It is said after knowledge you have to do meditation to gain moksa. That meditation you call nididyasanam I call it Upasana. So Vedanta it is contended that there should be Brahma Upasana after jnanam.

For that our answer is nididyasanam is not Brahma Upasana after jnanam. Nididyasanam is not an Upasana after jnanam and nididyasanam is also part of the process of jnanam only. There is difference between vrittikara’s Upasanam and Vedanta’s nididyasanam. Nididyasanam is also for jnanam only and it is not to be done after gaining jnanam. Second difference is karma after jnanam whereas nididyasanam is not karma after jnanam. Nididyasanam is also a process of jnanam.

The third difference is in vrittikara madham Upasana produces punyam and nididyasanam being not karma it does not produce punyam and it only remove our habitual dehatma buddhi. The removal of dehatma buddhi is drista phalam. Upasana gives Adrista phalam only. In Upasana one gains moksa that you gain is an event in future.

In vrittikara madam one expects moksa. In nididyasanam knows of expectation of moksa. I am either free or I am never free anywhere any time. There is lot of difference between the meditation they talk about and the one in the form of nididyasanam we talk about. Sravanam Mananam Nididyasanam put together gives knowledge. Sravanam has positive role to produce knowledge; manam has got negative role of removing samsara habits. All the three play limited roles and ultimate result of the three is jnanam. After jnanam you need not do anything. Therefore Brahma Upasana is not prescribed in Vedanta.

Then comes last purva paksa. Adhi Sankaracharya has established there is no karma involved in Vedanta because karma belongs to Karma Kanda and jnana kanda there is no karma at all. While negating karma he negated Upasana also for Upasana also falls under karma only. Karma is kayika karma and Upasana falls under manasa karma. Neither of the two gives moksa and jnanam alone gives moksa.

Vrittikara puts the last purva paksa. You say there is no moksa by karma and Upasana. You say jnanam alone gives moksa. He asks is it not jnanam also karma. If you take mental activity as karma, why cannot we take jnanam also karma. Upasana and jnanam both have similarities and if Upasana is a mental activity and why not jnanam also a mental activity. He asks if you negate Upasana, I will negate your jnanam also. This is his argument. Jnanam also a form of karma and it is also a form of mental vritti. This is purva paksa of vrittikara.

Adhi Sankaracharya gives a technical and important answer. He says jnanam does not come under karma. Even though Upasana is also vritti jnanam is also vritti Upasana vritti comes under karma jnana vritti does not come under karma/ jnanam vritti nididyanam does not come under karma while Upasana vritti comes under karma.

Adhi Sankaracharya says that jnanam depends upon the object of knowledge vastu tantram whereas karma depends upon subject of action kartru tantram. Jnanam depends upon object karma depends upon the subject. You come to the class. You do two types of work. You use your ears, and you are hearer when you operate your ears. After hearing you want to make notes. The second function you do, is you function behind your karmendriyam you are a karta a writer.

The moment you are a hearer, what you hear is not under your control and it is under the control the object for I determine your hearing. Whatever I talk you have to hear. You have no choice and it depends upon the object of hearing. We say jnanam is prameya tandram not pramana tantram. What vritti should happen also not in your control?

The moment you become a writer functioning behind your hand, the operating depends upon not on object but depends upon the subject. Some take notes many do not take notes. You have choice. Even if you write, you have the choice what you should write. You may do anything, writing is under your control but the hearing depends upon the object alone.

Second difference is the same as first difference. Jnanam is dependent upon the type of pramanam you use and pramana tantram. Whereas karma especially Sastric karma is dependent sastra vidhi or codana and it is codana tantram karma. What type of world I should experience depends upon the pramana I operate, if I operate srortrendriam the object of knowledge depends upon the sabda Prapancha. When I use Caksu indriyam it is rupa Prapancha I experience.

As a pramata the knowledge I get depend upon the type of experience depends upon the pramanam I use. That is why I am in meditation, the ears are open and I don't have any choice regarding the hearing whether I like it or not I will experience it. Karma is codana tantram. It is sastra vidhi. Adhi Sankaracharya gives an example here. In Chandogya Upanishad there is pancagni vidya. It talks about a type of meditation in which various things are to be seen as agni.

In that final portion it says may you look upon the father as fire principle and finally it says you look upon mother as fire principle. This is an Upasana. Looking upon purusa and woman as fire and this type of meditation depends upon codana tantram as it is codana vidhi. Therefore that comes under codana tantram and ti is a type of karma or Upasana. Suppose one sees a aman as a man is ti because of sastra vidhi it is not codana tantram. But seeing a man as fire is codana tantram. Seeing a man as man is jnanam but seeing a man as fire is Upasana. Seeing stone as stone is jnanam but seeing a stone as god is Upasana. Seeing stone as stone we have no choice because it is a fact. But seeing it as God, you have your own choice. He may see it as something else.

Karma can produce four types of results aptih, utpattihi, samskarah and vikaraha reaching a place, producing, purifying and modifying a thing. One of the four results happens in karma. In jnanam it does not produce any one of the four results. It only reveals a thing as it but it does not produce. Imagine I know about Himalayas in a book. By this knowledge I don't reach anywhere.

Before knowledge I am seated here and after knowledge I am here only. Similarly by karma I can produce something and suppose I gain the knowledge of mango tree by gaining that knowledge I don't produce anything. Jnanam does not produce anything. It does not purify anything. After one-month vacation you get a dusty house. Knowledge reveals a impure thing as impure thing; knowledge reveals a pure thing as a pure thing. Knowledge cannot purify the thing and make an impure thing as pure thing.

If you want siddha suddhi you have to do karma and jnanam cannot purify anything. Karma alone purifies the mind. By gaining jnanam I don't purify the mind purify Atma and jnanam does not purify. Jnanam does not modify anything. I am fat and by knowing I cannot convert myself into a slim body.

Jnanam does not produce any of the four things. Karma produces one of the four results but jnanam does not produce any of the four results. So, jnanam and karma are different and not one and the same. Therefore Self-Knowledge is not a type of karma and Self-Knowledge does not produce anything. If it does not produce it does not give moksa also.

The fundamental is negated jnanena moksa. Yes who said jnanam produces moksa. Jnanam reveals the fact that I was I am and I ever will be Mukta purusah. Jnanam reveals a fact. It does not purify and it does not modify. Jnanam is not karma and after jnanam no karma is required.

Then you may doubt why should there be a Karma Kanda in Veda. I said jnanam is not karma and after jnanam no karma. Jnanam is not Upasana and after jnanam no Upasana. Karma Kanda is required before jnanam. Before jnanam Upasana is required. Karma Kanda is not useless and Upasana kanda is not useless. Jnana and Upasana kanda is useful before gaining jnanam. Thus Adhi Sankaracharya concludes vritti kara objection also. Tu pada vyakyanam is also over.

With this fourth sutra commentary is also over. With this fourth samanvaya Adhikaranam is also over. We have completed general and word-to-word analysis. Now we will conclude.

First I want to present the fourth Adhikaranam in technical format, which involves five factors. Every topic is to present in systematic manner. Vishaya the subject matter is Vedanta

sastram. Samsayah the doubt is whether it is karma param or Brahma param whether it deals with action or revealing Brahman. Does it merely teaches or does enjoin some action. Purva paksa says it is karma param.

Vedanta sastra enjoins action. The reason is the well known jaimini stostra. Karma alone can give you something mere knowledge cannot give you any benefit. Mere theory is not enough and it should be followed by implementation. Knowledge must be followed by karma. Some purva paksa says some should be in the form of physical karma and some say mental karma. People like do's and don't's. Siddhanta is Vedanta sastram is Brahma param and it want you to understand something. It is a matter of understanding only. There is no need of any action.

Once you come to Vedanta you have nothing to do. By this mere knowledge we get the benefit just as the rope knowledge you get the benefit of fear of serpent is gone. Finally sangathi and we will see the connection between previous Adhikaranam and the present Adhikaranam. It is akseba sangathih. It is the fourth Adhikaranam happens to be an answer to an objection raised on in the third Adhikaranam.

It was Vedanta deals with Brahman. Based on that an objection was given Brahman is not the subject matter of Vedanta and karma is subject matter of Vedanta. It is answered and it is concluded that karma is not the subject matter and it is Brahman is the subject matter of the Adhikaranam. More in the next class.

## BRAHMA SUTRA - Chap: 1, Pada: 1

### Class 36

We have completed the first four sutras popularly known as chatur sutri. Four main topics have been discussed in the four sutras.

The first sutra happens to be first four topics also or four Adhikaranam. The first one is jijnasa Adhikaranam in which it was pointed out for moksa one has to gain Brahma jnanam through Vedantic enquiry. This is the essence of the first sutra. Then in the second Adhikaranam known janmadi Adhikaranam the idea give was that Brahman is nimitta upadana karanam of universe and that is both intelligent and material cause of the world. This we have to know through Vedantic study.

Third is sastrayoni Adhikaranam that jagat karanam Brahma is central theme of Vedanta sastra and all other topics are only convergent into this particular topic. In the fourth Adhikaranam known as Samanvaya Adhikaranam we saw that there is consistency of topic of Brahman. When we read this with Adhi Sankaracharya commentary the whole Vedanta is comprehensively discussed. He has brought out the essentials of Vedanta in the four sutras commentary.

The rest of the Brahma Sutra is elaboration of a magnification of the chatur sutri only. We will continue the study further. If you ask what you will get, we don't get any new knowledge but it is going to be clarity and conviction. In the following portion we will see several systems of philosophy and negating them. We will get thoroughness if we study the entire Brahma Sutra.

### **Topic 5 – Sutra 5-11 [Ikshatyadyadhikaranam]**

Brahman the [intelligent principle] is the first cause

#### **Sutra 1.1.5 [5]**

#### ***Iksateh na sabdam***

because 'seeing' [is referred, the Pradhana] which is not founded on the Veda is not [cause]

We will do a general analysis of this sutra. Previous sutra is the key sutra of the entire chapter. That is why it is named samanvaya Adhikaranam based on the fourth sutra alone. From sutra 5 to 134 is only elaboration of the fourth sutra only. From fifth onwards we see Vyasacharya's commentary on samanvaya Adhikaranam. The whole thing is based on jagat karanam Brahman. This Brahma is Chetanam Brahman. That is why it is called Chetana karana vada.

It is idea that the material cause of the universe is a conscious principle and not matter. This is very important in all other philosophy material cause of the universe is inert matter. In Sankya inert prakrti cause in vaishesika inert atom is the material cause and all of them are called Achetana karya vada. They talk about Achetana upadana karana vada. Purva Mimamsa

say world is there eternally. They need not talk about creation at all. There is no endless or beginningless and world is always there. So we ignore the Purva Mimamsa.

Vedanta says creation is Chetana Brahma karana vada. Brahman is upadana karnam from vyavaharika standpoint alone from paramarthika Dristi Brahman is neither karanam nor karyam. Our efforts will be to negate Achetana jagat karana vada and the most powerful is Sankya philosophers. They say inert Prakriti is the material cause of the world. Here Vedantins will negate their view in the rest of the present chapter. We will establish that Chetana Brahman is the material cause of the world as against the purva paksa that Achetana Prakriti is the cause of the world. The negation had started from the last Adhikaranam when we commented the word 'tu'. When we negate Sankya it is as good as negating all other Achetana vadis including scientist and the big bang theory. This method is called prathama mallan Nyaya.

When you defeat current world champion in any sports indirectly you would be considered defeating the world existing champion. During Adhi Sankaracharya time the main contender is Sankya matham. In the first chapter Sankya was negated showing that they had no sruti support. In the second chapter the Sankya is negated that they do not have Yukti support. In the first chapter we showed that Sankya is Avaidhikam and from now onwards we show Sankya is ayuktam [illogical].

Let us know what is Sankya philosophy before we take to negating that philosophy. Second chapter of Gita is called Sankya yoga. We may get confused. Sankya mentioned in Gita is same as Vedanta and it has nothing to do with Sankya the purva paksa. Vedanta is called Sankya because samkaya is that sastra in which Atma Tattvam is revealed. Baghavata Kapila muni is Baghavan and the Sankya of Kapila muni is Vedanta only.

The Sankya, which we talk about, is propounded by another Kapila muni. The original Sankya sutras are not available. What is the main source of Sankya philosophy? It is Sankya karika a small book in verses. One Isvara Krishna authors it. Sankya talk about the main 25 'principle'. They are required for our future discussion. First we will discuss the creation talked by Sankya philosophers. Sankya people say before creation evolved, previously there were two principles, which are beginningless in nature. They are nithyam. One is called purusa, Chetana Tattvam and the other is called which also existed before creation the Prakriti, which we call as moola Prakriti or pradhanam or mukyam. Adhi Sankaracharya uses the word pradhanam. This Prakriti is constituted of three gunas sattva, rajas and tamas. Here guna is not property but substance themselves. It is like a thread with three strings. They are intertwined together and form the main substance called pradhanam. In Nyaya philosophy guna means property. In Sankya it is constituent of property.

Also they say pradhanam is inert in nature it is Achetanam. They also say the Achetanam pradhanam is material cause of the world. They talk about the steps as how world evolved. The second principle is Mahat tattvam. It is a matter evolved in the second case. Pradhanam is karanam and Mahat is karyam. Next stage is ahankarah.

They say evolution takes place because of the equilibrium of the three gunas inequilibrium of Prakriti Prapancha. Prakriti, Mahat and Ahankara. From the three emerge Manas Tattvam. Ahankara is karanam and manas are karyam. From manas nothing is created. Pradhana, Mahat, Prakriti, Ahankara and manas is the one stream of creation. From Ahankara ten sense

organs come. They are born out of Ahankara Tattvam. They are the second 'stream' of creation.

From Ahankara five subtle elements are also created. They are called panca tan matras. Suttle elements are not final product. From the elements gross elements are created. From them nothing new is born. There are three streasms. They are called evolutes. Pourusa, poraklriti, Ahankara five subtle elements sense organs ten and total twenty five principles are there. They are categorized into four groups. They are Prakriti, vihriti, Prakriti vihriti and aparahriti vihriti. In these entire context Prakriti means karanam and vihritis means karyam. Karanam, karyam, karana karyam and akarana karyam. Karanam means that which is cause and is never an effect. Karyam means that which is karyam an effect and it is never a cause.

Karana karyam is that which happens to be both are cause and effect from another angle and akarana karyam that which is neither cause nor an effect. Pourusa is aprahriti vihriti neither karanam nor karyam. Prakriti is the karanam of everything never karyam of anything and it is anadi. Mind Ahankara and suttle elements; Mahat is karyam with regard to Prakriti and karanam with regard to Ahankara. Ahankara is also Prakriti vihriti. Mind sense organs are product and from them new principles are created. They are products and therefore they are vihritis. More in the next class.

## BRAHMA SUTRA

Class 37

### **Topic 5 – Sutra 5-11 [Ikshatyadyadhikaranam]**

Brahman the [intelligent principle] is the first cause

#### **Sutra 1.1.5 [5]**

#### ***Iksateh na sabdam***

because ‘seeing’ [is referred, the Pradhana] which is not founded on the Veda is not [cause]

From the sixth sutra onwards Vyasacharya gives a commentary on sutra form upon the fourth sutra. Here Vyasacharya will establish that Chetanam Brahman alone is jagat karanam. He will take various sruti statements in support of his view. First chapter is sruti based while logic will be given more importance in the second chapter.

The second part is Achetana karana vada negation of the view that world is based on the matter principle. Most of the arthika systems are based on Achetana karana vadi alone. As a sample Vyasacharya takes up Sankya to negate Achetana karana vada. Once Sankya is negated all others will be treated as valid. We establish our matham upon sruti. I was explaining some of the main features of Sankya before taking up the question of negation.

Purusa is first principle and it is eternal and it does not originate. Second is pradhanam or Prakriti. It is Achetanam material in nature as opposed to Chetanam. It is supposed to have three gunas. They are constituent substance of pradhana. Pradhanam is also eternal and anadhi. It is also nithyam as purusa is.

Purusa is not born out of Prakriti and Prakriti is not born out of purusa. These three gunas will be in equilibrium at Pralaya kalam. At the time of creation pradhanam or equilibrium gets disturbed and this leads to evolution, which we call sristi. From the pradhanam, which is material in nature, come Mahat Tattvam and it is second stage of total matter.

This magat is also jadam and it has three gunas here also. The next stage of evolution is Ahankara. It has nothing to do with siddha manam Ahankara etc. Ahankara is total matter in the third stage. Still body is not born sense organs are not born manas is not born. From Ahankara we have three creation one is manas, next is ten sense organs; they don't enumerate panca pranas separately; the third stream is from Ahankara five subtle elements are born and also ponca sthoola bhutani. These 25 principles are divided into four padharthas. They are one is that which is cause that which is effect that which is both cause and effect and that which is not both.

One difference is instead of using karnam and karyam they have their own words. They use the word Prakriti for any material cause. Wood is prakriti of furniture. Ornaments they will call it vihriti. The word prakriti can be used for material cause. The meaning of the word Prakriti is that which is available for molding into various forms.

What is vihriti? That which is molded that which is shaped is called vihriti the final product of any modification.

Prakriti is karanam list and one will come under karanam list. Purusa is either a karanam or karyam. What is karyam? Sixteen items come under karyam list. Mind, ten sense organs, five gross elements final products. The Mahat is karyam with regard to Prakriti and it is karanam with regard to Ahankara. It comes under karya karana category. Ahankara is a product from the standpoint of Mahat and it is cause with regard to the elements. Five elements are an effect from the stand point of Ahankara and cause from the point of gross elements. They are 7 prakriti and vihritis are there. The gross elements are karyam with regard to subtle elements and gross elements come under only karyam and not karanam.

The main feature is that the whole creation is born out of pradhanam, which is Achetanam or jadam. But Vedantins say that the whole world is born out of Chetanam Brahman. For them Achetanam pradhanam is karanam for the whole creation.

Now I will deal with some of the differences between Vedanta and Sankya philosophies. We use the word Purusa, Mahat and Ahankara. Therefore, we may see why should we quarrel with Sankya. Purusa in Sankya and Vedanta is Chaitanyam there is no problem. Both are asangam. They say purusa is Akarta and we also say purusa is Akarta.

The main differences are the following. They say purusa is a bokta. In Vedanta purusa is also abokta. Major difference is karta and bokta are not identical and Vedanta karta and bokta are one and the same. Second difference is purusas are many in number in Sankya. In Vedanta purusah is ekah plurality in purusa is unreal and it is a mistake. As many individuals are there so many purusas are there. Sankya comes under Dvaidam and Vedanta comes under Advaidam. Since purusa is bokta every purusa is samsari jivah. But in Vedanta every purusa is a 'seeming samsari' but really not samsari. In Sankya every individual is a real samsari. Purusa is a jnata a knower also. A pramata but in Vedanta purusa is not a pramata. They say jnata is suffering because of ignorance and when gains knowledge he gets moksa and Prakriti will relieve him and he will get m,oksa. In moksa Prakriti will withdraw from purusa. These are differences at purusa level.

Then we will come for difference at pradhana or Prakriti level. They say pradhanam is jadam and we also say it is jadam. They say pradhanam is trigunatmikam. We also do the same. They say Prakriti evolves to become the universe. We also in several places say Prakriti evolves itself to become universe. The difference is that they say Prakriti is independently real entity. Prakriti alone becomes creation and purusa does not do anything. It is svatantram pradhanam. This indicates Sankya is Dvaida pradhanam.

Whereas in Vedanta Prakriti cannot exist independently. It is not separate substance it does not have 'satta' of its own. Purusa is like clay and Prakriti is like pot and pot cannot have existence of its own. The 'isness' belongs to clay alone. In Vedanta Prakriti is like a sakti of purusa as it does not exist separately.

Sakti cannot exist separate from sakta purusa that is me. Even though speaking power alone speaks, speaking power cannot exist separate from me and therefore I say I speak through speaking power which is dependent one me. Prakriti is only a creative power of purusa. Purusa alone creates into the world through the creative power called Prakriti. Therefore if Prakriti is independent entity you can call prakrti is creator. Also from another angle you can understand Prakriti is upadana karanam you should know that upadana karanam alone should end existence to the karyam.

If you have to say Prakriti is upadana karanam and prakirti lends existence to the world. Vedantins say Prakriti cannot lend existence to the world because Prakriti has borrowed existence from Brahman. Ultimately Brahman alone through Prakriti lends existence to the world. Therefore Brahman alone being lender of existence is upadana karanam.

Another difference is they say Prakriti say it is jadam and it si the material cause of the universe. For any creation material cause alone is not sufficient and you need nimitta karnam also. What is nimitata karanam. Nimitta karanam must be Chetana vastu because it is intelligent cause. For converting Prakriti into matter into the world we require a nimitta karanam the Sankya philosophy says they do not have nimitta karanam because they have no isvara and there is no intelligent principle to convert matter into universe. They have taken purusa as jiva who is a bokta samsari. Bokta samsari cannot be nimitta karanam of the world. Jivah is not omniscient.

There is Isvara and Isvara is not nimitta karanam and jivah is nimitta karanam and Prakriti comes into creation of its own. There is intelligent principle in Sankya. The mater becomes without the requirement of nimitta karanam world comes into existence. This we don't accept. Isvara is vyavaharika 'sat'hyam, which is different from Nirgunam Brahman. This Sankya does not postulate at all.

Pradhanam exist independently and pradhanam becomes the world independent of a creator. Because of these two reasons they say pradhanam is svatantram.

Third difference is in the order of sristi there is some difference. We will not bother. From Ahankara sense organs have come. In Vedanta mind and sense organs have come from five subtle elements alone. Baghavatam borrows the sristi principle of Sankya. Sankya from the point of view of Vedantins is Avidhikam. It is against Veda. Their teaching is against Veda pramanam it is that Sankya philosophy Vyasacharya will criticize in the following adhikaranams in this chapter. More in the next class.

## BRAHMA SUTRA

Class 38

### **Topic 5 – Sutra 5-11 [Ikshatyadyadhikaranam]**

Brahman the [intelligent principle] is the first cause

#### **Sutra 1.1.5 [5]**

#### ***Iksateh na sabdam***

because ‘seeing’ [is referred, the Pradhana] which is not founded on the Veda is not [cause]

We were seeing that in the following sutras Vyasacharya establishes Chetana karana vada the karanam primarily meaning upadana karanam which means Consciousness is the essential stuff of the entire creation. He will also refute Achetana karana vada who says matter is the material cause of the world. This is advocated many philosophers particularly Sankya philosophers. He will take sruti pramanam not resorting of logic. We will take those sruti vakyam to show that Chetanam Brahman is the upadana karanam and indirectly we will refute Sankya philosopher or we will prove Sankya does not follow Vedas.

Once we show Sankya is avaidhika then we can ignore them. When I say Chetanam Brahma is karanam it is not Nirgunam Brahman. It is karya karana vilaksanam. It is not Kevalam Brahman. It is Sagunam Brahman or isvarah. Brahma karana vada is but isvara karana vada. We should note isvara is none but Brahman clothed in maya. Clothed Brahman is isvara and unclothed Brahman is isvara.

Hereafter wards we will take those sruti statements that lend support to isvara karana vada. There is some statement that shows isvara is nimitta karanam of creation. Sankya does not accept nimitta karanam concept also. He accepts jiva and accepts Prakriti and according to him matter naturally evolve into as world. Vedantins believe gold cannot become goldsmith and Prakriti cannot become world without nimitta karana isvara. He does not accept upadana karana isvara also. We will establish Brahma is abinna nimitta karanam.

The srutis take for analysis are divided into two categories. One is called spasta Brahma linga vakyani and the second type of statements is aspasta Brahma linga vakyani. Spasta Brahma linga vakyani are statement where Brahman karanatvam is clearly indicated to show that Brahman is the karanam; the other is called aspasta Brahma linga vakyani that means they are the statements in which Brahman karanatvam is not clearly indicated to and we have to analyse and establish that Brahman is the karanam. First we will analyse spasta Brahma linga vakyani.

Now we will do the general analysis of the fifth sutra. This Adhikaranam is called iksati Adhikaranam.

This Adhikaranam has got seven sutras. Sutras are many and the topic is one only. We will analyse the sruti statement. This is well known vakyams of the Chandogya Upanishad the sixth chapter mantras 6.2.1 *sadeva somyedamagra asidekamevadvitiam; taddhaika ahurasadevedamagra asidekamev advitiam tasmadasatah;* somya, before this world was manifest there was only existence, one without a second. On this subject, some maintain that

before this world was manifest there was only nonexistence, one without a second, out of that nonexistence, existence emerged 6.2.2. *Kutastu khalu somyaivam syaditi hovaca kathamasatah sajjayeteti; 'sat'tveva somyedamagra asidekamevadvitiyam* the father said 'o somya what proof is there for this, that from nothing something has emerged; rather, before this world came into being, o somya, there was only existence, one without a second 6.2.3 *Tadaiksata bahu syam prajayeyeti tattejoarjata tatteja aiksata bahu syam prajayeyeti tadaposrjata tasmadyatra kvaca socati svedate va pursastejasa eva tadadhyapo jayante* this read as that existence decided "I shall be many. I shall be born" he then created fire. That fire also decided 'I shall be many I shall be born' then fire produced water. That is why whenever or wherever a person mourns or perspires, he produces water.

The Upanishad says before creation started 'sat' was alone there and it has not said that 'sat' was Chetanam etc. Samka saya that says 'sat' refers to his pradhanam and we say 'sat' refers to Chetanam Brahman. That 'sat' visualized or perceived or literally saw. 'sat' wanted to become many. Thereafter wards it created agni Tattvam. 'sat' karanam created jalam etc. By saying that 'sat' created everything we come to know 'sat' is jagat karanam.

Whether it is nimitta or upadana karanam. 'sat' thought 'let me become many'. Nimitta karanam does not become the product. Carpenter does not become furniture. Upadana karanam alone becomes a product. We will say that nimitta karanam created and when it is upadana we will say the gold became the ornaments. Here 'sat' karanam says 'let me become many'. Because of that we say 'sat' alone became many and it is upadana karanam of the creation. The controversy is that 'sat' is Chetanam Brahman or Chetanam Isvara. And therefore Chetanam Brahman or Chetanam isvara is correct. Sankya will say that 'sat' alone evolves to become Agni, jalam, etc.

Now we have to argue out the real position. Does the word indicate Vedantic Brahman or Sankya pradhanam? We will establish that Sankya is wrong and Vedanta is wrong. The first sutra will give two staged arguments. In the first stage Vyasacharya says Sankya pradhanam is talked about in this portion at all. It does not have Vedic sanction. It does not have sabda pramana. Sabda pramana here is Veda. The pradhanam of Sankya philosopher does not have Vedic sanction.

Sankya will say that it is included in sixth chapter of Chandogya Upanishad and he will say that the 'sat' is my pradhanam only. And therefore it is vaidhkam they will argue. We will say that word does not refer to pradhanam. It refers to Chetanam Brahman and not Achetana pradhanam. The word iksateh occurs in the mantra.

There are two words tad and iksateh. Tad refer to the noun occurred in the previous mantra. It is tad karanam iksateh. 'sat' karanam visualize or mentally saw and he says to Sankya if 'sat' is Achetanam karanam it cannot visualize anything and it is not the function of any inert object. Iksanam Chetana dharmah. Visualization can be done by Chetana vastu and 'sat' karanam refers to Brahman or Isvara alone.

From here we know that pradhanam is not the cause of the universe for it does not have any support. It is like anu or paramanu. The second pramanam is word 'sat' does not talk about pramanam be Upanishad says 'sat' karanam refers to the universe.

We cannot say so kamayatha isivad. It means *Sloka 2.6.3* of Taittiriya Upanishad reads as *So'kamayat,bahu syam prajayeyeti, 'sat'apo' tapyata, 'sat'apastapta, idagmsarvam-asrjata*

*yadidam kim catat-srstva tadeva-nupravisat,tadeva nupravisya sacca-tyacca-bhavat,niruktam cani-rukatamca, nilayanam canilayanamca, vijnanam cai-jnanam ca,satyam canrtam ca 'sat'yam-abhavat,yadidam kim ca,tatsatyam-itya caksate,tadapy-esa sloko bhavati.[iti sastho 'nuvakah]* because the Upanishad says the 'sat' visualized the universe; so kamayatta isivad there the word is used and the desire is also the Chetana karanam so Upanishad uses the word visualization, desire, tapah etc., all these indicate that Chetana vastu is karanam. This is approach to the first sutra.

It consists of three words *iksateh na* a sabdah. The first word is *iksateh*. It refers to the function of the verbal action of visualization. By using the word because of the function of the verbal use of visualization there must be some conclusion. The conclusion is not said in the sutra at all. Adhi Sankaracharya supplies because of visualization tad karanam na pradhanam it means the word 'sat' cannot refer to the inert Prakriti because of the visualization is mentioned there and inert Prakriti cannot visualize and therefore pradhanam is not mentioned there. This is the first inference.

Adhi Sankaracharya goes on giving some arguments given by Sankya. Sankya says why do you say pradhanam cannot visualize. I know pradhanam has got three gunas. They are sattva rajas and tamas. We have seen in Gita itself refer to sloka 14.5 *sattvam rajas tama iti gunah prakrti sambhavah nibadhnanti mahabaho dehe dehinam avyayam* that reads as sattva or goodness, Rajas or activity, and tamas or inertia – these three gunas [states] of mind [or prakrti] bind the eternal embodies one [jivatma] to the body, O Arjuna.

We have clearly seen sattva represents knowledge. Whoever is sattva guna pradhana he will have knowledge. When sattva guna increases jnanam increases. Pradhanam has got jnanam and all Chetana dharmas are possible for pradhanam. If you say jagat karanam is sarvajnam I will say samasti sattvagunatvad pradhanam is sattva guna. Therefore even though the word *iksateh* comes I can take pradhanam is sarvajnam etc. This is the argument of Sankya.

For this Adhi Sankaracharya says however much sattva guna is there in pradhanam it can never know anything and it can never visualize anything because it is inert according to you. sattva guna is also Achetanam rajo guna is also Achetanam and tamo guna is also Achetanam and therefore pradhanam cannot visualize therefore I cannot accept pradhanam is Chetanam.

Adhi Sankaracharya concludes Chetanam Brahman alone is referred to here. Sankya says I accept pradhanam itself does not visualize because I know it is Chetanam. But because of purusa sambanda vasad because of sambanda the association with purusa, pradhanam gets the capacity to visualize and therefore sattva pradhanam alone visualized and become the creation. This is the statement of Sankya philosopher.

For this Adhi Sankaracharya says no. The first answer is you cannot say that because of the relationship with purusa you cannot say because you have said that your purusa is relationless and that it is asangah and there is second answer, which we will see, in the next class.

## BRAHMA SUTRA

Class 39

### **Topic 5 – Sutra 5-11 [Ikshatyadyadhikaranam]**

Brahman the [intelligent principle] is the first cause

#### **Sutra 1.1.5 [5]**

#### ***Iksateh na sabdam***

because ‘seeing’ [is referred, the Pradhana] which is not founded on the Veda is not [cause]

We analyse the word analysis of the fifth sutram Iksateh na sabdam. This is based on Upanisadic expression of Chandogya Upanishad manta 6.2. The Upanishad says the world was visualized before creation. Based on this Vyasacharya argues that visualization is possible by Chetanam Brahman alone and not by Achetana pradhanam as claimed by Sankya philosophers. It occurs in Aitereya Upanishad also chapter I section 1 mantra 1 *Atma va idameka evagra asit*, nanyat kincana misat that reads as in the beginning verily Atman [Self] alone was this [universe] nothing else active whatsoever.

In Prasnopanisad chapter VI.3 *sa iksamcakre, kasmin nahan utakranta utkranto bhavisyami kasmin va pratisthite pratisthasyamiti* that reads as He [Purusa] reflected; ‘what is it by whose departure I shall depart and bny whose stay I shall stay? From this it is clear that Chetanam Brahman alone visualized the world creation.

In Taittiriya Upanishad II.vi.3 reads as *so kamayat, bahu syam prajayeyetti, sa tapo tayata* that sasy ‘He desired ‘I shall become many and be born. He performed tapas. Having performed tapas He created whatever we perceive.’ This desire is possible for Chetana karanam only and not by Achetana pradhanam.

In Mundakopanisad II.ii.7 *yah sarvajnah sarvavid vasyaisa Mahima bhuvi, divye Brahma-pure hyesa vyomny Atma pratisthitah* there it is said jagat karanam is sarvajnam a\omniscience and omniscience is possible for Isvara alone the Chetana vastu alone and not for Achetana vastu.

Based on that Adhi Sankaracharya gives some more argument. Sankya philosophers countered that pradhanam also can be sarvajnam because pradhanam is full of sarvajnam as it is said in Gita. For this Adhi Sankaracharya counters that pradhanam cannot be Chaitanyam at all even it has sattva guna because sattva guna itself is Achetanam. Achetana sattvam Achetana rajas Achetana tamas all being Achetanam how can the combination of the three become Chetanam and become Chetana pradhanam to visualize the creation.

For this Sankya philosopher says that by itself pradhanam is not Chetanam but it becomes Chetanam in association with purusa. For that we answer no you cannot say that Vedanta alone can say that in your philosophy purusa is asanga swarupah and it cannot help Prakriti because purusah asangah and the fact Prakriti is svatantra and independently capable of functioning and that means it cannot be independent. Therefore that argument also will not hold water.

For that Sankya philosopher asks another question that in Adhidaiva philosophy also purusa is asangah as seen in various Upanisads. Gita sloka 9.10 reads as *maya dhyaksena prakritih suyate sacaracaram betund nena kaunteya jagad viparivartate* which means under My guidance, nature [prakriti] gives birth to all things moving and unmoving and by this means, O son of Kunti the world revolves. In the presence of purusa, Prakriti functions. It blesses Prakriti you say it functions but you claim asangah. In Vedanta it can be asangah and it is sasangah it blesses Prakriti we don't have any problem. It is contradiction in your system but it is not so in our system. In your system purusa and Prakriti have the same order of reality being in the same order of reality.

But in Vedanta especially in Advaitam Prakriti is of a lesser order of reality and Prakriti is vyavaharikam the association is also mithya and its relationship is of lower order of reality but its asangatvam is paramatikam. Since they belong to two orders of reality it is possible. Normally light and darkness cannot coexist but it can coexist, subject to one condition and suppose I go to bed in dark room, and they see a dream and in dream they see sunlight and he dreams in dark room. Light is there and darkness is also there.

Light belongs to dream and darkness belongs to jagrat being both belonging to two orders of reality. Therefore you cannot say Prakriti is sarvajnam because Prakriti is Achetanam as per your own statement and being independent it cannot associate with purusa and get the sarvajnam status. Let us assume by the blessings of purusa pradhanam becomes sarvajnam and Chetanam and because of purusa sambanda pradhanam becomes Chetanam. It it gets Chetanam because of associationship of purusa the credit of visualization goes to purusa alone.

Adhi Sankaracharya gives an example. A person says ayodahati it means the iron ball burns my hand. We know iron has no burning capacity. It means iron has become hot and it is because iron ball is pervaded by the fire hence the iron ball gets the burning power and it burns. The credit goes to the fire alone. Even if Prakriti visualizes, the credit goes to purusa and not Prakriti. Pen is writing means pen writes means I am writing through the pen. Chetanam gets importance but not the Achetana Prakriti. Visualization originally belongs to Chetanam alone and hence Chetanam is jagat karanam. Sankya says ok I accept. Pradhanam being Achetanam cannot visualize I agree. It cannot desire anything I agree.

Then he says even your Brahman cannot do iksanam Brahma cannot have sarvajnatvam. If my pradhanam cannot have the quality your Brahman also cannot have sarvajnatvam. Sarvajnam means knower of all; to become sarvajnatvam Brahman must be a knower and Brahman can never be a knower because of three reasons. First it is Nirvikaratvad knowing is a process involving mental activity. To be a knower you have to go through a process. But Brahman is avyaktoyam. It cannot be a knower.

Second reason is any action including knowledge requires instruments. Physical action requires karmandriyan, mind is required sense organs are required it is free from all karanam. You talk about Brahman before sristi when instruments are not born. Mind will come later after birth only. Therefore you cannot say Brahman is sarvajnan

Third reason is you say Brahma is sarvajnam knower of all before sristi there is nothing to be known when there is no object to know where is the question of all knowing. How can Brahman enjoy sarvajnatvam where there was nothing to know before creation. There are two types of answers.

Adhi Sankaracharya says when you say Brahman is all knower or all knowing that knowledge of Brahman is not a process we talk about but it is jnana swarupam, if we talk about knowing action mind and in the case of mind the knowing is not the nature of mind but it is an action. Refer to 1.4.10 of Brahadharaynaka upanisad. Knowledge in the form of activity and knowledge in the form of swarupam we have discussed there. In the case of Brahman it is the nature of Brahman. Therefore Nirvikaratvad will apply for mind and not to Brahman.

Second objection is karana Abhavad that Brahman has no instrument. Only when jnanam is a process it requires instruments. Whereas jnanam is swarupam it does not require an instrument because it is its very nature. It is very well said in Kaivalya Upanishad 1.1.21 *apani pado ham acintya saktih pasyamy acaksuh sa srnomy akarnah, aham vijanami vivikta rupo na casti vetta mama cit sada* 'hum this reads as I am without hands and legs, of incomprehensible power, I see without eyes, hear without ears. Devoid of all forms, I 'am knowing' [everything] and there is none that knows me. I am ever Pure knowledge.

Atma sees without the eyes hears without the ears knows without the mind means that Atma does not requires any instruments to know anything being it knows itself. Atma is jnana swarupah. Therefore karana Abhavad defect you cannot say.

Next is visaya Abhavad. There is nothing to know before sritsti. Adhi Sankaracharya says you cannot say objects are absent are absent before creation and then from nonexistence creation has to come and before sristi objects were there in potential form. Therefore had object that is avyakta jagat. Therefore Brahma Sarvasya avyaktasya Brahma sarvajnam Brahma is knower of everything in avyakta form.

I accept Brahman sarvajnam. Jnanam is not a process and it is swarupam you say. The question is if it is not a process, you cannot use any verb because to use a verb it indicates action and action indicates a process. If Brahman is not a process you should not use any verb and you cannot use the verb iksetah. Even sarvajnam a verb cannot be used. How do you say Brahman is sarvajnam.

For that Adhi Sankaracharya says even when a process is involved sometimes we use the verb in figurative sense. The example is Suryah prakasate agnihi dahati sun is lighting up fire is burning. Lighting is a verb you use. Adhi Sankaracharya asks the question is the lighting up is an action or is light a nature of agni. So also the agni whether it burns it is an action or it is its nature. If it is an action it will be temporary.

That is why my speaking is an action and I don't speak eternally. The rule *yad Kriya rupam tad anityam yad svarupam tad nithyam* lighting up is the very nature of the sun and it is not the job it does. Similarly agni does not burn and it is heat itself. Even though it is its nature we say agni burns. It is figurative expression and it is not an action. When you say Brahma janadi it is figuratively said and it is its swarupam. This is one way of arguing to establish Brahmanah sarvajnatvam.

There is another argument also. Even though Brahman by itself nirvikaram Brahman by itself cannot know anything but with the help of maya Brahman can become sarvajnah. Isvarah can become a knower. Brahman in the form of Isvara can be sarvajnah and maya is instrument and Brahman can become sarvajnah. Sagunam Brahmanah need not be figurative. I want you to take Chetanam Brahman that is having sarvajnatvam and not pradhanam.

Then we will go to the next word 'na'. It is connected to both iksateh and also to the second letter asabdam. Na refers to na pradhanam because of visualization.

Third word is asabdam. Asabdam is asabdatvad. It is clue for second reasoning. The word asabdam means Avidhikam. It does not have support of Veda pramanam. It is Sankya pradhanam. Now we have shown 'sat' does not have your pramanam and so you don't have support of Veda and 'sat' referred to by you.

Since it is avidhikam it does not have support of Vedas and it cannot be jagat karanam just as paramanu of Naiyayika philosophers. Pradhanam also is not supported by Veda. Pradhanam is not jagat karanam being not having the support of the Vedas. The conclusion is that Vedanta talks about Chetanam Brahman alone are jagat karanam and the subject matter of Vedanta is jagat karanam Brahman.

Vedanta does not deal with your pradhanam or anything. Another objection is there for which answer will be given in sixth sutra which we will see in the next class.

## BRAHMA SUTRA

Class 40

### **Topic 5 – Sutra 5-11 [Ikshatyadyadhikaranam]**

Brahman the [intelligent principle] is the first cause

#### **Sutra 1.1.5 [5]**

##### ***Iksateh na sabdam***

because ‘seeing’ [is referred, the Pradhana] which is not founded on the Veda is not [cause]

We are seeing the fifth sutra iksateh na sabdam which happens to be fifth Adhikaranam also. This consists of seven sutras i.e., five to eleven. In all the sutras the subject is one and it is what is the emaning of ‘sat’ in Chandogya Upanishad. Whatever is ‘sat’ is jagat upadana karanam. Sankya refers to it as pradhanam. We say that it refers to Chetanam Brahman alone. The first reason is because of perception because of visualization and iksanam. Now I will wind up the teaching of this sutra. Pradanam is Achetanam hence it cannot be the jagat karanam. How can Nirvikara Brahman be perceiver for which we said Brahman can be taken as Nirgunam Brahman or Sagunam Brahman. Both are Chetanam and both can be jagat karanam if we take Nirgunam Brahman it is perception without change and if we take Sagunam Brahman it is savikaran drastru. I will give you a reference we had elaborately discussed this topic 1.4.10 of Brahadharaynaka upanisad. It was concluded that Achetanam pradhanam can’t be the jagat karanam. With this fifth sutram is over. Now we will take up sixth sutram.

### **Topic 5 – Sutra 5-11 [Ikshatyadyadhikaranam]**

Brahman the [intelligent principle] is the first cause

#### **Sutra 1.1.6 [6]**

##### ***Gaunah cet na Atmasabdat***

*On account of the word ‘Atman’ [being applied to the cause] the meaning [of the word ‘being] is not figurative.*

In the previous sutra we said jagat karanam is Brahman alone because of visualisation that established Brahman is Chetanam. Sankya philosopher came with an objection saying that it can be connected to the Achetanam pradhanam or Prakriti also. He said pradhanam is jagat karanam. How can be insentient object be the cause of creation? He said every word can have two meaning one is Mukya meaning and the other is gouna meaning or figurative meaning. An example is given and it is that boy is a lion. We have got lion of Punjab. We say he is an iron man. When we say boy is a lion and the primary meaning of lion cannot be taken to mean a boy. There are so many differences between lion and boy. But still we say boy is a lion. We see there are some common features between lion and boy like majesty, like strength, like leadership etc. Lion is leader of animal and the boy is a leader. Because of common feature he is the lion. Similarly he is the pillar of the association. Pillar supports the building so the organization will collapse without him. It is figurative.

Similarly Sankya says iksanam is possible for pradhanam iksanam is figurative perception. Here he should give common features between primary and special or figurative features. Sankya says that any Chetana vastu sentient being uses visualization mental picturisation before systematic planned action. Someone visualizes how an action should take place. You have to visualize before picturisation. Unless I visualize I cannot systematically produce. Pradhanam also systematically visualizes everything. All the 23 items come in a systematic manner. If pradhanam makes it systematic it is 'as though' visualized the creation before because creation is orderly.

Pradhanam is jagat karanam 'satt' is pradhanam. Because it has got gouna iksanam. He gives further support also for this interpretation. Refer to 6.3.2 of Chandogya Upanishad *seyam devattaiksata hantahamimastisro devata anena jivan Atman anupravisya namarupe vyakara vaniti*. That god [existence] decided 'entering into these three deities [fire, water, and earth] as the individual Self, I shall manifest myself in many names and forms] First element created as per the Upanishad is tejah agnih.

Therefore Upanishad says 'sat' karanam visualized and it created agni Tattvam. 'sat' Brahman created agni and from agni he created jalam and Upanishad does not say Brahman created jalam but says agni created jalam. What does the Upanishad do? Before creating jalam what did agni do? Agni visualized water before creating jalam. It created jalam after visualizing jalam. Agni is Achetana bhutam. Upanishad says Achetana agni visualized before creating jalam. Can Achetana agni visualize?

Sankya says that the Upanishad says Achetana agni visualized and only way of justification is that visualization is figurative and not actually visualized. The agni visualized as though. Agni produced water and water produced earth. Fire produced water and water produced earth. Here also sruti does the same mischief. Water visualized the earth and after visualization created earth. Can water visualize because water is Achetanam. The iksanam is figurative and cannot be mukyam. We have got figurative iksanam here. The majority is gouna iksanam only. Thus Achetana pradhanam has got iksana sabdah gounah. That visualization is occurring near the visualization of agni. Because of the contact and proximity the iksanam is also gounam. This is the purva paksa of Sankya. Therefore pradhanam is cause of jagat karanam. They say Vedanta philosophy is wrong. So they say Sankya view is not Avidhikam.

Vyasacharya answers. Atma sabdad. He says that the word 'sat' is replaced by the word Atma. In two places the replacement comes. Here we have an Anupravesa sruti. After creating the world I the karanam will enter the world as Jivatma. This is one place. In another place there is another famous mantra wherein the teacher says jagat karanam 'sat' alone is Atma and that 'sat' Atma alone is you are. The argument is the word Jivatma can refer to only Chetana vastu.

Even in Sankya philosophy the word is connected to purusa alone and not to Achetana pradhanam again he says 'sat' which is Chetana Atma is nothing but you. Normally you will address Chetana vastu only. You will not talk to Achetana vastu. Atma is Chetanam and therefore 'sat' karanam also must be Chetanam only. In the case of visualization of agni I accept as gounam figurative. In the case of water also it is figurative. In the case of Atma it is Mukya iksanam. This is the essence of the sutra.

The first anumana vakyam is purva paksa and the other is siddhanta's anumanam. Iksadi sabda gouna sabda is the figurative visualization of fire and water. Vedanta says iksadi sabdah na gounah and it is mukyam eva. It is primary visualization of hetu. It is not visualization as said by Sankya pradhanam. The word Atma refers invariably to Chetana vastu unlike the visualization of water and fire. The word Atma refers to Chetana vastu alone and Achetana vastu can never be used for Atma. The word Atma is used to establish the visualization is not figurative but it is primary. Now we will go for word analysis.

Gouna is a word used by Sankya philosopher. Gouna means figurative. He is like a lion. All these expressions come under this category. Gouna means iksadi sabdah. The visualization expression is figurative. The full anumanam is represented by gounah one word. The next word is cet. If purva paksa argues like this the following is our answer. The third word is na Atma sabdad. Na means not. Na gouna the word should be supplied. Isadi sabdah na gounah visualization is not figurative because there is usage of Atma with regard to visualiser. You say Atma is Chetanam and if visualiser is Chetanam visualization is Mukyah. With this sixth sutra is over. The sixth cannot be taken independent sutra and it only strengthens the fifth sutra by showing that the visualization mentioned in fifth sutra is primary.

### **Topic 5, Sutras 5-11 [Ikshatyadhikaranam]**

Brahman the [intelligent principle] is the first cause

#### **Sutra 1.1.7 [7]**

#### ***Tannisthasya moksopadesat***

*because the instruction is that one who is devoted to Him, gets final release [the word Atman cannot be used with reference to pradhana]*

In the previous sutras we established 'sat' refers to Brahman alone and not pradhanam on account of primary visualization. Here we give another reasoning. Here also 'sat' refers to Chetana Brahman alone. The reasoning is different. The sutra presents the reason. This is based on the latter expression of the sixth chapter of Chandogya Upanishad.

That Atma is you it is declared. Whoever is established on that karana Atma will get liberated. The statement is whoever knows that 'sat' jagat karanam myself, he will enjoy until Praraptam is over and after Praraptam he will enjoy jivan mukti. Suppose the 'sat' refers to pradhanam, tat tvam asi Achetana pramanam you are inert pradhanam. Jagat karanam is pradhanam and you are inert.

You are pradhanam and you are foolish it is said. When you declare that you are inert pradhanam I will enjoy jivan mukti and get established in inert matter. Who will become inert by the study of sastram. I would prefer to be a jivah. More in the next class.

## BRAHMA SUTRA

Class 41

### **Topic 5, Sutras 5-11 [Ikshatyadhikaranam]**

Brahman the [intelligent principle] is the first cause

#### **Sutra 1.1.7 [7]**

#### ***Tannisthasya moksopadesat***

*because the instruction is that one who is devoted to Him, gets final release [the word Atman cannot be used with reference to pradhana]*

We are seeing the third sutra of Iksateh Adhikaranam. A statement occurring in Chandogya Upanishad is being discussed. 'sat' has been stated to be cause of to the jagat karanam. While Sankya philosophers claim that Achetana pradhanam is the cause, Vyasacharya himself in these sutras asserts that Achetana pradhanam cannot be the basis for the creation and the 'sat' referred to in the Upanishad is nothing but Chetanam Brahman for which Vyasacharya gives six reasons.

The benefits of more reasons in that process our scriptural understanding get better understanding. Every conclusion is ultimately connected to aham Brahma asmi the liberating wisdom. When you gather more and more reasons for important conclusion the Self-knowledge become clearer and clearer. Clarity in scriptural knowledge is the clarity in Self-Knowledge. It like wiping the mirror and more and more the mirror is clean, better and better you get the image or your face. When the face is not clear you don't rub your face, you rub the mirror alone.

Similarly we rub the scriptural knowledge mirror to get better understand. It will also eliminate the present doubts but also remove the future possibilities of doubts. Not only the possibility of doubts in my own mind but also the challenges from other people. We get knowledge and also the conviction and you have enough reasons to answer any doubt not only of mine but also others. We always look for more than one reason. 'sat' means existence is not inert entity but Consciousness. 'sat' the existence is the substratum of the whole creation and one Christian father studies under me. But he tells all the philosophers have accepted the existence is substratum but others are not able to accept that substratum is 'we ourselves'.

The basic reason is 'sat' is Chetanam Brahman. It is Mukya iksitatvam and visulisation is proof for that. In the second sutram we get the second reason that 'sat' is Chetanam Brahman.

Adhi Sankaracharya gives two interpretations. I will give the easier second interpretation. The Upanishad introduces 'sat' as jagat karanam. The sixth chapter of Chandogya has sixteen chapter elaborately discuss the creation. Thereafter it concludes that jagat karanam is 'you'. From eight section to sixteenth section the last mantra is '*sa yatha tatra nadahyetaidatmyamidam Sarvam tatsatyam sa Atma tattvamasi evetaketo*' that says that [self] is the Self of all this. It is the Truth. It is the Self that thou art, O Svedaketu. The jagat karanam Brahma is you are and you mean Chetanam Brahman or purusah. And he says Svetaketu you are and that you refers to purusah and that purusah is the listener student.

Having acquired the knowledge jagat karanam purusah one should get established with the knowledge and Chandogya upanishad says in the section 6.14.2 that the one who is established in this Self-knowledge gains moksa. He has to wait for that much time until the Prarapta is exhausted and after wards he get videha mukti and get liberated. The essence of this mantra is that the one gets established is jagat karanam will get liberated.

Now Vyasacharya asks the question what can be the Sankya philosophers. According to them jagat karanam 'sat' is Achetana pradhanam. When sruti says you are that. You are Achetana vastu and further it said that if you are established in Achetana nature you will get liberated means aham Achetanam pradanam jagat karanam asmi and according to that mantra the conclusion is that when you are established pradhanam you will get liberation. Thus you will end up in absurdity.

Even according to their philosophy itself it is a contradiction. They say in moksa the Prakriti should go away and according to him moksa is a state when Prakriti should go away. They themselves say that one should get established in purusa to get liberated but in this context they say you get established in pradhanam the Chetana vastu thus contradicting their own conviction. How can be Prakriti is pradhana nista.

Thus we establish 'sat' is Chetanam Brahman alone and not Achetana pradhanam. Here *tannisthasya* means whoever is identified with 'sat' will get moksa the liberation. Your aim always should to establish with 'sat' karanam. Next word is moksopadesat is the promise to get established with 'sat'. Atha sambatye occurs in 6.14.2 of Chandogya Upanishad the moksa is promised. If you take 'sat' as the pradhanam, that will not tally with what is said in the above sruti and therefore pradhanam nisthasya moksopadesat should not be taken is our conclusion. 'sat' is Chetanam because of visualization. 'sat' is Brahman and establishment of 'sat' is moksa karanam.

## **Topic 5, Sutras 5-11 [Ikshatyadhikaranam]**

Brahman the [intelligent principle] is the first cause

### **Sutra 1.1.8 [8]**

#### ***Heyatva avacanat ca***

there being no statement that it is to be discarded [the pradhana is not mentioned by the word 'sat'; and.

If you take the Upanishad it wants to reveal Atma, which is jagat karanam and Chetana vastu. It does not reveal directly being a suble entity. The listener has gross mind being engaged in gross Vyavahara. Hence the Upanishad takes one to the gross entity first and then subtler then subtler and the journey goes from grosser to subtler and this teaching is called arunthathi darsana nyayah. The couple has to see arunthathi star. Arunthathi is a smallest star. The priest cannot show it directly and he takes to the grossest entity, the moon and slowing smaller and smaller and each time the seer thinks it is arunthathi and slowly reaches the right star.

Similarly there is pancakosa Viveka and first it is Annamaya the Achetana vastu and later comes to prana maya and reveals prana maya as Atma and slowing come to the real Atma at the end. Upanishad first reveals the Achetanam and finally reveal the Chetanam at the end. This procedure is standard one used in Upanishad. 'sat' karanam is Achetanam pradhanam

alone and Upanishad is revealing Achetanam 'sat' pradhanam as jagat karanam and there is nothing wrong in this as arunthathi darsanam is followed. It is the first stage of teaching. The aim of the Upanishad is to reveal 'sat' and ultimately go to purusa through pradhanam. They say 'sat' is only an intermediary state and finally you have to reach the purusa as is the case of arunthathi Nyaya. This is the argument of Sankya philosopher.

Vyasacharya gives the answer in this sutra. Anna maya, prana maya and mano maya etc., are the intermediary stages that is followed to realize the Chetanam Brahman at the end. Finally ananda is revealed as Atma. Intermediary step is that which is negated later. Anna maya, mano maya etc., are negated and ultimately ananda Atma is not negated and hence it is final. To establish that is intermediary you should look for negation and negation is called heyatvam or nisheyatvam. All the kosas are negated. But ananda Atma is not negated.

According to Sankya philosopher sat is pradhanam only and it is taken as intermediary step and if the sat is taken as the intermediary step and if it is negated, that step cannot be the final Atma as per the sruti. Upanishad should continue teaching and since Upanishad has stopped the teaching the 'sat' as jagat karanam, Svetaketu understood 'sat' karanam. And after wards the teaching is over. 'sat' karanam is ultimate step and since it is final step it has to be Chetana purusah alone. Surti does not negate 'sat' karanam and therefore it is Chetanam alone. This is the argument and now we will take the word analysis. The false notion of the pradhana as the 'sat' has not been introduced first and discarded later so that it should be an aid to the understanding of Svetaketu that Atman alone is the 'sat' or the real being.

The sixth adhyaya of the Chandogya Upanishad deals with the direct statement of the Atman to the real being. If the word 'sat' were to denote pradhana then the knowledge of the pradhana as the cause would have given us the knowledge of the individual souls. But this does not happen because the souls, which are sentient, cannot be the effects of the non-sentient pradhana. Therefore the word 'sat' does not mean pradhana.

In this sutra tad sabda vakyam is not pradhanam heyatva avacanat. There is one 'ca'. Every word is important in the sutra. Adhi Sankaracharya takes the seventh reason that tad sabdham is not pradhanam from 'ca' sabda. In sixth chapter the father asks the question whether you raised the question from the teacher. Did you ask the particular question? Chandogya 6.1.,2 and3 what is that knowing which everything is known.

This comes in Mundakopanisad. *Karana vijnanenansarvam karyam vijnatham bhavati*. By knowing the cause all the effects are known. Karyam is nothing but the karanam with names and form. Ornaments is nothing but the gold with the names and forms. There are no ornaments separate from the gold. Jagat karana vijnanena jagat karyam vijnanam bhavati. 23 tattvams are born out of karanam.

Suppose a person gets pradhana jnanam, he knows all and can a person know purusa by knowing all. Purusa has to be known only if purusa is a product of the purusa. Pradhanam jnanam does not give purusa jnanam. This person will know all inert things in life and Chetana jivah he will not know. Therefore pradhanam cannot be jagat karanam if it is so Sarva jnanam naiva bhavati. In Vedanta Brahma vijnanam enables to know Sarva jivah and Achetana vijnanam. Because all jivas are none other than Brahman. All jivas are non different from Brahmas.

All Achetana Prapancha is also known through Brahma jnanam for entdrie Achetana Prapancha is then product of Brahma. Therefore in Vedanta alone eka vijnanena Sarva vijnanam possible. Ca kara indicates eka vijnanena Sarva vijnanam pratijna satvad. Further reason are given which we will see in the next class.

## BRAHMA SUTRA

Class 42

### **Topic 5, Sutras 5-11 [Ikshatyadhikaranam]**

Brahman the [intelligent principle] is the first cause

#### **Sutra 1.1.8 [8]**

##### ***Heyatva avacanat ca***

there being no statement that it is to be discarded [the pradhana is not mentioned by the word 'sat'; and.

We have just completed the 8<sup>th</sup> sutram of Iksateh Adhikaranam. The subject matter of the Adhikaranam is sruti vakyam of Chandogya Upanishad 'sat' *tveva somyedamagra asi* Sankya philosopher says 'sat' is Achetanam pradhanam and Vedanta says 'sat' is Chetanam Brahman. Adhi Sankaracharya has given seven reasons in support of their negation of pradhanam and we have competed four of them.

The word 'sat' does not refer to pradhanam because there is no statement of negation. If it refers to pradhanam it would have negated and taken to Purusa and since 'sat' is highest state not negated and hence 'sat' refers to Chetanam Brahman only. Because of ca in the sutram and ca refers to eka vijnanena Sarva vijnanam. Knowledge of 'sat' will lead to knowledge of everything and hence 'sat' sabda refers to Brahma jnanam and Brahman alone and not to pradhanam. Pradhna jnanam will not lead to Sarva jnanam. This we have seen in the last class. By knowing pradhanam can lead to latter knowledge and not purusa jnanam. Whatever is product of pradhanam can be known and through pradhan jnanam we have know the knowledge of purusa. Purusa is not the product of pradhanam. This is indicated by cakara in the 8<sup>th</sup> sutra.

### **Topic 5, Sutras 5-11 [Ikshatyadhikaranam]**

Brahman the [intelligent principle] is the first cause

#### **Sutra 1.1.9 [9]**

##### ***Sva apyayat***

on account of [the individual soul] entering into the Atman [the word 'Sat' does not refer to Pradhana]

In this sutra Vyasacharya refers to another discussion occurring in 6.8.1 of Chandogya Upanishad. The mantra read as *uddalako harunih svetaketum putramuvaca svapnantam me somya vijanihiti yatraitatpurusah svapiti nama sata somya tada sampanno bhavati svamapito bhavati tasmadenam svapitityacaksate svam hyapito bhavati* this means then Uddalaka aaruni said to his son, Svetaketu, Learn from me, my dear, the true nature of sleep. When a person here sleeps, as it is called then, my dear, he has reached pure being. He has gone to his own. Therefore they say he sleeps for he has gone to his own.

Upanishad points out during sleep state, a special name is given to sleeper and that name is svapiti. Upanishad raises the question why should a sleeper be named svapiti. The answer is that during sleep jiva resolves into its original nature. Apyayah means layah. Svapyayah means svarupa layah. In deep sleep a sleeper is called that jiva is in his real nature. During Sushupti jiva resolves into 'sat' karanam. We now get the idea that jiva resolves into its nature and jiva enters into 'sat' karanam and we come to the conclusion that the original nature of jiva is 'sat'. First it says jiva resolves into 'sat' and then says jiva resolves into its original nature. By analyzing the Sushupti state of nature, we come to know jiva resolves into nature, which is 'sat'. If we accept Sankya interpretation during Sushupti jiva resolves into nature 'sat' karanam. According to Sankya jiva resolves into Achetana pradhanam. Because its nature is Achetana pradhanam. According to Vedanta during Sushupti, jiva resolves into its nature, which is Chetanam. According to Sankya Achetanam will be the nature of jiva and according to Vedanta Chetanam is the nature of jiva. Are you Chetanam or Achetanam? Even if you are to say I am Achetanam, you should be Chetanam. Achetanam can never be the nature of jiva says Adhi Sankaracharya. Chetanam Brahman alone can be the true nature of jiva. Chetanam cannot be the nature of Achetanam and Achetanam cannot be the nature of Chetanam. Both are independent entity. Therefore svapyayah. 'sat' sabda cannot be pradhanam for 'sat' is jiva's real nature in Sushupti. This is the general analysis. We will go to word meaning.

Svapyaya is compound word one is svam and another is apyayah. Sva means svarupam in Sushupti jiva is said to be in svarupam. It is not the case of jiva alone. Anything resolves into its nature. If all the waves resolve it will resolve in the ocean. That nature is referred to as svam. Next word is apyayah. Apyayah word is used in Gita for resolving into the original nature in sloka 11.2 *bhavapyayau he bhutanam srutau vistaraso maya tvattah kamalapattraksa mahatmyam api ca 'vyayam* the origin and destruction of beings verily, have been heard by me in detail from thee says Arjuna to Krishna. Apyayah means desolution. Svapyayah means svarupa layah. Both in Sushupti and Pralaya jiva gets into svarupa layah. Svarupa layah is 'sat' layah and svarupa is 'sat' and therefore 'sat' should be Chetanam. With this fifth reason is over. We will enter the next sutra to see the sixth reason.

## **Topic 5, Sutras 5-11 [Ikshatyadhikaranam]**

Brahman the [intelligent principle] is the first cause

### **Sutra 1.1.10 [10]**

#### ***Gati samanyat***

on account of the consensus of opinion [expressed in different Upanisads, Brahman is the cause, and not pradhana

The Upanishad introduces 'sat' as jagat karanam without saying whether saatt is Chaitanyam or Achetanam because the Upanishad is vague we have the doubt. Now we have a general rule whenever a statement is vague in an Upanishad the vagueness can be clarified from parallel idea given in another Upanishad and solve the problem. We will take similar sristi statement in another Upanishad and then see the karanam taken is Chetanam or Achetanam based on that the vague statement could be clarified.

The famous one is from Taittiriya Upanishad 2.1.1 reads as *Om Brahma-vid apnoti param, tadesa'bhykta satyam jnanam anantam Brahma, yo Veda nihitam guhayam parame vyoman so-'snute sarvan Kaman saha Brahmana vipasciteti tasmad-va etasmad-atmana akasah*

*sabbhuta* the meaning of the mantra is Om, the knower of Brahman attains the Supreme. With reference to that there is following hymn recited; Brahman is the Truth, knowledge, Infinity. He who knows it as existing in the cave of the heart in the transcendent Akasa, realizes all his desires along with Omniscient Brahman.

From that [which is] this Atman is space born; further it reads satyam jnanam anantam Brahman and it is introduced as jnana svarupam and Chetana svarupam and there is no vagueness with regard to Brahman. Having introduced Chetanam Brahman it says that from that Chetanam Brahman Akasa was born. Further it is indicated Brahman is the upadana karanam for the entire creation.

In another place in *Sloka 2.6.3* of Taittiriya Upanishad reads as *So 'kamayat, bahu syam prajayeyeti, 'sat'apo' tapyata, 'sat'apastapta, idagmsarvam-asrjata yadidam kim catat-srstva tadeva-nupravisat, tadeva nupravisya sacca-tyacca-bhavat, niruktam cani-rukata mca, nilayanam canilayanamca, vijnanam cai-jnanam ca, satyam canrtam ca 'sat'yam-abhavat, yadidam kim ca, tatsatyam-itya caksate, tadapy-esa sloko bhavati. [iti sasthanu 'nuvakah]* that Brahman alone desired and became creation. Here also Brahman is introduced as upadana karanam.

In the same Upanishad mantra III.i.2 reads as *tam havaca yato va imani bhutani jayante yen jatani jivanti, yat-prayantya-bhisamvisanti, tad-vijijnasasya, tad brahmeti sa tapo – 'tapyata, sa tapas taptva* the meaning is to him [Bhrgu] he [Varuna] again said 'crave to know well that from which these beings are born, that by which, having been born, these beings live and continue to exist; and that into which, when departing they all enter. That is Brahman' Here, once again the Upanishad has categorically stated that Brahman is sristi sthithi karanam of the entire creation leaving no doubt that Brahman eva upadana karanam. Omniscient one is Brahman here and such Brahman is Chetanam what to talk of Sarva vid sarvajnam Brahman.

The same idea is seen in Mundakopanisad Mantra 2.1.3 that reads as *etasmaj-jayate prano manah sarvendriyani ca kham vayur-jyotir-apah prthivi visvasya dharini* the meaning is from Him are born the Prana [life], the mind, all the organs, the sky [Akasa], the wind [Vayu], the fire [Jyoti], the water [Apah], and the earth [Prithvi] which supports all. Here also we find explicitly that Chetanam Brahman is the upadana karanam of the whole creation starting from jiva to Prithvi.

Aitareya Upanishad declares in mantra 1.1 *aum Atma va idam eka evagra asti, nanyat kin can amisat; sa aiksata lakan nu srja iti* that reads as Aum Atma alone was verily the one that existed here in the beginning. Nothing rival whatsoever existed to blink, it thought; 'let me now create the worlds'. The word Atma represents Chetanam alone.

Prasnopanisad mantra III. 3 says *Atmana esa prano jayate yathaisa puruse chayai-tasminnetad-atatam mano-krten-ayaty-asmin-sarire*, which means this prana is born of the Atman, the Self. As shadow is born of the man, so is the Prana spread out on the Atman. By the actions of the mind, it enters into this body. It is very important and it says prana is born as shadow is born out of Brahman. The unreal creation is born out of Brahman the real.

The Brihadharaynaka upanisad contains several quotations to indicate that Chetanam is karanam for the jagat karanam Brahman.

Now we will see the word meaning. This contains two words as *Gati* and *samnyat*. In this context gati means jnanam, jnanam indicates Chetana karana jnanam. The jnanam belongs to Vedantin's Chetana Brahma jnanam. Other Upanishad does not support Achetana jnanam of Sankya whereas all the Upanisads as above support Chetana karana jnanam.

Samanyat means concurrence. The Chetana karana jnanam has got concurrence with other various Upanisads whereas Sankya's view is not supported by other Upanisads. Hence Sankya's view is negated in this regard that Achetanam pradhanam is jagat karanam. This is the sixth reason to establish that 'sat' is Chetanam Brahman not Achetanam pradhanam.

### **Topic 5, Sutras 5-11 [Ikshatyadhikaranam]**

Brahman the [intelligent principle] is the first cause

#### **Sutra 1.1.11 [11]**

##### ***Srutatvat ca***

*and because it is mentioned in Sruti [that the all knowing Brahman is the cause],*

Here Vyasacharya has in mind the statement occurring in 6.9 of Svetasvara Upanishad, reads as *na Tasya kascit patir asti loke, na cesita naiva ca Tasya lingam, na karanam karanadhipadhipo na casya kascij janita na cadhipah* this reads as of Him there is no master in the world, no ruler, nor is there any mark of Him, He is the cause, the lord of the lords of the sense organs; of Him there is neither progenitor nor lord.

The important portion is saha karanam, which means that is the cause of the universe. Upanishad says that does not seem to solve the problem. What is that is the question. All the previous mantras talk about Chaitanyam Brahman and having talked about Chaitanyam Brahman the Upanishad says that karanam Brahman is the cause of the universe. Here alone directly it is said that Brahman is the cause of the universe.

Since the universe says Brahman is karanam Sankya cannot contradict and if does so he becomes an avaidhika and his philosophy is more on Tarka less on sastra. He cannot contradict the Upanishad statement. This is the general analysis. The anumanam is 'sat' sabda vakyam refers to Chetanam Brahman is the cause of the world creation.

There are two words srutatvat and ca. Srutatvat means because it is heard and we should note because it is mentioned in the sruti. In those days Veda is never read because Veda was never a written text. They always heard Vedas and never read. That is why it is called sruti. There is a word 'ca' and this indicates the conclusion of the reasons given in the sutras. All seven reasons indicate 'sat' is Chetana karanam Brahman. Fifth Adhikaranam is over.

Now I will give you the Upasamhara of the Adhikaranam. The subject matter of the sutra is 'sat' occurring in the Chandogya Upanishad. The doubt here is whether the word 'sat' refers to achetana jagat karanam pradhanam or Chetana jagat karanam Brahman.

Here the Upanishad has not clearly mentioned that 'sat' refers to Brahman and hence the doubt has risen. Purva paksha here is Sankya. He says Achetanam pradhanam eva jagat karanam. Many reasons are given. First is material cause has to be material and it is Achetanam. Pot is Achetanam matter. All materials are inert and hence the cause also should

be material and inert. Pradhanam and world similarity is there. Cause and effect should have similarity and here world and pradhanam have similarity. Siddhanta says 'sat' is Chetana karanam Brahmaiva that we have seen in all the earlier mantras. In the fourth Adhikaranam Sankya raised an objection that Brahman is not jagat karanam, we have convinced them in the present adhikaranam. More in the next class.

## BRAHMA SUTRA

Class 43

### **Topic 5, Sutras 5-11 [Ikshatyadhikaranam]**

Brahman the [intelligent principle] is the first cause

#### **Sutra 1.1.11 [11]**

##### *Srutattvat ca*

and because it is mentioned in Sruti [that the all knowing Brahman is the cause],

**With the sutra 11 Iksateh Adhikaranam is over. This occurs in Chandogya Upanishad. Why should it occur in Brahma Sutra? Brahma Sutra analyses Vedanta vakyani. Therefore Iksateh Adhikaranam should come in Uttara mimamsa only. Then we should ask why the Iksateh Adhikaranam should occur in the first chapter. It is samanvaya adhyaya and it is meant to show consistency or harmony.**

This is to show there is consistently without contradiction reveals Brahman is the idea here. In this Adhikaranam it is shown that all vakyas reveal Brahman. This is called adhyaya sangathih and it is to show that the chapters occur in this chapter legitimately. Why this Adhikaranam occurs in the first pada of the first section. The reason is that the first pada analyses those statement in which there are clear clues that reveal Brahman.

We took the word ‘satt’ was taken as to whether it denotes pradhanam or Brahman. The clue is Iksatihi. In the second section we will analyse those statements, which are not clear. This academic exercise is called pada sangathih. Sangathih is the fifth Adhikaranam answers the objection raised in the fourth Adhikaranam. Sankya philosopher raises this objection.

With this Iksateh Adhikaranam is over.

### **Topic 6 – Sutras 12-19 [Anandamayadhikaranam]**

Anandamaya is Para Brahman

#### **Sutra 1.1.12 [12]**

##### *anandamaya*

[means the Brahma] because [the word ananda as denoting Brahman] is repeated

**Here we enter the sixth Adhikaranam Anandamayadhi Adhikaranam. This has got eight sutras dealing with one topic ananda maya. This occurs in second half of 2.5.2 of Taittiriya Upanishad that reads as *tasyaisa eva sarira Atma yah purvasya tasmad va etamsad vijnana mayat anyo’ntara Atma ‘nandamayah, tenaisa purnah sa va esa Purusa-vidha eva, Tasya Purusa-vidhatam, anvayam Purusa-vidhah, Tasya priyameva sirah, modo daksinah paksah, puccham pratistha, tadapy-esa sloho bhavati.***

**That reads as of that, of the Former, this one verily is the embodied self, Different from this self-made up of intellect [Vijnanamaya] is another self within, formed of Bliss [Anandamaya]. By this, that is filled [by that is filled [by Anandamaya the Vijnanamaya**

**is full]. It also has the shape of man. According to the human form of That is the human form of this. Of it, joy [Priya] is the right side, Rejoicing [Moda] is the left side and Bliss [promoda] is the trunk. Brahman is the tail support.**

This is Anandamaya Adhikaranam. Adhi Sankaracharya writes the commentary in a particular pattern. He has established Anandamaya is one of the five kosas and the study of Anandamaya is a part of panca kosa visayah. The Upanishad has not direct intention to reveal panca kosa for knowing *pancakosa* jnana will not give you moksa. If it does not give moksa why should the Upanishad introduce that. The same Upanishad Manta 2.1 reads as *Brahmavid apnoti param tadesa 'bhyukta, satyam jnanam anandam Brahma yo Veda nihitam guhayam parame vyoman, so-'snute sarvan Kaman saha brahana vipasciteti* I the meaning is the knower of Brahman attains the Supreme. With reference to that there is following hymn recited; Brahman is Truth, knowledge, infinity. He who knows It as existing in the cave of the heart in the transcendent Akasa realizes all his desires along with Omniscient Brahman.

There the Upanishad has said Brahma jnanam will give liberation. Naturally a seeker will be interested in Brahma jnanam. Upanishad says that it cannot reveal Brahman directly. It reveals a flight of steps to climb up and realize Brahman. The steps are panca kosas. They are not Brahman but steps from grosser to subtler level. Annamaya is first step; prana maya second step; mano maya third step; vijñana maya is the fourth step; ananda maya is the fifth step and then you get Brahman.

As even you get further kosas becomes subtler and the mind also becomes subtler and subtler. The grossest 'I' becomes sookshma and sookshma and if you understand up to ananda maya you can come to Brahman and once you realize Brahman you attain moksa. This is commentary of Adhi Sankaracharya.

There are some commentators who say Anandamaya is not a kosa and it is itself Brahman. They have commented Brahma Sutra also. Keeping this in view, they point out Anandamaya is Brahman. According to them Brahma Sutra proves Anandamaya proves Brahman. This is vrittikara madham. In samanvaya Adhikaranam also we saw vrittikara madham.

Adhi Sankaracharya joints this vrittikara madham and along with vrittikara Adhi Sankaracharya also comments upon every sutra and establishes that Anandamaya is Brahman. The greatest mischief he does while joining vrittikara he does say that he supports vrittikara but comments as though it is his view.

But in the commentary of Taittiriya Upanishad Adhi Sankaracharya comments Anandamaya is not Brahman. He concludes that the whole statement that Anandamaya is Paramatma in the sutra 19. Having said that thereafter he says that the following note is to be added. He says all I said till now is wrong and he says Anandamaya cannot be Brahman and Anandamaya is only kosa.

Having refuted the vrittikara madham, how do you interpret the sutra. If vrittikara is wrong how should you interpret the sutra. Adhi Sankaracharya says that the sutra has to be reinterpreted as follows and he gives the reinterpretation of the sutra, which alone is Advaidic interpretation. Under every sutra it is vrittikara interpretation. After the completion of the last sutra 19, Adhi Sankaracharya refutes vrittikara madham and defines Advaida interpretation.

I will not elaborately deal with vrittikara commentary. I will give the essence of the vrittikara arguments and then I will refute them and give our commentary. Vrittikara says Anandamaya Atma eva. Aya is not a kosa. He tries to give various arguments. There are two main arguments in support of his conclusion.

Previously Upanishad talked about kosa not directly. Initially it introduced the kosa as Atma only and thus Anandamaya is introduced as Atma. At the end of that Upanishad says anyontara Atma prana maya. It introduces prana maya and anna maya is reduced to kosa. Later prana maya is reduced to kosa when it introduces mano maya.

Manomaya becomes a kosa when it introduces vijnana maya; and vijnana maya becomes a kosa when it introduces Anandamaya kosa. If Anandamaya should be reduced to kosa there should be another statement anyontara Atma another interior Atma. Only when another interior is introduced the previous one is kosa and it is eliminated because of anyontara Atma. Vrittikara argues to prove Anandamaya as kosa we should get anyontara Atma, but such a statement is not there. So we find Anandamaya is innermost Atma and hence it is Brahman. The previous four are kosas. Anandamaya is Sarvantara Atma. This is the argument one of vrittikara.

The second argument is that after every kosa the Upanishad quotes a rg mantra which gives more description of anna maya, so also after introducing prana maya; vijnana maya rg mantra clearly states the meaning of the kosa. That rg mantra talks about Brahman. From this it becomes clear Anandamaya is Brahman. Therefore because of rg mantra quotation that we come to the conclusion that Anandamaya is Brahman. This is the argument of vrittikara madham.

Adhi Sankaracharya refutes the vrittikara maya by giving five arguments and negates their views. He gives his views in sutra 10 only. What are those arguments? His is vrittikara madha condemnation.

They say after Anandamaya there is no anyontara Atma statement. Nothing interior is revealed. For Adhi Sankaracharya says that no dobut anyontara statement is not there. Even though it is not there something interior to the Upanishad within the Anandamaya statement itself reveals Anandamaya. See the Upanishad quotation given above.

Ananda maya is Priya moda and pramoda is ananda maya and there is non-experiential pleasure wherein ananda means ananta which is ananda Atma which is interior to Anandamaya. It is 'Self' the core. Atma is the heart of Anandamaya kosa and thus Anandamaya becomes a kosa. This is the first argument.

Rg mantra talks about Brahman. Adhi Sankaracharya says that rg mantra does not refer to Atma. Rg mantra does not talk about Anandamaya but it talks about the tail of Brahman. In all previous portions it talked about anna maya etc. How is that here in the case of Anandamaya rg mantra does not talk about Brahman? For this Adhi Sankaracharya gives two arguments, which we will see in the next class.

## BRAHMA SUTRA

Class 44

### **Topic 6 – Sutras 12-19 [Anandamayadhikaranam]**

Anandamaya is Para Brahman

#### **Sutra 1.1.12 [12]**

#### ***anandamaya***

[means the Brahma] because [the word ananda as denoting Brahman] is repeated

**We see the sixth topic known as Anandamaya Adhikaranam where Taittiriya valli mantra is taken up for discussion. Adhi Sankaracharya writes his commentary in a particular pattern and I will do accordingly. First portion Adhi Sankaracharya commentary on all sutras based on vrittikara madham. The second part is negation and third part is reinterpretation of all sutras based on Advaidam. According to them Anandamaya should be taken as Brahman. We say it is Anandamaya kosa. The reasons given by vrittikara we have discussed in the last class. At the end of Anandamaya rg mantra talks about Brahman and therefore Anandamaya is only a kosa. All other sutras also will conclude in the same manner as is given here in this sutra.**

The second part is Adhi Sankaracharya's vrittikara madham. He establishes Anandamaya is kosa alone and it is the fifth kosa. He gives five arguments in support of his argument. One more argument is given in Taittiriya Upanishad. Then the arguments become six.

Vrittikara says Anandamaya is Brahman since nothing is introduced later. After Anandamaya kosa ananda Atma, which indicates Anandamaya is kosa and ananda without kosa, is Atma. The difference between them is kosa ananda and Atma ananda? The kosa ananda is experiential pleasure, which is Pratibimba ananda. It is fluctuating pleasure. The experience of ananda Atma is not subject to any fluctuation. It is non experiential and it is purnatvam and it is Bimba ananda and since Bimba ananda is introduced as antharatma and Anandamaya should be taken as kosa only. This is the first argument.

Virttikara says Anandamaya is kosa because rg mantra at the end of Anandamaya talks about Brahman. For this Adhi Sankaracharya gives this argument. Not doubt it talks about Brahman. It does not refer to Anandamaya the kosa but it refers to ananda Atma Brahma puccham pradhista. Therefore it does not refer to Anandamaya and Anandamaya has to be kosa alone. This is the second argument to establish that Anandamaya is a kosa.

Adhi Sankaracharya says that the very word Anandamaya indicates that it is a kosa and not Brahman. Word Anandamaya consists of two parts one is ananda and another is maya.

Suffix maya is added to the word ananda. The very suffix maya indicates that it cannot refer to Brahman. The first meaning of maya is modification and the second meaning is abundance or saturation etc. When you add suffix to any word, it indicates modification that object you talk of. Whatever the object is indicated with suffix maya is Savikaram only. It reveals a changing object and not changeless object. If it is savikarm it cannot be Brahman is the conclusion of Adhi Sankaracharya.

Physical body the modification of annam is Annamaya. Annam is karanam and Annamaya is karyam. All the four kosas are karya maya Atma only including Anandamaya. Being karyam or being Savikaram it cannot be Brahman. That is why we say no experiential pleasure can be Brahman. Experiential happiness is subject to fluctuation. Now we will come to the second meaning of maya that is abundance.

Even if we take ananda in abundance and even if we take that meaning Anandamaya cannot be Brahman because when you say ananda is predominant it means that there is some dukham in it. It is not purna ananda. You cannot dukha lesam when you talk of ananda. Brahma by definition is ananda embodiment and not even a dash of dukham. Then what is Brahman? Brahman is without the suffix 'mayat' since Anandamaya has got a suffix maya, it is kosa as is the case with Annamaya or prana maya or vijnana maya. This is the third argument.

Anandamaya is not Brahman. It gives the description of Atma. It means it has got parts. Anandamaya has got parts or avayava like Annamaya has got various parts are there. All the mayas have got various parts or limbs and similarly Anandamaya has got parts. Whatever has got parts is called savayavam. If it is savayavam or part it has to be a product. Not only it is a product, it has got the limitations. *Yad savayavam tad paricchinam savayavatvad gatavad.* It is subject to modification also. Anandamaya is also a limited product only. Brahman Niravayavam and it is free from parts. Therefore Brahman is parichinnam how can Savikara savayava parichinna be identical with niravayava, Nirvikara, aparichinna Brahman. Therefore Anandamaya is not Brahman. This is the fourth argument.

Anandamaya is not Brahman. While describing Anandamaya Brahman has been separately mentioned as puccham, which means adharam. It is the very support of Anandamaya and when Brahman is support how can Brahman itself is Anandamaya. Supporter and supported cannot be identical and they both are different. This is the fifth argument. Brahman is separately enumerated.

In Taittiriya Upanishad Adhi Sankaracharya gives one more argument. In the Upanishad Brahmananda valli at the end the Upanishad mantra III.x.5 talks of jnana phalam. *Sa yas-cayam puruse yas casav aditye sa ekah sa ya evamvit, asmal lokat retya etam annam ayam Atmanam upasam kramya, etam pranam ayam Atmanam upasam kramya, etam manomayam Atmanam upasam kramya etam vijnana mayam Atmanam upasam kramya, etam ananda mayam Atmanam upasam kramya, etam annam ayam Atmanam upasam kramya emam llokan kamanni kamarupy anusam caran, etat sama gayann aste* now the benefit of the knowledge the Upanishad says Jnani crosses over all the kosas which means dis-identifying with anna maya I no more look upon as Annamaya as myself and Annamaya is like a dress.

So each maya is a dress and jnanam transcends all of them and suppose Anandamaya is Brahman should be not disassociate with Anandamaya and it will become he is disassociated with Brahman and he will become sunyavadi. It is not crossing ananda maya. Anandamayah kosah upasankarana visayatvad annamayavad. It is an object of crossing like Annamaya and prana maya. So vrittikara madham is defective.

Now we enter the third part of all the sutras based on Advaidam. Adhi Sankaracharya does it very briefly. The reinterpretation he does briefly. This we will do it elaborately. Now we will take up general analysis.

The topic under discussion in this sutra is Anandamaya is not Brahman. The Upanishad talks about various parts of Anandamaya like Annamaya and Pranamaya etc. Puccham means tail and it is like a tail that supports. For bird the tail is important for support. Tail is part of something it is a limb and any part is always subsidiary to the whole. It is amukyam and not only amukyam it is also paratantram and the part depends upon the whole for survival. The states are under the control of the central. States depends upon the central. Part is ever dependent this we know. Brahman has been introduced in the Anandamaya context as Brahma puccham pratista. It is introduced as the tail of Anandamaya.

If Brahman is tail of Anandamaya it becomes an avayava of Anandamaya a part of Anandamaya and Anandamaya becomes the whole and Brahman the part and if Brahman is avayava it will have two qualification. It will become paratantram and it will be dependent on Anandamaya. Here analysis whether Brahman is secondary or paratantram or dependant on ananda maya. Through this section we establish that Brahman is not secondary to Anandamaya even though it is presented as the tail of Anandamaya.

Similarly, Brahman is not dependent of Anandamaya and Brahman is independent only even though it is presented as the tail of Anandamaya. Brahman is primary and not secondary. All the eight sutras establish Brahman is independent, the Brahman mentioned as the tail of Anandamaya. Anandamaya abyasad is the sutram and we should interpret Anandamaya maya puccha rupam Brahman is svatantram abyasad. This is the first reason establish that Brahman is svatantram. Details we will see in the next class.

## BRAHMA SUTRA

Class 45

### **Topic 6 – Sutras 12-19 [Anandamayadhikaranam]**

Anandamaya is Para Brahman

#### **Sutra 1.1.12 [12]**

#### ***anandamaya abhyasat***

[means the Brahma] because [the word ananda as denoting Brahman] is repeated

The commentary of this mantra is over in the last class. Adhi Sankaracharya established Anandamaya is only and kosa and it is not Brahman. Adhi Sankaracharya has negated the view of vrittikara that Anandamaya is Brahman with sruti support.

Analysis is not the nature of Anandamaya. What is Anandamaya is not our discussion. In Anandamaya discussion the word Brahman occurs as Taittiriya Upanishad *Tasya Purusa-vidhatam, anvayam Purusa-vidhah, Tasya priyameva sirah, modo daksinah paksah, puccham pratistha, tadapy-esa sloho bhavati [ibid]*. Here the word occurs and the controversy is about Brahman and not about Anandamaya. Why should there be a discussion about Brahman? There is no controversy at all. Vichara presupposes controversy.

It is this that Upanishad introduces Brahman as the puccham of Anandamaya. Puccham means a tail. We all know like the tail of the monkey or bird the tail must refer to an avayava or part alone. Thuccha sabda indicates the avayava only. Brahman is introduced, as thuccham of Anandamaya and Brahman becomes an avayava. Let Brahman become an avayava then what is wrong. Once we accept it as avayava, Brahman becomes avayavi the whole. Any part depends upon the whole, as the tail cannot be independent of the whole. Then Brahman becomes paratantram. This purva paksa's argument.

Superficially looking Brahman appears to be paratantram as it is presented as the tail. We establish that Brahman is svatantram alone. Here Brahman means what is said in the Anandamaya prakatanatvam. It is svatantram alone. The reasons are many but the conclusions are many.

The first reason given in sutra 12 is abyasat. We find in Taittiriya Upanishad at the end of every kosa we find a rg Veda mantra. That mantra is called nigamana slokah. We have five nigamana sloka. When we find the content we see something interesting. After every maya, it gives importance to the five mayas. Anandamaya nigamana should give importance to that Anandamaya but it talks about ananda. Here Anandamaya is not given importance. It talks about the Brahman, which is the puccham of Anandamaya. Since nigamana sloka gives importance to Brahman, it is evident that Brahman is pradhanam and it is not the tail of Anandamaya. Therefore it is not tail it is 'as though' tail. Nigamana sloka repeats the word Brahman giving importance to Brahman and not to Anandamaya. This repetition is termed as abyaas in the sutra. All the latter portions give importance only to Brahman and not Anandamaya. Therefore it is clear Brahman is importance and not Anandamaya.

It consists of two words Anandamayah and abyaasa. We should get the laksyartham of Anandamaya. It is Anandamayasta puccha Brahman. We take such a meaning because that is the context. We are not interested in Brahman and not Anandamaya. We supply a new word, which is not in the sutra which is pradhanam or svatantram. Anandamayasta is svatantram. Abyasaad means in the nigamana sloka stresses the importance of Brahman alone.

## Topic 6 – Sutras 12-19 [Anandamayadhikaranam]

Anandamaya is Para Brahman

### Sutra 1.1.13 [13]

#### *Vikarasabdat na cet na pracuryat*

if it be said [that Anandamaya] does not [denote the highest Atman] because it is a word denoting modification, [then it is] not so, [the meaning of the affix ‘maya’] being abundance.

Now a purva paksa comes and raises an objection. Brahman is pradhanam and the word Brahman is repeated and predominantly discussed in the later portions. He says that these are indirect reasons and I have direct support that Brahma puccham pradhista. It is sruti words. The word puccham means tail and the tail is a portion and the portion always depends upon the whole. Once it moves from the body or the whole the avayava loses its importance. Here Brahman is said to be puccham and it cannot be independent. If such a purva paksa is raised the sutra gives the answer also.

The sutra has got two portions one of purva paksa and the later portion siddhanta. Vedanta says puccham is used and it is not used in literal sense at all and it has got an implied meaning. The implied meaning is adhara Artha laksanaya. Adhara means support. Brahma puccham means Brahman supports. Just as the tail of the bird supports the bird, so the Brahman supports the whole world and reveals adhara. The word puccham is followed by pradhista the adhistanam. Why should Upanishad confuse us? Upanishad could have used the word adhara. Why it is not done so? It has not done because in the previous kosas the word puccham has been used for the sake of Upasanartham.

In each of the kosa there is head, right, left etc., and the Upanishad wants to keep the trend in Anandamaya also. It is done for continuity and to go on majority. In order to reveal Brahman, the puccham word has been used after mentioning Anandamaya. In order to reveal Brahman the word puccham is used. The literal word of puccham should not be taken and the lakshyartha the meaning as support should be taken.

Vikarasabdat is the word. Vikaraha means avayavah sabdah means sabda. It is there in the Upanishad. It is Brahma puccham. There afterward we have introduce a word. After the word na we should supply the word Brahma and svatantra. Purva paksa says Brahma na svatantram. Brahman is not independent being tail of the whole.

Siddhanta says if the purva paksa argues like that our answer is na paratantram. Brahman cannot be taken as paratantram prajuryad. It means predominance. The word puccha is used not to indicate avayava but to agree predominance used in the previous stotram. To fall in line for the agreement in other stotra the puccha sabda is used here.

The word puccha is taken by purva paksa as avayava. It means Brahman is dependent. Whether the word limb is Vachyartha or lakshyartha we should see. The meaning avayava is lakshartham or Vachyartham. Tail does not mean limb. Tail means tail. It is a particular part hanging behind the animal. Suppose the word tail and limb are synonymous, some one asks me do you have tail. Tail as limb should be only lakshyartha and therefore if purva paksa takes it as limb he takes it as Vachyartha.

When I take it as lakshyartha, both of us do not take the direct meaning. Between Vachyartha and lakshyartha direct meaning is powerful. You take implied meaning and I take implied meaning and my implied meaning suits the context more than yours. Therefore word puccham is used not because it is limb but puccha sabda abundance and to agree with majority that is all. Anandamaya maya na pradhanam vikara sabdat. This anumanam number one. Anandamayastam Brahma na apradhanam or na palatantram why praturyad. This is the second reason. Now we will go to the third one.

## Topic 6 – Sutras 12-19 [Anandamayadhikaranam]

Anandamaya is Para Brahman

### Sutra 1.1.14 [14]

#### *Tat hetu vyapadesat*

because [Brahman] is mentioned as the cause of [the bliss, the affix ‘maya’ means abundance].

Here we give another reason to establish Brahman is svatantram. Brahman has been introduced after Anandamaya. When we look at the later portion the focus is not Anandamaya but the tail of Anandamaya, which is Brahman. Then comes sristi prakaranam once again. Because in Taittiriya Upanishad sristi has been talked already. Brahman is introduced and the creation comes afterwards. Now Brahman has been reintroduced as the puccham of Anandamaya kosa and after wards sristi is reintroduced again.

Taittiriya Upanishad 2.6.3 *so kamayat bahu svam prajayeyeti sa tapo tapyata sa tapas taptva idagm Sarvam asrjata yadidam kimca tat srstva tadeva nupravisat tadeva nupravisya sacca tyacca bhavat niruktam cani rukatam ca, nilayanam cani layanam ca, vijnanam cani jnanam ca, sathyam, jnanam anandam abhavat, yadidam kim ca, tat satyam itya caksate, tadapy-esa sloka bhavati.* This reads as he desired ‘I shall become many and be born, He performed tapas, having performed Tapas, he created this whatever we perceive. Having created it, he entered into it. Having entered it He became the manifest and the Unmanifest; the defined and the undefined; the housed and the houseless; knowledge and ignorance; truth and falsehood; and all this whatsoever that exists. Therefore it is called existence. In this sense, there is the following vedic verse.

Saha akamayata idagm Sarvam asrjata does this saha refers to Anandamaya or Brahman. If it refers to Anandamaya then Anandamaya will become jagat karanam but we know it cannot become jagat karanam. How can the limited savayava Anandamaya become the jagat karanam and if you take Brahman it fits perfectly and therefore Brahman is svatantram because it is the cause of the whole creation. More in the next class.

## BRAHMA SUTRA

Class 46

### **Topic 6 – Sutras 12-19 [Anandamayadhikaranam]**

Anandamaya is Para Brahman

#### **Sutra 1.1.14 [14]**

##### ***Tat hetu vyapadesat***

because [Brahman] is mentioned as the cause of [the bliss, the affix ‘maya’ means abundance].

We see the third sutra of ananda maya karanam. We see the interpretation of Adhi Sankaracharya made at the end of the Adhikaranam. The topic is puccham in the sutra is svapradnam Brahman or apradhanam Brahman. It is conclusion that it is svatantram Brahman.

What he says is Brahman, which is elaborated later, is revealed as jagat karanam even though it is presented as Anandamaya puccham. That puccham Brahman is elaborated later. Brahman is presented as jagat karanam. Not only it is jagat karanam but also karanam of panca kosa and Anandamaya also. It is Sarva karanam Brahman. Also we have another supporting reason that Anandamaya is savayavam and it has limbs. According to logic yad savayavam tad karyam. Brahman is introduced later as karanam.

Vyasacharya asks karanam is dependent upon karyam or karyam dependent upon karanam. Karanam is ever independent. You cannot say Brahman depends upon Anandamaya but you should say Anandamaya is dependent upon Brahman. Upanishad also adds a word pradhista and the word puccham does not mean tail but the very adhistanam of the entire world including Anandamaya. Brahman is the hetu of the entire creation.

We say Brahman is presented as jagat karanam. It is presented in Taittiriya vakyam. Saha akamaya means he desired to create the world and he created the world is the Upanishad vakyam. Pronoun saha refers to what is our question. Here pronoun is given but not said Brahman created the world. Brahman presented as Anandamaya alone presented as sokamayama later to indicate that Brahman created the world. The pronoun should agree with the gender and also number etc., according to grammar. It need not agree in case. Brahman neuter gender and saha is masculine gender. How can the masculine pronoun can go with neuter gender Brahman? And he says Anandamaya alone is svapradhanam and it is jagat karanam and not Brahman. This is the suggestion of a purva paksha.

We say pronoun cannot refer to Anandamaya and it refers to Brahman only. Pronoun should refer to immediately present noun only and not farther noun. Therefore, saha should refer to Brahman, alone which is closer, and not Anandamaya. After introducing several sentences Brahman is introduced so Brahman is closer. It may be closer and what about the gender is not in agreement. For which siddhanti says gender does not agree because the Upanishad does not want to make any difference between Brahman and Atma.

The word Atma is in Sanskrit is masculine in gender. Here Upanishad want to show that Brahman and Atman are identical and it becomes very clear if we study the beginning portion

of Brahmanandavalli. There the Upanishad defines Brahman Taittiriya II.i.1 as *satyam jnanam anantam Brahma. Yo Veda nihitam guhayam parame vyoman, so'snute sarvan Kaman saha Brahmana vipasciteti* here Brahman is categorically defined as satyam jnanam anantam that is truth, knowledge and infinity is Brahman. And then the Upanishad continues in the next mantra *tasmad-va etasmad-atmana akasah sambhutih* and then Upanishad introduces Atma.

Tasmad va etasmad Atmanah tasmadva represents Brahman and again it says that Brahman is none other than the Atma and from this it is clear that Upanishad does not want to differentiate between Atma and Brahma. Ananda Atma eva Brahma puccham.

Again in Bhrgu valli it is said III.vi.1 *anando prahmeti vyajanat, anandad-dhyeva khalvimani bhutani jayante, anandena jatani jivanti anandam prayanty-abhisam visantiti, saisa bhargavi varuni vidya, parame vyoman pratisthita, so ya evam Veda pratistithati annavan annado bhavati, mahan bhavati prajaya pasubhir Brahma varcasena, mahan kirtya.* Ananda here is said to be Atma. Atma and Brahman are identical is confirmed in the above two statements. Thus it is concluded that Brahman alone is jagat karanam.

There are two words tat hetu and vya-padesat. Brahma puccha Brahma is svatantram. Because it is presented as jagat karanam Brahman is jagat karanam in the statement sokamayam. Tad means Brahman hetu means jagat karanam mentioned in Upanishad, this is the meaning of the compound word. This the reason for establishing Brahman is svatantram, the next word is ca. The significance is that purva paksha says Brahman has to be paratantram because it is presented as tail. Because it is a tail it should be part.

Why do you raise it in Anandamaya prakaranam. Why you are attached to the word tail. Look at vijñana maya prakaranam and there it is Hiranyagarbha in vijñana maya prakaranam.

The Upanishad mantra II.iv.2 reads as *tasmad va etasman manomayat, anyo'ntara Atma vijñanamayah tenaisa purnah, sa va esa Purusa-vidha eva, Tasya Purusa-vidhatam, anvayam Purusa vidhah, Tasya sraddhaiva sirah rtam daksinah paksah, satyam uttarah paksah, yoga Atma mahah puccam pratistha, tad apy esa sloko bhavati* it is said face is the head of vijñanamayah Sastri knowledge is on the right side of vijñanamaya concentration is central part of vijñana maya puccham is samasti sookshma sariram or Hiranyagarbhah. In vijñanamaya Hiranyagarbha is presented as vijñana maya kosa. How can you accept Hiranyagarbha as tail? It is vyasti and macrocosm. How can macro vyasti maya become tail of microcosm? You should say Hiranyagarbha is the tail means Hiranyagarbha is the adharah, the supporter.

If here, the tail can be taken as adhara why cannot you take puccham as adharam in anandamaya also. Pritivi is shown as puccham in prana maya. In mano maya puccha is avayava. In some context puccha is avayava and in some other context it is adharam. This is to be taken keeping the context in mind. According to context the meaning of the word differs. In the context of Anandamaya adhara meaning should be taken. With this third sutra is over.

## **Topic 6 – Sutras 12-19 [Anandamayadhikaranam]**

Anandamaya is Para Brahman

### **Sutra 1.1.15 [15]**

### *Mantravarnikam eva ca giyate*

[Anandamaya is Brahma because] the same [Brahman which has been mentioned in the mantra is mentioned [in the Brahmana.

We will do the general analysis. Vyasacharya says you look at Brahmandanda valli and you will have no problem at all. This deals with Brahman in detail. The very word indicates that Brahman is pradhanam. Brahman is svatantram. Anything mukyam is pradhanam. Subordinate will be dependent. It starts with bramavid apnoti param. It starts with the saying that one who knows Brahman will become Brahman. Brahman is defined through a rg mantra. It is mantra varnah. It quotes rg mantra because the Upanishad is not rg Veda Upanishad. Brahmanam is commentary on mantra portion of the mantra bagha of the Veda.

Mantra and Brahmana is equal to Veda. Mantra is crisp and Veda is elaborate. Therefore it quotes a rg mantra. Brahman is define das infinte Brahman satyam jnanam and anantam. Brahman is independently existent; Brahman is thus svatantram. The very word anantam shows Brahman is the tail of anything. Upanishad wants to reveal Brahman through arunthathi Nyaya. Brahman is introduced as jagat karanam and Brahman is introduced as kosa karnam also. Up to Annamaya gosa everything is karyam. Going backward Pranamaya to Manomaya to vijnana maya.

Then at the end of Anandamaya it is shown as the same as the rg mantra. Brahman of rg mantra is commented upon later and shown as ananda maya. Therefore Anandamaya prakatatva Brahma is mantra varnikam Brahman. Puccham Brahma is given a new title mantra varnikam Brahma; it is that Brahman that independent and infinite Brahman mantra vane yuktam mantra varnikam. Mantra varnikam Brahman is svatantram and puccham Brahman is nothing but mantra varnikam Brahman is also svatantram. This is the general meaning of the stostra.

Puccham Brahman svatantram maantravarnikatvad. If you want Atmavad. Vyatirakaena gatavad. There are four words are there in the sutra. Mantravarnikam is that Brahman which has been already mentioned in rg mantra satyam jnanam anantam Brahman. That alone is talked about and not new Brahman. That mantra varnikam Brahman is supposed to give moksa ultimately. If this puccham Brahman is different by knowing this we will not any moksa.

Therefore there should not be different mantra varnikam Brahman alone is mentioned as puccham Brahman. Because of this reason also [four reasons] Brahman is pradhanam or svatantran and it is not paratantram. In the next sutra the topic is slightly different. Until now we said Brahman is svatantram. In the next sutra Anandamaya is not svatantram but paratantram. Because there will be doubt that if you study the Upanishad superficially.

Brahman is presented as part of Anandamaya and Brahman is part and Anandamaya is the whole in which case it is svatantra and Brahman is paratantra because it is a tail of Anandamaya. Now we say Anandamaya is para tantra and Brahman is svatantra. The details we will see in the next class.

## BRAHMA SUTRA

Class 47

### **Topic 6 – Sutras 12-19 [Anandamayadhikaranam]**

Anandamaya is Para Brahman

#### **Sutra 1.1.15 [15]**

#### ***Mantravarnikam eva ca giyate***

[Anandamaya is Brahma because] the same [Brahman which has been mentioned in the mantra is mentioned [in the Brahmana.

We see Anandamaya Adhikaranam and we have seen the first four sutras and Vyasacharya has established puccham Brahman is svatantram. In Taittiriya Upanishad Brahman is shown as puccham, Anandamaya is pradhanam and Brahman is apradhanam. Through this Brahma Sutra Vyasacharya has established that Brahman though seen as apradhanam, Brahman svatantram and Vyasacharya has show four reasons in the last four sutras.

The next two sutras we will discuss Anandamaya is not pradhanam and it is apradhanam. This word apradhanam can be said as paratantram. Apradhanam means dependent.

### **Topic 6 – Sutras 12-19 [Anandamayadhikaranam]**

Anandamaya is Para Brahman

#### **Sutra 1.1.16 [16]**

#### ***Na itara anupapatteh***

[Anandamaya] is not the other [viz.the Jivatman] because [thing] do not follow

Here Vyasacharya says Anandamaya cannot be pradhanam in the main topic of Brahmavalli. It is svapradhanam. It cannot be svatantram at all. It is because by seeing the Brahmananda valli Upanishad introduces that Brahma jnanam will give liberation. From this it is clear that Brahman is important for mumukshu and it is important for Brahmananda valli and later that Brahma is introduced satyam jnanam and anantam truth, knowledge and infinity. Anantam means it is not limited at all.

That Brahman is presented as jagat karanam also. It is satyam it is anantam and it is Sarva karnam also. It is repeated three times Brahman is jagat karanam showing its importance. In the last portion also Upanishad concludes emphasizing Brahman. Brahma is the beginning and it is end and it is jagat karanam also.

Vyasacharya says ananda maya is not satyam for it is experiential pleasure, which is subject to change. Anandamaya consist Priya moda etc., and it cannto be satyam. It cannot be infinite also it has got Priya moda avayavam. It is endowed with parts and it has boundary. It has boundary means it not sathyam and it is not anantam.

Whatever has got avayavam comes under karyam only and it will not come under karanam. In seed you cannot branch fruits etc., which is karanam and in tree the karyam you can see everything. Anandamaya is karyam and it has parts it is not ananta, sathyam, it is having parts

and so it is not the main topic of Brahmananda valli. It not pradhanam for it does not fit into it. This is the general analysis.

This sutra consists of three words na itarah anupapatteh. You supply a word svatantrah. Itarah na svatantrah anupapatteh it is. Itarah means the other one, which means Anandamayah. The next word is 'na' svatantrah or na pradhanah. Anandamaya is not the pradhanam or not the central theme of the Brahma valli.

The next word is anupapatteh, which means because it is not fitting, it is not proper it is not logical etc. For Anandamaya it is not fitting or be proper to be the central these of Brahmananda valli. Why it does not deserve to be Brahman. It is not jagat karanam and hence it is moksa hetuh also.

## **Topic 6 – Sutras 12-19 [Anandamayadhikaranam]**

Anandamaya is Para Brahman

### **Sutra 1.1.17 [17**

**]**

### ***Bheda vyapedesat ca***

and because the difference is pointed out [the Anandamaya is not the Jivatman]

Here Vyasacharya says that we come to know that Brahman is the central these when you make a thorough study. Brahman alone is focused elsewhere also and Brahman pucham Pradista all them you see Brahman alone is given special status. Brahman is also presented as ananda swarupah refer to 2.7.1 of Taittiriya Upanishad *asad va idam agra asit tato vai sad ajayata, tad atmanagm svayam akuruta tasmad tat sukrtam ucyata iti* it is said that in the beginning was verily that Non-existence from that the existent was born. That created itself for itself. Therefore it is called the self-made or the will made. The mantra continues in the second mantra *yad vai tat sukrtam raso vai sah*. That which is self made that is taste or joy. Upanishad as ananda translates the word rasah. It is this portion we will concentrate here. The meaning of the two sentences raso vai saha means Brahman is of the nature of ananda. The next sentence in the same mantra is *rasagm hyvayam lasdhava 'anandi bhavati* having obtained the taste man, because blessed for who can breathe out or breathe in if this joy were not there in the cavity of the heart and this Brahman himself brings us joy.

Ayam anandi bhavati this Anandamaya kosa becomes happy through Priya vritti of moda vritti or pramoda vritti. Anandamaya kosa becomes happy by getting Brahmananda. He gets the ananda vritti by getting Brahman. From this Vyasacharya says that Anandamaya kosa is receiver of Brahma ananda Vyasacharya

Anandamaya kosa and Brahmananda should be different because the receiver is different from the received. Subject and object can never be same. Brahman and Anandamaya are different as the subject and object cannot be the same.

Here Brahman is proved as pradhanam because it is source of moksa. Brahman and Anandamaya are different. Brahman is pradhanam and naturally Anandamaya is apradhanam. Anandamaya is apramadham secondary and subservient because it is different from pradhanam Brahman. Rasam is received and Anandamaya is receiver. Anandamaya is apradhanah. Anandamaya is apradhana for sruti says it is different from pradhanam Brahman. Two words are there. Beda vyapedesat and the other word is ca. Different of ananda maya from pradhanam Brahma binnatvam the difference of Anandamaya from pradhanam Brahman and Anandamaya become sapramadhanam.

Next word is vyapesat, which means sruti vakyad. Suppose Vyasacharya says Anandamaya is not Brahman none would accept. Bed vyapedesat such a sruti statement is there. Adhi Sankaracharya reinterprets all slokas I said. Vrittikara's madham he approved in all eight

sutras and Advaita's interpretation he has done in three sutras and says the rest you do the homework. This job sub commentators have given the comments for the three sutras.

Therefore Anandamaya na pradhanah. Sruti says that is different from Brahman. The next word is ca to connect his with the previous sutra. Both have the same topic that Anandamaya is apradhanam. With this sixth sutra is over.

## **Topic 6 – Sutras 12-19 [Anandamayadhikaranam]**

Anandamaya is Para Brahman

### **Sutra 1.1.18 [18]**

#### ***Kamat ca na anumapeksa***

and on account of desire [being expressed by anandamaya] no necessity of interring [the pradhana]

The topic here in the next two sutras is Anandamaya is apradhanam. If Anandamaya and Brahman are identical and Anandamaya will become pradhanam if both are one and the same, Vyasacharya says both are different and Anandamaya will become pradhanam. Hence it is said Anandamaya is not Brahman or pradhana.

Here one of purva paksha wants to establish that Anandamaya is Brahman elevating it to the vip status. For that he uses a peculiar logic. Whenever something is controversial at two places and parallels topic if discussed it will become clear. Clear statement occurring elsewhere removes the doubt in another place. If Brahman is Chetanam satt is also Chetanam. If the meaning is vague in one Upanishad, take some other chapter or Upanishad for have clear meaning.

Purva paksha says it is Brahman. Since the definition is not clear, he is ready to take to Brigu vallu. Here kosa Viveka is done there also. After vijñana maya it is said that ananda is introduced as jagat karanam Brahman.

In the sixth valli of Taittiriya III.vi.1 it is said *anando brahmeti vyajanat, anandad dhyeva khalvimani bhutani jayante, anandena jatani jivantie anandena jatani jivanti, anandam prayanti abhisam visantiti* he see another beauty the student take annam as Brahman and then he mistakes prana maya as Brahman, he mistakes anantam as Brahman and he comes back not he does not come back to the teacher.

That is why purva paksha says the student does not come and hence anandam is Brahman. After knowing anandam as Brahman and student does not come back. In Brigu valli the fifth one named ananda clearly reveals Brahman. Here also ananda maya is fifth one.in brigu Valli fifth one represents Brahman. To prove Anandamaya as Brahman he takes an example of the sutram. Now purva paksha says Ananda maya occurring here is Brahman.ananda maya Brahman and it is the fifth item. He qualifies Brahmananda valli through brigu valli. Vyasacharya says that there is other anumanams.

Vyasacharya say that your example is wrong but Brahmananda valli word used is anandamaya and both can never be equated though the words used is coming both. One is endowed with suffix maya. Therefore Anandamaya refers to Nirvikara padarth. How can

Nirvikara ananda is quoted as an example to Savikara ananda maya. The details we will see in the next class.

## BRAHMA SUTRA

Class 48

### **Topic 6 – Sutras 12-19 [Anandamayadhikaranam]**

Anandamaya is Para Brahman

#### **Sutra 1.1.18 [18]**

#### ***Kamat ca na anumapeksa***

and on account of desire [being expressed by anandamaya] no necessity of interring [the pradhana]

We see Anandamaya Adhikaranam and the Adhikaranam has got eight sutras and we see the seventh one. The sruti portion taken for discussion is Taittiriya Upasana where Brahman is compared to puccham and the confusion how puccham the tail, a part can become the whole. The word puccham should be taken, as adhistanam of Anandamaya is the argument of siddhanta. It is said pancakosa adhistanam is Brahman it is argued by Vedantins. It is the central these of the Upanishad argued.

Vyasacharya establishes Brahman is svatantram and independent in the first four sutras of Anandamaya. Anandamaya is para tantram and apradhanam is established in the fifth and sixth sutras. In the last two sutras it is established that Anandamaya is not Brahman. The subsidiary Anandamaya and Brahman cannot be equal at any time.

While doing the general analysis we discussed the arguments of purva paksa who said Anandamaya is Brahman. He argued that Brahmananda valli with brigu valli the third chapter of Taittiriya Upanishad. In both chapters Pancakosa Viveka is done. Therefore we have an advantage if there is vagueness in one chapter the vagueness can be rectified by a clear statement elsewhere.

When we take Brahmananda valli the fifth one is Anandamaya. Whether the fifth one Anandamaya is Brahman or not we are not able to decide and purva paksa suggests to go to Birgu valli to decide whether it is Brahman or not.

There is no room for doubt because Anandah Brahman comes after vijnana maya. Purva paksa in Brahmananda valli argues that Anandamaya mentioned in in Brahmananda valli should be necessarily be Brahman only. This is the purva paksa argument and Vyasacharya gives answer in the present sutra.

Here in the sutra he says such an inference should not be done. Vyasacharya says such an anumanam there is no scope and no room for purva paksa's argument that brigu valli ananda be taken as an example to prove that Anandamaya is Brahman Vyasacharya does not say that purva paksa should not do such inference being that is wrong. Vyasacharya does not say why such inference is wrong nor does he give any reason. It is our homework

Fours are there kamata, ca, na and anumana apeksa is the fourth word. Anumana apeksat consists of two words. Anumana means the inference made by purva paksa, which

Vyasacharya quotes. The anumanam is Anandamaya is Brahman mentioned in Birgu valli. Apeksha means scope the possibility to take such an anumanam.

For doing such anumanam is indicated in the first word kamatah, which means anandah. That which is desired by all is kamatah and it otherwise means Birgu valli ca anandah. This ananda is used as an example and word kamatah means Birgu valli ca ananda Dristanta.

The next word is na which means should not be done. Or it is nonexistent or not there. The final meaning kanad na anumana apeksha there is no possibility of purva paksha inference by taking Birgu valli ananda as an example. For our understanding we can say that purva paksha anumanam is wrong. Purva paksha anumanam is Anandamaya is Brahman. There is another word ca, which I will discuss later.

Vyasacharya does not say the purva paksha inference is wrong. Ananda of Birgu valli and Brahmananda valli represent fifth kosa of panca kosa. That both come after vijnana maya we do not question. Because it comes after vijnana maya is sufficient reason to equate the both Anandamaya of Brahmananda valli and Anandamaya of Birgu valli and the example is wrong example. The reason why they cannot be equated is said in one place it is said ananda and in other place it is said Anandamaya. The very words are different.

The siddhanti tells that they are different from the very name when the one is with suffix and the other without suffix. This suffix shows the difference. When maya comes it indicates sa vikaram. Maya sabdah vikaraha. It is Anandamaya is Savikara padartha. We know happiness never remains the same either it increases or decreases. Therefore the word Anandamaya indicates it is Savikara padartha and ananda in birgu valli is Nirvikara Chaitanyam.

Ananda is Nirvikara padartha. Here ananda refers to Consciousness and not experiential pleasure whether it is ordinary or mystic pleasure. Mystical pleasures experienced by persons in Samadhi. It is available only when in Samadhi state and not at all times. Consciousness is universally present and if ananda is Consciousness and how can we use the word ananda to show the Consciousness.

Ananda is state of mind and how can Consciousness be ananda is their argument. Consciousness is not subject to arrival and departure. For that Swamiji gives an answer. The word ananda whenever it is equated to atma or Brahman should be translated differently. The normal translation is joy, happiness pleasure ecstasy, bliss etc.

In this context never translate ananda like that for it is anantam. In English it is wholeness, fullness or infinitude. It is so because when ananda is equated to Brahman, it refers to non-fluctuating entity. When you use the word ecstasy it is fluctuating one and no one is eternally bliss. Sachidananda is wrongly translated as existence, awareness, and bliss.

While existence and awareness are non-fluctuating principle, the bliss is fluctuating one and it is not eternal. Not only we make that mistake and we try to go to Samadhi and experience Brahman in the form of bliss. Once it is bliss, you have to work for it but when you take it as infinite you need not work for it because infinite is here and now. Ananda as bliss is sadhyam and ananda as bliss is siddham. In Brahma valli Anandamaya is happiness and birgu valli anandam is wholeness or purna vastu. One is Savikaram and another is nirvikaram. Two we give a counter anumanam. Anandamaya na Brahma savikaratvad like annamayavad or prana mayavad or manovayavad or vijnana mayavad.

Now we go to cakara. This sutra is interpreted differently also to convey totally different idea. For this we go back to the previous iksati Adhikaranam remembering the subject matter also. In iksati Adhikaranam it was discussed satt was Achetanam or Chetanam Brahma. Upanishad took satt vastu is jagat karanam. The controversy was whether satt was Achetanam pradhanam or Chetanam Brahman. We concluded that satt vastu is Brahman alone not Achetanam pradhanam.

Pradhanam is technical word to equate with Prakriti, which is a matter principle. Satt is matter according to Samkya and satt is the Consciousness is the cause of the universe. Satt is Chetanam Brahman we gave the reason iksateh. Upanishad talks about visualization before creation. Our argument visualization is possible for Chetana vastu and not possible for Achetana vastu.

Satt sabda vastu is not inert pradhanam and visualization is possible by Chetana vastu and not Achetanam Brahman. This sutra is to be connected to the previous Adhikaranam in the previous Adhikaranam. Satt vastu is not pradhanam for various given. This present sutra should be taken as eighth reason for this. Desiring or kamanaca is the reason., the satt vastu creates the world for visualization. He says that satt vastu is taken after creating the world. It is found in Taittiriya upanisad *so kamanamaya* portion of the Upanishad.

Without universe punya papa of jiva cannot be cleared without universe and in order to reduce the burden Isvara wanted to create the world and so we say satt vastu desired. Desiring is possible for Chetana Brahman and not by Achetana pradhanam. This is the meaning of this sutra.

Kama is here interpreted as desire. Because of the presence of desire, jagat karanam is taken as the jagat vastu. Pradhanam is called anumanam. Anumanam in certain context means pradhanam or matter in Samkya philosophy.

Samkya philosophers establish pradhanam only through inference. I will elaborate this latter. Anumana apeksa means there is no possibility. Satt sabda vakyam na anumanam or na pradhanam because it has got desire. The ca adds this aspect to Iksateh Adhikaranam for the sake of conjunction to the previous Adhikaranam. Therefore Anandamaya is not Brahman. Now we will take the last sutra.

## **Topic 6 – Sutras 12-19 [Anandamayadhikaranam]**

Anandamaya is Para Brahman

### **Sutra 1.1.19 [19]**

#### ***Asmin asya ca tadyogah sast***

besides, within this [Anandamaya, the union of this [individual soul] is taught.

It also talks about the same that Anandamaya is not Brahman. I will give a general analysis. Anandamaya is also resolved into Brahman by knowledge. It is so because the aim of Upanishad that it wants to reveal Brahman and it as Advaita Brahman. The reason is that as long as Dvaidam there is fear there is limitation there is mortality and there is samsara and in Advaidm alone there is moksa and it reveals Brahman and after revealing Brahman it resolves the whole creation into Brahman.

Once you resolve everything into Brahman there is only Brahman into everything. Ultimately Anandamaya is also resolved into Brahman and if it is resolved into Brahman indicates that Anandamaya is resolved and Brahma is resolved and how can both be one and the same and be identical. Hence it is different from Brahman. More in the next class.

## BRAHMA SUTRA

Class 49

### **Topic 6 – Sutras 12-19 [Anandamayadhikaranam]**

Anandamaya is Para Brahman

#### **Sutra 1.1.19 [19]**

#### ***Asmin asya ca tadyogah sast***

besides, within this [Anandamaya, the union of this [individual soul] is taught.

We see the last sutra of Anandamaya Adhikaranam. Here it is established that Anandamaya is not Brahman. It is savikarm because of the suffix of maya to ananda which is nirvikaram Brahman. I will continue the general analysis of this sutra, which I commenced in my last class.

Taittiriya Upanishad mantra II.vii.3 reads as *yada byevaisa etasminn-adrsye-‘natmye anirukte-‘nilayane-‘bhayam pratistham vindate atha so-‘bhayam gato bhavati* that says when atman attains the fearless oneness with Brahman who is invisible, incorporeal, inexplicable, and unsupported, and then he becomes free from fear. The jnani resolves the whole universe in Brahman and Advaidam Nirgunam Brahman alone remains. The resolution of world we don't talk about physical resolution, which we cannot do it but it only by understands.

By knowing the clay, which is the essence of the pot, I know that there is no substance called pot and pot is only a namarupa and it has only nominal or verbal existence and it does not have substantial existence.

This negation of substantial existence of pot is called dissolution of the pot, we come to know there is no pot but it is clay. In the same, the resolution of the world is nothing but the understanding that there is no substantiality in the world and it is nothing but Brahman, which is its adhistanam. World has got only verbal existence, if this whole world is resolved, the reminder Brahman will be formless, property-less support-less, invisible, incorporeal, inexplicable, unsupported Brahma alone will be left out. He will gain nirbhayatvam because there is not second thing to frighten him.

On the other hand if a person accept even the slightest difference in the form of port whole difference, it will the cause for bhayam or fear. There should be no world difference from me and even the god difference from me. I, between the world and god there is no difference and the feeling of oneness alone will help one to gain liberation.

Upanishad talks about panca kosa dissolution and in that context Upanishad talks about Anandamaya dissolution also which is relevant for us. Anandamaya also dissolved into Brahman. The idea is Anandamaya is dissolved into Brahman means Anandamaya is dissolved and Brahma is dissolver and therefore dissolved has to be different from locus of dissolution. Anandamaya is different from Brahman in which Anandamaya is it is dissolved. So Anandamaya is not Brahman because it is dissolved into Brahman and this is the essence of this sutra.

In this sutra five words are there such as asmin, asya, ca, tadyogom, sasti. Asmin means asmin prakarane. Asmin is equal to what is said in Brahmananda valli. Anandamaya, which we discuss, is Brahmananda valli is the meaning of asmin. Asya means of Anandamaya. Ca means also that not only anna maya prana maya Anandamaya also; tadyogam means Brahma layah or atma layah or dissolution.

Yogam means layah or dissolution. Sasti means teaches here we have to take that the Upanishad teaches. In this chapter itself Upanishad teaches the dissolution of Brahman. The dissolution of Anandamaya in Brahman is taught in this sutra. The idea to be arrived is since Anandamaya dissolution in Brahman, Anandamaya and Brahman are different. Anandamaya is like sugar and another is coffee. Sugar dissolved into coffee to make it sweet. Brahman is pradhanam and Anandamaya is apramanam. Brahman is primary and Anandamaya is secondary. Primary Brahman is different from from Anandamaya.

In this Adhikaranam the topic is Brahman, which started in the first sutra. Brahma is to be known; Brahman is jagat karanam; Brahman known only through sastra; Brahman is the central theme of the Upanishad. In the fifth Adhikaranam Upanishad did not use the word Brahman and used the name satt and we have to clarify that satt is nothing but Brahman. In the sixth Adhikaranam the Upanishad uses the word Brahman but it says Brahman is the tail of Anandamaya and there is room for confusion. Then it is said that tail is unimportant and therefore Brahman seems to be secondary being puccham and it was confirmed primary even though the word puccham is used.

The word puccham does not have the meaning of tail. Puccham means support of visvadharam. The tail of the bird is very important to support it to fly. So also Brahman supports all the living creatures it is argued. Don't extend the example too much and don't ask Brahman has a tail etc. Brahman is tail and tail supports and Brahman supports are the Tatparyam of the sutra. Finally I will put the whole Adhikaranam in technical format.

Puccham Brahman occurring in Tatitriya Upanishad is the subject matter of this Adhikaranam; the doubt is whether puccham Brahman is svatantram primary or paratantram or apradhanam secondary. Next purva paksa the view of the opponent whoever does not accept Vedanta is discussed. It can be anyone who opposes Vedanta is called purva paksa. His view is ever wrong. He says puccham Brahma is paratantram and it is secondary. This is the third factor. The conclusion of Vedantins is that puccham Brahman is svatantram.

Sarva adharatvad vyatirekena annamayavad unlike Annamaya puccham is Sarva adharam. In four statements we crystallize our thinking. To be precise puccham Brahman is the topic and our view it is primary. Purva paksa says it is secondary. We take the view because Brahman is pradhanam. Why this occurs in Brahma Sutra and why it is in first sutram and why it is occurs in the first pada and why it occurs after iksatet Adhikaranam. With this Anandamaya Adhikaranam is over. Now we will enter the seventh Adhikaranam.

## **Topic 7 – Sutras 20-21 [Antaradhikaranam]**

The being or person in the sun and the eye is Brahman

### **Sutra 1.1.20 [20]**

#### ***Antah taddharma upadesad***

the being within [sun and the eye] is Brahman because His attributes are taught therein

This is a small Adhikaranam consisting of two sutras. Since the first sutra begins with antah, it is called antar Adhikaranam. The sruti vakyam, which is analysed in the Adhikaranam, or the visaya vakyam is Chandogya Upanishad 1.6.6. The subject matter here is Sagunam Brahma Upasanam. We can also say Isvara Upasanam. This Sagunam Brahma or Isvara is meditated upon two different locuses. One is called Adhideivata Upasana wherein locus is external and the other is adhyatma where locus is internal. Since we talk about Sagunam Brahman wherein Brahman is endowed with attributes and it is Nirgunam Brahman. Seven important attributes of Isvara are talk about about. Isvara is not having negative attributes but

Isvara has all seven positive attributes. Seven attributes in adhidevata and adhyatma Upasana each we will discuss here.

Seven attributes of adhidevatma Upasana is Adhitya Purusatvam Isvara as located in the sun's orb or solar disc. Upon the Adhitya Mandalam we have to imagine Isvara located in the sun.

Second is Hiranmayatvam and he is golden coloured. His skin shines like gold. Bhagavan has got eternally golden skin.

Third is pundarikaksatvam or kamala nayanatvam that is lotus eyed Lord. The peal of the fully flowered lotus flower and Isvara has got the eyes like the lotus flower.

Fourth feature we will see in the next class.

**BRAHMA SUTRA**  
Class 50

**Topic 7 – Sutras 20-21 [Antarathikaranam]**

The being or person in the sun and the eye is Brahman

**Sutra 1.1.20 [20]**

***Antah taddharma upadesad***

the being within [sun and the eye] is Brahman because His attributes are taught therein

Seven attributes of Adhidevatma Upasana are Adhitya Purusatvam as below.

First is Isvara as located in the sun's orb or solar disc. Upon the Adhitya Mandalam we have to imagine Isvara located in the sun.

Second is Hiranmayatvam and he is golden coloured. His skin shines like gold. Even the hair is supposed to be the golden coloured. Bhagavan has got eternally golden skin.

Third is Pundarikaksatvam or kamala nayanatvam that is lotus eyed Lord. The peal of the fully flowered lotus flower and Isvara has got the eyes like the lotus flower.

The fourth guna of Isvara is oordhatvatvam. Isvara is the lord of higher lokas and the objects therein. Not only he rules the higher lokas the lord can give those pleasures. That is why he is called kamesvarah. He can give pleasures by Sankalpa matrena.

The fifth virtue is Sarva papa Rahitatvam. He is free from all the papas. Chandogya gives a special name for that and that is 'udh' which means 'beyond' and he is beyond all the papams.

The sixth virtue is sarvagatmam and the lord alone is in the form of everything. He is visva rupah and virad rupah etc. The Vedas are the limbs of the Lord and the whole creation the sabda, Artha, vak Prapancha are the limbs of the Lord.

The seventh and final virtue mentioned here Sarva vibhudhimatvam that all the glories of the creation belong to the Lord only. Wherever glory is there that belongs to the Lord only. In Gita 7.21 and 7.22 it is said *yo-yo yam-yam tanum bhakiah sraddaya rcitum icehati Tasya-tasya 'calam sraddham tam eva vidadhamy aham sa taya sraddhaya yaktas Tasya 'radhanam ihate labhate ca tatah Kaman mayai 'va vihitan hi tan* whichever deity you worship only one lord alone you actually pray one Isvara only. All the glories go to the Isvara lone.

Similarly we have seven glories on adhyatma level also

First is aksi Purusatvam that means the Lord is not seen outside but is seen or imagined to be present in our own eyes.

Second virtue is hiranmayatvam seen as before is golden coloured.

The third one pundarikatsatvam is same as before

The fourth virtue is adholoka kama Isvaratvam. One who is the lord of lower lokas as well as the sense pleasures there? Here percentage of pain will be more and the percentage of pleasure will become less and less.

The fifth, sixth and seventh are the same as before.

We will do an analysis of the above now. We come to know that Brahma Sutra is not confined to Nirgunam Brahma alone and it analyses Sagunam Brahma as well. We should be careful to assess which Brahman is talked about in the context in which the name of Brahman is indicated. Neyam Brahma is Nirgunam Brahman and upasyam Brahma is Sagunam Brahman is discussed.

Why should we discuss the topic and we should know why this debate is taken up. The controversy is because that Upanishad does not say Sagunam or Nirgunam Brahma is not used and the Upanishad uses the word Purusa only. In adhyatma Upasana akshi antha Purusah is used. In adhideiva upasana the word used is adhithya antha Purusah. If the word Brahman is used there would have been no controversy. The word Purusah can also refer to jivah also. The word Purusah can be used for Brahman or Isvarah also.

Therefore the controversy is whether Purusah refers to Isvara or Jiva. Our conclusion is Purusa sabdah refers to only lord and Lord alone is the object of meditation or object of worship. Therefore the topic is antha Purusah whether it is Isvara or Jivah and our conclusion is Isvara only. Akshi antha as well as adhi antha Purusa refer to Isvara only. All the virtues mentioned in this section belong to Isvara only. Jiva does not have any of the glories mentioned here. Anthah Purusah Isvarah. Isvara guna gathanad eva. This is the general analysis of this sutra.

This sutra consists of two words first one is antah and the other is *taddharmaupadesad*. *Antah* means *adhithya aksi anta Purusah*. Literally the word *antah* means inside one; in other wards it means antar adhithya Purusah. The two Purusas are referred to *anthah*. Before that we supply one word that is Isvara or Sagunam Brahman and it is na jivah. It is not jiva. The next word is *tad dharmopesad*.

Tad means Isvarah and dharmah means virtues and it means the divine virtues are mentioned in the Upanishad. Now what are the divine attributes applicable to Isvara and what to Jiva. Sarva papa Rahitvatvam freedom from all sins is attributable to Isvara only. Jivah is in fact is embodiment of all papams.

Adhitya Purusah aksi Purusah both refer to Isvara. Aksipurusah may refer to ordinary jivah and exalted jivah may be Adhitya Purusah the status gained by extraordinary punya karma. All the devatas are jivah only belonging to higher category.

A purva paksa asks why not take Adhitya Purusa as exalted jivah a person who has gained that status due to exalted punyams. Our answer is that you see the Upanishad once again and Upanishad says sarvepyah papyayah udayah and it is Sarva papa Rahitvatvam that means here we talk about Purusa who is absolutely free from all papas.

Adithya Purusa may be exalted devata and he may have better punyam and even that devata has got a mixture of punya and papa and he has got dukha and sukha and papa. Even

Hiranyagarbha has got one percent papam and if he is fully free of papa he would have been a liberated soul and he is also subject to birth and death.

Adithya devata is only an exalted jivah and Isvara is free from all the papams. Isvara is sarvatmahah and he is free of the whole creation and Isvara is jagat karanam and jagat karana rupa is Sarva jagat Rupena Isvarah eva varthate and no Isvara can claim sarvatmakatvam. The very fact the pujas are different and vahanas are different shows they are equal to Isvara.

Third virtue is Sarva vibhudiattvam. No devata can claim all the vibdhuti. But no jivah and devata have got all the mahimas or glories as Isvara has. It is a symbol or clue to show that my very living depends on his grace and Isvara alone make me live and me enjoy life. It is Isvara Mahima only. This is the meaning of the sutra.

One purva paksha raises an objection and he says he cannot accept adithya and aksi Purusa as Isvara and it has got to be a devata only and not Isvara. When you talk of virtue you take only the last three virtues, which are convenient to you. You don't talk about other four virtues, which they cannot belong to Isvara.

First one is adithya Purusatvam and aksi Purusatvam. Upanishad clearly gives a location. Adithya va aksi va. Purva paksha says location is limitation. When you say location it means that he does not stay elsewhere. It is not sarvagathah.

If Purusah refers to Isvara and Isvara also become limited one and located one applies to jivah alone and not to Isvara. Location suits only jivah. Second virtue is hiranmayatvam. Upanishad clearly talks about body, and hiranmayatvam etc. It clearly indicates sariram and finitude. Isvara is all pervading and he is to be all pervading.

In this regard refer to Gita sloka 7.4 that reads as *maya tatam idam Sarvam jagad avyaktamurtina matsthani sarvabhutani na ca ham tesv avasthitah* that read as by me all the universe is pervaded through my unmanifested form. All beings abide in me but I do not abide in them.

Isvarah is all pervading and the one having organs is to be limited; to have colour is to be limited; to have complexion supports me; and the other one adho loka kama two distinct Purusas have been talked about and each one has got limited area in power.

Adithya Purusa is lord of higher slokas and aksi Purusa is lord of lower lokas. But Isvara is Sarva loka kama and is omnipotent and he cannot refer to Isvara. Therefore limited power indicates jivah or devata. Now siddhanti will give an answer, which we will see in the next class.

**BRAHMA SUTRA**  
**Class 51**

**Topic 7 – Sutras 20-21 [Antarathikaranam]**

The being or person in the sun and the eye is Brahman

**Sutra 1.1.20 [20]**

***Antah taddharma upaadesad***

the being within [sun and the eye] is Brahman because His attributes are taught therein

We are in the 20<sup>th</sup> sutra, which happens to be in the antar Adhikaranam regarding the word occurring in Chandogya Upanishad in adhideiva Upasana, and adhyatma aksi Purusa. Our enquiry is whether it refers to Sagunam Brahma or Isvara. In this Adhikaranam nirgunam Brahman is not taken for discussion. Brahma Sutra discusses both nirgunam Brahman and sagunam Brahman. Our controversy is due to the fact Purusa refers in some cases jivah also. Antah and we have to supply the word Sagunam Brahman. That of all the virtues three of them belongs to Isvara. The purva paksha here raises an objection. He says when we talk about virtues we talk only about the three and always talk of the last three virtues. If the first four virtues are taken, they indicate limitations only. The first one relates to adharavatvam and it refers to location indirectly indicating the limitation. To be located in one place is to be absent in other places; the very sutra the word anthah is used and locate within is negate the locus outside.

The second virtue is that Purusa has got hiranmayatvam. This gives colour to Isvara and giving the colour etc. Also denies other attributes to Purusa. Then next is pundarikatsam and this is rupavatvam of Isvara. Isvara has got form and Purusa with form must be limited. The next is adhideiva Purusa is ruler of lower and higher worlds. His sovereignty has got limitation and it is aisvarya maryadha. There is limitation to his power. Adithya Purusa and aksi Purusa with limited powers have been here indicated and argued they cannot be Isvara but only jivah. Such Isvara is limited one and when Purusa is not Isvara, he should be manusya rupa jivah or devata rupa jivah and manusya as also devata has got limitation.

For this Adhi Sankaracharya gives the answer. He says it is true. Isvara cannot have and does not have any limitation. He does not have a location, form limited power also true. But at the same time he can have all the three for the sake of Upasana of the upasaka. This is called upasanartham. The limited cannot be conceived by individual upasaka and for the same of Upasana sastra can prescribe varieties of colours, locations and forms for the sake of Upasanartham. They are not factual and are prescribed for Upasana only.

**Even though Isvara does not have particular location etc., because of maya Isvara can assume particular form and particular colour, which is known as avataram. It is imagination of devotee and he can imagine and in addition to that for the sake of devotee he can assume the form. If with the help of maya Isvara can create the whole world and what is the difficulty for him to become or take form for the purpose of his devotee with all the forms, colours etc.**

I this regard Gita sloka 4.6 reads as *ajo'pi san avyayatma bhutanam isvaro'pisan prakrtim svam adhisthaya sambhavamy atmayaya* the meaning of this sloka is though [I am] unborn, and My self [is] imperishable though [I am] the lord of all creatures, yet establishing Myself in My own nature, I came into [empiric] being through my power of [Maya] but on the other hand the embodiments of human beings are not voluntary. Driven by prakrti through ignorance they are born again and again.

Some appearances are for samasti for the society and some are for the individual devotee and He gives darsanam to grace and bless them. All the seven virtues are possible for Isvara. If you take jiva you can explain only first four virtues and if you take Isvara you can explain all the virtues taking into account that Isvara takes the various forms and colours to bless His devotees which Isvara can do always with maya.

When Isvara can create the entire universe with his maya powers why cannot he appear in various forms to bless those whom he Himself has created. This is the argument of Adhi Sankaracharya to negate the views of the purva paksa. The last three virtues are innate virtues while the first four are acquired virtues of Isvara to bless and grace jivas.

### **Topic 7 – Sutras 20-21 [Antarathikaranam]**

The being or person in the sun and the eye is Brahman

#### **Sutra 1.1.21 [21]**

#### ***Beda vypadesat ca anyah***

on account of the distinction being mentioned [the person who appears on the sun is another [from the individual should residing in the body of the sun]

**Before going to sutra in detail I will give some general observation. This we should remember throughout the study of Brahma Sutra as also the Vedanta. The observation is regarding is our approach to Isvara and how does Advaidins approach Isvara. Their approach appears contradictory and it is necessary we should know the reality. Our approach is one from paramarthika the absolute standpoint is than Nirgunam Brahman everything else is mithya. Jiva mithya jagat mithya and even Isvara is mithya. Mithya karana boothah. Advaidins negate Isvara also along with jiva and jagrat. From paramarthika Dristi, even Isvara is mithya.**

In Advaida Maharanta one author rightly says *upasanta-jagat-jiva-sisya-acharyesvara-bramam svatah siddham-anadyantam paripurnam-aham-mahah*, the author of this sloka declares that effulgent Consciousness am I, which is self established, all full without beginning and end and in which the illusory ideas of the worlds, the individual, the disciple, the teacher and Isvara are all extinct. There are five confusions. They are jagat, jiva, sishya, Acharya, jiva all the five are bramams [confusions or delusions] and he establishes that from paramarthika svarupam from the standpoint of paramarthika Dristi the real nature of jivah as also Isvara are one and the same and therefore jiva Isvara aikyam is established. When Advaidins comes to vyavaharika Dristi he is particular to establish Isvara. And that means there is jiva vyavaharika dristy there is jagat from vyavaharika drisy and Isvara also is there from vyavaharika drishya. Isvara is karana Tattvam and jiva and jagat are karya Tattvam. He also establishes that each one is different from the other. Jiva` is different jagat and jiva is different Isvara. Isvara is different from jiva and Isvara is different from jagat. Advaidins very clearly establish the different between jivah, Isvara and jagat. The existence as also his

difference from Isvara is underlined by Advaidins. In Brahma Sutra we get both of them in equal numbers. Both vyavaharika as also paramarthika Dristi are discussed. We should be careful to note what is exactly meant in each place.

Here Purusa is the topic is discussed. We want to find whether Purusa refers to jiva or jiva refers to Isvara. When jiva and Isvara are identical we will not find any difference and the controversy will not be there. You see difference only when you note that jiva and Isvara are identical from the vyavaharika level. Several such occasions we come across in Brahma Sutra. Of the purva paksha happens to be sankya who is a person negating Isvara. If sankya negates from paramarthika dristya we will appreciate because we also negate from paramarthika Dristi. The problem is that sankya negate Isvara jagat karana bootha from vyavaharika drist also.

Vedantins says from vyavaharika Dristi Isvara is there and they in turn negate vyavaharika Isvara. When we negate sankya philosophy we are in vyavaharika level. Isvara is existent and Isvara is different from jiva that is the view of Advaidin. Isvara is Sarva papa rahitaha and jiva is Sarva papa sahitah. This particular sutra [21] says Isvara is different from jiva, our sruti pramanam to establish that jiva is different from jiva. From this we get a corollary that our attitude to Isvara should not be casual which may happen to Vedantic student.

Consistently we negate Isvara from Paramarthika angle. We call it mithya. Mithya is divided into Prathibasika and vyavaharika mithya. Prathibasika is imaginary or mental projection. At the same time vyavaharika mithya has gone some reality from empirical angle and it is not like imaginary projection. So also Isvara is also one like vyavaharika mithya and it is like Prathibasika mithya or it is not a mental projection like swapna. Isvara is as much real as world. You take any object of the world which is dearest to you a thing, a being or a situation and mentally imagine you lose that thing and then look at it as real one and important to me and you attach that thing to Isvara and attach so much important to that object and you should give the same important to Isvara.

As I cannot brush aside my relations etc., so also you will not be ready to lose Isvara also. If I ask you whether you are ready to lose your knowledge, you will say I am ready to lose anything except the knowledge. But from Brahma Dristi, knowledge is also mithya because it is enjoyed by the mind and when the mind is mithya how can the knowledge be real. As you respect mithya jnanam so much respect you should already be ready to give to Isvara also. If that mithya knowledge is to come from Isvara, you should have mithya grace of mithya Isvara to gain and retain the mithya knowledge. For attending the classes of the mithya knowledge and to gain mithya knowledge from the mithya classes, you require mithya grace from mithya Isvara to gain knowledge also.

If the grace of mithya Isvara is not there to gain mithya knowledge, Isvara may give you ever so many obstacles to gain the knowledge. That is why, it is better to surrender to Isvara and don't take Isvara as casual and it is therefore in Advaidam, Isvara is very important for gaining jnanam, jnana ishta from pratibanda Dristi. As this Isvara is negated by sankya, even Vyasacharya and Adhi Sankaracharya both canvass for Isvara who is distinct from Jiva and who bless jiva to gain jnanam and this vyavaharika Isvara helps us to study and gain the knowledge of that Paramarthika Brahman. When many people read Brahma Sutra and Adhi Sankaracharya's bashyam on this sutra, people get confused as why and how Adhi Sankaracharya himself is confused and he advocates beda between Isvara and jiva.

Here we should remember Adhi Sankaracharya is not at all confused but he is very clear about the concept of Isvara and he favours beda in some classes and advocates abeda in some other places based on the context. When purva paksa is yoga, Nyaya, vishistadvaida or Dvaida, he establishes abeda and when purva paksa is carvaka, bouddha etc, he will advocate beda and establish Isvara from the Vyavaharika angle.

**BRAHMA SUTRA**  
**Class 52**

**Topic 7 – Sutras 20-21 [Antaradhikaranam]**

The being or person in the sun and the eye is Brahman

**Sutra 1.1.21 [21]**

***Beda vypadesat ca anyah***

on account of the distinction being mentioned [the person who appears on the sun is another [from the individual should residing in the body of the sun]

We see the 21<sup>st</sup> sutra the second sutra of antaradhikaranam where Isvara or Sagunam Brahman is being enquired. The sruti vakyam adhithya and aksi anta prusah is being analysed and we come to the conclusion that both refer to Isvara only. When we deal with Isvara we are at vyavaharika level and we don't discuss Paramarthika Nirgunam Brahman. Through this Adhikaranam Vedanta establish that there is Vyavaharika Isvara in addition to vyavaharika jagat and vyavaharika jivah. It is accepted because Samkya and other philosophers don't accept Isvara at all.

Therefore it is necessary for Vyasacharya to establish vyavaharika Isvara that this adhikaranam shows that vyavaharika Isvara is different from vyavaharika jivah. Vyavaharika jiva and vyavaharika Isvara is equated then there will not be the third entity. It for this reason the distinction is made and therefore we establish jiva, Isvara beda through sruti pramanam. When we establish this difference, one should not feel that we are against jiva Isvara abeda. Nor do we contradict ourselves.

Whenever we establish beda the context is Upasana and whenever we talk of abeda it is from Paramarthika Dristi and the context is jnanam. Vyavaharika dristya jiva Isvara bedah and in the context of Paramarthika jiva Isvara abedah. There is not contradiction and we establish that wave and ocean are one and the same and at the same we also establish wave is karyam and ocean is karanam while at the same time we vehemently establish that wave and ocean are one. The essential identity of wave and ocean from the standpoint of water we know very well.

We are sane when we say both the statements. When we talk of beda, it is vyavaharika Dristi and the context is Upasana. But from Paramarthika Dristi we talk of jnanam and we talk of jivah Isvara abedah. There is not contradiction. This Adhikaranam is from vyavaharika angle and we advocate Sagunam Brahman. Adhitya devah refers to jivah and purusah refers to Sarvagatha jivah who is located in Adhitya also. Jivah is in Adhitya and Isvara is also in the Adhitya.

The sruti statement occurs in Brihadaranyaka upanisad 3.7.9 that reads as *ya aditye tisthann adityad antarah, yam adityo na veda, yasyadityah sariram, ya aditayam antaro yamayati, esa ta atmantryamy amrtah* which means 'He who dwells in the sun, yet is within the sun, whom the sun does not know, whose body the sun is, who controls the sun from within, he is your self, the inner controller, the immortal. This Brahmanam is well known Antaryami

Brahmanam. Here Isvara is introduced or presented as Antaryami and the Antaryami who is the inner controller present everywhere.

In this entire Brahmana, the Antaryami Isvara is present everywhere and one of the places mentioned that Antaryami Isvara is present in Surya Mandalam also. Antaryami remains in Surya Mandala. 'Yam Adhitya na beda' is the relevant portion we should note. Here means Adhitya or the sun does not know Antaryami. Here when Upanishad says Adhitya does not know Antaryami what is meaning of the word Adhitya. It does not refer to inert solar disc because it does not know anything and there is no meaning.

Only if we can know something, then only we can say we know or we do not know something. Only Chetana vastu can know something of not know something. Here sun does not know Antaryami means it refers to Adithya Devata, who is Chetanam. Here, Adithya devata not knowing Antaryami means that what we derive is that Antaryami is different from Adhitya devata. Therefore in the Adhitya itself there are two things, one Adhitya devata and the Antaryami Isvara both are there.

Therefore Adhitya has got two Chetana Tattvams one is jivah and the other is Antaryami, which called Isvarah. Upanishad says that Adhitya devata does not know Isvara indicating that Adhitya devata is different from Isvara. Since two are there the word can either refer to Purusa or Adithya devata. Word purusa here refers to Antaryami alone an Antaryami, which is different from devata, which devata does not know and that Antaryami alone is referred to by the word purusah.

The three extraordinary glories mentioned belong to Antaryami Isvara only and not to the jivah. Adhitya purusa mentioned in 1.6.6 of Chandogya is different from Adhitya devata mentioned in Brahadharaynaka upanisad 3.5.7. The difference is mentioned in this Upanishad because of the statement of difference between adithya devata and Antaryami purusah. The anumana vakyam is adithya aksi purusah is the paksa mentioned in Chandogya 1.6.6. And 1.6.5 is Isvarah the Sagunam Brahman or upasyam Brahma. This refers to the difference mentioned in 3.7.9 of Brahadharaynaka upanisad. In fact the word anyah is given and we have to supply the word adithya devatah anyah Isvarah. It is not referring to devata but to Isvara different to devata. This is the general analysis of this sutra.

Now we will take the word-to-word meaning. Beda means difference; the difference between adithya devatga and Antaryami. Word vyapadesat means because of the statement. Because of the statement of difference mentioned between adithya devata and adithya Antaryami and we supply the statement occurring in Brahadharaynaka upanisad 3.7.9 of Antaryami Brahmanam.

The next word is ca is the conjunction, which joins this sutra with the previous sutra. Previous sutra gives the reason tad dharmopesad we give an additional reason also. The third word is anyah which means different. Different means what is different from what; adithya Antaryami Isvara the Isvara residing in adithya is different from adithya devata.

This is the meaning of the sutra. The final meaning is that Isvara who is located in the solar disc is different from the adithya devata because the sruti differentiate this Isvara from adithya devata. When we worship the deity the sun are we worshipping devata or maya sahitam Brahman, this is question. A doubt may arise. Siddhanta says that we don't worship

the sun the presiding deity of the sun but Isvara who is the controller of all the presiding deities.

Why we don't worship the adithya devata to have good eyesight. Our answer when we worship adithya devata it will protect only the eyes and when you worship Antaryami Isvara since he is lord of all presiding deities that will take care of all our sense organs. In the same way when you worship Saraswathi, you get the blessing so the controller of all deities and not only Saraswathi. In fact all our worship and all our pujas are directed to one Antaryami Isvara alone. With this antaradhikaranam is over.

We will now sum up the sutra in the formal format. The subject matter of this Adhikaranam is adithya aksi purusha mentioned in 1.6.6. Of Chandogya Upanishad. In adithya aksi purusha the controversy is whether it is jivah, jiva or devata. Devata comes under exalted jiva category. Purva paksha claims that adithya purusha is jiva or devata only. The reason is it has got limitation. It means because it is located in the sun and eye and it has got colour and it has got organs like pundarikaksah etc, and it has limited lower of ruling lower or higher loka. Siddantah conclusion is purusha refers to Sagunam Brahman alone.

It is different from jiva; jagat and devata the reason being the virtues of total purity and absolute glory etc. Can belong to Isvara alone not to any other one. All the limitations mentioned are for the sake of Upasana or they should be taken as the limited manifestation of the Limitless Lord to bless the limited jivas. Either I imagine a limited god for my benefit and it for my benefit or lord comes to me to bless me and both are possible and the lord has got assuming maya sakti and we have also have got imaginary power. Our conclusion is purusha Isvarah only.

Either I imagine for my benefit and it is my projection or Isvara comes to me to bless me. Both are possible. We have imaginary power while god has got assuming power of maya sakti. By this we directly address Samkya philosopher that we should accept jivah and jagat for vyavaharika Dristi. This is the seventh Adhikaranam and it has come after six and before eight and the establishing the appropriate job is the job of the commentators.

## **Topic 8 [Akasadhikaranam]**

The word Akasa must be understood as Brahman.

### **Sutra 1.1.22 [22]**

#### ***Akasah; tat – lingat***

on account of signs on account of the characteristic marks [of Brahman being mentioned] the Akasa [in Brahman]

Akasastalligat – the word Akasa i.e., ether here is Brahman on account of the characteristic marks [of that i.e., Brahman being mentioned] tad; his, of Brahman ligat; because of characteristic mark; the Akasa referred to here is of Akasa mentioned in mantra 1.9.1 of Chandogya upanisad. *Asta kijasya ka gatih ity Akasa iti hovaca, Sarvani ha vaimani bhutany akasad eva samutpadyante akasam pratyastam yanty akaso hy evaibhyo jyayan akasah parayanam* which means what is the goal of this world? He replied 'space for all these creatures are produced from space' they return back into the space; for space is greater than these' space is the final goal.

This is the 22<sup>nd</sup> sutra and it is the eight Adhikaranam or topic and it is a small Adhikaranam consisting of only one sutra. It is called akasadhikaranam because it starts with the word akasah. I will give you the context of discussion. For this we take two sections together the 8<sup>th</sup> and 9<sup>th</sup> section of Chandogya upanisad. Here the Upanishad gives another Upasana that is Isvara Upasana only.

Isvara that is endowed with a special virtue parovariyatvam, which means the greatest one or the most, exalted one. In this Adhikaranam also Sagunam Brahman is discussed. This Isvara is to be invoked in Omkara occurring in Sama veda is known as Udgita. Udgita means that which is chanted in highest pitch. It is invocation of Isvara in Udgita.

The Upasanam prescribed is parovariyatva guna Vishista Isvara Rupena Upasana the meditation on Omkara seeing it as the greatest Lord. This is the topic in 8<sup>th</sup> and 9<sup>th</sup> section of Chandogya upanisad. It is in the form of discussion among three people called Salavatya a Brahmin as to what is the support of these worlds may be; the king Pravahana Jaivali replied that it is Akasa.

The third one is Dalbyah. Of these two are Brahmana and raja is ksatriya. The topic they discuss is something nobler. Jaivali knows more than the other two. In spite of his learning he is humble and he gives respect to the Brahmana. He wants to hear from them and the discussion is on what is greater than what. In the first dialogue salavatya gives a series of great things each one better than the previous one.

First they talk with sama mantra; greater than that is svarah; pranah is number three ; annam is four and apah is five and svargah is number six. The superiority goes upto svarga loka and when questioned which is better than svarga loka. Then he is countered that there is something better than the svaraga loka. Sikah says if anyone svarga is best, he will lose his head. Dalbyah teaches the first six stages. Silaka introduces the seventh one that Buloka is superior to svarga.

Manusyas sustain all the devatas and Pitrus. When these two people come up to seventh stage Jaivali interferes and in the 9<sup>th</sup> section he comes and he says Buloka is not the ultimate and if anyone says Buloka is ultimate his head will break. Then Jaivali says that you are Brahmanas and you do not know and he teaches this Upasana or Udgitha sama or Omkara sama.

While introducing the eight one which superior to Buloka and introduces Isvara by using the word akasah. Since the word Akasa is used here there is confusion. The confusion is whether Akasa refers to local Akasa or Isvarah. More in the next class.

## BRAHMA SUTRA

Class 53

### **Topic 8 [Akasadhikaranam]**

The word Akasa must be understood as Brahman.

#### **Sutra 1.1.22 [22]**

#### ***Akasah; tat – lingat***

on account of signs on account of the characteristic marks [of Brahman being mentioned] the Akasa [in Brahman]

We see the 22<sup>nd</sup> sutra which happens to be the 8<sup>th</sup> Adhikaranam of Brahma Sutra.

Akasastalligat – the word Akasa i.e., ether here is Brahma on account of the characteristic marks [of that i.e, Brahman being mentioned] tad; his, of Brahman ligat; because of characteristic mark; the Akasa referred to here is of Akasa mentioned in mantra 1.9.1 of Chandogya upanisad. *Asta kijasya ka gatir ity Akasa iti hovaca, Sarvani ha vaimani bhutany akasad eva samutpadyante akasam pratyastam yanty akaso hy evaibhyo jyayan akasah parayanam* which means what is the goal of this world? He replied ‘space for all these creatures are produced from space’ they return back into the space; for space is greater than these’ space is the final goal.

I was discussing the context in which the above sruti statement occurs in Chandogya upanisad. Two Brahmanas and one king discuss as to what is the highest thing in the world. This Isvara utkristan guna Vishista Isvara is invoked and it is Omkara occurring in sama veda and it is called Omkara or Utkrista Isvara. Omkara is alambanam and Isvara is upadyam. A series of superior things are discussed sama, svara, prana. Anna, apah swarga and finally Akasa and in the discussions they reached that Akasa is the highest thing in the world. Each is considered being superior to the previous one. Akasa occupies the topmost position. Jaivali reveals that Akasa is the highest thing in the world. We have taken Isvara is the greatest source. There contradictory is due to the fact jaivali has used thw word Akasa to indicate Sagunam Brahman. Akasa is one the five elements and we take not as Akasa but we take it as Isvara. We have to justify such an interpretation. Vyasacharya gives his support to this view in this sutra.

The general meaning of the sutra is that the word Akasa occurring in this mantra refers to Isvara only. Sagunam Brahman or upasyam Brahman replaces the word Isvara. Why not use the word Isvara. Brahma Sutra should deal with Brahman only and how come you use the word Isvara which is not different from Brahman.it is so because dressed Brahman is Isvara. He wears the dress called maya and when he removes the dress called maya, maya sahitam Brahman is Isvara and Isvara minus maya is Brahman. The word Brahman is very loosely placed as well as suguna Isvara.

Adhi Sankaracharya does not commit the mistake out of sonfusion but ti is used for us to know that Brahman and Isvara are not different. For Vishistadvaidins Brahman is Sagunam

Brahman and there is no Nirgunam Brahman for them. When Advaidins use the word Brahman it can refer to both Sagunam Brahman or Nirgunam Brahman. But when it comes both and it is a job to select the meaning that suits. There is a rule vyavaharika Brahma is sagunam Brahman. Inanna prakarane neyam Brahman is Nirgunam Brahman. Here we use Akasa word to indicate that it refers to Nirgunam Brahman. And it does not refer to Akasa element. There are sufficient to show that it is Brahman. The anumana vakyam is akasah Brahma [Sagunam Brahman or Isvarah] Brahma word is to be supplied by us.

Now we will take up word for word analysis and the first word is akasah occurring in 1.9. Of Chandogya upanisad is the meaning of the word Akasa. Then comes the word Akasa. Tan linga consists of two words tan llingat. Tad refers to Brahman or Isvara. Linga means clues or marks or indications of Brahman are there in the Upanisads.

The indications to show akasah is Brahman are indicated by Adhi Sankaracharya. Jaivali says all beings in the world are born of this Akasa only which is the first indication. All these people resolve into Akasa only. Akasa is Sarva butha sristi karanam; akasah is cause for sthithi or emerging of the world. Akasah allows the people to do this Upasanam. Akasah is superior to all other things. Sritikjaranatvam, laya karanatvam, laya karanatvam and Sarva concludes this and in the next mantra Upanishad uses the word ananda, the infinite. All six indicators are there and Akasa should not be taken as butha Akasa and it is said that akasah is the indicator. This is the essence of this sutram.

Purva paksa ekadesi some one raises an objection to our conclusion. He says that Akasa should not be taken as Isvara and it should be taken as element alone. He gives the reason for doing so. Any word can have several meanings. One rule is that every word has got one primary and powerful meaning, which is taken by all people in general. The word can have several secondary meanings also. Anything that moves in the sky can be called kathah.

The sun, which moves in the sky, is kathah. Bird is the primary meaning and all others are secondary meaning. Derived meaning should be taken only in certain cases and the primary meaning is taken by one and all, on all occasions. Here general meaning is called vachyarthah and when you take it for a particular thing it is called yoga arthah or derived meaning.

According to language study sastras have come to the conclusion that the primary meaning is more powerful than derived meaning. Primary meaning is primary and all the people understand it. Only the one who has that knowledge of the things knows derived meaning. Primary meaning is prasiddharthah and yogad means secondary meaning. We have got the word akasah and the primary meaning as understood by all the people that space is ruhi arthah of the word akasah. What we do here. We don't take the prasiddha Artha but take the secondary meaning Isvara. We have to justify such an interpretation.

One justification is Isvara is all pervading like Akasa and therefore Akasa is Isvara. Chaitanyam is akasah because Chaitanyam is all pervading like akasah. Akasa is Isvara because Isvara is as much pervading as Akasa. Akasa is derived from the root prakasate, the shining one, and effulgent one. Akasah means sarvatra Prakasah. Brahma is evident everywhere in the form of sat, chit and ananda Rupena. Akasa is like Isvara it is said. It is all pervading like space and is effulgent as Akasa. Whatever be the reasons akasah is secondary meaning for Isvara.

The primary meaning of the word Akasa is the space only. Between primary and secondary always the former is superior to all secondary meaning and purva paksa says Akasa is space and it should not be taken as Isvara the secondary meaning. Akasa is space is more powerful than the secondary meaning. Akasa is taking as the sristi sthithi laya karanam.

Taittiriya Upanishad says that space element is sristi karanam because from Akasa alone all other things came to existence. Without space we cannot exist because without space we cannot live. So also space is laya karanam also and it is superior to all other elements. It can be applied to elemental space also and it is the primary meaning. Purva paksa says that Akasa is space element, mahan, sristi sthithi laya karanam. You have to invoke Akasa upon Omkara.

Siddhanti has to establish a no and convince Akasa is Brahman alone. Adhi Sankaracharya says no doubt we can take the primary meaning that Akasa is an element. Upanishad says akasad Sarvani bhutani jayante everything is born out of Akasa and should we take as Brahman or element is our question. When you say everything it includes Akasa the elements also. Here it is taken everything except Akasa is element. If you say Akasa as Brahman everything has got unrestricted meaning.

When I say everything is born out of space, we mean everything except space is born out of akasah. Then everything is limited. If you take Akasa is Brahman everything is born out of Brahma. In your interpretation everything has got restricted meaning and when I say everything is born out of Brahman everything including is born out of Brahman. Sarva sristi, Sarva sthithi and Sarva laya etc., all fit more with Brahman then by taking Akasa as the element.

Akasa is abeksita laya karanam and Brahman is adhyatmika laya karanm. Akasa resolves into Brahma and therefore Brahman alone Sarva sristi sthithi laya karanam. When you take space element as Akasa you sacrifice the primary meaning in many cases. You have to take secondary meaning. But I take the secondary meaning only at one place that is by sacrificing the primary meaning. More in the next class.

## BRAHMA SUTRA

Class 54

### **Topic 8 [Akasadhikaranam]**

The word Akasa must be understood as Brahman.

#### **Sutra 1.1.22 [22]**

#### ***Akasah; tat – lingat***

on account of signs on account of the characteristic marks [of Brahman being mentioned] the Akasa [in Brahman]

We see the 22<sup>nd</sup> sutra, which happens to be the 8<sup>th</sup> Adhikaranam of Brahma Sutra. We have seen that Akasa is sristi sthithi laya karanam. The question is whether we should take it as space element or Sagunam Brahman. Purva paksa says that the primary meaning is Akasa and when it is taken as such all the adjectives attached to it that Akasa is Sarva siddhi karana do not apply. On the other hand when we take it as Sagunam Brahman, we sacrifice the primary meaning of the word Akasa the element of space. When we take it as Sristi sthithi laya, we compromise with the secondary meaning while sacrificing the primary meaning of the element. Thus our conclusion is that Akasa means all pervading Isvara. In this we have become weaker a bit as we compromise with the secondary meaning but Adhi Sankaracharya says we are able to have all other Sarva sristi karanam which includes the space also. This we saw in the last class

Adhi Sankaracharya adds one more point. We have accepted Akasa as Isvara is secondary meaning although it makes us weaker. The weakness is compensated by all other meanings that it is sristi sthithi laya karanam. Even taking Akasa is not secondary meaning is the argument posed by Adhi Sankaracharya. Really speaking Akasa as Isvara is not secondary but primary meaning only. It is so because Akasa is well known as Isvara in the scriptures. It is not loka *prasiddhi* but it is primary meaning in the Sastric circle. It is often used in the name of Sagunam Brahman. Adhi Sankaracharya gives three mantras as example.

Mantra 8.14.1 of Chandogya upanishad *Akaso vai mama namarupayorniravahita* having used the word Akasa, the Upanishad says *tat Brahma* and which means word Akasa is nothing but Akasa clearly indicating that Akasa is Brahman the sristi sthithi laya karanam of the entire creation. The entire substratum of the creation is nothing but Akasa which in other words means Brahman.

Also refer 4.10.5 of Chandogya upanishad that reads as *so hovaca vijnamyaham yat prano Brahma kam ca tu kham ca na vijanamiti te hocuryadvava kam tadeva kham yadeva kham kamiti pranam ca hasmai tadakasam couch. Iti dasamah khandah*. This meaning of the mantra reads as ‘I know that prana is Brahman but that ka and kha are Brahman I do not know. The fire replied. ‘that which is ka is also kha, and that which is kha is also ka’. Then the fires taught him that Brahman was both prana and Akasa [space]. here kham means Akasa and kam means anandah. Here it is said Akasa Brahman and anandam Brahman. Here Brahman means Sagunam Brahman. *Rujo aksare parama yomen* is rg veda mantra. Here also it is said all emanate from supreme Aksaram Brahman which is sristi sthithi laya karanam and which is yoman that means akasah. Aksara and yoman are used to indicate Akasa.

Therefore Adhi Sankaracharya conclusion even with regard to Akasa as Isvara we do not take the secondary meaning and it is primary meaning when viewed from scriptures but not from the view of the world common usage is concerned. With this Akasa Adhikaranam is over.

The vishaya is the Akasa occurring in the Chandogya upanisad. Samsaya is whether it refers to space element or whether it refers to Sagunam Brahman or Isvara. Purva paksha says Akasa is the element or space. He argues that Akasa the element is the primary meaning of the word Akasa that is most powerful meaning. Fourth factor is siddhantah the word Akasa means Brahman only for which Adhi Sankaracharya has give various Sastric pramanams even though the primary meaning of the word is Akasa the element. All the six description of Sagunam Brahman tallies with the word Akasa to Brahman is proved by siddhantins. The fifth factor is sangathih. The position of this topic is in the appropriate position that it should occur in Brahma Sutra. Here we don't go into the detail. With this eighth Adhikaranam is over.

## Topic 9 Pranadhikaranam

Then word 'prana' must be understood as Brahman

### Sutra 1.1.23 [23]

#### *Ata eva pranah*

for the same reason the breath also refers to Brahman. – atma eva for the same reason; pranah the breath [also refersto Brahman] as prana is described as the cause of the world, such a description can apply to Brahman alone.

'Which then is that deity? 'Prana' he said Chandogya upanisad mantra 1.11.5 *prana iti hocaca Sarvani ha va imani bhutani pranamevabhisamvisanti pranamabhyujjihate saisa devata prastavamanvayatta tam cedavidvanprastosya murdha te vyapatisyattathoktasya mayeti*. It is the prana [the vital force'. In prana all things that we see around us [moving or unmoving], disappear [at the same time of their destruction. And at the time of their appearance,] they appear from prana. Prana is that deity to whom the prastava is addressed if you had sung the hymn not knowing the deity to whom it is addressed, in spite of being warned by me, your head would surely have fallen.

This Adhikaranam also happens to be a smallest Adhikaranam with only one sutra. This is known as prana Adhikaranam and prana is the first word and hence it is called pranadhikaranam. For this Adhikaranam the visaya vakyam is from Chandogya upanisad 1.11.5.

Here a king is doing a very big yaga. The yaga is to be started and all the priests are seated around the yaga kunda. There are several priests associated with each veda. Each veda has got four priests each totaling 16 priests. When the yaga is about to be started one famous Brahmana sastrayana Rishi enters the yagasala who is very poor. Before yaga there was a cyclone in his village and all suffer including the Brahmana. He wants money. He comes to know that local king is going to perform the yaga and he hoped get good daksina. He goes to the group of four sama veda priests sitting there. One is Udgata. Second is prastota, third is patiartha and the fourth is subramanya. The Brahmana asks three questions to them to the first three priests. The question is related to sama mantra chanting. Every sama mantra is divided into five or seven divisions. Each division is called a Bhakti. It means a division of

sama mantra. We will take five divisions of sama mantra. One is himkarah and second is prastava and third is udgata, fourth pratihara and five is nithanam. Four priests and five baktis and each Bakti has got adhistana devata. Sakrayana approached the priest and asked three questions about adhistana devatas.

First he goes to prastota priest and having approached him, he asked about the adhistana devata about prastava Bakti devata. Second question the Udgata priest is asked about Udgata Bakti devata, pratikarta priest is asked about pratihara Bakti devata. The answer he gets that all people do not know about the devatas although they know and they are expert of sama mantra. Sakrayana tells that if you chant without knowing the meaning of mantra, your heads will burst. He gives a warning.

The priests did not chant anything and there was utter silence. King was worried why the yaga did not begin. He asked sakrayana who he was. He is a learned person and a scholar. Sakrayana was asked to perform the yaga and he became the supervisor for the yaga and demanded good Dakshina. The yagna is about to commence. Three priests asked sakrayana about the devatas before meditating the devatas on whom the mantra is changed. He gives the answer and he says prana is the Bakti devata; adithya devata is udgita Bakti devata and pratihara Bakti devata is Annam. We will now focus on the prana devata, which is prasthana Bakti devata.

It is discussed 1.11.5 of Chandogya upanisad the extract given at the beginning of the lecture. In his commentary Adhi Sankaracharya points out that the word prana here is Sagunam Brahman or Isvara and Isvara is the Bakti devata. That further described in this mantra. Isvara is described as Sarva sristi sthithi laya karanam.

All things arise from prana, which is nothing but Sagunam Brahman or Isvara. If the Upanishad had used the word Isvara there would not have been any problem. But the Upanishad instead of using the word Isvara uses the word prana to indicate the Isvara. Prana is part of Sookshma Sariram. But here prana is taken as Sagunam Brahman.

Here it is seen prana refers to Sagunam Brahman only and not only the vayu vikara. Indications are there for prana to be Sagunam Brahman, which is sristi sthithi laya karanam etc. Prana is Isvarah. Therefore this Adhikaranam is simple. Prana is because of Isvara's description. Prana has got two descriptions, which is sristi and laya karanam,

The sutra consists of three words. Ata eva pranah. Atah means because of this reason; asmad karanad; based on this tal lingas because of Isvara's description being given Sristi sthithi laya karanam and eva means there is no other reason given that is the reasons given earlier to Akasa applies to this also. Athi desah means extension of one argument to another context, the argument in the earlier and present Adhikaranam is same. Then comes the word prana, which means the prana occurring in Chandogya upanisad mantra 1.11.5. Here word prana refers to Isvara. The fourth word you have to supply is Brahma.

## BRAHMA SUTRA

Class 55

### **Topic 9 Pranadhikaranam**

Then word 'prana' must be understood as Brahman

#### **Sutra 1.1.23 [23]**

#### ***Ata eva pranah***

for the same reason the breath also refers to Brahman. – atma eva for the same reason; pranah the breath [also refersto Brahman] as prana is described as the cause of the world, such a description can apply to Brahman alone.

We have seen in the last class that the word prana represents Sagunam Brahman as it has the qualities of Isvara as was decided in the Akasa in the previous Adhikaranam. Thus whether you take it as panca prana or vayu in either of the meaning it cannot be laya or sristi karanam and hence we say prana here means Sagunam Brahman or Isvara.

Now purva paksa comes with another sruti quotation to negate our view. It is taken from satapata Brahmanam of shukla Yajur veda. Here it is said when one is asleep the vayu indria, manah and in short all organ resolve into prana. During sleep prana does not get resolved and it very much functions at the time of sleep and this Unmanifest condition is called prana that is avyakrita avasta or Sushupti avastha is called prana.

The very fact the sleeping person is alive and he again wakes up shows that prana is alive. On waking up all organs wake up with prana. So it is called Sarva laya as also Sarva sristi karanam. Purva paksa says that prana itself is able to be the cause of sristi sthithi laya karanam and why it should be given the meaning that it indicates Isvara or Sagunam Brahman. This is the argument of purva paksa. Adhi Sankaracharya says you read the scriptures clearly. In Chandogya upanisad prana is presented as samasti Prapancha sristi sthithi laya karanam that includes our organs also.

In satapata Brahmanam it talks of only the vyasti karana sristi laya karanam only. Prana in vachyartha is the vyasti karana sthithi laya karanam. Therefore your quotation is uncalled for quotation. Purva paksa gives another sruti quotation in which it talks about everything resolves into prana. There also we talk of Sushupti. In this mantra also Sushupti is talked about and it is said all the organs resolve into prana and it uses an extra expression that it says not only vak indriyam resolves but also the objects of vak indriyams also resolves. That means Caksur and Caksur visayah also resolves. It will include all things in creation. Sarvani bhutani pranam apyete it is said. Prana is not karana sristi laya karanam but it is samasti karana sristi karanam.

Prana is Brahman it is concluded in Kaushitaki Upanishad mantra 2.2 *prano brahmeti ha smaha paingyas Tasya va etasya Pranasya Brahmano vak prastac Caksur arundhate, caksuh prastacchrotraam arundhate Srortram parastat mana arundhate .tasmai va etasmai pranaya Brahmana etah Sarva devata ayacamanaya balim haranti evam haivasmad Sarvani bhutani ayacamanayaiva balim haranti ya evam veda tasyopanisan na yaced iti tad yatha gramam bhiksitva labdhvopavisen naham ato dattam aniyam iti ta evainam upamantrayante ye*

*prustat pratyacaksiran esa dharmoyacato bhavati annadas tv evainam upamantrayante dadama ta iti.* The breathing spirit is Brahma thus indeed paingya used to say and the mantra continues asserting that the breathing spirit as Brahma behind the speech the eye is enclosed behind the eye the ear is enclosed; behind the ear the mind is enclosed; behind the mind the breathing spirit is enclosed. To this same breathing spirit as Brahma, all these divinities bring offering though he does not beg for it even so to this same breathing spirit all beings bring offering even though he does not beg for it, and so the mantra goes.

There is another Brahadharaynaka upanisad mantra also there it is presented as karana sristi karanam prana is prana but when it is presented as karana of samasti Prapancha sristi sthithi laya karanam panca prana cannot be sristi sthithi laya karanam and when it is karyam, and how can it be resolving ground of another karyam and how can be chain can be resolving ground of gold and prana itself being karyam it cannot be resolving ground karyam and therefore it is taken as Brahman. Always in sastra is weaker than primary meaning. For this we give the same argument given in the case of Akasa. You sacrifice one primary meaning for the sake of justifying many indicators like Sarva sristi karanam and Sarva laya kranam etc. The word prana is taken as breath by the lay people. Prana is Brahman in the sastra it is prasiddham.

We find in the sastra at many places, prana is used in the sense of Brahman. Refer to mantra 1.2 of Kenopanisad that reads as *srotasya srotram manaso yad vaco ha vacam sa u Pranasya pranah caksusas saksur atimucya dhirah, pretty asmal locat amrta bhavati* which means that because it is the which is the ear of the ear, the mind of the mind, the speech of the speech, indeed of the speech the breath of the breath, the eye of the eye, wise giving up [wrong notions their self sufficiency] and departing from this world become immortal. Pranasya pranah Brahma it is said. There are two pranas. Second prana indicates Brahman. From this it is clear word prana is used in the sense of Brahman.

Further in mantra III.i.4 of Mundakopanisad it is said *prano hyesa yah Sarva-bhutair-vibhati vijanan Vidvan bhavati nativadi, atma krida atam ratih kriyava- nesa Brahma vidam varisthah I* which means knowing him the prana reveling in all beings,, the wise man stops all his blabberings. Sporting in Self, delighted in Self and doing acts [enjoined], this man is the best of those who know the Brahman. Prana alone appears in the form of total creation.

The same Upanishad in mantra II.i.1 states *tad edat satyam yatha sudiptat pavakad vispphulingah sahasrasah prabhavante sarupah tatha ksarad vividhah somya bhavah prajayante tatra caivapi yanit* that reads as this the truth as from the flaming fire thousands of sparks, similar to its form [nature] issue forth; so from the Immortal [Brahman] O my beloved youth, diverse [manifold] beings [jivas originate and they find their way back into it.

In the second chapter it is said Brahman alone is in the form of creation and in the later state it is said prana is Brahman. From this it is clear Mundakopanisad prana is used in the name of Brahman alone. In 1.4.7 of Brahadharaynaka upanisad it reads as *Taddhedam tarhyavyakrtamasit, tannamarupabhyameva vyakriyate, asaunamayamidamrupa iti; tadidamapyetarhi Namarupabhyameva vyakriyate, asaunamayam idamrupa iti; sa esa lha pravistah, a nakhagrebhyah, yatha ksuradhane' vahitah syat, visvambharo va visvambharakulaye; tam na pasyanti. Akrtsno hi sah, Prananneva prano Nama bhavati. Vadan vak, pasyamascakshuh, srnvan srotram, manvano manah; tanyasyaitani Karmanamanyeva, sa yo't ekaikamupasate na sa Veda, akrtsno hyeso't ekaikena bhavati; atmetryevopasit, atra hyete sarva Ekam bhavanti. Tadetat Pathaniyamasya sarvasya*

*yadayamatma, anena hyetat sarvam Veda. Yatha ha vai padenanvindedevam; kirtim slokam vindate ya evam Veda.*

It is very clearly said Brahman entered everybody who is breathing and when one breathes atma itself gets the name prana. Thus in various Upanisads the prana is used in the sense of primary meaning and therefore it enjoys the status of primary meaning and the word prana is Brahman. There is one more argument that purva paksa makes here. Prana is introduced as prastava Bakti devata, udgita Bakti devata and pratihara Bakti devata. Here Bakti means a portion of Sama mantra. What is the devatas of the three is the question posed by Sakrayana. First one is prana, the second is adithya and the third one is annam.

For this purva paksa says the second and the third are not primary devatas and how they can be compared to Brahman. They are parichinna devatas only. Two are parichinna devatas and because of the proximity of parichinna devatas prana devata also refer to parichinna devata only. This is the proximity argument. If we talk about something if there is vagueness based on the meaning of the other word you connect to the nearest you decide the correct meaning. Sanithya argument is weakened if the indicator words are stronger. The linga argument here is powerful then the sanithyam because of the proximity if you take prana as small devata, the problem is as to how the small devata will be sristi sthithi laya karanam. In front of powerful indicator the proximity argument is set aside. Hence prana is Brahman is concluded effectively.

The subject is prana sabdah in 1.11.5 of Chandogya upanisad. Samsaya is whether it refers to vayu vikara prana or whether it is Brahman or Sagunam Brahman or maya sahitam Brahma. The third factor is purva paksa who says prana is vayu vikara eva. He gives the reason is that it is the primary meaning. That alone is powerful than the secondary meaning of Brahman. Prana is the sristi sthithi laya karanam of our body also. Therefore prana is vayu vikaraha. Then siddhanta and it is always the sutra and pranah Brahma.

The indications are there being Sarva bhuta sristi laya karanatvam is possible only when you take prana is Brahman. Prana is sristi laya karanam of individual organs in Sushupti and prana is not sristi laya karanam of samasti Prapancha. Because of this reason pranah Sagunam Brahman. Sagunam Brahman is established in Brahma Sutra. Isvara as material cause is the unique aspect of Vedanta which is not there in Samkya Nyaya etc. In the other philosophies Isvara is taken as nimitta karanam. They take matter as the material cause. Conscious being the material cause of the world is unique feature in Advaidam. Here Isvara is upadana karanam is repeated. Establishing Nirgunam Brahman is not going to negate the sankya system. For Brahma Sutra primary purva paksa is Isvara is Kevala nimitta karanam or upadana karanam also. Pranadhikaranam establishes Brahman as upadana karanam and when we say sristi sthithi laya karanam means it is upadana karanam. Therefore sankya philosophy gets negated in all the Adhikaranam. Now we enter the next Adhikaranam which we will do in the next class.

## BRAHMA SUTRA

Class 56

### **Topic 10 – Sutras 24-27 [Jyoticharanadhikaranam]**

The Light is Brahman,

#### **Sutra 1.1.24 [24]**

#### ***Jyotisharanabhidhanat***

Jyotih the light charanam feet; abhidhanat because of the mention

The light is Brahman on account of the mention of feet in a passage, which is connected, with the passage about the light referring to mantra III.13.7 of Chandogya upanisad.

We will take up general analysis of the whole Adhikaranam and thereafter we will take the general analysis of this sutra. We take up for discussion the mantra III.3.7 of Chandogya upanisad. First we will see the context of this discussion. This refers to 12,13 and 14th section of Chandogya upanisad. The subject matter discussed here is Sagunam Brahman Upasana is the subject matter and this Brahma Upasana is prescribed in three different ways.

In the 12<sup>th</sup> section Brahma Upasana is presented in the form of Gayatri. Gayatri is the metre one of the vedic metres in which mantras are composed. This meter is used for one particular mantra. Mantra is also called Gayatri. In vedas there are several metrea are there. Them we see in sandhyavandanam. Metre is a method in which a mantra is composed. Gayatri metre is most respected metre and it is taken as the mother of all the metres. In the name of Gayatri chandas a Brahma Upasana is suggested.

In 13<sup>th</sup> section we get two topics. We get an Upasanam called Brahma purusa Upasanam. All ideas I give are relevant ideas for our discussion. Brahma used in Gayatri is presented as abiding in the hridayam, which is abode of Gayatri rupam Brahma that is discussed in 12<sup>th</sup> section Chandogya upanisad.

This hridayam is like a city and huge palace and Brahman is the king and there are four ways to this palace. Each of the door way is taken care of by a security and we have five security in the form of devatas each door manned by one one devata and this devata is called Brahma purusa. The master who is none but Brahman engages it. This Brahma purusa is to be done and it is prescribed as anga Upasana for the previous main Upasana, which is Gayatri rupa Brahma Upasanam. Gayatri Upasana is primary Upasana and others are secondary Upasanam. Anga should be done with angi Upasanam and they complementary Upasanam.

The Brahma purusa Upasanas are discussed in 13<sup>th</sup> section of Chandogya upanisad. There we also get second part where another type of Brahma Upasana is prescribed. This is in the form of Jyoti Rupena Brahma Upasanam. Tejo Rupena Brahma Upasana. This is the second part of 13<sup>th</sup> section. Then we have the next section 14<sup>th</sup> of Chandogya upanisad. Here also Brahma Upasana is talked about and that is Sarva Rupena Brahma Upasana.

That is meditation is sarvatmaga Brahma Upasana. It is called chandilya vidya and it comes in the 3<sup>rd</sup> chapter 13<sup>th</sup> section 7<sup>th</sup> mantra. Now we are going to analyse this particular mantra. I will give you the meaning of this mantra.

Mantra 7 of 13<sup>th</sup> section of 3<sup>rd</sup> chapter of Chandogya upanisad reads as *atha yadatah parro divo jyotirdipyate visvatah prsthesu sarvatah prsthesvanuttamesuttamesu lokesvidam vava tadyadidamasminnantah* Jyotih the meaning the mantra is then higher than this heaven, above the world, higher than everything in the highest world, higher than which nothing exists the light that shines there is the same light that is in a human being. Brahma is said to be above everything else. It is the highest and the best. It shines in the highest world and ti also shines in the heart of a human being.

This mantra says Brahma Jyotih is all pervading which is in the higher lokas up above and also within the individual body sarira Jyoti. While talking about higher lokas are which is beyond all the lower pranis and all Buvar loka suvar loka and it is Brahma Jyoti. Not only it is above all lokas and it is also within the body and because of this Jyoti alone the body is live body. Without Chaitanyam this body will be dead body and it will not have life at all.

The light is the magnification of Brahman and for meditating higher Jyoti and it is available in body. You meditate on Brahma Jyoti on physical body itself. The presence of Brahma Jyoti is recognized that you touch your body you can feel the warmth of life; even when outside temperature is lower this physical body is warm and in that dead body that warmth is not there. Thus, ausniya Rupena Brahma Jyotih.

The second thing is the very same Jyoti is there is in the stomach in the form of digestive fire and this is ablaze all the time. You have to fuel this fire to glow for you to be alive. When the fire burns you can hear the sound of the burning fire. That Jyoti you can hear when you turn your attention inwards and you can hear the voice of the one that of sound of the fire. In the form of sound and heat, the Brahma Jyoti is available in the body. This is the actual mantra. In addition to that you hear the samanya sabda heard always from the inner body.

This mantra talks about Jyoti Rupa Brahma Upasana in the body. This is our interpretation of this mantra. In this mantra Brahman does not occur at all. Jyotih alone is used. It talks about Jyotir Upasana and it does not say Brahma Upasana. How do you interpret Jyoti as Brahman? Why cannot the Jyoti be taken as well known light like Surya Prakasa or Agni Prakasa or anything else? Therefore the word Jyoti means light that is effulgent and why do take this primary meaning and take it as Brahman. Jyoti is Achetana Prakasa.

All other Prakasa are karya or Achetana Jyotih. Our discussion is Jyoti mentioned in the mantra is Achetana Jyoti or Chetana Brahma Jyoti and it is established that Jyotih Brahmaiva. We have sufficient reasons to prove our viewpoint. This is general analysis of the whole Adhikaranam. All talk about the same subject but now we will take up the first sutra of this Adhikaranam.

We have a problem, which we did not face earlier. We could prove prana and Akasa is Brahman because we had the special qualities was mentioned in the same section. We could easily establish based on the qualities mentioned. We don't find any quality mentioned in the 13<sup>th</sup> section when we talk of Jyoti. Therefore we have to prove this by an indirect method.

Vyasacharya drops 13<sup>th</sup> section for the time being. We should go back to 12<sup>th</sup> section and we have to show that Brahma Upasana is talked about we have to establish. That itself we have to establish because in the previous section Gayatri Upasana is talked about and there also Upanishad does not Gayatri is Brahman. Then we have to go to 12<sup>th</sup> section and establish that Gayatri Upasana is Brahma Upasana. In the 12<sup>th</sup> section several qualities are mentioned and therefore we have sufficient clues to establish that Gayatri is Brahman.

Having established that we say 13<sup>th</sup> section talks about the same Upasnam as in the 12<sup>th</sup> Upasnam. First we will have to establish by giving sufficient clues. 12 upasyam is the same 13<sup>th</sup> upasyam and once we establish 13<sup>th</sup> is same and go back to say 12 upasyam is Brahman and then come to prove the Jyoti is Brahman. Now we will go to the 12<sup>th</sup> section

Here in 12<sup>th</sup> section it is said Gayatri alone is everything. 3.13.1 of Chandogya upanisad says *Gayatri va idam Sarvam bhutam yadidam kinca vagvai Gayatri vagva idam Sarvam bhutam gati ca trayate ca* that mean all that exists in this world, whatever there is is Gayatri. It is the word that is Gayatri for the word gives names to all things and it also tells them not to fear. The Upanishad talks about the glory of Gayatri.

The glory of Gayatri is presented that Gayatri has got four quarters and the first quarter consists of entire cosmos or universe; this means all middle upper and lower lokas and the other three quarters are beyond the universe and time and space which is Nirguna svarupam. Samasti Prapancha is one fourth of Gayatri and that which is beyond this is the other three fourth. This is to show that the so-called vast universe occupies only one quarter of Gayatri and how infinite Gayatri should be. It is similar to vibhuti yoga and there while talking about the glory of Krishna he says that I am so vast and in fact the entire universe is but a minutest part of me.

The whole universe is occupying a small portion of me and similarly Gayatri is infinite and three quarters are not occupied by anything and the whole universe occupies only one fourth. The other three are beyond desa and kala. Gayatri is sarvatmika and Gayatri is chatuspad. All these are in the 12<sup>th</sup> section.

The Upanishad has said Gayatri is everything. Can this Gayatri be taken as one of the vedic metres or Gayatri be taken as Brahman itself. We should take Vachyartha or something else. If it is vedic metres, how can a vedic metre be everything and in fact Gayatri metre cannot be another metre and how can you say that is in the form of the whole universe and how can you justify if it is taken as limited metre. Gayatri is all and it is having four quarters of which only one quarter occupies the universe but the rest are beyond time and space.

Therefore Gayatri is Brahman. Sarvagatma rupa chatuspad rupa linga. It has the characteristics of Brahman in the form of sarvagatmatvam and chatuspadatvam.

The next is based on anga Upasana that comes later. This comes in 13<sup>th</sup> section first portion is that Gayatri Brahman is abiding in hridyam with five four ways and the security guards are Brahma purusa. Security staff is called Brahma purusa is significant if Gayatri is not Brahman why should the supporting devatas in the anga Upasana be called Brahma purusas. Instead of using the word Gayatri purusas it has used the word Brahma purusas.

Connecting the anga and anga Gayatri has to be Brahman. If Gayatri is taken as Brahman and anga Upasana is Brahma Upasnam and anga Upasana is Brahma purusa Upasnam and it

will perfectly fix and therefore Gayatri has got to be Brahman. Brahma Upasana and Brahma purusa Upasana and thus we have established Gayatri is Brahman. In 13<sup>th</sup> chapter Gayatri is talked about and here jyoti must be Brahman. More in the next class.

## BRAHMA SUTRA

Class 57

### **Topic 10 – Sutras 24-27 [Jyoticharanadhikaranam]**

The Light is Brahman,

#### **Sutra 1.1.24 [24]**

#### ***Jyotisharanabhidhanat***

Jyotih the light charanam feet; abhidhanat because of the mention

The light is Brahman on account of the mention of feet in a passage, which is connected, with the passage about the light referring to mantra III.13.7 of Chandogya upanishad.

We see the 24<sup>th</sup> sutra and that is the tenth Adhikaranam known as jyotisharanagabhikaranam. This refers to 3.13.7 of Chandogya upanishad. Here the enquiry is about the Jyoti occurring in the Upanishad. In this Adhikaranam we establish that Jyotih is Brahman and it is Sagunam Brahman or Isvara only since the context is Upasana. In the last class I did the general analysis of the entire Adhikaranam as also the first sutra.

In the previous two Adhikaranam we had special clues in that section itself to show that Akasa is Brahman or prana Brahman etc. Here we don't find Brahma lingam and are forced to use indirect method. Hence we go to the previous section of Chandogya upanishad. This mantra belongs to 13<sup>th</sup> section known as Jyotir vidya. 12<sup>th</sup> section deals with Gayatri vidya. We have to establish that Gayatri is Brahman and we are able to establish because we have sufficient clues to establish that Gayatri is Brahman. The very same Brahman previously seen as Gayatri is talked referred to in the 13<sup>th</sup> section also. Then we can apply the equation. We establish Gayatri is Brahman and then we prove Gayatri is Jyotih and then we conclude that Jyoti is Brahman. Upanishad talks of four padas of the Gayatri to prove that Gayatri is infinite. The entire universe is Gayatri. The three are beyond universe.

The mantric Gayatri cannot become infinite and therefore Gayatri should be understood as Brahman only because of the four quarters. Not only Gayatri has four quarters consisting the whole universe it is also seen that Gayatri is Sarvatmagam. If it is a metre then it is a finite entity and it cannot become everything. Then that Gayatri must be Brahman only. This is the first part of the argument.

Gayatri abhinna Jyotih. If Gayatri is nothing but Brahman in the 12<sup>th</sup> section the topic of 12<sup>th</sup> section and topic of 13<sup>th</sup> section are the same it is to be established. Adhi Sankaracharya gives three reasons for Gayatri is discussed as Jyoti Brahman. First is grammatical reason.

Adhi Sankaracharya says you look into that mantra, which begins with atha, indicates beginning of new Upasana and afterwards it uses the pronoun yathu which means a pronoun can be used only to remind you of the noun talked before. If the Upanishad suddenly says that principle means that Upanishad assumes that reader knows of something that is talked about. If Upanishad talks of fresh thing it will talk of light and then use the pronoun. Pronoun of yad reminds of the upasyam Brahma the Gayatri rupam Brahma here. This is the first reason.

While talking about Gayatri vidya Upanishad gives a mantra. There Brahman associated with swarga loka is indicated in the 13<sup>th</sup> section by using the word divi. Brahman of 13<sup>th</sup> section has got swarga loka sambanda. When the Upanishad introduces Brahman, it uses the words atah, parah, divah higher than the heaven; yat Jyotih dipyate the light which shines visvatah prsthesu above the word etc. The association of all pervading Brahman is indicated by the word divah. Thus swarga loka sambandha of Brahma or Gayatri is indicated in 12<sup>th</sup> mantra and Brahman and Jyoti is indicated in the 13<sup>th</sup> mantra and thus we can link that Jyoti is Brahman. This is the second argument.

Then one more argument Adhi Sankaracharya gives. In 12<sup>th</sup> section Gayatri vidya is Brahma Upasanam and we have already proved. Then our doubt is regarding 13<sup>th</sup> section Jyotir vidya. Then Adhi Sankaracharya says go to 14<sup>th</sup> section, which is candilya vidya. When you go to 14<sup>th</sup> chapter we clearly prove that candilya vidya of 14<sup>th</sup> section is also Brahma Upasanam. Controversy is only about the middle. Previous one is Brahma Upasana and the later one is Brahma Upasana and suddenly in the middle nothing new can come like a jerk. This argument is generally used in mimamsa sastra and this argument is called sandamsah nyayah. The tong is called sandamsah.

Jyotir vidya is caught between Gayatri and candilya vidya and hence the middle Jyotir Upasana must belong to Brahma Upasana only. Symbolized is one while the symbols are different. Alambanam, vary but the upasyam is one and the same Brahman. Therefore whatever argument is given for prove Gayatri is Brahman can be applied to show that Jyotih is also Brahman. The Jyoti is non-different from Gayatri refer to Brahman alone because of the mention of four padas of the previous section the universe being one padam and the rest being the three padas.

Now we will go for word for word analysis. The first word is Jyotih and second word is charanabhitnad. The light, which is mentioned in 3.13.7 of Chandogya upanisad and which is non-different of the Gayatri of previous section. The conclusion is that Jyoti is Brahman and it is Sagunam Brahman or Isvara. Here context is Upasana prakaranam and it is maya sahitam Brahman and it is otherwise called Isvara. Charanam and abhidhanad the word charanam means padah or quarter. In this context it refers to the four quarters. Abhidhanad means because` of the statement of indication of four quarters. Now the question will where is the mention of four quarters. We see the mention of four quarters in the previous Gayatri Upasana and borrow the lingam and apply it to our Jyoti Brahmanam to prove it is Brahman.

Now a purva paksa comes and he say I cannot accept your conclusion. He says the word cannot refer to Brahma Jyoti or Chetana Jyoti. It should refer to Achetana Jyoti alone. The most famous light is the sunlight. He says Jyoti should be taken adithya Jyoti not as Brahma Jyotih. Surya Jyoti is karya Jyoti and Chetana Jyotih. He gives six arguments in support of their views.

Prasddatvad whenever we use light we get the idea of some sunlight or moon light or tube light etc. Hence Jyoti is taken as Consciousness but taken as some sort of light only. The second argument is it uses the word diptyate means shining. No one thinks of shining Consciousness. No one experiences the shining Consciousness.

The third argument is maryadha vacanad, which means boundary. Purva paksa says you read mantra once again. The mantra reads as *parah mantrah dipyate* it is beyond the heaven in the higher lokas. The word parah means beyond. Beyond means this side he is not.

The fourth argument is adhara sravanad. The Upanishad talks of location for the Jyotih and it is all about the location and it means the light is in the higher lokas. That is not possible for Brahman and Brahman is not located anywhere.

The fifth argument is here the Upanishad talks about the Jyotir Upasana. It is in higher lokas and that Jyoti may be meditated upon in the body in the form of the very warmth of life and tejah or agni. It can also be felt within.

Now purva paksa says the warmth of body the agni Tattvam is taken as symbol and Jyoti also must be taken as a similar Tattvam in the higher loka or the heaven. Some similarity should be there between alambanam and deity. alambanam is ferocious when you do kali Upasana. Alambanam and upasyam should have some similarity. In the sme way the fire in stomach must have some Jyotih. Alambana samanyad.

The sixth and final argument is this. The Upanishad talks of the phalam of this Upasana. it are warmth experienced in the body and also the sound heard from within the body. The phalam of the Upasana is that he will become a presentable or handsome person. Not only that his name will be famous but also will be known everywhere. The beauty and fame are the Upasana phalam. This phalam is what? They are only finite result. We know generally that parichinna devata will give parichinna phalam. Meditators of final devatas get final moksa phalam only. Isvara Upasana will give paricchinna phalam. Therefore Jyoti karya Jyoti is Brahman. Adhi Sankaracharya takes all arguments and therefore Jyotih means Brahman alone. More in the next class

## BRAHMA SUTRA

Class 58

### **Topic 10 – Sutras 24-27 [Jyoticharanadhikaranam]**

The Light is Brahman,

#### **Sutra 1.1.24 [24]**

#### ***Jyotisharanabhidhanat***

Jyotih the light charanam feet; abhidhanat because of the mention

The light is Brahman on account of the mention of feet in a passage, which is connected, with the passage about the light referring to mantra III.13.7 of Chandogya upanisad.

We see the 10<sup>th</sup> Adhikaranam with four sutras of which we see the first sutra. We have seen the word analysis of the sutra. If Jyoti the light mentioned in 3<sup>rd</sup> chapter refers to Brahman alone which we have talked about in 12<sup>th</sup> chapter in the name of Gayatri. Now a purva paksa has come and has given six reasons saying adhithya Jyoti is a light and it talks about Surya Prakasa alone and not Brahma Prakasa Upasanas.

First is he says Jyoti is Achetana Jyoti and it is not Chetana karana Jyoti. The Upanishad uses the word shining and it is only external shining and the Consciousness does not shine at all. If it be so, in the dark room wherever we go light should be there. Thirdly there is boundary and the light is beyond heaven and by saying beyond heaven it talks about limit and therefore it must refer to any limited Jyoti say the Surya Prakasa.

Fourthly adhara vacanad and Upanishad uses the word that the light is in the heaven or higher lokas and location indicates it is not Brahman and it is unlocated and the Jyoti being located it is not Brahma Jyoti; fifthly that this Jyoti is similar to Jyoti in the body which is felt in the form of warmth and it has some similarity and therefore upasyam also should be karya and not karna Jyoti.

Sixth and final reason is that it is parchinna and the Upasana phalam is beautiful body to the upasaka which can be seen and not only he will be seen and when a person goes through Brahman he will get unlimited reasons and limitless Isvara should give limitless results and therefore limited phalam proves that the light mention here is not Brahma Jyoti but any other Chetana and limited Jyoti like adithya Prakasa. Now Adhi Sankaracharya give his arguments negating the views posed by the purva paksa.

The word light is well known external light alone and how can we sacrifice primary meaning. We say primary meaning can be sacrificed if other factors are favourable if all other factors are favouring secondary meaning. Here we have shown that secondary meaning alone is supported for Upanishad talks about a Jyoti, which pervades the whole universe, and beyond universe. And this is possible for karna Jyoti Brahman and not karya Jyoti.

The second answer is that the word Jyoti has got the meaning of Consciousness in the primary sense and the only reason that the meaning is to loka prasiddham and this meaning is sastra prasiddham. In the Upanishad the expression Jyoti is common to indicate the

Consciousness. Refer to II.ii.9 of Mundakopanisad that reads as *Hiranmaye pare kose virajam Brahma niskalam tac-chubhram jyotisam Jyotih tad yadatma vido viduh* and the meaning of this mantra is the stainless indivisible Brahman, the pure, the light of all lights, is in the innermost sheath of the golden hue- the highest. That is what the knowers of the Atman know.

Again the same Upanishad mantra II.2.1 reads as *vaih sannihitam guhacaram nama Mahat padam atraitat samarpitam ejat prajan nimisac-ca yadetaj-janatha sad-asad varenyam param vijnanad yad varishthanam Prajnanam* the meaning of the mantra is Bright existing very close moving in the cavity of the heart; great and the support of al; In Him is all the universe centered round; what moves, breathes and winks. Know it, which is both with form and without form the most adorable, the highest of beings, the one beyond the understanding of creatures.

The expression light is very much used for Consciousness and there is nothing wrong for light is that in whose presence things become evident and the ultimate light is Consciousness because in the presence alone we know anything and everything.

The Upanisad uses the meaning shining for the Consciousness also in several places. It is sastra prasiddha Artham. We see in mantra I.i.16 and 1.1.17 of Kaivalya Upanishad that reads as *yatparam Brahma sarvatma visvasya yatanam Mahat sukmat sukmataram nithyam tat tvameva tvameva tat jagrat svapna Sushuptyadi prapancam yat prakasate tad Brahmaham iti jnatva Sarva bandhath pramucyate* the meaning of this is that which is the Supreme Brahman the self of all the ample support of the universe, subtler than the subtle and eternal... that alone thou art thou alone art that and that which illumines the world of relative experiences lived in the waking, dream and deep sleep conditions, that Brahma am I and realizing thus one is liberated from all shackles. Therefore there is nothing wrong in such a meaning.

In Gita sloka 18.7 it is said *jyotisam api taj ryotis tamasah param ucyate jnanam jneyam jnanagamyam brdi Sarvasya dhisthitam* that reads as He is the Light of lights as aid to be beyond darkness knowledge, the object of knowledge and the goal of knowledge – he is seated in the hearts of all. Therefore Jyoti as Consciousness is the primary meaning of Consciousness. The second objection is sound

Third objection is that boundary has been placed and how can Brahma has boundary. Adhi Sankaracharya says that this section is Sagunam Brahman Upasana section and Isvara Upasana section and we can talk about limitation of Isvara for the convenience of upasana. We confine Isvara to an idol and we go to a temple and worship the idol and keep the all-pervading Isvara in a temple. Therefore maryada vacanad is not an ocean and the limitation is consciously imposed for the purpose of Upasana.

The fourth objection is adhara vacanad. How can you locate Brahma or Isvara in one place. For this the same answer is given as before. All this is done for the purpose of puja or for the purpose of Upasana.

Fifth objection is that Isvara is visualized in sarira Jyotih. If the alambanam is karya Jyoti the upasyam also should also be karya only. If one is jadam the other also will be jadam. We say that there is no rule like that. If the jada alampanam is for jada vastu only we cannot do any Upasana or puja. It is because upasyam is invisible and we need visible alampanam. The alampanams are always jada vastu of the universe for meditating upon the invisible devata. In

fact we cannot do any Upasana without having an alampanam and alampanam being jada vastu cannot be displaced. The upasyam also must be jadam is not there. In fact Krishna asks us to meditate upon him on various objects only. Ganga, Himalayas, agni etc., are jadam yet we use them as alampanam to invoke the Lord Isvara.

Then comes sixth and final argument that the phalam is parichinnan and therefore devata also will be paricchinnam only. Purva paksa argument is that limited devata can give only limited power. This Adhi Sankaracharya negates asking the purva paksa as who gave such a rule. A limited devata cannot give limitless result that we accept. A fellow having ten rupees can give only charity of ten rupees only. But hundred-rupeed person can give more danam. Parichinna deva can give only parichinna phalam but Isvara can give both limited as also limitless phalam. Refer to Gita sloka 7.21 that reads as *yo yo yam yam taum bhaktah sraddaya'rcitum icchait Tasya Tasya 'calam sraddham tam eva vidadhamy aham* the meaning of this sloka runs as whatever form any devotee with faith wishes to worship, I make that faith of his steady. here he say I can give dharma Artha as also moksa. You can go to Isvara and seek material benefits as also beauty. There is nothing wrong if phalam is beauty. Gayatri abhinnam Jyotih Brahma. With this 24<sup>th</sup> sutra is over.

### **Topic 10 – Sutras 24-27 [Jyoticharanadhikaranam]**

The light is Brahman.

#### **Sutra 1.1.25 [25]**

#### ***Chandobhidhananneti chet na tatha cheto'rpananigadat tatha hi darsanam***

if it be said tha Brahma is not denoted on account of the metre Gayatir being denoted, we replay not so, because thus i.e., by means of the metre the application of the mind on Brahman is declared' because thus it is seen –in other passages also]

While defining sutra we talked about the pithy short statement. Even though this condition is followed there are occasions when the sutra becomes longer. This sutra is an exceptional sutra.

Now we will go to general analysis of this sutra. The topic is the same of the light of Brahman. In the previous sutra we established that Jyoti in this sutram is Brahman. Our main argument was the Brahma upasana is talked about and from that we come to this section. Purva paksa does not accept this argument. He says just because in previous section we talked about Brahma Upasanam and hence this sutra also talks about Brahman. Purva paksa argument is that even taking the previous sutra Jyoti Brahman is itself wrong.

Our answer to that is Gayatri is Brahman. And therefore Gayatri Upasana is equal to Brahma Upasana and that is continued here. Purva paksa asks who said Gayatri is Brahman for it is primarily known as vedic metre. You misinterpret it as Brahman. Well-known meaning of the word is chandah. He says in the previous section Gayatri chandah was talked about and not Brahman. Our argument that Gayatri has got a primary meaning that it is vedic metre. We say the word Gayatri has got laksyartha and it is implied and the secondary meaning is Brahman. Metre is primary meaning and Brahman is the secondary meaning. For which he argues when primary meaning and secondary meanings are there which is powerful.

Primary means primary and secondary means secondary. How can you leaving the primary meaning you take to secondary meaning. He asks when primary meaning is powerful why taking secondary meaning. Our argument is that again primary meaning can be given up if it contradicts logic and it unfitting. If primary meaning does not fit in this context we can take to secondary meaning. In this context the primary meaning does not fit in and therefore we are forced to take to the secondary meaning.

Upanishad says in 12<sup>th</sup> section Gayatri is everything Gayatri va idam Sarvam. Gayatri is cause of the whole universe. Gayatri pervades everything. Now take to the primary meaning of Gayatri. This Gayatri does not occupy even one page and this finite limited metre is the primary meaning. But this 24 letters of Gayatri is pervading the entire universe. We find that primary meaning does not fit in and we have to go for the secondary meaning.

Adhi Sankaracharya says in mantra 47 of vakya vritti that if the direct world meaning throws up in inconsistency with what is pointed out by other proofs or evidences, the sense consistent with its word meaning that is intelligently suggested by the terms, is to be accepted – and this is its suggestive meaning or [laksahan]. Primary meaning should be given primary place. You should not take secondary meaning first. If it does not fit only the secondary meaning should be taken here we are forced to take the secondary meaning.

Any presiding deity presides over one aspect of creation and no devata can be taken for everything. Here therefore you are forced to take karnam Brahman or maya sahitam Brahman. Therefore Gayatri pada Vachyartha is chandah and Gayatri pada lakshyarthah Brahman. Then comes the final question from purva paksa. When you take a secondary meaning you have to apply a rule and the secondary meaning should be closely connected to the primary meaning. Lakshyarthah should be connected with Vachyartha. The connection between Gayatri and Brahman is Brahman is connected with everything in creation.

Brahman is the cause of everything and everything is the karyam of Brahman. Gayatri is karyam of Brahman and Brahman is the cause of everything. You can invoke Brahman on invoke on anything. Karya Gayatri dvara karanam Brahman upasyate. Karya ganga dvara karana ganga upasyate. We don't have infinite gods but we have infinite forms symbolizing one god. Purva paksa says it is talking about Gayatri only but siddhanti says it talks about Brahman through Gayatri.

In the final part of the sutra is the example where Vyasacharya says we have many examples like this invoking Brahman through vedic mantras. It is very common.

In Siksavalli of Taittiriya Upanishad chapter v there are several vyahriti mantras through which Brahman is invoked for example 1.iv.2 *bhutiti va ayam lokah, bhuva iti antariksam suvar-ity-lokah, maha iti, adityyah, adityena vava sarve loka mahiyante*. It is Gayatri alampanah Brahma Upasana it is. We worship Brahman through Gayatri. Ganga puja is Brahma puja through ganga. Hindus are not idol worshipper and it idol alampanaka Isvara puja.

We will go to word for word analysis. *Chandobhidanad na* relate to purva paksa portion *iti chet* means suppose; *na tatha chetorpana* thus application of the mind; *nigadat* means because of the teaching *tatha hi* like that darsanam it is seen [in other texts]. Because of the mention of the vedic metre mention in the previous section the conclusion is. Purva prakaranam upasyam and another word we have to supply is Brahma.

The final sentence is because of the mention of the vedic metre Gayatri the object of meditation in pervious section is not Brahman. The idea is that the purva paksa questions why take Gayatri for meditating upon Brahman when it is nothing but a Gayatri metre. Suppose such an argument is given, then comes siddhanta and his answer we will see in the next class.

## BRAHMA SUTRA

Class 59

### **Topic 10 – Sutras 24-27 [Jyoticharanadhikaranam]**

The light is Brahman.

#### **Sutra 1.1.25 [25]**

#### ***Chandobhidhananneti chet na tatha cheto'rpananigadat tatha hi darsanam***

if it be said tha Brahma is not denoted on account of the metre Gayatir being denoted, we replay not so, because thus i.e., by means of the metre the application of the mind on Brahman is declared' because thus it is seen –in other passages also]

We see the word for word analysis of the sutra. We saw the inferential statement assumed by him is the object of meditatioin in 12<sup>th</sup> section of Chandogya upanisad is not Brahman. If you prove that what is said there, then alone we can say 13 section deals with Brahman. 12<sup>th</sup> section deals with Gayatri chanda. Because of the mention of vedic metre and it is an Upasana on vedic metre and not Brahman. Up to this we saw in the last class.

Second part of the sutra deals with the answer to the purva paksa. The second na is the negation by us the Siddhantis. The previous section dealt with Gayatri chandah is not correct is our reply to purva paksa. We supply purvaprakarana upasyam na change the object of meditation is not on vedic metre as you claim.

Tatha means through Gayatri symbol. It is through the symbol we meditate and Gayatri is not an object but it is a symbol for some other object. Siddhanti says Gayatri is only alampanam and the upasyam is Brahman. Gayatri chanda alampanena chetorpananigadat chetorpanam means Upasanam and it means Brahma Upasanam. Cheta means mind; arpanam means fixing. Fixing mind means Upasanam.

The word Brahma we have to supply. Nagatad means because of the mention. The final meaning is because of the mention of the Brahma Upasanam. Because of Brahma Upasanam through Gayatri alampanam Gayatri should not be taken as Upasanam but as alampanam. Gayatri chanda alampanena Brahma Upasana vidhanam. Brahma Upasanam is prescribed through the symbol of vedic metre.

Now we will take the word tatha that means such meditation. Such meditation means veda mantra dvara Brahma Upasanani. The word he means widely popularly etc. We see the word darsanam means, such Upasanam are seen by us in the Upanisads. In siksa valli vyahriti mantras are taken as alampanam for Brahma Upasanas. I some cases even letters are taken as symbols for Brahma Upasana. Vedic letter, vedic words, vedic metres, vedic sentences are taken as alampanams for doing vedic Upasanas.

In the olden days people did veda adhyayenam and student's mind was soaked in vedic mantra and it was possible to take such mantras or vedic letters as alamapanam for doing vedic Upasanas. Rg veda people meditate on Isvara on rg mantra. Rg mantra can serve as alampanam for any Upasana. Gayatri is common to all vedas and hence Gayatri is taken as symbol for Brahma Upasana. Now we will go to 26<sup>th</sup> sutra.

## **Topic 10 – Sutras 24-27 [Jyoticharanadhikaranam]**

The light is Brahman.

### **Sutra 1.1.26 [26]**

#### ***Bhutadipadavyapadesopapattescheivam***

And thus also [we must conclude viz., that Brahma is the subject or topic of the previous passage, where Gayatri occurs] because [thus only] the declaration as to the beigns etc. Being the feet is possible.

The main discussion here is 13<sup>th</sup> section of the 3<sup>rd</sup> chapter of Chandogya upanisad and we establish that the Jyoti mentioned there refers Brahma and not Gayatri. Here he gives one more reason in support of the above conclusion that Purva prakaranam upasyam na Gayatri chadah. The object of meditation is not vedic metre. In the previous section Upanishad makes a statement 3.12.5 of Chandogya upanisad that Gayatri has got four padas. Adhi Sankaracharya argues this itself indicates Gayatri does not refer to vedic metre and if it refers to vedic metre it should refer to three padas and not one pada. Gayatri has got three padas whereas in the Upanishad says chathus padas.

Once you say Gayatri has got four padas the question comes what are the four padas of Gayatri. In the same Upanishad four padas of Gayatri is mentioned and they are bhutani[all living beings of the creation] second pada is Prithvi [the whole earth] third is sariram [physical body] and the fourth is hridayam [the heart]. From this it is clear Gayatri refers to Brahma or sarvatmakam Brahma. Since four quarters encompass the whole universe all human being consisting of individual body and individual sariram the macrocosm and microcosm the whole thing put together it is said Gayatri. If it is metre how the whole world be talk about here. Therefore Gayatri refers not to the vedic metre but to Brahma alone.

You should make a note that 12<sup>th</sup> section of Chandogya upanisad states Gayatri has got four padas as above. This is one explanation given by Chandogya upanisad. The very same Chandogya upanisad gives another explanation by quoting a rig mantra. The other three pada are beyond the creation, one is based on sama veda and the other is rg veda based. Entire world creation is the basis for one explanation and the other one is the basis for rg veda based. Final conclusion is Gayatri refers to Brahma alone. Here Vyasacharya takes sama veda based explanation. Because four padas are mentioned as living being earth and sariram.

Now we will enter the word for word analysis. The sutra contains three words. Bhutadi; the elements etc., i.e. The elements, the earth, the body and the heart; pada; [of] foot, part ; vyapadesa; [of]mention [of]declaration or expression; upapatteh; because of the possibility or proof, reasonableness, as it is rightly deduced from the above reasons; cha also; evam thus so.

## **Topic 10 – Sutras 24-27 [Jyoticharanadhikaranam]**

The light is Brahman.

### **Sutra 1.1.27 [27]**

#### ***Upadesabhedanneti chet na ubbayasminnapyavirodhat.*** ..

If it be said [that Brahman of the Gayatri passage cannot be recognized in the passage treating of 'light'] on account of the difference of designation or the specification [we reply] no because in either [designation] there is nothing contrary [to the recognition].

Now we get into a grammatical discussion in this sutra. Going back to our past discussion.

First we analysed and established that Gayatri is Brahman. Then we came to the 13<sup>th</sup> section of Chandogya upanisad that Jyoti talks of Gayatri only. Therefore we said Jyoti deals with Brahman in roundabout method. In the 12<sup>th</sup> section Gayatri is Brahman. How do you say that 13<sup>th</sup> section also deals with Brahman. For this we gave several reasons. Among various reasons one particular reason we should take up for discussion. Swarga loka or 'div' is repeated in both the sections. In the 12<sup>th</sup> section [3.12.6] of Chandogya upanisad the mantra reads *asmtavanasya Mahima tato jyayamsca purusah padosya Sarva bhutani tripadasyamrtam divi*. The mantra contains the word divi which means swarga loka in the heavens.

Now we come to the mantra 3.13.7 of the same Upanishad which reads as *atha yadatah paro divo yotirdipyate visvatah prsthesu sarvatah prsthesvanuttamesuttamesu lokesvidam vava tadya didamsminnanantah puruse Jyotih* here also we see the word 'divo' to indicate the swarga loka.

Our argument of common word connection, because of the common word occurring in both the sections the object of meditation must be the same and the topic is swarga loka is common to both the section. In both the places we are reminded of the Brahma Upasanam. Based on this argument, the purva paksa is raising an objection. The objection is he says you cannot say that the same word is repeated in both the sections. If the 12<sup>th</sup> section the word mentioned is 'divi' whereas in 13<sup>th</sup> section the word is 'divo'.

Grammatically speaking 12<sup>th</sup> section is using the 7<sup>th</sup> case whereas the 13<sup>th</sup> section is using panchami vibakti the 5<sup>th</sup> case. Even though words are identical the cases are different. Since the cases are different, the topic also must be different. Then the siddhanti says even though cases are different the topic is the same. In one place it is said 'in the heaven' and in the other place it is said 'beyond the heaven' and how can the topic be the same is their argument. Thus we find the propositions are different as we see in one place it is 'in' and in the other it is 'beyond' before the noun heaven. How can both be the same is the argument of the purva paksa.

Now Adhi Sankaracharya and Vyasacharya answer that in certain times different cases have different meanings but certain other context the different cases or different propositions endings give the same meaning. Jnanad moksa jnanena moksa. The fifth as also the third case both convey the same meaning that knowledge gives moksa. In English also certain propositions convey the meaning of another proposition also. The hotel is on the river. The capital of the country is on the river. Here 'on' means of the river or beyond the river or near the river. The proposition is 'on' but the meaning is 'near' or 'beyond'. Here the word divi does not convey location and it conveys beyond the heaven. There is not a problem. 'In' the heaven means 'beyond' the heaven in this context. We have a proposition 'over'. When I say the clock is over the table means it is located on the table. Suppose I say the boy jumped over the table means he jumped beyond the table. Here divi and divah should not disturb too much as.

Now we will see the second argument. When we talk about the repetition of the same word we only talk about the repetition of the word and not the cases. Behind the proposition we should see the word is repeated or is the same should be seen by us. Repetition of word is enough whether the topic is the same. Prakriti is common but Pratyaya there is no difference. I will give you the example in the next class.

## BRAHMA SUTRA

Class 60

### **Topic 10 – Sutras 24-27 [Jyoticharanadhikaranam]**

The light is Brahman.

#### **Sutra 1.1.27 [27]**

*Upadesabhedanneti chet na ubbayasminnapyavirodhat.*

If it be said [that Brahman of the Gayatri passage cannot be recognized in the passage treating of 'light'] on account of the difference of designation or the specification [we reply] no because in either [designation] there is nothing contrary [to the recognition].

This sutra consists of two parts the first of purva paksa and the second one is that of Siddhantis. The word divi in the 12<sup>th</sup> section and divah in 13<sup>th</sup> section of fist chapter of Chandogya upanisad refers to heaven in both the places. This gives us the pratya vijnanam the recognition that the object of meditation is the same in both the places.

Purva paksa's argument was that you couldn't take as confirmation that both are the same because of the different in the cases from grammar point of view. This we have discussed in detail in the last class. For that we gave two answers that even though the propositions are different we say that the two different propositions convey almost the same idea only. We say that in both the cases it means divah only and there I no difference between divi and divo from the standpoint of grammar even though two case endings are there, the meaning is the same.

Secondly our conclusion is not based on proposition but on the word near the proposition. We don't talk about the repetition or recognition of the proposition but we see the repetition of the word heaven and therefore the topic in both the places are the same. Suppose we have two books and in the first place it is written volume I and in the second book it is not written what book but volume is written as II.

In such cases I read the characters or the name occurring in the second volume and if I see the names are repeated I conclude that this volume is continuation of Ramayanam only. For this confirmation I read the names and not the volume. The propositions may be different and I am not particular in case ending but I am interested in names. I am not interested in the words and not the propositions.

Again even though propositions are different the meanings are the same in both the places. Though the grammatical cases used in the scriptural passage are not identical, the object of the reference is clearly recognized as being identified. So ends the general analysis of this sutra.

Now I will come to the word for word analysis. Upadesa; of teaching of grammatical construction or cases; bhedat; because of the difference; na; not; iti chet: of it be said; na; no; ubhayasmin; in both [whether in the ablative case or in the locative case] api even; avirodhat because there is no contradiction.

Of these first two words relate to purva paksa. Here we have to supply two words to complete purva paksa. They are Purva prakaranam upasyam the objection of meditation said in the 12<sup>th</sup> section of chapter 1 of Chandogya upanisad. Then we have to supply then the word Brahma. The object of meditation in the pervious section is not Brahma because` of the Upadesa bedad the words are different in both the cases. The words kept in mind are divi and divo occurring in 12<sup>th</sup> andnm13th section respectively. They are different is their argument. When they talk about not the difference in words but on the basis of the propositions.

Then comes if such an argument is given by purva paksa, then comes siddhanta answer na ubayasmin api abhirodad. Here also we supply three words. Purva prarita upasyam na Brahma na iti na. That means it is Brahman. Purva paksa is not true is easier expression. Here there is no contradiction in the ideas.

All the things and beings are one quarter of Brahman and the other three relate to heaven. Here the word all means that not only the things and beings of Buloka as also the higher and lower lokas also or the entire Saguna Prapancha that will include the swarga loka also. Suppose the word divi is taken in the heaven and there will be problem of repetition because it is included in the word 'all'. Therefore the word divi should not be taken as being in the heaven but it should be taken as beyond heaven. It is beyond Sagunam Brahman and it is but Nirgunam Brahman. This is beyond ika loka and para loka. This is our argument. Thus there is no contradiction. The tenth Adhikaranam is over with the 27<sup>th</sup> sutra.

I will give you the final summary of the entire Adhikaranam. This is unique because we give a set of reasons and we make two conclusions. Two conclusions are one is with regard to 3.1.12 and the other one of 3.1.13 Chandogya upanisad. The first one talks of Gayatri Brahma. The word gayatri used in 12<sup>th</sup> section does not refer to gayatri metre or gayatri mantra but refer to Brahman. We come to another conclusion based on 13<sup>th</sup> section Jyotih Brahman that means that Jyoti occurring in 13<sup>th</sup> section is Brahman. For both conclusions the reasons are the same.

Three reasons are given. We see one each in three sutras. We have to read three sutras twice because we come to the two conclusions. First time gayatri Brahma charanabhidanad; the bhutadipadavayapadesopapptechaivam and conclusion is gayatri Brahma. Then we have to read the same second time. Gayatri abinnam Jyotih Brahma; charanabhidanad; then you repeat the mantra. The conclusion is some with set of two reacons.

Her we take reasons from the 12<sup>th</sup> section [ibid] and we apply the reason for the conclusion in the 13<sup>th</sup> section [ibid]. This is the uniqueness of this Adhikaranam. It is because in the 13<sup>th</sup> section we don't have the direct supporting reasons and therefore we borrow this from 12<sup>th</sup> section. Therefore, it appears to be a confusing Adhikaranam. Now I come to the technical format.

The subject matter in this Adhikaranam is the word Jyotih occurring in 3.13.7 of Chandogya upanisad. The samsaya is we have to tell the doubt. Without doubt the topic will not be included in Brahma Sutra. If it is not a confusing topic it will not find a place in Brahma Sutra. The doubt here is Jyoti is whether it is Chetana or Achetana whether it refers to worldly light or it refers to Chetana Jyoti the Consciousness principle. Because we find both the meanings are there.

In fact because of this confusion alone people wait for Jyoti to come. We should not take the Jyoti as karya Jyoti but take it as Brahma Jyoti. Purva paksa takes it as Achetana Jyoti or adithya Jyoti. He takes that meaning because that is the primary meaning and that is the known meaning. Then comes siddhanta and he says Jyotih Brahman. We talk about Sagunam Brahman only. Samkya does not believe in Isvara and therefore we have to establish Isvara. Because of the three reasons we conclude that Jyotih Brahman. Because of the same reason the word gayatri is Brahma which is an incidental conclusion. It comes in the appropriate position only.

### **Topic 11 – Sutras 28-31 [Pratardanadhikaranam]**

The prana is Brahman.

#### **Sutra 1.1.28 [28]**

#### ***Pranastathanugamat***

prana is Brahman, that being so understood from a connected consideration [of the passage referring to prana]

This is the first sutra of the pratardanadhikaranam. Normally the Adhikaranam is named based on the prominent word of the first sutra. Here it is prana and it should be named pranadhikaranam because 9<sup>th</sup> is named as pranadhikarnam and therefore this Adhikaranam is named as pratardanadhikaranam. Generally in vidvat sadat, they discuss Brahma Sutra. Each scholar takes up one Adhikaranam each. Then other people attack and so the vidvat discusses the topics.

To avoid the communication gap it has been named as pratardanadhikaranam to avoid repetition with 9<sup>th</sup> Adhikaranam. In this Adhikaranam the Upanishad taken is Kaushitaki Upanishad. This Upanisad belongs to rg veda consisting of four chapters. One particular point to be noted is very big mantra. Third chapter second mantra is taken up for discussion. *Sahovaca pranosmi pajnatma tanman ayur iti upasva.* More in the next class.

## BRAHMA SUTRA

Class 61

### **Topic 11 – Sutras 28-31 [Pratardanadhikaranam]**

The prana is Brahman.

#### **Sutra 1.1.28 [28]**

#### ***Pranastathanugamat***

prana is Brahman, that being so understood from a connected consideration [of the passage referring to prana]

We see the 28th sutra, which is the beginning of the 11<sup>th</sup> Adhikaranam of the first pada of the first chapter. This Adhikaranam deals with a mantra in Kaushitaki Upanishad belonging to rg veda. A particular portion of the big chapter 2<sup>nd</sup> mantra of 3<sup>rd</sup> of Kaushitaki Upanishad is taken for analysis, which reads as *Sahovaca pranosmi pajnatma tanman ayur iti upasva*. Here the teaching is given in the form of Indra the teacher and the disciple is the king known as Pratardano. He was powerful and valourous king. Indra liked the king.

Pratardano is on earth and Indra is in the heaven. It is like Naciketusa visiting Yama. Pratardano meets Indra and says I am very much pleased with you and he gives a boon to the king. Pratardano leaves the boon to Indra and asks for the best that is useful for entire humanity. He says I don't want to choose and he left the choice to Indra. Indra knows there are four purusarthas dharma, Artha, kama and moksa. There is only one that is best and that is moksa. Moksa is not a substance. Moksa is the very nature of every person and it is given in terms of jnanam. It is already ours for claiming. Getting moksa Purusartha is claiming Purusartha. Claiming moksa is possible only gaining the knowledge.

Indra chooses to bless Pratardano with Brahma jnanam. This is one of the dialogues in the Upanishad. There is another dialogue Gargya ajatasatru dialogue from Brahadharaynaka upanishad is repeated here. Since Pratardano is the student, it is called Pratardanadhikaranam. Indra begins his teachings. Instead he calls the king and say that you should know me. It is like Krishna asking Arjuna to surrender to him. Now the question comes who are you. Indra begins to describe himself. He talks about himself in different vein and therefore there is lot of confusion.

In Gita also we have confusion about the role of Krishna. He calls himself as friend of Arjuna when he addresses himself as an ordinary human being. At the same time when he says that I have taken many avatars to save the humanity, Krishna poses himself as Sarvatmaka Brahman. There is need for us to clearly understand the meaning of the words used by Baghavan to realize what he actually means when he says I am the karanam of everything.

Sometimes Krishna is Mr. Krishna and in other places he is Sagunam Brahman and in other places he is Nirgunam Brahman. One I is to be interpreted differently at different places keeping the context in mind. Here also Indra uses the word aham in different meaning. In one place he says ajaraha asmi and I am immortal etc. And in some places he says I am Brahman.

In other places he says I am prana and I am prajnatma asmi, Chetana rupa asmi or Chaitanya swarupa asmi.

Therefore there is some confusion. We have taken one particular statement for analysis. He says aham pranah asmi. I am pranah. I am prajnatma asmi Chetana swarupah asmi Chaitanya rupah asmi. May you know me as the immortal one. I am the very life of everyone. We analyse prana as to whether prana refers to Indra himself or whether prana refers to jiva or whether it refers to vayu or whether it refers to Brahman. In this Adhikaranam we establish prana is Brahman. This is the general analysis of the entire Adhikaranam.

The first sutram is the main sutram that lead to the argument to establish that prana is Brahman only. Tathaanugamat because of the consistency it is accepted as Brahman. There is confusion different topics are discussed. Shadlinga vicara is samanvayah finding the consistency or harmony. This we have done elaborately in samanvaya Adhikaranam. Now we have to find out what are the indication is Brahman is consistently discussed and not prana or jiva or vayu or Indra.

Adhi Sankaracharya gives four main indications to how that Brahman is discussed here. First clue is that he says pratardana has asked for the best Purusartha in mantra 3.1 of the Upanishad ibid. We know Brahma jnanam alone is the best Purusartha and therefore prana must refer to Brahma alone. Knowing prana as prana will not give Brahma jnanam and getting prana jnanam he will get higher loka and not liberation. This is first indication.

Second indication is that he says that because of this knowledge a person is freed from all the karmas. It is again 3.1 of the Upanishad ibid. Once one knows this, he does not have to worry about anything. This state can be attained only through Brahma jnanam. Sarva karma nasa phalam.

Third clue is Adhi Sankaracharya points out that esha prana eva prajnatma ajarah anandah amrtia swarupah and it is neither increasable nor decreasable and there is one neither thing that will neither decrease nor increase and that purnatvam belongs to only Brahman. The regular prana cannot be said to be ananda. How can regular panca prana be ananda, amritam and ajara. Therefore we should not take the vachyartham of prana but take the lakshyartham of prana, which is nothing but Brahman. This is the third reason.

Fourth and final meaning is pranosmi prajnatma is there that means Chaitanyam swarupam and Chaitanya swarupam belongs to Brahma alone. Regular prana is born out of the samasti rajo guna of five elements and since elements are inert in nature but prana is Chetana prana and therefore it should refer to aboudhika chaitanyam eva. This is indicated by the word anugamat. This is the meaning of the first sutra

We come to word for word analysis. Pranah; the breath or life energy the word occurring in 3.2 of Kaushitaki Upanishad; them we supply the word Brahma; tatha, thus so likewise like that stated before; life that stated in the sruti quoted in connection therewith; angamat because of being understood [from the texts]. The final meaning is that prana is Brahman. This is the main theme of the sutra.

First objection is that prana should be taken as vayu Tattvam. Samasti vayu is available in individual level as prana. This vayu is glorified in the Upanisads. Upanishad says vayu is infinite vayu is Brahma and vayu is eternal also. Vayu is anasthamita devata. Therefore prana

is vayu. Prana is primary meaning of the word vayu. It is the Vachyartha and it is primary meaning than all secondary meaning.

Adhi Sankaracharya says no. Because primary meaning can be given up if all the other statements support our conclusions. In support of many favourable factors we can give up the primary meaning. When Vachyartha goes against logic etc., we can give up the primary meaning and take to lakshyartha meaning. The second reason is Sarva karma nasa phalam. Again eternity of vayu said in the pictures is not literal eternity. That eternity is not primary. Compared to jalam, vayu and agni prana has got better life. Even after the resolution of three elements vayu continues in Akasa. Therefore vayu is not anantam, anandam ajaram etc., will not be possible. Thus it is concluded you take the Vachyartha meaning.

### **Topic 11 – Sutras 28-31 [Pratardanadhikaranam]**

The prana is Brahman.

#### **Sutra 1.1.29 [29]**

#### ***Ma vakturatmopadesaditi chet adhyatmasambandhabhuma hyasmin***

If it be said that [Brahman is] not [denoted or referred in these passages on account of] the speaker's instruction about himself we reply not so because there is abundance of reference to the inner self in this [chapter of the Upanishad]

As I said before these three sutras are only answering the various points. We know prana is vayu is negated. Here and the next sutra gives some other objection. This is against Indra's statement made to Pratardana. First person singular refers to the speaker. Here the speaker is Indra. Therefore purva paksa claims the word prana refer to devata only because of the sentence sa ho vaca..... This is the Purva paksa. First part is purva paksa view and the second part is the teaching.

Entire teachings refer to individual only. It has nothing to do with adhideivam. adhyatmam deals with individual adhi butham deals with cosmos creation adhi Deivam controlling the creation. Indra comes under adhi Deivam classification. Vyasacharya says if you look to the teachings in Brahman, it deals adhyatmam only. The word prana itself in the context of various states of experience, you cannot suddenly go to devata. You may go anywhere. Predominant reference in this chapter is adhyatmama.

We will see the word for word analysis. Na; not; vaktuh; of the speaker [indra; Atma of the Self; upadesat on account of instruction; iti thus chet; if adhyatma sambandha bhuma; abundance of reference to the Inner Self; Hi because asmin; in this chapter or Upanishad. Prana cannot be Brahman is the purva paksa argument. Because prana is taught as Atma the very self. Here prana is revealed as the very self of the speaker. Here speaker happens to be Indra and therefore we should take it as prana and not Brahman

## BRAHMA SUTRA

Class 62

### **Topic 11 – Sutras 28-31 [Pratardanadhikaranam]**

The prana is Brahman.

#### **Sutra 1.1.29 [29]**

#### ***Ma vakturatmopadesaditi chet adhyatmasambandhabhuma hyasmin***

If it be said that [Brahman is] not [denoted or referred in these passages on account of] the speaker's instruction about himself we reply not so because there is abundance of reference to the inner self in this [chapter of the Upanishad]

The present sutra is the second sutra of pratardhanadhikaranam. The topic of discussion is the word prana that occurs in Kaushitaki Upanishad. In the first sutra of this Adhikaranam we have establish the main conclusion that prana is Brahman. The supporting reason is that the following portion because of the law of consistency. There are two reasons for consistency.

The Upanishad says that prana jnanam is the greatest goal of life and we know if prana jnanam to be greatest goal prana cannot be ordinary prana but Brahman. Sarva karma nasa is possible through Brahma jnanam only and hence prana must be Brahman only. The usage of ananda, ajarah. Amritah etc., also reveals that prana is Brahman and we have already concluded the main meaning in the first sutra. From this sutra Vyasacharya refutes the interpretations of other philosophers. We have already refuted the purva paksa argument that prana represents vayu in the first sutra.

According to this purva paksa the word prana should mean Indra devata alone. The reason he gives is that the speaker happens to be Indra. While talking about prana he uses the words in apposition with prana. In one place he says you should know prana and in another place he says that you should know me thus it is made clear that prana is Indra.

Prana knowledge is equivalent of knowing me. We know that a reflective pronoun can refer to only the speaker. The first person singular always refers to the speaker and here the speaker is Indra devata and hence prana refers to Indra devata alone. The first portion of the sutra is the purva paksa argument. Our answer is that we don't question the subjective reference of Indra.

When you see the third chapter in the entire chapter we find there is no scope for devata description at all, the topic is adhyatma topic and not adhideivam topic. The whole chapter discusses the prana and the Brahman. The contextual references support Adhyatmam and not Adhideivam meaning.

In Isavasya Upanishad it says in mantra 4 that *nainad deva apnuvan Purva marsat* it describes Atma is not available for any type of knowledge or objectification and it says devas cannot objectify Atma. The topic of discussion is available for any means of knowledge only. Suddenly Indra or Varuna cannot come. We talk about sense organs prana Avasthatriyam etc., all are centred on Adhyatmam and you cannot give Adhideivam meaning to prana. This is the general analysis.

Pranah na Brahma it is said by purva paksa devata vadi; he says prana occurring in Kaushitaki 3.2 is not Brahman. When he says it is not Brahma he has in mind that prana is Indra devata. Prana refers to Indra devata according to him. Vaktu Atmani upadesat; here the speaker is Indra. Word Atma means himself. Here it does not mean sachidananda Atma. Upadesat means revelation. It means because of the speakers revelation of prana as himself; if such an argument is given by anyone or purva paksa the answer is Adhyatma sambanda bhuma; bhuma means predominance; sambandha means related to; predominant discussion is related to Adhyatmam related to individual.

Here the emphasis is on the word Adhyatmam. Here Vyasacharya negates Adhideivam by emphasizing Adhideivam. Here Indra is negated here. Indra comes under Adhideivam group. The next word hyasmin; he should be joined to Adhyatmam sambanda bhuma and he means because; because predominant discussion is related to the individual and not devatas the celestials, why do you talk of devatas here. Asmin means here in this section. In this Upanishad there is no need for bringing in devata when it discusses only individual. Therefore pranah na Indra h. This is our argument. With this 29<sup>th</sup> sutra is over.

### **Topic 11 – Sutras 28-31 [Pratardanadhikaranam]**

The prana is Brahman.

#### **Sutra 1.1.30 [30]**

#### ***Sastradrishtya tupadeso vamadevavat***

the declaration [made by Indra about himself viz., that he is and with Brahma] is possible through intuition as attested by sruti, as in the case of Vamadeva.

In the previous sutra devata vadi was negated. Circumstantial evidences do not support Indra and he cannot be drawn. Purva paksa is not satisfied with our answer. Therefore he raises another question. He is not satisfied because he says I gave a reason to establish that prana is Indra but you have not directly answered my question. But you have not refuted my reason that usage of pronoun which first person singular refers to Indra himself. You have not replied this point. I have got direct evidence that Indra uses the word I and me which has not been answered at all.

Indra says in mantra 3.1 of Kaushitaki Upanishad *mam eva vijanithy etad evaham manusyaya hitatamam manne yan mam vijaniyan trisirsanam tvastram ahanam* that Indra begins his teaching that you should know me to the highest of Purusartha. For that answer is given in this sutra. The word I or me has got two meanings. One is called Vachyartha, the primary meaning used in common language and the other is implied meaning known as lakshyartha, which is predominantly used in Upanisads and scriptures. It is a meaning given in scriptural standpoint. I the primary meaning refer to anatma the karya karana sthoola sookshma sariram. Vyavaharika Dristi is Vachyartha; scripture teaches another meaning.

Another 'I', sastra wants to teach which is other than Sookshma Sariram Sthoola Sariram and the other meaning is the Consciousness in the body. The scripture aims to reveal the Consciousness and point out that you the body is mortal and you the Consciousness is ever immortal. You should know when loukika Dristi Artha should be taken and where satriya Dristi Artha should be taken. Suppose Krishna says you are my friend and then it refers to Krishna not only as a friend and there first person refers to anatma.

But when Krishna says 9.4 of Gita says *maya tatam idam Sarvam jagad avyaktamurlina matshani sarvabhutani na ca ham tesu avasthitah* that means by Me all this universe is pervaded through My unmanifested form. All beings abide in Me but I do not abide in them. Here Krishna refers himself to Brahman. His absolute reality is for above the appearance of things in space and time. Can Krishna the person pervade the whole creation? No. Krishna as person cannot say he pervades the whole creation. When Krishna says I pervade how can you take it as Brahman.

So here the mang refers to lakshyartha and paraprakriti is Consciousness alone. Always you see whether it is sastriya or loukika Dristi? Indra used first person singular and it is sastriya dristya upadesah. It is lakshyartha Dristi. But Vyasacharya gives an example from Brahadharaynaka upanisad. This occurs in Taittiriya Upanishad also. Here Vamadeva Rishi is given. Refer to 1.4.10 *Brahma va idam agra asit, tad Atmanam evavet, aham Brahmasmiti tasmad tat Sarvam abhavat tad yo yo Devanam pratyabudhyota, so eva tad abhavat, tatha rstuam tatha manusyanam*, that reads as Brahman, indeed was this in the beginning. I know myself only as 'I am Brahman'. Therefore it became all.

Whoever among the gods became awakened to this be indeed became that. Whoever knows I am Brahman he can say I am everything sarvatma bhava it is called. Upanishad quotes vamadeva Rishi and that Rishi declared that I am Manuh and aham Surya and extend further I am stars moon and *ayam eva idam Sarvam*, in Taittiriya we have got 3.x.6 *aham annam aham annam aham annam aham annado3'ham annado3'ham annadah ahagm sloka-krda-ahagnm sloka-krda-hagm sloka-krt, aham-asmi prathamaja rta3 bhayi, yo ma dadati so edeva ma3 vah aham annam annam dantama3-;dmi, aham visvam bhvanam-abhya-bhava3m, suvarna Jyotih, ya evam veda, ity upanisat* there a jnani says I am all. The Rishi is talking about his sariram but he talks of Brahman only. In all such cases aham means sastra drisya Brahman alone. Vamadeva Rishi got knowledge even during the conception alone. Now we will go to word analysis.

There are four words in this sutra *sastradrishtya*; through insight based on scripture or as attested by sruti it is not loka drishtya, it is from lakshyartha drishtya; *tu* unlike loka drishtya ; but; *upadesah*; instruction, the teaching from Indra in front of Pratardana; *vamadevavat*; like that of *vamadeva* although there are so many examples are there in the Upanishad. If vamadeva refers to body he cannot say that I pervade everywhere.

Devatavadi is still not satisfied. He raises another question, which Adhi Sankaracharya gives, in his commentary. In the third mantra itself Indra said that you know me and in the same mantra another line comes. Purva paksa quotes some more description of Indra . The description is the mantra says *trisirsanam tvastram ahanam* where he says that I have killed an asura called Tvastran an asura with three-headed monster. He says *arunmukan yatin salavrkebhayah prayacchan* that means there were some fake sannyasis who had Vedanta in their mouth all the time who talked spirituality all the time but there were some who don't talk of spirituality but who talked loukika words; they are non-vedantic sannyasis and they mislead the world and I gave all the sannyasis the wild dogs to kill them. In fact he asked the dogs to kill the fake sannyasis. These are all from Indra drishti for Brahman cannot kill anyone. Here Indra is using the word clearly for devata. Because of reference to tvastra vada the first person singular should be taken as Indra devata only and therefore I cannot accept prana as Brahman. This we will see in the next class.

## BRAHMA SUTRA

Class 63

### **Topic 11 – Sutras 28-31 [Pratardanadhikaranam]**

The prana is Brahman.

#### **Sutra 1.1.30 [30]**

#### ***Sastradrishtya tupadeso vamadevavat***

the declaration [made by Indra about himself viz., that he is and with Brahma] is possible through intuition as attested by sruti, as in the case of Vamadeva.

.Here there is a dialogue between Pratardana and Indra. The discussion is on Prana occurring in Kaushitaki Upanishad mantra 2. Purva paksa object prana is not Brahma but Vyasacharya negates the objections. First contention that prana is vayu is negated and the second contention is indra devata itself is being negated in the current sutra. It is because indra uses the word aham when he referred prana. We elaborately discussed in the last class. First we negated on plea that the discussion is centred round Adhyatmam and we should not bring in devata discussion and the purva paksa objection is negated. The second part is given in the present sutra.

Now their point is when you say the chapter predominantly discusses means you have no direct support in the absence of direct support. Now purva paksa gives the direct support of reflective pronoun 'mang' and he asks how do you answer this scripture support. In scripture aham is used in two ways one is lokaika prayogah the common meaning and another is sastriya drishtya and Krishna says I am sarvatma and here one should take sastriya drishti. Here also indra can use the word both in personal name and lakshyartha drishtya when it will mean Brahman. Mama ayuh amritam upasva may you meditate upon me and you will become immortal.

In some other places also he says you remember me you will be immortal; by knowing indra as devata none will get moksa and if one sees from sastriya drishtya the one gains liberation. The details of Vamadeva is given in the next class. One more question is raised by purva paksa, which I raised in the last class. He said when indra uses aham it is not sastriya drishti and it refers to devata also. He only give details of his exploits in Brahadharaynaka upanisad in killing of asuras and fake sannyasis. All these exploits belonged to Indra devata and not to Brahman. Adhi Sankaracharya says that you are only studying those statement talks about the exploits of indra. There is another sentence follows the killing of asuras and sannyasis.

It says *Tasya me tatra na loma canamiyate, sa yo mam veda na ha vai Tasya hena cana karmana loko miyate* the essence of the sloka is even though I have killed all sannyasis and it is papa karma and either I should papa or punya phalam and I am free from all the phalas. I am not afflicted by those karmas. When indra says I am not affected by karma phalam, it is very clear that he refers to Atma alone. Exploits are mentioned not to talk of devata Atma and it only shows even the extreme karmas will not affect me. Krishna says in Gita all the karmas are mentioned there only to show that all of them will not affect asanga Atma swarupam.

Therefore the Upadesa is satriya drishti eva. Even the papams will not touch my hair is the expression used by indra. Then where is the question of touching me the Atma.

## **Topic 11 – Sutras 28-31 [Pratardanadhikaranam]**

The prana is Brahman.

### **Sutra 1.1.31 [31]**

#### ***Jiva Mukhya prana linganneti chet na uapsatraividhyat asritatvadiha tadyogat***

it is to be said that [Brahman is] not [meant] on account of characteristic marks of the individual soul and the chief vital air [being mentioned], we say no, because [such an interpretation] would enjoin threefold meditation [Upasana] because Prana has been accepted [elsewhere in the Sruti in the sense of Brahman] and because here also [words denoting Brahman] are mentioned with reference to Prana.

Purva paksa says that we have got enough clues to take prana as jiva itself. This is called jiva lingam. Lingam means clue or indication. Prana also may refer to mukhya prana. Our regular prana is called mukhya pranah. In certain context prana is used in the sense of sense organs.

In 2.1.8 of Mundaka Upanishad it is said *sapta pranah prabhavanti tasmad saptaricisah samidhah sapta homah. Sapta ime loka yesu caranti prana guhasaya nihitah sapta sapta* that means from Him are born seven pranas the seven flames, seven fold fuel, the seven fold oblations, as also the seven worlds where the pranas move in the cave of living creatures, seven and seven. Here prana means sense organs. Very breathing itself is called prana.

So add the adjective Mukhya then it is regular prana. Purva paksa says that there is one statement occurring in 3<sup>rd</sup> chapter 8<sup>th</sup> mantra of Kaushitaki Upanishad says don't concentrate on the instruments or organs and they are not the real you and you should know one who is using the karanam and you should know the smeller, speaker and in short you should know one behind the organ, if Indra negates the karanam and you should know the karta means the statement refers to jiva alone.

Then comes the fourth meaning for the word prana and he says prana means life breath alone. He gives another reference 3.3 of Kaushitaki Upanishad says prana is the life of the person. Prana alone holds the very body together and not only it holds the body together but also it supports such a weak plant is supported by a stick that holds the body together. That is why when the prana goes the body disintegrates. That prana is panca prana that holds the prana. From that it is clear that prana refers to Mukhya prana alone.

Siddhanti gives three reasons to negate the purva paksa. One chapter will have three different themes, which is against mimamsa sastra. It says one prakaranam should have one main theme. All other topics should be secondary topics. All secondary topics will center on the main topic. The achievement of the goal of liberation is not possible without gaining Brahma jnanam. Therefore our conclusion is that partaram also should be interpreted as Brahman. Prana supports the body and here also the prana refers to Brahman alone. Vyasacharya says that this is not the unique thing we do and we have done this in many places. All indriams are backed by Consciousness alone; prana is prana is because of Chaitanyam alone. Everybody

lives not because of local prana but because of the original Consciousness that enlivens the body.

In Kathopanisad mantra 2.5.5 says *na pranena na apanena martyo jivati kascana, itarena tu jivanti, yasminn etav upasritau* that reads as not by Prana; Not by apana does any mortal live; but it is by some other, on which these two depend, that men live. Prana itself is jadam in nature and behind the prana there is Chaitanyam that is called Pranasya prana. The glory of prana is prana borrows Chaitanyam from atma this prana out of borrowed Consciousness prana lends Consciousness to the Sthoola Sariram and the real glory belongs not to prana but to the atma.

That is why it called Pranasya prana and it is called atma. The real supporter is Brahman only. In this Kaushitaki Upanishad also the situation is the same and the word should not be taken literally and be taken as atma. We have to see the context and understand rightly.

Now we will see the word meaning. Jivamukhyapranalingat; on account of the characteristic marks of the individual soul and the chief vital air; Na; not; iti; thus chet; if; na; not Upasana; worship meditation; traivdhyat; because of the three ways; asritatvat; on account of prana being accepted [elsewhere in sruti in the sense of Brahma]; iha; in the Kaushitaki Upanishad passage; tadyagoat; because of its appropriateness; as they have been applied; because words denoting Brahma are mention with reference to prana.

Since there is jiva and prana, it is concluded that prana refers to Brahman. supporter is prana but ultimate supporter is Brahman. in 9<sup>th</sup> Adhikaranam we have interpreted prana as Brahman why cannot we do it here. Although there may be many indications, the powerful one will take the lead. Because of these reasons pranah is Brahman.

I will sum up the entire Adhikaranam. the visayah is the word prana occurring in 3.2 of Kaushitaki Upanishad is the subject matter. the doubt is whether it refers to Brahman or anything else of Brahman. the doubt is due to the clues indicating so many things. Purva paksas says vayuh, devata, jivah,, and then Mukya prana can be taken as prana. they don't want it to be Brahman. siddantis says prana is Brahman. the sangathi is the Adhikaranam is in appropriate place only. In 9<sup>th</sup> Adhikaranam also we proved prana is Brahman and why should we have two Adhikaranam. it is because in 9<sup>th</sup> Adhikaranam brahma lingam was there and there was no problem. it was not obstructed by any other lingam. But it is not the case with this Adhikaranam. with this first pada is over.

## BRAHMA SUTRA - Chap: 1, Pada: 2

Class: 64

### **Pada 2 - Introduction**

You may remember that Brahman sutra has got four adhyayas first is samanvaya adhyaya, second is aviroda adhyaya, third is sadhana adhyaya and the fourth is phala adhyaya. In the first adhyaya vyasacharya shows the consistency and harmony and he shows Brahman known as upasyam Brahman and neyam Brahman. Upasyam Brahman is called isvara. This samanvaya adhyaya consist of four sections and each one is called pada or quarter. It consisted of 11 topics and 31 sutras. In these 11 topics the first is introduction and all the later ten topics dealt with Brahman alone. Of these 10 topics we find 2<sup>nd</sup> to 6<sup>th</sup> adhikaranam and 11<sup>th</sup> adhikaranam totally 6 adhikaranams deals with neyam Brahman vedantic topics as means of liberation. From 7<sup>th</sup> to 10<sup>th</sup> adhikaranam deals with upasyam Brahman or isvara.

Whether it is neyam Brahman or upasyam Brahman it deals with Brahman alone. Spasta Brahman linga samanvaya vadah it means in this pada whatever upanisadic statements are taken they are supported by clear references to Brahman. Brahman linga vakyams they are. It reveals sarva adhistanam clues revealing Brahman. These clues are divided into two spasta Brahman lingam clearly indicating Brahman and aspasta Brahman lingam which are not directly revealing Brahman. They are to be analysed and show that all deal with Brahman alone. In the first pada the statements taken are all belong to spasta linga vakya Brahman samanvaya pada.

Now we enter second pada. And this is known as aspasta Brahman linga vakya samanvaya pada. Here we will takes the clues, which are unclear and establish that Brahman alone is the subject matter. Whether it is spasta or aspasta the aim is all of them reveal Brahman alone. Central theme of all upanishad is Brahman only. All uniformly deal with Brahman. It is called mimamsa. Because of this only Brahman sutra got the name utara mimamsa sutrani. We have seven topics and thirty-two sutras. With this background we will take up first adhikaranam of the second pada.

### **Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]**

The mano maya is Brahman

#### **Sutra 1.2.1 [32]**

#### ***Sarvatra prasiddhopadesat***

[that which consists of the mind 'manomaya is Brahman] because there is taught [in this text] [that Brahman which is] well-known [as the cause of the world] in the upanisads.

Now i will enter into general analysis of the entire adhikaranam. This adhikaranam consists of 8 sutras. This adhikaranam analyses the mantras 1 to 4 occurring in the 14 chapter of 3<sup>rd</sup> section. This section in chandogya upanishad is called sandilya vidya. This section consists of four mantras beginning with *sarvam khalvidam Brahman tajjalaniti santa upasita*; it has got four mantra. We take up the second mantra for analysis. [3.14.2] sandilya is asking the

devotee to do an upasanam. The object of meditation is the controversy, which we will resolve. It is described as mano maya that which has got manas as upadhi; prana sarirah the one who has got prana as his body; and barupah chaitanya swarupah.

These are the gunas or virtues of the upasya. Therefore in chandogya upanishad 3.14.2 we have an upasya vastu, which if of the nature of mano mayadi visistah characterized by mano maya, prana maya and barupah. Here we have controversy that whether the mano mayadi visista upasyam is jiva or Brahman. It is because the upanishad is mischievous in this section. The condition for analysis is only when there is doubt seen in the upanishad. The first qualification for entering the Brahman sutra is doubt and that it should be beneficial to the seeker. It should not be a useless pursuit. It is called kaka dantha pariksa nyayah.

There are fourteen sections where there are problems. Upanishad gives many descriptions of Brahman as also upasya vastu and equal number of description of jiva also and if only Brahman lingams are there there is no controversy and only jiva lingams are there, there is no controversy. When there is a mixture of Brahman lingam or jiva lingam there is controversy. This is the general analysis of the entire adhikaranam. We will establish mano mayadi visistam Brahmaniva. Purva paksha will argue it is jivaiva.

Now we will analyse of the first sutra. Here vyaacharya analyse mano mayadi alone is Brahman. It begins with Brahman. It comes under 3.14.2 of chandogya upanishad. First we will take 3.14.1 of chandogya upanishad that reads as *sarvam khalvidam Brahman tajjalaniti santa upasita; atha khalu kratumayah puruso yathakraturasmimlloke puruso bhavati tathetah pretya bhavati sa kratum kurvita* [all this is Brahman. Everything comes from Brahman; everything goes back to Brahman, and everything is sustained by Brahman. One should therefore quietly meditate on Brahman. Each person has a mind of his own. What a person wills in his present life, he become when he leaves this world. One should bear this in mind and meditate accordingly.]

I will summarise the mantra briefly and it is the most important mantra. Idam sarvam Brahman kalu the whole creation is Brahmaniva. The upanishad gives the logic tajjalan is the description of the world and the world is given a beautiful title; first description is tajjam means that which is born out of Brahman; tallam means the world is that which resolves into Brahman; tadanam means 'ann' means breath; breathing means existence; Brahman is sristi sthithi laya karanam of the world is established. Hence the world is given the title tajjalan.

Since everything is Brahman karyam sarvam Brahmaniva. Ornament is gold because it is gold karyam. *Yad yad karyam tad tadatmakam. Brahman karyam jagat Brahman rupam. Jagat Brahman rupam Brahman karyatvam mrd rupa gatavad.* Therefore, since everything is Brahman why do get annoyed. May you do upasana of Brahman, which is sarvatmakam. Thereafter ward upanishad says a person is made up of what he repeatedly meditates. As a man thinks so becomes not only mentally but also physically. Purusa is said to be dhyana mayah. He is a product of his own meditation.

Meditation does not mean you sit and meditate. Meditation means whatever be the constant preoccupation of the mind. Krishna says in 8.5 of gita *yam yam va 'pi smaran bhavam tyajati ante kalevaram tam tam evai'ti kounteya sada tadbha abhavitah* that means thinking of whatever state [of having] he at the end gives up his body, to that being does he attain o son of kunti, being ever absorbed in the thought thereof. Not only he becomes the object of

meditation in this life but also he becomes one of the thought in the next life also. As a person thinks so that he becomes after death.

Then the upanishad advises may a person monitor the mental life. Generally we don't monitor our mental biography because the world and society does not know it. People bother about the shirt they wear. But they don't bother about banian. So you do dhyanam. In the first sutra vyasacharya argues that Brahman is the upasya vastu and therefore mano mayadi visista upasyam Brahmaniva na tu jivah. Here again i have to make an incidental point. We do discuss Brahman or isvara in the sastra. We should see the context of discussion.

Sometimes Brahman is discussed as upasyam Brahman or sometimes as neyam Brahman. When we discuss upasyam Brahman it is vyavaharika dristi and when we discuss neyam Brahman it is paramarthika dristi. Many people are confused about advaida because they are not able to understand this beda between upasyam Brahman and neyam Brahman the vyavaharika and paramarthika dristi. When vyavaharika dristi comes advaidin argue Brahman is jivah. When upasyam Brahman is discussed we call upasyam Brahman is isvara and we strongly argue this is talking about isvara only. We clearly accept jiva isvara beda. We say jiva is different isvara is different. The same advaidin argue vehemently they are nondifferent and they are one and the same and only by that knowledge you get liberation.

Advaidin talks of beda as also abeda. Our answer when we talk of upasana we will talk of beda and when we talk of jnanam we talk of abeda. The question comes why should beda be talked about in the Brahman sutra. Why upasya prakaranam and establish beda? Our answer is that Brahman sutra not only wants to give liberation but also refute all other systems of philosophies. If you don't bother about other philosophies then Brahman sutra is not required and if you are interested in refuting other systems of philosophies you should study Brahman sutra.

One of the challenging philosophies is sankya philosophy and he did not accept vyavaharika isvara and he was an atheist and nirisvara vadi. Since sankya was primary opponent of Brahman sutra we discuss the second pada. Through Brahman sutra vyasacharya equally want to establish vyavaharika isvara is different from vyavaharika jivah and vyavaharika jagat. Paramarthika dristya jiva is isvara jagat nasti. Adhi sankaracharya says jiva is confusion; jagat is confusion and isvara is a divine confusion. Here vyasacharya wants to establish vyavaharika upasyam Brahman is different from upasaka jivah. This mano maya prana sarira deals with that upasyam Brahman alone. This is the general analysis of this sutra. More in the next class.

## BRAHMA SUTRA

Class 65

### **Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]**

The mano maya is Brahman

**Sutra 1.2.1. [32] contd.**

#### *Sarvatra prasiddhopadesat*

[that which consists of the mind 'manomaya is Brahman] because there is taught [in this text] [that Brahman which is] well-known [as the cause of the world] in the upanisads.

We now see the first sutra of the second pada of the first chapter and the adhikaranam is sarvatra prasiddhyadhikaranam. Here we now take a statement from chandogya upanishad and the mantra comes in 3.14.2. Here an isvara vidya names as sandilya vidya prakaranam is taught. There are four mantras and now we take up the second mantra.

Here there is an expression many mayah prana sarirah and bharupah. An upasya devata is prescribed here and upasyam is mano mayadhi visista upasyam. From this it is clear that we deal with sagunam Brahman or isvara only and this has nothing to do with jnanam. Here controversy is whether mano mayadi is jiva or isvara. We indirectly imply jiva and isvara are different.

In this adhikaranam consisting of 8 sutras we will establish that mano mayadi visista is isvara and not jiva. Advaidin is going to establish that jiva is not the object of meditation and it does not mean that he accept isvara alone as object of meditation and not jivah and it does not mean both are different. We answer to this that jiva and isvara are different. We do jiva isvara aikyam also. We do teach jiva isvara beda. Yes both beda and abeda. Are you not ashamed of the double standard? For this we say we are not doing anything wrong.

Satta beda vyavaharika dristya there is jiva isvara beda is there and from paramarthika dristya there is no beda and jiva isvara aikyam is seen. Jiva and isvara are identical. For example carbon and diamond are different from common man's point of view because people wear diamond ornaments but none even touch the carbon. They both are different.

At the same time carbon and diamond are one and the same from the point of view of the scientist and they call diamond is nothing but carbon with slight variation. So also with isvara and jiva. They are two from vyavaharika angle and they both are one and the same thing from paramarthika angle. Upasana prakaranam is vyavaharika dristi only. Jnana prakarane abedah; purva baghe beda and vedanta baghe abedah. Sandilya vidya is upasana prakaranam and we accept jiva isvara beda and mano mayatvad visistah.

The sutra is based on the first mantra of 3.14.1 of chandogya upanishad. Upanishad clearly says Brahman is everything and Brahman is sristi sthithi laya karanam. This jagat karanam Brahman is sarvatra prasiddham. It means in all the upanisads in all puranas that Brahman is well known. In gita krishna defines himself as sristi sthithi laya karanam and in baghavata

puranam also this fact is establish. Lord is the one who creates, sustains and dissolves is Brahman alone and that Brahman is introduced in 3.14.1 of chandogya upanishad. This is the general analysis of the first sutra.

Now we go to word for word analysis. This consists of two words sarvatra everywhere, in every vedantic passage; i.e., in all the upanisads; prasiddha; the well known; upadesat because of the teaching. You have to supply two words manomayatvad visista upasyam Brahman. Object of meditation is endowed with property of manomaya etc., mentioned in chandogya upanishad is the controversial topic. The topic is sagunam Brahman or isvara.

Here it is taught that isvara and Brahman are non-different and dressed Brahman is isvara and undressed isvara is Brahman. Smriti grandha also states Brahman is sristi sthithi laya karanam. Prasiddha means well known; sarvatra means well known by all. It means jagat karanam Brahman.3.14.1 talks about Brahman and 3.14.2 cannot talk anything other than Brahman is the statement of vyasacharya. The upasya vastu in 3.14.1 is Brahman alone.

## **Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]**

The mano maya is Brahman

### **Sutra 1.2.2 [33]**

#### ***Vivakshitagunopapattescha***

Moreover the qualities desired to be expressed are possible [in Brahman; therefore the passage refers to Brahman]

Now in the bashyam adhi sankaracharya raises a question, which can be asked by purva paksi. He answers the question. We have to go back to the first mantra 3.14.1 *sarvam khalvidam Brahman tajjalaniti santa upasita; atha khalu kratumayah puruso yathakraturasmimlloke puruso bhavati tathetah pretya bhavati sa kratum kurvita* . He says in the first mantra it is said that the whole world is born out of Brahman, sustained by Brahman and go back to Brahman we don't question. Thereafter wards the sruti talks about the important of the upasana. Therefore one should do meditation. Now the purva paksi says the definition of Brahman is given only to be connected with the word santah and should not be connected to upasita. Santah means quietly. Then upasita.

Everything in Brahman is connected to the santa padam and not with upasita padam. The benefit of doing it is since everything is Brahman why do you have raga and dvesha. Adhi sankaracharya in his bhaja govindam [sloka 24] writes *tvayi mayi chaanyatraiko vishnuh vyartham kupyasi mayyasahishnuh bhava samachittah sarvatra tvam vaanchhasyachiraadyadi vishnutvam* the meanin of the sloka reads as 'in you, in me and in [all] other places too ther is but one all pervading reality [vishnu]. Being impatient, you are unnecessarily getting angry with me.

If you want to attain soon the vishnu status, be equal minded in all circumstances. Vishnu is everywhere. Why do you get angry with me? Why don't you accept me. You are vishnu and i am vishnu and may you become santah. If you want to attain vishnu padam this condition you have to follow. The passport for vishnu padam is that you should not have raga and

dvesa, upanishad says if you want to practice upasana you should not have raga dvesa. Even if the lord's form comes then also you will think of artha and kama or raga or dvesha.

If you remember everything is Brahman then you can become quiet or shantah chandogya upanishad 3.14.1. Is not meant for suggesting upasana but only an advice to be tranquil in mind thinking that all are Brahman. Then the upanishad says may you practise meditation. Brahman is not suggested as an object of meditation. The object of meditation is mano maya. Don't take that Brahman here and introduce Brahman as object of meditation. This is the argument of purva paksi.

Adhi sankaracharya says no doubt that first mantra introduces first mantra shanti and sama siddatvam. Second mantra talks about some object of meditation. Now we have a problem what should i meditate upon? In the first mantra Brahman is introduced for something. In the first mantra jivah is not talked about. How can you talk about jiva about which no mention has been made? Since Brahman is mentioned, we have to take it as an object of meditation in the absence of mention of anything else.

Here why do we have to controversy and it is because the object of meditation is presented as mano maya, prana maya and barupah the self-effulgent chaitanya rupah and we already know that all the three of them are chaitanya rupah. The confusion worsnes when mano and prana maya are included. Maya and prana maya predominantly is jivah and barupah is both jiva and isvara. When such controversy is there, we read the very same prakaranam further and if some more descriptions are there. In sandilya vidya itself whether there are any noncontroversial descriptions on the object of meditation. Confusing statements are clarified with the help of other noncontroversial statement.

In some other places jiva is used in the sense of isvara. Purvapara paramarsah. Look at the previous and later mantra and settle the controversial mantra. In the next word it says sathya sankalpah one who programmes is never obstructed. The object of meditation is described as sathya sankalpah. We know that if we plan hundred things a few alone happens and majority does not happen. Sathya sankalpam is possible only in the case of atma alone. One whose body is all pervading like akasa is atma. Sarva kamah sarva rasah all are Brahman's.

All belong to him alone and this is said in the second mantra. This object of meditation is bigger than the earth and bigger than akasa, [refer to chandogya upanishad 3.14.3] *esa ma atmantarhrdaye'niyanvriherva yavadva sarsapadva syamakadva syamakatanduladvaisa ma atmantarhrdaye jyayanprthivya jyayanantariksajjyayandivo jyayanebhyo lokebhyah* it is said my self within my heart is smaller than a grain of rice; smaller than a grain of barley, smaller than a mustard seed, smaller than a grain of millet; smaller even than the kernal of grain of millet then the sruti adds the self in my heart is larger than the earth, larger than the mid-region, larger then the heaven; and larger even than all these worlds; the underlying idea in the verse is that the self is everything and everywhere.

It is therefore smaller than the smallest and bigger than the biggest. In the fourth mantra again the upanishad says *etad Brahmanitamitah pretyabhisambhavitasmiti yasya syadaddha na vicikitasastiiti ha smaha sandilyah sandilyah iti caturdasah khandah* [mantra 3.14.4 of chandogya upanisad] the gunas further gunas mentioned in the second and third and fourth mantras belong to Brahman alone isvara alone and never to jiva. The fitness of later virtues is there with isvara and not jiva. This is the general analysis. Now we will go to word for word analysis.

This contains three words vivakshita; desired to be expressed; guna qualities; upapatteh; because of the reasonableness; for the justification cha and moreover. Vivakshita gunopapatteh is a compound word of three words. Vivikshitam means revealed in the upanishad in the same sandilya vidya 3.14.1 to 3 and the next word is guna which means virtues, qualities that are mentioned are sathya sankalpah akasa atma, sarva karma and etad Brahman etc.

You can go on adding other virtues as well. Then the next word is upapatteh means fixed into. It is proper because of the fitness etc. Since virtues mention in three mantras will fit into isvara alone and not jiva and therefore mano mayadvadi refers to isvara alone. Ca indicates because of this reason also. Because already one reason is given in the previous sutra and the present sutra adds one more reason.

Purva paksi comes with another objection. He says all these virtues i can fit into jivatma also. He says wherever sarva karma etc., comes i would say jiva has got all the karmas because he has taken many janmas and therefore cumulatively he has got all the karmas similarly cumulatively he has got rasas gandhas etc., and suppose we ask what about akasa atma. You cannot say any argument. How will you explain sathya sankalpa and akasa atma. This i will tell you in the next class.

## BRAHMA SUTRA

Class 66

### **Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]**

The mano maya is Brahman

#### **Sutra 1.2.2 [33]**

#### ***Vivakshitagunopapattescha***

Moreover the qualities desired to be expressed are possible [in Brahman; therefore the passage refers to Brahman]

We see the second sutra of sarvatra prasiddhyadhikaranam in which sandilya vidya of chandogya upanisad 3.14.1 to 4 are discussed. The mano maya prana sarirah refer to jiva or Brahman is the topic for discussion. While purva pakshi says it pertains to jiva, siddhanti argues the same belongs to Brahman. Here prana sarira refers to sookshma sariram and mano maya refers to jivatma only. Siddhanti through these 8 sutras establishes this belongs to Brahman alone.

First mantra talked about Brahman and therefore vyasacharya argued that it relates to Brahman alone. The second sutra which we have completed that other qualification mentioned here clearly revealed isvara alone and qualifications mentioned in the second mantra is sathya kamaha akasa etc. And in the third mantra it was pointed out akasatmatvam and in the fourth mantra Brahmantvam etc. Cannot fit into Brahman and it cannot fit into jiva is established. We have seen the word meaning also.

The final meaning the possibilities of the revealed gunas can possibly can fit into Brahman only and not jiva. Adhi sankaracharya introduces a purva paksha here. All the revealed gunas can fit into jiva also purva pakshi says. Even though jiva does karma in one janma but he must be doing all karmas cumulatively and therefore sarva kamah then what about sathya sankalpah etc., we know that in no particuar janma all our sankalpah will be implemented and jiva can never have sathya sankalpa in one janma and what about akasa.

None can be as big as akasa or Prithvi. Purva paksha agree and he says it can fit in with isvara only. But he says jiva one can become akasatma and sathya sankalpa etc, one day. He can merge with isvara and he can be and 'would be' jiva. Siddhanti says this too much stretched fitting. Where is the need for jiva mixing with isvara and then say jiva becomes big and be compared to akasa etc. Why somehow fix into jiva.

Somehow you fit into jiva and you say jiva is manomaya sathya samratva etc., and future oneness with Brahman etc and say jiva and what is the use of meditate upon jiva and what is the benefit of meditating upon jiva. You cannot say the meditated jiva will fulfill the wishes. He is going to become sathya sankalpa only afterwards. Therefore the conclusion is mano maya refers to Brahman only and not jiva and now we will go to third sutra.

### **Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]**

The mano maya is Brahman

**Sutra 1.2.3 [34]**

***Anupapattestu na saarirah***

On the other hand as [those qualities] are not possible [in it] the embodied [should is] not [denoted by manomaya etc]

In fact this sutra is the reverse side of previous of the previous sutra. In the previous sutra vyasacharya said that the qualification could fit into isvara also. But here he says that these qualification cannot fit into jivah. When i says these qualification means sarva kamatvam, Brahmantvam, sathya sankalpam and since none of them fit into jivah and therefore jivah is not the object of meditation. Such qualities cannot apply to the individual should. The argument in support of the sutra is continued.

The preceding sutras have stated that the qualities mentioned are possible in Brahman. The present sutra declares that they are not possible in the jiva or the embodied should. Brahman only is endowed with the qualities of 'consisting of mind or manomaya and so on' but not the embodied self. The qualities such as 'he whose purposes are true, whose self is the ether, who is speechless, who is not disturbed; who is greater than the earth' cannot be ascribed to the individual should. The term 'saarira' or 'embodied' means 'dwelling in a body'.

If the opponent says 'the lord who dwells in the body' we reply; true. He does abide in the body, built not in the body alone; because sruti declares 'the lord is greater than the earth, greater than the heaven, omnipresent like the ether, eternal' on the contrary the individual should resides in the body only. The jivah is like a glowworm before the effulgence of the Brahman who is like a sun when compared with it.

The superior qualities described in the text are not certainly possible in jiva. The all pervading is not the embodied self or the individual soul as it is quite impossible to predicate omnipresence of him. It is impossible and against fact and reason also that one and the same individual could be in all the bodies at the same time. This is the general analysis.

Here there are four words. Anupapattah; since they cannot be fit into; supply viviksita guna anupapattah since the revealed property not being justifiable, because of the impossibility, because of the unreasonableness, because they are not appropriate; tu; definitely also but on the other hand; na; not; saarirah; the embodied, the jiva or the individual soul. We have to supply one word mano mayatvadi visistah upadyam. The object of meditation prescribed as mano maya etc., is not applicable.

All these qualification mentioned in sandilya vidya are fit in for isvara only. Purva paksi argues that there are certain other qualifications mentioned in sandilya vidya you avoid because they cannot fit in for isvara. The third mantra you quoted '*jyayan prthivya, jyayan antariksath jyayan divah jyayan ebhyah lokebhyah*' that the self within the heart is larger than the earth, heaven, mid-region and all these worlds etc. They fit into isvara only. But read the third mantra again and you find '*vriheh aniyam vrihehva*' means the smallest one; upasya devata is smaller than even grain of barley or rice; this you have conveniently forgotten and not quoted when talking about isvara qualification. This particular qualification of smallness can you ever fit in to isvara. As i cannot apply certain qualification of isvara to jivah, you

cannot also apply the qualification of smallness in size` etc., to isvara which is applicable to jiva. These qualifications will fit into jiva only in figurative sense that is the jivatma obtaining in the body. In some other upanishad the size of jiva is described. You take a piece of hair or the tip of the hair and cut the hair into hundred portion and take the one hundredth of the cut portion and then subdivide into hundred, or on ten thousandth tip of hair is the size of jivatma it is said. Aniyam vrihehva fit in with jiva only and since these qualifications do not fit in for isvara, my argument is that upasya devata should be jiva and not isvara on the basis of the above argument.

Adhi sankaracharya says for us no problem at all because you should remember that when we say isvara is totality all the individuals are included in isvara and isvara couldn't be included in jiva and jiva can be included in isvara. Isvara's body cannot be included in jiva and jiva's body can be included in isvara. Therefore the aniyatvam or smallness also is the property of isvara. Manomayatvam is not only the property of jiva and it is the property of isvara also.

Mind is the property of jiva as also isvara. Vyasti attributes can belong to samasti and samasti attribute cannot be applied to vyasti. In taittiriya upanishad we see '*sa ya eso-ntar-hrdaya akasah, tasminn-ayam puruso manomayah, amrto hiranmayah, antarena taluke, ya esa stana ivava-lambate, sendrayanah, yatrasau kesanto vivartate, vyapohya sirsa-kapale* which means here in this space within the heart resides the intelligent, imperishable, effulgent 'purusa' or 'entity'. Between the palates, that which hangs nipple like [uvula] – that is the birthplace of Indra, where the root of hair is made to part opening the skull in the center. [1.vi.1siksavalli] here hiranyagarbha upasana is prescribed and hiranyagarbha's qualification is mentioned and it says 'manomaya' is used for samasti hiranyagarbha alone.

From this it is clear that word manomaya can be used for isvara also, so also prana maya can be used for isvara also but sathya sankalpa etc., can be applied to only isvara and not jiva. Now we will go to fourth sutra.

## **Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]**

The mano maya is Brahman

### **Sutra 1.2.4 [35]**

#### ***Karmakartrivypadesaccha***

Because of the declaration for the attainer and the object attained. He who consists of the mind [manomaya] refers to Brahman and not the individual soul.

We will do the general analysis. In this sandilya vidya there are four mantras and in the fourth mantra the phalam of sandilya vidya is given. Refer to 3.14.4 of chandogya upanishad that reads [a portion of the mantra] *etat Brahman itah pretya etam abhisambhavitasmī iti* the upasaka will reach the upasaka devata after death he will be isvara and krama mukti is prescribed. If you put this phalam in appropriate way it is upasaka jiva will reach upasya devata is the statement, upasaka jiva is the traveler and upasya devata is reached object.

Now vyasacharya argues here the reacher karta is jiva, the subject of reaching and upasya devata the karma the object; here what is our debate the upasya devata the object of reaching is our controversy. It is whether jivatma or isvara. The controversy is whether the object reached jiva or isvara. Suppose the object reached also is jiva the traveler is jiva and upasaka devata is also jiva and therefore it amounts to jiva after death reaches jivah.

How can karta and karma be one and the same? This is illogical and it cannot happen the one entity being both subject and object. Thus upasya jiva is jiva it is illogical. According to mano maya is isvara and jiva is doing upasana and he will reach isvara through shukla gathi reach isvara and then he will get liberated. This is not possible if the upasya devata is jivatma. Hence mano maya refers to isvara and not jiva.

This sutra contains two words; kartri; subject; karma; object; vyapadesa because of the declaration or mention; cha and – because of the clear statement of object of reaching as the upasya devata the upasaka jivah. Upasya devata is jivah and upasaka is jivah means the jiva will reach jivah after upasana is impossibility. Subject and object cannot be one and the same. If the object were isvara, then the upasaka jiva can reach isvara after upasana is possible. Because of the distinct mention of upasya devata and subject is devata [3.14.4 chandogya upanishad] jiva will reach upasya devata means it has to be isvara alone and you cannot say jiva will reach jivah. Two words are to supplied are mano mayatvadi visista Brahman karma kartu vyapdesacha. Cha means the next reason also. With this fourth sutra is over.

## **Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]**

The mano maya is Brahman

### **Sutra 1.2.5 [36]**

#### ***Sabdaviseshat***

The argument in favour of sutra 1 is continued. That which possesses the attributes of 'consisting of mind' and so on cannot be the individual soul, because there is a difference of words.

This is one word sutra. We will do general analysis. There is a general rule that when a vague statement occurring in one place may be understood with a clear statement occurring in another place of the upanishad. In another portion of veda in satapata Brahmanam isvara upasana is talked about and there also isvara is described as mano mayah prana sarirah barupah. Our problem is whether the three refer to jivah or isvara. In satapata Brahmana another qualification is given which makes the upasya devata very clear. There it is said antaratman purusah, which means isvara who is obtaining within jiva. Now it is clear upasyam cannot be jiva and one who is within jiva cannot be jiva itself and therefore it must be other than the jiva. The content is different from container is the law. The manomaya purusa is presented as content and jiva is presented, as container the content upasyam must be different from upasaka jivah. More in the next class.

## BRAHMA SUTRA

Class 67

### **Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]**

The mano maya is Brahman

#### **Sutra 1.2.5 [36]**

#### ***Sabdavisheshat***

The argument in favour of sutra 1 is continued. That which possesses the attributes of 'consisting of mind' and so on cannot be the individual soul, because there is a difference of words.

We see the fifth sutra of sarvatra prasiddhyadhikaranam with reference to sandilya vidya mantra occurring in 14 chapter of chandogya upanisad. The object of meditation prescribed manomadvadi visistah. Upasyah is talked about and we find whether it refers to jivatma or paramatma. Vyasacharya establishes it refers to paramatma only. First we referred to first mantra in which mantra itself referred Brahman and next we said all the attributes given there referred to paramatma only and not to jivatma.

Then we referred the same in negative angle also. Thereafter we gave another logic in the fourth mantra based on the phalasthuthi. We said that upasaka jiva this upasya vastu after death and if upasya vastu will reach upasya jiva which means jiva will reach jiva and it is not phalam at all. Therefore upasyam should be taken as isvara and jiva after death will reach isvara. The first four sutras are based on sandilya vidya based on mantra 3.14.1 to 3.14.4 of chandogya upanishad.

Now vyasacharya takes the same idea from *satapata Brahmana* expressed in similar words 'as is a grain of rice or gram of barley or a canary see or the kerna of canary seed, so is that golden person in the self [x 6.3.2 satapata Brahmana]. This portion deals with isvara upasana only here one word i.e., the locative 'in the self' denotes the individual soul or that embodies self and a different word viz., the nominative 'person' denotes the self distinguished by the attributes of the consisting of mind etc. The upasya devata in sandilya vidya and upasya devata in satapata Brahmana are one and the same and if we prove there it is different from jivah the we can prove the upasya deva is different from jiva in this sutra also. The portion from satapata Brahmana we have chosen if we understand sandilya vidya. Refer to 3.14.3. Of chandogya upanisad. Here also upasya devata is mention, which means the deity of meditation. In satapata Brahmana also upasya devata description is given. The description in both is very, very same. The description of atma given in satapata Brahmana is also very subtle. From this common description we conclusion the upasya devata in satapata Brahmana and upasya devata in sandilya devata are one and the same. Now we will see the upasya devata given in satapata Brahmana is different from jiva or not. It is different from jivah. In satapata Brahmana two words are used. What is used is antaratman purusah. Purusah here is upasya devata, in sandilya vidya upasya devata is called hiranmayah and in satapata Brahmana also it is called self effulgent. Antaratma means jivatma and antaratman means according to vedic grammar means jivatmani it means within jivatma. Within jivatma present

is purusah and it is nominative case and upasya jivah purusa is in locative case it means upasya purusa is within jivatma who is in locative. Content is different from container. Antaratman is in locative case and it refers to container. Satapata Brahmana says upasya devata is within jiva and it is not jiva is proved here. Then we can say sandilya vidya upasya devata is also paramatma. This is the general analysis.

Now we will go to word for word analysis. There is only one word. Sabda word viseshat because of difference. Words occurring in satapata Brahmanam and the words meant here is antaratman and purusah; these two words refer to upasya devata and jivatma are described. Between these two words viseshat because of their difference being vibakti beda; jivatma pratipathaka paramatma pratipathaka sabda yogo vipakti beda. Jivatma is put in seventh case and paramatma is put in first case. Sabda bedad artha bedah. Sabda viseshad the conclusion is upasya devata is different from jivatma it is something obtaining in jivatma but different from jivatma. Two words are supplied to compete the sentence manonmayatvadi vishistah jivah.

## **Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]**

The mano maya is Brahman

### **Sutra 1.2.6 [37]**

#### ***Smritescha***

From the smriti also [we know the embodied self or the individual soul is different from the one referred to in the text under discussion]

In the previous sutra we took a clue from satapata Brahmana. In this sutra vyasacharya takes an outside clue. It is not from sandilya vidya. Here we take a clue from bhagavad gita. In sandilya vidya while discussing upasya devata there is a particular description in the third mantra. If mantras are in our mind it will be convenient for discussion. Refer to 3.14.3 of chandogya upanisad *eshama atma antar hridaye* is an expression we find in this mantra means the upasya devata is within the heart.

In gita there is a sloka reads as *isvarah sarvabhutanam hrddese 'rjuna tisthati bhramayan sarvabhutani yantrarudhani mayaya* [18.61] that means as the lord in the hearts of all beings o arjuna causing them to turn round by his power as if they were mounted on a machine.

Here also isvara is taken upasya devata. In sandilya vidya also upasya devata is stated to be in hridayam. If the upasya vastu in gita is isvara, the upasya vastu in sandilya vidya also should be isvara only. There is commeness in both. Here isvara is clearly said and in sandilya vidya it is not clear and because of the gita vakyam we can take it as isvara.

Smritech from the smriti here any scripture other than the veda is called smriti. Ramayanam, bhagavatam, panini, yogasutra etc., are called smriti. There are countless smritis are there. Even puranas are also called smriti. Without adhi sankaracharya's bashyam the word smriti will not convey anything to us. Here upasya devata is in hridaya and in sandilya vidya also upasya devata is in the heart and therefore isvara is revealed as upasya devata. Ca means because of this reason also. We supply two words manomayatvadi vishistah jivah.

## Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]

The mano maya is Brahman

### Sutra 1.2.7 [38]

#### *Arbhahaukastvattadvyapadesaccha neti na nichayyatvadevam vyomavaccha*

If it be said that [the passage does] not [refer to Brahman] on account of the smallness of the abode [mentioned i.e., the heart] and also on account of the denotation of that [i.e., of minuteness] we say, no; because [brahman] has thus to be meditated and because the case is similar to that of ether.

First we will do the general analysis of this sutra. First it is an objection from purva paksi. Up to na is the objection and thereafter it is our answer. He says that i cannot accept that the upasya devata is isvara. He says you quoted from gita and sandilya vidya that upasya devata is in the heart. You also said that isvara is in the heart of every one's heart. The very fact that the upasya devata is within the heart indicates that it is not isvara. Logic is the content must be smaller than container. A bigger content cannot be enshrined in a smaller container. The hridayam is not even as big as body. It is of the size of our fist. It is of very small size.

The first clue we get upasya devata is residing in a small container. That means upasya devata is smaller than the heart.. 3.14.3 of chandogya upanishad further describes the size of the upasya devata upanishad takes the comparison to rice, barley etc. From the size of the container and from the description of the dimension of the upasya devata, we find them to be small but isvara is sarvagathah and is very big. Upasya devata must be small like barley rice etc., and it cannot be the infinite isvara. This is the purva paksi argument.

For this vyasacharya gives is yes accepted. Upasya devata is big is also accepted. Big isvara cannot be contained in small heart also is accepted. Still upanishad talks about the location and size for the sake of meditation and they are not factual. Both of them are imaginary for the purpose of upasana. A small spadika lingam is of smallest size and but represents the big isvara. Lingam is only an alampnam and imaginary symbol of the real isvara. It is only superimposition that is location and size. He gives an example of akasa. We all know that akasa is all pervading and there is no container to accommodate akasa and it is never a content but still we talk about akasa inside a pot. That is gatakasah. We say inside a pot or inside a room. Inside the space is small we say. We all know that there is no small or no big space. Limitation never belongs to the space. Space is all pervading. The limitation of the container is falsely transferred to limitless akasa. Space is all pervading and the limitation of container we falsely attribute to the space. Space within the house is limited although all pervading space is limitless. For that we say the very expression that space is within the pot. Space is not within the pot but really speaking space is without and in fact the pot is within the space. All these things are imaginary and it is only the imagination that god is within the heart but on the other hand all the hearts are within the god. This is the general analysis.

We will see the word analysis. Arbha kaukastvat; because of the smallness of the abode this contains two words arbha means small okah means residence upasya devata has got a small space when sutrakara says upasya devata has got small abode in the form of hridayam; tatvyapadesat; because of the description or denotation as such i.e., minuteness upasya devata

is of barley size; cha; and also na not; iti not so; chet; if na thus so vyomavat like the ether;  
cha and. More in the next class.

## BRAHMA SUTRA

Class 68

### **Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]**

The mano maya is Brahman

**Sutra 1.2.7 [38] contd.**

#### ***Arbhahaukastvattadvyapadesaccha neti na nichayyatvadevam vyomavaccha***

This is the seventh sutra of sarvatra prasiddhyadhikaranam. The subject matter of debate is manonmayatvam whether it is jiva or isvara is the question. Siddhanta says that Brahman alone is upasya devata. This is contined in the 7<sup>th</sup> sutra is also. The first part is purva paksi and the second portion is siddhanta. Upasya devata is jiva is established by the siddhantis. The upasya devata has got alpa asrayam a small abode a small dwelling space. The dwelling space is small it is pointed out that it is in antar hridaye.

We know that heart is a small space and if the devata is indwelling in the heart means indweller is smaller than the dwelling space. Purva paksi says that upasya devata is jiva alone and it cannot be isvara. The second word is tad vyapadesad is the another reasoning given by the purva paksi. It consists of two word tad and vyapadesad means smallness; vyapadesat because of the direct statement or mention of the smallness of the upasya devata.

The direct mention of smallness is given in 3.14.2 of chandogya upanisad as already discussed in the previous class. Previous reason was not directly mentioned the smallness that the container is small and the content devata also must be small; but now the upasya devata is small directly aniya vriherva from the two reason the upasya devata is small like paddy and therefore upasya devata is jivatma and not paramatma. The two words supplied is manonmayatvad vishistah and the second word added is paramatma to be read with the word na in the sutram.

Siddhanta says iti chet if such argument is given by the purva paksi or suppose the purva paksi gives such an argument we give the answer 'na'. We say purva paksi madham na their opinion is not correct. The upasya devata is paramatma only and not jivatma. Siddhanti has to refute the two reasonings given by the purva paksi. The upasya devata is within the heart and it is small. We say when sastra says isvara is in the heart you should not understand in the normal way. When someone says shri raman is in the office, we understand that shri raman is in the office he is not elsewhere, he is not at home and he is not on the road. We understand that shri raman is in the office only. And authomatically we assume that he cannot be found anywhere. Adhi sankaracharya says when sastra says isvara is in the heart you should not conclude isvara is in the heart only. Then you will think he is in the heart and he is not outside. If you think that isvara is in the heart only, isvara is taken as limited. Adhi sankaracharya says when sastra says that isvara in the heart, you should note that isvara is in the heart also. Once you understand that isvara also must be outside also. There is no question of limitation. The next question is if you say that upasya devata is in the heart also the question comes if upasya devata is everywhere and why should the upanishad take the heart only. If you accept upasya devata is everywhere for that answer given is because the upasya

devata is an object of meditation. Since it is an object of meditation for the convenience of meditation it requires a locus for meditation purpose even though upasya devata is everywhere. It is not a factual locus because isvara is everywhere. Everything including time and space are located in isvara. Sastra talks of assumed locus for the purpose of meditation. For the sake of meditation hridaya akasa is because it is an object of meditation. It has been said as located in the heart. Don't take it that seriously. This is the answer to first reasoning of the purva paksi. If it is all pervading why should it be described as paddy, barley etc. In another place it is said lord is of the size of the thumb. For this also we have the same answer. Upasya devata is object of meditation and limitations are superimposed for the convenience of meditation. The next word is vyomavat. Here vyaacharya gives an example it is like akasa. Manomayatvad visishta upasya devata is all pervading like akasa. All pervading paramatma is in the heart also like all pervading akasa is within a room also. Here also extend the example i gave before. When raman is in the office means he is in the office only. Suppose a person says there is space in the room, the understanding is space is all pervading when we say the space is in the room also. In the case of upasya devata also you meditate on upasya devata who is in the hridayam also. Then comes the next sutra.

The opponent says if Brahman has his abode in the heart, which heart abode is different in each body, it would follow that he is attended by all the imperfections which attach to beings having different abodes such as parrots shut up in different cases viz., want of unity being made up of parts, non-permanency etc., he would be subject to experiences originating from connections with bodies. To this the author gives a suitable reply in the following mantra.

### **Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]**

The mano maya is Brahman

#### **Sutra 1.2.8 [39]**

#### ***Sambhogapraptiriti chet na vaiseshyat***

If it be said that [being connected with the hearts of all individual souls to] its [brahman's] omnipresence, it would also have experience [pleasure and pain] [we say] not so, on account of the difference in the nature [of the two] another objection is raised and refuted here.

This is also divided into two portions first is purva paksi and the second is ours. Purva paksi said that all pervading atma is within the heart. We all know that jivatma is within the heart as a samsari and experiencer of samboga. Upasaka jivatma is in the heart and upasya paramatma is also in the heart. Purva paksi says both of them are in the heart and the difference is jivatma is in the heart only and paramatma is in the heart also. Only jivatma and also paramatma both are in the heart. Both of them are chetanas also. Now purva paksi says both of them are sentient and both are in the heart. Jiva experiences sukha and dukha anubhava is there for jivatma.

Now purva paksi argues jivatma who is sentient experiences sukha and dukha and you say paramatma is in the heart and paramatma is chetana and paramatma also necessarily suffer sukha and dukha boghavan. Paramatma also must be experiencer of sukha and dukha and paramatma is sentient one residing in the heart like jivatma. We also know that when

someone is suffering in the hospital and if you go there and see the suffering and because of the presence don't you undergo the trouble. Therefore paramatmanah samboha prapti and paramatma also is a samsari.

Siddhanti says no, because paramatma the upasya devata isvara is different from upasaka and upasaka is samsari and upasya isvara is asamsari. Upasaka is having punnyam and papam and upasya devata is free from punya and papa. Therefore even though isvara is in the heart he does not suffer samsara. Because isvara is present in a suffering in the problematic adhikaranam samithyam does not mean suffering. Lotus is in water and it does not get water. One is like a cloth it does get wet and another is like a lotus leaf it does not get wet. Upasaka has sukha dukha anubhava but upasya devata like lotus leaf does not suffer samsara.

An advaidin who talks of jivatma paramatma aikyam talks of beda. Advaidins talk about both beda and abeda because of contextual difference. Advaidin talks of difference whenever the topic is upasana and it is from vyavaharika level. In sandilya vidya you have to apply beda and upasaka is samsari and upasya devata is samsari. At the sametime advaidins talk of abeda when in the context of discussion on paramarthika level when jivatma and paramatma are one and the same.

Now we will do the word for word analysis. Sambhogaprapti that it has experience of pleasure and pain iti thus for paramatma also when you say paramatma is also in the heart. paramatma out of sympathetic vibration will also cry when jivatma cries.; chet if; na is the statement of siddhanti. There is no sukha and dukha anubhava for paramatma.; not; vaisheshyat; because of the difference in nature that is between jivatma and paramatma the difference being jivatma is like a cloth getting wet and paramatma is like lotus leaf asangah punya papa vilaksanah nithya, mukta purusah;. vitiriktatvad upasya devata is to be supplied.

Now adhi sankaracharya raises a purva pakshi and answers. Now purva pakshi asks you cannot say jivatma and paramatma are different. Have you forgotten your real teaching. According to sastra jivatma and paramatma are one and the same. Therefore sastric teaching is that paramatma alone is in the form of jivatma. Not also in the hridayam and paramatma alone is in the hridayam in the form of jivatma. Don't say both are in the heart and you should never say paramatma also in the heart. He says paramatma alone is there in the form jivatma and jivatma suffer sukha and dukha when paramatma is in the form of jivatma and therefore paramatma alone must be suffering according to advaida madham. Paramatma is suffering in the form of jivatma since aikyam is the philosophy of advaidin. Adhi sankaracharya in this context is either angry or amused.

Now he asks the question to this poor prahaspathi. He says what is significance of the maha vakyam. Maha vakyam says jivatma is equal to paramatma. To interpret you should know that all philosophers agree that jivatma is samsari and all the philosophers uniformly agree paramatma is asamsari. Now we have an equation jivatma is equal to paramatma; you can interpret it in two different ways. Jivatma is a samsari and that jivatma is equal to paramatma; therefore paramatma is also samsari. Samsari is equal to jivatma and jivatma is equal to paramatma therefore paramatma is samsari. There is another interpretation. Paramatma is asamsari and paramatma is equal to jivatma asamsari is equal to paramatma and paramatma is equal to jivatma therefore jivatma is equal to paramatma.

According to one interpretation paramatma is samsari and according to another interpretation jivatma is asamsari paramatma. After long study do you want to conclude do you want to

arrive at jivatma is samsari or do you want to conclude paramatma is jivatma. In this way it should not be interpreted. This we will discuss in the next class.

## BRAHMA SUTRA

Class 69

### **Topic 1. Sarvatra prasiddhyadhikaranam [sutra 1-8]**

The mano maya is Brahman

**Sutra 1.2.8 [39] contd.**

#### ***Sambhogapraprtiriti chet na vaiseshyat***

If it be said that [being connected with the hearts of all individual souls to] its [brahman's] omnipresence,, it would also have experience [pleasure and pain] [we say] not so, on account of the difference in the nature [of the two] another objection is raised and refuted here.

We have just completed the word analysis of this eighth sutra. Adhi sankaracharya has raised an extra purva paksi and he answers that. Here purva paksi happens to be half cooked advaidin and he has some knowledge of advaidam and has not fully grasped advaidam. He applies advaidam partially. He asks according to advaidin paramatma is everywhere he happens to be in adhikaranam also and he also knows jivatma is experiencer of sukha and dukha and he also knows paramatma is jivatma according to the maha vakyams. Paramatma alone is in the form of jivatma and jivatma is a samsari and one concludes paramatma is a samsari. This is the words of the purva paksi argument. Therefore according to advaidam paramatma will become a samsari.

For this adhi sankaracharya gives his answer. No doubt jivatma paramatma equation through every maha vakyam. When sruti talks about this one should know what is the intention behind this. There are two ways of equation. We have an idea of jivatma and paramatma before arriving at the conclusion. We know paramatma is asamsari and sarva kalyana gunah. We have to base our opinions from the sruti. Before coming to the equation of jivatma and paramatma, we know jivatma is samsari, a maha samsari and we know paramatma is asamsari. Now we learn the teaching. We come to two different conclusion. One starts from jivatma. Jivatma is samsari. Upanishad points out jivatma is equal to paramatma and therefore jivatma is samsari upanishad say jivatma is paramatma and therefore paramatma also must be samsari. Now i come to know paramatma is samsari after studying sastra. Paramatma is in our own court only. This is one type of interpretation.

The second possibility is we start from paramatma; paramatma is asamsari. Upanishad points out that paramatma is jivatma; and paramatma is asamsari and i knew jivatma is samsari and now the correction is from samsarivam to asamsarivam. First interpretation brings paramatma down to samsarivam and according to second interpretation jivatma status is upgraded from samsarivam to asamsarivam. If you say because of maha vakyam paramatma is samsari you bring down paramatma status. That is not the object of sastric study. What benefit i get by studying the sastra. What benefit i will get by knowing that paramatma is samsari. In second interpretation i make a big correction that until now i thaout i am a samsari and i gain knowledge and i get corrected and i become asamsari and become one with paramatma. Difference is jivatma is samsari during ajnana kalam and jivatma is asamsari at

the time of jnanam. Paramatma is both at the time jnana and ajnana kale is paramatma. Paramatma will have samsara before and after advaida jnanam is not correct. The eighth sutra is over and the first adhikaranam is also over. We will sum up the adhikaranam.

First one is visayah. The subject matter is the object of meditation mentioned in sandilya vidya of chandogya upanisad and that too the three expression mano mayah prana sarirah etc., that too specifically mano maya vishistah is the subject matter. The samsaya the doubt resolved here is because of the contention. The samsaya is that upasya devata is jivatma or paramatma. It is resolved that paramatma is the upasya devata. Purva paksa says upasya devata has to be jivatma only. He has got his own reasons. He says mind, prana etc., can belong to jivatma alone and paramatma is beyond all these things. Further jivatma is located in the heart and it means limitation. Description indicates the finite thing and upasya devata is jivatma is the purva paksa contention.

Vedantins say that it is paramatma only and he gives several reasons and eight sutras are eight reasons. Most of the attributes given there fit in with paramatma alone and the few attributes generally connected with jivatma fits in with paramatma. Paramatma includes jivatma and jivatma attributes can form in paramatma but paramatma attributes cannot fit in with jivatma. Because of the above reasons we have concluded that the upasya devata of this upasana is paramatma alone.

Before concluding i want to make two more points. In our advaidic literature in some places we vehemently establish jivatma paramatma beda or jiva isvara beda. There are certain occasions we equally vehemently establish abeda or aikyam. This has created lot of confusion to those who study sankara bashyam. Both are right depending on the conduct of discussion. Whenever we talk of upasana the context is vyavaharika dristy that is empirical standpoint. Advaidin accept vyavaharika dristy jiva isvara bedah asti. There is jagat different from isvara and jiva; there is jiva who is different from isvara and jagat' there is isvara that is different from jiva and jagat. Jiva isvara beda we will emphasise when sankya does not accept vyavaharika isvara. For them jiva is purusa and jagat is prakrti and he does not accept vyavaharika isvara.

This vyavaharika dristi is entertained at the time of upasana. Therefore i should say there is isvara who sristi sthithi laya karta. I am deenah samsari and alpha. These are all vyavaharika dristi jiva isvara beda. This is established in this adhikaranam. When we talk about liberating jnanam and from paramarthika dristi there is no beda between jiva and paramatma. There is no plurality at all. One who says jivatma is different and paramatma is different is devanam pasuh. Eighth sutra says jivatma and paramatma are different and this statement is from vyavaharika angle for the purpose of upasana.

The second point i want to discuss is this. Because this particular adhikaranam deals with meditation and it is known as upasya Brahman. In certain adhikaranam wehre the same Brahman is discussed not for upasana but for moksa and that Brahman is called neyam Brahman. If you remember the first pada i told you which adhikaranam deals with upasana Brahman and which one deals with neyam Brahman. What is difference between upasyam Brahman and neyam Brahman.

You will find when upanishad talks about upasyam Brahman and neyam Brahman the description appears to be very similar. That you will not know which is upasyam and which is neyam Brahman. Tajjalan means sristi sthithi laya karanam Brahman is introduced by

sandilya vidya. Our conclusion is that whether sandilya vidya deals with upasyam Brahman or neyam Brahman.

Sandilya vidya upasyam Brahman is introduced as karanam. In taittiriya upanishad Brahman is introduced as karanam Brahman *tasmad-va etasmad-atmana akasah sanbhutah, akasad-vayuh, vayor-agnih, agner-apah, adbhyah prthivi, prthivya osadhayah, osadhayah-'nnam, annat-purusah* [ii.i.2 of taittiriya upanishad] in brigu valli [iii.i.2 of the same upanishad] it is said *tam hovaca, yato va imani bhutani jayante, yen jatani jivanti, yat-prayantya-bhisamvisanti, tad-vijijnasasva, tad brahmeti, so tapo-tapyata, sa tapas-taptva i* here also karanam Brahman is introduced.

But we say sandilya vidya karanam Brahman is upasyam Brahman and Brahmananda valli and brigu valli of taittiriya upanishad relate to karanam Brahman but it is neyam Brahman. Karanam Brahman is maya sahitam Brahman; it is not suddham Brahman and it is karana karya rahitam. In sandilya vidya also we get karanam Brahman; in taittriyam we take Brahman as neyam Brahman. The difference is this that when it introduces sagunam Brahman alone.

The main teaching on Brahman is central theme of upasana prakaranam. At that time whether the karanatvam, sagunatvam is retained or not. This is the question. Adhi sankaracharya says in upasana one has to retain sagunatvam staus and meditate on sagunam Brahman and karanatvam is retained. This is the technically communicated by a special word. That is karatva visistam Brahman. Here karanatvam is introduced and its status is retained throughout the upasana. Upasyam Brahman is equal to karanatvam vishistam Brahman.

In the jnana prakaranam karanam Brahman is introduced and Brahman is given the status at the time of introduction and later when tat tvam asi is taken or paramatma jivatma aikyam is said the student do so only by doing the important job of from Brahman one has to remove the maya and karanatvam status is removed and sagunatvam is also removed and similarly from jivatma his upadhi is also removed and karyam status from jivatma will go and therefore jivatma is not an effect and paramatma is not the cause and you find the ekam chaitanyam.

Karanatvam status is lost at the time of teaching a jivatma paramatma aikyam. Now we say karanatvam upalaksitam or upahitam Brahman. This is introduced in jnana prakaranam. In vishistam Brahman the karanatvam is retained. In upahitam Brahman the karanatvam is left off. Introduce karanatvam launch the teaching and drop the karanatvam and this teaching is called adhyaropa. Both introduce sagunam Brahman. And then drop it at the time jnanam. We say certain adhikaranams are upasya Brahman adhikaranam and some are neyam Brahman adhikaranam and both will introduce karanam Brahman and the difference is one is vishistam and the other is upahitam. With this first adhikaranam is over.

## **Topic 2. Attradhikaranam; [sutras 9-10]**

The eater is Brahman

**Sutra 1.2.9 [40]**

*Atta characharagrahanat*

The eater [is Brahman], because both the movable and immovable [i.e., the whole world is taken [as his food]

I will give you general analysis of the entire adhikaranam. This adhikaranam consists of two sutras only and it is known as attradhikarnam. This adhikaranam deals with a mantra occurring in kathopanisad 1.2.25. This is neya Brahman adhikaranam. The essence of this mantra Brahman jagatah laya karanam. The details we will see in the next class.

## BRAHMA SUTRA

Class 70

### **Topic 2. Attradhikaranam; [sutras 9-10]**

The eater is Brahman

#### **Sutra 1.2.9 [40]**

#### ***Atta characharagrahanat***

The eater [is Brahman], because both the movable and immovable [i.e., the whole world is taken [as his food]

We see the 9<sup>th</sup> sutra of the second section, which happens to be attradhikaranam consisting two sutras. Here we analyse a mantra from kathopanisad yasya Brahman ca ksatram ca, ubhe bhavati *adanah, mrtyur-yasyo-pasecanam ka, ittha veda yatra sah, iti kathakopanaisadi prathamadhyaye dvitiya valli* [1.ii.25]. The meaning of the mantra is to whom the Brahmana and the ksatriya classes are [as it were] but cooked rice and death itself is a condiment [curry or pickle], how can one thus know where that atma is? Thus ends the second valli of the first chapter.

We will see the meaning of the mantra paramatma is the cause of the resolution of the world. Normally paramatma is sristi or sthithi karanam but here it is shown as laya karanam. Here it is shown at the time of pralaya eats up the whole universe and therefore paramatma is the eater of the universe. Eater is called atta in sanskrit and here paramatma is the eater of the universe and the whole universe becomes the fool of paramatma. Odhanah means the food in sanskrit.

The word Brahman in this mantra means the Brahmana jathi all the Brahmanas. Ksatram means all the ksatriyas. By using the two words the mantra means the whole chara achara prapancha. Why choose Brahmana and ksatra as the representative of the world and it is because they are the ones who maintain the creation. They are considered to be the vips of the universe.

Brahmana protects dharma by providing vedic education. Ksatriyas protect dharma through their legal and legal laws and courts and they protect dharma through legal system. They are supposed to maintain dharma and by maintaining dharma they sustain the world. By mention the prominent ones they mean the whole world. For that paramatma the entire world becomes the food. When we eat solid food, it is difficult to swallow and liquid is mixed with solid food and make it easy to swallow. Any liquid dish you mix with solid food is called upasesanam.

If you don't add any liquid and straightaway you cannot swallow the food and to make the eating easy bhagavan has provided upasesanam in the form of salaiva in the mouth and disintegrate the food with the help of the teeth. This we all know. In the same way paramatma is the eater and the whole world is the solid stuff and he cannot swallow without upasesanam. The upasesanam here is the hammering stuff is every sukha and dukha anubhava or experience of ours.

Each experience is like hammers and it disintegrates the personality and it is further helped by the time principle. When young the body is a solid stuff and adding upasesanam kala look at the person at the time of ninety what happens the body does not move. The mind is shattered and the person he wants to live and he wants to leave. That means this person has come to swallow-able condition. Physically also with kala upasesanam the body has become easy to swallow. With the help of kala the world is the food for the bhagavan. Mrithyur yasya upasesanam.

Here another important principle is told and that time is paramatma and paramatma is not in 'time'. Paramatma is not in time but the time is born in paramatma, exists in paramatma and dissolves in paramatma and paramatma is beyond paramatma. In our experience we find not only the world resolves and along with that time also resolves. World and time are inseparable ones and you cannot think of time without world and you cannot think of world without thinking of time. Who can know paramatma in this manner as a swallower of world and time? What is more important is the swallower of time. This is not a question and only a few can comprehend what is beyond time.

Then the upanishad makes another statement as to who can know where the paramatma is located. This is also significance statement. We say paramatma swallows the world with the help of time. Here paramatma takes kala as side dish and kala is also swallowed. The universe includes akasa also. Akasa is the first product to have been produced. Now imagine a condition when paramatma swallows the space where is the paramatma is located.

To locate paramatma it requires space. Paramatma has swallowed space and some one asks where is paramatma. Intellect cannot answer the question and paramatma is location-less. That means paramatma has neither time location nor it has space location; it creates time and space it sustains time and space and it resolves time and space. Who can understand paramatma as swallower of time and space? Hence paramatma is seen as eater of time and space.

Here what is the controversy here for this mantra to be included in Brahman sutra? We said paramatma is eater of the world along with time and space. Here upanishad does not use the word paramatma and upanishad uses a pronoun. Here word 'yasya' means for that or for him is used to denote paramatma. Here we get full of pronouns to denote Brahman. How do you know the pronoun represents Brahman or paramatma alone and no other noun?

The controversy is compounded here. If the upanishad talks about one noun then we can say it talks about that particular noun. But kathopanisad talks about different subject and we should the pronoun talks with particular topic. Three main topics are there that can be represented by pronoun. One is Agni devata; second is jivatma and the third topic discussed is paramatma. Since different nouns are there, the pronouns can represent either Agni or jivatma or paramatma.

When naciketetus approaches yama he asks for three boons. To perform the naciketetus fire, one has to chant a specific mantra; is known as nachiketetusagni. Kathopanisad talks about naciketetusagni. Through that ritual one gains swarga loka..yama teaches this yaga and with the help of this Agni one can perform a ritual and with the help of this yagna he can gain moksa. Then nachiketetus asks what happens to jiva after death.

*Yeyam prete vicikitsa manusye asti-tyeke nayam astiti caike, etad vidyam anusistas tvaya 'ham varanam esa varas trtiyah* [i.i.20 of kathopanisad] which means there is that doubt, 'when a man is dead' some say 'he exists' and some again say 'he does not' this i should like to know being taught by thee this is the third boon, that i ask. He cannot ask what happens to paramatma after death. Yama answers the question later.

Then yama dharma raja says '*yonim anye prapadyante sariratvaya dehinah, sthanam anye 'nusamyanti yatha karma yatha srutam*' that means some souls enter the womb to have a body, others to to the plants, just according to their work and according to their knowledge. Then naciketetus asks yama to talk about paramatma which beyond birth and death beyond punya papam etc. Jivatma travels and goes to another body depending upon the punya papa karma. It travel and it talks of birth death cycle.

The third topic is paramatma and about that also naciketetus asks the question. *Anyatra dharmad-anyatra dharmat anyantra smat krta krtat, anyatra bhutac-ca bhavyac-ca yat tat pasyasi tad vada* [kathopanisad i.ii.14] that is naciketetus asks about 'that which thou seest as other than virtue and vice – as right and 'unright', as other than cause and effect, as other than the past and future - tell me all that. Then, yama talks about paramatma.

Then yama dharma raja says '*na nayate mriyate va vipascit nayam kutascin-na babhuva kascit, ajo nityah sasvato'yam purano na hanyate hanyamane sarire* [i.ii.17 of kathopanisad] that means the intelligent atman is not born, nor does he die, he did not spring from anything, and nothing sprang from him. This unborn, eternal, everlasting, ancient, is not slain even when the body is destroyed. Agni devata is talked about; paramatma is talked about; jivatma is talked about. Now three pronouns are talked about and in 1.ii.25 of kathopanisad three pronouns are used and asked who is the eater whether it is paramatma or jiva or Agni. It is the doubt.. We should say that the eater referred to by the three pronouns is paramatma. The eater is paramatma. Now i will come to the general analysis of the first sutra.

The first sutra says that the eater is only paramatma. It is because the food mentioned is not the ordinary food. The food mentioned is the entire cosmos consisting of both movable and immovable animate and the inanimate things of the world. It is not jiva he cannot eat anything; similarly Agni devata also cannot eat anything except that offered in the yaga etc, Agni can swallow Prithvi and jala devata. Agni is itself is consumed by vayu. Agni cannot consume vayu and on the other hand it is consumed. Here we talk of that which consumes everything the sarachara prapancha. This is the general analysis of the first sutra.

Now we will see word for word analysis. It has got two words' *atta* means the eater; eater mentioned in 1.ii.25 of kathopanisad] now one may ask the question the word eater is not mentioned in the mantra. We say the eater is not mentioned directly but it is mentioned the food and the eater mentioned is implied here. By implication the eater is mentioned in the mantra and that eater is called *atta*. Then we have to supply paramatma bhavati. This eater mentioned in the above mantra is paramatma alone. *Bogta* is paramatma. This is the conclusion.

What is the logic here? The reason is given as characharagrahanat because the movable and the immovable [i.e., the whole universe] is taken [as his food]. How do you say chara chara prapancha is mentioned? Such a word is not at all there. The mantra talks about Brahmanas and ksatriya. For that our answer is that Brahmanas and ksatriyas are representatives of chara chara prapancha. They are the indicators of the whole universe. Brahmanas and ksatriyas

represent the whole universe. There is some norm where one should take implied meaning and the direct meaning.

Here Brahmanas and ksatriyas are taken as upalaksanam to represent the whole world. Kala is taken to consume all which means vasyas, sudras etc., are also taken into account. Time is the helper for swallowing the entire prapancha. This is the word meaning of the first sutra.

Now adhi sankaracharya raises certain further questions. One purva paksi raises the question and says that it is paramatma is the eater but jivatma should be taken as the eater. In sastra we often discuss who is akarta abokta karta bogta. Invariably in sastra paramatma is asamsari; jivatma is samsari. Paramatma is abokta and therefore asamsari. Jivatma is resented as karta and bokta and therefore he is samsari.

Therefore atta should be taken, as jivatma and paramatma is abokta. I will give you upanishad support and paramatma is not eater and jivatma alone is eater. In mundaka upanishad it says there is a tree and two birds bound to each other in close friendship, perch on the self-same tree. One of them eats the fruits of the tree with relish, while the other [just] looks on, without eating.

*Dvau sparna sayuja sakhaya samanam vrksam parisvasjate, tayor anyah pippalam svady-atty-anasan anyo abhicakasiti* [ref iii.i.1 of mundaka upanishad] of those two birds jivatma bird eats the karma phalam and from atti take the word atta which means eater whereas the other bird which is paramatma remains as saksi and jivatma is atta and paramatma is not and therefore your interpretation is wrong is the argument of purva paksi. Now what will the answer of siddhantin and adhi sankaracharya gives the answer, which we will see in the next class.

## BRAHMA SUTRA

Class 71

### **Topic 2. Attradhikaranam; [sutras 9-10]**

The eater is Brahman

**Sutra 1.2.9 [40] contd.**

#### ***Atta characharagrahanat***

The eater [is Brahman], because both the movable and immovable [i.e., the whole world is taken [as his food]

We see the ninth sutra of second pada which happens to be the second adhikaranam known attradhikaranam. Here we have seen the meaning of the first sutra and we see certain purva paksas and the questions and answers given in the sankara bashyam.

We see the kathopanisad mantra 1.2.25. The upanishad does not directly say that Brahman is eater but it says indirectly saying that the whole world is the annam and if it is annam there must be one who eats and the eater cannot be other than Brahman. Further side dish for the food is stated to be the kala, the time. The implied eater is called atta and eater is not mentioned. We have concluded that eater is paramatma alone and none else. The food is not ordinary food but the entire cosmos both animate and inanimate things. Here bashyakara introduces a purva paksi. Atta means eat. Atta and bogta both means the same thing.

Purva paksi says from vedanta sastra we know bogta is a samsari because he described as karta and bogta but paramatma is termed as akarta and abokta. Since bokta is samsari and he is jiva therefore 1.2.25 of kathopanisad talks of jivatma alone. If it were paramatma the upanishad cannot use the word atta and it must have used the word anatta. In support, he gives upanisad mantra *dvau sparna sayuja sakhaya samanam vrksam parisavajate, tayor anyah pippalam svady-atty-anasan anyo abhicakasiti* [ref iii.i.1 of mundaka upanisad]. Jivatma and paramatma are compared to two birds and they are perched on the individual body and upon the tree jivatma and paramatma are seated and one is atta and another is anatta one is eater and another is noneater or abokta. Now our doubt is which is atta and which is anatta.

Upanishad says jivatma is atta and paramatma does not eat anything. Another one without eating only witnesses. From mundaka upanishad it is clear jivatma is atta and paramatma is anatta. From this it is clear jivatma is atta. This is purva paksi's answer. Now adhi sankaracharya gives his answer.

Adhi sankaracharya says in the sastras the word atta and bogta can refer to either jivatma or paramatma depending upon the context. Therefore never jump into a conclusion without referring to the context. Context is determined by the object, which is eaten. After finding out what is the object of eating then conclude jivatma or paramatma. There are two objects of eating found in sastra. One is sukha dukha anubhava or karma phalam. Eating means experiencing. One experience is karma phalam. This is not the whole creation and it is only a

particular experience of sukha and dukha. Karma phala bogta is one possibility or karma phala atta.

Second object of eating the whole universe is presented as object of eating it is not sukha dukha anubhava and it is seen in the entire universe. Prapancha atta means eating or it is but laya karta. One meaning of atta is eating and another meaning is dissolving. Karma phala means experiencing karma by jivatma and it is samsari status. Jivatma enjoys karma phala attritvam status makes him a samsari and it means sukha dukha anubhava, when you talk about prapancha atta it refers to laya karta one who is eating the whole universe at the time of pralayam and it refers to paramatma alone and paramatma alone is laya karta and he is asamsari and paramatma is mukta.

When you say karma phala samsari jivatma and when you say prapancha atta it is asamsari paramatma. In kathopanisad we talk of the whole universe assisted by kala it refers to paramatma alone whereas when you talk of the birds one of them is said to be the eater and the eater is jivatma and the witness bird is paramatma. Kathopanisad mantra talks of the eater of the world the asamsari paramatma and mundakopanisad mantra talks of the eater of the karma phala samsari jivatma. The word pippalam means karma phalam.

In mundaka phalam jivatma is talked about. In kathopanisad the prapancha atta paramatma is talked about and therefore don't mix up the two mantras. An aside point also can be noted here. The word karta is also like that. Suppose i ask the word karta refers to jivatma or paramatma. Karta literally means doer. The word karta can either refer to paramatma or jivatma according to the context. You ask the question doer of what. After getting the answer alone you conclude. If i say punya papa karta means it refers to samsari jiva.

Suppose i say sristi sthithi laya karta the doer of the sristi sthithi laya of the whole universe then refers to asamsari paramatma. When it is macrocosmic karta bokta it is paramatma and microcosmic karta bokta is samsari jivatma. Here atta refers to paramatma alone. One more purva paksi who argues that atta can be Agni devata also. We know Agni is consumer of things both in the worldly sense and also from the scripture sense of the terms also. Agni receives all the offerings and Agni is in the stomach in the form of vaishvanara Agni. Agni alone si there in stomach in the form of samana prana. Purva paksi says Agni can also be called as atta.

The second fire naciketusa fire also is Agni and not only that in veda mantra Agni is seen as annadah. In taittiriya upanishad [brigu valli iii.viii.8] it is said *annam na paricaksit, tad vratam, apo va annam, jyotir annadam, apsu jyotih pratisthitam jyotisy-apa pratisthitah, tad etad annam anne pratisthitam sa ya etad annam anne pratisthitam veda pratisthithati annavan annadeo bhavati mahan bhavati prajaya pasubhir Brahman varcasena, mahan kirtya* which means do not reject food. That is a duty. Water is food. Fire is the food eater; fire is fixed in water, water is fixed in fire. So food is fixed in food. He, who knows that food is fixed in food, stands forever, established well. He becomes the possessor of food and an eater of food. He becomes great in prajeny in cattle and in his spiritual lusture. He becomes great in fame. Here Agni is said to be the eater. The same idea is repeated in brihadharaynaka upanishad also ref mantra [1.4.6 brihadharanyaka upanishad] reads as *atheity abhyamanthat, sa ,mukhac ca yoner hastabhyam cagnim asrjata, tasmad etad ubhayam atomaham antaratah, alomaka hi yonir antaratah tad yad idam ahur amum yaja, amum yajety ekaikam devam, etasyaiva sa visrstih, esa u hy eva sarve devah, atha yat kim cedam ardrum, tad retasao asrjata, tad u somah, etavad va idam sarvam annam caivannadas ca, soma evannam Agnir annadah, saisa*

*rahmanotistrstih, yac chreyaso devan asrjata; atha yan martyah sann amrtan asrjata, tasmad atrisrstih, atisrstyam hasyaitasyam bhavati ya evam veda.* Here it is said that this whole world is just food and eater of food soma is food and fire is the eater of food this is the highest creation of Brahman namely that he created the gods who are superior to him. He although mortal himself created the immortals. Therefore it is the highest creation. Adhi sankaracharya does not answer the question. Agni devata can consume only limited things. Vaisvanara Agni can eat only eatable. Even in pralaya kala Agni can consume jala and Prithvi tattvam and it cannot other akasa, vayu etc. Agni is atta and it is sarva atta. Therefore it has to be paramatma alone and not Agni.

## Topic 2. Attradhikaranam; [sutras 9-10]

The eater is Brahman

### Sutra 1.2.10 [41]

#### *Prakaranaccha*

And on account of the context also the [eater is Brahman]

First I will give you general analysis. Vyasacharya says the context reveals paramatma is the eater of the whole prapancha. If you see the place of the mantra 1.2.25 the context is not jivatma context. Jivatma is talked about later in the upanishad. There is a special area where jivatma is talked about. Jivatma context is separately given. Even Agni devata is not there. Agni devata talk is over with the second boon. This mantra comes with this mantra of the third boon.

Since the second boon is over Agni is not talked about. Jiva is also not there. This sloka comes immediately comes after naciketusa asks a question. This question is asked in 1.2.14.kathopanisad that reads as *anyatra dharmad anyatrsa dharmat anyatra smat krta krtat, anyatra bhutac-ca bhavyac-ca yat-tat pasyasi tad vada.* This question is quoted more often than the answer itself. The question is beyond dharma and adharma. This is quoted to negate the idea given by vishistadvaidam. If god is nirguna only in the sense god is free from bad guna. Akalyana guna is negated by nirguna, but advaidins say god is free from good and bad gunas. This is crucial difference between vishistadvaidam and advaidam. Brahman is beyond dharma and adharma kalyana and akalyana good and bad. All the cause and effect is beyond we talk about that one. The question is about jivatma or paramatma and it is certainly about paramatma only and not about jivatma. Dharma adharma aditah means paramatma only. Jivatma has got dharma and adharma. In fact jivatma is jivatma because he is in the grip of dharma and adharma. Answer should be paramatma alone. Yama's answer begins from no 1.ii.18 and 19 of kathopanisad reads as *na jayate mriyate va vipascit nayam kutascin-na babhuva kascit, ajo nityah sasvato 'yam purano na hanyate hanyamane sarire hanta cen manyate nantum, hatas-cen-manyate hatam; ubhau tau na vijanito, nayam, hanti na hanyate* all these mantras if you study they all talk about paramatma alone. Whereas we know jivatma is subject to birth death cycle. While dealing with paramatma we get in that prakaranam which begins with 18. The question is about paramatma and the answer is also about paramatma and therefore the concluding mantra also should talk about paramatma and therefore eater talked about is not jivatma and it is paramatma because of the context which determined by question and the answer.

The word for word analysis is that it contains two words prakaranat; from the context or because of the context the paramatma is the context cha; also and. Why also is added because in the previous sutra one reason is given and it is the second reason so it is said second reason also.

Vyasacharya gives two reasons. Adhi sankaracharya gives the third reason also. Again go back to the [antra 1.ii.25] *kathopanisad yatra Brahman ca ksatram ca ubhe bhavati odanah, mrtyur yasyo-pasecanam ka ittha veda yatra sah*. The eater is talked about. Whether it is jivatma or paramatma is the question. Who can know the eater and the second question that can know where the eater is? Here even though upanishad asks the question, actually it is not a question and here who can know means majority cannot know but a very, very few know the eater and eater is incomprehensible matter is talked about. The eater does not have any location because eater is not in space and space itself is the eater.

Adhi sankaracharya argues if the eater is jivatma such a question will not come at all jivatma is never an incomprehensible one and we know jivatma as samsari etc. If the eater is jivatma, it can be easily known to anyone, if it is easily known, upanishad would not have said who can understand the eater. It talks about incomprehensible paramatma the eater.

Similarly the location also regarding jivatma's location there is no doubt about it. Jivatma location is not a mystery. The smriti talks of the mystery and hence it talks about incomprehensible eater not a well-known eater and incomprehensible eater can be paramatma alone and not jivatma. In all the discussion we talk about jivatma and paramatma all the time differentiating jivatma and paramatma and you may have doubt whether you have any difference about jivatma and paramatma. Avoiding confusion is not clear knowledge. If Brahman sutra can create confusion raise the confusion and remove the confusion. Therefore here we do talk about jivatma paramatma beda and what we say is ajnana kale we talk of beda from vyavaharika angle and when we gain jnanam we talk of abeda from paramarthika angle. Therefore when we talk about we talk of vyavaharika ajnana avastha. With this attheadhikaranam is also over.

The subject matter of this adhikaranam is the eater mentioned in 1.ii.25 in kathopanisad is paramatma. Second point is what is our doubt. The doubt is whether what is mentioned here is the eater jivatma or paramatma. Doubt is because the upanishad does not use the word jivatma or paramatma. What is view of the purva paksa. He says atta is jivatma. The reason is atta means bokta and bokta is samsari and samsari is jivatma and mundaka mantra supports this fact. Jivatma is atta the upanishad says. Jivatma birds eats and paramatma bird does not eat. Our answer is atta paramatma. The reason is we talk about the eater of karma phalam and if it is the eater of karma phalam we talk of the eater of sristi sthithi laya karta and it is paramatma only and because of this eating paramatma does not become samsari. Eater of karma phalam becomes a samsari and eater of sristi sthithi laya karta is asamsari. This adhikaranam is occurring in the right place only.

## BRAHMA SUTRA

Class 72

### **Topic 3. Guhapravishtadhikaranam; [sutras 11-12]**

The dweller on the cave of the heart is the individual soul and Brahman

#### **Sutra 1.2.11 [42]**

#### ***Guham pravistavatmanau hi taddarsanat***

We have completed the 10<sup>th</sup> sutra of the second pada. Now we will go to the next sutra, which happens to be the third adhikaranam. This is a small adhikaranam consisting two sutras and it is known as guhapravishtadhikaranam. First we will do the general analysis of the entire adhikaranam and then we will do the general analysis of the first sutra.

This adhikaranam analyses a mantra in kathopanisad and the mantra is *tram pibantau sukrtasyo loke guham pravistau parame parardhe; chaya-tapau Brahman-vido vadanti, pancagnayo ye ca trina-ciketah* [1. Iii.i of kathopanisad] the meaning of the mantra is the two who enjoy the fruits of their good works being seated in the cavity of the heart, the seat of the supreme, the knowers of Brahman call them shadow and light; as also the performer of the fivefold fire and those who have propitiated three times the naciketush fire.

In the previous adhikaranam we analysed a kathopanisad 1.2.25 mantra. The next mantra of kathopanisad is the present adhikaranam. First I will give you the general meaning of the mantra in detail as this is very important mantra. This mantra talks about jivatma and paramatma as residing in the heart of all beings. Guham pravistau parame parardhe jivatma and paramatma have entered the hridayam the heart and they reside in the heart. They are located in the sacred place within the heart. The whole physical body is compared to the temple and heart is called sanctum sanctorum and it is said in the first line that they enjoy the karma phalam which is in the form sukha and dukha rupam. The world loke means sarire in the physical body. This jivatma and paramatma experiencing the karma phala. In our language jivatma can be understood as pratibimbananda chaitanyam and paramatma can be called bimba chaitanyam and pramata and saksi experience the karma phalam. The nature of the two is they are totally different and are diagonally opposite nature like light and shadow. One is light and another is dark. Brahmanvido vadanti those who deal with jnana kanda talks about these two jivatma and paramatma and even ritualists talk about these two jivatma and paramatma. Both karma kanda people and jnana kanda people talk about the heart where jivatma and paramatma resides. This mantra of kathopanisad is too close to bird example given in mundaka upanishad *dvau sparna sayuja sakhaya samanam vrksam parisasvajate, taylor anyah pippalam svady-atty-anasan anyo abhicakasiti* [ref iii.i.1 of mundaka upanishad]. The body is compared to the tree and heart to a branch and the heart branch jivatma and paramatma birds are seated. The mantra context and discussion we will speak guha pravistau very often. What is the controversy. There is some doubt in this mantra. What is the controversy which is to be resolved in this sutra. In the entire mantra the word jivatma or paramatma is not at all used. We only come to know they are two entities in the heart. Two things are experiencing the karma phalam. They are comparable to shade and light that indicates that there are two things. Mantra points out two things experience the karma

phalam. Mantra does not say what are the two things. Now we are going to establish what are they in the absence of the upanishad not mentioning what they are. We will establish that they are jivatma and paramatma because sankya philosophers do not accept paramatma separate from jivatma. We say that there is paramatma separate from jivatma. How do you say vedantins accept paramatma separate from jivatma? From vyavaharika dristya we accept paramatma and jivatma. Sankya do not do so. The main advantage is accept jivatma and paramatma from vyavaharika angle but from absolute angle jivatma and paramatma is one and the same. Now i will explain the general analysis of the first sutram of this adhikaranam.

The first one can be interpreted in two ways; adhi sankaracharya does not clearly present two interpretations. In this interpretation we will say that two experiencers of karma phalam located in heart is jivatma and paramatma and none else. The reason for this conclusion is that it is clearly stated elsewhere. The rule a vague mantra should be understood with a clear mantra outside. Here we have a conclusion that the entities mention are jivatma and paramatma. We see a parellel idea elsewhere.

The two birds mantra *dvau sparna sayuja sakhya samanam vrksam parisasvajate, tayor anyah pippalam svady-atty-anasan anyo abhicakasiti* [ref iii.i.1 of mundaka upanisad] one bird experiences karma phala and the other witness the karma phala which is paramatma bird and jivatma bird is pramata and paramatma bird is saksi which is clearly said in mundakopanisad. This is hinted by adhi sankaracharya. This is the general analysis of the first interpretation. Now we will go for the word for word analysis interpretation of the first analysis.

Guham; in the cavity of heart the physical heart, the mind which is located in the heart, we say he does the work whole heartedly means the invisible mind which is located in the physical heart. We talk of mind and the heart here it is physical heart; pravishtau means located literally it means entered; this is the paksa. Two things have entered, those two entities are atmanou jivatma and paramatma is our conclusion; hi means indeed because and it is jivatma and paramatma only and none else and the next word is taddarsanat; tad means this idea, that the idea that two entities located in heart is jivatma and paramatma only; darsanat means this is clearly mentioned elsewhere. Elsewhere is mundaka upanishad mantra 3.i.1. [see above para]. This is the first interpretation.

The second interpretation is clearly given by adhi sankaracharya. We will general analysis of the second interpretation. Here adhi sankaracharya shows that those two entities are chetana tattvam. He does not say jivatma and paramatma. He says they are sentient one and once you say they are sentient one and then it can be established that they are jivatma and paramatma only. There is one paramatma and within the heart there is only one jivatma and therefore once you say there are two sentient one we know that they are jivatma and paramatma.

How do you prove that they are two sentient one? Taddarsanat means they are two sentient things. In the heart jivatma is there is accepted by all philosophers. There is no controversy. The controversy is whether there is paramatma is there or not. The location of paramatma is the controversy. It is because sankya philosopher does not accept paramatma at all let alone accepting the location of paramatma in the heart. Who is the second one other than paramatma is the controversy.

The usage of dual number supports my case. When you give number to a thing, the rule is that the objects referred to will belong to the same class of things or objects or being.

Somebody has brought a cup of coffee. Then i say bring another one. That means the second one is coffee nothing else. Suppose people get into a vehicle. Someone say one more comes. Then another means another person comes. They talk about various devatas and the fifth one means fifth one belongs to devata only. When we count the people and say 150 means all the people only. We don't count other species. Here we talk about two entities. One of them is chetana jivah and the second one referred to dual number the other sentient one has to be paramatma only. The reasoning is taddarsanat. Previously we said taddarsanat means stated elsewhere. Now we say the well known rule as above.here dual number is present and the same species is chetana one. This is the general analysis of second interpretation.

Now we will see the word for word analysis. Guham means physical heart; pravistou means located; we have to supply a word that jivatma and paramatmanou. That means jivatma and paramatma only; those two located in heart are jivatma and paramatma. Then we have to give the reason. Atmanou hi. Here in the second interpretation the word atmanou means chetanou. Chaetanou merans, because both are sentient one. That is proved by the next word taddarsanat it is the reason to prove that he two entities are sentient one. Tad means the general rule. Wherever numbers are used the numbered things belongs to the same species one is jivatma and the other is paramatma darsanat means well known rule. With this first sutra interpretation is over.

Now we will enter into purva paksi. He does not allow us to conclude anything. What we have seen is our conclusion. Our conclusion is that the two entities in the heart are jivatma and paramatma. First statement he says is that you are wrong. He says that the two entities located in the heart are jivatma and adhikaranam.he says one is jivatma and the other is the mind and not paramatma. If you take it as paramatma there will be so many logical problems. They are not there if you take it as jivatma and intellect. Problem number one is that the mantra says two experiences of karma phalam. If you take jivatma and paramatma the problem will be jivatma is bokta and paramatma also becomes bokta which is not acceptable to you. Paramatma is not bokta. Paramatma is abokta non-experiencer. Second defect is that paramatma cannot be located in the heart because you say paramatma is all pwervading and how can you the all pervading paramatma is located within the small heart. There is one more defect which we will see in the next class.

## BRAHMA SUTRA

Class 73.

### **Topic 3. Guhapravishtadhikaranam; [sutras 11-12]**

The dweller on the cave of the heart is the individual soul and Brahman

**Sutra 1.2.11 [42] contd.**

*Guham pravistavatmanau hi taddarsanat*

We see the third adhikaranam. This is based upon the kathopanisad mantra 1.ii.1. The topic of discussion is what are the two entities mentioned in this mantra which are located in the heart. Upanishad mentions two entities the experiencers of karma phalam and it has not explicitly mentioned them. Since the upanishad is not explicit it finds place in Brahman sutra. We have already given two interpretations. And we concluded that they are jivatma and paramatma. Now we discuss purva paksi objections discussed in bashyam.

He says that the two entities are not jivatma and paramatma. Sankya will accept jivatma and jagat but he will not isvara or paramatma. Because of dvesa for paramatma he avoids and says the two experiencers are jivatma and adhikaranam the mind. If you take it as jivatma and paramatma there will be several problems they say to advaidins. We see the three dosha. The word is dual number and mentions two experiencers of karma phlam. If you take them as jivatma and paramatma it is against your own philosophy. Paramatma should not be taken as karma phala bokta. One bokta and another abokta should have been said since paramatma is abokta. This is the first defect according to sankya.

The very statement that both are located in the heart and he says that one can be located since jivatma is subject to movement and how can paramatma all pervading paramatma be accommodated in the small limited heart.

The third defect is that the word chayatabah is like light and shadow and they are diagonally opposite. In advaidic interpretation jivatma and paramatma are not opposite with both of them being chetana they are not diagonally opposite. According to me they are buddhi and jivatma and buddhi is achetana and jivatma is chetana. According to us both of them are chetanam one is pratibimbananda chaitanyam and the other is bimba chaitanyam. Purva paksi says chetana and achetana shadow and light will fit in perfectly according to sankya interpretation they say. Hence they argue they are not jivatma and paramatma. He justifies his view. He says all the three defects mentioned in advaidic interpretation are not there in sankya interpretation.

First dosha is paramatma is not experiencer and in my interpretation both jivatma and buddhi are experiencers. Because both of them are savikarah. Both are savikara and both can experience the karma phalam. In advaidam this defect is not there.

The second defect is guham pratistou in advaidic interpretation paramatma cannot be located in the heart. Paramatma is big and heart is small. In our interpretation both mind and jivatma are small and can be comfortably be located in the heart.

Third interpretation is shadow and light. The mind is achetanam and jivatma is chetanam and they are like light and shadow. Because of these three defects, your interpretation that jivatma and paramatma are located in the heart is wrong. Our interpretation is right is the argument of purva paksi.

In advaidic interpretation we have to prove all the objections are not there and also establish that all the defects are there in your matham also. Now let us see one by one.

First defect is that jivatma and paramatma are not experiencers. Jivatma is experiencer and paramatma is not experiencer. Advaidic answer is that your statement is true but still because of the presence of paramatma alone because of the grace of paramatma alone jivatma is able to experience. Jivatma is able to be an experiencer because of paramatma alone. Jivatma is pratibimbananda and paramatma is bimba chaitanyam. The very existence of chidhabasa is because of chit and therefore we say that paramatma makes jivatma a bokta. It is because of the mere presence paramatma makes jivatma a bokta and since he makes jivatma a bokta we can figuratively say paramatma is also a bokta. For this we give an example also. We say i have cooked the food today.

Then i ask the question did you cook the food or the fire cooked the food. Cooking is process that takes place because of the fire. No. You are the one you made the fire and created the fire to get cooked the food. You do not cook the food and you caused the fire to cook the food. You are responsible for the fire to cook the food. In the same way paramatma is indirectly a bokta and figuratively paramatma is bokta. Since paramatma makes the jivatma to experience things, that paramatma is bokta. If you want any supporting scriptural statement we can give.

Refer to gita sloka 13.22 *upadrasta numanta ca bharta bhokta mahesvarah parramatme 'ti ca'py ukto deha'sminpurusah parah* the meaning of this sloka is the supreme spirit in the body is said to the witness, the permitter, the supporter, the experiencer the great lord and the supreme self. In the gita, no distinction is made between the knower of the field and the supreme lord. Paramatma is boktuh bokta like srortrasya srotra. The first charge is set aside.

Then comes the second charge. How can you say that paramatma is located in the heart. Whenever we say paramatma is in the heart you hve to put additional word that paramatma is in the heart also. All pervading paramatma is in the heart or not is absurd question. All pervading heart is everywhere means paramatma is in the heart also. Why you specifically say it is in the heart. Although paramatma is everywhere, the consciousness cannot be experienced outside. For me consciousness is available only in my body and in my mind as the witness of every thought every condition and every emotion. It is witnessed by all pervading consciousness. It is everywhere but appreciated in the heart and it is like the god in the temple. God is all pervading but in the temple god is especially available for our worship. The consciousness is manifest in the heart. It is not the place of location and it is the place of manifestation. In several upanishad Brahman is presented as guhahitam.

Next is shadow and light. If jivatma and paramatma are taken they are diagonally opposite they said. They are diagonally opposite from the angle of samsari and asamsari one is parichinna and one is aparicchinnah. Jivatma and paramatma are diagonally opposite not in the form of chetana achetana rupena. One is samsari and another is asamsari. Why not take it as chetana achetana rupena. The experiencers of karma phala the upanishad have already indicated that both are chetanam. Both belings to the same species. Light and shadow fits in

even though they are light and shadow because one is samsari and another is asamsari. Third defect is also not there.

Next job is that in your interpretation you have the problem. The first and third point you say are both contradictory. First, we have to take buddhi and jivatma as two experiencers; therefore my interpretation is better you said. Third point you said that buddhi and jivatma are totally opposite like light and shadow because buddhi is achetanam and jivatma is chetanam. If you say that buddhi is achetanam how can you say achetana buddhi and the jivatma are two experiencers. You say paramatma is non-experiencer and to solve the problem you replace paramatma by buddhi an achetana.

When you replace by achetana buddhi a non-experiencer, and how can you say that achetana buddhi and chetana atma are the two experiencers. Then suppose you argue that achetana buddhi is figurative experiencer, then i hold on to my answer that paramatma is also figurative experiencer and in what way your interpretation is superior. Thus you contradict your own first and third statement. You hold on to second point. Other than that all the points are wrong. Therefore my interpretation that jivatma and paramatma are two experiences is correct. We will go to the second sutra.

### **Topic 3. Guhapravishtadhikaranam; [sutras 11-12]**

The dweller on the cave of the heart is the individual soul and Brahman

#### **Sutra 1.2.12 [43]**

#### ***Viseshanaccha***

And on account of the distinctive qualities [of the two mentioned] in subsequent texts.

First i will give general analysis. Through this sutra vyasacharya points out that upanishad itself by later mantra sorts out the confusion with first mantra. If you read the later mantra applying your mind, you would have sorted the problem. It specifically refers to two experiencers mentioned in the first mantra.

For that you remember 1.3.1 of kathopanisad the chariot example. *Atmanam rathinam vidhi, sariram ratham eva tu, buddhim tu sarathim vidhi, manah pragraham eva ca.* The meaning of the mantra reads as know the atman as the lord of the chariot, who sits within it and the body as the chariot. Know the intellect as the charioteer and the mind as verily the reins. In the earlier mantra the experiences are not specified but in the entire third section the experiencers are very specific.

Here jivatma is presented as traveler and paramatma as the destination. This we see in the mantra 1.iii.9 of the same upanishad that *vijnana-sarathir-yastu, manah pragrahavan narah, so'dhvanah param apnoti, tad visnoh paramam padam* which means the man who has intelligence for his charioteer and the mind as the [well controlled] rein – he attains the end of the journey, that supreme place of vishnu [the all pervading atman]. Jivatma is the traveler, body is the carrier buddhi is driver jivatma is seated in back seat and the destination is paramatma.

Then upanishad points out where the paramatma is located. In which direction one should travel can be known only when you know where paramatma is there. Here it is not the outside journey but it is inside journey. This we see in mantras 1.iii.10 and 11 of the same upanishad that reads as *indriye bhyah para hy artha, arthebhyas-ca param manah, manasas tupara buddhih, buddher atma mahan parah* followed by the mantra 11 *mahatah param avyaktam, avyaktat purusah parah, purusan-na param kincit, sa katha sa para gatih*. The meaning of the upanishad mantra reads as beyond the senses are the sense objects; beyond these objects is the mind; beyond the mind is the intellect and beyond the intellect is the great self followed by the meaning of mantra 11 that beyond the great [mahat] is the un-manifested [avyaktam]. Beyond the avyaktam [prakrti] is the purusa' beyond the purusa there is nothing; that is the end; that is the highest goal.

In these two mantras upanishad presents panca kosa viveka. It is repeated in another kathopanisad mantra *avyaktat tu parah puruso vyapako 'linga eva ca; yam jnatva mucyate jantuh amrtatvam ca gacchati* the meaning of this mantra runs as and verily beyond the unmanifest [prakrti] is the all pervading purusa devoid of all distinctive marks knowing whom the creature [the knower] is emancipated and he attains immortality having talked about paramatma as destination upanishad says that paramatma is within you the destination and jivatma traveler is within; paramatma the destination is within you and jivatma traveler is also within you, the real experiencer jivatma is within and paramatma the destination if figuratively an experiencer is also within. Pramata is the traveler and the apramata paramatma is the destination. Small 'i' is the traveler and the big i is the destination. Soupathika is traveler is jivatma and nirupathika is destination is paramatma and both are within. Therefore gunam pratistah is not only jivatma but also paramatma is there. Upanishad itself specifies jivatma traveler and paramatma destination. Now we will see word analysis.

Viseshanat on account of distinctive qualities, because of the specific reference of jivatma and paramatma that too as traveler and destination the conclusion is jivatma paramatma guha pratistav eva with specific reference given in kathopanisad itself the reference is jivatma and paramatma only and not jivatma and buddhi. This is the meaning of viseshanat. And cha means and because of the reason also. With this word analysis of the second sutra is over. Now adhi sankaracharya introduces another purva paksa here. I will introduce the controversy. We have introduced jivatma and paramatma and we quoted the mantra in support of the first sutra. Mundaka upanishad also says the same thing. Now purva paksa says there is a problem. A mantra which is parallel to the mantra is discussed in another part of the veda. That part is called paingi rahasya Brahmanm parallel mantra is quoted that talks about two entities are detailed.

Veda writes a commentary on that. In saptanna Brahmanm of brahadharaynaka upanisad also we see the commentary on some mantras. There the upanishad says the two entities are satva ksetrajnaou. The word sattvam is mind or adhikaranam. Upanishad accepts that one of the entities is the mind. But the upanishad in question supports the purva paksa and says they are buddhi and ksetrajna. Buddhi and jivatma alone are two entity and we come back to the back to the square one. This we will have to be tackled which we will do in the next class.

## BRAHMA SUTRA

Class: 74

### **Topic 3. Guhapravishtadhikaranam; [sutras 11-12]**

The dweller on the cave of the heart is the individual soul and Brahman

#### **Sutra 1.2.12 [43]**

#### ***Viseshanaccha***

And on account of the distinctive qualities [of the two mentioned] in subsequent texts.

We see guhapradistaadhikaranam, which is the third adhikaranam of the second pada. We have seen the meaning of the sutra. The sruti vakyam taken for analysis is kathopanisad vakyam 1.iii.1 of the upanishad. In this word occurs guhan pratistou where to entities reside and what are they is the topic for analyses. While establishing this particular fact, adhi sankaracharya gives a parallel sruti vakyam from mundaka upanishad. In this mantra also, two entities reside within the heart. One is the bokta jivatma and the other is abokta paramatma.

Adhi sankaracharya introduces another controversy. The same mantra is quoted in another part of the veda. This is known as pangi rahasya Brahmanam. In this portion this mantra is quoted. This Brahmana itself writes a commentary on the mantra. Now the question is, what is the eating bird and what is the non-eating bird. The eating bird represents jivatma and non-eating bird represents paramatma. The vedic commentary is different from your interpretation says purva pakshi. Sattva and ksetrajna are two entities in the mind and if you literally translate it, it is buddhi or mind and the word ksetrajna is stated to be atma. We interpret it as jivatma and paramatma but the upanishad says that the two denotes the mind and jivatma.

There are two answers to this objection. One is simpler and immediate method of answering which adhi sankaracharya does not take. Immediate and simple answer is that the buddhi and atma can be taken, as sattva and it is jivatma and ksetrajna that is paramatma. The word sattvam means the mind and the mind always exists along with pratibimbananda chaitanyam and the mind with chidhabasa is called jivatma, karta bokta etc. And the word sattvam relate to the eating bird.

Ksetrajna means it is paramatma. There is no contradiction to what we said and what the upanishad said. Adhi sankaracharya brings about the method of vedantic teaching. What he says is this. We talk about eating one and non-eating one. In vedanta eating refers to bokritvam and non-eating refers to abokritvam and our question is which is bokta. The word bokta indicates an experiencer. Experiencer must fulfill two condition one the entity should be sentient and experiencer should be subject to changes. Experiencer goes through the condition of good and bad, sukha and dukha, and other feelings has got to be savikara chetana vastu.

Adhi sankaracharya says on analysis we find that we do not have savikara chetana vastu in the entire creation on deep analysis. The entire creation consists of two-entity purusa and

praksrit and atma happens to be chetana vastu and it is nirvikara chetana vastu; but the second entity is anatma and it is achetana vastu and it is savikara achetana vastu. We have nirvikara chetana vastu and savikara achetana vastu. Bogta should be savikara chetana vastu or nirvikara chetana vastu and we do not have savikara chetana vastu as it is a nonexistence thing. If savikara chetana vastu is nonexistence, then there is no bokta at all and the upanishad wants to tell us that the bokta is a nonexistent thing and it is not at all there and that it is mithya.

Upanishad wants to teach that there is no entity called mithya at all since the student cannot swallow the truth, the upanishad conveys this in two stages. In the beginning it states that we take that i am a bokta and it is also taken that atma as the bokta. The upanishad wants us to remove the bokta totally; therefore in the first stage it says that you are not bokta but your mind is bokta; the anatma mind is bokta and this is the intermediary stage of the teaching. In the first stage it is said that 'i am a bokta' and in the next stage it says the mind is bokta and later it is said that it is anatma mind which is jadam etc., and then the sruti says that the mind is not bokta; atma is also not a bokta and then it says none of the two is a bokta.

In support of that adhi sankaracharya quotes that is there to hearer and who is there to smell etc. For this i will give you an example. Suppose we clean the house. Loft is the place where there will be a screen. One day you decide to clean. You want to remove the dirt in the loft and you put it down on the floor. This is the intermediary stage before throwing the dirt out you put them on the floor. Ultimately you remove the impurity and all the dirt and throw it away. Putting the impurity and dirt on the floor is intermediary state. Ultimately you throw the dirt away. Ultimately you remove the impurities from the floor also/

Loft is atma and the floor is anatma and all the impurities are bogritvam kartritvam etc. And the upanishad first remove bogritvam away from ksetrajna atma and it put on the sattvam the anatma and this is the intermediary stage and ultimately sattvam is also not bogta and you ultimately put it in the waste paper basket, the mithya.

Buddhi is the bokta is the temporary state and the ultimate state is that atma is not bogta buddhi is also not bokta. In the first the answer atma is abokta and chidhabasa sahita buddhi is the bokta and the chidhabasa sahita buddhi is atma and therefore adhi sankaracharya concludes that there is no contradiction between paingi ragasya Brahmanam interpretation and what i say. We will sum up the adhikaranam` format in technical format.

The subject matter of this adhikaranam is what are the two entities residing in the mind. Or the guham pratistou is the subject matter. That is why the adhikaranam is called so. This occurs in 1.3.1 of kathopanishad. The doubt is the two entities are jivatma and paramatma or something else like jivatma and buddhi. This is the doubt. This is raised by sankya philosopher for sankya does not accept paramatma and hence he raises this question. Therefore his doubt arises in his mind. Purva paksa says that is jiva and buddhi only. He thinks that paramatma is all pervading and how can that all pervading paramatma be located in the mind. What is the view of the opponent, they have to be jivatma and buddhi only. Why he does not accept paramatma? Paramatma is supposed to be all pervading and how can all pervading paramatma be limited. The view of the opponent is t the two entities should be jivatma and buddhi only. He does not accept paramatma is because all pervading paramatma be located in the mind.

Jivatma being limited jivatma can be limited in mind and adhikaranam can also be located both being finite it can be individual and should not bring in paramatma which is all pervading. Word enter cannot happen because paramatma is one 'all pervading'. This is the view of purva paksa. The conclusion is the two entities are jivatma and paramatma only.

The reason is that the two sutras are there for the discussion in Brahman sutra. It is summed up that the two entities are jivatma and paramatma alone and not jivatma and buddhi as claimed by purva paksa. It is presented as one and located as two because in mind alone it is recognized as consciousness. All pervading isvara resides in the heart, which is a contradiction. By pointing out that isvara is available in the heart also it is proved that isvara is both in the heart as also the same isvara is all pervading. The topic is in proper position.

#### **Topic 4. Antaradhikaranam [sutras 13-17]**

The person within the eye is Brahman

##### **Sutra 1.2.13 [44]**

##### ***Antara upapatteh***

The person within [the eye] [is Brahman] on account of [the attributes mentioned therein] being appropriate [only to Brahman]

First we will have general introduction of the entire adhikaranam. This is known as antaraadhikaranam. Previously in the first pada we had another adhikaranam known as antaradhikaranam and we should get confused one from the other. This adhikaranam is known so because the first sutra begins with the word antara. This consists of five sutra 13<sup>th</sup> to 17. This is based on another chandogya upanishad 4.15.1. Here the topic is sagunam Brahman upasana or isvara upasana.

That is isvara endowed with various gunas. Guna visista isvara upasana. It is popularly known as upakosala vidya. Here the student happens to be upakosala. This is upasana taught to upakosala. Here the teacher is sathya kama jabalah. He gives this isvara upasana. This is the background and the context of this upasana. It is given in the form of a story.

The student upakosala has gone to the teacher sathya kama jabala. For doing the ritual he has to maintain vedic fire and for different rituals different types of fire is to be used and various homa kundas were also there. All were known by different names. The maintenance of fire is a big job and this is done by the Brahmancharis. Upakosala was tending the fire happily. Sathya kama jabala did a peculiar thing. Upakosala even though he was taught properly he was wondering. There was a session in which upakosala was not given any title or anything and after sending him away the guru went on pilgrimage. Upkosala was upset and still he did not misunderstand his teacher.

He had the shradda and he did not interpret it negatively. He was cursing himself. He started taking upavasa thinking he was not fit to be taught. Even though guru was gone, guru pathni was there and she cared for him. He asked why he did not eat. He said his mind was upset. He sat quiet where all the Agnis were present. At that time something mysterious happened and Agni devata began to teach him. All the fires became the guru of upakosala.

He was taught varieties of upasanas and one of them is nithya ananda rupa prana upasana. Kham Brahman kham Brahman. Nithya ananda upasana. Not only this was given and he was also taught various Agni upasanas were taught by the fires. Having completed the upasanas they told him your guru is sathya kama jabala. This is the present we give and it is not that and ultimately you have learn from your guru and the only the knowledge will have the value. They said sathya kama will come and he will complete the teaching and also give the phalam of this jnana. Mantra 4.10.10 to 14. We find all these teachings.

In 15<sup>th</sup> section we see sathya kama comes back. He sees the student and asks that you have extra brilliance and how come. Some Brahman tejas is there and who gave you the brilliance and sathya kama teaches him isvara upasana which is given in the 15<sup>th</sup> section and that isvara is endowed with two virtues and vamani is the technical word used. He is the master controller of the universe.

Second glory is that he is the illuminator of the whole creation. Vamani is the technical word used. For that isvara upasana some location is required. This isvara has to be invoked somewhere. Sathya kama says that isvara is to be invoked on your eyes that too dakshina Aksi the right eye. May you meditate upon that isvara. That is given in 4.15.1 of chandogya upanishad that reads as *ya esoksini puruso drsyata esa atmeti hovacaitada mrtamabhayametadbrahmeti tadyadyapyasminsarpirvo dakam va sincati vartmani eva gacchati* that reads as the teacher said [the person seen in the eyes is the self. It is immortal and fearless; it is Brahman. This is why, if anyone puts clarified butter or water in the eyes, it goes to the corners of the eyes. Here the rough meaning as we saw is that isvara is in the right eye. Lord is seen in your own body. Lord is seen in yourself. That alone is called paramatma which is amritam and abhayam and not only that this isvara is asangah to the papams that body perform. You put a drop of eye in the water and the water does not stick to the eyes and goes out and water that is dropped like water on the lotus does not affect eyes. The punya papam also will not stick to isvara and isvara is in your body but the body does not pollute isvara.

Here gita 13.31 says *anaditvan nirgunatvat paramatma 'yam avyayah sarirastho 'pi kaunteya na karoti na lipyate* the meaning of the mantra reads as because this supreme self imperishable is without beginning without qualities, so, o son of kunti thought it dwells in the body it neither acts nor is tainted. All the karmas will affect the atma. In the following sarva karma sauksmyad is talked about gita 13.32 *yatha saragatam sauksmyaa akasam na 'palipyate sarvatra 'vashito dehe tatha 'tma no palipyate*. As the all-pervading ether is not tainted, by reason of its subtlety, even so the self that is present in every body does not suffer any taint. It is said that isvara is the illuminator of all the things in the world. Upasana phalam is talked about in the fourth mantra of chandogya upanisad. This is the context.

Now we have to find out where is the controversy. The details in the next class.

## BRAHMA SUTRA

Class 75

### **Topic 4. Antaraadhikaranam [sutras 13-17]**

The person within the eye is Brahman

#### **Sutra 1.2.13 [44]**

#### ***Antara upapattēh***

The person within [the eye] [is Brahman] on account of [the attributes mentioned therein] being appropriate [only to Brahman]

Now we will see the fourth adhikaranam of the second pada, which is known, as antaraadhikaranam. I will give general background of this adhikaranam and i will explain the analysis of the first sutram. This part of saguna Brahman upasana and it is called upakosala vidya. It is known by the name because the student upakosala receives it. It was received first from Agni devata and that isvara upasana which is called Brahman upasana and it is sukha rupa upasana and isvara as ananda rupa Brahman upasana, the Agni devata told the other part would be taught by your guru.

Sathya kama jabala is pleased and he continues the same upasana and he starts this from mantra 4.15.1 to 4.15.4 of chandogya upanisad and sathya kama teaches some more virtues of isvara. One is ananda rupa isvara kham Brahman kham Brahman. Ananda rupa isvara is already taught and sathya kama teaches some more virtues of isvara. They are atmatvam – isvara is very atma, amritatvam freedom from death eternity, abhayatvam freedom from fear, Brahmantvam- infinitude asangatvam free from any pollution. He is the producer of all karma phala, vamaniya bhisammyanti all beautiful things come to him; the next virtue is vamanitvam it is karma phala prapakatvam; finally the virtue is bamnitvam sarva visaya prakasatvam Brahman is illuminator of everything. This Brahman should be meditated upon.

The Brahman talked about here is sagunam Brahman. We don't use the word isvara and it is replaced by the word Brahman and it is sagunam Brahman. For this Brahman upasana a location is required to invoke Brahman and that locus is our own eyes. Therefore this Brahman is presented as Aksi purusah. Aksi purusa is the Brahman with all the virtues enumerated above.

Where is the controversy here? Now we will find where is the controversy. Take 4.15.1 of chandogya upanisad that reads as *ya eso'ksini puruso drsyata esa atmeti hovacaitada mrtamabhayametadbrahmeti tadyadyapyasminsarpirvodakam va sincati vartmani eva gacchadi*. The teacher here says the person seen in the eyes is the self. This is the statement. There is a purusa perceived by us seen by us in the eyes of people. Now the problem comes because the word purusa is used in the scriptures in several meanings. Which meaning should be taken is our confusion. In common parlance itself purusa when you say you think of male gender the physical body.

Anna rasa may itself is called purusa. Word purusa is used in the name of jivatma. The very word means sarire. Jivatma, which resides in the body, is also called purusa. Again the word purusa is used for the devatas of various organs and devatas. Third meaning of purusa is devata. Finally and most importantly paramatma itself is called purusah. In kathopanishad purusa is used to denote paramatma. We have to find out which meaning is to be taken here.

Adhi sankaracharya gives a particular meaning and he does not justify why this meaning is taken. In Brahman sutra the analysis is why this particular meaning is taken and why cannot we take another meaning. Aksini drisyate means seen or perceived and paramatma cannot be seen. Some sayn drisyate is used and purusa is perceived purusa. Jivatma cannot be seen devata cannot be seen and we talk about purusa and purusa cannot be jivatma or paramatma or devata and if we take it as sariram the body, the sariram is seen and upanishad says Aksini purusa drisyate and sariram is seen in the eyes of the people. Do you see jiva in eyes do you see devata do you see paramatma in the eyes. You don't see paramatma; you see physical body.

Here the upanishad says purusa is seen in the eyes. Reflection is seen in the eyes of the person in front of him. I see physical body not in the eyes. I cannot see jivatma or paramatma and i see only sthoola sookshma pratibimba as the eyes are capable of seeing and that only we say Aksini purusa drisyate. It is chaaya sariram. We have got five meanings for purusa. The body, reflection of the body, jivah, devata and fifth meaning paramatma are possible and the first one only seems to fit properly which we can see in the eyes of the person. So we have established a controversy. This is the general background of the entire adhikaranam.

In the first sutra, first reason is given to establish our conclusion that Aksi antara purusah paramatma eva bhavati. Aksyantara purusa mentioned in 4.15.1 of chandogya upanishad is Brahman alone. All the virtues mentioned for the purusa will fit for paramatma alone. All the ashta guna cannot fit in with pratibimba sariram, jivah and devata. Because we find that the pratibimba sariram cannot be eternal. Bimba sariram is noneternal jivah is not eternal devata is noneternal but paramatma alone can be amritam abhayam asangam karma phala prabhakam etc. This is the first reason. Now we will go to the word meaning.

It has got two words antarah – person within and - upapateh being available; antarah purusah paramatma bhavati. The purusa obtaining within the eye is paramatma alone because that alone is logical. This is the total sentence. First word is antarah means within. We have to supply the word within the eyes. The purusa obtaining in the eyes mentioned in chandogya upanishad mantra 4.15.1 [ibid].

The next word we have to supply paramatma bhavati and this purusa is Brahman bhavati or paramatma bhavati. The third word is upapateh because that alone is logical because of the fitness. Now vyasacharya says because it is proper and all virtues are possible for paramatma alone. Asangatnvam sariram is not asangah and it is associated with all dust possible; jiva is full of punya papa sanga; devata has got lot of punyam and is not fit for any one of other purusa; sariram, devata all are having the fear. Even yema dharma raja is afraid of isvara and only fearless one is Brahman only. Karma phala utpatakatvam jiva does not produce karma phala and jiva produce karma alone. Devatas do not produce karma phala and they have received karma phalam from lord only. Isvara appoints them only. All are possible for paramatma alone. No single devata can illumine the entire creation. Caksur devata can illumine the forms. Every devata can illumine only a particular segment only and Brahman alone can illumine the entire world.

## Topic 4. Antaraadhikaranam [sutras 13-17]

The person within the eye is Brahman

### Sutra 1.2.14 [45]

#### *Sthanadivypadesaccha*

And on account of the statement of place and so on.

In this sutra vyasacharya answers a doubt, which can come in our mind. Brahman alone can have all the good virtues. Therefore purusa seems to be Brahman. I understand Brahman as all pervading; i understand Brahman as sarva adhistanam. Everything in the creation is located in Brahman. Therefore Brahman is not located in the creation. Once Brahman is located in creation it gets localized and becomes limited one. Brahman is locationless in my understanding. Purusa is located in the eye as per the mantra. How can you say Brahman because here purusa talked about is located purusa while Brahman is unlocated Brahman. That is why i suggest jivah. Devata, reflection etc. How do you say purusa Brahman is located in the eye. I will give you the general analysis of the sutra.

Here this question has been asked several times and the teacher has also taught umpteen times. Yet the teacher has to answer. How can Brahman be located? Brahman is not located really speaking and for the sake of upasana the sastra invokes Brahman in various locations. Every time we do puja we do avahayami. Avahayami means locating the devata, which is big in turmeric power. You should not take all these things literally. All the descriptions are for the sake of upasana. Meditate on Brahman invoking in the legs, tongues etc. You meditate on nakshatra.

Brahman is invoked on Surya mandalam also. Don't take it literally. Not only locations are meant for upasana. Various names and forms are also meant for upasana. Even though Brahman is nama rahitam, for the sake of upasana Brahman is given various forms. It has shining eye; we saw in previous antaradhikaranam where Brahman is given golden eyes, golden hair etc. Brahman is location less formless and nameless. Don't hold on to vishnu alone etc. They are for upasana purpose only. This forms and names you see for upasana are not real at all. Location is not real but figurative for the sake of upasana.

Now we will see the word meaning. It has got two words. Sthanadi the place and the rest; sthanam and adhi sthanam means temporary location for upasana; a lamp, an idol, a photo, every temple etc. Temporary alampanam for upasana; adhi means etc. A temporary name for upasana rama, krishna, etc. Upasana also gives special name sathyasya sathyam etc. And also temporary forms for upasana; all vishnu forms all shiva forms are temporary.

Which form is permanent and no form is permanent. There is no form for Brahman. Formlessness is the form of Brahman. Vyapadesat on account of the statement; it means they are mentioned in the sastra. In antarnami Brahmanam of brihadharaynaka upanisad Brahman is located in various places. Brahman is located in the tongue; Brahman is located in the eye; the whole antaryami Brahman location of Brahman at various places. Cha ; and. So also are the various statements in the bhagavatams etc. The next word is cha it means also because of this reason also. You complete the sentence Aksi purusah paramatma bhavati. So Aksi purusa is paramatma. Paramatma is in the eye means paramatma is in the eye also. Then there is no

limitation on Brahman. Brahman is invoked on eye for the sake of upasana. More in the next class.

## BRAHMA SUTRA

Class 76

### **Topic 4. Antaraadhikaranam [sutras 13-17]**

The person within the eye is Brahman

#### **Sutra 1.2.14 [45]**

#### ***Sthanadivypadesaccha***

And on account of the statement of place and so on.

All the virtues mentioned in 4.15.1 of chandogya upanisad referred to purusa alone and not any thing else and it was also established that Brahman is located in the eye for the purpose of upasana in the last class. Although Brahman has no form, no place etc., for the sake of upasana Brahman has got several names. None of them belongs to Brahman. Similarly Brahman is given various forms although Brahman has no forms but they are attributed to Brahman for the purpose of upasana. One should remember they are superimposed rupas, superimposed forms and superimposed names. They do not really belong to Brahman. The superimposition is for the purpose of upasana only. The upanishad are superimposing nama, rupa and sthanam if someone questions we say superimpositions are of two types. One is erroneous superimposition caused by ignorance rajju sarpah and the deliberate superimposition for the purpose. The superimposition of vishnu on saligrama stone superimposition of Shiva on lingam superimposition of vinayaka on turmeric powder is knowingly made for the purpose of upasana. Therefore ajnatva aropaha jnatva aropah. Upanishad superimposes nama rupa etc., deliberately. This is for facilitating meditation. A devotee cannot invoke Nirgunam Brahman.

### **Topic 4. Antaraadhikaranam [sutras 13-17]**

The person within the eye is Brahman

#### **Sutra 1.2.15 [46]**

#### ***Sukha visishtabhidhanadeva cha***

And on account of the passage referring to that which is distinguished by bliss [i.e., Brahman]

I will do the general analysis of this sutra. Here vyasacharya gives another argument in favour of his argument that Aksi purusah is Brahman. Upakosala vidya starts from 4.15.1 to 4.15.5 of Chandogya upanisad. Now we go back to 4.10.1 of Chandogya upanisad wherein it is pointed out that Agni taught upakosala and he was taught ananta sukha vishista brahma upasana. Kham Brahma kham brahma occurs in the mantra 4.10.4 of chandogya upanisad. At the end Agni devata tells Upakosala that his acharya will complete the teaching. The brahma upasana was taught and the acharya would teach brahma upasana phalam. Acharya continued the topic and instead of teaching the phalam, the acharya teaches the upasana again. It is in

the form of Aksi purusa upasana. Ananta purusa brahma upasana taught by Agni is followed by the acharya and after talking about the upasana in 15<sup>th</sup> section and it is concluded with brahma upasana phalam. This is the movement or development of the five sections. The entire first section of brahma sutra is textual analysis. All the time you remember the texts. 4.10 of Chandogya upanisad is brahma upasana given by Agni devata and 4.15 of Chandogya upanisad is given by acharya sathya kama. If you have a doubt you go back to 4.15.10<sup>th</sup> section of Chandogya upanisad and find out whether it is Brahma Upasana or not and if it is Brahma Upasana then 4.15 of Chandogya upanisad is also Brahma Upasana. If the Upasana taught by Agni is Brahma Upasana then the Upasana taught by Sathya Kama Jabala also would be Brahma Upasana because Sathya Kama Upasana is nothing but continuation of the Brahma Upasana taught by Agni in the 4.10 of Chandogya upanisad. Agni devata might have talked Brahma Upasana and Sathya Kama might have taught another Upasana. Adhi Sankaracharya points out that Agni devata had already said as per the Upanishad that your Acharya would continue the teaching and hence whatever taught by Agni is continued and since Agni had taught Brahma Upasana Sathya Kama also had taught only Brahma Upasana. The word Brahman is clearly used kham and ham are used and it means ananta sukham. Ananta sukham is possible only for Brahman. Ananta sukham Brahma alone is taught in 19<sup>th</sup> section of Chandogya upanisad. So in Aksi Purusa also the same Brahman alone is invoked. Now we will see the word analysis.

Sutra has got three words. Sukha bliss; visishta qualified by; abhidhanat; because of the description; the three words are compound sukhavisishta abhidhanat infinite bliss is endowed with has been introduced. It means Aksi Purusa has been already introduced in the 10<sup>th</sup> section as ananta sukha visishta Brahman endowed with infinite ananda and the same ananda is continued and how can the same Brahma be changed in the study continued by Sathya Kama. Eva means because of this reason also alone; cha and. To complete the sutra you have to add the word Brahman. Purusa in the eye is Brahman because of the reason also.

#### **Topic 4. Antaraadhikaranam [sutras 13-17]**

The person within the eye is Brahman

##### **Sutra 1.2.16 [47]**

##### ***Stutopanishatkagatyaphidhanaccha***

And on account of the statement of the way of him who has known the Truth of the Upanisads.

First we will have the general analysis of this sutra. We had given a particular argument in the previous sutra and based on this purva paksa may raise a question. Now we have to supply a purva paksa to the objection raised in the previous sutra. You should note all the five sections continuously that Agni devata has taught Brahma Upasana and the Acharya continues the Brahma Upasana and therefore Aksi Purusa is Brahman alone. Purva paksa says that as per the Upanishad the argument is improper. In section 10 to 14 of Chandogya upanisad Agni devata teaches Upakosala. The teaching starts with Brahma Upasana. But the problem is that Agni devata do not teach one Upasana and he teaches other Upasanas and therefore there is some complications. They are Agni Upasanas. First it was Brahma Upasana and thereafter many Agni Upasanas are taught by the Agni. After teaching Agni Upasana and at the end Agni tells the student that your Acharya will complete the teaching. They have taught

Brahma Upasana as also Agni Upasana and the teacher starts with Aksi Purusa Upasana. Aksi Purusa Upasana is continuation all right but it is not continuation of Brahma Upasana but it is continuation of Agni Upasana. Therefore purva paksa says it is the continuation of Agni Upasana and why should you take Aksi Purusa as Brahman. For that we say that the discussion of the Acharya Sathya Kama and Upakosala indicates sufficient clues if some exploratory job we will know that it is Brahma Upasana alone and not Agni Upasana as contended by the purva paksa. Adhi Sankaracharya clue is not given in the sutra. After Acharya comes back he looks at the student and says that you have got some more knowledge from someone. He asks from whom did you learn. In that dialogue the teacher tells Upakosala that he has effulgence in the face that of Brahma upasaka. He has not said that sishya had Agni upasana. He clearly says that you have the tejas of Brahma Upasaka. If a person does Brahma Upasana will not have papas and at the same time it is not possible for the Agni Upasana to be free of papas. Not only that at the end of the section Shukla or Brahma loka prapti phalam is mentioned for the Brahma upasaka. Brahma loka prapti is possible for Brahma Upasana alone and not to the Agni Upasaka.

This is said in the mantra 4.15.5 of Chandogya upanisad that reads as *atha yada caivasminkaavyam kurvanti yadi ca narcisamevabhisambhavantyarciso'harahna apuryama napaksamapuryamana paksa dyansadudanneti masams tansmasebhyah samvatsaram samvatsara dadityamadit yaccandramasam cdandramaso vidyutam tatpuruso 'manavah sa enanbrahma gamayatyesa devapatho brahmapatha etana pratipadyamana imam manavamavartam navartante navartante* the meaning of this mantra is then, for those who know this, whether proper funeral rites are performed or not, they go after death to the world of light. From the world of light they go to the world of day; from the world of day to the world of the bright fortnight; from the world of the bright fortnight to the six months when the sun moves northward; from there they go to the year to the sun from the sun to the moon; and from the moon to lightning. There someone not human, receives them and leads them to Brahmaloaka. This is the way of the gods. This is also the way to Brahman. Those who go by this path never return to this mortal world. They never return.

How do you know Brahma upasakas alone get Brahma loka prapti. Here Krishna says in Gita *agnir yotir ahah suklah sanmasa uttaranam tatra prayata gacchanti Brahma brahmavido Janah* that reads as fire, light, day, the bright [alf of the month], the six months of the northern path [of the sun] then going forth the men who know the Absolute go to the Absolute. [Gita VIII.24] it is very clearly said Brahma vid reach Brahma loka. Here Aksi Purusa gets Brahma loka prapti and therefore Brahma loka prapti phalam shows that it is Aksi Purusa only.

Now we will see word for word analysis. Sruto hear the who has heard and practised upasakah; upanishatka Upanisads also Brahma Upasana together will mean one who has heard and practiced Brahma Upasana or Brahma upasakah; gati way also it means phalam, Brahma upasaka phalam the benefit attained by Brahma upasaka which is Brahma loka phalam; abhidhanat; because of the statement or because of the presentation because of the presentation of Brahma loka phalam to Aksi Purusa upasaka and if such upasaka gets Brahma loka phalam then the Aksi Purusa is Brahman alone and if had he been Agni, he would not have got Brahma loka phalam cha because of this reason also. whenever I use Brahman with Upasana it should be understood as Sagunam Brahman and not at all Nirgunam Brahman. This I want to make it clear to you.

#### **Topic 4. Antaraadhikaranam [sutras 13-17]**

The person within the eye is Brahman

**Sutra 1.2.17 [48]**

***Anavasthiterasambhavaccha netarah***

[the person within the eye is the Supreme Self] and not any other [i.e/. The individual soul etc.] As these do not exist always; and on account of the impossibility [of the qualities of the person in the being ascribed to any of these]

Until now he pointed out that Aksi Purusa has to be Brahman alone was explained in the above sutras. Now he says that Aksi Purusa cannot be anything other than Brahman. Now it is from negative angle Aksi Purusa cannot be any other devata. All the other description do not fit into any other devatas. Purva paksa says that the Upanishad has used a word [4.15.1 of Chandogya upanisad] Purusa only for the human being. He has understood Purusa means manusya sariram. Here again the manusya sariram which is visible in the right eye it is said. Here purva paksa wants to analyse and find out that which manusya sariram is visible in the eye. Only when I stand in front of the person and my manusya sariram is seen in the eye and the other man's eye is like a mirror and visible Aksi Purusa has to be Pratibimba sariram, the reflected body in his eye and the other mans body in my eyes. This is the Aksi Purusa so says purva paksa, here Vyasacharya says chaya sariram cannot be upasya devata. Two reasons are given one is that it is impermanent and unsteady. The second reason is all the other virtues given cannot fit into chaya sariram. Can the Pratibimba sariram be immortal. Aksi prati Bimba sariram cannot be immortal. It cannot be nirvikaram, abhayam, vamanitvam etc. Virtures do not belong to chaya sariram. Because of these reasons Aksi Purusa cannot be chaya sariram.

Sutra has got five words. Anavasthiteh; not existing always unsteady or impermanent of the reflected boy and therefore it cannot be upasya devata; even if one turns one's head the Pratibimba sariram or the reflected boy will go; asambhavat; on account of the impossibility of all the virtues that we should know amrtivam abhayatvam etc..mentioned in the Pratibimba sariram; cha and, also na not itarah any other the chaya sariram. Details in the next class.

## BRAHMA SUTRA

Class 77

### **Topic 4. Antaraadhikaranam [Sutras 13-17]**

The person within the eye is Brahman

**Sutra 1.2.17 [48]**

#### ***Anavasthiterasambhavaccha netarah***

[The person within the eye is the Supreme Self] and not any other [i.e., the individual soul etc.] As these do not exist always; and on account of the impossibility [of the qualities of the person in the being ascribed to any of these]

This aksantara Purusa occurs 4.15.1 of Chandogya upanisad which is part of Upakosala vidya. We see the final sutra. In the previous sutras Vyasacharya establish that aksyantara Purusa is Paramatma alone and later various attributes were mentioned and all of them fit in with Paramatma only and finally the phalam also is mentioned as Brahma loka prapti phalam and Vyasacharya confirmed that only by Brahma Upasana alone Brahma loka prapti is possible but nothing else. All the first four sutra established positively and in this sutra Vyasacharya establishes negatively that the aksyantara Purusa cannot be anything other than Paramatma.

Here main purva paksa kept in view is a person who claims Pratibimba sariram as aksyantara Purusa, first he takes Purusa as human body that is widely understood meaning, because of the word drisyate he takes the Purusa sariram which is visible in the eyes and the only sariram which is the reflection of the body in the eye of the person standing in front. This is the main contention of Purva Paksi. Vyasacharya refutes Purva Paksi and says Pratibimba sariram cannot be Aksi Purusa, for that he gives two reasons.

The mantra describes aksi Purusa as eternal and if aksi Purusa as pratibimba` sarira eternity cannot be explained. The aksi Purusa is described as amrita permanent one. The other virtues mentioned there are impossible in the case of Pratibimba sariram Sarva karma pratitvam, Vamanitvam etc. Chayatma cannot have all these virtues. Therefore you have to supply aksyantara purusah. Itarah na bhavati. The reason being anavartate asambavaca. Being other virtues being impossible in Pratibimba sariram. Aksi Purusa cannot be taken even in the case of Jivatma also. Not only Jivatma is negated and says even the devatas in the aksi cannot be taken as Paramatma. In the aksi Surya devata is also not to be taken as Paramatma. All the three Atma is negated by itarah. If all the three are negated, the Paramatma alone is left out to be aksi purusah. With this antaraadhikaranam is over.

The subject matter is aksi antara Purusa mentioned in the mantra 4.15.1 of Chandogya upanisad/ the second factor to be noted here what is the doubt. Whether the Purusa is Paramatma or something else. Something else we mean Jivatma, chayatma or devatatma. Third factor is the view of the Purva Paksi and he says that it is chayatma alone. The meaning of chayatma means physical body reflected in the eye of a person. The argument of purva paksa is because of the word Purusa he takes it as body and because of the word drisyate it is

visible; aksi Pratibimba Sthoola Sariram alone. Fourth factor is siddhanta and we say aksi Purusa is Paramatma alone. The main reason is the virtues mentioned therein fits with Paramatma alone and not to any other one and hence it is concluded that aksi Purusa is Paramatma. This topic occurs in the right place alone which is called sangathi.

After establishing that Paramatma alone is aksi Purusa purva paksa raises a final question is that you have not explained on word properly. The mantra says aksini Purusa drishyate that is one visible in the eye. Now if you take aksi Purusa as Paramatma, the Paramatma visible in the eye and purva paksa asks the question that Paramatma is visible. In all the Upanisadm you have very clearly said that Paramatma cannot be tasted touched etc. How do you reconcile with the description mentioned in the mantra. Adhi Sankaracharya say the word darsanam has two meanings and one is literal meaning of sensory perception and the other meaning is the clear understanding. Jnanam is called darsanam. See means one is understanding and another is sensory perception. Just as seeing is final the understanding is also final and doubtless.

All over the Upanishad the word seeing is used to convey the idea of recognition and understanding. It means Paramatma is discerned in the eyes. In the eye I experience Consciousness I don't see Consciousness but experience Consciousness and the Consciousness in the eye is not seen but discerned. My body is conscious means I don't see Consciousness but I feel the Consciousness and when Upanishad says in the eye, it means I felt in the hand I Paramatma and if Consciousness is felt everywhere why specifically say eye alone because eyes alone is the source of 90 percent of the knowledge we gain. Eye is the locus of Consciousness and drisyate is not wrong thing and drishyate means feel the Consciousness.

## **Topic 5. Antaryamiadhikaranam [Sutras 18-20]**

The internal ruler is Brahman

### **Sutra 1.2.18 [49]**

#### ***Antaryamyadhidaivadishu taddharmavyapadesat***

The controller of gods and others from within [is the Atman], for the characteristics of that [Atman] are mentioned.

This Adhikaranam is known as antaryamyadhikaranam. This is known by this name because of the first name of the first sutra. This is also a smaller Adhikaranam with three sutras only.

In this Adhikaranam topic taken is Mantra 3.7.3 of Brihadharaynaka upanisad that reads as *yeh prthvyam tisthan prthivya antarah, yam prthivi na veda, yasya prthivi sariram, yah prthivim antaro yamayati, esa atmantaryamy amrtah*. This means Yajnavalkya said 'He who dwells in the earth, yet is within the earth, whom the earth does not know, whose body the earth is, who cotnrols the earth from within, he is your Self, the inner controller, the immortal.

Now we have to know the background. Third chapter of Brahadharaynaka upanisad is an interesting chapter. Janaka maharaja conducted a big yaga and all scholars from various places attended the yaga. Janaka maharaja wanted to find out who is the best of all the

scholars and he conducted a debate and he offered to whoever is the learned scholar will be given thousand cows with gold tied to their horns.

Even before the debate started, he called his Brahmachari and ordered to drive all the cows to his asrama. This was looked upon by the scholars attending the debate as an arrogant action on the part of Yajnavalkya and Janaka's priest Asvala questioned the propriety of Yajnavalkya for having ordered the cows be driven to his asram without proving his worth. The scholars asked Yajnavalkya 'how do you consider yourself the best of the scholars'.

Yajnavalkya said that he wanted the cows and he ordered the cows to be taken to the asrama. Asvala the hota of the palace demanded Yajnavalkya to answer the question raised by them and only after proving his worth he could drive the cow to his home. In the seventh section one Brahmana comes his name is Aruni and he asks two questions to Yajnavalkya one regarding Hiranyagarbha and another about Isvara. There also we have an interesting story that says Aruni went to Madra desa for some teaching and he asked a Gandharva that possessed the wife of the teacher. They asked all about who is Hiranyagarbha and who is Antaryami for which the Gandharva gave the answers.

Hiranyagarbha in this section is termed as sutra Atma and Isvara in this section is termed as Antaryami. The question asked is who is greater Hiranyagarbha or Antaryami Isvara or sutra. Since Antaryami is superior this section is called Antaryami Brahmanam. Here Aruni asks who is Isvara and who is Antaryami.

This is explained in Sloka 61 of chapter 18 that reads as isvarah sarvabhutanam hrddese 'rjuna tisthati bhramayan sarvabhutani yantrarudhani mayaya that means The Lord abides in the hearts of all beings, O Arjuna causing them to turn round by His power as if they were mounted on a machine.

The lord is called Antaryami. Lord is inside everything, every devata and every being. Hence it is called antah. Yami means the controller. Antaryami means inner controller and the one who is inside and controls everything. Control means one who gives existence to all of them and one who gives Consciousness to all of them. Brahma alone lends existence to everyone.

If the mind exists it is because of Consciousness only. That alone is further explained in the form of a yaksa story in Kenopanisad. Inner controller of fire and vayu is Brahman only. Yajnavalkya explains all about Antaryami and he says Antaryami is both in microcosm and macrocosm and it is in all the devatas and in all the living beings. Antaryami also controls Antaryami controls Indra and individual. Antaryami also control Prithvi and Prithvi devata. Just I cannot know Antaryami so also Prithvi devata cannot know Antaryami. If at all want a body to Brahman the Prithvi is the body of that Brahman.

Residing within Prithvi controls Prithvi and lends Consciousness to Prithvi devata. In every panca bootha Antaryami is there and later he says Antaryami is in you and this essence is tat tvam asi and it is none but you yourself. This Antaryami is your eternal essence. What is the controversy here? The controversy here is that Antaryami it is said and it is not Paramatma. It is inner controller only and it is not Brahman. A vagueness has because inner controller it is said. Every devata is said to be the inner controller. Surya devata can be called Antaryami because Surya devata also is inner controller and it controls my eyes and solar disc and Surya devata resides in my eyes also.

Similarly Indra devata is within my hand and it can be called Antaryami. Akasa devata can be called Antaryami and akasa is in our ears controlling our hearing power. Each devata controls external world and also inner organs. Antaryami of Antaryami refers to a devata or does it refer to Brahman. Does it refer to Isvara or a devata? Purva paksa says it is devata talked about. And it is not Brahman is the contention of Purva Paksi. Siddhanti will prove that Isvara is the ultimate controller. It is like an intermediary boss and the ultimate boss. Intermediary boss controls his inferiors and the ultimate boss controls him himself.

Now I will give you a general analysis of the first sutra. Vyasacharya establishes Antaryami both in microcosm and macrocosm is Isvara because all the virtues mentioned fits with Isvara only and not with any devata. Three virtues are mentioned here. The word immortal fits with Isvara only and even devatas are not immortal and they occupy that status because of the punya karmas. Devatas are also perishable only. Amritatvam cannot fit into Isvara and Brahman only. It is said to be the innermost essence of jiva and Brahman alone is the essence of jiva and devata is never said to be the inner essence of jiva. Atmatvam fits into Brahman alone. More in the next class.

## BRAHMA SUTRA

Class 78

### **Topic 5. Antaryamiadhikaranam [Sutras 18-20]**

The internal ruler is Brahman

#### **Sutra 1.2.18 [49]**

#### ***Antaryamyadhidaivadishu taddharmavyapadesat***

The controller of gods and others from within [is the Atman], for the characteristics of that [Atman] are mentioned.

We see Antaryami adhikaranam and the Antaryami discussed in 3.7.3 of Brihadharaynaka upanisad. The controversy is what is the Antaryami mentioned here. The word only means inner controller and inner controller can be anyone. According to sastra presiding deity can be called inner controller in the form of devata. It is immediate controller of every action. Behind the devatas we have Isvara or Brahman. This Brahman is the ultimate controller, which controls everything through devata. Brahman controls the eye through sun, the mind through moon etc. The ultimate inner controller is Isvara. In sandhyavandanam we invoke the immediate inner controller and we invoke only Brahman. Whether in the Brihadaranyaka upanisad whether Prithvi refers to the inner controller or Isvara is our question. Antaryami is Brahman only because all the attributes mentioned are Brahman's attributes alone. Atmatvam sarvantaryatmam and amritatvam and Vyasacharya arguments is all the three attributes relate to Brahman only and not to any devata. Brahman alone is inner Self of everyone. No particular devata controls every diety. Upanishad says Antaryami is my essential nature and therefore it must be Brahman alone. The second attributes are sarva antaryamitvam and here it is said that Antaryami is the inner controller of everyone. Everyone means all gods, all living beings Adhibootham and all organs Adhyatmam. Antaryami is the inner controller all gods, human being and all organs. Brahman alone is inner controller of all gods, all beings and all organs. No particular devata sarva Antaryami. Every particular devata is inner controller of only one thing. Surya devata can be Antaryami of eye alone and not any other organs. Third one is amritatvam means immortality and that does not belong to any devatas and Brahman creates all of them. They have longer life but they do not have immortality or amritatvam. There is one more argument. It is not there directly in the sutra. If you take the third mantra and see the meaning you will know that. The Antaryami resides in the Prithvi. And the Antaryami is inside the Prithvi and inner Self of Prithvi and em Prithvi na veda Prithvi does not know Antaryami. The earth does not know the Antaryami. What is the meaning of the word earth? Certainly word earth cannot be physical earth which being inert nobody need say it does not know anything. Here Prithvi does not know Antaryami and here Prithvi does not mean anything because Prithvi cannot know anything being inert. That means we mean Prithvi devata knows and the question is Prithvi devata knows Antaryami or not. Even Prithvi devata does know Antaryami. Vyasacharya argues if the Upanishad says Prithvi does not know Antaryami, then Antaryami must be someone different from even Prithvi devata and only then it is an object different from Prithvi devata. Prithvi devata does not know Antaryami means Antaryami is inner controller of Prithvi devata and Prithvi devata

does not know Antaryami which is nothing but Brahman. This is the next argument to establish that Antaryami is not Prithvi devata. Now we will see word for word analysis.

Antaryami; the ruler within; it means inner controller; residing within, indwelling; yami means controller that controller residing within is called Antaryami; Antaryami occurring in 7<sup>th</sup> Brahmanam of 3<sup>rd</sup> chapter of Brihadharaynaka upanisad, this is the controversial word who is the controller. Adhidaivadishu; in the gods, etc. This relate various devatas; Antaryami residing in god etc., not only residing in the gods but also residing in living beings animals etc., which means Adhibootham and Adhideivam and Adhyatmam like Jnanendrias and karmendriani etc.it is within the prana also; then we have to supply to complete the sentence that is Brahman Antaryami residing in gods, humans and organs is Brahman alone and not limited devata; tad dharama vyapadesat; tad means Brahman; dharma means attributes; attributes kept in mind is atmatvam, savantriyatmam and amritatvam etc., devata cannot have any of the above three attributes. Vyapadesat because of the reference to mention; because of the reference you should take Antaryami as Brahman and not anything else.

Now purva paksa raises one objection. He asks the question how can Brahman be inner controller of everything because in the world I have to control anything I need have various bodies etc. It is only through our organs you control the everything. Antaryami if it is Brahman cannot be the controller because he does not have any controlling medium. This is the argument number one; you say Brahman is asangam. It does not have any relation-ship. How can relation-less connectionless Brahman control anything? Without relationship how can you control anything? How can Brahman without any relation control anything. There is no rule that a body requires to control everything. Body is utilized to control but there is no rule a body required. Now the question is how does Jivatma control the body itself. I move the cloth with the help of my hand. How do I move the hand. To move the hand I the Jivatma do not require any other hand and Jivatma has the sakti to move the hand and to move one body you don't require anything and you have the sakti and it control the body without the help of another body and the Brahman can certainly move anything without any body and that moving power is called maya. Brahman is asarirah and it has maya sakti. The second question is Brahman does not have any connection with the world and how can connectionless Brahman can control the world. Pure Brahman is asangam and maya sahitam Brahman has got relationship with the world and maya sahitam Brahman it has become vyavaharikam and world is also vyavaharikam and the vyavaharika Brahman and vyavaharika world has got connection. But Nirgunam Brahman has no connection whatsoever. With this first sutra of this adhikaranam is over.

## **Topic 5. Antaryamiadhikaranam [Sutras 18-20]**

The internal ruler is Brahman

### **Sutra 1.2.19 [50]**

#### ***Na cha samrtamataddharmabhilapat***

And [the internal Ruler is] not that which is taught in the Sankya smriti [viz. Pradhana] because qualities contrary to its nature are mentioned [here]

We will have general analysis of this sutra. Here Vyasacharya answers an objection raised by Sankya philosopher. Objection is not there but the answer is given here. Prakriti can be taken as Antaryami and he justifies saying that prakriti is moola karanam of the entire creation. The basic matter of prakriti with basic three gunas is modified into the entire creation. Since prakriti is the moola karanam of all creation, prakriti is Antaryami of all creation. So they argue prakriti is the very essence of all creation. Sarva Antaryami prakriti so sarva karanatvad. It is amritatvam also. Even in pralaya prakriti does not get destroyed and it goes into avyakta form. Therefore prakriti has got sarvantavitam.

In Brihadaranyaka upanisad itself Antaryami is discussed adristah invisible; apraryaksam it is said; Sankya philosopher says prakriti is also apratyaksam. You see the product and when all products are resolved that prakriti is invisible. Maya is invisible and maya turned product is visible. It is avyaktam and it is another word for prakriti. Antaryami is said to be indriya agocharam beyond sense perception. Antaryami is indriya agocharam; prakriti is also indriya agocharam and therefore Antaryami should be taken as prakriti alone says Sankya philosopher. Our answer is no. It is not correct.

Vyasacharya argues that you don't read the whole brahmanam fully. The Upanishad defines Antaryami it is invisible but seer of everything; asruta srota it is not hear but it is the hearer of everything; Antaryami is a seer and it is chetanam; because itr is drasta srota vijnata and it is chetana vastu whereas moola prakriti is unfortunately achetanam matter principle and how drasta Antaryami reveal achetana prakriti. It can reveal chetanam Brahma only.

Antaryami is mentioned as Atma of everyone. Atma means the inner Self of every living being and every god. The very word Self refers to chetana tattvam only and matter can never be the essence of a living being; Atma can refer to Conscious being and not an inert thing. This is the general analysis. Now we will take up word for word analysis.

Na neither; cha also and in the previous section devata was talked about. Not also another negation here; smartam; the prakriti of Sankya philosophy, in most of the place the word smartham means prakriti of Sankya philosophy; in the tradition word smriti was used for all secondary literature. All puranas and itihikas as are called smriti anything other than the primary literatures; four Vedas are primary literature, which is known as sruti even other system of philosophy literature are also called smriti. Any topic discussed in smriti is called smartam. smartham can refer to anything and here it is prakriti discussed in Sankya philosophy. That which is taught in [sankya] smriti; the you supply another word Antaryami it means inner controller mentioned in 3.7.3 of Brihadaranyaka upanisad. Inner controller mentioned in the above Brahmanam is not prakriti also. Ataddharmabhilapat; this is a common word atad dharma and abhilapat. Because qualities contrary to its nature are mentioned, more in the next class.

## BRAHMA SUTRA

Class 79

### **Topic 5. Antaryamiadhikaranam [Sutras 18-20]**

The internal ruler is Brahman

#### **Sutra 1.2.19 [50]**

#### ***Na cha samrtamataddharmabhilapat***

And [the internal Ruler is] not that which is taught in the Sankya smriti [viz. Pradhana] because qualities contrary to its nature are mentioned [here]

We see the 19<sup>th</sup> sutra of second pada, 3<sup>rd</sup> sutra of antaryamiadhikaranam which is discussed in 7<sup>th</sup> Brahmaanam of 3<sup>rd</sup> chapter of Brihadaranyaka upanishad. There the word Antaryami is occurring and who is the inner controller is the doubt which is clarified in this sutra. All the properties of Brahman applies to Antaryami alone and none else can be immortal, devata are also found to be mortal and they will drop their devatatvam once the karma is exhausted. This is the essence of the first sutra.

Vyasacharya here in the second sutra negates the view of the Sankya that prakriti can be inner essence of the entire creation as prakriti is primary cause of all the creation. Not only that Upanishad says it is adristaha etc., and according Sankya philosophy prakriti's products are visible but the products are visible and because of invisible nature Vyasacharya says that it is not possible. At the end of the 7<sup>th</sup> brahmanam four words are there drasta, hearer, thinker and knower and these words indicate that the Antaryami is chetana vastu and prakriti is achetanam according to Sankya philosophers. Behind prakriti there is Purusa, prakriti may be the controller of everything but Brahman is the controller of Purusa. Prakriti is nonsentient Antaryami but Brahman is sentient Antaryami. Now we will see word for word analysis.

Na neither; cha also and smartam Antaryami cannot be prakriti of Sankya also. In the previous it was pointed out that Antaryami is not any devata and they are not ultimate Antaryami they are intermediary Antaryami only. In the previous sutra devatas were negated and here prakriti is negated. Tad refers to prakriti. Tad dharma means property of prakriti. Adatdharma a property does not belong to prakriti or which is contradictory to prakrit dharma is mentioned in the Upanishad; because a property which is contradictory of the property of prakriti which is sentiency or chetanatvam and therefore it is not Antaryami. Antaryami is chetana vastu and prakriti is achetanam. The word chetana is not mentioned but it is indirectly mentioned. In the words drasta srota vijnata and mantra seer, hearer, thinker and knower all are possible for chetana tattvam alone, because of chetanatvam, it is concluded that Antaryami is not prakriti but Brahman alone.

### **Topic 5. Antaryamiadhikaranam [Sutras 18-20]**

The internal ruler is Brahman

**Sutra 1.2.20 [51]**

***Sarirachobbaye'pi hi bhedenainamadhiyate***

An the individual soul [is not the internal ruler] for both also [i.e., both recensions viz., kanva and Madhyandina Sakhas of the Brihadaranyaka upanisad] speak of it as different [from the Internal Ruler]

First we will have general analysis of the sutra. Here, Vyasacharya is negating another possible suggestion from another Purva Pakshi. The subject matter of controversy regarding Antaryami is it a devata no; is it prakriti no; a third suggestion is can we say Antaryami as Jivatma which is referred in the sutra as sariarah Jivatma. Because Jivatma also seems to have all the properties mentioned there. Jivatma controls subtle body which is inert; it enlivens physical body nonfunctional inert body. Jivatma happens to be chetana unlike prakriti. Jivatma is also eternal punarabi jananam and punarabi maranam. The birth death cycle continues forever. Why not take Jivatma as Antaryami. It is now established that Antaryami is Brahman and not any other thing. Antaryami is presented in this Brahmanam as the controller of Jivatma also. So we are not talking about Jivatma the controller. We talk of Antaryami the Brahman and Vyasacharya points out Brahman are presented as Jivatma and both versions are presented in the Brihadaranyaka upanisad. One belongs to kanva sakha of shukla yajur veda and madyandina sakha os shukla yajur veda. Vyasacharya says in both the sakhas in both Brihadaranyaka upanisad versions ami is presented as inner controller of Jivatma. In fact two versions are almost closer but here and there some changes are there. Sankara has written to madyantina sakha and sureswaracharya has written a commentary on kanva sakha. Yaga vijnane drastan here vijnana means Jivatma as Jivatma is often referred to as vijnanatma. In madyandina sakha there is a slight variation. That mantra begins yaha atmani drastan; combining two mantras we conclude that Antaryami is different from Jivatma and Antaryami resides in Jivatma and controls Jivatma. Both kanva and madyandina saka reveals Antaryami is the controller of Jivatma. This is the general analysis of the sutra.

Now we come to word for word analysis. Antaryami and na; sariraka the third word it is one who resides in the body that is Jivatma; ca is added to put the meaning also. The final meaning is Antaryami Jivatma ca na bhavati. Antaryami cannot be Jivatma also. Both the branches of Brihadaranyaka upanisad kanva and madyandina sakha are referred to by the word ubaye; hi means because; enam adhiyate Antaryaminam both reveal Antaryami adhiyate reveal; bedena as different from Jivatma. Different from Jivatma. Or different from sarira Jivatma. He says because Antaryami is presented as inner controller of Jivatma, inner controller must be different from the controlled. Not only that there is another expression also and that is Antaryami resides in Jivatma. Jivatma becomes the residence and Antaryami becomes resident and resident Antaryami is different from resident Jivatma. As the container content different is clear; as the controller controlled the difference is very clear. With this word for word analysis is over. Antaryami is not a devata; not a Jivatma, Antaryami is not prakriti and Antaryami is Brahman only. Now we will go to the fourth sutra.

Ami is not Jivatma and Antaryami is Brahman only. It is clear that Brahman is different from Jivatma and Paramatma1 is different from Jivatma. Antaryami is the controller of Jivatma. When the definition is very clear how come you say Antaryami is different from Brahman. One is the controller and the other is controlled. What is your philosophy whether Jivatma

Paramatma aikyam or Jivatma and Paramatma are different? Adhi Sankaracharya says both; Paramatma controls we will say Jivatma and Paramatma are identical we don't have any confusion. If you have confusion we will resolve the doubt. We say both are correct. How can we say both? If they are different they cannot be identical; if they are identical both cannot be different. Here we say that there is two-tier system. Fortunately all other systems do not agree with vyavaharika Paramarthika dristi beda. Vyavaharika dristi very much accept jivatma and Paramatma bedah. Advaidin also pay their worship to Lord. First he will accept aikyam and not agree with namaskara; then he will say he will accept namaskaram but not accept aikyam,. Controller means there is upadhi in the form of maya. When I say Jivatma is controlled that too sarira vishistah and maya visishtah and beda is highlighted. From Paramarthika dristi we agree to tat tvam asi. Now they ask who allowed the three-tier system of vyavaharika and Paramarthika levels. Where is the pramana from that. Adhi Sankaracharya say if you are available to listen to me the I will tell you that the same Brihadaranyaka upanisad says that where there is vyavaharika dristi is there, there is beda and from Paramarthika angle there is abeda. Avidya avasta is vyavaharika dristi and vidya is Paramarthika dristi. As long as one is ignorant he will say I am different and Brahman is different. Both are there from the standpoint of dristi. From vyavaharika dristi beda will be there. Now we will come to the summary of this adhikaranam.

The subject matter or controversy is Antaryami or inner controller mentioned in 3.7.3 of Brihadaranyaka upanisad; the doubt is this Antaryami is Brahman itself or anything else. It can be devata Jivatma or prakriti or siddha yogi etc. Third is purva paksa who says it is not Brahman. It can be devata, prakrit or Jivatma. His own reason for advocating this view which we have seen elaborately in the present and previous class. Siddhanta asserts that Antaryami is Brahman only. All properties mentioned for Brahman fit in with Brahman . This adhikaranam occurs in the right place.

I will conclude the summary of the adhikaranam. Antaryami discussed here is Sagunam brahmana alone. Here we talk about beda or division. Once controller status comes it is Sagunam Brahman. We do not classify as Sagunam or Nirgunam. We don't classify in this way. Sagunam Brahman is discussed in upasana and Vedanta prakaranm also. In aksi Purusa we analysed and it proved to be Brahman and it was for the purpose of Upakosala vidya. The phalam given is krama mukti. Brahman was discussed for Upasana purpose and that Brahman is Sagunam Brahman. Here also we talk of Sagunam Brahman but the purpose of the sutra is not for Upasana but to realize jivatma Paramatma aikyam. Sometimes Sagunam Brahman is a step stone for Nirgunam Brahman status. Sometimes Sagunam Brahman is introduced for nirguna jnanam. In Antaryami adhikaranam we talk of Sagunam Brahman only but it is not for Upasana but to realize Jivatma Paramatma aikyam. Sometimes it is introduced as a stepping-stone for nirguna Brahma jnanam. For example in Taittiriya Upanishad iii.1.2 reads as *tasmad-ca etasmad-antmana akasah sambhutih, akasad, vayuh, vayor-agnih, agner-apah, adbhyah prthivi prthivya osadhayahm asadhibhyo-nnam annat-purusah*, from that this atman is space born; from Akasa air, from air, fire, from fire, water; from water earth from earth herbs from herbs food and from food man. Taittiriya Upanishad introduces Brahman as Sagunam Brahman. It is because Nirgunam Brahman is beyond Sagunam Brahman. The introduction of Sagunam Brahman is not for Upasana. It is for nirguna saguna aikyam is aimed at here. Sagunam Brahman are two; one for the purpose of Upanishad and we call the Brahman as Upasam Brahman whereas in Brahmananda valli jagat karnam Brahma is introduced but is not for Upasana but is stepping stone for Nirgunam Brahman and that Brahman is called Neyam Brahman. How to see the difference we will see in the next class.

## BRAHMA SUTRA

Class 80

### **Topic 5. Antaryamiadhikaranam [Sutras 18-20]**

The internal ruler is Brahman

**Sutra 1.2.20 [51]**

*Sarirachobbaye'pi hi bhedenainamadhiyate*

An the individual soul [is not the internal ruler] for both also [i.e., both recensions viz., kanva and Madhyandina Sakhas of the Brihadaranyaka upanisad] speak of it as different [from the Internal Ruler]

With 20<sup>th</sup> sutra antaryamiadhikaranam is over. I pointed out Sagunam Brahman is seen as part of Upasana in which context it is called Upasyam Brahman where beda is retained and the purpose of Sagunam Brahman is Upasana and th bhalam is also krama mukti only it is often presented as jagat karanam Brahma. Jagat karanam Brahma is jnana prakaranam also the aim is ultimately to discover Jivatma and Paramatma and this Sagunam Brahman is not meant for krama mukti and it is meant for nirguna jnanam and jivan mukti and this Sagunam Brahman is called Neyam Brahman, in sandilya vidya Sagunam Brahman is presented for Upasana and it is called Upasyam.

In Taittiriya Upanishad the Sagunam Brahman is introduced for the purpose of gaining jnanam. What is difference between Upasyam Brahman and Neyam Brahman. The difference is this when Sagunam Brahman is present the focus is on the guna which makes Brahman superior and it emphasizes difference between Brahman and me.

The differences are retained until the end. Karantvam is highlighted my inferior quality is highlighted. Upasyam Brahman is guna pradhanam. In jagat karanm Brahma or Neyam Brahman it is not for highlighting but it a temporary attributes and the emphasis is on Brahman and karanatvam is loosely attached because sooner or late when tatvam asi coms karanatvam is unscrewed and taken away and jiva is going to lose the karyatvam status and it is neither karanam nor karyam.

We are not going to retain karantvam status of Brahma and at the same time we are not going to retain the karyatvam status of jiva and at the time of maha vakyam karya karana vilaksana Chaitanyam is there. When it is loosely attached we say it is Neyam Brahman and when the same Chaitanyam is tightly attached to attributes it is called Upasyam Brahman and when you gain jnanam we own up with Nirgunam Brahman the ultimate goal. Isvaratvam has no value because it is mithya because it is caused by maya. Upasyam Brahma is also Sagunam. In Upasyam Brahman is guna pradhanam and Neyam Brahman is jnana pradhanam. In Upasyam Brahman attributes are there and are highlighted but in Neyam Brahman the attributes are dropped once jnanam is attained and Nirgunam Brahman is realized. When we study every adhikaranam in Brahma Sutra we don't ask the question whether it is Upasana Brahma prakaranam or jneya prakarana Brahman. At the end I will point out which relates to Neyam Brahman and which relates to Upasyam Brahman. Antaryamitva status is loosely

attached and is dropped at any time. By studying the context, we will know. After Antaryami Brahmanam we see aksaram Brahman free from all attributes. Antaryami karanam, Brahma is introduced and aksaram Brahman karantvam status is dropped. Now we will go to the next adhikaranam.

## **Topic 6. Adrisyatvadhikaranam [21-23]**

That which cannot be seen is Brahman

### **Sutra 1.2.21 [52]**

#### ***Adrisyatvadigunako dharmukteh***

The possessor of qualities like indivisibility etc., [is Brahman] on account of the declaration of its attributes.

This adhikaranam is called adrisyatvadhikaranam. This is a small adhikaranam consisting of three sutras and the topic taken for analysis is 1.1.6 of Mundaka Upanishad that reads as *yat tad-adresyam-agrahyam-agotram-avarnam acaksuh srotram tad-apani-padam, nityam vibhum sarvagatam susuksmam tad-avyavam yad bhuta-yonim pari-pasyanti dhirah*. The meaning of this mantra is that which is invisible, ungraspable, un-originated and attribute-less, that which has neither eyes nor ears nor hands nor legs – that is Eternal full of manifestations, All-pervading. Subtlest of the subtle – that Imperishable Being is what the wise perceive as the Source of all creation.

First I will give you the background behind the mantra. Sounaka approached his guru asked the question what is that knowing which everything is known? What is in the mind of the student when he asked the question and he had the ‘basic knowledge’ that material cause alone appear as many types of creation.

Since ekam karanam appears as anekam karanam eka karana vijnanena sarva karya vijnanam bhavati. By knowing one, material cause one can know all the effect. Effects do not exist separate from cause. By knowing the cause the effects are as good as known. With this knowledge the student asks the question what is the one ultimate cause of the world ultimate material cause of the world knowing which entire universe is known. By knowing the wood you can know furniture only.

Similarly knowing gold you can know only about ornaments alone, but when you know the ultimate cause of the world eka karana vijnanena aneka karya vijnanam bhavati. The question is jagat karanam kim? Cause means material cause of the world. Angiras elaborately answers this question. We have to learn one is para vidya superior vidya and inferior vidya that is called apara vidya; knowledge of cause is higher knowledge and knowledge of effect is lower knowledge. Why knowledge of cause higher and knowledge of effect is lower.

By knowing one effect the cause is not known. By knowing the cause all effects are known. Karya vijnanena sarva vijnanam na bhavati; karana vijnanena sarva vijnanam bhavati. Karya vijnanam is aparam; not only that teacher will show karana vijnanam will liberate a person and karya vijnanam will not liberate a person. Karya vidya is apara vidya and it keeps you in bondage and karana vidya or para vidya liberate the person. The teacher removes the

curiosity of the student by calling it as aksaram. Karanam is aksaram. Next question is what is aksaram? Then the teacher gives the meaning of aksaram.

Even though you are supposed to know the meaning of the mantra 1.1.6 of Mundaka Upanishad I will give you the meaning. Agreshyam that is not available for the five sense organs ungraspable; agnotram that which does not have any family at all; avarnam that which is free from all properties, or descriptions; indescribable attributeless; acaksuh srotram that which is organ-less or limbless; Jnanendria rahitam; first one is not object of sense organs now it is non possessor of sense organs; tad apani padam it is Karmendriya rahitam; then nityam that is immortal; vibhum capable of becoming everything; that which can become creation; sarvagatham all pervading susooshma extremely subtle avyavam without any decay and bhutayonim the material cause of all the beings that is known as aksaram and this aksara vidya is apra vidya.

Now the question is what is controversy. Why should the mantra is brought to the Brahma Sutra? The reason is this nowhere in the mantra the word Brahman is mentioned. It says it is material cause is there the word aksaram is there and how do you know it relates to Brahman, Sankya philosopher claims aksaram relates to moola prakriti which is known as pradhanam fundamental matter in Sankya philosophy. We say bhuta yoni refers to Brahman alone. That is topic of the sixth adhikaranam.

Now I come to general analysis of the first sutra. This material cause seen unheard etc., is Brahman alone. It is because the specific properties mentioned in the Upanishad. This belonged to Brahman alone. Where do we find the specific properties are mentioned? Three examples are given. From spider web comes from earth tree originates from body hairs grow similarly from Brahman the whole creation comes. Spider is both the material cause and intelligent cause of creation; second example form one earth varieties of plants come; here from achetanam chetana vastu emerges and similarly from one Brahman varieties of creations emerge; the third example is the hair growing from the body from live body lifeless hair comes. From chetana sariram achetana roma comes. From chetana Brahman achetana sristi comes.

From the Brahman creation comes. In 1.1.9 of Mundaka Upanishad mantra that reads as *yah sarvajnah sarva vid yasya jnana mayam tapah tasmad etad Brahma nama rupam annam ca jayate* the meaning of the mantra is from Brahman [Supreme realities – who not only is aware of the total happenings in the world but is equally in the know of all the details of happenings every minute whose very thought is of the nature of knowledge – are all these produced; the creator, names and forms and nourishness for all; it is said here that jagat karanam Brahma is omniscient; sarvavit is omniscient; Adhi Sankaracharya gives the significance also first is from the standpoint of para vidya and the second from apra vidya and Brahman is apra vidya from material science as also from spiritual angle also. Adhi Sankaracharya keeps in mind sarvjnaha sarvavit.

Vyasacharya says material cause has got to be Brahman your prakriti can never be said to be omniscient, cannot be all knowing it cannot even have limited knowledge and it is jada tattvam and therefore aksaram Brahma eva na tu achetanam pradhanam. This is the general analysis of the first sutra.

It has got two words. Adrisyatva invisibility, which is described as unseen; that which is endowed with properties of unseenness unheardness handlessness etc.; that material cause is

Brahman alone; why Brahman next word is dharmokteh after the mention of attributes of Brahman in the Upanishad; adi and the rest beginning with gunakah; one who possesses the quality; adrisyatvadigunakah possessor of qualities like invisibility. Dharmokteh; because of the mention of qualities. The word bhuta yonih means material cause mentioned in mantra 1.1.9. of Mundaka Upanishad *yah sarvajnah sarva vid yasya jnana mayam tapah tasmad etad Brahma nama rupam annam ca jayate*; one of the basic questions of all the systems of philosophy. All say the matter is ultimate cause from which the material universe has come. Material is called differently.

Sankya calls it pradhanam; nyaya calls it atomic; whether they call it atom, energy etc., the matter is fundamental from which the universe has come. Vedanta says Consciousness is the fundamental and from out of Consciousness alone the universe has come. Matter is Consciousness or matter is matter is the point at discussion.

Sankya philosopher comes to say and that your conclusion is wrong. And he puts various questions. He says that the prakriti alone can be the material cause of the world as the entire description tally with prakriti. Prakriti is invisible, it cannot be grasped and it is eternal and it is bhuta yoni and all pervading. Not only that the very translation we give is material cause and it is matter. How can material cause be Consciousness? Material cause has got to be matter alone.

All the examples given are in agreement with my conclusion only. Spider, pritvi and body hair example. Spider's web comes from the body and body is the matter. From earth plant kingdom comes from earth, which is a matter. So also hair comes from body and all the three are matter.

Then he says in Mundaka Upanishad there is no word indicating chetanatvam or sentiency. In Antaryami the chetanatvam was indicated by many words. But here there is no word to indicate chetanatvam.

Fourth point is sarvajnah and sarvavid is there in 9<sup>th</sup> mantra and it does not refer to material cause at all and it talks about Purusa tattvam which is sarva vid and sarvajnam. It is talking about the purusah. Don't take 9<sup>th</sup> mantra to support 6<sup>th</sup> mantra.

Next is that later in the second section 2.1.2 of Mundaka Upanishad the mantra goes like this *divyo hymurtah purusah sabahya bhyantaro hyajah; aprano hyamanah subhro hy aksarat pratah parah* the meaning is Self resplendent, formless, unorginated and pure that all pervading Being is both within and without; anterior both to life and mind, He transcends even the transcendent, unmanifested, causal state of the universe. Then he says in this mantra Purusa the Brahman is described. That Sankya philosopher accepts. Then Brahman is described here and last description is Brahman is beyond aksaram. That means different from aksaram which means aksaram is different from Brahman. Now Sankya says coming back to 6<sup>th</sup> mantra, therefore which talks about aksaram is different from aksaram is different from Brahman. Because of these reasons, it is pradhanam and pradhanam alone. This we will do in the next class.

## BRAHMA SUTRA

Class 81

### **Topic 6. Adrisyatvadhikaranam [21-23]**

That which cannot be seen is Brahman

#### **Sutra 1.2.21 [52]**

#### ***Adrisyatvadigunako dharmukteh***

The possessor of qualities like indivisibility etc., [is Brahman] on account of the declaration of its attributes.

We see the 5<sup>th</sup> adhikaranam known as Adrisyatvadhikaranam and in this adhikaranam Upanishad mantra taken for analysis is 1.1.6 of Mundaka Upanishad. Here Upanishad introduces the jagat karanam which is called bhuta yoni and aksaram. Bhuta means all the things and beings and yoni means the material cause of all things and beings and in simple language it is jagat karanam, aksaram. The controversy is whether this refers to prakriti or padhanam a technical word for prakriti used by Sankya philosophers/ whether bhuta yoni is chetanam or achetanam is being analysed. We said it is chetanam and we said that Brahman's character is specifically mentioned. Omniscience Brahma cannot refer to the achetana vastu. We have completed the general study of the first sutra. Here Adhi Sankaracharya gives five reasons to show that all description tally with prakriti alone. The examples given are also tallied with prakriti alone spider, plants and the hair.

In the cases of these examples is matter so also the cause of the world is prakriti the matter. The third reason he gave was that all description did not indicate the chetana dharma. Even sarvajna comes in the 1.1.9<sup>th</sup> mantra of Mundaka Upanishad. The omniscience mentioned in the 9<sup>th</sup> mantra has nothing to do with what is said in 1.1.6<sup>th</sup> mantra of Mundaka Upanishad. These two mantras talk about two different things and how can it be taken to indicate the same thing.

Another argument is mantra 2.1.2 of Mundaka Upanishad says Brahman is different from aksaram and I can also say aksaram is different from Brahman. And then coming to mantra 1.1.6 Mundaka Upanishad this mantra talks about aksaram and this Brahman is different from aksaram which is padhanam and which is different from Brahman. Because of these five reasons, the aksaram does not refer to Brahman but to the prakriti.

The first statement tallies with prakriti alone and not Brahman. For that our answer is that all description do not tally with prakriti. Only some of the description is extended to prakriti and only some of them can be extended. Prakriti is invisible and it is energy form and agrahsyam is ok. But certainly not nithyam sarvagatham and vibhum cannot tally with prakriti as it is subject to negation by Atma Jnanam. In the wake of knowledge prakriti is also negated and Brahman alone remains. prakriti is not nithya and it goes with only Brahman and not with anything.

Prakriti cannot be all pervading and according Sankya philosopher for prakriti produces only inert things and it can pervade only inert things karanam can pervade only the karyam and prakriti can pervade only its product and it can never pervade the jivas and jivas are not the product of prakriti. Any cause can pervade only its product and it cannot pervade jivah which is chetana tattvam and all pervasiveness also cannot tally with Brahman. All the attributes tally with Brahman alone. All the examples given are the achetana examples. Spider's body is chetanam; earth is achetanam and body is achetanam. Jagat karanam also must be achetanam.

Adhi Sankaracharya hints and asks a counter question you say all examples are achetanam. Then jagat karanam is also achetanam. All examples are pratyaksam. In spider example spider is pratyaksam; in second example earth is pratyaksam; in the third example boyd is pratyaksam and in all the three karanams are pratyaksam and prakriti is not pratyaksam and in the example all examples are pratyaksam. Your karanam is pratyaksam and it is not acceptable. Sankya says the example the karnam is pratyaksam and you should not extend the example lto the real life.

Achetanatvam example part you can take. Pratyaksam part you don't extend but achetanam part you should extend, which part to be extended and which cannot be extended and who will decide that. Who will decide which part of the example should be taken which should not be taken and can one person decide ti. That person is author of the example should decide which part should be extended which should not be extended. I say this person has got moonlight face.

Four different people gave commentary. One person may say that I understood the example all right. It blooms as we approach pournami and as the amavasya comes he will have no face. If you study the surface of moon, we see craters with mountains etc. Then the face of the person is rough. Moon is invisible in day and can be seen only in the night.

Fourth person says moon round the earth and this person will not stay at any place. Who will decide which part of the features he kept in mind. That person may say that the moon is bright and cool the author may say. No one has got right to say what he meant when he said the face is like a moon.

Similarly, when we take the example from the Upanishad, Sankya people have no right to interpret what the authors of Upanishad had in mind when giving the spider example etc. Whether pratyaksam part was kept in mind and if you study Upanishad, achetanatvam was not kept in mind. Spider has got eight leg and this was not kept in mind and it should not be taken that Brahman has got eight legs. It should be taken that spider is nimitta upadana karanam should be taken so also Brahman is the nimitta upadana karanam of the creation. Again in the case of earth, it should be taken that from one Brahman many things have emerged as from one Brahman the entire universe and the living beings have arisen.

Similarly from chetana human being from sentient one achetana hair is born similarly from chetana Brahman achetana Prapancha can come. You cannot interpret the example in your way. If we give the rajju sarpa example, Advaidin can say how to extend the example not other people. The nonadvaidins take Advaida example and they should ask us which part it will fix and where it will not fit in. Then they extend the example to all other example where this will not fit. They extend in the wrong places. Fourth mistake they conclusion the advida is wrong. Rajju sarpa you can extend only when the knowledge of rajju removes the ignorance. Rope and snake have different order of reality. How can you extend achetanatvam

as jagat karanam and extending the examples is not correct. Examples should be understood properly.

Next there no chetana dharma mentioned. They talk of inert thing only and chetana dharma is not extended at all. For this our answer is that chetana dharma is not mentioned in 6<sup>th</sup> mantra but mentioned in 9<sup>th</sup> mantra. 9<sup>th</sup> mantra talks about chetana but it talks about different subject in support of sixth mantra. According to Sankya 6<sup>th</sup> mantra talks about prakriti and 9<sup>th</sup> mantra talks about Brahman.

Adhi Sankaracharya says no and assets that both talk of jagat karanam alone and certain features are mentioned in 6<sup>th</sup> and some are mentioned in 9<sup>th</sup> mantra. There is a word bhuta yoni the cause of the universe. The crucial word is bhuta yoni jagat karanam. 9<sup>th</sup> mantra says *yah sarvajnah sarva yasva jnana-mayam tapah tasmad etad Brahma nama rupam annam ca jayate* from this sarvajna sarvavid alone are all these produced the creator, names and forms and nourishment for all.

Therefore in the 9<sup>th</sup> mantra it is said nama rupa is born from omniscient jagat karanam and definitely it is not born of prakriti which is not even sentient. Both 1.1.6 and 1.1.9 talk of jagat karanam Brahman alone and definitely not prakriti. Prakriti can never be omniscient. It does not have even the limited knowledge. With this fourth point is also answered.

Now we go to the fifth point. In the sixth mantra it talks about aksaram identical with Brahman. Aksaram and Brahma are identical we say. We find according to Advaidam that talks about aksaram and Vedanta equates aksaram and Brahman. Sankya asks how would you accommodate 2.1.2 *divyo hyamurtah Purusah sabahya bhyantaro hyajah apramo hyamanah subhro iti aksarat paratah parah* where it is said aksara and Brahman are different.

The word aksaram is used in Upanishad in two different meaning. In fact, the Upanishad is doing this as a mischief only. In every language words have got different meaning. In the same way the word aksaram has got two meaning one is maya and the other is Brahman. In 1.1.6 of Mundaka Upanishad the word aksaram is used in the sense of Brahman and 2.1.2 the Brahman should be understood as maya. Maya is that which pervades the entire creation and that is why the creation is mayitha Prapancha. Therefore in 1.1.6 aksaram is Brahman and 2.1.2 aksaram relates to Maya. The word Atma is used in the meaning of mind, Chaitanyam, physical body also. The fifth point is also answered.

Having answered Sankya philosopher Adhi Sankaracharya gives further reasons that jagat karanam is Brahman alone. First reason is Upanishad has said that knowledge of jagat karanam is para vidya. Now why do we call it superior knowledge. Why call others अपरा विद्या. Adhi Sankaracharya says the reason is only one that para vidya is liberating knowledge whereas अपरा विद्या does not liberate. In this fifth and sixth mantra it is said jagarana vidya is para vidya that means jagat karana vidya is liberating knowledge. Now Adhi Sankaracharya say jagat karanam is prakriti that means prakriti vidya is jagat karanam vidya and para vidya and liberating knowledge. According to you the knowledge of prakriti liberates a person. This Sankya never agrees with it because they have said knowledge of prakriti can never liberate. If para vidya is liberating knowledge, the jagat karanam be Brahman alone and then only it is a liberating knowledge. The he gives some more additional arguments which we will see in the next class.

## BRAHMA SUTRA

Class 82

### **Topic 6. Adrisyatvadhikaranam [21-23]**

That which cannot be seen is Brahman

#### **Sutra 1.2.21 [52]**

#### ***Adrisyatvadigunako dharmukteh***

The possessor of qualities like indivisibility etc., [is Brahman] on account of the declaration of its attributes.

We have completed the 21<sup>st</sup> sutra in which 1.1.6 of Mundaka Upanishad was taken up for discussion. The controversy was whether it applies to pradhanam or Brahman was the point at issue. The doubt whether jagat karanam aksaram is prakriti or Brahman. We saw that Vyasacharya pointed out that jagat karanam aksaram is Brahman only because the omniscience was pointed out while prakriti can never be omniscient. We further various objections raised by Sankya and in the last class we saw the answers to the five objections.

Now Adhi Sankaracharya gives some more reasons in support of our conclusion. The first argument is that in the 5<sup>th</sup> and 6<sup>th</sup> mantra the Upanishad presents the knowledge of jagat karanam as para vidya. This is superior to apara vidya said in Mundaka Upanishad. Why it gets the two names. Apara vidya is binding knowledge and it brings out limitations more and more. Para vidya is superior knowledge being the liberating knowledge.

Aksara vidya is para vidya and para vidya is moksa vidya and therefore it is Brahma vidya. If aksaram is prakriti, apara vidya will be prakriti vidya' knowledge of prakriti will not liberate and knowledge of Brahman alone will liberate therefore Brahma vidya is para vidya and para vidya is aksara vidya and therefore aksara is equal to Brahman.

The students in Mundaka Upanishad approaches his guru and asks the question what is that knowledge by knowing which everything else is known, the teacher para vidya as that knowledge that gives eka vijnanena sarva vijanam. Aksara vidya is para vidya and is equal to sarva vijnana prada vidya. Having this equation what can be aksaram. Aksaram is Brahman then Brahma Vidya is para vidya and Brahma knowledge will give knowledge of everything.

Suppose if you take aksaram as prakriti prakriti vidya is para vidya and is equal to sarva vijnanaprada vidya it will be equal to saying that by knowing this everything is known/. It is not possible by knowing prakriti you will know jada amsam of prakriti only the sariram sookma sariram and you cannot know chetana amsam of creation. By knowing basic matter you will know only material and not chetana vastu. Brahma Vidya alone can give you all knowledge. By knowing Brahman you know chetanam and achetanam only. This is an important argument, which Adhi Sankaracharya will repeat in later portion also. The teacher has presented aksara vidya as para vidya. The argument is whether this is Brahma viya or otherwise. When we go to the second section, apara vidya is elaborated. Chapter 1 section ii mantra 1 to 9 apara vidya is said to be karma Upasana. In the 11<sup>th</sup> mantra apara vidya

vairagyam is mentioned and not only that this person gets interest in para vidya. He goes to guru. Guru should teach para vidya and that is said in 12<sup>th</sup> mantra. The Upanishad says guru taught para vidya and instead using the word para vidya Upanishad uses the word Brahma vidya and from this we come to know para vidya is equal to Brahma Vidya. In the first section we saw para vidya is equal to aksara vidya and in the second section para vidya is Brahma Vidya and from this we infer aksaram and Brahman is one and the same. In 1.1.6 aksara laksanam should be taken as Brahma laksanam. This is the third argument.

Then comes fourth argument. Adhi Sankaracharya says that in the introductory mantra Upanishad begins saying *om Brahma devanam prathamah sambabhuva visvasya karta bhuvanasya gopica sa Brahma vidyam sarva vidya pratisthitham atharvaya jyestha putraya praha* that reads as of the gods, Brahmaji the creator and the protector of the universe was Self born first. He gave out the knowledge of Reality [Brahma Vidya] the knowledge of all knowledges the foundation for all sciences, to his own eldest son Atharva.

Upanishad says the Brahma Vidya was taught. And later having introduced this in 5<sup>th</sup> and 6<sup>th</sup> mantra Upanishad talks about para vidya and apara vidya. Para vidya is aksara vidya and apara vidya is karma Upasana knowledge. Para vidya is aksara vidya and what is the aksaram is the question. Sankya says aksaram is prakriti. If you give this interpretation where is scope for discussing the Brahman at all. There is no scope for studying Brahma Vidya at all. If there is no scope for Brahman the first mantra will become meaningless. If our interpretation is taken Brahma Vidya is aksara vidya and aksara is taken as Brahman. Thus we conclude para vidya is Brahma Vidya and Brahman is aksaram and aksaram alone is Brahman and not pradhanam. Now we will go to second sutra of this adhikaranam.

## Topic 6. Adrisyatvadhikaranam [21-23]

That which cannot be seen is Brahman

### Sutra 1.2.22 [53]

#### *Viseshanabhedavyapadesabhyam cha netarau*

The other two [viz the individual soul and the pradhanam] are not [the source of all beings] for distinctive attributes and differences are stated.

First we will do the general analysis of the sutra. Our debate whether aksaram jagat karanam is prakriti or Brahman, which defined in mantra 1.1.6 of Mundaka Upanishad. Aksara cannot be prakriti we argue. Sankya call prakriti as pradhanam. Sankya pradhanam is Vedantins maya. Half of Brahma Sutra is negation of Sankya philosophers. He derives pradhanam as the whole world is kept in pradhanam alone at the time of pralayam. Prapancha laya sthanam is pradhanam. Our controversy is whether aksaram is pradhanam or Brahmam. Here Vyasacharya says aksaram is neither pradhanam nor jiva. We can have doubt aksaram is imperishable and jiva is apparently seen imperishable and the second sutra he says aksaram should be taken as Brahman neither jiva nor pradhanam. Aksaram is not jiva because of special description of aksaram given in mantra 2.1.2 of Mundaka Upanishad. *Divyo hyamurtah Purusah sabahya bhyantaro hyajah apramo hyamanah subhro iti aksarat paratah parah* where it is said aksara and Brahman are different. The third line is relevant to us.

Aksaram is described as prana rahitam and manorahitam. Every jiva is called a prani. We have got pranam so we are called prani. Jiva is endowed with prana. Jiva is sapranah. Aksaram is defined as apranah amanah suprah and aksaram is different from jiva. Aksaram is not pradhanam. For this the sutra says the Upanishad itself describes aksaram as different from pradhanam. It is different from prakriti. The fourth line of the mantra is relevant. The Upanishad clearly says aksarat parah. Aksaram Brahma is different from aksaram prakriti. Therefore also because of this mantra also aksaram Brahma is not pradhanam or prakriti.

Now we will see word for word analysis. Viseshanabhedavyapadesabhyam on account of the mention of the distinctive attributes and differences cha and na not itaram the other two jiva and pradhanam also this description alone defines Brahman and therefore it is called specific description. It is without mind and prana is the specific description. Because of this specific description jiva is negated because jiva is not apranah jiva is sapranah. It is different from pradhanam. Vyapadesah means statement or reference. We have to supply the word aksaram. The fourth line aksarat parah means Brahman is beyond pradhanam. Because of the specific description of aksaram as pranaless and also because of the mention as different from pradhanam. Because of the two reason aksara is neither pradhanam nor jiva it is Brahman only. This is the second sutram. Ca means also..

## **Topic 6. Adrisyatvadhikaranam [21-23]**

That which cannot be seen is Brahman

### **Sutra 1.2.23 [54]**

#### ***Rupopanyasaccha***

And on account of its form being mentioned [the passage] under discussion refers to Brahman.

Here also Vyasacharya says aksaram is neither jiva nor pradhanam. The reasons she gives is the visva rupa varnanam of aksaram Brahma occurs in Mundaka Upanishad. In 2.1 we get sristi prakaranam the Upanishad says aksaram alone has become entire creation. Aksaram Brahma alone is the entire creation aksaram is visva rupam; and this visva rupam is described in two places one is 2.1.4 of Mundaka Upanishad *Agnir murdha cakssi candra suryau disah srotre vag virtasca vedah, vayuh prano hridayam visva masya padhhyam prthivi hyesa sarva bhutani ratma* that reads as fire [Agni] is his head; sun and moon – his eyes; four quarters or directions – his ears; the declared Vedas his speech; the air his breath; the universe his mind [heart] the earth originated from his feet; he is indeed the inner Self of all beings. The heaven is the head of aksaram; the 11<sup>th</sup> chapter of Gita is also drawn from this sutra only. Sun and moon are the eyes earth his teeth. Visvarupa description is given for the Brahma alone. Sarva bhuta antaratma and pradhanam is never presented as Atma anywhere. Visvarupa description applies to aksaram Brahma and not aksaram pradhanam. How can it be the description of pradhanam. It is sarva bhuta antaratma. This does not fit into jiva as also pradhanam. This is the general analysis.

Now we will do the word for word analysis. Rupa form means visva rupam description of aksaram upanyasat because of the mention ca and rupa upanyasat thus Brahma alone is the description of aksaram and not pradhanam. With this third sutra is over.

Vishayah the aksaram occurring in mundaka 1.1.6 Mundaka Upanishad aksaram is the subject matter. The word can be applied to many things third topic is purva pakshi the main purva paksa is aksaram is jivah or pradhanam and the description also tallies with aksaram Brahman alone. More in the next class.

]

## BRAHMA SUTRA

Class 83

### **Topic 7. Vaishvanaradhikaranam [24-32]**

Vaisvanara is Brahman

**Sutra 1.2.24 [55]**

#### ***Vaisvanarah sadharanasabdaviseshat***

Vaisvanara [is Brahman] on account of the distinction qualifying the common terms ['Vaisvanara ' and 'Self']

This adhikaranam is known as Vaisvanara adhikaranam. This is one of the very big adhikaranam containing the sutras 24 to 32.

This enquires into mantra occurring in 5.18.2 of Chandogya Upanishad. In the fifth there is a type of Vaisvanara Upasana or Vaisvanara vidya which is well known Upasanam and it is the saem as visvarupa Upasana. It is another name for virad Upasana. Here the description of virad or Vaisvanara is given. It is an another mula mantra for 11<sup>th</sup> chapter of Gita. It is almost paraphrased in vishna sahasranamam dhyana sloka. I will give the background of this Upasana. This topic begins with mantra 5.11.1 chapter of Chandogya upanisad and it goes upto 5.24 section of Chandogya Upanisad.

This section begins with five students decides to discuss Isvara. They a raise a question what is Brahman which is known as Atma. Where Brahman indicates the Sagunam Brahman and it deals with Upasyam Brahman. Therefore they want to do Brahma Upasana or Isvara Upasana and they ask themselves what is Brahman. They approach another rishi Uddalaka Rishi.

They approach him not knowing what is Brahman. Uddalaka also says that he does not know and he asks them to go to Asvapathih Raja who is a great jnani. In the Upanishad the story is elaborated and they go glorify the raja. The king offers the Brahmana good daksina. But said to the raja that they wanted knowledge from the king. And the Brahmanas said that they wanted Brahma Vidya and not money. The king asked the Brahmana to come the next day.

Next day they go to the king. The king said that it was not proper for them to do namaskara to the king being Brahmana. Asvapathi accept them as sishyas and asked them what was their understanding of Brahman. They described what they understood as Brahman and what they meant by the word Vaisvanara. Each one says one one aspect of creation and each one claimed that aspect as Vaisvanara. One said heaven is Vaisvanara another said sun is Vaisvanara fourth said air is Vaisvanara fifth said earth is Vaisvanara and sixth aid space is Vaisvanara.

After they presented their understanding of Vaisvanara, the king said their understanding was wrong. Each one had understood the part but not the whole of Vaisvanara. Therefore asvapathi said that he was going to give the description of Vaisvanara. Refer to 5.18.2 of Chandogya upanisad.

The mantra reads as *tasya ha va etasyatmano Vaisvanarasya murdhaiva sutejascaksur vsvarupah pranah prthagvartmatma sandeho bahulo bastireva rayih prthivyeva padavura eva vedirlomani barhirhrdayam garhapatyo mano'nvaharya pacana asyamahavaniyah. Ityastadasah kandah.* The meaning is the bright and beautiful heaven is the head of this Vaisvanara Self they think that heaven is the whole of Vaisvanara but he is taught ultimately that heaven is only a part; visvarupa [having many forms the sun] is the eye he thought the sun is Vaisvanara and asvapathi says sun is only a limb of Vaisvanara.; prthagvarma [one who changes direction – air] is the prana of Vaisvanara; bahula [pervasive – space] is the middle part of Vaisvanara; rayi I 'wealth – water] is the bladder; the earth [pratistha – the support] is the feet of Vaisvanara; the sacrificial altar is the chest of Vaisvanara; the kusa grass is the hair on the chest of Vaisvanara; the Garhapatya fire is the heart of Vaisvanara; the Anvaharyapacana [i.e., daksinagni] fire is the mind of Vaisvanara; and the ahavaniya fire is the mouth of Vaisvanara this is Krishna's source of information for writing visvarupa darsanam; ahavaniya fire starts burning right from the moment of birth and child starts eating from then onwards; the implication is that none can be the Vaisvanara Self.

Lastly the benefit of Vaisvanara is given. It is as though eating the entire world. This upasaka not only eats through mouth but also through all the senses. Here I imagine myself as visvarupa or virad Purusa and I am in everything because of my imagination I am eating not only through my mouth and all the mouth as though. Because of this Upasana he learns to identify himself with samasti. He eats annam through all jivara and all the beings.

*Sarva anna asanam eating as it were through all the people. 5.24.3 tadyathesikarulamagnau protam praduyetaivam basya sarve papmanah praduyante ya etadevam vidvanagnihotram juhoti* this upasaka will destroy all papams by Isvara praptih. Just as the cotton fibres of the isika grass are totally consumed when thrown into the fire, similarly all sins are consumed of one who performs the agnihotra sacrifice with the knowledge of the Vaisvanara Self. At the time of death Gita says 8.5 *yam yam va 'pi smaran bhavan tyajati ante kalevaram tam tam eai'ti kaunteya sada tadbhavabhavitah* thinking of whatever state [of being] be at the end gives up his body so that being does he attain Oh son of kunti [Arjuna] being ever absorbed in the thought thereof.

Here the ksatriya teaches the Brahmanas. The meaning kept in mind is Vaisvanara Atma is Sagunam Brahman. For this Vaisvanara the various limbs are there. Vaisvanara upasakas gains krama mukti and he will reach Isvara and all his papams are burnt like grass. Sarva anna asanam and sarva papa nasah are the benefit of this Upasana. All these points will be taken to understand the Purva Pakshi and siddhanti clarification.

What is the controversy in this mantra. The controversy is because of the two words Vaisvanara Atma. The word Vaisvanara has three meaning and Atma has got two meanings which one we should take is our problem the first meaning it is digestive fire known as jataragni. The second meaning is the fire element. We will call it bhuta agnih. Jataragni is inside the body and bhuta Agni is outside. Agni devata means invisible conscious principle that presides over the Agni and it is called devata Agni. Bhuta Agni is visible and devata Agni is invisible. There is another Atma that adds further conclusion. Atma has two meanings Jivatma and Paramatma, samsari Jivatma miserable Jivatma and asamsari sarvajnah Paramatma. Here in this mantra both these words are used. Vaisvanara Atma has got this universal form. Which meaning should be taken is our question. We conclude that it is nothing but Paramatma or Brahman. Vaisvanara Atma Brahman. The reasons are given in

this adhikaranam. Vyasacharya establishes that it is Upasyam Brahma only and Vaisvanara is not any one of the other four. He should give reasons for his conclusion.

First we will take up general analysis of the first sutra. Here he says Vaisvanara is Brahman only. The reason that no doubt that Upasana uses general word with many meaning to create confusion. General I use the word is that the word having many meanings. Atma is sadarana sabda. Even though they are general words in later portion the teacher gives a specific meaning to avoid confusion. The description gives specific meaning to the general word. Thus the visvarupa varnanam is given. This can never fit into jataragni. Bhuta Agni is eka rupam; it is not devata Agni. Therefore the main reason can belong to Brahman alone and not to any other one. It is the meaning of the sutra.

Now we will go for word for word analysis. Two words are there. Vaisvanarah Vaisvanara; sadharana sabdah common word viseshat; because of the distinction. Vaisvanara the word is used in 5.18.2 of Chandogya upanisad. You have to specify it because the Vaisvanara is used in different sense. In Kathopanisad Brahmana is classed as Vaisvanara.

The next word is Brahma and it is nothing but Isvara or Sagunam Brahman. In Brahma Sutra Isvara is called Brahman only. So supply the word Brahman. Sadarana sabda visesat. Sabda means a word a padham. General word means vague word. Here when Vyasacharya says sadarana sabda, he means Vaisvanara. It has three meaning and therefore it is confusing. Then there is another sadarana sabdou that is Atma. Upanishad gives the visesha the specific meaning. Once visvarupa description comes the doubt is cleared.

The Upanishad gives specific meaning to Vaisvanara and Atma. He says specific meaning is Brahma or anything else. It is concluded Vaisvanara is Brahman. With this first sutra is over. Vaisvanara is Brahman. Adhi Sankaracharya in his bashyam gives two more additional reasons to prove Vaisvanara is Brahman. Adhi Sankaracharya says because of the particular phalam to this Upasana. The phalam given is sarva anna asanam and sarva papa nash these are two results possible for visvarupa Upasana. Jataragni it is not possible bhutagni upasana it is not possible. In all the other Upasana only a portion of the papas will go. Any devata Upasana will remove a particular doshas. If you do Isvara upasana all the doshas will go. Isvara namaskara is sarva devata namaskara. Sarva papa nasa is possible only by Isvara namaskara. More in the next class.

## BRAHMA SUTRA

Class 84

### **Topic 7. Vaisvanaradhikaranam [24-32]**

Vaisvanara is Brahman

**Sutra 1.2.24 [55] contd.**

#### ***Vaisvanarah sadharanasabdavisheshat***

Vaisvanara [is Brahman] on account of the distinction qualifying the common terms ['Vaisvanara ' and 'Self']

We see Vaisvanaradhikaran which is final adhikaranam of the second pada in which Chandogya upanisad chapter 18 is taken for consideration. This discussion is regarding the Vaisvanara and we will establish that this Vaisvanara is Brahman alone. In the first sutra we established Brahma only. Visvarupa discription is given and Vyasacharya says visvarupa discription fits with Brahman alone. Visvarupa varnanam is possible only for karanam. Karanam alone can have names and forms for karyam. Gold can have many rupams but bangle cannot have many rupams but one. Karyam has one form but karana alone can have aneka rupam. Jataragni, bhutagni and devatagni being karyam cannot have more than one form each. But visvarupa is possible only for karanam and here the cause is Brahman only. Adhi Sankaracharya gives some more supportive reason. First is the upasaka of Vaisvanara eat the food which will be eaten by all. Vaisvanara upasaka will get oneness with Vaisvanara.

As a person meditates so he becomes. This is possible only when you get oneness with Isvara or Brahman. In Gita Krishna says *bhoktaram yajnatapasam sarvalokamakhesavaram suhrdam sarvabhutanam jnatva mam santim yechati* 5.2.9 of Gita and having known Me as the enjoyer of sacrifices and austerities, the Great Lord of all the worlds the friend of all beings, he [the sage] attains peace. Sarva anna bhota fits with only Isvara and not to anyone.

Vishnu is the one who pervades all the people and Vishnu alone takes food through me. Second reason given by Adhi Sankaracharya is based on 5.24.3 of Chandogya upanisad. This mantra says *tadyathesikatulamagnau protam praduyetaivam hasya sarve papmanab praduyante ya etadevam vidvanagnihotram juhoti*. Just as the cotton fibres of the isitka grass are totally consumed when thrown into the fire, similarly all the sins are consumed fo one who performs the agnihotra sacrifice with the knowledge of the Vaisvanara Self. In this mantra it is said Vaisvanara will destroy all the papams. This is possible only by doing Isvara upasana. This Upasana gives krama mukti. This is the second additional reason.

Third reason is given in 5.11.1 of Chandogya upanisad which is the beginning of the Vaisvanara Agni portion. The mantra reads as *pracinasala aupamanyavah satyayajnah paulusirindradyumno bhallaveyo janah sarkaraksyo budila asvatarasviste baite mahasala mahasrotriyah sametya mimamsam cakruh ko na Atma kim brahmeti* Upamanyu's son pracinasala pulusa's son sathyaya jna bhallavi's son indradyumna sarkaraksa's son jana and asvatarasva's son budila these eminent householders, who were vedic scholars once met to decide the issue who is the real Self? And what is Brahman?

Everyone says that each one do not know and they go to the king and they raised the question kaha naha Atma kim Brahman. At the beginning they never used the word Vaisvanara. They use the word Vaisvanara is replaced by Atma and Brahman. If you are going to take any of the three agnis they are not myself and they are anatma different from me. Atma sabda indicates it is not bhutagni elemental fire and no one can say fire is myself. Fire is not myself. Even devatagni cannot be called myself and I don't look upon myself as devata and I worship devata and Atma indicates neither jadara or devata Agni. For this next word clarifies. Kaha naha Atma him Brahman. Vaisvanara is synonymous with Atma and Brahma are used and the word Atma negates three agnis and word Brahman negates Jivatma possibilities and therefore all the four possibilities are ruled out and therefore Vaisvanara is Brahman as said in Chandogya upanisad.

## **Topic 7. Vaishvanaradhikaranam [24-32]**

Vaisvanara is Brahman

### **Sutra 1.2.25 [56]**

#### ***Smaryaamanumanam syaditi***

Because that [cosmic form of the Supreme Lord] which is described in the smriti is an indicatory mark of inference [from which] we infer the meaning of this. Sruti text under discussion.]

This sutra is based on one basic rule that veda is the original scripture which is known as sruti and all other secondary scriptures are called smriti. According to our tradition all our smritis are based on sruti alone and none of them is original. They are derived from Vedas alone and the validity is not original validity and they are considered valid because they are derived from Vedas. The very word smriti indicates that they are recollected version and recollection presupposes the collection. They are collected from sruti and from smriti they are recollected. If any smriti contradicts a sruti then automatically the smriti vakyam will be rejected. The moment they contradict their very existence will be denied. This is an aside rule.

Second rule suppose there is an idea mentioned in smriti but not mentioned in sruti. In such case would we reject or not. We cannot reject it because only when smriti contradict sruti. Sruti has not made any mention about it and it is silent. The rule is since smriti is borrowed from sruti this idea also must have been borrowed from sruti and we should assume that it has lost in time and we supply sruti mantra and it called inferred sruti.

Vyasacharya argues there are many smriti slokas, which reveals. Vaisvanara belong to Brahman alone. Inferred sruti also says visvarupa belongs to Brahman. Extending that Vaisvanara has got to be Brahman because Vaisvanara and Brahman are one and the same. Vaisvanara has got visvarupa varnanam. In this Chandogya upanisad visvarupa belongs to Vaisvanara. Visvarupa belongs to Vaisvanara smriti says. So Vaisvanara is Brahman. The next question is what is the smriti vakyam based on which you infer sruti vakyam. The vakyam is from Vishnu sahasranamam. In this mantra we get visvarupa varnanam and that belongs to Vishnu the Paramatma. From this sruti we infer visvarupa is Brahman and therefore we infer Vaisvanara is Brahma because Brahman has visvarupam.

Samryamanam refers to sruti vakyam that reveals visvarupa relates to Brahman. Anumanam the word anumanam means lingam. Lingam means an indicator a clue. What is said in smriti must have been said in sruti. That is the traditional argument to say that manu vakyam is veda vakyam and it is like smoke indicating the existence of fire. Brahmanah visvarupatve. It will be the indicator of visvarupatve. Iti means therefore. Since the inferred sruti vakyam is therefore Vaisvanara with visvarupa rupam must be Brahman alone. With this second sutra is over. Now we will go to the third sutra of this adhikaranam.

## Topic 7. Vaishvanaradhikaranam [24-32]

Vaisvanara is Brahman

### Sutra 1.2.26 [57]

***Sabdadibhyo'atahpratisthanaccha neti chet na tatha drishtyupadesat  
asambhavat purushamapi chainamadhiyate***

If it be said that [vaisvanara is] nto [Brahman] or the highest Lord on account of the term [viz. Vaisvanara which has a different settled meaning viz. Gastric fire] etc. And on account of his abiding within [which is a characteristic of the gastric fire] [we say] no; because there is the instruction to conceive [Brahman] as such [as the gastric fire because it is impossible for the gastric fire to have the heaven etc., for the head and other limbs] and also because they [the vajasaneyain] describe him [viz. The Vaisvanara] as man [which term cannot apply to the gastric fire]

We will do the general analysis. Here Vyasacharya negates the Purva Paksi's views and he establishes his conclusion that Vaisvanara is Brahman alone. Purva Paksi view is Vaisvanara is number one and jataragni vada is two devata fire is three and bhutagni will be negated later. The sutra is divided into two portions. Second portion relates to Vedanta portion.

Purva Paksi argues that Vaisvanara is jataragni alone. For this purpose he depends upon the mantra occurring in satapata Brahmana which runs like this. *Sa esah Agni Vaisvanara sayo haitam eva agnim Vaisvanaram Purusa vidham puruse antarpratistitham veda.* Here Vaisvanara Agni is going to be commented critically. Later it is said puruse antapratistitham veda and that Agni is within the human beings. What is that Agni which is within the human being and that is jataragni. The mantra says Vaisvanara. It is clear Vaisvanara refers to jataragni alone. This is one support Purva Paksi takes. He says the very mantra we analyse now 5.18.2 of Chandogya upanisad.

Here Vaisvanara visvarupa description is given towards the end mantra says gargapadya Agni and ahavahaniya Agni anvaharya Agni or dakshinagni etc are different manifestation of fire only. While Vaisvanara is description the fire gargapadya and ahavahanya Agni is used and therefore Agni deva is used and not Brahman. Thus he establishes the Agni that is manifested within.

Third support comes 5.10.1 of Chandogya upanisad. The mantra reads as *tadyadbhakatam prathamamaagacchettaddhomiyamsa yam prathamamahutim juhuyattam juhuyatpranaya svahetipranastrpyati III* the first part of the food is like oblation. One who eats should offer it as an oblation to prana saying 'pranasya svaha [i.e. I offer this as an oblation to prana] with

this your prana becomes pleased. Here eating is being compared to performing a sacrifice. Every time you put food into your mouth it is as if you are offering an oblation. Prana is the deity to whom you offer the first oblation. The word prana in this context means that aspect of the vital air that is responsible for respiration.

In this mantra it is said that the food an upasaka takes is an oblation to the Vaisvanara is homiyam and is an offering to Vaisvanara. Then that Vaisvanara should be directly going to jataragni and from this Vaisvanara is jataragni. Because of these three supports, we conclude that Vaisvanara is gani and that too jataragni. Because of these Purva Paksi concludes Vaisvanara is Brahman alone.

Adhi Sankaracharya says no doubt that Vaisvanara belongs to jataragni alone, here it is said that one should look upon Vaisvanara Agni as Brahman. This Upanishad refers to Brahman represented by vaisvanara. I accept that idol is stone alone. In this context you are not supported to look as stone. Even though it is like stone and varnanam fits into stone represented by Lord alone. But visvarupa varnanam fits into Brahman only then only visvarupa varnanam will fit properly. It is stone represented by Lord.

One more interpretation Adhi Sankaracharya gives will be seen in the next class.

## BRAHMA SUTRA

Class 85

### **Topic 7. Vaisvanaradhikaranam [24-32]**

Vaisvanara is Brahman

#### **Sutra 1.2.26 [57]**

***Sabdadibhyo'atahpratisthanaccha neti chet na तथा द्रिश्युपदेशत  
asambhavat purushamapi chainamadhiyate***

If it be said that [vaisvanara is] not [Brahman] or the highest Lord on account of the term [viz. Vaisvanara which has a different settled meaning viz. Gastric fire] etc. And on account of his abiding within [which is a characteristic of the gastric fire] [we say] no; because there is the instruction to conceive [Brahman] as such [as the gastric fire because it is impossible for the gastric fire to have the heaven etc., for the head and other limbs] and also because they [the vajasaneyain] describe him [viz. The Vaisvanara] as man [which term cannot apply to the gastric fire]

We see the Vaisvanara adhikaranam 3<sup>rd</sup> sutra. In the first two sutras Vyasacharya has established Vaisvanara is Paramatma only. In the following two sutras Vyasacharya negates the Purva Paksi. Here he points out that Vaisvanara mentioned in 5,18.2 is jataragni only by taking a mantra in Satapata Brahmanam. His main arguments are the word Agni has been used clearly and the word Vaisvanara primarily mean fire only. This is the first argument of Purva Paksi. Secondly the sabda adityah the word adhi means some other reasons also. And the second reason that is implied the mantra we analyse while analyzing it there is mention of various agnis that feature different aspect of fire only. Also there is a mantra that the food comes first offered goes to Vaisvanara. Then it should refer to jataragni only digestive fire only and not to devata etc., Agni. This reason also comes under etc. Last reason is puruse antapratistitham veda Vaisvanara is located within the human being as stated in satapata Brahmanam.

Of the four reasons first and fourth are mentioned in the Sutra and second and third one we get it from etc. Thus through the four reasons Vaisvanara is to be taken as jataragni . We don't agree with their view. Tada dristi upadesat. It is because Upanishad wants Vaisvanara as a representative of virad Brahman. We say the meditation is for virad Brahman but represented by jataragni as sivalinga represents Shiva.

Therefore Vaisvanara represents Brahman alone. The difference is due to the description of visvarupa cannot fit into jataragni. The heaven is head etc. Therefore we take Vaisvanara is not equal to jataragni but take it as jataragni represented Vaisvanara Brahman. Next visvarupa rupa description is impossible for jataragni. The first reason is jataragni rupena Brahma upasana upadesat and the next portion is vivaraupa varnasya jata rupa is not to the jataragni and it is to Brahman alone. He explains another thing. In the satapata Brahmana there is an expression *puruse antapratistitham veda* it if it is within the human being it should be taken as Brahman how can you say it is within human being. This was Purva Paksi question. We say Brahman can be within human being. All pervading Brahman is within

human being also. I take it within human being also. In Gita [18.61] it is clearly said *Isvara sarvabhutanam hrddesa 'rjuna tithati bhramayan sarvabhutani yantraudhani mayaya* the Lord abides in the charts of all being causing them to turn round by his power as if they were mounted on a machine. The relations of our unborn nature and its fateful compulsion are regulated by the Divine who dwells in our hearts and guides and constrains our development. Also it is said that 'without Thee we cannot live for a moment. As the truth thou dost exist eternally within and without.' Therefore Brahman is within. There is a second argument also *puruse antapratistitham* is the topic of debate here. Purva Pakshi says it is fit for jataragni but we say it is possible for Brahman also. Adhi Sankaracharya says look at the *satapata Brahmana* again. It is said there is word *purusah* asks us to underline. Purva Pakshi wants to underline *Purusa antapratistitham* for he says it is Purusa and it is within Purusa. If Purva Pakshi interpretation is taken he can say jataragni is within Purusa he can explain. But what he has got to say it is within Purusa. If Vaisvanara is jataragni, according to Purva Pakshi jataragni is Purusa and jataragni is within Purusa. Vyasacharya says jataragni is within Purusa is agreed but only one the sentences fit in properly but the other one does not fit in. If we take Vaisvanara is Purusa and Vaisvanara is within Purusa if we take Brahman is Purusa and Brahman is within Purusa. It is perfectly alright if we take Brahman is Purusa and Brahman is within Purusa also. It is alright whatever we take is Purusa it applies for Brahman without, Brahman within. *Enam atiyate* means *satapata Brahmana* declares that this Vaisvanara to be *purusam abhi* to be Purusa also. The significance of the word also is not only that *satapata Brahmana* declares Vaisvanara to be within the Purusa but also *satapata Brahmana* declares not only within Purusa but also it is Purusa. Only if we take as Brahman only both the conditions apply. Siddhanta says because *upasaka* wants to meditation upon Brahman, jataragni word is used. Now comes the last question. How do you account for *gargapatya* etc, Agni description for they all belong to Agni alone. [5.18.2 of Chandogya upanisad and 5.19.1 of Chandogya upanisad] if the first food is offered to Vaisvanara then it belongs to jataragni alone how do you explain these sentences Purva Pakshi asks.

For this Adhi Sankaracharya says with regard to Brahman all descriptions are possible for all features are possible for Brahman only. The features belonging to fire cannot belong to human being. As long as Brahman all the features belong to Brahman because everything belongs to Brahman only. So *gargapatya* feature belongs to fire also. That is why Krishna says *aham kratu aham 'yajnah svadha 'ham aham ausadham mantr 'ham aham eva'jyam aham agnir aham huta* [Ch. 9.16 of Gita] that reads as I am the ritual action I am the sacrificer, I am the ancestral oblation, I am the medicinal herb, I am the sacred hymn, I am also the melted butter, I am the fire and I am the offering. Ausadha or herb stands for the food of all creatures. The vedic sacrifice is interpreted as an offering of our whole nature; an entire Self giving to the universal Self. What we receive from Him we give back to Him; the gift and the surrender are both His. On the same principle the food although it goes to jataragni, there is nothing wrong if we say the food obligation goes to Brahman only. Through jataragni the oblations go to Brahman alone. That is why Krishna says [Gita 15.14] *aham vaisvanara bhuta praninam deham asitah prana panasamayatah pacamy annam caturvidham* becoming the fire of the life in the bodies of living creatures and mingling with the upward and downward breaths, I digest the four kinds of food literally like a cook. In the form of jataragni Brahman alone exists and jataragni represented Brahman. From this we have to derive an important corollary which is the foundation of our culture. Any principle in creation can be worshipped in two ways. One is that particular presiding deity or the very same principle can represent *samsti Isvara* also. If it is a particular principle it is finite and if it represent *Isvara* it is infinite. If a person does *Surya namaskara* we get a doubt whether sun represent Brahman or *caksur devata*. If it is *caksur* it is *paricchinnam* and if it is Brahman it is

apraicchinnam, and this we know only from the context. If he has eye problem and if he prays Surya devata it is finite caksur devata only. During sandhyavandanam when he worships sun, it represents Isvara. Similarly jataragni can represent simple jataragni or Isvara. Similarly Vaisvanara can represent devata or Isvara. When you do Vishnu sahasranama archana vinayaka represents remover of obstacles; but when you do archana for vinayaka then vinayaka represents Param Brahman itself. Every devata is paricchinnah as also aparicchinnah. That in our culture there is big confusion. This is to be understood clearly. Vishnu is finite deity when Vishnu represents sustenance; Shiva is finite deity when Shiva represents destruction function alone; Brahma is finite deity when we talk of creation alone. At the same time Brahma can represent sristi sthithi laya kartru Isvara. The word Isvara can represent which is one of the trinity but here Isvara represent maya sahitam Brahman Sagunam Brahman. Isvara can be totality also. So Vaisvanara can represent jataragni but here jataragni represents Brahman. In this context because of visvarupa description Vaisvanara has got to be Brahman only not jataragni. With this jataragni Purva Pakshi is negated.

Because of the location of Vaisvanara within the body as given in satapata Brahmana and the next word sadbavibhyaha a compound word and avibhyaha because of usage of the word Vaisvanara and Agni in the above brahmana mantra now I will give you the second part of Brahmanam and because of other reasons this points out garghapadhyah visualization and reference as the offerings are indicated by other reasons. The two words should be added na occurring in the mantra this will reveal Vaisvanara is not Brahman; because of the various reasons Vaisvanara is not Brahman. It is to suppose such question is raised, then hereafter our answer begins. Our first answer is 'na'. Purva paksha is not correct; the objection not valid. Tadadrishtupasedat because of prescription description in the Brahma upasanas. Because of the impossibility of visvarupa in regard to jataragni vaisvanara fire, connect it to na; and because of the impossibility of visvarupa with regard to Vaisvanara your objection is not right. The objection is Vaisvanara is Brahman only. The next word is adhiyate means satapata Brahmana reveals enam this Vaisvanara purusam abhica as Purusa also the complete by adding a sentence your objection is not correct.

## **Topic 7. Vaishvanaradhikaranam [24-32]**

Vaisvanara is Brahman

### **Sutra 1.2.27 [58]**

#### ***Ata eva na devata bhutam cha***

For the same reasons [the vaisvanara] cannot be the deity [fire] or the elements [fire]

First we will do general analysis. In this sutra Vyasacharya negates the other two Purva Paksi devata Agni and bhuta Agni. He says the word Vaisvanara occurring in 5.18.2 of Chandogya upanisad refers to bhutagni, which means fire element which is outside the individual; the next is Vaisvanara is devata Agni, the presiding deity of fire which is invisible intelligent principle. Vyasacharya negates both. He says because of the reasons used before or mentioned before. We should note all the reasons which being four that because of visvarupa description that can fit only Brahman not bhuta Agni or devata Agni. The upasaka will get the phalam of sarva anna adhanam. Third is sarva nasa papa phalam. It is only possible for Brahma Upasana and not for devata or bhuta Upasana. Lastly Atma is used. The word Atma and word Brahman can be used for Brahman only and not for anything else. It is neither devata Agni nor bhuta Agni.

Now we will do word for word analysis. Ata eva because of the reasons explained before only supply the word Vaisvanara that means the word Vaisvanara used in 5.8.2 of Chandogya upanisad; the next pair is na devata and it is not devata Agni, and also Bhutan cha. It is not bhutagni the fire element.

The fourth purva paksa Vyasacharya does not negate at all. Whether Atma represent Jivatma is the question. Athah eva because of the same reasons. Visvarupa description cannot belong to Jivatma; sarva anna phalam is not possible for Jivatma Upasana even the Brahman infinite cannot be applied to Jivatma. Now we enter fifth sutra.

## **Topic 7. Vaishvanaradhikaranam [24-32]**

Vaisvanara is Brahman

### **Sutra 1.2.28 [59]**

#### ***Sakshadayavirodham jaiminah***

Jaimini [declares that there is] no contradiction even[if by Vaisvanara] [Brahman I] directly [taken as the object of worship]

Vyasacharya has established Vaisvanara is Brahman alone and he has negated all the four purva paksas. He first accepted Vaisvanara is jataragni and alone and in this context we should know Vaisvanara is jataragni represented Brahman. He retained jataragni and think of it and should know that this represented Brahman. We don't look jataragni as jataragni but we see it as Brahman. I offer flower to the idol but worship Isvara visualized by idon.

Vaisvanara through jataragni represents Brahman. Jaimini says that jataragni is Brahman alone. There is no need to say it indirectly.

## BRAHMA SUTRA

Class 86

### **Topic 7. Vaishvanaradhikaranam [24-32]**

Vaisvanara is Brahman

**Sutra 1.2.28 [59]**

#### *Sakshadayavirodham jaiminah*

Jaimini [declares that there is] no contradiction even[if by Vaisvanara] [Brahman I] directly [taken as the object of worship]

In this interpretation is given by Jaimini Maharishi a disciple of Vyasacharya. Another interpretation to show Vaisvanara refers to 5.18.2 of Chandogya upanisad is Brahman. Until we have established that Vaisvanara refers to Brahman only. It directly refers to digestive fire only and upon the digestive fire we should visualize Brahman. In the previous interpretation Vaisvanara referred to jataragni the digestive fire symbolized Brahman. How should we do the Upasana. Just as we meditate upon Shiva through siva linga etc., similarly we have to meditate through digestive fire.

Jaimini says you need not go through digestive fire. Vaisvanara can directly reveal Brahman. This is jaimini statement. He says every word has got many meaning and one meaning is popular and it can reveal meaning other the popular menaing.

Suppose you analyse the word it consists of two words one is kh Akasa and other is gha mover. This is derivative meaning of the word. This is called yoga arthah derived meaning. If you jump from here to there for half a minute you are kagah. Primary meaning of jalajam is lotus, if you split the word jala means water ja means i.e other than lotus anything other than lotus called jalajah. We can have rubi artha as also yoga artha. So far we have taken rubi artha and Vyasacharya said Vaisvanara represented Brahman. Jaimini gives up popular meaning and takes up yoga artha which means virad Isvara. How can you take yoga artha for Vaisvanara.

I will give on interpretation given by Adhi Sankaracharya. Visve and nara are two words the part of the word represents sarve narah means visve sarve narah means visva narah eva vaisve narah that Lord who includes all the living heings who is that Lord that includes all beings is visvarupa and virad, the macrocosm includes all the microcosm. He says visve narah vaisvanarah. When there is rubu artha and yoga artha is possible there will be confusion which one we should take.

Then there must be a rule that rubi artha is powerful than yoga artha. Popular meaning is ever powerful. Popularity is powerful and there can be an objection and one can ask jaimini and say the rubi artha is powerful and how can you leave the rubi artha and take yoga artha. Here Vaisvanara means digestive fire; jaimini says normally rubi is powerful and take that meaning and fix it and see that whether it fits properly and if it does not fix and then you have right to take yoga artha. Jaimini argument is I am ready to take the popular artha and when I

take it mantra fit in properly because mantra gives visvarupa description for Vaisvanara. This visvarupa rupa can never fit in with digestive fire, which is within stomach, and therefore we drop the meaning of digestive fire and take the meaning of cosmic law. There is no contradiction to the general rule. This is the general analysis of the sutra. Now we will take up word analysis.

The sutra consist of four words; Sakhat api means directly also it means without going through the digestive fire directly also; then supply two words Vaisvanara Brahman it means the word Vaisvanara occurring in 5.18.2 of Chandogya upanisad is Brahman avirodhum, means there is no contradiction; there is no error; there is violation. Jaiminih we have to supply the word vadadhi he says so. Vyasacharya quotes his disciple jaimini. Now we will go to the next sutra.

## **Topic 7. Vaishvanaradhikaranam [24-32]**

Vaisvanara is Brahman

### **Sutra 1.2.29 [60]**

#### ***Abhivyakteryasmarathyah***

On account of the manifestatioin, so says Aasmarathyah

First I will do general analysis of this sutra. In jaimini's interpretation a problem can come. Vaisvanara directly refers to Brahman. This mantra points out that Vaisvanara is Agni, gargapadya etc, Agni. Normally we know they are aspects of fire only and how will you describe the expressions of gargabhadya etc., fire. This is question number one. Agains in Sadapata Brahmana it is said Vaisvanara is within the body how will you explain. And also in Sadapata Brahmana word Agni occurs. Vaisvanara Agni and Vaisvanara is within the body and how will you explain these three.

Now we will see one by one. The word Agni also should be taken in its yoga artha not rubi artha. The primary meaning of Agni is fire. If you take the derived meaning there will no problem. The derived meaning is agre nayati gacchadi iti agnih the one who moves in front or one who is the leader is Agni in short agragami agnih. Therefore Vaisvanara does not refer to fire at all but the leader of entire universe and Lord is the ultimate leader. The word Agni is explained.

The next question is Sadapata Brahmana it is said Vaisvanara is within the body. Since Bahaman is all pervading he can certainly within the body also. Vaisvanara is cosmic person who is everywhere and he is within the body also.

How do you explain gargabadya and other fire aspects. Jaimini avoids fire. How can you avoid fire, for that the answer is if that everything is different aspects of Lord alone because what belongs to Tamil Nadu is certainly the glory of India. Only the glory of Tamil nadu belongs to Karnataka etc. All the glories belong to India. Whether they are aspects of jalam, vayu etc, all them ultimately belong to Vaisvanara. Gargapadya is immediate aspect of fire but it is ultimately the aspect of Brahman alone. Since everything ultimately belongs to Brahman alone. In fact Adhi Sankaracharya explained all of them in previous sutra itself.

Finally one more problem is introduced based on 5.18.1 of Chandogya upanisad. In this mantra Vaisvanara is described. *Tanhovacaite vai khalu yuyam prthagivematmamam vaisvanaram vidvamso'nnamattha yastvetamevam pradesamatramabhivimanamatmanam vaisvanaramupaste sa sarvesu lokesu sarvesu bhutesu sarvesvatma svannamatti* the king said to Brahmins; those of you who re here meditate on the Vaisvanara Self only in part. [That is why when you eat you think you are eating separately] he who worships the Self as all pervasive and infinite, enjoys eating through whoever eats in the worlds, through all beings and through all selves, but for us the relevant part is pradesa matram this word creates problem when we take Jaimini's interpretation. Pradesa matram spatially limited. There is problem.

We are taking Vaisvanara as cosmic Lord who is all pervading. Upanishad uses the word spatially limited and how will you reconcile the spatially limited and all pevasiveness. For this problem different solutions are given by different acharyas. First solution is given by Asmarassya Sutra 29. Another rishi badhari rishi Sutra 30 gives another solution; sutra 31 Jaimini gies another solution. The details we will see in the next class.

## BRAHMA SUTRA

Class 87

### **Topic 7. Vaishvanaradhikaranam [24-32]**

Vaisvanara is Brahman

#### **Sutra 1.2.29 [60]**

#### ***Abhivyakteryasmarathyah***

On account of the manifestation, so says Aasmarathyah

We are in the final adhikaranam of the second pada which is known as Vaisvanaradhikaranam where Vyasacharya analyses 5.18.2 of Chandogya upanisad. The primary contention is that Vaisvanara should refer to primary meaning of digestive fire whereas siddhanti view it refers to Brahman alone. In the first four sutras interpretations were given and indirectly through jataragni it is proved that Vaisvanara is digestive fire only and we should meditate upon Brahman on the symbol of Vaisvanara fire. Our conclusion is Vaisvanara is jataragni pratiba Brahman. digestive fire symbolized Brahman.

Now another interpretation was given in sutra 28 and not through jataragni but directly it is Brahman. Primarily means jataragni but it can etymologically or secondarily it can mean sarvagatha Isvara. for taking secondary meaning there is support of visvarupa description. If we take primary meaning visvarupa will not fit in properly.

If we take this interpretation there is some problem. This is based on mantra 5.18.1 of Chandogya upanisad there is a word pradesa matram spatially limited, measurable. Therefore Purva Pakshi raises a question if Vaisvanara is taken as infinite Brahman how can you take the spatial limitation. How can describe Vaisvanara as infinite and finite way create doubt. We have to find out an ingenious method to convince both contradictory views. In the previous sutra we managed saying Vaisvanara represented jataragni. Wherever infinitive description comes we will connect it to Brahman and wherever there finite description comes we will connect it to jataragni as symbolized for Brahman. some of them may be connected to Brahman and some to jataragni Agni.

In this interpretation we are in trouble. Vaisvanara directly means Brahman and if so how will you connect to Brahman pradesa matram which indicates Brahman is within the body. Here Assmarathya rishi gives the answer. The problem is if Vaisvanara is all pervading Brahman how do you explain the word pradesa matram, which means spatially limited. The answer given is that no doubt Isvara is all pervading when a meditator wants to have darsanam for blessing the devotee all pervading Isvara can assume a limited form. Here Lord Krsihna says in 4.7 of *Gita yada yada hi dharmasya glanir bhavati bhārata abhyutthanam adharmasya tada'tmanam srjamy aham* here it is clearly stated that the Supreme though unborn and undying, becomes manifest in human embodiment to overthrow the forces of ignorance and selfishness. Since Isvara has got maya power, He can take manifestation the private appearance for the sake of a particular devotee and for the sake of the world he takes the avatar. The particular appearance is called abhivyakti the manifestation or appearance

for the upasaka's sake. It is for the purpose of the devotee alone Lord takes the various forms like Shiva, Vishnu, Brahma etc, this is the first answer.

Abhivyukteh because of the finite manifestation of Brahman for the sake of upasaka; then you hve to supply two words pradesa matratvam sadhu which means finite description of Vaisvanara is proper; iti in this manner the sage Assmarathya answers the objection. Aasmarathyah.

### **Topic 7. Vaishvanaradhikaranam [24-32]**

Vaisvanara is Brahman

#### **Sutra 1.2.30 [61]**

#### ***Anusmriter badarih***

For the sake of meditation or constant remembrance – so says the sage Badari

Badari answers in the same direction. The problem if Vaisvanara is Brahman how do you account of pradesa matram. When a devotee wants to meditate Isvara or visualize Isvara he can do so only within the mind alone and the visualized Isvara will be confined to my mind. Unfortunately or fortunately mind is limited and finite. Although Lord is infinite our mind the container is limited the content the Lord, the memorizes Lord will also be limited. Because it is visualized mind it is finite. Appearing space being limited Lord is limited. This is the answer.

Anusmriteh because of visualization of Brahman through within the finite mind and the supply two words pradesa matritvam sadhu the spatially limited is fine because it is based on visualization focus and Badarih answers the question. Present answer is based on the appearance based on the meditation. Now we will see third answer.

### **Topic 7. Vaishvanaradhikaranam [24-32]**

Vaisvanara is Brahman

#### **Sutra 1.2.31 [62]**

#### ***Sampatteriti jaiministatha hi darsayati***

Because of imaginary identity the Supreme Lord may be called Pradesamatra [span song]. So says Jaimini because so [the sruti] declares.

We will see the general analysis of this sutra. Here Jaimini answers the objection based on his own interpretation. He says whenever you have difficulty in interpretation of veda you will find the answer in veda itself. The word 'Pradesa Matram' occurs in some other place also. 5.18.1 of Chandogya upanisad creates problem, scan the sama veda and see Sadapata Brahmanam.

At the end alone Brihadaranyaka upanisad comes. We have already seen on mantra. Next to the mantra alone the word 'Pradesa Matram', is used. The significance of this mantra is this. Here the teacher says no doubt Lord is all pervading and Lord has got heaven as head sun and moon as eyes, space the visvarupa description is given. Since the person cannot visualize the totality I shall give you a specila Upasana called sambad Upasana or sambatti Upasana that means visualization of bigger one in a smaller locus. To see the head you have look up above the sky; to see the feet you have to see the bottom.

So the acharya says that he would simplify the process and see the visvarupa within your face itself. Beginning from your head to your chin or lower jaw tries to visualize the visvarupam. Acharya gives the description. Adhi Sankaracharya quotes the mantra in his bashyam. The head of virad is to be visualized as your head; the eye of virad sun and moon as your own eyes; nose as your nose; the body of virad is seen as space obtaining within your mouth.

All pervading space is body of the virad. In simplified version space within the mouth is the body of virad. Saliva is the bladder of the Lord. In original version ocean is taken as the bladder of the Lord. The chin is the feet of the Lord. This is pradesa matra of Vaisvanara. Previously the original version and this description is limited version of Vaisvanara. This Upasana is called sambatti Upasana and because of this pradesa matra is used and what is wrong in that. This is the answer given by Jaimini Rishi.

Now we will word for word analysis. Sabpatteh because of the special prescribed in sadapada Brahmanam where Vaisvanara is visualized in our face itself and then supply tow words pradesa matratvam sadhu the word pradesa matram used in 5.18.2 of Chandogya upanisad is perfectly alright. iti means in this manner jaimini jaimini rishi answers the obejection; tatha hi in this manner darsayati another Upanishad describes Vaisvanara in pradesa matra version another mantra described sadapata Brahmana mantra darsayati and it is clear that your face is His face etc. he gives further justification in the next sutra.

## **Topic 7. Vaishvanaradhikaranam [24-32]**

Vaisvanara is Brahman

### **Sutra 1.2.32 [63]**

#### ***Amananti chainamasmin***

Moreover they [the Jabalas] teach that this [Supreme Lord is to be meditated upon] in this [space between the head and the chin]

Vaisvanara is visualized within the face. How can this be done. He says it is for the sake of Upasana and if you are not convinced of that I can give you another Upanishad also and that is Jabala Upanishad. Adhi Sankaracharya quotes the mantra 2 of Japala Upanishad reads as *atha hainam atri papraccaha Yajnavalkyam, ya eso'nanto vyakta Atma tam katham aham vijnaniyam iti, sa hocaca Yajnavalkya so'vimukta upasya ya eso'nanto'vyakta tma so'vmukte pratisthita iti, so'vimuktah kasmin pratisthita iti, varunayam sasyam sca amdhye pratisthita iti* the mantra reads thereafter Atri inquired of Yajnavalkya 'how can I know that Self which is infinite and unmanifested? Yajnavalkya said [in reply] meditate on Avikukta [for] the Self, which is infinte and unmanifested is established in avikukta [Atri then enquired].

It is established in the middle of varana and nasi. Atri enquired what is varana and what is nasi? Yajnavalkya answered. As it overcomes all the faults done by the sense organs it is called varana; as it destroys all the evils done by the sense organs it is called nasi [Atri inquired] what is their abode [Yajnavalkya answers] it is the meeting place of the eyebrows and the nose. It is the meeting place of the world of gods and [the worlds] beyond.

The same meeting place is to be meditated on. He who knows it gains the knowledge, which makes for liberation. the infinite Paramatma abides in Jivatma and is identical with Jivatma. Avimuktah means Jivatma. Where is Jivatma located. It says Jivatma is located between varana and nasi the Lord is in varana and nasi. The question is what is varana and nasi. It is explained in the Upanishad. varana means eyebrows; nasi means the nose.

Between the eyebrows where we apply tilakam is varana nasi sandhih. Otherwise it is called Varanasi. Kasi visvanathar is called Avimuktamesvarah. Then he asks what is wrong in using pradesa matram. This is the answer. Now we will go to the word analysis.

Amananti cha means Jabala Upanishad also talks about; previously sadapata Brahmanam talks about it; keeping this only Chandogya upanisad talks about pradesa matram.

We will now see the summary of the adhikaranam. subject matter is the word Vaisvanara occurring in 5.18.2. of Chandogya upanisad. Samsaya the doubt is whether the Vaisvanara refers to jataragni digestive fire or does it refer to Brahman. then Purva Pakshi say Vaisvanara is jataragni alone and not Brahman. it is the primary meaning of the word and finite description given. Siddhanta says Vaisvanara refers to Brahman alone. Indirectly it refers to Vyasacharya and directly refers to Brahman as per Jaimini. According to us all the description that it is finite as also infinite also can be connected to Brahman. in the jataragni finite description alone fits in but infinite description will not fit in. this is placed in the right place. With this second pada is over.

In this pada 7 adhikaranams are there. all deal with aspashta Brahma linga vakya samanvaya. Wherever vague statements are there, are analysed and established that they relate to Brahman alone and nothing else. Of these seven, three deal with 1,4, and 7 Upasamyam Brahman all occurring in Chandogya upanisad. 2,3,5, and 6 deal with neyam Brahman. with this the second pada of the first chapter of Brahma Sutra is over.

## BRAHMA SUTRA – Chap: 1, Pada-3

Class 88

### **Introduction to the third pada**

The abode of heaven, earth etc., [is brahma] on account of the term, ‘own’ i.e., self

We have completed the first two padas of pradhmadhyaya and now we enter 3<sup>rd</sup> pada. The entire first chapter deals with samanvaya meaning consistency that there is consistency in the upanishad with regard to the revelation of brahman. To put it in another language all the upanishad consistently reveals brahman only. Brahma is the subject matter of upanishad and not karma or any other matter. This has been presented in fourth sutra sattva samanvaya and fourth is the foundation of the entire first chapter. The consistency is proved throughout the first chapter. All the four padas of the first chapter deal with consistency.

Then the question is what is the difference between the four padas if they reveal consistency alone. Then we said even though consistency; with consistency we have divided into four padas. It deals with consistency of those statements, which indirectly reveals brahman with the help of clear indicators. This is the subject matter of pada.

The idea is whenever there is indirect revelation it uses the indicators to reveal brahman and the indicators are two types one clear indicators and another is a vague indicator. The clear indicators are spasta brahma lingani and the other is aspasta brahma lingani. First pada discussed those that revealed clear indicators and the second discussed those statements that revealed vague indicated statements were analysed. We are not analyzing those directly revealing brahman because there is no confusion regarding brahman revelation. Such statements don't find any place in brahma sutra.

Now we have to find the subject matter of tridiya pada. It does the same job as the second pada. Aspasta brahma linga vakya samanvaya is the subject matter of tridiya pada. Then there will be a question when second and third deal with the same why third pada should be there. This i will answer at the end of the chapter to show the difference i have to analyse the subject of both. Both deal with the same subject only. The third pada has got 13 adhikaranams consisting 43 sutras. Having introduced now I will go to the general introduction of the first the third pada.

### **Topic 1. Dyubhvyadhikaranam [sutras 1-7]**

The abode of heaven earth etc., is brahman

#### **Sutra 1.3.1 [64]**

#### ***Dyubhvyayatanam svasabdat***

The abode of heaven, earth, etc., [is Brahma] on account of the term ‘own’ i.e. Self.

This is the first adhikaranam of the third pada. It is called dyubhvyadhikaranam. It is called so because it starts with the word dyubhvyayatanam. The subject matter of this

adhikaranam is based on the mantra 2.2.5 of the mundaka upanishad. The mantra reads as *yasmin dyaub prthivi contariksa motam manah saha pranais-ca sarvath, tam evaikam janatha atmana manya tam evaikam janatha atmana manya vaco vimunca thamrta syaisa setuh* the meaning reads as he is whom the heaven, the earth and the interspace are centered, together with the mind and all life-breaths [pranas] know him alone as the one self of all, and desist from all other talks. This is the man's bridge to the shore of immortality [across the ocean of life]

I will give you the general meaning of this mantra says that brahman is support of the macro cosmic as also micro cosmic universe of buloka and swarga loka etc. Loka triya adharam visvadharam brahma. Third line says may you know this visvadharam, which is otherwise known as Paramatma. Prapancha adhistanam brahma you should know that. Thereafter wards give up talking. Talking refers to all type of vyavaharas. It means take to sannyasa and i will not say that and you continue to be in grahasthasrama and spend more time on mananam and nididyanam.

Fourth line of Mundaka mantra says two different commentaries are there and two meanings are there. According to first interpretation is sethuh means a dam. It is one that holds water. There is bundh out of mud found in the fields is called sethu. Then amrtasya according to first interpretation it is immortality. This visvadhara Paramatma is possessor of immortality just as bundh holds water brahman holds immortality. It is as its nature brahman holds immortality. Since dam holds water you depend for your water, since brahman dam holds water of immortality and may you go to the dam of water of immortality.

The second commentary for the fourth line is that brahma jnanam said in the third line. Sethuh according to second interpretation does not mean a dam or bundh but a bridge. The bundh will serve in both ways to cross from one side of the field to the other side. It is not only holder of water but also it is a bridge. This brahma jnanam is a bridge for realizing brahman. First interpretation it is immortality. In second interpretation it is this brahma jnanam is the bridge to reach the immortal brahman. Brahma jnanam is the bridge to take you to brahman.

What is the problem? It is about visvadharam the support of universe by using the word otham supported in brahman. But the upanishad does not use the word brahman but it talks about visvadharam. Why do you take visvadharam as brahman. It is raised by sankya philosophers. In sankya philosophy pradhanam is concept very close to maya. Why cannot you take visva ayadhanam as basic matter from which visva has come, in which the world sustains and into which the world resolves.

The controversy is jagad adharam him and visvadharam kaha. Purva paksa claims the basic matter alone is the basic substance of the whole universe. Life means consciousness and the matter is visvadharam and vedantins takes it as brahman. Through seven adhikaranam visvadharam brahmaiva na pradhanam. This is the adhikaranam debate.

Now we will go to the first sutra. In this vyasacharya says visvadharam is brahman. He says that in the third line upanishad uses the word atma which is the clinching evidence. We know the word atma stands for chetanam brahman alone and it cannot be used for achetana pradhanam. Self is a reflective pronoun and it can be used for chetana vastu alone. Therefore atma sabda prayogad. That stands for Paramatma. This is the reason number one.

The second reason is that the upanishad itself clarifies this elsewhere. Here we do not know visvadharam is not clear and in some other place visvadharam is made clear. Adhi sankaracharya gives one example 6.8.4 of Chandogya upanishad. says *tasya kva mulam syadanyatrannadevameva khalu somyannena sungenapo mulamanvicchadbhih somya sungena tejo mulamanviccha tejasa somya sungena sanmulamanviccha sanmulah somyarmah sarvah prajah sadayatana satpratistha*. The mantra reads as where else, except in food, can the body have its root? In the same way, o somya, when food is the sprout, search for water as the root; when water is the sprout, o somya, search for fire as root, when fire is the sprout, o somya, search for sat [existence] as the root, o somya sat is the root; sat is the abode, and sat is the support of all these things.

In this mantra the crucial word is sadayatana sat means support and ayadhana is praja all jivarasis. This is one support to show that it is brahman alone. There is another supporting mantra in kathopanishad mantra 2.6.1 that reads as *urdhva mulo- 'vak sakha, eso- 'svatthah sanatanah tad eva sukram tad brahma, tad eva amrtam aucyate tasmin lokah sritah sarve, tadu natyeti kascana etad vai tat* the meaning of this is this is the ancient asvattha tree whose roots are above and branches [spread] below. That is verily the pure, that is brahman and that is also called the immortal., in that rest all the worlds and name and none can transcend it. Verily this is that.

For us the relative portion tasmin loka sritah sarve here brahman is presented clearly visvadharam in kathopanishad we have to drag it support that to this sutra. Now we will go to the word analysis. Dyu heaven bhu earth; adi and the rest that includes all the other things dyubhuadi means the entire universe; ayatanam; the support, abode or visvadhara occurring in mundaka 2.2.5, it does not directly say visvadharam. Indirectly says; you supply the word brahma; svar own sabdat from the word sva sabdat on account of the word. For this adhi sankaracharya two different interpretations are given.

This word sva is itself a compound word sva and sabdad. According to the first interpretation 'sva' means Atma. Sabda means word; because of the word atma used in Mundaka upanishad 2.2.5, sva sabdad is equal to atma sabda prayogad. Atma refers to chetana vasthu visvadharam and not achetana pradhanam. The second interpretation is sva means the upanishads themselves. Sabdad means clarification. Because of the clarification by the upanishads themselves elsewhere that visvadharam is brahman only and it is not pradhanam. That is 6.8.4 of chandogya upanishad and kathopanishad example quoted above.

Now adhi sankaracharya in his bashyam introduces a purva paksi and answers. Purva paksi says visvadharam cannot be brahman if you analyse the fourth line. That does not support your interpretation. Esah sethu is the fourth line. It is the first interpretation of the fourth line. This brahma, which is visvadharam, is sethuh a dam a water holder. Purva paksi says is only a dam or embankment and any holder of something is a limited entity. It has got boundary however big it is. If you take brahman as a dam and you cannot take it as dam.

There is second interpretation also. Esah sethu amritasya. It means immortal brahman. It is sethuh brahman is the holder of brahman. adhi sankaracharya in his commentary is not correct. The answer will be given in the next class.

## BRAHMA SUTRA

Class 89

### **Topic 1. Dyubhvadyadhikaranam [sutras 1-7]**

The abode of heaven earth etc., is brahman

#### **Sutra 1.3.1 [64]**

#### ***Dyubhvadyayatanam svasabdat***

The abode of heaven, earth, etc., [is Brahma] on account of the term 'own' i.e. Self.

In this first adhikaranam of the third pada known as Dyubhvadyadhikaranam Vyasacharya analyses Mundaka Upanishad mantra 2.2.5. In this mantra the first half Upanishad refers to something that is substratum of the entire universe the heaven as also the earth. This is referred to in this adhikaranam as Dyubhvadyayatanam. Visvadharam is presented in the above mantra.

What is this visvadhara. We want to establish visvadhara is brahmaiva. Sankya however argue that visvadhara refers to achetana tattvan pradhanam. In the first sutra which we completed in the last class is visvadhara Brahma sva sabdad. For this we gave two interpretation the first is because of the expression Atma occurring in the mantra. The word Atma can refer to only chetana tattvam and not achetana tattvam and pradhanam being achetanam it will not fit in here.

The second interpretation is because of the clarification by Upanishad itself sva refers to Upanishad. Because of the clarification given elsewhere and that elsewhere is Chandogya upanisad 6.8.4 it says sat Brahman alone is pradistha. Then Adhi Sankaracharya introduces a Purva Paksi, which I introduced in the last class.

The fourth line of the current mantra we give two interpretations. Purva paksa contends the first interpretation of the fourth line. Esa refers to pronoun a line mentioned before. Esah is visvadhara Brahma or Paramatma. The word sethu according to our first interpretation refers to bund or dam, which holds water. Esah sethu means Brahma is a dam or bund if Brahma is a dam what does it hold. It holds immortality. It is the reservoir of immortality from where one can tap immortality. Based on the first interpretation raises two objection. He says sethu refers to finite or paricchina or limited entity. Since the fourth line refers to visvadhara refers to sethu and since Brahma is limitless entity and how can samanvayadhikaranam between sethu and Brahma.

Even if you accept sethu as dam the holder of amritasya, the word amritam does not eman immortality but the amritam means immortal means Brahma. Esah which is according to you is sethu a dam of amritam and this Brahma is holder of brahman.. Can water be the holder of water and Brahma cannot be the holder of Brahma and holder and held cannot be identical and therefore esah should be other than Brahma.

We have to answer the first part of purva paksa. How can you equate Brahman with limited dam. For that Adhi Sankaracharya says it is a foolish approach and he says that it is gouna prayogah and it is like a reservoir. Example and original will not have all features common.

Then example will become original itself. Certain original features will be there. Dam has water that can be tapped by us and make use of dam. Availability of water in the dam is example and so availability if immortal Brahman is there to bless you with immortality. Also Adhi Sankaracharya says you should not foolishly compare example and they you may ask Brahman is made of mud cement etc.

Second purva paksa is how can you say it is holder of immortal Brahman. For that Adhi Sankaracharya answers eventhough amritam means immortal but in this context you should understand umrittvam a compromise with the word is allowed if the tatparyam require contextual adjustment. There is nothing wrong. It want to tell the source of immortality, it is all right. Amritam is literally immortal but in this context it is immortality.

When we give the answer purva paksa is not satisfied and he says that you compromise with the word's meaning amritam. He says it is escapism. Taking amritam as immortality is not correct. Then Adhi Sankaracharya says if you are not satisfied \, we will give the second interpretation for the fourth line to avoid compromising with the meaning of the word amritam. Here we say esah does not mean Brahman at all. It means Brahma jnanam. If you see the mantra first line talks about Brahman; the third line talks about you should know Brahman means it talks about Brahma jnanam.

Esa is a pronoun refers to nearer thing and that refers to far away. Esa refers to something nearby. Brahman is near by or Brahma jnanam is near by; fourth line is closer to third line and therefore esah refers to Brahma jnanam only what is the meaning of sethuh. Here we say sethu does not refer to dam at all. Another is a bridge. Here bridge means a path, and path means a sadhanam; therefore sethu means sadhanam and esah means Brahma jnanam; amritasya means Brahman itself. Now esah this Brahma jnanam is the means to attain Brahman. Brahma veda brahmaiva bhavati. We say through Brahman you gain Brahma jnanam. Therefore first two lines talk about Brahman only.

You interpret esah as Brahma jnanam given in third line. According to Sanskrit Brahma jnanam is neutral gender. Esah is masculine gender. Now while Brahma jnanam is neutral gender can be referred to masculine gender. According to grammar, it can take the gender of the previous word which it refers to or future predicate it is going to talk about. Here pronoun is corresponding to sethu which comes later. Hence etad sethu is correct and esah sethu means the sethu which is masculine. Therefore there is no dosha. Therefore Dyubhvadyayadhanam is brahmaiva. Now we go to the second sutra.

## **Topic 1. Dyubhvadyadhikaranam [sutras 1-7]**

The abode of heaven earth etc., is Brahman

### **Sutra 1.3.2 [65]**

#### ***Muktopasripyavyapadesat***

Because of the declaration [in the scriptures] that that is to be attained by the liberated.

We will now see general analysis. Here Vyasacharya points out that visvadhara mentioned in Mundaka relates to Brahman only. Now he takes a future mantra in support of his statement. The mantra is 3.2.8 of Mundaka that reads as *yatha nadyah syanda-manah samudre- 'stam gacchannti nama-rupa vihaya, tatha vidvan nama-rupar vimuktah Parar-Param purusam upaiti divyam.* The meaning is as flowing rivers get themselves disappeared in the ocean their special names and distinct forms, so the wise man free from all his identifications with the names and forms goes into the highest of the high the Supreme divinity.

The mantra talks about the phalam of Brahma jnanam. It says Brahma jnani will merge into Brahman which was discussed before as visvadhara. Therefore we can say visvadhara vidvan or jnani merges into Brahman. An example is given just as rivers merge into ocean losing the individuality and nama rupa. Adhi Sankaracharya argues therefore if you take visvadhara as pradhanam then it will mean knower of pradhanam will merge into pradhanam and what will be the jnana phalam.

Visvadhara jnani who is chetanam will merge into pradhanam which is achetanam. Here becoming chetanam will become achetanam and that is the moksa phalam. Brahma jnanena Brahma praptih. Since visvadhara is presented as destination of a jnani in Mundaka 3.2.5 is presented as destination of jnani visvadhara should be Brahman only. If visvadhara is taken the destination will be pradhanam which nobody wantsit.

The sutra has got one word Muktopasripyavyapadesat. It is a common word consisting of three words mukta upasripya upadesad. Muktah means a jnani, upa sripya means locus of merger, gath, laksyam, goal, vyapadesah means presentation. Because of the presentation of visvadhara of Mundaka 3.2.5 as the destination of a jnani. Visvadhara is Brahman because of the presentation of visvadhara as the destination of jnani said in mantra 3.2.5. With this second sutra is over.

## **Topic 1. Dyubhvadyadhikaranam [sutras 1-7]**

The abode of heaven earth etc., is Brahman

### **Sutra 1.3.3 [66]**

#### ***Nanumanamatacchabdat***

[the abode of heaven etc] is not that which is inferred i.e., pradhana because there is no term indicating it.

In this sutra Vyasacharya establishes that visvadhara is not pradhanam, which is a basic matter as per Sankya philosophy. There are no expressions in the Upanishad, which indicates pradhanam, which are relevant to pradhanam. There pradhana referring in the Upanishad. All then words in the Upanishad are opposed to pradhanam. All the expressions used in the Upanishad indicate chetana tattvam and none referring to achetana tattvam. Atma refers to chetana tattvam.

Sankara also quotes 1.1.9 of Mundaka upanisad that says *yah sarvajnah sarva vid yasya jnana mayam tapah tasmad etad Brahma nama rupam annam ca jayate* the meaning of the mantra is from the Brahman [the Supreme reality] who not only is aware of the total happenings in the world but is equally in the know of all the details of happenings every

minute whose very thought is of the nature of knowledge, - are all these produced the creator, names and forms and nourishment for all.

The Sarvajna omniscient we find that omniscient principle is chetanam. All the words in the mantra are chetana vakyams only. Because of the absence of relevant expression visvadhara is not pradhanam. Hence visvadhara is Brahman only. This is general analysis of the sutra. Now we will go to the word analysis.

Na the next word is anumanam visvadhara the substratum of the world is not anumanam the word anumanam means pradhanam of Sankya philosophy the basic matter I have discussed this before according to their philosophy pradhanam is never perceptible the basic matter can not be perceived but it can only be inferred since it can be inferred it is called inferable substance or inferred substance; normally anumanam means inference but in this context anumanam inferred substance, and the inferred substance is pradhanam. Anumanam is pradhanam therefore1 visvadhara is not pradhanam atachabdat this consists of ah means absence tad means pradhana vacaka sabda means expression because of the absence of the expressions relevant to pradhanam we conclude that visvadhara is Brahman.

### **Topic 1. Dyubhvadyadhikaranam [sutras 1-7]**

The abode of heaven earth etc., is Brahman

#### **Sutra 1.3.4 [67]**

#### ***Pranabhricha***

[nor] also the individual soul

First we will do a general analysis of this sutra. In the previous sutra Vyasacharya has negated pradhanam. In the following four sutra Vyasacharya establishes visvadhara is not jiva also. The doubt comes here because in the mantra 2.2.5 of Mundaka upanisad the third line says *tam-evaikam janatha atmana manya*. In the sastra there are two meanings Jivatma is called Atma and Paramatma also is called Atma. We need not take pradhanam which is chetanam. Since Jivatma is chetanam the doubt comes Vyasacharya takes pains to establish visvadhara is not jivah. The details we will see in the next class.

## BRAHMA SUTRA

Class 90

### **Topic 1. Dyubhvadyadhikaranam [sutras 1-7]**

The abode of heaven earth etc., is Brahman

#### **Sutra 1.3.4 [67]**

#### ***Pranabhriccha***

[nor] also the individual soul

In this first adhikaranam Vyasacharya analyses a Mundaka mantra 2.25 in which Upanishad talks about the substratum of the world. The Upanishad does not clearly say what visvadhara is. Hence there is an enquiry in this regard in Brahma Sutra. It is Paramatma alone but not pradhanam as claimed by Sankya philosophy. Since pradhanam is achetana vastu and Atma is chetana vastu mantra must refer to Paramatma alone. In the third sutra Vyasacharya negated Sankya philosophy that pradhanam is visvadhara. There is absence of expression of which are relevant to pradhanam. Such expression should be achetanam revealing expression.

All the Upanisads express chetana Atma sabda. I want to add the incidental purva paksa connected to earlier purva paksa. Visvadhara can be vayu also supported by Brahadharaynaka upanisad aksara Brahmanam where the expression is by vayu alone the whole world is supported. Since vayu is presented as visvadhara third sutra negates vayu also because of the same reason. Just as pradhanam is achetanam vayu is also achetanam whereas Mundaka uses the word sarva vid and sarvajna and from this it is clear that it is chetana vastu. In absence of expression vayu is achetana.

Here in the fourth sutra Vyasacharya negates a purva paksa on the Mundaka mantra. The third line Atma is used as visvadhara the substratum of the universe is said to be Atma. The word can refer to Jivatma or Paramatma. When the word Atma can refer to both of them. Now the controversy is whether visvadhara is Jivatma and our view is visvadhara is not Jivatma but it is Paramatma only.

Before going further I will add an aside note. These are the situation very confusing for Advaitic student. From this it becomes indirectly very clear and Vyasacharya totally differentiates Paramatma and Jivatma and asserts Paramatma is visvadhara. That means Vyasacharya seems to indirectly establish Jivatma Paramatma beda and this adhikaranam seems to support bedavadi. Advaitin has to clearly understand the adhikaranam. Vedanta especially Brahma Sutra establishes both difference between jivatma and Paramatma and equally establish jivatma and Paramatma aikyam also.

Therefore especially in Sankara bashyam he establishes beda and abeda. Those who read sankara's bashyam criticize sankara himself does not know what he wants to say and even he is not clear about the Jivatma and Paramatma aikyam, therefore some people introduced a new philosophy beda abeda vada. What is our answer. We establish the difference from vyavaharika dristi. We establish the non difference from Paramarthika dristy.. Then the

question can come that vyavaharika dristya beda the difference from relative or empirically establish and is it not different from day to day life. Sastra need not say what we already know very clearly. Why should sastra vehemently establish beda. For that it is important because Sankya philosophers do not accept Isvara even at vyavaharika level. He accepts vyavaharika jiva and he accept vyavaharika jagat but he does not accept vyavaharika Isvara. Vyavaharika Isvara does not accept and we have twofold job one is vyavaharika dristi we have to establish vyavaharika Isvara different from vyavaharika jiva and vyavaharika jagat. In this task we take dvaida philosophers also.

We all become one Vedantins in facing Sankya and while facing Sankya we establish Isvara and say that Isvara is different from jiva and jagat and we say that Isvara is adham and jiva and jagat are adheyam. After establishing that we go to Dvaidin and vishistadvaidins and we have an internal difference whether jiva jagat Isvara beda is vyavaharikam and not Paramarthikam. Here in this sutra our dristi is that Isvara is different from jiva. Visvadhara Paramatma and not Paramatma from vyavaharika dristya and if we understand this there is no problem.

Visvadhara is Paramatma and not Jivatma and the reason we have to borrow from the previous sloka anuvritti. The reason is to be taken from previous sutra. Atha sabdad. Java vacaka sabda abhavad. But you should be careful here. There we said achetana vayu sabda abhavad. But now here jivah and it is not achetana. There are no expressions to reveal alpa jivah. Sarvajna etc., chetanam all right but it does not refer to jivah. Visvadhara is not jiva in the absence of reference to Paramatma.

Pranavid ca we have to supply visvadhara, na and adha sabdad. Visvadhara na prana brid ca adha sabdad. Prana brid means Jivatma. That holds prana for sometime and that which takes one to punarabi jananam and punarabi maranam is Jivatma. Ca also. In the previous sloka it was said visvadhara is not vayu and visvadhara is not pradhanam and now we add Jivatma also. Because of the absence of expressions, which are relevant to Jivatma, and such expressions are not there and in fact opposite expressions are there which goes against Paramatma. Now we go to sixth sutra.

## **Topic 1. Dyubhvadyadhikaranam [sutras 1-7]**

The abode of heaven earth etc., is Brahman

### **Sutra 1.3.5 [68]**

#### ***Bhedavyapadesat***

[also] on account of the declaration of difference [between] individual soul and the abode of heaven etc,

This sutra also establishes visvadhara is not jivatma. Here a new reason is given. Vyasacharya says that Mundaka mantra indicates the difference Jivatma from visvadhara. Again we go to the third line which says *tam-evaikam janatha atmana manya* may you know that visvadhara. Janatha is second person, in that statement you is presented as subject of knowledge and visvadhara as the object of knowledge and from this it is clear knower is you Jivatma and visvadhara is to be known and there we see subject object difference is indicated

in the third line. You the knower is to be different from the known. Therefore it is not Jivatma. This is the general analysis now we will come to word analysis.

It has one word *bedavyapadesat*, *visvadhara na pranavid beda vyapadesat*. This is the full sutra. *Visvadhara* is not *jiva* because of *beda vyapadesat*. *Beda* means difference distinction between *Jivatma Paramatma* *bedah*. The next word is *vyapadesa* is indication. Indirect revelation or hint or clue any word you can take it. Because of indication of difference between *Jivatma* and *Paramatma* as the subject and object of knowledge. They are subject and object because may you *jivatma* know the *Paramatma*.

## Topic 1. Dyubhvadyadhikaranam [sutras 1-7]

The abode of heaven earth etc., is Brahman

### Sutra 1.3.6 [69]

#### *Prakaranat*

On account of the subject matter

This sutra also establishes the same idea that *visvadhara* is not *jiva* for which third reason is given. All reasons establish *visvadhara* is not *Jivatma*. The context, which is *Paramatma*, it is not *Jivatma*. Here *Vyasacharya* quotes mantra 1.1.3 of *Mundaka upanisad* that says *saunako ha vai mahasalo-'ngirasam vidhivad-upasannah papraccha, kasmin nu bhagavo vijnate saram-edam vijnataam bhavatiti* which means the great householder *saunaka* duly approaching *Angira* in the prescribed manner asked 'what is that, my Lord, having known which all these become known?' Contextually we understand many things. In the third mantra the student asks the question.

What is that knowing which we know everything. *Karana vijnanena karya vijnanam bhavati*. Therefore the question is what is the root cause of the universe. It is certainly not *Jivatma* and it is not the cause of the universe and he is suffering birth death cycle in the creation. *Isvarah Paramatma*. It talks about *jagat adhara Paramatma*. Whenever the mantra clearly does not talk about *Paramatma*, we should see the context and arrive at the conclusion. Here taking the context into account, we find that *visvadhara* is not *Jivatma* but *Paramatma* alone. Now we will see word analysis.

Supply three words of *prakaranat*, *visvadhara na pranavid prakaranat*. *Visvadhara* is not *Jivatma*. *Prakaranat* means context. Because of the context of *Paramatma* *Jivatma* is not *visvadhara*. The context is decided by the question asked. The answer must be related to the question. Now we will come to the sutra 7 and the final sutra of this *adhikaranam*.

## Topic 1. Dyubhvadyadhikaranam [sutras 1-7]

The abode of heaven earth etc., is Brahman

### Sutra 1.3.7 [70]

### *Sthityadanabhyam cha*

First we will do general analysis where he asserts visvadhara is not Jivatma. Vyasacharya argues in a very indirect way. For this we must see a mantra 3.1.1 of Mundaka upanishad *dvan suparna sayuja sakhaya samanam vrksam parisavajate tayor anyah vrksam parisavajate tayor anyah pppalam svady-svadv-atty-anasnam anyo abhicakasiti* the meaning of the mantra is two birds bound to each other in close friendship perch on the Self-same tree. One of them eats the fruits of the tree with relish, while the other [just] looks on, without eating.

Jivatma and Paramatma are located in the same tree and Jivatma is as distinct from Paramatma and the Upanishad specifically mentions the difference. Of the two Jivatma experiences karma phalam and the Paramatma bird witnesses Jivatma eating and enjoying. It only witnesses and it is a nonparticipator. In this mantra Upanishad wants to reveal Paramatma or Jivatma. Which is highlighted?

Adhi Sankaracharya Paramatma alone is tatparyam of mantra and not Jivatma the reason being Jivatma, as an experiencer of karma phalam Upanishad need not reveal and we know that and we experience it daily. That mantra reveals only Paramatma, which is distinct boktru Jivatma. Adhi Sankaracharya says Mundaka 3.1.1.

Aboktru Paramatma as distinct from Jivatma. If the previous mantra talks about pradhanam jivah then suddenly introducing Paramatma in this mantra will become out of context. If you take visvadhara is talking about Paramatma this mantra continues Paramatma topic and the flow will be without any jerk. This is the essence of the argument.

Sthithi means non-participation keeping aloof; he keeps in mind the Upanishad mantra 3.1.1. Of Mundaka upanishad adanam it is literally eating but here it is involvement. He keeps in mind the Jivatma bird eating as stated in the mantra in question. Because of nonparticipation and participation of Paramatma and Jivatma respectively in experiencing the karma phalam revealed in 3.1.1.of the mantra. Visvadhara is not Jivatma due to what is stated earlier.

With this adhikaranam is over. The subject matter visvadhara is Paramatma. Doubt is visvadhara is Paramatma or pradhanam of Sankya philosophy or Jivatma. Visvadhara is doubted because pradhanam is basic matter of the universe. It is can be the casue of jagat karanam is the argument of purva paksa. Visvadhara is also taken as Jivatma on the basis of the word Atma in the third line of Upanisadic statement. Jivatma can be justified as visvadhara because the whole world comes into being for the benefit of Jivatma. World has not punyam and papam. It comes inot being to exhaust the punya papa of Jivatma. For the world there is no karma phala because it is achetana vastu. If the world does not come for whose sake does it come. Ti comes to give sukha and dukha anubhava of Jivatma. Hence Jivatma is responsible for arrival of the universe and when prarapta is exhausted the whole world goes. Visvadhara can be taken as vayu because of the upanishadic statement in Brihadharaynaka upanishad that because of vayu the whole world survives. Just as prana is supporter of the individual being so vayu is the supporter of the universe. Then comes purva paksah. Anything wrong he will say. He says visvadhara is pradhanam or it should be Jivatma sarvasristi hetutvad; Gita support is there; Jivatma alone brings the world through his karma; visvadhara is vayu because of the Brihadaranyaka upanishad mantra. With this third factor is over.

Siddhanta says visvadhara is Paramatma or Brahma. The reasons are given in the first two sutras. One reason is Upanishad itself clarifies by using the word sarvajnah. It can neither be inert nor pradhanam nor it can be vayu or jiva; it is only sarvajna sarvavid Brahman alone. Pradhanam can never be the destination. Therefore also it has to be Brahman alone. Later in the next five sutras Vyasacharya negated vayu, jivah vadha also and therefore it is concluded that visvadhara is Paramatma alone. The position of the adhikaranam is rightly positioned. With this first adhikaranam is over.

## BRAHMA SUTRA

Class 91

### **Topic 2. Bhumadhikaranam [Sutras 8 – 9]**

Bhuma is Brahman

#### **Sutra 1.3.8 [71]**

#### ***Bhuma samprasadadhyupadesat***

Bhuma [is Brahman] because it is taught after the state of deep sleep [i.e., after prana of the vital air which remains awake even in that state]

The next adhikaranam is called Bhumadhikaranam. This is a small adhikaranam with two sutras. The first sutra begins with the word Bhuma. Here Vyasacharya analyses Chandogya upanisad mantra, which is 7.24.1. The mantra is *yatra nanyatpasyati nanyacchrnoti nanyadvijanati sa Bhumatha yatranyatpasyaty anyacchrnotyyanya dvijanati tadalpam yo vai Bhuma tadamrtamatha yadalpam tanmartyam sa bhagavah kasminpratisthita iti sve mahimni yadi va na mahimniti* the meaning of the mantra is if you attain Bhuma then you have real happiness. What is Bhuma? It is Brahman. It is the biggest and it is Infinite one. Something is Infinite when it is without any limitation in terms of time and space; even our own lives are limited. We were born at a certain point of time and we shall live for a certain span of time. It may be for a hundred years or it may be less, but the body will not last forever.

First I will give you the meaning of the mantra. It is known as Bhuma laksana mantrah. The word Bhuma means Brahman. It is Brahma laksana mantra and this gives the definition of Brahman, Brahman is that in which no seer sees anything with a seeing instrument, no hearer hears anything with hearing instrument and Brahman is that in which triputi is absent. Three factors known as subject object and instrument is called triputi. Brahman is that in which all the triputis are absent. We can define Brahman as nirvikalpam. Since it is advidiyam it has to be anandam also and the final meaning is Infinite. Then the Upanishad says wherever triputi is there wherever duality is there that is alpam; savikalpam sadvayam vastu is alpam, which means finite.

Then the mantra says Bhuma is Infinite that which is finite is subject to end and we have to add that yad Bhuma tad sukham; Bhuma is sukha swarupam and alpam is dukha swarupam. Bhuma is supporter of anything and itself is the unsupported supporter of all. This is the meaning of this mantra. We should know the background in which the mantra has come. This occurs in the seventh chapter of Chandogya upanisad, which is called Bhuma vidya chapter. It is called Bhuma vidya the word Brahman is replaced by Bhuma.

The seventh chapter begins with the student narada and teacher sanatkuma. Narada comes and tells sanatkumara that I have learnt all in my life. I know veda veda angas etc. But the tragedy is that I am educated miserable person. All knowledge has not brought any change in me. Previously I was ignorantly miserable and now I am knowledgably miserable. I know that you would have heard sokham admavid. I have heard Atma vid Brahma vid knower of Brahman crosses over sorrow. Atma means biggest one Atma means Bhuma. The biggest one

is Atma Infinite is Atma Bhuma is Atma knower of Bhuma will cross over sorrow. Teach me the biggest thing in creation. He does not want to show the biggest one because the human mind is small.

So he introduces the series of thing each one is bigger than the previous one. First item is nama and the last one is asha. This comes in seventh one to 14 sections. Nama is big and vak is bigger and still bigger and in this series asha is biggest one as Bhuma. Nama is Bhuma vak Bhuma manah Bhuma asha is the biggest one. In the 15<sup>th</sup> chapter he says life principle is bigger than all the fourteen items and prana is introduced as 15<sup>th</sup> item that is Infinite and that is sarvam visvadhara and prana sustains everything.

The Upanishad also says whoever knows prana he knows the biggest thing in creation. Prana vadhi is adhvadhi. Who knows prana and speaks about prana he knows biggest thing in creation. The Upanishad deals with prana tattvam elaborately. In 16<sup>th</sup> section he says prana vadhi is not adhi vadhi and he is abeksita adhi vadhi and one who knows and talks about Brahman alone is adhi vadhi.

The mischief is that first it says prana is biggest thing that dwells on the topic elaborately and says Brahman is biggest it says. And confusion is that prana is dealt with elaborately and it says Brahman is biggest is said casually. From 17<sup>th</sup> to 23<sup>rd</sup> section various sadhanas are discussed. There is one sentence about Brahma vadhi while prana is talked about elaborately. In 24<sup>th</sup> section we get the definition of the biggest of the biggest thing. This is called by the name Bhuma. It is a common noun the 'biggest'. The biggest is said to be 'triputi rahitam'.

The Upanishad does not clearly say that it is biggest whether it refers to prana or Brahman in the 16<sup>th</sup> section. Now our question is which is the biggest Prana or Bhuma in the absence of any clear-cut definition. Had the Upanishad used the word Brahma there would not have been any problem. But it has not been done. Hence alone this sutra has found a place in the Brahma Sutra. Having seen the general background to this adhikaranam we shall discuss the analysis of the first sutra of this adhikaranam.

Our siddhanta says Bhuma is not prana but Brahman, the Paramatma alone. The essence of the first sutra is Paramatma. Vyasacharya says you study the order of the series. The series started with nama and the fourteenth item is asha and the fifteenth item is prana and the sixteenth item is Brahman. Nama, asha, prana and Brahman is sixteenth. Sanatkumara says later item is bigger than the previous one and in that order after prana Brahman has been presented and going by the same logic, we say Brahman is greater than prana and Brahman is absolutely great and prana is relatively great.

This is the positional difference, the seating arrangement is sixteen and after Brahman none is there so it is the greatest. Now we will see the word for word analysis.

Bhuma samprasadat, adhi upadesat are the four words. Bhuma means Brahman; Bhuma is Brahman only samprasadat adhi upadesat. Bhuma means the biggest and it is derived from the words bahu. And Bhuma is abstract noun. Fullness is itself is called Bhuma. Bahutvam is Bhuma and it is fullness. It occurs in Chandogya upanisad 7.24.1. The next word is in this context samprasadat means pranah. One meaning is jivah. In that context you have to derive that the jiva in sleep. That is one meaning. Second meaning is sleep itself, a state in which one is calm. Calm state is also called samprasadat. The third meaning is prana. First jiva, second is Sushupti and the third is prana. How can we accept the meaning prana?

In sleep everything is resolved except one thing. That one thing is prana. If prana is resolved the person will be disposed of. The very fact all the activities are stopped but prana functions. In sleep prana alone is awake. The next word is adhi means after; that is after prana. Upadesat means teaching. The teaching of Brahman takes place after prana in Chandogya upanishad 7<sup>th</sup> chapter.

In fact, Prana is taught in the 15<sup>th</sup> section and Brahman is taught in the 16<sup>th</sup> section. Why is it so? It is just because Brahman is bigger than prana. In the last fifteen items Sanatkumara says earlier one is smaller and the latter one is bigger. This applies to this mantra alone. Therefore Bhuma is Brahman, alone which is bigger than prana. This is the word for word analysis of the first sutra.

Here Adhi Sankaracharya introduces a big purva paksha. He says that no doubt when we look at the series nama to Bhuma and fifteenth is prana and sixteenth is Bhuma. He says if you study the seires you study one thing. At the end of every item student asks the question teach me further what is the next bigger thing. Sanatkumara says the second etc. After prana is introduced narada asks no question at all. Purva paksha says the series is complete with the 15<sup>th</sup> item.

Sanatkumara goes on talking. Sishya is satisfied with prana answer, which has been elaborately discussed. Life principle is all pervading. Therefore with prana series is complete and therefore prana is the biggest one and the Bhuma in the next is bigger thing.

The second is that this item is given special title speaker of prana is biggest thing. This title is not given to anyone of the earlier things. The next argument is after talking about in 15<sup>th</sup> section, sanatkumara teaches all right and he does not talk of Brahman because the word Brahman does not occur Brahman. He talks of sadhanas only but he does not use Brahman anywhere. It talks of sathyam sadhana but he does not talk anything about Brahman. More in the next class.

## BRAHMA SUTRA

Class 92

### **Topic 2. Bhumadhikaranam [Sutras 8 – 9]**

Bhuma is Brahman

#### **Sutra 1.3.8 [71]**

#### ***Bhuma samprasadadadyupadesat***

Bhuma [is Brahman] because it is taught after the state of deep sleep [i.e., after prana of the vital air which remains awake even in that state]

This second adhikaranam is known as bhumadhikaranam and it analyses a mantra occurring in Chandogya upanisad. We now discuss a purva paksa where Bhuma laksanam is questioned. Our argument Brahman is talked about after prana although prana is bigger than the previous 15 items, Brahman alone is biggest as it is taught after prana. Now Adhi Sankaracharya introduces a purva paksa.

Purva paksa says that upto prana alone there is question answer series between Narada and Sanatkumara. The dialogue is between nama and prana and narada does not ask anything further and Sanatkumara speaker of prana is speaker of adhidhiva. Pranavadhi is given the title adhidhiva. Later section it does not talk about Brahman but some sadhana only. Therefore they contend that prana is the biggest one.

Second argument is that in the 24<sup>th</sup> section [7<sup>th</sup> chapter] where Bhuma laksanam is given perfectly fits with prana. He contends that the prana laksanam and Bhuma laksanam tallies. While defining Bhuma [7.24.1 of Chandogya upanisad] is that in which there is no triputi and there is no vikalpa and one does not see anything, one does not hear anything; triputi rahityam Bhuma laksanam. Purva Paksi argues that this fits in with prana. During the sleep everything is resolved except one thing and that one thing is prana and that is why Sushupti is known by the word prana also.

In Sushupti prana alone is there and therefore the word prana and Sushupti are synonymously used. The definition of Sushupti is triputi rahityam. Sushupti and prana are identical. Therefore definition of Sushupti is the definition is prana and triputi rahityam is definition of prana. Sushupti and prana is identical and prana is triputi rahita and in 24<sup>th</sup> mantra Bhuma is triputi rahita and therefore all the three are one and the same. Hence Bhuma is prana is equal to Sushupti and therefore nirvikalpah. In 24<sup>th</sup> section Bhuma is equated to sukham. Purva Paksi says when do you experience bliss, a continued bliss. In Jagrat it is rare; I swapna it comes and goes but in Sushupti it is continuous. Sushupti is equated to sukham.

Sushupti is equated to prana. Prana is equal to Sushupti and Sushupti is sukham and prana is equal to sukham. In 24<sup>th</sup> section it is said Bhuma is sukham and therefore all the four words are synonymous. Therefore Bhuma has got sukatvam, triputi rahityam and prana is also like that and therefore both are one and the same. So Bhuma is prana alone. The definition of prana and definition Bhuma perfectly tally. The Bhuma fits with prana the biggest one; prana

is biggest one as it pervades all human being. Prana is sarvatma and it is all pervading and therefore it deserves the name Bhuma. This is the second argument of Purva Pakshi. Now we have to answer the purva paksa.

We give five reasons in negating the purva paksa. First reason is based on 7.16 Chandogya upanisad where the mantra runs as *esa tu va ativadati yah saryenativadati so'ham bhagavah satyendativadaniti satyam tveva vijinasitavya miti satyam bhagavo vijinasa iti iti sodasah khandah* the meaning of this mantra is 'but a person must first know the truth. Then he is truly an ativadi.' Narada said 'I want to be an ativadi by knowing the truth' sanatkumara replied 'but one must earnestly desire to know the truth'. 'Sir I earnestly desire to know the truth' Narada said .

Esa tu va ativadati in the 15<sup>th</sup> section Chandogya upanisad the dialogue is over with prana. Not only that prana vadhi is given a title adhvadi. Unfortunately Narada was satisfied with this teaching., he was about to go away and even though Narada was not ready to learn further, the dialogue was not over from Sanatkumara angle. Therefore Sanatkumara revived the teaching. He continues the teaching. When he begins the teaching he commences with esa tu va ativadati the word tu is highlighted here. Tu means but. Whenever we use the word but reduce the intensity of what is said earlier. But dilutes the previously what is said.

In the 15<sup>th</sup> section pranavadi is ativadhi and in 16<sup>th</sup> section it shows that pranavadi is only an relative adhvadi. That means prana is absolutely big but relatively big and one the following thing is absolutely big. Esah means the following person. Not only that Upanishad uses the expression vai. Which means really. From that we come to know that prana is really big but the following person is the biggest and it one who is sathyavahdi is a real adhvadi. Sathyam means Brahman. Brahmadhvadi alone is real adhvadi. Pranavadi is pradeksita adhvadi and Brahma is real absolute adhvadi. This sathyam Brahma is talked about as Bhuma in 24<sup>th</sup> section. This Bhuma alone is later talked about as Atma in the Upanishad in 7.26.1 of Chandogya upanisad. This is the argument number one.

The next argument is in the beginning of the teaching has said sarathi sokam atmavid the knower of Atma crosses sorrow and therefore Upanishad should talk about Atma alone and not prana. Therefore 16<sup>th</sup> section 24<sup>th</sup> section and 26<sup>th</sup> section Atma should be the teaching and not prana of 15<sup>th</sup> section. This is the second argument.

Third argument is prana is mithya and mithya prana can never said to be greatest thing in the creation. We have several arguments in support of this. First thing is up to 15<sup>th</sup> section Upanishad talked about asha etc., and prana. When it wanted to talk to Brahman, it chooses the word sathyam. Namadi pranantham the Upanishad respective words but when it wants to talk about the word Brahman sathyam indicating all others are asathyam mithya.

Then another argument is in 26<sup>th</sup> section the Upanishad says Atma is great and it is all pervading. Having talked about Atma, 26<sup>th</sup> section it is said atmanah pranah jadhaha from Atma prana is born. Atma karanam prana is karyam; Atma is cause prana is effect; karana Atma sathyah and karya prana is mithya. In the 15<sup>th</sup> section mithya prana is talked about. In 16<sup>th</sup> section sathya Atma is talked about in fact here it is said that prana is not the ultimate. This is not Brahman. Prana is a manifestation of Brahman but not Brahman itself; in order to know Brahman one must know the truth; that is to say one must know the meaning behind the words. . 24<sup>th</sup> section talks about sathya Atma and it cannot be mithya prana. And that

sathya Atma is Brahman and the Brahman is named as Bhuma in this section. Hence Bhuma is biggest of all is proved beyond doubt. It can never talk about mithya prana.

In other Upanisads also it is clear that the prana is mithya. Prasnopanisad *atmana esa prano jayate yathaisa puruse chayai tasminn etad atatam mano krten ayaty asmin sarire* [3.3. Of Prasna Upanishad] this prana is born or the Atman, the Self, as shadow is born of the man so is the prana spread out on the Atman. By the actions of the mind, it enters into this body. As mithya shadow is born of Sathya Purusa so is prana is mithya can never said to be greatest thing and therefore prana is not Bhuma.

Purva paksa said that prana fulfills all the definitions of Bhuma. Adhi Sankaracharya says no doubt it fits in but not perfectly. He said paid is free from triputi in Sushupti. Adhi Sankaracharya says that this freedom from triputi is relative freedom and this is not totally absent but if is only in dormant condition. We don't glorify samadhi very much. Because in samadhi if a person experiences nirvikalpa the absence of triputi is temporary and it is not a permanent case. Triputi rahityam of Sushupti, samadhi, samprasat is temporary but Brahman is permanently nirvikalpa.

Therefore should I go to samadhi for nirvikalpam. That is not real nirvikalpam. Once you come back it is savikalpam. We are not interested in experienced nirvikalpam. We are interested in the knowledge of nirvikalpam in all the three states, jagrat swapna and Sushupti and we want the knowledge of nirvikalpam. We are interested in jagrat and study in jagrat and we should become nirvikalpam in waking. Perceived this is savikalpam and really I will be in nirvikalpa state from Paramarthika angle. For communication the most important is eye contact. That is very important. Therefore open the eyes and experience Advaidam that I am. Therefore pranasya triputi rahityam abeksikam. Bhuma is not prana and it is Brahman alone.

Purva paksa now says prana is equitable to sukham also. So called sukham which comes temporarily in Sushupti can never be real sukha. It is available in all state. Brahman alone is adhyantika sukham.

The next argument prana is Bhuma for it is all pervading. For that our answer dthe bigness of prana is also abeksikam compared to be more pervading and prana is not said to be all pervading. Brahman is said to be even more pervading than Akasa itself. How can prana be the biggest. It is big but it is not the biggest. Brahman has got everything adhyantikam. Because of these reasons prana is not Bhuma and Brahman alone is Bhuma. Now we will go to the second sutra.

## **Topic 2. Bhumadhikaranam [Sutras 8 – 9]**

Bhuma is Brahman

### **Sutra 1.3.9 [72]**

#### ***Dharimopapattescha***

And because the attributes [declared in the scriptural passage to Bhuma] appropriately one to the pure Brahman.

First we will do the general analysis of this sutra. Here Vyasacharya says that when you read other Upanisads all definitions of Bhuma tally with that of Brahman or atman given elsewhere. They don't fit in with prana. Whenever there is a vague statement in one statement you take the clear statement from another Upanishad. Suppose Krishna says in 3.20 of Gita *karmanai'va hi samsiddim asthita janakadayah lokasamgraham cad'pi sampasayan karyam arhasi* so it was even by works that janaka and others attained to perfection. Thou should do works also with a view in the maintenance of the world. There is doubt whether karma will give moksa or one has to gain jnana to gain moksa. Karma is neither is only means of moksa nor it is one of the means of moksa.

Here also Bhuma is sukham the world in 7.24 of Chandogya upanishad and Bhuma either refer to prana or Brahman. Hence we go to some other Upanishad. Sukha dharma belongs to dharma alone and not to prana. All the other attributes also belongs to Brahman alone and another Upanishad says only when one discovers triputi will be fully negated. In Sushupti triputi is dormant. *Sukhatva dharmanah brahmanah eva*. All pervasiveness also belong to Brahman only.

This we see in Isavasya upanishad *sa paryogin chukam akayam avramam asna viragm suddham apapu viddham kavir manasi praibhuh svayambhuh yatha tathyatah arthan vyadadhac chasva fibhyah samabhyah* the meaning is He, the Atman, is all pervading bright, bodiless, scatheless without muscles, pure, unpierced by evils. Wise, omniscient, transcendent and Self-existing, He alone allotted their respective functions [duties] to the various eternal years [creators]. Bhuma it is clearly said in Isavasya upanishad. All pervasiveness of Brahman is said in various other Upanisads and therefore here the word Bhuma refers to Brahman and not prana.

## BRAHMA SUTRA

Class 93

### **Topic 2. Bhumadhikaranam [Sutras 8 – 9]**

Bhuma is Brahman

#### **Sutra 1.3.9 [72]**

#### ***Dharimopapattescha***

And because the attributes [declared in the scriptural passage to Bhuma] appropriately one to the pure Brahman.

We do the second adhikaranam of Bhumadhikaranam. Through this analysis Vyasacharya establishes that Bhuma is Brahman alone. The main purva paksa introduced was pranavadi who claimed that Bhuma is nothing but prana. Adhi Sankaracharya refuted pranavadi's argument. After negating prana purvapaksa we had taken up the general analysis of the second sutra. Here all the features of Bhuma in the mantra 7.24 of Chandogya upanisad can fit into Brahman alone and not for prana. All the qualities of Bhuma said in the above mantra fit into Brahman alone. Several qualities are given.

First is beyond darsana Vyavahara aditatvam. Hearing and seeing transactions are not there for Bhuma. Our argument of Vyavahara aditatvam fit into Brahman only and prana goes out of Vyavahara then the person will sleep. Because of prana's Vyavahara all things take place. Vyavahara aditatvam belongs to Brahman and not prana. We have Isavasya upanisad and Brihadharaynaka upanisad mantra 4.5.15 says *yatra tva asya sarvam atmaivabhut, tat itara itaram tat kena kam jughred tat kena kam rasayet tat kena kam abhivadet, tat kena kam srnuyat, tat kena kam manvita, tat kena tam kena vijaniyat, sa esa neti nety Atma*. Brihadharaynaka upanisad clearly points out Brahman Vyavahara aditatvam is established. Who will see what and with what? Subject object and instruments are negated. Therefore Vyavahara aditatvam belongs to Brahman and not prana.

Second feature given is sukhatvam or happiness is the second feature given to Bhuma and this belongs to Brahman and not to prana. This is also revealed in various other Upanisads. Ananda Atma also we find this fact in Taittiriya Upanishad also.

Yovai Bhuma tadai amritam amritatvam is another quality of Bhuma. This can belong to Brahman alone and not to prana. Eternity or permanence belongs to Brahman and not to prana. Prana is marthyam. It is not amritam. Bhuma is amritam.

Next feature is swamahima prasthistitvatvam. It is independence. It is Self-reliance or Self sufficiency. It is given in 7-12 of Chandogya upanisad. Here Sanatkumara says Bhuma is supported by anyone but is supports itself. It is independent. Independence belongs to Brahman alone and not to prana. Nobody lives because of prana but Upanishad says prana survives something else which is called Atma or Brahman. Prana can never be Self reliant because prana is karyam and it has to depend upon karanam. Brahman is cause of everything and hence independent but prana is the effect and hence dependent on Brahman.

Sarvagatatvam is the fifth feature. It is given in 7.25.1 of Chandogya upanisad. Bhuma is in front is behind is in right is in left and it is everywhere. This sarvagatatvam is the feature of Brahman alone and it cannot be the feature of prana. Sarvagatha Bhuma is Brahman alone and not prana.

Sarvatmatvam 7.25.1 Chandogya upanisad; sarvatmatvam is the feature of Brahman alone and not of prana. Hence Bhuma alone is Brahman and not prana.

This is the general analysis of the sutra. Now we will do the word for word analysis. We have to supply Bhuma and Brahma. Bhuma dharma dharmopapattescha the word occurring in Chandogya upanisad 7.24 is Brahman only. Dharma upapattescha itself is a compound word dharma and upapatteh dharma means properties; properties of Bhuma mentioned in this section or in this chapter [six properties said above] upapatteh means because they fit; because six dharmas or bhumas mentioned in this chapter fit in with Brahman only. The next word is cha that means also. This is to add to the reasons previously given. With this the adhikaranam is over.

Vishayah is Bhuma occurring in 7.24.1 of Chandogya upanisad. The controversy is whether it is prana or Brahman. The word Bhuma means big one. It is that which is big. The third item is purva paksha. They say that Bhuma is prana alone. It is because the dialogue between guru and shishya concluded with prana. Each item is bigger than the previous item. In the gradation prana happens to be the last one and the dialogue is over with prana. Our conclusion is that Bhuma is not prana and it is Brahman only. We have presented various reasons in the two sutras. Dialogue continues without shishya asking no more questions. Initially it is called sathya, then Atma and then called Bhuma. Therefore Bhuma is Brahman and definitely not Atma. Now we will see the next adhikaranam

### **Topic 3. Aksaradhikaranam [Sutras 10-12]**

Akshara is Brahman

**Sutra 1.3.10[73]**

#### ***Aksharamambarantadhrith***

The imperishable [is Brahman] on account of [its] supporting everything upto Akasa [ether]

This is the third adhikaranam of the third pada and it is called aksharadhikaranam. First I will give you the general analysis of the entire adhikaranam that consists of three sutras. It is called so because the first sutra starts with the word akshara. Here Vyasacharya analyses a Brihadharaynaka upanisad mantra which occurs in mantra 3.8.8.

The mantra is *so hocaca etadvat tadaksaram gargi brahmana abhivadanti asthulamanvahasvamadirgham alohitam asnehamacchayam, atamovayavanakasam, asangamarasam, agandhamacaksuskam, asrotram, avagamanatejaskam, apranamamukham, amatram, anantaram, abahyam, na todasnati kincana, na todasnati kascana* [Mantra 3.8.8. Brihadharaynaka upanisad] he said 'that O Gargi, the knower of Brahma, call the imperishable.

It is neither gross nor fine, neither short nor long, neither glowing red[like fire]nor not adhesive [like water] [it is] neither shadow nor darkness , neither air nor space, unattached, without taste, without smell, without eyes, without breath, without a mouth, without measure, having no within and no without. It eats nothing and no one eats it. It is the changeless reality.

In this mantra the word aksharam is occurring and it is analysed. Now we will see the background of the mantra. We have an interesting story in the third chapter of the Brihadharaynaka upanisad. There is a competition and many learned people had come to the contest. Janaka wanted to find out who is the best scholar and he offered 1000 cows with gold attached to the horns as prize money for the best scholar selected from the assembly. When all were wondering,

Yajnavalkya asked one of his disciple samsvara took the cows even before the debate was over. All asked Yajnavalkya 'do you think that you are the best scholar'. Yajnavalkya was polite and he said he took the cow because he wanted the cows. In each section one one brahmana comes and asks the question. Among them was on lady known as Gargy. She was a Brahma vahini. She asked questioned twice. In the sixth Brahmanam she comes and again she appears in 8<sup>th</sup> Brahmanam. To avoid confusion this Brahmanam is called Aksharam Brahma.

The entire cosmos is supported by what is the first question. Yajnavalkya answers akase. Akasa supports the whole thing. Here the word Akasa has got a special name. What is the support of Akasa including the space. What is the ultimate karanam, which is called maya avyakta Akasa. Then Gargy says you are great. Then she asks the next question. What is that on which akasa itself is based and what is the substratum of avyakruta Akasa. To that question Yajnavalkya answers the question. The substratum maya is that I got from my guru. That is called aksaram. This is the substratum of the entire space. Aksaram has been defined as it does not have smell touch short etc, and it is Nirgunam, Nirgunam Brahman supports maya and maya supports the creation. What is the problem and why it is included in Brahma Sutra.

The Upanishad has not used the word Brahman and instead using Brahman it has used the word Aksharam. The word Aksharam has got so many meanings. If you take the most popular meaning Aksharam it is letter. Therefore the debate whether it refers to a letter or to Brahman. Purva Pakshi says it refers to varnah and the popular meaning he has applied. It is called primary meaning that is Aksharam. Therefore this adhikaranam is there. It is not varna and it is only Brahman we are going to establish in this adhikaranam.

Now we will see the first sutra. Vyasacharya says Aksharam is Brahman and it is supported to be the support of everything up to maya or Akasa. Therefore the universal support has got to be the Brahman alone. Akasa samastha prapanchasya adharatvad brahmaiva.

Now we will go to word for word analysis. You have to supply one word that is Brahma. Aksaram Brahma ambaranta dhriteh. The word is occurring in Brihadharaynaka upanisad 3.8.8. Is the meaning of the word Aksharam. You have to add the word Brahman and not an alphabetic letter. Ambaranta dhriteh. It has three words ambara anta dhriteh. Ambara means Akasa; anta means everything up to; dhriteh because of sustenance, the holding etc. Because of sustenance of everything up to is Akasa.

Adhi Sankaracharya puts a purva paksa. He says that I know that alphabetical letter will sustain the universe. Regular letter will not support the world. Here it is special letter which is glorified. There is an Aksharam called om. This can be called, as omkara rupa aksaram is the sarva adharah. If you are not convinced I will give the sruti support also. Om iti idahm sarvam [Taittiriya Upanishad] omkara is everything and it is everything past, present and future. Therefore, it is not Brahman. Omkara can support everything including Akasa. More in the next class.

## **BRAHMA SUTRA**

Class 94

### **Topic 3. Aksaradhikaranam [Sutras 10-12]**

Akshara is Brahman

**Sutra 1.3.10[73]**

#### ***Aksharamambarantadhrith***

The imperishable [is Brahman] on account of [its] supporting everything up to Akasa [ether]

This is the third adhikaranam of the third pada. Here Yajnavalkya reveals Aksharam as the ultimate support of everything. The definition of Aksharam is one of the most important definitions, which Adhi Sankaracharya often quotes. Here Brahman is revealed negatively. It is not revealed negatively free from everything. All properties are negated. Sensory properties are negated; all elements are negated. Aksharam is Nirgunam Brahma is revealed. The controversy is that Aksharam is a letter ambaram refers to samastha Prapancha. The word ambaram normally means Akasa but here it is maya or avyakruta Akasa or everything up to maya. Dhriteh means being the support. Aksharam is Nirgunam Brahman only and covers entire Prapancha including maya. This we saw in the last class. Now I will continue the purva paksa I had taken up in the last class.

Purva paksa says that aksaram, the letter is the primary meaning and vachyartham only should be taken. Our answer that primary meaning should be given importance and if it does not fit in the context, we have to take to the secondary meaning. Primary meaning should be applied and if does not fit we have to take the secondary meaning, he it does not fit. Aksharam is presented as sarva adharah. No aphetical letter can be sarva adharah. In this context I am not taking the ordinary letter and I take that syllable which is omkara Aksharam is sarva adharah. In support of his contention he gives sruti pramanam also. 2.23.3 of Chandogya upanisad omkaraha eva idam sarvam. In Taittiriya Upanishad 8.1.1 it is seen omi Brahman omitidagm sarvam omkara is presented as sarvatmakam. In Mandukya Upanishad also we find a mantra in support of the above. Because of this purva paksa concludes that Aksharam refers to omkara sabda eva and not Brahman.

Our answer is that even omkara Aksharam cannot be sarva adharah. Maximum you can claim is that omkara is adhara of the words and it can never be claimed as sarva padartha adhara. It is sarva pada adhara and it cannot be sarva padartha adhara. Omkara is itself a sound produced which is subject to beginning and the end. Omkara is a sabda, which is a property of Akasa when Akasa itself is, subject to beginning and end what to talk of omkara, which is only a property of Akasa. Anithya omkara cannot be taken as sarva adhara. If it is taken as supporter of everything and it cannot be then supporter of Akasa. Akasa supports Omkara and therefore omkara sabda can never support of Akasa, our contention cannot be sarva adhara. This is logic. It is also against anubhava viroda. No word can support the creation, it is against our anubhava and yukti also. Then purva paksa asks the next question how do you explain all the omkara mantra and sruti statements. Then Adhi Sankaracharya argues even sruti statements are against anubhava and yukti pramana. We will accept those sruti, which

do not violate anubhava virodha. Aksaram is not omkara and aksaram is Brahman alone. Adhi Sankaracharya gives further argument when primary meaning does not fit into the context we have to take the derived meaning. The derived meaning of aksaram Adhi Sankaracharya gives. The first derivation is from the root to perish. Aksaram means that which is eternal and what is eternal is Brahman alone. Therefore it is concluded that Aksharam refers to Brahman alone. The all pervading one is aksharam. Eternal all pervading Brahman is called Aksharam. All pervading one is adhara of everything including Aksharam. Omkara is not all pervading. Only Brahman is all pervading. Eternal all pervading Brahman is indicated by the word Aksharam and that all pervading one can only be the adhara of everything. Now we will enter the second sutra,

### **Topic 3. Aksaradhikaranam [Sutras 10-12]**

Akshara is Brahman

#### **Sutra 1.3.11[74]**

#### ***Sa cha prasasanat***

The [supporting] on account of the command [attributed to the imperishable, can be the work of the Supreme Self only and not of the pradhanam]

We will do general analysis first. In the previous sutra it was said that Aksharam is Brahman alone because it is sarva adhara. When this is said the Sankya philosopher argues that Aksharam is not an alphabetic letter and he says why should it be taken as pradhanam when pradhanam is qualified to be pradhanam. Pradhanam in Sankya philosophy is moola prakriti sometimes he calls prakriti sometimes he calls it avyaktam and our Vedantic equivalent is maya the basic matter because this basic matter is sarva adharah, and ultimately the whole creation. Vedantins says sarva adhara is Brahman. Now Vyasacharya has to negate pradhanam.

Sarva adharam cannot be and is not pradhanam. The reason is prasasanat. That is the approach of Vyasacharya. The reason he takes from the Upanishad itself. 3.8.9 of the Brihadharaynaka upanisad. In the 8<sup>th</sup> mantra Aksharam is defined as sarva adhara. The mantra reads as *etasya va aksarasya prasasane gargi suryacandramasau vidhrtau tisthatah, etasya va aksarasya prasasane gargi dyavaprthivya vihdrte tisthatah, etasya va aksarasya prasasane gargi nimesa muhurta ahoratnyardhamasa masa rtavah samvatsara iti sidhrtastisthanti; etasya va aksarasya prasasane gargi pracyonya nadyah syandonte svetebhyah parvatebhyah, praticyonyah, yam yam ca dismanu, etasya va aksarasya prasasane gargi dadatp ,amisuj [rasamsanit yajamanam devah, darvim pitaronvayattah.*

The meaning of the mantra runs as verily, under the rule of this Imperishable, O Gargi the sun and the moon are held in their respective courses; sky and earth are held in their respective positions; moments, hours days and nights, fortnights, months, seasons and years are held in their respective positions; some rivers flow to the east from the snowy mountains, other flow to the west each keeping to their respective directions; those who give, shining ones depend on the sacrificer and the departed ones on the independent offerings.

Etasya aksarasya prasasanam here the prasasanam means to govern or ruling or commandment. Therefore because of the commandment of Aksharam the world is

maintaining its order. Now Vyasacharya says prasasanam or commandment can be done by Chetanam or achetanam. The ruling is done not by local AK 47 but it is done by chetana tattvam which is Paramatma; achetana prakriti can rule the world. Therefore Aksharam is not pradhanam because of the upanisadic usage of the ruling or commandment. This is the function of only the chetana tattvam.

We will do the word for word analysis. It consists of three words sa; cha; and prasasanat; you have to supply a word Brahma karma therefore sa brahmakarma prasasanat; sa means that and in this context ambaranta dhredih which means supporting the whole universe or holding the entire universe together; the supplied word is Brahma karma which means the function of Brahman; that sustenance of the entire world is the function of Brahman alone and not the function of pradhanam. Why we say so prasasanat which means prasasana sravanat, because of the Upanisadic usage of the word commandment or the word governance or the ruling.

How does the use of word commandment is that commandment means only chetana tattvam can command and not achetana pradhanam cannot command. Sustenance of the world is the function of Paramatma because of the usage of the word commandment and the commandment has to be of chetana tattvam and that tattvam is Aksharam and that Aksharam is brahmaiva and not pradhanam. We have talked about the word cha and the word prasasanat and now comes the word cha.

Adhi Sankaracharya does not say anything. Sub commentators say cha based on reasoning. The essence of the sutra up to Akasa is the function of Brahman and not pradhanam. Pradhanam is not sustainer up to ambaram Akasa. The meaning of ambaram or Akasa does not mean regular Akasa but avyakrita Akasa or avyaktam and this Avyaktam itself is called pradhanam.

That means we talk about the support of pradhanam also. When we talk about the support of pradhanam and support of pradhanam cannot be pradhanam itself for pradhanam is the supported. We talk about the supporter and we are not talking of supported pradhanam. Therefore the supporter Aksharam has got to be pradhana binnam Brahmam. With this second sutra is over.

### **Topic 3. Aksaradhikaranam [Sutras 10-12]**

Akshara is Brahman

**Sutra 1.3.12[75]**

#### ***Anyabhavavyavrittiscaha***

And on account of [the sruti] separating [the Akshara] from that nature is different [from Brahman]

This reason Vyasacharya did not directly give but he has given it indirectly. In this sutra also Vyasacharya says Aksharam is not pradhanam. He says again by quoting another Upanishad mantra and sruti indirectly negates pradhanam in a letter mantra. The mantra taken is 3.8.11 of Brihadharaynaka upanisad. The mantra reads as *tadva etadaksaram gagyadrstam drastr, asuntam strotr, amatam matr, avijnatram vijnatr; nanyadatosit drastyā, nanyadato'sit strotr, nanyadato'sit mantr; nanyadato'sit' vijnatr; etasminnu khalvaksae garyakasa otasca*

*protasceti* the meaning is verily, O Gargy that imperishable is never seen but is the Seer, is never heard but is the Hearer; is never thought of but is the Thinker, than this; there is no other knower than this; across this imperishable, O Gargi is space [Akasa] woven, warp and woof.

Sarvadhara Aksharam is the hearer of everything, never known it is ever the knower and Aksharam ever the experiencer never the experienced. Our question is whether Aksharam is chetanam Brahman or achetanam pradhanam. Here in this mantra Aksharam is presented as ever the experiencer and it can be only chetanam Brahman and achetanam pradhanam can never be the experiencer. Sruti itself negates pradhanam. It negates the properties of pradhanam which is inertness. It talks about sentiency and by talking about sentiency it negates insentiency and it negates property of pradhanam and by negating the property of pradhanam it negates pradhanam. More in the next class.

## BRAHMA SUTRA

Class 95

### **Topic 3. Aksaradhikaranam [Sutras 10-12]**

Akshara is Brahman

**Sutra 1.3.12[75]**

#### ***Anyabhavavyavritttescaha***

And on account of [the sruti] separating [the Akshara] from that nature is different [from Brahman]

The substratum of the entire universe is seen as Aksharam which is nothing but Brahman. This is negated by the Sankya philosophers. This pradhanam is negated in second sutra saying that Aksharam is the commander of this universe. Aksharam is not only the ruler as also the substratum. Aksharam pradhanam can be substratum but it cannot be the ruler. Jada pradhanam cannot be the ruler. If Aksharam is Brahman, then the Brahman happens to be the prasasana karta the ruler also. Now we see the third sutra where I pointed out that the third sutra also negates the pradhanam.

Aksharam cannot be pradhanam. There is another statement occurs the sruti vakyam negates the main pradhanam attribute indirectly pointing out that Aksharam is Brahman and not pradhanam. In 3.8.11 of Brihadharaynaka upanisad the attributes of aksaram is given. Aksaram is chetana tattvam and it indirectly reveals it is chetanam. Thinker hook knower hood etc., is possible only for the chetana aksaram and it cannot be achetana pradhanam.

The mantra reads as *tadva etadaksaram grgyadrstam drastir, asrutam srotr, amatam matr, avijnatram vijatr, nanyadato'sti drastya, nanyadato'sit srotr, nanyadato'sit mantr, nanayadato'sit vijnatr, etasminnu khavaksare gargyakasa otasca protasceti* the meaning of the mantra is verily, o Gargy, that imperishable is never seen but in the seer, is never heard but is the hearer, is never thought of but is the Thinker, is never known but is the Knower, there is no other Seer than this; there is no other Hearer than this; there is no other thinker than this; there is no other Knower than this; Across this imperishable, O Gargi is space [Akasa] woven, warp and woof. Therefore also aksaram is chetanam Brahma not achetana pradhanam. Now we will go to the word analysis.

There are three words sa three words we have to supply Aksharam na pradhanam cha and prasasanat. Aksharam mentioned in Brihadharaynaka upanisad 3.8.8., that reads as *so hocaca etadvat tadaksaram gargi brahmana abhivadanti asthula manvahasvama dirgham alohitam asnehamacchayam, atamovayavanakasam, asangamarasam, agandhama caksuskam, asrotram, avagamanatejaskam, apranamamukham, amatram, anantaram, abahyam, na todasnati kincana, na tadasnati kascana* [Mantra 3.8.8.Brihadharaynaka upanisad] he said 'that O Gargi, the knower of Brahma, call the imperishable. It is neither gross nor fine, neither short nor long, neither glowing red [like fire]nor not adhesive [like water] [it is] neither shadow nor darkness , neither air nor space, unattached, without taste, without smell, without eyes, without breath, without a mouth, without measure, having no within and no

without. It eats nothing and no one eats it. It is the changeless reality. Twenty-three properties are negated in this mantra.

Na pradhanam it is not pradhanam. It is not the basic matter. Anya bhava vyavrutte this is one common word anya bhava vyavrutte anya means the other one. Since we want to establish Brahman here the other one is one other than Brahman the pradhanam. Then bhavah means attributes, the properties of pradhanam again this means achetanatvam dharmah; vyavritteh being negated by the Brihadharaynaka upanisad vakyam 3.8.11.

This does not directly negate pradhanam but it says indirectly. Since the properties of pradhanam name inertness is negated by the sruti vakyam 3.8.11 of Brihadharaynaka upanisad, the Aksharam cannot be taken as pradhanam. Next word is ca; it is a simple conjunction and that adds the previous conclusion. With this the word for word analysis is over. Here Adhi Sankaracharya has given another note. It is extension to the word ca.

We negate another possible purva paksa also. If you take 3.8.11 of Brihadharaynaka upanisad aksaram is taken as thinker, knower etc., purva paksa may argue aksara is chetana tattvam is established but the same chetana tattvam may be Jivatma chetana tattvam or Paramatma chetana tattvam. Why do you take it as Paramatma and why not take it as Jivatma. Second times you study the sutra and negate Jivatma. Anyabhava should not be taken as Jivatma. Vyavritteh means Jivatma properties are also negated by the sruti.

Where does the sruti negates Jivatma dharma. It is negated in 3.8.8. Itself. *Asthula manvahasvama dirgham alohitam asnehamacchayam, atamovayavanakasam, asangamarasam, agandhama caksuskam, asrotram, avagamanatejaskam, apranamamukham, amatram, anantaram, abahyam, na todasnati kincana, na tadasnati kascana* it defines Aksharam as without any properties. Therefore Jivatma is endowed with all the organs. Aksharam is free from sense organs and therefore aksaram must be taken as sariratriya rahita Paramatma alone not sariratriya sahita Jivatma. The sruti negates both pradhanam and Jivatma and hence Aksharam is Brahman alone.

Visayah, subject matter occurring in 3.8.8 of Brihadharaynaka upanisad is called Akshara Brahmanam. Samsayah is whether Aksharam means omkara or whether it means pradhanam or it means Jivatma or it means Paramatma. Purva paksa gives all wrong views. One says omkara the primary meaning of the word Aksharam; second purva paksa says it is pradhanam as it is presented as substratum of the whole world; third purva paksa says Aksharam is Jivatma only; it is said to be seer, hearer etc.

With this purva paksa is over. Siddhanta says and concludes that it is Paramatma alone because the description of Aksharam tallies with Paramatma alone. It is substratum, it is the ruler and it is without organs. Substratum omkara syllable is ruled out; because it is ruler the pradhanam is ruled out; it is without organs so Jivatma is ruled out; Paramatma alone has got all the three attributes.

Gita 8.3 also clarifies and supports siddhanti's views Aksharam is Brahman in this sloka *aksaram Brahma pramam svabhavo 'dhytmam ucvate bhutabhavadbhavakaro visargah karmasamjnitah* this means Brahma or the Absolute] is the indestructible, the Supreme [higher than all else] essential nature is called the Self. Karma is the anemgiven to the creative force that belongs beings into existence. Brahman assumes the form of jiva [chapter 15.7.] With this fourth item is over. Sangathi is that it is placed in the appropriate place only.

## Topic 4. Ikshatikarmavyapadesadhikaranam [Sutras 13]

The highest person to be meditated upon is the highest Brahman

### Sutra 1.3.13[76]

#### *Ikshatikarmavyapadesat sah*

Because of His being mentioned as the object of sight, He [who is to be meditated upon is Brahman]

I will give you a general analysis of this adhikaranam. It is known as Ikshadhikarma vyapadesat and hence ikshatikarmavyapadesadhikaranam. The statement analysed here is a vakyam occurring in Pasnopanishad. The mantra runs as *yah punaretum trimatrena-om-ityetenaiv-aksarena-Param purusam-abhidhyayita sa tejasi surye sampananah yatha padodarastvaca, vinir, mucyata evam ha vai sa papmana vinir-muktah sa samabhir unniyate Brahma lokam sa eatasmaj-jivaghanat Parat-Param purnasayam purusamiksate tad etau slokau bhavatah* [V.5 of Prasna Upanishad] the meaning of this mantra is but if again he meditates on this highest Purusa with the help of this very syllable Aum by all its three matras-s, he becomes untied with the bright sun,. As a snake is freed from its skin, so is he freed from all sins. He is led by the Sama hymns to the world of Brahma, the creator, and from Him – the mass of life [that Hiranyagarbha is] – he beholds the Supreme Purusa residing in the heart. There are the two following verses about it.

This mantra is going to be analysed here. Prasna Upanishad is called so because there are six disciples come to one Guru Pippalada and the latter answers the questions asked by the sishyas. Now we deal with the sixth question asked by Sathya Kama Pipplada dialogue. Here student asks about Omkara. Pippalada answers and he says Omkara can stand for both Nirgunam Brahman and Sagunam Brahman, both karanam Brahma and karyam Brahma and it stands for Para and apara Brahma and Para Brahma is called Paramatma and apara Brahma stands for Hiranyagarbha.

The same thing we get in Kathopanishad also. *Etad-dhyeya-ksaram Brahma etad dhyeya ksaram Param etad dhyeya ksaram jnatva yo yad icchati tasya tat* [I-ii.16 of Kathopanishad] the meaning of this mantra is ‘this word is verily Brahman alone. This word is also the highest, he who knows this word obtains, verily, whatever [of the two] he desires. Here Brahma means lower or Sagunam Brahman and the higher means Nirgunam Brahman.

Then Pippalada talks about Omkara Upasana. In first Upasana akara is talked about and in the second Upasana he talks about ukara is highlighted and in the third all the three letters are highlighted. The first two are not important and the third alone Omkara is fully taken. That full Omkara Upasana is given in the 5<sup>th</sup> mantra. Through that Omkara one should Para Purusa Upasana through trimatra Omkara. This line is the line for enquiry. Param purusam avidyayeta. What is meant by Para Purusa is over controversy? We take it as Paramatma alone which we will establish. He will not get mukti here and he will become one with Hiranyagarbha. Surya mandala is the place through which he will travels to Brahma loka. He will be free from all papams and he will become tremendous purity like a snake is free its skin. The front portion of the body will become the body. This Upasaka will be free from papa skin. He casts off his papa skin and he will free, he is taken to Brahma loka by various devatas.

Among various devatas one set of devatas are called sama veda devatas. There in Brahma loka, he will attend Brahmaji's classes on Brahma vidya. As a result of Brahmaji's teaching he will know the Param purusam. And he will practise Paramatma Upasana and he will know about Paramatma and this jnanam will give him moksah. According to us Omkara rupena Paramatma upasana Brahma loke Paramatma jnanam bhavati mukto bhavati.

Incidentally you should not that he practices Paramatma Upasana and then in Brahma loka he will get Paramatma jnanam. While practicing Paramatma Upasana he will not get Paramatma jnanam. How can he practise Paramatma Upasanam without knowing Paramatma jnanam? This upasaka does not Paramatma fully and he has got paroksa jnanam of Paramatma as sathyam jnanam anantam etc.

And he does know Paramatma but he meditates on unknown Paramatma, which is known indirectly and invokes on Omkara and what he has done is upon Omkara he has invoked Paramatma. Even though he does not Paramatma he invokes Paramatma on Omkara. This is like invoking Shiva on a stone, which is solidly known to me. Paramatma is unknown all right but he knows Omkara. This upasaka get krama mukti. What is the controversy here?

The controversy is Omkara rupena Param Purusa in the form of Omkara. Since the word Purusa is a vague word which can be used for any thing including male being on wards to everything. The question is what does Para Purusa means. Purva paksa says Para Purusa stands for Hiranyagarbha I would like to take Para Purusa as Brahman alone and it is not Para Purusa. Hiranyagarbha jnanam is presented here and according to siddhantis Isvara jnanam is prescribed in this mantra.

Now with this we will do the general analysis of this sutra. In this Vyasacharya says the Para Purusa which is the object of meditation is Paramatma only. It is not Hiranyagarbha. The proof is taken from the same mantra alone. The controversy is the first part of the mantra and proof is there in the final part of the mantra where the phalam is given. The phalam is stated to be Paramatma iksayam that is Paramatma jnanam. From this we have to establish that is Paramatma. More in the next class.

## BRAHMA SUTRA

Class 96

### **Topic 4. Ikshatikarmavyapadesadhikaranam [Sutras 13]**

The highest person to be meditated upon is the highest Brahman

**Sutra 1.3.13[76]**

#### ***Ikshathikarmavyapadesat sah***

Because of His being mentioned as the object of sight, He [who is to be meditated upon is Brahman]

We now analyse the fourth adhikaranam known as ikshatikarmavyapadesadhikaranam. I will continue the general analysis of this adhikaranam. This adhikaranam relates to Prasna Upanishad. The first part deals with dhyana vakyam and second part with dhyana phalam. The dhyanam prescribed here is Para Purusa dhyanam in the form of Omkara. The rest of the mantra deals with the benefit to the upasaka. The meaning of the phalam is that this upasaka will get krama mukti and there in Brahma loka he will get Atma jnanam and from there he will gain moksa.

The controversy is that in the dhyana vakyam it is said Para Purusa in the form of Omkara and the word Para Purusa is a vague expression referring to male, jiva, Hiranyagarbha, and many things. Here the doubt is what is Para Purusa. Purva paksa argues it is Hiranyagarbha only. This is going to be purva paksa. Our argument is that Para Purusa refers to Brahman only. We do not make any difference between Isvara and Brahman. Siddantis say Para Purusa refers to Brahman alone.

In support of our conclusion Vyasacharya takes the phala vakyam of the same mantra. The phala vakyam is a long one. Towards the end there is an expression and from them we take three words as Param purusam and ikshade. Phalam is Param Purusa and ikshade. Object of meditation is one should meditate upon Para Purusa and Para Purusa ikshanam is the phalam. Ikshanam means jnanam. Para Purusa jnanam is the phalam. Para Purusa upasanam is sadhanam and Para Purusa jnanam is the phalam. This is the essence of this mantra.

Para Purusa jnanam means is it Hiranyagarbha or Isvara is the controversy. If in the dhyana vakyam if Para Purusa is vague take the meaning from the phala vakyam to ascertain the right meaning. Vyasacharya argues in the phala vakyam should refer to Paramatma alone and not Hiranyagarbha. Once you Purusa the phala vakyam is Isvara you can derive in the Upasana also Para Purusa is meant.

The argument is Hiranyagarbha jnanam can never be given as phalam of any sadhana. It is so because Hiranyagarbha jnanam does not give me any benefit at all. Knowing Hiranyagarbha does not give any benefit. If at I get any benefit after knowing Hiranyagarbha and if I practise I become one with Hiranyagarbha and then I get the benefit. It is like knowing the existence but not practicing. Knowing the exercise is of no use if it is not practiced. The benefit will come only when you do the exercise. Knowledge of Hiranyagarbha cannot give any phalam.

Knowledge of Paramatma will give moksha. It is ajnana nivrutti. Adhyasa nivrutti moksasya prapti bhavati. Param purusam ikshade will be fruitful benefit only if Para Purusa is Paramatma and other than Paramatma if any meaning is given Para Purusa ikshanam is of no use at all. Para Purusa is Paramatma alone because it is given the object of knowledge in the phalam in this mantra in question.

Now we will go to word for word analysis. There are two words ikshadi karma vyapadesat sah. We have to supply the word Paramatma. We have to rearrange sah Paramatma ikshadi karma vyapadesat. Now we will take up the words for analysis. Sah means he or that. Sah means dyeya Para purusah. It means Para Purusa the Supreme person which is presented as object of meditation in the dhyana vakyam of Prasna Upanishad 5.5 that Para purusah the Paramatma so that the supreme person is Paramatma alone and not Hiranyagarbha.

The reason is given in the next word. Ikshadi karma vyapadesat. Ikshadi means jnanam. Karma means object; it is object of knowledge; jneya visayah; vyapadesat means presentation, reference. It presents the same Para Purusa as an object of knowledge in the phala vakyam 5.5. Of Prasna Upanishad. Para Purusa occurring in the mantra is an object of knowledge; as an object of knowledge is Paramatma and therefore as an object of meditation is also Paramatma. This is ikshadikarama adhikaranam.

Adhi Sankaracharya in his commentary takes a purva paksa where Purva Pakshi comes and makes a subtle argument, which Adhi Sankaracharya refutes. In the phala vakyam phala Purusa is Paramatma alone being the object of knowledge. Para Purusa in phala vakyam is Paramatma. If you study the phala vakyam two phala purusas are mentioned there/ one Para Purusa is Hiranyagarbha and there is another which is Paramatma. Now we have enumerated Para Purusa number one and Para Purusa number. Two.

There are two words Para and another Paraad. This is followed by the word Purusa. First Paraa refers where Purusa we have to supply. Saha Paraad purusad Param purusam ikshade. If you translate in English the upasaka will know Para Purusa number two who is superior to number one. And purva pakshi says Para Purusa number two is Paramatma and Para Purusa number one is Hiranyagarbha. The upasaka knows Paramatma who is superior to Hiranyagarbha. Therefore Purva Pakshi says from the phala vakyam we come to know the Para Purusa can be either Hiranyagarbha or Paramatma.

That being so how can you say it supports the dhyana vakya Para Purusa. In dhyana vakyam there is Para Purusa and there we find come conclusion. At the same time when we take to Para Purusa in the latter mantra also creates confusion because there are two Para purusas one referring to Hiranyagarbha and the other to Paramatma. He gives reasons to prove that Para Purusa refers to Paramatma alone. In phala vakyam there is a mention that the upasaka will go to Hiranyagarbha lokam and therefore Purva Pakshi says only if he does Hiranyagarbha Upasana he will get Hiranyagarbha prapti. As the Upasana is as the prapti is. Those who worship devas go to deva loka and so also pitru Upasana will take one to pitru loka. Para Purusa means Hiranyagarbha only and by doing Hiranyagarbha Upasana he obtains Hiranyagarbha lokam. This is argument number one by Purva Pakshi.

He says let us come to phala vakyam. At the end Para Purusa is repeated twice. If phala Purusa number one is preceded by a pronoun etasmat. Purva Pakshi argues that this pronouns can be used only when the object of the pronoun is already is introduced before. First I talk

about rama and this rama is intelligent only when I have already introduced rama the pronoun has be used.

The pronoun this is used for Para Purusa number one Hiranyagarbha and it is not used in Para Purusa number two the Paramatma. Paramatma number one must have been introduced already and then alone the pronoun can be introduced. Para Purusa number one is introduced in the dhyana vakyam. If you take Hiranyagarbha in dhyana vakyam and the first this in latter portion refers to Hiranyagarbha alone.

If Paramatma is introduced it will go with Paramatma. In this context in dhyana vakyam Hiranyagarbha alone introduced. One should meditate upon Para Purusa Hiranyagarbha then he will know the Para Purusa Paramatma who is superior to this Para Purusa Hiranyagarbha. Then this will tally perfectly. Therefore Para Purusa to be meditated is Hiranyagarbha alone and the pronoun also supports the arguments. What is our answer?

We have to refute their argument and then give our view. In the dhyana vakyam the Para Purusa must be Hiranyagarbha. Because phala vakyam says Hiranyagarbha praptih. It is not mentioned as ultimate result. It is intermediary state. Then Upanishad should have stopped Hiranyagarbha loka praptih. The ultimate phalam prescribed is Paramatma jnanam. Hiranyagarbha loka prapti is not the phalam but it is only a station in the middle. Therefore Brahma loka prapti is not the phalam. Paramatma jnanam is the ultimate phalam. Paramatma upasaka will attain Paramatma jnanam.

The same idea is seen in Gita 8.13 *Aum ity ekaksaram Brahma vyaharan mam anusmaran yah prayati tyajan deham sa yati Paramam gotim* the meaning of this sloka is he who utters the single syllable Aum [which is] Brahman, remembering Me as he departs giving up the body, he goes to the highest goal. In fact this sloka is exactly Ikshadikarma adhikaranam. In both Omkara rupa Brahma Upasana is the topic. The first argument is refuted.

Now we will refute the pronoun argument. He says in the phala vakyam 'this' is used and therefore it refers to the Hiranyagarbha given in the dhyana vakyam. He says that the pronoun is used in phala vakyam. Therefore Hiranyagarbha must have been discussed before. The conclusion that this refers to Hiranyagarbha said in dhyana vakyam. Hiranyagarbha is discussed in the phala vakyam alone. Brahma loka has been discussed in the phala vakyam itself and there the word Brahma loka reference is there. There is a word Brahma and that Brahma refers to Hiranyagarbha.

Hiranyagarbha has been already introduced Hiranyagarbha in phala vakyam. The pronoun this does not refer o Hiranyagarbha in dhyana vakyam and on the other hand pronoun refers to Brahma loka. According to answer, the translation is that one should meditate upon Paramatma and then he will know that Paramatma who is superior to this Hiranyagarbha who is in Brahma loka. Don't go to dhyana vakyam. Therefore pronoun refers to phala vakya Hiranyagarbha or dhyana vakya Hiranyagarbha. More in the next class.

## BRAHMA SUTRA

Class 97

### **Topic 4. Ikshatikarmavyapadesadhikaranam [Sutras 13]**

The highest person to be meditated upon is the highest Brahman

**Sutra 1.3.13[76]**

#### ***Ikshathikarmavyapadesat sah***

Because of His being mentioned as the object of sight, He [who is to be meditated upon is Brahman]

Now we analyse the fourth adhikaranam of the third pada. We have completed the words meaning of the sutra. We now discuss the purva paksa raised by someone, which Adhi Sankaracharya answered in his bhashyam. Whether the object of meditation prescribed in 5<sup>th</sup> chapter 5<sup>th</sup> mantra of Prasna Upanishad is Hiranyagarbha or Paramatma is our discussion. We established that the object of meditation is Paramatma alone. Two purva paksas one based upon the phala vakyam and the other based on the pronoun etasmat. We negated both purva paksas and established that Para Purusa referred to Paramatma alone.

Adhi Sankaracharya discusses three more arguments. In the phala vakyam Para is mentioned indicating Para Purusa indicating the Hiranyagarbha as also the Paramatma. The word Paraad is there and then he supplies the word purusad and then there is again Param purusam occurring in the mantra Paraad Purusa ikshade. There are two Para Purusa and with one referring to Hiranyagarbha and the other indicating Paramatma. In dhyana vakyam there is one Para Purusa used.

We say it should be Paramatma alone and when purva paksa says in the phala vakyam the word Para Purusa is used to refer to Hiranyagarbha we find that the Para Purusa there is not fully used. Hiranyagarbha is not referred to Para Purusa. Para Purusa in the meaning of Hiranyagarbha is not fully used by the Upanishad. But it is fully used to indicate the Paramatma. In our case the word Param and the word purusam both are there to mean Paramatma. We have got full reference of Para Purusa in the sense of Paramatma. This is the third argument.

The fourth argument is relatively simpler. Adhi Sankaracharya says in the dhyana vakyam the Upanishad says Param purusam avidyadeeta. Purva paksa doubts Para Purusa is Hiranyagarbha or Paramatma. The word Param if used it means the highest as per the dictionary. Once you go to Para Purusa Hiranyagarbha can be great all right it can never be greatest. Virad cannot be the greatest and Param refers only to the Paramatma. And according to the rules of interpretation we have to first try the mukhyartha and only if it fails we have to go in for secondary meaning. We try to fit in with primary meaning and it is Paramatma and therefore dhyana says may you meditate on Paramatma.

This primary meaning fits in properly there is no problem at all. When primary meaning fits it properly why do you take other meanings and try to contest our argument. Other Upanisadic statement also supports this view.

It is supported by Kathopanisad vakyam also 1.iii.10 *says indriya bhyah Para by artha arthebhyas ca Param manah manasas in Para buddhiti, budder Atma mahim Para followed by mantra 1.iii.11 mahatah Param avyaktam avyaktat purusah Parah, purusan-na Param kincit, sa katha sa Para gatih* the meaning of the mantras is beyond the senses are the sense objects; beyond these objects is the mind; beyond the mind is the intellect; and beyond the intellect is the Great Self; beyond the Great [Mahat] is the unmanifested [avyaktam].

Beyond the avyaktam [prakrti] is the Purusa; beyond the Purusa there is nothing; that is the end; that is the highest goal. What is the superior most Purusa and it talks about graded level and it comes to Atma as Para Purusa the Upanishad says saha na Param kincit there is no other Para Purusa other than Atma. Para Purusa as Atma is the primary meaning. As it fits properly the Para Purusa means Paramatma alone.

The fifth and final argument is this. It talks about phalam of Paramatma jnanam. While talking about it, the Upanishad says that the phalam as sarva papa vinir mogah. It is sarva papa nasa is the phalam is given for this Upasana. Adhi Sankaracharya argues sarva papa nasa is possible only in the case of Paramatma jnanam and not by Hiranyagarbha dhyanam or Hiranyagarbha Upasana. Hiranyagarbha Upasana can give purity and not absolute purity. Because of this reason also the Upasana must be Paramatma Upasana alone. Adhi Sankaracharya concludes and establishes Para Purusa is Paramatma.

The first one is visayah. It is the word Para Purusa occurring in 5.5. Of Prasna Upanishad which reveals the object of Omkara meditation. The doubt is whether the Para Purusa is Paramatma or Hiranyagarbha. Whether Paramatma is karanam Brahma or karyam Brahma is the question. Our conclusion is that Para Purusa is Paramatma alone. And our main reason is Para Purusa jnanam is given as the phalam. If that is the phalam then the Para Purusa has to be Paramatma alone. Hiranyagarbha jnanam cannot be phalam for it does not give any benefit at all.

The fifth point is that this adhikaranam is occurring in its appropriate place only. With this the Ikshadhikarmanadhikaranam is over. Here Paramatma revealed is Paramatma as an object of meditation unlike the previous adhikaranam. There we establish Brahman alone, as the subject matter it was not Upasanam Brahman but it was jneyam Brahman the object of knowledge, in this adhikaranam it is meant for Upasanam.

## **Topic 5. Daharadhikaranam [Sutras 14-21]**

The Dahara or the 'Small Akasa' is Brahman.

**Sutra 1.3.14[77]**

***Dahara uttarebhyah***

The small [ether, Akasa is Brahman] on account of the subsequent arguments or expression.

This is a big adhikaranam and it is known as Daharadhikaranam. This has got eight sutras. In this adhikaranam Vyasacharya analyses a Chandogya upanisad mantra no. 8.1.1. That mantra reads as *om Atha yadidamasminbrahmapure daharam pndarikam vesma daharo'sminn antarakasastasminyadantastadanvestavyam tadvaya vijjna sitavyamiiti* the meaning of the mantra runs as 'Om. This body is the city of Brahman. Within it is an abode in the shape of a lotus [i.e., the heart], and within that there is a small space. One must search within this space and earnestly desire to know what is there.

Here the Upanishad talks about an Upasana in this section, which is known as daharopasanam. The Upanishad reveals daharakasa in this mantra.

The Upanishad takes this typical body and it names the body as Brahma puram. This itself is a beautiful name. Brahma puram means it is abode of Brahman. The body is compared to a temple. Brahman means Paramatma and puram means abode. In mundakopanisad the physical body is compared to temple and heart is compared to sanctum and Paramatma is seen as the resident of that temple.

Within the Brahma puram daharam pundarikam vesma and here pundarikam means hridayam that is similar to lotus in bud form. The word vesma means sthanam or abode. Daharam means a small hridaya sthanam. Every human being has got a physical body and every body has a lotus like heart which is a beautiful thing. Already heart is small. Within that small heart there is a small space akasah. Dahara akasah means alpa akasah. It is the object of enquiry.

According to our interpretation it is chidakasa and this is nothing but Consciousness. Here akasah means Chaitanyam. Aa means everywhere kasah means manifests everywhere as sacchidananda rupam. Here the word Akasa means Chaitanyam, which is small as it were. For this tasmin edantah we have two interpretation and we will take first interpretation. It is the reputation of asmin antarakasah. This means tasmin hridaye antar akasah. Within the heart chaitanya Akasa is there. That daharakasa one should enquire into. Tadvava vijjnasitavyam means one should know this.

Within the daharasa the small heart there is Brahman and that daharasa within the heart one should enquire into and one should know and one should meditate upon. Daharasa Upasana is prescribed in this section of this adhikaranam. It is to be meditated upon the Lord the whole world is residing and that Lord is space like Lord. We have to note the beauty of this Upasana. Brahman is formless and cannot think of formless Brahman. Therefore the Upanishad gives the various forms to Brahman nirvisesham Param Brahman which is attributeless and most of them are helpless in recognizing this Nirgunam Brahman and those madha students who are not capable of realizing the Nirgunam Brahman and they are compassionately consider them by presenting the Sagunam Brahman.

Even though they initially meditate upon Brahman in saguna form and Upanishad does not want us to remain in Sagunam Brahman permanently. Therefore Upanishad wants us to elevate us to Nirgunam Brahman and the Sagunam Brahman is gradually refined and in this process the highest form of Sagunam Brahman is the most refined Sagunam Brahman and Akasa is as good as attributeless. It does not have any of the attributes.

That is why Om kham Brahma is an Upasana that is Akasa Upasana. First Upanishad pointed out Sagunam Brahman and then elevated us to Akasa Upasana and we have come to formless god and as long as you see the external god there will be Dvaidam and Upanishad wants to

refine us further and enough of meditating upon external Akasa to meditate upon daharakasa. According to the real rule sannyasis are not supposed to do the physical puja of god and they are supposed to do daharakasa Upasana only.

The Lord as external object is the first state; Lord as external Akasa is the second state is the second state; Lord as the internal Akasa is the third state; the fourth state is not Upasana but knowing the Lord as inner Akasa. In third state I imagine Lord as Akasa but in the fourth state I recognize Lord as inner space. Now what are we supposed to analyse is dahara Akasa. What is the inner space talked about in this mantra/

Purva paksa says inner space is bhuta Akasa is talked and we are going to say the word Akasa the primary meaning is Akasa the element and in this case as a special case we have to take daharakasa is inner space. Now we will do the general analysis of the first sutra.

In the first sutra Vyasacharya says the inner space within the heart is Brahman alone. Adhi Sankaracharya says the heart talked about in Upanishad is the regular heart, which is seen inside. The word heart is used in two meaning and one is the physical or pumping heart; this is the mukya artha; there is a laksyartha also. According to sastra the physical heart is the abode of the mind at the time of sleep. Heart happens to be the residence of the mind. Mind in waking runs all over the body. The mind is behind the ears, eyes, tongue etc.

Therefore in certain context the word hridayam represents the mind located in the hridayam. When you talk of heart attack it means the physical heart. If you say I have given the heart to him or her in all such cases you cannot take it literally. Here heart means the mind alone. Within the heart there is Brahman alone. It is so because of the description of the inner space given latter. The latter description is that of Brahman and not of elemental space. When we study the mantra, we find the latter description refers to Brahman alone.

Now we will do the word for word analysis. There are two words daharah; the small and it is translated as daharakasah the small inner space within the lotus heart within the body called Brahma puram which is mentioned in Chandogya upanisad 8.1.1 this is the meaning of daharah. Next word is Brahman daharah Brahman means the small place within heart is Brahman. Uttarepyah; from the subsequent text or expressions or arguments. The latter description is given in the very same Chandogya upanisad. This is not of much use. We have to supply the word Paramatma or Brahman. Daharah Brahman uttarepyah. The latter description is given in the latter sutras. Even though Vyasacharya gives out the latter description here Adhi Sankaracharya brings out some of the important latter descriptions to support our conclusion which we will see in the next class.

## BRAHMA SUTRA

Class 98

### **Topic 5. Daharadhikaranam [Sutras 14-21]**

The Dahara or the 'Small Akasa' is Brahman.

**Sutra 1.3.14[77]**

#### ***Dahara uttarebhyah***

The small [ether, Akasa is Brahman] on account of the subsequent arguments or expression.

We analyse the fifth adhikaranam of the third pada named Daharadhikaranam. The mantra talks about the physical body and within the body there is small heart like lotus and within the heart there is still smaller space. Is this daharakasa is Brahman or bhuta Akasa the elemental space. The doubt occurs because Upanishad uses the word Akasa and it means elemental space alone.

Here Vyasacharya mentioned that this daharakasa is Brahma alone because of the latter statements or latter description of daharakasa itself. Adhi Sankaracharya himself gives more explanation to the word uttarebhyah as to what are the latter descriptions that supports the view of daharakasa.

Adhi Sankaracharya takes the latter mantra and also latter portion of the mantra itself in support of our conclusion. Seven descriptions or seven features are brought out by Adhi Sankaracharya in support of our view. We will see each of the features along with the relevant mantra/

First is the relevant mantra is 8.1.1. Of Chandogya upanisad that reads as *om Atha yadidamasminbrahmapure daharam pndarikam vesma daharo'sminn antarakasastasmin yadantastadanvestavyam tadvaya vijijna sitavyamiiti* the meaning of the mantra runs as 'Om. This body is the city of Brahman.

Within it is an abode in the shape of a lotus [i.e., the heart], and within that there is a small space. One must search within this space and earnestly desire to know what is there. Antarakasa comes in the middle of the mantra. In the end it uses dad anvestavyam means that daharakasa should be enquired into. Enquirability feature. It deserves to be enquired into the daharakasa, which is the point of controversy. That should be known, recognized and realized. Second feature is knowability or realisability.

Adhi Sankaracharya says these two features that daharakasa should be enquired into the two descriptions are possible only when daharakasa is Brahman or else Upanishad will not ask us to know about Akasa, the elemental space. It is pouruseya visaya. By knowing Akasa we will not get any prayojanam of this study or the enquiry. This is possible only when daharakasa is Brahman. These two features support our conclusion that daharakasa is Brahman.

Then we will go to the next mantra 8.1.3 of Chandogya upanisad and here further description is given about the daharakasa. The mantra reads as *tam cedbruyuryadidamasminbrahmapure daharam pundarikam vesma daharo's- minnantarakasah kim tada tra vidyate yadanvestavyam yadvava vijijnasitavyamiti sa bruyati* the meaning of the mantra is if the disciples ask 'this body is the city of Brahman, within it is an abode in the shape of lotus and within there is a small space; what is it that one must search for within this space and what should one earnestly desire to know? The teacher should reply. The scripture says let us investigate it. Here it says daharakasa is seemingly small but it is as big as outer space, thus Upanishad compares daharakasa to all pervading elemental space or sarvagata bhuta Akasa sadrisyam.

The fourth feature is in this daharakasa alone everything is based sarvam asmin samahitam, the entire creation is based on the daharakasa, it is sarva adharah. It has sarva adharatvam. These two features are possible only when daharakasa is Brahman and not otherwise. Daharakasa is compared to bhutakasa. The very fact that daharakasa is compared to bhutakasa shows that it is not bhutakasa.

The definition of comparison is if x is similar to y, first condition is x is different from y though different from x it has many common features with y. Our point is x is different from y. Since daharakasa is compared to bhutakasa it is not Akasa. Sarva adharatvam daharakasa is said to be the substratum of everything and Akasa is relatively sarva adhara and Akasa is not adhara of Akasa. Akasa is support of everything and Akasa is support of Akasa. Akasa is supported by Brahman. And therefore daharakasa is Brahman only.

Now we will go to the mantra 8.1.5 of Chandogya upanisad. The mantra reads as *sa bruyannasya jarayaitajjiryati na vadhenasya hanyata etatsatyam brahmapuram asmin kamah samahita esa Atma pahatapapma vijaro vimrturvisoko vijighatso'pipasah sathyakamah satyasankalpo yatha hyeveha praja anvavisanti yathanusasanam yam yamantamabhikama bhavanti yam janapadam yam ksetrabhagam tam tamevopajivanti* the meaning of the mantra is – in reply the teacher will say 'the body may decay due to old age, but the space within [i.e. Brahma pura] never decays.

Nor does it perish with the death of the body. This is the real abode of Brahman. All our desires are concentrated in it. It is the Self – free from all sins as well as from old age, death, bereavement, hunger and thirst. It is the cause of love of Truth and the cause of dedication to Truth. If a person strictly follows whatever the ruler of the country commands, he may then get as reward some land or even an estate. The idea is that an ignorant person may get whatever he wants as the fruits of his actions, but he remains bound.

We have two features there. The mantra says esah Atma. Not only it uses the word it says pahatapapma vijaro virturvisoka vijighatso this daharakasa is the Paramatma and that Atma which has eight virtues which are free from papam, free from old age, free from death, free from dukha, free from hunger free from thirst; it is with fruitful desires unfailing desires; then sathya sankalpa unfailing sankalpas which means plans. These are the eight glories of daharakasa. Before that esah Atma atmatvam. In this mantras two features are given that it is the very Atma and it is endowed with eight glories. Adhi Sankaracharya says these glories belong to Brahman alone and not to bhutakasa. Bhutakasa can never be described as Atma. Vimrityu means without death and it cannot fit to bhutakasa and it has got janma. Therefore

we have got six features to conclude that daharakasa is Brahman. One more is there the seventh feature, which comes in 8.1.6 of Chandogya upanisad.

The mantra reads as *tadyatheha karmajito tokah ksiyata evamevamutra punyajito lokah ksiyate tadya ihatmanamanuvidya vrajantyetamsca satyam kamamstesam sarvesu jokesvakamacaro bhavatyatha ya ihatmanamanuvidya vrajantyetamsca satyan kamamstesam sarvesu lokesu kama caro bhavati*. Everything perishes whether it is something you have acquired through hard work in this world or it is a place in the other world, which you have acquired through meritorious deeds. Those who leave this world without knowing the Self and the Truths, which they should, know are not free, no matter where they go. But those who leave this world after knowing the Self and the Truths, which they should know, are free, no matter where they are.

The gist of the mantra is that all the karma phalams are finite in nature but the knowledge of daharakasa gives infinite phalam. It is ananta phalavatvam and that daharakasa can give Infinite result and if it had been bhutakasa, it will not give infinite results when the Akasa itself is finite. Thus because of these seven features occurring latter in the Chandogya upanisad itself we should conclude that daharakasa is Atma itself.

Adhi Sankaracharya gives one more additional reason in this sutra. This physical body is Brahmapuram only because daharakasa happens to be Brahman and if it had been bhutakasa it would have never been named as Brahma puram. This title occurs in the mantra 8.1.1 of Chandogya upanisad. This gives us the clue that daharakasa is Brahman and Brahma puram means it is the residence of Brahman.

Purva paksa comes and raises an objection. How can you describe the body as residence of the body? You say Brahman is residence of everything how can that Brahman have miserable residence, how can the physical body be residence of Brahman. Here the residence is as though residence because why you say this is the residence of Rama, you can meet rama in that place. That person is available in the residence. Body is the residence of Brahman or recognizable or contactable in the body so Brahma puram means Brahman obtains in the body.

This view is supported by Gita in sloka 5.13 that reads as *sarva karmana manasa samnyasya 'ste sukham vast navadvare pure dehi nai'va kurvan na karayan* the meaning is the embodies [soul] who has controlled his nature having renounced all actions by the mind [inwardly] dwells at ease in the city of nine gates neither working nor causing work to be done.

The same idea is expressed in Kathopanisad *puram ekadasa dvaram, ajasya-avakra-cetasah anusthaya na sacati, vimuktas-ca vimucyate* the meaning of the mantra is this body of eleven gates is indeed of the unborn even minded Self. Having meditated upon this [the seeker] grieves not and the liberated one is ever liberated indeed. This is verily that. It is very clearly clear that body is Brahma puram and Brahman resides in that.

With this Adhi Sankaracharya's we will conclude this commentary. Now we will go to the next sutra.

## **Topic 5. Daharadhikaranam [Sutras 14-21]**

The Dahara or the 'Small Akasa' is Brahman.

**Sutra 1.3.15[78]**

***Gatisabdabhyam tatha hi drishtam lingam cha***

The small Akasa [ether] is Brahma on account of the action of going [into Brahman] and of the word [Brahmaloka], because thus it is seen [i.e., the individual souls go into Brahman] is seen elsewhere in other sruti texts; and this daily going of the souls into Brahman [during deep sleep] is an inferential sign by means of which we may properly interpret the word 'Brahmaloka']

This also explains the *uttarebyah* of the previous sutra in this sutra. Here Vyasacharya takes two features of *daharakasa* from another mantra 8.3.2 of Chandogya upanishad. *Atha ye casyacha jiva ye ca preta yaccanyadicchanna labhate sarvam tadatra gatva vindate'tra hyasyaite satyah kama anrtapidhanastadyathapi hiranyanidhim nihitama ksetrajna uparyupari sancaranto na videyurevamevema sarvah praja aharahargacchantya etam brahmalokam na vidantyanrtena hi pratyudhah* the meaning of the mantra is further those of his relatives who are still alive and those who are dead, and also those things a person cannot get even if he wishes for them – all these he gets by going within his heart.

All true desires of a person are in his heart, though they are hidden. It is like when there is gold hidden someplace underground and people who are ignorant of it walk over that spot again and again knowing nothing about it. Similarly, all these beings go to Brahmaloka every day and yet they know nothing about it because they are covered by ignorance. Inside the heart is the whole universe. When we have *Sushupti* dreamless sleep, we are then one with Brahma and one with the whole world. We are not conscious of it, however, because of our ignorance.

Here three words we are going to focus *evema sarvah praja aharahar gacchantya etam brahmalokam na vidantyanrtena hi pratyudhah*. The context we should know. The Upanishad says during sleep every *jiva* resolves into *daharakasa* only. The word *daharakasa* is not there and the pronoun 'this' is there and 'this' refers to *daharakasa*. Vyasacharya says that we all know that whenever *jiva* resolves it resolves into Brahman only. It is so because Brahman is the *karanam*. All *jivas* are *karyam*.

We get the support from Mundaka upanishad also mantra *tad edat satyam yatha sudipat pavakad visphulingah sahasrah prabhavante sarupah tatha 'ksarad vivdhah somya hbhavah prajayante tatra catvapi yanti* [II.i.1.of Mundaka Upanishad] the meaning of this mantra is this is the truth; as from the flaming fire thousands of sparks, similar to its form [nature] issue forth, so from the Immortal [Brahman] O! My beloved youth diverse [manifold] beings [*jivas*] originate and they find their way back into it. We clearly see that all *jivas* are born of Brahman and resolve into Brahman whether it is temporary resolution or permanent resolution. The resolution takes place during sleep and also during *pralayam* or when we go to sleep we resolve into *Isvara* only. During permanent resolution also *viveka mukti jiva* resolves into *Isvara* only. During sleep *jiva* resolves into

Brahman and Upanishad says *jiva* during sleep resolves into *daharakasa* and joining these two, we conclude that *daharakasa* is Brahman. In this sutra four points are discussed. *Jiva* resolves into *daharakasa* and we know *jiva* resolves into Brahman and therefore *jiva* resolves into *daharakasa*. During sleep several other sruti statements prove *jiva* resolves into Brahman.

We get the support from 6.8.1 of Chandogya upanishad also *uddalako harunih svetaketum putramauvaca svapnantam me somya vijanihiti yatraitatpurusah vapiti nama sata somya tada sampanno bhavati svamapito bhavati tasmadenam svapitityavaksate svam hyapito bhavati*- this means when a person is said to be sleeping he becomes one with 'Sat' the existence, and he attains his real Self; that is why people say about him, 'when is sleeping' he is then in his Self.

The Upanishad clearly says that during sleep jiva is merged with Brahman. Adhi Sankaracharya quotes this only. Again in Prasna Upanishad 4.4 it is clearly said as *yad ucchvasanth svasav etavahuti samam nayatiti sa samanah mano ha vava yajamanah, ista phalam evodanah sa enah yajamanam ahar ahar Brahma gamayati* the meaning of the mantra is because the samana distributes equally the oblations of the 'inspiration and expirations' he is the priest [hotr]. The mind verily is the sacrificer [yajamana] and the Udana is the fruit of the sacrifice. He leads the sacrificer everyday [in deep sleep] to Brahman. It says udana during sleep takes jiva to Brahman.

Jiva resolves into Brahman in various Upanisads. Vyasacharya further says that there is another feature also which supports our conclusion. Jiva resolves into daharakasa which is Brahma loka. Refer to 8.3.2 of Chandogya upanishad. Brahma loka means Brahma Chaitanyam. Brahma lokam gacchadi means Brahma loka is Brahma Chaitanyam and daharakasa is Brahma Chaitanyam. Vyasacharya wants to say daharakasa is Brahman and in support of this he uses the word usage Brahma loka. Purva paksa says Brahma loka as

Brahma Chaitanyam and is it not a twisted interpretation. Purva paksa may wonder how do you interpret Brahmaloaka as Brahma Chaitanyam. For this answer is indicated in this sutra because of the appropriate clue to indicate that Brahmaloaka is Brahman only and not seventh heaven and the clue is the Upanishad says jiva merges into Brahmaloaka everyday. No jiva goes every day to Brahma loka. This refers to prajna alone and everyday he goes to sleep which is considered as Brahmaloaka. This is the general analysis of this sutra.

Now we go to word for word analysis. There are four words in this sutra. Gatisabdabhyam tatha hi drishtam lingam ca. We have to divide into two portions gatisabdabhyam daharakasa Brahma; and tatha hi drishtam lingam ca; first word is gatisabdabhyam is gati and sabdah means merger, dissolution and layah is gathih. He uses it Gathi because of gacchantyah. Sutra uses the word merger only. Because of the merger of Jivatma into daharakasa during deep sleep as revealed in 8.3.2 of Chandogya upanishad. That much alone is Vyasacharya's expression. We know jiva merges into Brahman only. Hence jiva merges into daharakasa. This is Gathi's Gathi. Then the second word is sabdah means because of the expression that is the word Brahma loka.

Because of the expression Brahma loka given in 8.3.2 of Chandogya upanishad as an epithet of daharakasa the reference means etam Brahma lokam. This is the first part of the sutra. The second part is tathahi drishtam lingam ca. Drishtam means literally seen; jiva's merger into Brahman during sleep is seen in other parts of the Upanishad. In other parts of the Upanishad jiva's merger into Brahman during Sushupti is seen. More in the next class.

## BRAHMA SUTRA

Class 99

### **Topic 5. Daharadhikaranam [Sutras 14-21]**

The Dahara or the 'Small Akasa' is Brahman.

#### **Sutra 1.3.15[78]**

#### ***Gatisabdabhyam tatha hi drishtam lingam cha***

The small Akasa [ether] is Brahma on account of the action of going [into Brahman] and of the word [Brahmaloka], because thus it is seen [i.e., the individual souls go into Brahman] is seen elsewhere in other sruti texts; and this daily going of the souls into Brahman [during deep sleep] is an inferential sign by means of which we may properly interpret the word 'Brahmaloka']

The second sutra of daharadhikaranam in which we analyse the word daharakasa, the small space within the heart which itself is within the body. There is the body within that there is heart and within that there is a heart which is daharakasa. Daharakasa as per Chandogya upanisad is Brahman alone. The word Akasa should be taken as chidakasa and word small should be taken as 'as though' small. This is our conclusion. But there is difficulty in establishing that.

Generally Akasa is element and the word small also creates problem. Brahman is big and how can it be small. Vyasacharya says that it should be taken because of the latter description in the Chandogya upanisad mantra. Adhi Sankaracharya talked of seven descriptions of Brahman, which tallied with daharakasa as Brahman. Vyasacharya also gave two descriptions Chandogya upanisad 8.3.32 and the second referred to the word sabda in the Upanishad mantra.

In the last class we analysed the word meaning. The word Gathi was given a long meaning and because of jiva merging in daharakasa during the sleep, it was concluded that daharakasa is nothing but Brahman. It used the word gacchandiah occurring in the mantra is the clue for finding daharakasa is nothing but Brahman. Because of the Brahmaloka as an adjective in the mantra of daharakasa also shows that daharakasa Brahman.

During Sushupti Jivatma resolves into daharakasa. It is proved that elsewhere in the sruti it is said that in Sushupti Jivatma merges into Brahman and here Jivatma merges into daharakasa and joining these two ideas we see daharakasa is but Brahman. Drishtam you have to supply many words. In Sushupti Jivatma merges with Brahman in other sruti statements. One is Chandogya upanisad 6.8.1 where Upanishad clearly says Jivatma merges with Brahman. Another definition I gave was from Prasna Upanishad. Up to this we saw in the last class.

Now we will go to the word lingam. Lingam is to explain the word Brahmaloka occurring in the mantra 8.3.2 of Chandogya upanisad. We say everyday Jivatma merges with Brahmalokam. We say daharakasa and Brahmalokam are one and Brahman. When you have an appositional usage we see both are the same thing. Similarly I said in .8.3.2 of Chandogya

upanisad are it is said Brahmaloka and daharakasa are identical. Brahma lokam means Brahma Chaitanyam and therefore daharakasa is Brahma Chaitanyam. But here there is a problem. I have discussed this in the general analysis. Purva paksa says that I can accept Brahmaloka and Brahma one and the same. How can you say that Brahmaloka and Brahma Chaitanyam are one and the same? Brahmaloka means Brahma's world and how do you take Brahmaloka is Brahma Chaitanyam. For that Vyasacharya uses the word lingam. There is a clue to show that Brahmaloka is Brahma Chaitanyam. There is a clue to prove Brahmalokam is Brahma Chaitanyam. What is the clue that Vyasacharya keeps in his mind? Adhi Sankaracharya gives that clue.

The expression daily occurring in the mantra is the clue. Jivatma daily going to daharakasa in Sushupti is the clue to prove that Brahmaloka and daharakasa are one and the same. In Sushupti. Jivatma goes to Brahmaloka everyday. The very fact daily is used that Jivatma does not go to seventh heaven and in Sushupti Jivatma goes to daharakasa which is Brahmalokam and which is nothing but Brahma Chaitanyam. The main reasons are given by the two words Gathi and sabda and the word drishtam is the explanation of Gathi and the word is the explanation of sabda. The arguments are two Gathi and sabda. With this the sutra is over.

Daharakasa is Brahman because in Sushupti Jivatma merges into daharakasa as revealed in Chandogya upanisad 8.3.2 and also because of the expression in Brahma loka used as epithet of daharakasa in mantra above. Then the next sentence the merger of Jivatma in Brahman during Sushupti is seen in other scriptural statements also. There is a clue in the form of daily merger revealed in 8.3.2 to show that Brahmaloka is Brahma Chaitanyam. There is one more word cha and it is a simple conjunction. With this sutra 2 of this adhikaranam is over.

## **Topic 5. Daharadhikaranam [Sutras 14-21]**

The Dahara or the 'Small Akasa' is Brahman.

### **Sutra 1.3.16 [79]**

#### ***Dhritescha mahimno'syasminnupalabdheh***

Also because of the well known meaning [of Akasa as Brahma the small Akasa is Brahma]

It is like the previous sutra and it is also an expression uttarebyah occurring in the first sutra. Then argument in support of sutra 14 is continued. In this sutra another latter description is given to establish that daharakasa is Brahman only.

In this sutra Vyasacharya keeps another mantra occurring in Chandogya upanisad 8.4.1 that reads as *atha ta Atma sa seurvidhrtiresam lokanamasambhedaya naitam setumahoratre tarato na jara na mrtyurna soko na sukrtam na duskrtam sarve papmano'to nivartante'pahatapapma hyesa brahmalokah* the meaning of this mantra is next this Self is like a dam. It supports the worlds and protects them from getting mixed up. Day and night cannot cross over this dam, nor can old age, death, bereavement good actions and bad actions. All sins turn away from it for this Brahmaloka is free from evil.

What is important here is the word *vidhrti is dredhihe* drihidhi means sustenance or protection. Here in this mantra Upanishad says that this daharakasa alone sustains the whole

creation by maintaining the law and order and makes sure every law is strictly followed. The universal laws are never violated and the universe survives is the proof for non-violation.

Some intelligent principle is keeping the order and supervises the law and order. The one who maintains the law and order is called *dhriti* the law maintainer. First meaning is sustenance and second is sustainer. Daharakasa is said to be sustainer of the world. Dritih is sthithi karta. Brahman alone is sthithi karta as per the Upanishad but here it is said daharakasa is the sustainer. Joining these two together we say Brahman and daharakasa are one and the same.

We can find any number of statements to show that Brahman is sthithi karta. Adhi Sankaracharya collects such statements in which dritih is used to convey the idea of sustainer. That comes in Brihadharaynaka upanisad. 3.8.9 of Brihadharaynaka upanisad reads as *etasya va aksarasya prasasane gargi suryacandramasau vidhrtau itsthatah, etasya va aksarasya prasasane gargi dyavaprthivya vidhrte tisthatah, etasya va aksarasya prasasane gargi nimesa muhurta ahoratranyardhamasa masa rtavah samvatsara iti vidhrtastisthanti; etasya va dante svetabhyah gargy parvatebhyah praticyonyah, yam yam ca disamanu; etasya va aksarasya prasanane gargy dadato manusyati prasamsanti yajamananam devah darvim pitaro'nvayattah* it is because of the governance the sun and moon do not violate the rules and functions. The rivers flow and the time go according to order and all the things work in order because of the Brahman sustaining the creation.

Chandogya upanisad uses the same word *vihriti* is used for daharakasa. Therefore daharakasa is Brahman. This is one quotation. There is another quotation Brihadharaynaka upanisad 4.4.22 where the word vidhrana means sustainer Brahman. Here Brahman in vihruti and in Chandogya upanisad daharakasa is vihruti and therefore Brahman is daharakasa. Now we will see word for word analysis.

Daharakasa Brahma Dhritescha; the word daharakasa occurring in Chandogya upanisad 8.1.1 is Brahman; dhriteh is the sustainer of the creation as revealed in the mantra 8.4.1 through the word vidhritih cha; means also it means previous sutra he has given two reasons and the reason dhriti also supports the view; daharakasa may be the sustainer of the creation. The question is just because daharakasa is the sustainer how can that prove daharakasa is Brahman.

Vyasacharya says other Upanisadic statement we find that sustainer status is there only for Brahman. Here it is said daharakasa is sustainer and elsewhere we know Brahman is the sustainer and joining these two we see daharakasa is the Brahman. Asya mahimanah; the glory of the sustainer status the protector status sthithi kartritvam asya this particular status asmin; upalabdheh; is found asmin means in this Brahman alone. Because the sustainer status is found in Brahman alone since sustainer status is found in Brahman alone daharakasa, the sustainer should be Brahman only. With this the third sutra is also over.

## **Topic 5. Daharadhikaranam [Sutras 14-21]**

The Dahara or the 'Small Akasa' is Brahman.

### **Sutra 1.3.17 [80]**

### **Prasiddhescha**

Also because of the well-known meaning [of Akasa as Brahma the small Akasa is Brahman]

The argument in support of sutra 14 is continued. Vyasacharya gives an independent view in support of the fact that daharakasa is Brahman. The word Akasa is often used in the scripture to reveal Brahman. Therefore Akasa as Brahman is well known in sastra. This we call it as sastra prasiddhi. Not only Chandogya upanisad Akasa is used in the name of Brahman and in other Upanishads also Akasa is commonly used in the meaning of Brahman. It is in Taittiriya Upanishad II.7.2 yadesa *Akasa anando na syat esa hyevanandayati* the sruti says that all have got Brahman inside in the form of akasah. Akasah ananda Brahman is there in every jiva.

Another instance is 8.14.1 of Chandogya upanisad that reads as *akaso vai nama namarupayornirvahita te yadantara tadbrahma tadamrtam sa Atma prajapateh sabham vesma prapadye yasoham bhavami*; here it is stated Brahman is the substratum of all the beings is established and the word Akasa is used to denote Brahman here.

There is another example in Chandogya upanisad 1.9.1 that reads as *asya lokasya ka gatirityakasa iti hovaca sarvani ha va imani bhutanyakasadeva samutpadyanta akasam pratyastam yanyakaso hyevaibhyo jyayanakasah parayanam* the meaning of the mantra is space for everything that exists arises from space and also goes back into space. Space is superior to everything.

Space is the highest goal. All are born out of Brahman, which includes Akasa. Kham Brahma kham Brahma kham purana also used and the kham also gives the meaning of Akasa. Aa means sarvatra and kasah means prakasate Chaitanyam rupena sarvatra satta rupena satatmakam. Brahman shines everywhere and hence Brahma is called Akasa. Daharakasa is Brahman because in sastra Akasa is popularly known as Brahman. We will go to word for word analysis in the next class.

## BRAHMA SUTRA

Class 100

### **Topic 5. Daharadhikaranam [Sutras 14-21]**

The Dahara or the 'Small Akasa' is Brahman.

#### **Sutra 1.3.17[80]**

#### ***Prasiddhescha***

Also because of the well-known meaning [of Akasa as Brahma the small Akasa is Brahman]

We see the daharadhikaranam in which daharakasa is introduced as Brahman. the inner place in heart is nothing but Brahman is established while purva paksa says it is bhutakasa alone. Vyasacharya has established daharakasa as Brahman while negating the view of purva paksa. The normal meaning of the word Akasa is space but in sastra it has the special derivation of Brahman. Akasa means that which shines is Brahman. That which is appreciated as sat and chit is Brahman, which is available in the world and that availability, is called prakasate. In support of this Adhi Sankaracharya has quoted many quotations from Upanisads. Akasa is seen as substratum of the entire creation. I also gave a quotation from Taittiriya Upanishad.

Now we will go to word for word analysis. Prasiddheh and cha and you have to supply daharakasa Brahma. Daharakasa Brahma inner space within the heart mentioned in Chandogya upanisad 8.1.1 is Brahman. The reason is because it is well known in the sastra as revealed in the above quotation. There is another quotation is from 1/9/1 of Chandogya upanisad. Three reasons are given already and this is in addition to the reasons already given. Gathi, sabda, vhrithi and prasiddha are the four reasons justifying that daharakasa is Brahman.

Now a Purva Paksi may ask how do you say Akasa is Brahman when everyone knows Akasa is space alone. This meaning is loka prasiddhi. How do you give up this meaning and you say Akasa means Brahman. if Akasa is loka prasiddha and Akasa as Brahman is sastra prasiddhah. Loka prasiddhi says Akasa is space and sastra prasiddhi says Akasa is Brahman. Certainly loka prasiddhi will win between loka and sastra, which one is to be taken, is our question. But the thing is in which context the word is used. During the study of sastram it comes and then sastra prasiddhi should be given importance. In loka Vyavahara loka prasiddhi should be given importance. Knowledge means in common parlour, it means that one is well informed. Once we come to sastra Vyavahara, the knowledge relates to Self-Knowledge or the Atma jnanam alone.

Adhi Sankaracharya gives another reason also. he says I am ready to accept loka prasiddhi normally and also accept daharakasa as space and when this particular meaning is illogical, then one should give up mukyartha and accept contextual meaning only. if daharakasa is bhuta Akasa, the latter attributes of Brahman does not fit in with bhutakasa. Hence we take the secondary meaning and therefore daharakasa is Brahman.

### **Topic 5. Daharadhikaranam [Sutras 14-21]**

The Dahara or the 'Small Akasa' is Brahman.

**Sutra 1.3.18.[81]**

***Itaraparamarsat sa iti chen nasambhavati***

Also because of the well-known meaning [of Akasa as Brahman the small Akasa is Brahman]

The sutra has got two portions, the first being the purva paksa and the second one the reply from siddhanti. The sutra has a question and an answer. *Itaraparamarsat sa iti* is the question portion and *chen nasambhavati* is the answer part. The first two words are purva paksa and the last two words are siddhanta's. the purva paksa raises a question on 8.3.4, of Chandogya upanisad. *Atha ya esa samprasado* is the relevant portion of the mantra we analyse here.

This daharakasa has been introduced 8.1.1 of Chandogya upanisad is shown as esah and *samprasadah* means Jivatma. This means one who becomes tranquil in sleep stage. Prasadah means one who becomes tranquil. Samprasadah means one who becomes totally tranquil. In jagrat jiva is fully active; and in swapna jiva is partially active and in Sushupti jiva is totally tranquil.

Purva paksa contention is that the word samprasadah means only jiva and jiva only becomes tranquil and Brahman need not become tranquil. One becomes tranquil means it refers to jiva only because Brahman has no avastha like jagrat, swapna Sushupti etc. so esah is equal to daharakasa and samprasadah is equal to jiva and hence daharakasa must mean Jivatma only.

Vyasacharya says no and he says daharakasa means Brahman alone. Vyasacharya says it is improper to the context. If you take daharakasa as jiva all the other descriptions does not fit in properly. It is free from all papas and it does not fit in because jiva is the product of punya and papa alone. Daharakasa is description as sustainer of the whole universe. Daharakasa is sthithi karta and Jivatma cannot even maintain his own family. He is not able to maintain his own body and how can he maintain the universe. Therefore daharakasa do not fit in with jiva and therefore it is not jiva and it is Brahman only.

Now we will go for word for word analysis. Now purva paksa is jiva purva paksa. he talks about Jivatma based on samprasadah. Itara paramasad sa iti chen na asambavad. Now we will take up first portion. We have to supply daharakasa. Itara paramasad daharakasa sa; itara paramarsad itara means other one; since we are repeatedly saying daharakasa is Paramatma because of the context the other one implies Jivatma. Paramarsad means reference mentioned; because of reference of jiva as daharakasa in mantra 8.3.4 of Chandogya upanisad.

How 8.3.4 refers to daharakasa as jivah because it does not directly say daharakasa is jiva but refers to daharakasa as esah. The daharakasa occurring in 8.1.1 saha means jivah. Is that jiva alone. Because jiva is referred to daharakasa in 8.3.4. of Chandogya upanisad. If such a question is asked suppose if such purva paksa is raised then comes our answer 'na asambavad' daharakasa and jiva you have to add. Daharakasa na jivah is our reply. Daharakasa that is daharakasa occurring in 8.1.1 of Chandogya upanisad is not Jivatma; because it does not fit in this context; illogical in this context. It is unfitting because daharakasa is described as Brahman in other places.

Every jiva starts with free will jivah. As we grow older and older and faith and free will becomes less and less and then we become fatalistic and we will say there is nothing in our hand. Sathya kamatvam and sathya sankalpam does not fit with jiva and therefore it should be taken as Brahman. in this context we vehemently establish that daharakasa is Paramatma and it is not Jivatma because Paramatma alone sathya kamah sathya sankalpah.

The corollary we get is Paramatma is Sathya Kama sathya sankalpah and jivah is asathya kamah and asathya sankalpah and therefore we derive that Jivatma and Paramatma becomes a fact one feels. There are many sutras in Brahma Sutra which gives this corollary. If Jivatma Paramatma aikyam is the vision of Vyasacharya why should he establish Jivatma and Paramatma different? Why he does not say ok to jivatma and Paramatma aikyam.

Some people even say Brahma Sutra supports vishistadvaidam and Upanishad supports Advaidam. Why such a view is there. it is because Vyasacharya says Jivatma Paramatma beda and I had earlier also pointed out before and I repeat this and caution that one should not take Jivatma Paramatma beda. You should take the context in the right way to take the right view. When we negate Sankya philosopher they don't accept Isvara even in vyavaharika dristi and he does not want an Isvara. In advaidam we want Isvara in vyavaharika dristi not only we want to establish but also establish that jagat is karyam and Isvara is karyam. Jiva and jagat are karyam and product and Isvara is karanam. In Brahma Sutra Sankya is primary purva paksa.

So when Sankya is purva paksa one of the problem of Sankya is vyavaharika dristi Isvara is not acceptable to them. Another context we establish beda is Upasana context. We should note that the present adhikaranam relates to daharakasa Upasana and therefore krama mukti is the phalam. at the end of dahara vidya the phalam is given as krama mukti. Upasaka upasya beda is maintained. In jnana prakaranam, abeda is underlined.

Thus in all jnana prakaranam jivatma and Paramatma aikyam is revealed from Paramarthika dristi and here dristi being vyavaharika dristi we should take Jivatma and Paramatma different. Daharakasa is not vachyartha Jivatma. When you take Jivatma as lakshyartha Jivatma okeyed. Lakshyartha Jivatma and Paramatma are identical. Daharakasa is not vachyartha Jivatma and if it is taken as lakshyartha Jivatma we have no objection. Now we will go to the next sutra.

## **Topic 5. Daharadhikaranam [Sutras 14-21]**

The Dahara or the 'Small Akasa' is Brahman.

### **Sutra 1.3.19.[82]**

#### ***Uttaracchedavirbhutasvarupastu***

If it be said that for subsequent texts [it appears that the individual soul is meant, we say that what is there referred to is] rather [the individual soul in son far] as its real nature has become manifest [i.e., as it is non different from Brahma]

The argument in support of sutra 14 is continued.

Another purva paksa and siddhanta in one sutra. We will do general analysis. Here also Purva Paksi is Jivatma purva paksi. His argument is similar argument only. Vyasacharya says that daharakasa is jivah only because of latter descriptions. Adhi Sankaracharya also took some latter description. Now purva paksa says I will also give some objections that are latter descriptions. Vyasacharya used the word uttarebhyah plural number and he uses the word uttarad.

Now Purva Paksi's contention when you gave the description of latter descriptions, which are favourable to you. He says that you are not quoting those mantras which present daharakasa as jiva. There is not much difference between the previous and the present sutra. He says that this Purva Paksi is answered and now again the Purva Paksi again comes and argues. The previous and present sutras are almost similar. There are several mantras, which Purva Paksi quotes in support of his argument. Chandogya upanisad 8.7.1. The mantra reads as *ya atmapahatapapma vijaro vimrtyur visoko vijighatso'pipasah satyakamah satyasankalpah so'nvastavyah sa vijijnasitavyah sa sarvamsca lokanapnoti sarvamsca kamanyastamatmanamanuvidya vijanatiti ha prajapati ruvaca.*

The meaning of the mantra is the Self is free from sin, free from old age, free from death, free from sorrow, and free from hunger thirst; it is the cause of desire for Truth and for commitment to Truth. This Self has to be sought for and thoroughly known. The person who has sought for and known the Self attains all worlds and all desires. This is broadly divided into two sections and section 1 to 6 is one portion is daharakasa Upasana which is known as dahara vidya. It is Upasana prakaranam and not jnana prakaranam. Second portion is jnana prakaranam wherein daharakasa is revealed as Brahman. in dahara vidya dahara Akasa is imagined as Brahman and in the second jnana prakarandam daharakasa is Brahman and it is a fact.

## BRAHMA SUTRA

Class 101

### **Topic 5. Daharadhikaranam [Sutras 14-21]**

The Dahara or the ‘Small Akasa’ is Brahman.

#### **Sutra 1.3.19.[82]**

#### ***Uttaracchedavirbhutasvarupastu***

If it be said that for subsequent texts [it appears that the individual soul is meant, we say that what is there referred to is] rather [the individual soul in son far] as its real nature has become manifest [i.e., as it is non different from Brahma]

We are now in the 19<sup>th</sup> sutra of Daharadhikaranam. Through this adhikaranam we establish daharakasa is Brahman alone for the purpose of Upasana. This adhikaranam has got 8 sutras. First four sutras Vyasacharya refute one type of purva paksa and in the second four he refutes another set of purva paksa. Bhutakasa purva paksa are negated in the first and in the second is jiva purva paksa. Jiva purva paksa we commenced from 18<sup>th</sup> sutra and now we analyse the 19<sup>th</sup> sutra now. We claimed daharakasa is Paramatma because of the latter descriptions. Now purva paksa claims daharakasa is Jivatma as per the latter descriptions. Thus only difference we used uttarebyah and they use the expression uttarad. The question is what is the description, which seemingly supports the purva paksa. I said that in the Chandogya upanisad in the 8<sup>th</sup> chapter we have six topics in the first group, which we call as dahara vidya, which means dahara Upasana. From section 7 to 12 the second group is called prajapati vidya, which refers to jnanam. In both dahara vidya and prajapati vidya daharakasa is the basis. In the first one daharakasa is imagined as Brahman while in the second daharakasa is known as Brahman. The first one is not fact based and imagination based but the second one is the fact based. I imagine you are beautiful means it is not a fact. I know you are beautiful means it is a fact.

Now while talking about dahara vidya, this daharakasa has got eight gunas of Atma, which we saw earlier. The Upasana topic we completed and the Upasana phalam was also given which ended with krama mukti. He goes to Brahma loka and gets jnanam and gets mukti. In prajapati vidya that is Brahmaji makes a statement, which is esah Atma prajapati also, makes asta guna vishista Atma he introduces. From that expression we come to know prajapati also talks about daharakasa only. Whoever knows this Atma he attains liberation. Thereafter prajapati makes a public notice and he never addresses any particular person. All the beings saw and approached Brahma and all devas and others go to Brahma and seek ashta vidha guna visishya jnanam. He teaches this Atma in four stages and he had two students one Indra and one Virocana. In the first session two students were there and in the second session he had only one student. In each stage the guru had to serve the guru for 35 years. The mantra reference is the public notice mantra occurs in the mantra 8.7.1 of Chandogya upanisad [the individual Self is Atma]. This is the general announcement. Here Prajapathi declares that this is the nature of the Self. And if you know the Self, you attain everything. He sent invitations as it were ‘come and learn from me’ here in order to teach the nature of the Self and also to emphasise the need for Self discipline to attain Self-Knowledge the Upanishad introduces this

story of Indra and virocana. The teaching begins in the mantra 8.7.4 of Chandogya upanisad. Here Atma is revealed as Aksi Purusa [that which is seen in the eyes is the Self] the waker Self is technically called visvah. The next stage of teaching comes in the mantra 8.10.1 Chandogya upanisad [when a man being asleep reposing and at perfect rest sees no dreams that is the Self] here ashta vidha guna Atma is revealed as taijasa. Again in the third stage the same Atma is revealed in the mantra 8.11.1 Chandogya upanisad [the immortal fearless] here the very same Atma is revealed as sleeper, the Self-prajnah. According to Vedanta atman and Brahman are one and the same. When we use the word atman we refer to the Self within us. The word Brahman means the biggest, the greatest, the ultimate that is superior to everything. These three statements alone purva paksa takes to his advantage. While Prajapathi talks about daharakasa he talks about waker, dreamer and sleeper, the purva paksa says that Jivatma alone is waker, becomes dreamer and sleeper because avasthatriyam belongs to jiva alone. Therefore daharakasa is affected by three avasthas and therefore daharakasa is visva taijasa and prajna because of these three mantras. This is jiva purva paksah. For this Vyasacharya gives his answer that daharakasa refers to Paramatma alone. Now we will see the answer.

Vyasacharya says 'yes'. Upanishad reveals daharakasa as jiva waker, sleeper and dreamer. Whenever sastra talks about jiva, jiva has got two meanings depending upon the context one is vachyarthajiva and the other is lakshyarthajiva. When we take vachyarthajiva for waker jiva the meaning is the waker jiva is conscious entity, which is the integral part of the physical body and the consequent jagrat avastha. It is sthoola sarira sahita Chaitanyam. It is a messy jiva. This is the meaning, which is commonly understood by every meaning.

When we use the word I we know the 'I' represents this physical body. In some cases Upanishad uses vachyarthajiva along with the human being. Even after knowing that sun does not rise and set and ti is the earth that goes round knowingly we use the mistaken expression sun goes round the earth. So also Upanishad joins the common man and uses jiva to indicate the sarira sahita Chaitanyam. It is called anuvada knowing the truth. Vachyarthajiva is anudita jiva an expression used along with the common man body mixed Consciousness. This is meaning number one for jivah.

The second meaning is the Consciousness as mixed with body but the witness of the body therefore distinct from body and uninvolved from body; the body separated from Consciousness and it is lakshyarthajiva Chaitanyam or upahita Chaitanyam. One is pure Consciousness and another is adulterated Consciousness. One is vachyarthajiva and another is lakshyarthajiva. First is vishista Chaitanyam [impure Consciousness with body] and the other is upahita Chaitanyam [pure Consciousness]. Take the meaning according to the context.

Suppose the father has gone to the temple and he has brought some thirtham on the puja table. Children get up late. Father addresses the son 'on the cup temple thirtham and bring it'. The son does even though he asked father thirtham only, the son understood container sahita thirtham and he brought the thirtham with container. Father says bring the thirtham. Suppose as in the first case, take thirtham. First thirtham included the container and second time he took the thirtham and not the container. Body is container; Consciousness is the thirtham. We have to understand whether the body with container or without container one should take the meaning according to the context.

Suppose the father does not ask him to bring the thirtham but drink the thirtham, the son takes only the thirtham and not takes the container. First time vishista thirtham and second time it is upahita thirtham. Body is the container; Consciousness is thirtham jiva; Upanishad uses the

wordc jiva generally and we have to understand in the context whether it is sarira sahita or sarira rahita.

When Prajapathi decided to reveal the daharakasa Atma, what he meant was Sthoola Sariram saksi Chaitanyam lakshyartha waker is revealed visvah is talked about and not vachyartha visvah. Consciousness that obtains in Sookshma Sariram does not include Sookshma Sariram. Daharakasa is lakshyartha Jivatma that includes tajasa, prajna and visva; many important Vedantic is revealed here.

Purva Paksi says daharakasa is not Paramatma and it is Jivatma and you say that Jivatma is vachyartha Jivatma and he says that daharakasa is Jivatma whether it is vachyartha or lakshyartha. It is Jivatma but qualified as vachyartha or lakshyartha. For that we answer lakshyartha Jivatma is another name for Paramatma. Therefore you cannot say daharakasa is not Paramatma. It is Paramatma for lakshyartha jiva is Paramatma only. Sometimes conversation takes place either without understanding what is what. Here Purva Paksi without understanding lakshyartha Jivatma is Paramatma he argues that daharakasa is Jivatma. Now we have to prove it is lakshyartha to establish aksi Purusa is aksi saksi Sthoola Sariram saksi alone is talked about. He says you read the mantra properly. If you read the mantra he says daharakasa is waker and this waker is amritam immoral abhayam ever secure; now tell me if the waker is vachyartha the conscious entity along with body can you he is immortal. Can you say the waker jivah is fearless? No. The sense of insecurity is ever with jiva. Therefore vachyartha jiva can never be abhaya jiva. Prajapathi says abhayam means the waker Consciousness is witness Consciousness alone and not Jivatma and jiva sariram. This is repeated in the next stage also. In swapna and in Sushupti also etad amritam etad abhayam is repeated. Prajapathi also says in the end etad Brahman. Visva is Brahma tajasa Brahma prajna is Brahman provided you take the right meaning.

Here Adhi Sankaracharya takes the fourth stage of teaching. The mantra goes like this. It is 8.12.3 of Chandogya upanisad. The mantra reads as *evam esvaisa samprasadosmac charirat samutthaya Param jyotir upasampadya svena rupenabhinispadyate,, sa ultamah purusah, sa tatra prayeti jaksat kridan ramanah sribhir va yatha prayoga acarane yuktah, evam evayam asmin sarire prano yuktah* the meaning of the mantra is even so that serene one when he rises up from this body and reaches the highest light appears in his own form. Such a person is the Supreme person. There such a one moves about laughing, playing, rejoicing, with women chariots or relations not remembering the appendage of this body. As an anima; is attached to a cart so is life attached to this body.

Here Prajapathi says daharakasa taught of as visva tajasa and prajna is turiam separate from sookshma, sthoola and karana sariram when separated from sariratriaym it merges with Brahman. By making this statement Upanishad contributes to our confusion. Merges mean you may think that separate jivatma and pour this to Brahma Chaitanyam. This adds to confusion. This is a very important line on which the Advaita teaching is centered around. Svena rupena abhinispadyate means Jivatma Chaitanyam merges into Brahma Chaitanyam. This statement is refined as Jivatma Chaitanyam emerges in its original nature of Brahma Chaitanyam or Paramatma. The original nature Jivatma is nothing but laksayartha Jivatma. Now Purva Paksi may say in the fourth stage, the original nature of Jivatma may be taken as right but what about other three states. The first stage and second stage and third stage also must be talking about lakshyartha alone because Prajapathi repeatedly says that I teach this subject in every state. The fourth state of teaching refers to lakshyartha and the first three also the topic is same so the first three states also refer to lakshyartha Jivatma only. In all the four

stages lakshyartha Jivatma is talked about which is identical with Paramatma and therefore daharakasa is Paramatma only. More in the next class.

## BRAHMA SUTRA

Class 102

### Topic 5. Daharadhikaranam [Sutras 14-21]

The Dahara or the ‘Small Akasa’ is Brahman.

#### **Sutra 1.3.19.[82]**

#### ***Uttaracchedavirbhutasvarupastu***

If it be said that for subsequent texts [it appears that the individual soul is meant, we say that what is there referred to is] rather [the individual soul in son far] as its real nature has become manifest [i.e., as it is non different from Brahma]

We do the general analysis of the 19<sup>th</sup> sutra of Daharadhikaranam. This is purva paksa part and here purva paksa argues that the daharakasa has to be taken as jiva as the latter description tallies with his arguments. Daharakasa is revealed as visva, taijasa and prajna and the jiva is avastatriya sambandha can belong to jiva alone and therefore daharakasa is jiva. Siddhanta argues that the vachyārtha of these words should not be taken and it is not that the sthoola sarira visishta Chaitanyam you should take but you should take the lakshyārtha of sthoola sarira upahita Chaitanyam. So also in the case of sookshma and karana sariram one should take the lakshyārtha and the lakshyārtha of the respective sookshma and karana sarira Chaitanyam refers to Paramatma and not Jivatma as contended by the Purva Paksi is the arguments of siddhantis in this regard. Lakshyārtha Jivatma is nothing but Paramatma. The Upanishad consistently uses the word etad amritam and if vachyārtha is intended the samanvaya prayoga etad amrita is not possible. It is because etad amritam is there at every stage Visva Taijasa and Prajna, the Upanishad itself reveals what is meant is lakshyārtha in the mantra by the words etad Brahman and therefore daharakasa means Paramatma alone.

After revealing visva, taijasa and prajna the same daharakasa is revealed as turiyam in 8.12.3 reveals that this daharakasa separates itself from Visva Taijasa and Prajna and merges itself with Paramatma. And it emerges in its own original nature and from this it is very clear that his daharakasa is none other than paramjyoti or Paramatma it is very clear.

But purva paksa says that I am not worried of the fourth stage but I am worried about the first three states only. It looks redundant but says that Prajapathi makes it clear that Prajapathi hints of the fact that the same topic is discussed at all stages. At the end of 8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup> and 12<sup>th</sup> sections, the mantra says the same topic is discussed which means that whatever is discussed in fourth stage which is non-controversial is alone discussed in first three stages and it means the first three stages are also Visva Taijasa and Prajna the same Paramatma is discussed and similarly in the fourth stage also and this possible only if you take lakshyārtha Jivatma which is equal to Paramatma. The objection is based on 8.12.3 of Chandogya upanisad which reads as *evamevaisa samprasado'smacchariratsamutthaya Param jyotirurpasampadya svena rupanabhinispadyate sa uttarmah purusah sa tatra pryeti jaksarkridanramamanah sribhirva yanairva jnatibhirva nopajanam smarannidam sariram sa yatha prayoga acarane yukta evamevaya mamsmificharire prano yuktah* the meaning of the mantra is that in the same way the joyful Self arises from the body and attaining the light

of the Cosmic. Self appears in his own form. This is the Paramatman, the cosmic Self. He then freely moves about eating, laying or enjoying himself with so men, carriages or relatives not remembering at all the body in which how was born. Just as horses or bullocks are harnessed to carriages, similarly prana [life] remains harnessed to the body due to karma. When Visva Taijasa and Prajna comes out of this body, it merges and it becomes one with paramjyoti and it emerges out in its Brahma swarupam. A very confusing statement it is. Jiva gets out of the three sariram is one confusion and it get merges with Paramatma is another confusion.

Purva paksa asks the question you say Brahman is the very nature of Jivatma and the nature is that which obtains all the time. Swabhavam or swarupam is that which is never lost. Swarupam is something, which is always there. Emerging in its original form is a contradiction. Only when some impurity is there and after removing the impurity, the Atma gets its original form we can accept. But it cannot emerge out of original form and it is not even covered by impurity for asangam Brahman cannot have any impurity. The question is what is the meaning of emerging out in Brahman form. What process is that? According to you no process is involved. It is not an end product of any process. Where is the question of emerging out? This is the question from purva paksa.

Adhi Sankaracharya says emergence in the form of Brahman, merging with Brahman etc., are not actual event taking place any time anywhere, Jivatma was Paramatma, is Paramatma and will be Paramatma. Adhi Sankaracharya impurity is your notion that you are impure. There is no impurity other than the notion that I am impure. I said I am 'impure notion', means that the Sthoola Sariram has got impurity we know; Sookshma Sariram there is plenty of impurity kama kroda, anger etc. Karana sariram is ajnana malam and it is impure and we talk about I, the Atma is ever pure and the impurity is but a notion; I am embodied is only a notion. If the impurity is the form of notion the removal of impurity is nothing but dropping of the notion and it is only an intellectual process. Our samsara is an intellectual process that I am a samsari. Moksa also is an intellectual process to drop the notion of 'avidya' or samsara. Aviveka is equal to samsara and viveka is moksa. Viveka take place only in the intellect. Aviveka also takes place in the intellect. Therefore, Adhi Sankaracharya says here, viveka aviveka matram, other than the knowledge, no process is involved to become asariram. This topic is elaborately discussed before.

Tattusamanvayad 4<sup>th</sup> sutra we had discussed this matter. The embodied person is samsari and un-embodied person gains moksa and that is essence of the statement. Sariratvam samsarah and asariratvam mokсах. Here there is support in Kathopanisad 1.2.22 *asariram sariresu anavathesu anavathesva vasthitam, mahantam vihum atmanam marva dhiro na socati* the meaning of the mantra is that the wise man, who knows the atman as bodiless seated firmly in perishable bodies, great and all pervading, does never before. When Adhi Sankaracharya quotes the statement purva paksa says that you are trapped. The embodied person is samaari. Unembodied one is muktah. When Adhi Sankaracharya quotes it, he says that as long jiva's body is there jivan mukti is impossible. He says that now it is sadeha and that is why you talk about viveka you gain and from the sruti statement sadeha mukti is a contradiction. Adhi Sankaracharya says you are ever unembodied one. You are nitya vivekah. He further adds that Atma does not become sadeha because Atma is asangah and it can never get connected with the body.

Sahetvam is the notion that I am embodied is sadeha. During the notion I entertain I am sadehah also I am videha. Adhi Sankaracharya quotes Katha mantra 1.2.22 as above. Moksa

is nothing other than knowledge cannot remove the notion that I am sadehah. Abinishpattih nama vivegah. Jivatma emerging as Paramatma is nothing but the knowledge; Jivatma emerging as Paramatma is nothing but dropping the notion that I am Jivatma. With this the last purva paksa is answered and with this the general analysis of this sutra is over.

Now we will take up the word for word analysis. Uttarat number one; chet number two; avirbhuta svarupam number three and tu is the fourth word. If Jivatma and Paramatma is eternally one why should the Upanishad negate it. Upanishad does not negate it because we have the notion of difference and Upanishad negates the notion held by jiva that he is not Paramatma. You supply two words in the beginning. Daharakasa and jiva add before uttarat. Daharakasa is Jivatma uttarat because of the latter description of daharakasa as Visva Taijasa and Prajna 8.7.4, 8.10.1, and 8.11.1 of Chandogya upanisad. It is described as waker, dreamer and sleeper, it Jivatma. Now the answer comes. Here you have to supply jiva and say we do agree that jiva reference is there. Avirbhuta swarupa means lakshyartha jivah jiva in secondary meaning and not in its vachyartha meaning. We take it in its exposed nature Sthoola Sariram, Sookshma Sariram and karana sariram and we see the waker minus Jagrat Avastha; dreamer minus swapna avastha; and sleeper minus Sushupti avastha the three avasthas are three layers and now we get exposed visva, we get exposed taijasa and we get exposed prajna; so we get avirbhuta swarupam yasya jivah. We get jivah in its secondary meaning which is Brahman. Primary meaning is jiva. Daharakasa deals with lakshyartha jiva which is none other than Paramatma. Tu means therefore the objection is negated. Therefore, the purva paksa nishedartha indicates the negation of purva paksa. Now we will go to the next sutra.

## Topic 5. Daharadhikaranam [Sutras 14-21]

The Dahara or the 'Small Akasa' is Brahman.

### Sutra 1.3.20.[83]

#### **Anyarthascha paramarsah**

And the reference [to the individual soul] is for a different purpose.

The argument of sutra 14 is continued. There is possible objection from Purva Paksi if the Upanishad does not want to reveal daharakasa as Jivatma and if it wants to reveal it as Paramatma then why should Upanishad brings in Visva Taijasa and Prajna and confuse us and avoid the three. It need not have talked about Visva Taijasa and Prajna. Why bring in lakshyartha and vachyartha and why should you do talk in roundabout way. If you talk about Paramatma why say Visva Taijasa and Prajna and say it is vachyartha and lakshyartha. It adds to the confusion. Since Upanishad is using the word jiva, Visva Taijasa and Prajna it should be Jivatma alone and give the secondary meaning Paramatma etc. If it had not revealed so, we would have taken Paramatma is a separate entity and bed would have been there. Then comes you come and see Paramatma in vaikundam etc., for me to see Paramatma one day. The idea of division should go away. This makes Paramatma limited. And therefore Upanishad wants to say the visva is Paramatma. The separation of Jivatma from Paramatma should go away. Then waker Consciousness minus waking experiences is Paramatma. Even now the I, the Consciousness is Paramatma. I need not superimposition of body on the jiva and even now I realize the superimposition, I can realize the unlocated awareness and the location belongs to the body and I should know minus the notion of location I am Paramatma.

With the superimposing of the body and the various experiences like Visva Taijasa and Prajna, I get the notion that I am Jivatma and the very notion of Jivatma takes me to samsaritam. Once the notion of the body and its various experiences is dropped I feel my very nature and the very swarupam which is nothing but Paramatma status. Buddhi nivanartham jiva paramarsah. Otherwise Paramatma will be eternally Paramatma and Jivatma will be eternally Jivatma and you will say that that Brahmanis ever free and the Jivatma is ever in bondage without any solution of getting liberation. Therefore the essence of this sutra the reference of jiva is not to reveal that I am jivah but to reveal the fact that I am non-different from Paramatma.

Now we will go to the word for word analysis. We have to rearrange the words of the sutra from anyarthascaha paramarsah to paramarsah anyarthascahah. Paramarsah means reference to daharakasa as jiva in 8.3.44, 8.7.4, 8.10.1 and 8.11.1, and 8.12.3 of Chandogya upanisad here daharakasa is referred to as jiva in different words samprasaha word is kept in mind here. This is meant for some other purpose, which means it is not the purpose that you mean, and other than the purpose different. You think that daharakasa is jivah but it means the enlightened jivah or Brahman, which is non-different from jiva. The difference between Jivatma and Paramatma is negated and it negates not for the benefit of Upanishad but unfortunately we have the notion of difference and therefore it negates the notion of difference and therefore it negates the notion of difference between jivatma and Paramatma. Equation cannot be there between explicitly equal thing but equation can be there between two different things only. The condition for equation of the two things should be equal with a seeming difference and then only there an equation is possible. Eight is eight is not an equal. Eight is nine minus one is equal. Then only it is an equation. On one side eight is there and on the other nine is there; on one side nothing is there and on the other minus sign is there. Similarly between Jivatma and Paramatma there is vachyartha Beda. There does seem difference that one is superimposed by upadhis while the other is not. Therefore Upanishad has to reveal the aikyam and therefore jiva has been brought in and told about the aikyam with Paramatma. The next sutra we will take in the next class

## BRAHMA SUTRA

Class 103

### Topic 5. Daharadhikaranam [Sutras 14-21]

The Dahara or the 'Small Akasa' is Brahman.

Sutra 1.3.21.[84]

#### **Alpasruteriti chet taduktam**

If it be said that on account of the scriptural declaration of the smallness [of the ether] [Brahman cannot be meant] [we say that] that has already been explained. The argument in support of Sutra 14 concluded with this sutra.

We see the last sutra of this adhikaranam. It is connected with daharakasa obtaining in the heart is Brahman or something else with reference to 1.2.7 of Brahma Sutra, Purva paksa says that it refers to elemental space alone while siddhanta says that daharakasa refers to Brahman only. Daharakasa means small space; Brahman means Infinite. The small space is Infinite and we see the statement itself is contradictory. Therefore daharakasa is jiva which is alpam. Daharakasa as Brahman is so evidently contradictory. It is like saying that I have no tongue. The very fact that I talk means I have tongue. The very word dahara means alpa and word Brahman means mahat and you say paricchinna Akasa is aparicchinna Brahman. On the other hand if you take jiva there are several indications to show that jiva is small one in the Akasa and how can it be big Akasa or Brahman. Alpasruteriti chet is purva paksa part; taduktam is siddhanti argument. We have answered this question. The answer is given in 1.2.7 of Brahma sutra the answer is given. We have seen Brahman as manomaya resides in the heart. Daharam alpakam are synonymous and since manomaya is within the heart and how can we say Brahman is in the heart when Brahman is all pervading. Here the Brahman is within the heart means we correct the statement as Brahman is within the heart also. Brahman is in the heart also means Brahman is everywhere both in heaven and hell and Brahman is in the heart also. If you think Brahman is in the heart only there is problem. Even though Brahman has not location, and Brahman is all pervading and the scriptures prescribes location for Brahman for the purpose of Upasana alone. Brahman is located in the heart for the purpose of puja or meditation. I cannot invoke Brahman in the absence of a particular locus for the purpose of puja and dhyana. Daharatvam is superimposed for the purpose of dhyana and meditation and to perform puja in the absence of which it is difficult to perform any puja. The word Vishnu means all pervading. That Vishnu I worship in small saligrama and even when I worship I know Vishnu is all pervading but I temporarily invoke on a salgrama. So also daharakasa means small Akasa in the heart although the same daharakasa is all pervading Brahman alone.

Now we will see the word for word analysis. Alpastrute iti chet tad and uktam. There are five words in this sruti. The first portion is purva paksa portion. Supply two words as daharakasa and Jivatma. Daharakasa jivah alpastrute; this is Purva Paksi statement. The meaning is daharakasa which is referred to in Chandogya upanisad 8.1.1 is jiva lone is the argument of the purva paksa. Alpasrute because of the smallness of Akasa in the sruti. The word alpa does not occur there but the word dahara is mentioned there in the Upanishad. That jiva is small is

understood and accepted by all. Iti chet means suppose such an objection is raised and now comes the answer tad uktam the answer to that objection. Vyasacharya himself is already given the answer in the sutra 1.2.7. Smallness is superimposed for the purpose of jnanam for the sake of invocation or meditation. Daharakasa is neither Akasa nor Jivatma but it is Paramatma himself.

Visayah the subject matter is whether the small space within the heart mentioned in the 8.1.1 of Chandogya upanisad referred to as daharakasa. The point at issue is whether the small space mentioned above refers to bhutakasa or Jivatma or Paramatma. The first one the very Akasa is primarily bhutakasa; the second is the latter description of Atma, Visva Tajasa and Prajna Atma etc., refers to Jivatma is the basis and the third one Paramatma and siddhanta's base which we have explained. The Upanishad very heavily supports our stand. Purva paksha supports that it refers to bhutakasa and Jivatma. The siddhanta says daharakasa is Paramatma, which is the conclusion. The fifth sangathi and with regard to this we say it is occurring in its proper place only. This adhikaranam deals with Upasyam Brahman only. It is have nothing to do with jnanam.

Before going to the next adhikaranam I would like to discuss a topic. This is the first interpretation of the mantra 8.1.1 and I would like to discuss the second interpretation also. In Adhi Sankaracharya commentary both the interpretations are given. Hence I thought it would be better to give you both the interpretation. Within the body Brahma puram is sariram and pundarikam means heart; within the heart there is small space; body is one container; heart is one container and within the heart the space is another container. And within the space the container resides Brahman. Whatever is there is, you have to enquire. Upanishad uses the pronoun. 'Within that' is the expression we analyse. Tasmin we took again as the heart itself. Previous statement within the heart the space is there and within the heart whatever space is there you should enquire into. The object of enquiry is the space within the heart.

The second interpretation is within the heart space is there and within that what every is there you have to enquire is the first interpretation. The second interpretation is within the space whatever is there you should enquire into. The object of enquiry is not the space and within the space whatever is there you should enquire into. Daharakasa is not object of enquiry. Within daharakasa whatever is there you should enquire into. According to the second interpretation. Let us analyse further on the basis of the second interpretation. What is that space and what is within the space? The latter mantra analyses the container and the content. It says what is inside is daharakasa. It clarifies daharakasa is Brahman. What is there within the daharakasa. The content it says the entire creation is the content. Jagat the world is the content. According to the analysis there are three containers the body, the heart, the daharakasa within the heart and then jagat is the innermost thing and then it is clear that what is our enquiry is jagat alone. What is the benefit of jagat enquiry. Second problem is everywhere Upanishad talks about enquire about Brahman and now why should jagat need be enquired. During the body analysis, we said that Brahman is the object of enquiry. While talking about uttarebhyaha, we have said that Brahman is the object of enquiry. Within Brahman jagat is there and mantra talk about jagat anvesanam and why to you interpret is Brahman enquiry. Adhi Sankaracharya says that jagat anveshtabyam when Upanishad says sadharam jagat anveshtabyam. You should enquire into the world alongwith the content. The first container you need not enquire, second content you need not enquire and Upanishad says that the third container is enquired. Tad is interpreted as ubhayam. Upanishad prescribes the enquiry of the world along with Brahman. Adhi Sankaracharya manages to enquire Brahman as the object of enquiry. It talks about jagat enquiry. Why do you say jagat enquiry along

with something. He says I have sruti support and logical support. He has the sruti support is 8.1.6 one who knows Atma and the desires existing in Atma attains everything. Upanishad talks about Atma and desires within. Atma refers to container jivakasa and desires are the entire ue. Atma refers to the container. But Upanishad talks about Atma sahita jnana phalm. By enquiring into the world there is no purusarthah. But Upanishad gives moksa phalam and therefore enquiry should take into account the adhistanam also. Refer to 15<sup>th</sup> chapter Upanishad talks about samsara saharah. Gita sloka 15.1 reads as *urdhavamulam adhakidkham advaitham prahur avyayam chandamsi yasya parnani yas tam veda sa vedavit* the meaning of the mantra is they speak of the imperishable advaitham [peepal tree] as having roots above and branches below. Its leaves are the Vedas and he who knows this is the knower of the Vedas. In the first three lines it discusses samsara vriksha and in the fourth line it says the knower of samsara vriksha is a jnani. We should have the confusion as to how the knower of samsari is liberated. The one who knows samsara vriksam along with its root and here the root is Brahman and knower of Brahman gain freedom or liberation. The container is daharakasa and daharakasa is Brahman and you have to enquire Brahma sahita daharakasa. This you should remember when you read sankara bashyam. More in the next class.

## BRAHMA SUTRA

Class 104

### **Topic 6. Anukriyadhikaranam [Sutras 22-23]**

Everything shines after Brahman.

#### **Sutra 1.3.22.[85]**

#### **Anukritestasya cha**

On account of the acting after [i.e., the shining after] [that after which sun, moon, etc., are said to shine is the Supreme Self] and [because by the light] of Him [everything else is lighted]

A passage from the Mundaka Upanishad mantra II.2.10 is taken up for discussion.

First I will give a general introduction of this small adhikaranam. here Vyasacharya analyses the well known Mundaka mantra II.2.10 that reads as *na tatra suryo bhati na candra tarakam nema vidyuto bhanti kuto- 'yam-agnih, tameva bhantam anubhati sarvam tasya bhasa sarva midam vibhati* which is repeated in Kathopanishad mantra No. II.v.15. the meaning of the mantra is the sun does not shine there, nor does the moon, nor do the stars, nor the lightning and much less this fire. When He shines, everything shines after him, by His light all these shine.

With regard to that Atman the sun does not shine; that means when the question of illumination of Atma comes the sun does not shine means that is non-luminous. The sun does not illumine the Atma. We change the verb from illumine to shine. With regard to Atma the moon and stars do not shine that means moon and sun do not illumine Atma. With regard to the Atma the streaks of lightning do not illumine the Atma; what to talk of the miserable ordinary fire. With regard to Atma fire does not shine means this local fire also does not shine Atma. Then *tameva bhantam* in fact Atma need not illumine anything for Atma is Self-revealing Self luminous and Self-evident. Anything need not illumine these things. Everything else is shining with the help of Atma.

Everything reveals everything with the help of Atma alone. Everything shines after Atma light. Atma shines first and only that shines everything else shines. After the first person I all other things and beings come into being. This is indicated by the word *anu*. Similarly Ramah jathah and *anu Lokshmana jathah*. *Anu* always indicate the sequence. only when *agam vritti* arise *idam vritii* arises. This is said in *sad darsanam*. *aham* is first and everything else comes later only. in fact everything shines because of the light of Atma. Everything shines depending upon the Atma alone that means they do not have independently 'shining', independent capacity to reveal it won existence. I reveal my existence not because of anything else and therefore I shine myself and I do not dependent upon anything else for my shining nature. That Atma is Self-effulgent. Itself being not illumined by others it shines itself. It is *swapraksam*. *Swa itara aprakasatve sati* itself not illumined by others, *swa itara pakasa itvam illumine* all others. it is a very important mantra and from this alone we get an important corollary that Self-Knowledge is not an event. It is a very important concept of

Vedanta. When I know this particular cassette and cassette knowledge is possible because this knowledge was not evident to me. I know it means after knowing it I know the knowledge of the cassette. Knowledge is a process in which I change the non-evident category to the evident category. Atma Jnanam means change Atma from the non-evident to the evident category. That is called knowledge. Upanishad says that Atma is never under the non-evident category to switch over to evident category. Adhi Sankaracharya says there is no such case of non-evident category at all. It is wrong to say that Atma Jnanam is possible only if you convert the Atma from non-evident to evident category. It is so because that Atma is being ever self evident, Atma is ever evident. What is Atma jnanam? Adhi Sankaracharya says in Upadesa Sahasri Adhi Sankaracharya defines Atma Jnanam is the negation of superimposed limitation from the ever-evident I. Brahman is evident as I. just as elephant throws dust on its dark body, we throw attribute dusts and we don't stop with I am, and we add bio-data I am a man man-ness attributes, I am an M.A. it is another attributes; I am sat and I am 'sat' and with that we should stop and not add any attribute and this jnanam is nothing but Atma Jnanam. Atma jnanam is not a peculiar experience. Any experience is not connected with Atma and it is only a peculiar experience. Don't look for Atma anubhava. When this mantra is so evident, why do you bring the mantra to the Brahma Sutra? What is the confusion here for bringing it in Brahma Sutra? What is the doubt? The doubt is that in the entire mantra, either the word Atma or the word Brahman is not used but instead a pronoun tatra is used to indicate Brahman. Tatra means 'tasmin', which means 'with regard to that'. in this context, we want to find out what do we mean by the tat sabdah? 'Tat' refers to 'that' because of which everything shines. What is that we want to know by the 'that' ['tat' in Sanskrit] sabda? here the sruti says 'tat' sabdah refers to Paramatma alone. With this general analysis of the entire adhikaranam is over.

Now we will enter the general analysis of the first sutra of this adhikaranam. 'tat' sabda is nothing but Paramatma. The pronoun that occurs in the first, second and the third line of the mantra refers to the Paramatma only because everything else has got posterior shining while the mantra talks of something that has the independent shining or that which is Self-shining Atma or Brahman. Because of its posterior shining of everything else, the light principle is Atma. Here Atma is shown as the Self-shining one.

In 5.4.2 of Chandogya upanisad we see that *manomayah pranasariro bharupah satyasankalpa* and here *bharupah* means it is self-luminous. Why this particular quotation is chosen? In this mantra the Self-revealing nature is shown prior shining means it is Self shining. Here the word *anubhati sarvam* of the above Mundaka Upanishad mantra is used to show the prior shining or Self-shining nature. The second reason is that because everything has got dependent shining. Previous one is everything has got posterior shining the time-wise nature. Here everything shines because of borrowed shining. But Atma lends shining to others because that sabda refers to the lender of shining and that lender of shining is Atma. How should you understand this in empirical experience? What do you means dependent and independent shining. To the cassette is you require that 'I am' first and the I am the Self evident I should be there. Then alone you can say the cassette is. Without telling that 'I am' the this-ness is not there. 'I am'. The Advaita Maharantam sloka 7 reads as *nahi bhanadrte sattvam narte bhanam citio'citah cit-sambhandho 'pi nadhyasad rte tenaham-advayah* the meaning of this mantra is the world cannot be reckoned to exist without its experiences. The experiences, of the inert world, in turn are not possible without Consciousness; the association of the inert with Consciousness again, cannot be there but for the superimposition. I the Consciousness am one without second. To talk about 'is-ness' of something you should be conscious of that and to be conscious of that you require

Consciousness and that Consciousness is nothing but Atma and without Atma you cannot be conscious of anything. Without Atma's existence you cannot talk about existence of anything else. Therefore also everything has got dependent shining. That is the second reason. Since everything has got dependent shining, the must talk about only something that has got independent shining and that which has independent shining is Atma which is referred to in the Mundaka mantra as 'tat'.

Now we will go to the word analysis. Here there are three words *anukriteh tasya and cha*. We have to add two words. The words to be supplied are *tad sabdarthah* and the next word is *Brahman*. *tadsabdarthah Brahma anukriteh tasya cha*. First word is *tadsabdarthah* the meaning of the word 'that', occurring in Mundaka Upanishad three times in II.ii.10 they do not shine with regard to that that everything shines after that and everything shining because of that. The next one is *Brahman* or *Paramatma*; because of *anukriteh* means *anubhanam* or which is mentioned in the third line of the Mundaka mantra that is *tameva sarvam anubhati sarvam* the posterior shining; posterior means chronologically latter. *Anukrite* means because of the posterior shining of *sarvasya* so Upanishad must talk about the Self-shining of the Atma. Then comes *tasya cha* here the word *tasya* is used as an indicator of the entire fourth line of the mantra. *Tasya bhasa sarvamidam* so *Vyasacharya* uses this *tasya* that is because of the fourth line of this mantra which means *Vyasacharya* assumes the meaning of the fourth line that is because of the dependent shining of everything else *sarva anubhanad sarva basyatvacha* because of the dependent shining of everything else the Upanishad must talk of independent shining which is nothing but Self shining Atma alone. This is the essence of the mantra. The word *cha* is the conjunction of the two reasons. The final meaning of the sutra that the meaning of the word *tat* occurring in the mantra is *Brahman* alone because of the posterior shining of everything else. With this the first sutra is over. now *purva paksa* says I do not agree.

He says that the word 'tat' does not refer to Atma or Brahman. he says that it refers to some other powerful light principle. It is because of the various reasons. First look at the first line *na tatra suryah bahi* you interpret because of that sun does not shine. It is your interpretation. Here *purva paksa* says that I interpret that in the presence of that the sun does not shine. That means that in our experience we have seen when there are two light principle the powerful light overpowers the feeble light does not shine is not evident. The overpowering and overpowered light both are there. The stars are there in the sky in the night. They are there during the day also. They are luminous in day but because of the powerful light from *Surya* the stars do not shine. The same is the case with the moon. Suppose you keep a candle light in the day. You cannot see the candlelight. In the presence of powerful light the feeble light is not seen. The mantra says in the presence of some x light even the sun does not shine then the Upanishad must talk about very, very powerful light. This light must be much, much more powerful sunlight also. that in the presence of which the sun, moon or stars do not shine means the Upanishad talks about some powerful light. Then there is reason number two, which we will see, in the next class.

## BRAHMA SUTRA

Class 105

### **Topic 6. Anukriyadhikaranam [Sutras 22-23]**

Everything shines after Brahman.

**Sutra 1.3.22.[85]**

#### **Anukritestasya cha**

On account of the acting after [i.e., the shining after] [that after which sun, moon, etc., are said to shine is the Supreme Self] and [because by the light] of Him [everything else is lighted]

A passage from the Mundaka Upanishad mantra II.2.10 is taken up for discussion.

In this small adhikaranam Vyasacharya analyses the well-known Mundaka mantra. We have seen the meaning of the sutra and the meaning of that used is Paramatma alone because of the posterior shining of everything else in the creation and because of the dependent shining of everything in the creation. We have completed the meaning of the sutra and we see purva paksa observation. Purva paksa says that the pronoun refers not Paramatma or Brahman but some kind of effulgent principle more brilliant than the sun. it is a tejas tattvam and it does not refer to Consciousness principle. In support of his contention we saw the first one in the last class. All examples are tejas tattvam and boudhikam tattvam. All five refers to worldly perceptible light alone. In the presence of brighter light the lighter light does not shine. During day the stars are present and the light of stars are overpowered by sunlight and sunlight in this context is over-powering light and starlight is overpowered light. In the presence of a powerful light, even the sun does not shine means sun becomes dimmer in the presence of that light which is very brilliant. Tatra Surya na badhi means it must indicate that powerful light and the light which is introduced by the Upanishad must be boudhika light only. The principle is overpowering and overpowered light should belong to the same category visible to the eye. Extending the same principle the overpowering light should be boudhikam and the tatra is some powerful light. The second reason Purva Paksi gives is this. It is based on the word anubhati shine behind or shines after. Anu has the meaning of imitation, the imitation of any action indicated by the verb. Purva Paksi says the specific indicates anukaranam. Bhati is shining and anubhati means shining imitation. Then he introduces a law that imitation is possible only when two things have got similar features. Here Surya chandra and stars do the anubhanam and unknown principle is doing bhanam. That principle also should belong to the similar category. This is the second argument of the Purva Paksi. Tatra, tam and tasya occurring in the mantra refer to some boudhikam teja alone. Therefore it is said that tat does not refer to Paramatma.

Adhi Sankaracharya gives four arguments in support of his negation of Purva Paksi view. Firstly tatra should be taken as in its presence the sun moon etc., are overpowered. It talks about some brilliant light, which shines sun moon etc. Adhi Sankaracharya does not accept. Then he says it must be available for the perception of the eye. As it is not available to see, there is no light at all. It is not caksur pramana gocharam. That then light of the sun etc.,

should shine by some other material light is not known. It is absurd to say that one light is lighted by another. We do not know of any physical light, except the sun that can light Brahman. the manifestation of this whole universe has for its cause the existence of the light of Brahman, just as the existence of the light of the sun is the cause of the manifestation of all forms and colours. Brahman is Self-luminous. It remains in its own glory. It illumines the sun, the moon etc., the fire, senses, the mind and the intellect and all other objects. It does not need any other light to illumine it. Sruti texts like 'Brahman is the light of the light [jyotisham jyothi] clearly intimate that Brahman is Self-effulgent. It is quite possible to deny the shining of sun, moon etc., with reference to Brahman because whatever is seen is seen by the light of Brahman only. As Brahman is Self-effulgent, it is not seen by means of any other light. Brahman manifests everything else but is not manifested by anything else.

Adhi Sankaracharya adds there is no such a rule that imitation is possible only between two things of the same category. He gives another example. He says that there is an iron ball and it has no burning capacity. Suppose the iron ball comes in contact with fire, the fireball is capable of burning the iron ball. Here there is anukramam between the fire and iron ball and they don't have any similar nature while one has got the capacity to burn the other does not have the nature to burn. In fact when you take the example of shining they need not be of similar nature in fact Adhi Sankaracharya argues they should be of dissimilar nature only. Suppose there are two candles both emit lights. Samana swabhava is there. can you say that one is bhakti and the other is anubhakti one light does not depend upon the other light and anubhaktam cannot be possible between two light. It can be possible between one luminous and another non-luminous object. Samana swabhava anukramam rule does not apply here. Therefore this rule is not acceptable and that principle is not boudhikam jyoti.

The third argument is based on the word sarvam, which is highlighted here. If some powerful principle is boudhikam jyoti, which is more brilliant, then sun, any light or moon or fire they can help only in the illumination of forms and colours and not illumine smell, touch, taste etc. whereas the word sarvam according to our interpretation is that principle of Consciousness illumines everything which includes colours, touch, smell, knowledge, even your ignorance. The word boudhikam jyoti has got restricted meaning and the all cannot include taste smell etc. but in our interpretation that brilliant light lights everything without restricting the lighting anything. It means it lights without any exception. In the science of interpretation the meaning of word should not be restricted as far as possible. The word sarva means everything while Purva Pakshi restricts the meaning we don't restrict the meaning.

The next is the context of the mantra. Upanishad talks about Brahman and not anything about astronomy. The truth of universe is the question. The Upanishad here predominantly defines Brahman. hence this mantra refers to Brahman alone and not any other boudhika jyoti. That Brahman is there in the Atma and in the 9<sup>th</sup> mantra it is said that in vijñāna māyā kōśa the teacher has introduced Brahman in previous mantra. Atma is given the title light of the lights. The light of the light the teacher says that it is nothing but Self-effulgent Brahman alone. It is my explanation in the context of the expression. There is one more argument also. The very definition of veda is that instrument of knowledge which reveals things which are not available for human intelligence or instrument. Those that are seen by the instruments of knowledge need not be discussed by sastra. With this first sutra is over.

## **Topic 6. Anukriyadhikaranam [Sutras 22-23]**

Everything shines after Brahman.

**Sutra 1.3.23.[86]**

**Api cha smaryate**

Moreover the smriti also speaks of him i.e., Brahman to be the universal light.

An argument in support of sutra 22 is given. Purva paksa is not happy with the explanation given in the above sutra. Purva paksa says the explanation is not at all satisfactory. With regard to Atma sun does to shine. This is re-read as sun does not illumine the Atma. Here how can you give the meaning of illumine to the word shine. This is the argument put forward by the Purva Paksi. Shine is an intransitive verb and illumine is a transitive verb. The Upanishad uses an intransitive verb and you take the word as causal verb or transitive verb. How can this be done? For that answer is given in this sutra.

Whenever you are uncomfortable with veda vakyam you can go in for the smriti vakyams for smriti is a commentary on sruti. Kalidasa gives the example that Sita followed Rama like smriti following sruti. What a great example. If he could give this smriti follows sruti so closely. Smriti follows sruti very closely. here we have sruti support in Gita sloka 15.6 that reads as *na tad bhasayate suryo na sasanho na pavahah yad gatva na nivartante tad dhama paramam mama*. The sun does not illumine that, or the moon or the fire. That is My Supreme abode from which those who reach it never return. The word basayati is used and it is commentary on the word bhati. Basayate means illumines and we have not violated by any rules. This is the general analysis.

Now we will go for word for word analysis. It has three words. Api cha smaryate. The first two words should be taken together which means moreover. Already reasons are given and now one more is added. That means there is smriti support also. Vyasacharya says sruti support is there but he has not given the detail. Adhi Sankaracharya gives the number of the sruti. Another quotation is from Gita 15.14 that reads as *yad adityagatam teja jagad bhasyate'khilam yac candramasi yac ca 'gnau tal tejo viddhi mamaham* the meaning of this sloka is that splendour of the sun that illumines this whole world, that which is in the moon, that which is in the fire, that splendour know as mine. Jyotisham hyoti is my tejas the Brahman's tejas and this alone adityagatam tejah. Because of this light alone the sun shines. We complete the sutra smriti pramana tad sabdah and with this, this adhikaranam is over.

The subject matter of the adhikaranam is subda occurring in 2.2.10 of Mundaka Upanishad. The doubt is whether it refers to elemental light or spiritual light. Purva Paksi says that it refers to elemental light only because of the other elemental lights mentioned. Siddhanta says because of the various reasons given above tad sabda refers to Brahma alone. The adhikaranam is placed in the right place.

## BRAHMA SUTRA

Class 106

### **Topic 7 pramitadhikaranam [Sutras 24-25]**

The person of the size of a thumb to Brahman.

#### **Sutra 1.3.24.[87]**

#### **Subdedeva pramitah**

From the very word, the term [viz. the term Lord supplied to it] the [person] measured [by the size of the thumb] [is Brahman]

Here mantra II.4.12 of Kathopanisad is taken up for discussion. The mantra reads as anguntha matrah Purusa Madhya atmani tisthati, isano bhuta bhavyasya, na tato vijugupstate with the meaning that the person [Purusa] of the size of a thumb, resides in the middle of the body, Lord of the past and the future and henceforward [after knowing Him] fears no more. This is indeed That. This followed by the next mantra of the same Upanishad 13 that reads as anguntha matrah Purusa; jyotir iva adhumakah, isano bhuta bhavyasya sa evadya so u svah the meaning of this mantra is that person of the size of the thumb, is like flame without smoke, Lord of the past and future. He alone is even today and will be verily tomorrow. This is verily That.

First I will give you to the general introduction to this adhikaranam, which has two sutras. In this adhikaranam Vyasacharya analyses the mantras occurring in Kathopanisad angusta matra purusah as above. Here jivatma and Paramatma aikyam is revealed in this mantra. First line talks of Jivatma and the second line of Paramatma. Angusta mantra purusah means one who dwells within the body. This Jivatma, which is known, as Purusa is *angusta matra* means the Jivatma is of the size of the thumb in the middle of the body. Here Atma means sariram. sarira Madhya means hridaye. Jivatma dwells in the heart of the body is of the size of the thumb. This Jivatma really speaking is the Lord of the creation of the past, present and future creation. in 12<sup>th</sup> mantra it is said that whoever knows this jivatma and Paramatma aikyam never feels insecurity. He does not seek security from the external world. he does not desire for security]ty means he feels security within himself. This Atma alone was in the past, in the present and will be in future also. This Atma is eternal. This Jivatma residing in the heart of the size of angusta is none but Paramatma. The word *angusta matra Purusa* is the word for discussion. It is to be found that whether *angusta matra Purusa* is limited Jivatma or limitless Paramatma. The purva paksa assumes that it refers to the limited Jivatma alone. While siddhanta says it refers to Paramatma alone. Now we will enter into the general analysis of the first sutra.

In the first sutra *angusta matra Purusa* does not refer to limited Jivatma but to the limitless Paramatma. Vyasacharya says the second line gives the reason. *Angusta matra Purusa* does not refer to limited Jivatma but limitless Paramatma alone by using the expression *isanou bhuta bhavyasya*. The limitless Jivatma is not even the Lord of the house and how can he be the Lord of the creation. Jivatma is not even the Lord of the body even. The very fact it equates it with Paramatma alone.

We will go to the word for word analysis. There are three words *sabdat eva and pramitah*. You have to supply one word Paramatma and sutra should be read as pramitah Paramatma and the hetu is sabdat eva. The first word is pramitah. The word pramitah means the measured one, the limited one sized one, quantified one etc. this word refers to angusta matra Purusa. this Purusa is of the size of the thumb. This occurs in the Kathopanisad 2.4.13. the conclusion is that it refers to Paramatma alone. We have to take the lakshyartha of angusta matra and not the vachyartha. we should not take abasa chaitanya Purusa but we should take chaitanya Purusa. we should not take the reflected Consciousness but the original Consciousness the Paramatma. Because of the Upanisadic statement isanou bhuta bhavyasya and here Purusa is presented as the Lord of the universe. Here it is mentioned as jagat purusah. it should refer to lakshyartha Purusa Paramatma alone. Eva gives the emphasis. With this the first sutra word analysis is over. now we will see purva paksa's objection. How will you explain the size of the thumb when Paramatma is very big and he is sarvagathah. For this we ad eva and he is of the size of the thumb because he is in the heart and he is small as if. The space is limited within a hall and when we talk about the hall it seems limitation being factually it is not limited. If someone asks space within pot is limited we say space within the pot is wrong expression and it should be said that space is not within the pot and pot is within one all pervading space and in fact all the pots are within the space, the earth and the entire galaxy is within the space. The space within the pot is a figurative expression the limitation born out of figurative expression is aupathika parchedika. Limitation of pot is vasthavika paricchedah the real limitation. Similarly when Purusa is said angusta Purusa what we mean the Purusa seemingly is of the size of the thumb is nothing but sarvagata Paramatma alone. Even though Paramatma does not have the size of thumb and it is taken in the size of thumb for the purpose of meditation. These are the two answers to the first question. Now purva paksa comes with another question. He says that elsewhere in scripture angusta matra is used for limited Jivatma only. How do you contradict that? The elsewhere is a sloka in Mahabharatam in Sathyavan savitri story. in the story we find a sloka atha sathyavatha kayad pasavatham vasam gatham angusta mathram purusam niccha garsha yamo bhalad. Yama dharma raja drags the Jivatma of the size of the thumb from the Sathyavan's body. The Jivatma, which has been tied with the rope in the yama dharma raja's hand the Jivatma that is of the size of thumb, was dragged by yama dharma raja. The dragging is possible for the limited Purusa or limitless Purusa. dragging is possible to take an object from where it is from where it is not. Paramatma is available everywhere and Paramatma cannot be dragged. Hence purva paksa says only paricchinna Jivatma alone can be dragged and not aparicchinna Paramatma. All problem is due to taking not the right meaning. the direct meaning of Jivatma is Chidhabasa Chaitanyam, the reflected Consciousness. it is the vachyartha of the meaning of Chaitanyam. The implied meaning is the very chit the original Consciousness which pervades everywhere and which pervades Chidhabasa also. The chit alone and Chidhabasa being mithya lend the very existence of Chidhabasa. The chit the adhistanam is the lakshyartha meaning of the angusta Purusa. You take right meaning on the basis of the context. Whenever we talk of traveling Jivatma it refers to vachyartha Jivatma and when we talk of adhistanam of Jivatma it refers to lakshyartha adhistana Jivatma which is Chaitanya swarupam. In Kathopanisad it is lakshyartha meaning and in Savitri's story it refers to vachyartha Jivatma. When you talk of vachyartha Jivatma the limitation is factual. But when you take lakshyartha the pariccheda is seeming pariccheda, the limitation is seeming limitation. Here there is no confusion. The word Jivatma should be taken according to the context. Jivatma and Paramatma aikyam is not possible if Jivatma refers to abhasa Chaitanyam. We should take adhistana Chaitanyam and it is Jivatma lakshyartha and Prapancha chaitanya Jivatma is vachyartha. with this all purva paksa are answered. Now we will go to the next sutra.

## Topic 7 Pramitadhikaranam [Sutras 24-25]

The person of the size of a thumb to Brahman.

### Sutra 1.3.25.[88]

#### Hridyapekshaya to manushyadhikaratvat

But with reference to the heart [the highest Brahman is said to be of the size of the thumb] as man alone is entitled [to the study of the Vedas to practise meditation and attain Self realization.]

This sutra answers another possible question. If you talk of the limitation of Paramatma for the sake of Upanishad or for some upadhi why should Upanishad refer to the size of the thumb? Vyasacharya gives the answer.

Vyasacharya says Paramatma obtains in the mind of everyone as the saksi or witness. Eventhough Paramatma is everywhere there the saksi manifestation is not there. everywhere it is jada Prapancha and in the mind alone Paramatma resides as saksi in adhikaranam. Paramatma is in the mind it is said by the scripture. But it is only a figurative expression. Paramatma is everywhere and as it obtains in Jivatma we compromise and say it is in the mind. One explanation is Paramatma is obtaining in the mind or we can say Paramatma is in the mind also. mind is in the heart. we talk of the physical heart only. therefore Paramatma is in the heart. the size of the heart is such that it will occupy the space indicated by the fist. Paramatma is within the container of this size and how can it be accommodated and try to put the thumb within. The space obtaining within your fist is the size of the thumb and therefore Paramatma is of the size of the thumb as it were. How can you say the heart is of the size of the fist. In the case of the elephant the heart will be of bigger of size. Heart can be bigger in the case of big animals. The heart size may vary. Since elephants do not study Vedas we need not worry about them. Human heart of the size of human fist. You take only manushya hridayam for example here since manushyas study the Upanishads.

It contains three words. You have to supply angusta matratvam. The words *hridi apekshaya and manushyadhikaratvat*. Manushya hridi apeksaya from the standpoint of human heart; the size of the thumb is mentioned. Manushyadhikaratvat because human beings are qualified to study the scriptures. The word tu indicates purva paksha object is not valid. Therefore the conclusion of this adhikaranam angusta matra Paramatma occurring in Kathopanisad is Paramatma. Adhi Sankaracharya gives two additional support also. Adhi Sankaracharya quotes Kathopanisad that angusta matram Brahman is amritam Brahman. that is the reason number one. another support is at the end of 13<sup>th</sup> mantra it says that his Purusa is one that you wanted to know. Kathopanisad is the teaching to naciketetus and in the third boon he wanted to know Paramatma which was given in mantra number 1.2.14. of Kathopanisad and there naciketetus clearly asks him to teach about Brahman. then he says that this is Paramatma and it makes it clear the lakshyartha Jivatma which is Paramatma. With this the adhikaranam is over and the sutra is over. more in the next class.

Vishayah is the angusta matra Purusa occurring in Kathopanisad 2.1.13. the doubt is does it refer to samsari Jivatma or does it refer to samsari Jivatma or asamsari Paramatma. Purva paksha says it refers to Jivatma only because of the thumb size. Siddhanta says angusta matra

refers to Paramatma alone based on the second line of the sutra and the size is 'seeming size' and not the factual size. The fifth point is that it occurs in the right place.

## BRAHMA SUTRA

Class 107

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

**Sutra 1.3.26[89]**

#### **Taduparyapi baadarayanah sanbhavat**

Also [beings above them [viz., men] [are entitled for the study and practice of the Vedas] on account of 'the possibility [of it] according to Badarayana. The description of the privilege of study of Vedas and meditation is continued.

We enter the next adhikaranam. I will give you the general introduction of this adhikaranam consisting of eight sutras. This and the next adhikaranam are the extension of the previous adhikaranam. these two adhikaranam answer two questions arising out of the previous adhikaranam. they are discussed incidentally and it is called prasanga sangathih. What is the question that may arise out of the previous adhikaranam. we discussed the kathopanisad mantras concerning the angusta matratvam. In the second sutras it was said that Paramatma is said to be the size of human thumb because human beings alone study the scriptures. Since Paramatma is obtaining as saksi in the mind, Paramatma is figuratively called Paramatma is of the size of the mind. manusyadhi karatvad is used in the previous adhikaranam and human beings alone has the right to study the Vedas. The question now is whether manusya alone has the right or manusya also has the right for Vedanta jnanam. here the subject matter is whether the Devatas have the right to study Vedas. If you go on nasthika approach or purely practical this adhikaranam has no relevance at all because we do not know much about the existence of Devatas and heavens etc. if we believe in sastra and believe in swarga and believe in Devata then this adhikaranam is going to be relevant. It is purely academic adhikaranam. because of the topic alone it has got the name Devatadhikarnam. The name is based on the subject matter and it being Devata adhikarah it is called Devatadhikaranam. We do not have a separate mantra vakyam because it is extension of the previous adhikaranam. for this also vishaya vakyam also it is 2.1.13 of Kathopanisad. The question is whether this angusta matra applies to Devatas also is discussed in this adhikaranam. our siddhanta conclusion is that Devatas also have sastra adhikara. Devatas also can get Atma jnanam by studying under the Devata guru.

Now we will discuss the first sutra. Vyasacharya says that Devatas have got sastra adhikara. He says for higher beings also adhikara is there. higher beings means those who live in higher lokas. For having the adhikara or rights three conditions are required. Devatas fulfill all three conditions and therefore they have sastra adikarah. Three conditions for sastra adhikara are the first karana is arthitvam; second is dakshatvam; and the third condition is appradisiddhatvam

Arthitvam means the need or requirement for sastra should be there. sastra deals with dharma artha kama and moksa and unless one is desirous of four, the sastra is going to be irrelevant. It requires rituals for acquiring kama, artha moksa and dharma. I am not in terstested in any

one of the four-I do not become eligible for any the arthitvam. Animal do not seek anyone of the purusartha and they don't have any need of sastra and even a jnani does not require sastra. Then the second condition is daksatvam means the capacity mere desire is not required. Therefore financial and physical capacity is required, and all angas should be in fit condition; physical body should be there and it should be fit for doing karmas and rituals. Wife, son, money deiva vittha and manusa vithha are required as stated in the Brihadharaynaka upanisad for doing any ritual or karma.

Third condition is apradisiddhatvam which means sastra's permission is required. It should not have negated the permission. A ritual meant for grahastha alone is permitted means sannyasi or brahmacharis cannot do that and they come under prasiddha category. He may have money, physical fitness etc., even then he cannot do that because he has apprasiddhatvam and he is not qualified to do it. for adhikara apprasiddhatvam is required. Desire, capacity and scriptural permissions are required for sastra adhikara. Now our point is whether Devatas have these three conditions fulfilled to perform rituals. If the three factors are there they can study the sastras.

Adhi Sankaracharya in his commentary shows that all the three conditions they fulfill. Devatas have got desire for moksa being samsaris. They also suffer samsara as we have seen in Taittiriya Upanishad they do not have purna ananda subject of increase and decrease; they have mortality and they have raga dvesha. All the time they are afraid of their position and they yearn to get out of samsara. Second condition is daksatvam. Devatas also have the capacity because they have physical bodies; since Devatas are not knowable through pramana and sastras clearly talk about Devatas weapons, body etc. and we have to take sastra as pramanam. This we will analyse more later. Vighrahavatvam means body possession. Devatas possess the body to attend classes and to attain moksa. They have enough money and wife is there. all Devatas wife, money body etc., and we will focus on the body. The proof is sastra pramanam. Appradisiddhatvam means sastric permission also to study the scriptures. The vedic study is allowed only for those people who have gone through upanayana samskara is the rule. To become a dvija one should go through upanayana samskara. For this Devatas upnayanam is said anywhere. for Brahmana it is said in sastra. therefore they don't have right to study the sastra and for this Adhi Sankaracharya says upanayana is meant for memorization of veda. Memorization is pre-requisite for enquiry. upanayana is needed for the sake of knowing the veda. Veda adyayanam is first and veda vicara is the second process. One should know how to chant Vedas. Thereafter comes veda mimamsa and it is twofold veda purva mimamsa and veda utara mimamsa one deals with rituals and the with the knowledge. a person enters brahmacharya asrama study Vedas by heart and then he studies veda purva mimamsa and veda anta adyayanam. Then , he should enquires into veda purva mimamsa. These two are done in brahmacharya asrama. Then purva mimamsa should be implemented when he becomes a grahasthasrama. Forty one samskaras are there which one should do in grahasthasrama. In vanaprasthasrama also veda purva baga implementation. In sannyasa asrama it is veda anta vichara. This is the vedic scheme. Whether purva or anta mimamsa veda dyayanam is a must for veda purva and veda anta mimamsa. Devas do not have upanayanam and therefore they cannot do vedanta vichara. Adhi Sankaracharya says Devatas do not require adyayanam learning to chant veda. Devas do not require adhyayanam because of the very deva status they will have the knowledge of vedic chanting from the date of birth. They straightaway attain the youthful body. There is no problem of garbhavasa etc. devas are given the title swayam badha veda. It means by birth they have the knowledge of vedic chanting. Since they have vedic jnanam, they can do veda vicharah even without upanayana samskara.

When I say or sankara say devas have physical body means it is not like our physical body and they are physical enough to do the action but it is not subtle and we cannot perceive their body. For this sastra is the pramana. this will be elaborated in the next sutra. For this particular sutra it is enough to note that Devatas have body on the basis of the sastra. badarnarayan says devas have body and jaimini says they do not have the body will be discussed later.

Now we will go to word for word analysis. Tad upari abhi badanarayanah sambhavat. We have to supply the words adhikarinah; iti manyate. Then rearrange the sutra tad upari abhi adhikarinah; sambhavat; iti badanarayanah manyate. This is the complete sutra. First word is tad, which means tasya or tesam manusyas the human being; upari means uparistah Devatah; the higher celestials above than the human beings; adhikarinah they also are qualified for sastric studies; in the previous we said human beings are entitled to do the rituals and now we add Devatas also can do it because of the conditions for sastric rites. With this the first sutra is over.

Now Adhi Sankaracharya includes a purva paksha. purva mimasaka is the purva paksha here. In the purva mimamsa there is a portion whether Devatas have right to do rituals. There they have established that Devatas and Rishis do not have karma adhikarah. The essence of the two sutras is all the rituals are defined as offering oblations in the fire which is meant for various Devatas. In the yaga Devatas are the beneficiaries because they receive the oblations. The benefactors are the manusyas. Suppose Devatas also give oblations what will happen will be discussed in the next class.

## BRAHMA SUTRA

Class 108

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

#### **Sutra 1.3.26[89]**

#### **Taduparyapi baadarayanah sanbhavat**

Also [beings above them [viz., men] [are entitled for the study and practice of the Vedas] on account of 'the possibility [of it] according to Badarayana. The description of the privilege of study of Vedas and meditation is continued.

We do the first sutra of Devatadhikaranam and this is more an extension of the previous adhikaranam. here it is shown that manusyas as also Devatas have got eligibility to do vedanta vichara to gain liberation. Devatas are also adhikaris with regard to Brahma Vidya. This we analysed in the last class. Badanarayana accepts this. Thus Vyasacharya considers that Devatas have sastra adhikarah. Vyasacharya is the authors of the sutra yet he says Badanarayana says. this views is contested by Jaimini.

I pointed out a purva paksa is raised and that he says that in the Purva Mimamsa the same topic is raised and there in two sutras it has been negated and said that Devatas have no adhikaras. Devatas cannot have adhikara in the Vedas and in rituals Devatas are receivers of the oblations and it is conducted for the Devatas. Therefore yaga is not a yaga without Devatas receiving the oblations and if they have adhikara for performing the yagas and they will be givers of the oblations and who will be the receivers and as this is not possible, manusyas are offerers and Devatas are the receivers of oblations. This is extended to the Rishis also. Rishis are also invoked before employing any mantra. That is why it is said Devatas are invoked in the heart. Rishis are always invoked in vedic rites and the manusyas are invokers and Rishis are always invoked. If Rishis start performing rites none will be there to receive the oblations or invoking. So Purva Mimamsakas have concluded that Rishis and Devatas have no veda karma adhikara. It is said in Jaimini sutras. Based on this purva paksa says this rule should be extended to the Vedanta also. this is what purva paksa and Adhi Sankaracharya answers the purva paksa by saying that by saying that I don't want to dispute your conclusion and your conclusions should be confined to the karma kanda alone. This conclusion I don't want to challenge or question. With regard to jnana kanda this conclusion is not correct that Devatas have the right to do yagas etc. karma involves invocation of Devatas and so Devatas cannot do perform and these two reasons are not there in jnana kanda. Here there is no invocation of any Devata in jnana kanda. Since invocation problems are not there Devatas are not restricted. In fact the Devatas fulfill the conditions to perform yaga and also gain Self-Knowledge. Having given the logic in the argument he quotes sastric supports also. There are places where it is mentioned that Devatas gain Self-Knowledge by getting teaching from a guru. In the Kenopanisad Devatas gets Self-Knowledge from Uma devi. Thus in Chandogya upanisad Devatas get Self-Knowledge and similarly Rishis have got right for Self-Knowledge as stated in the Brigu valli Taittriya Upanishad III.1 where it is said the god Varuni went to his father Varuna sayi g sir teach the Brahma. The god varuna

possessed the knowledge of Brahman, which he teaches to his son Brigu. In Kailvalya Upanishad also the same idea is given and we have many sruti pramanam to support our stand. In 1.4.10 of Brihadharaynaka upanisad also the same idea is given. Here it is said whoever gains Self-Knowledge will get sarvatma bhava whether he is Rishi or Devata or manusyanam. The gods undergo discipleship in order to attain knowledge we read in Chandogya upanisad VIII-7.11 Indra lived as disciple with Prajapathi for one hundred and one years. All the three have adhikara and we have yukti pramana as also sruti pramanams to support our stand.

## **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

### **Sutra 1.3.27[90]**

### **Vidrodhah karmaniti chet, na, anekhapratipatterdarsanat**

If it be said that [the corporeality of the gods involves] a contradiction to sacrifices; [we say] no because we find [in the scriptures] the assumption [by then gods] of many [forms at one and the same time]

First we will do the general analysis of this sutra. It consists of two portions one is purva paksha portion that is upto *karmani* and it *chet na anekha pratipatternarsanat* is our answer.

An objection against the sutra 26 is raised and negated.

It is based on the previous sutra where we said devatas have got eligibility for jnana kanda. The middle factor *daksatvam* means capability to do Sravanam Mananam Nididyanam, which Adhi Sankaracharya indicated in one word as *vigraha vatvam* if being negated by the purva paksha here.

Here purva paksha will say that devatas have no sariram according to Advaitins. The body is not visible to our eyes. The body is gross enough to have the body but it is not good enough for our perception. Purva Mimamsakas believe in Vedas but they don't believe in devatas in physical form. Other than the word Indra there is no physical Indra. so also other devatas. They are in *sabda rupa*. This is their strong argument. even Isvara they do not accept. They contend the law takes care of all action and where is the need for Isvara. they are not *pramana vakyam*. *Devatanam vighrahanam nasti* we say. But we say that devatas have subtle body. The discussion is whether devatas have any body or not. If devatas have bodies there will be problem if they have the bodies. If devatas have the body they have to physically take part in rituals. Devatas have to take part physically in all the yagas. among the people who claim devatas don't have body, Purva Mimamsa don't believe in devatas as *karma phala dadas*. According to them they are *sabda rupa devatas*. Other than the words *varuna* they don't have physical *varuna*. Indra as *sabda* give *phalam* is their view. Similarly by extension even Isvara they do not accept he actions give results and they don't believe in Isvara. even Isvara's descriptions are taken as *artha vada* by the Purva Mimamsas. We say devatas have got the body. The following sutras deal with the question whether devatas have the body or not. Purva paksha says if devatas have the body they will have problem in the field of rituals. There will be contradiction in the field of rituals. If devatas have the body they will have to physically take part in the rituals and devatas have to physically take part in the rituals as the

priests. Yejamana has physical body and they physically take part in the rituals. So also is the case for all the devatas. The problem is one rtvik can take part one ritual at one time. That is why I complain from the student and the priests do not come in time and so we lose faith in ritual. If one yejamana gives higher dakshina he goes there. all because a priest can take part in a ritual at a time. If devatas has to take part in ritual and if one takes part in ritual and many people perform ritual in the same time where will Indra will go. If he goes to one place he cannot go to the other places where the offerings are made. As many people perform offerings so many indras are required and there will be problem if sariram is there for the devatas. If sabda rupa Indra means such a problem will not rise. This is a contradiction and this is the objection. Thus Purva Mimamsa raises the objection that the Indra and other devatas do not have any sariram and they are sabda rupena devatas and without sariram they cannot do rituals and offer oblations in the yagas and hence the vedanta vichara will to apply to devatas. This is the argument of the Purva Mimamsa.

The reply given by vachyartha is this. We have two answers for this question. Devatas have powers to assume many roles to take with their power of siddhis. One siddhis is the capacity to have many bodies at the same time. Adhi Sankaracharya quotes smriti and other pramanas which I will quote later. Only difference devata and manusya and devata need not do any work but manushyas have to work to gain that status of yoga etc. in support of that Adhi Sankaracharya quotes Brihadharaynaka upanisad 3.9.2 which reads as so *hovaca mahimana evatsamete trayastrimsatvena deva iti; katame te trayastrimsaditi; astau vasavah; ekadasa rudrah; dvadasdityah, te ekatrimsat, indrascatva prajapatisca trayastrimsaviti* Yajnavalkya said that there are only thirty three gods' these others are but manifestation of them; which are those thirty three? The eight vasus, the eleven rudras and the twelve adityas these are thirty-one and Indra and Prajapathi make up the thirty-three. This is the reply to the question that the student asked as to how many devatas are there. first Yajnavalkya said three thousand and odd devatas are there and Yajnavalkya answers that in fact I need not enumerate the devatas and they are only the extensions of thirty three devatas. Then sakalya asks are there thirty three devatas and Yajnavalkya says that there are only six devatas and again he asks the question and then he says that there are only three and when asked are there three and then he says ultimately there is only one devatas that is Prajapathi 3.9.2 of Brihadharaynaka upanisad. And also in 1.4 of Brihadharaynaka upanisad says there is only one Prajapathi is there who assumes many sarirams. Again there is sruti pramana that one Indra can assume many bodies. This is the first answer to the purva paksa.

Then there is the second interpretation. The purva paksa said that if a devatas is embodied he cannot take place simultaneously in many rituals as the priest is embodied in one ritual he cannot take part in many rituals. For this Adhi Sankaracharya says no and he says that there are exceptions. He says suppose there is a guru or Brahmana or a respectable person and he is standing in one place and many people do namaskaras and one who do namaskaras are also embodied and one to whom the namaskaras are done are also embodied. If the person to whom namaskaras are done he cannot bless all the person who do namaskaras. It is because you are sure that namaskaras will produce benefit for you as also for other persons also. these are the two answers and we will take the word for word analysis.

Devanam for the devas if the physical body is there in the field of rituals Virodhah; there will be contradiction that many simultaneous rituals are impossible but veda accepts many simultaneous rituals are impossible and that is the vedic contradiction. Just as a priest cannot take part in many rituals. Iti chet if such objection is raised it is not logical.; karmani in the sacrifices iti thus; if; na not; aneka many [bodies] pratipatteh because of the assumption

aneka sarira pratipattih that is assuming or grahanam which means taking many bodies simultaneously by the devatas; devatas assuming many bodies simultaneously is mentioned in the sastras. When you says it need not be indras sariram not only he can take many bodies and each body can take any type of body even animal body one can take; even the word ishitvam means being a mini Isvara. one can even create a world. all siddhis are seen in the sastras. darsanat because it is found [in the scriptures]

Then comes the second interpretation of aneka pratipattih. Anekatra ekasya pratipattih. Anekha means in many places. Pratipattih means taking part anga bhavah. You have to supply one devatga. One devata is taking part in many places. First interpretation is one devata taking many bodies. Darsanat is seen. One guru takes namaskaras of the ten disciples simultaneously. Aneka pratipatteh darsanat karamana virodha nasti. Now we ill go to the next sutra.

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

#### **Sutra 1.3.28[91]**

#### **Sabda iti chet, na atah prabhavat pratyakshanumanabhyam**

If it be said [that a contradiction will result] in respect of the word [we say] no; because [the world] originates from the word as is known from direct perception [sruti] and inference [smriti]

Another objectiona against sutra 26 [with respect to the corporeality of the gods] is raised and refuted.

In this sutra the same purva paksa comes with another objection with regard to the same topic as to whether the devas have the bodies or not. Here also Purva Paksi says devatgas cannot have the body because of some other reason also. the first portion is sabde that is purva paksa portion. The Purva Paksi says that veda will become apramanam if devatas have the body. Firstly he says if devatas have body, they will also perishable. Where thereis body they also will become mortals. Vedas have been accepted by one and all as nithyam. Both purva paksa and Vedantins have accepted that if devatas have body they will become anithya. The Vedas will have the words of devatas and they will have no meaning. Vedas are nithya and devas are anithya. If that be case that the word Indra will be there without any body. Artha rahita sabdah will be there because devas are anithya. A sound symbol without any meaning is blabbering. If veda is apramana prasangah is the objection which we will discuss elaborately in the next class.

## BRAHMA SUTRA

Class 109

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

#### **Sutra 1.3.28[91]**

#### **Sabda iti chet, na atah prabhavat pratyakshanumanabhyam**

If it be said [that a contradiction will result] in respect of the word [we say] no; because [the world] originates from the word as is known from direct perception [sruti] and inference [smriti]

We see the sutra 28 third of the devatadhikaranam. Here Vyasacharya wants to establish that devatas have got eligibility for Self-Knowledge and as a part of that devatas have got a form. This aspect the Purva Mimamsakas don't agree and according to them they are sabda swarupa and they do not have any body etc. In this and the previous sutra Purva Mimamsa raises an objection if devatas have got a body it will be difficult` for them to receive yahuti in karmas. For which Vyasacharya gave two answers. One is that they can appear in all the yagas in invisible form and receive yahutis. And another argument is that they need not go to all the yagas to receive yahutis but receive them as they are. For this an example is given that it is like several people doing namaskaram to the teacher and he is able to accept all namaskarams as the guru stands at one place with one body. Guru does not take several form of body to bless each disciple independently. So also devatas by remaining at one place in one form will be able to bless and offer yahutis as they are and receive yahutis from many places. This was one objection covered by the purva paksa. They raised that if they took the body it would take veda pramananyam would be affected. First we should understand the purva paksa. What is veda pramananyam. Sabda pramananyam has been discussed by Purva Mimamsa themselves which discussion has been accepted by us. The beginning of the sutra is aupattika sutra or sabda pramanya sutra. Here uniqueness of veda pramanya is apouruseya sabda pramananyam is brought out. It is a sabda pramanya, which is not created by human intellect. To understand the uniqueness of apaouruseya sabda, we should understand what is pouruseya sabda pramananyam. It is invented by and used by human beings to convey the ideas are called pouruseya sabda. we use the words to convey the ideas. Even new words are coined as even new products are made. All they convey the particular products and let this new product be termed by this sabda or word and the object is revealed by the sabda and artha the sabda and the sabda artha sambandha that means hereafter wards let this word be called by this sabda and then I am able to convey the object through the sabda and even if the object is not there that sabda is capable of communicating the object. Since I have created the sabda and I have created the sabda artha sambandha and others should agree for the sabda to become a pramanam. This sabda artha sambandha agreed by all is called saangethah a relationship by the word and object created by common agreement. This is the nature of all the pouruseya sabda pramana. when we analyse further whenever sabda artha sambandha is saangethika in the case of pouruseya on analysis we find they are not pramanam at all although they help one to communicate the objects and they cannot be called pramanam at all. It is only compromised pramanam and not real pramanam. In the case of pouruseya sabda

I have created the world and its objects. In fact before I invented the word the object is known to me or not. I know it already and therefore I invented the word and for communication I invented the sound symbol and I created the word to denote the object, which is known to me. Pouruseya sabda denotes an object that is already known to me with the help of other pramanas and through my sense organs. The object are knowable through other pramanas. They are pramanantara adhikatha vastu. In all such cases words reveal the object known or knowable through other pramanas. A pramanam is a means of knowing an object, which is not known through any other source. Pramanam is an instrument of knowledge, which reveals something, which is not known through any other pramanam. Eye is a pramanam for colours for it reveals the colour which cannot be known through any other pramanam. Similarly ears are pramanam for sabda because sabda cannot be known through any other pramanam. Words are pramanam for object, which cannot be known through any other pramanam. In the case of pouruseya sabda sabdhartha sabda is saangathika the sabda and artha are known to me and I create the sambandha and the sabda refers to the objects already known to me. If Vedas should be a pramanam, then the relationship between veda sabda and artha should not be artificially created by me and it should not be saangethika sambandha. if it is so, then I have created the world of the object known to me. It should not be artificially created word or the creation and for sabda cannot be saangethika sambandha and it should be aupattika sambandha. That means the word to be a pramanam should not be created by me then relationship between the object also be created by me and it will be apramanam. Sabda should be anadhi and sabda artha sambandha also should be anathi and it should be natural or else it should be aupattikam and veda should be anathi and of course it should be ananda also and veda should be uncreated and nithyam and veda sabda connection with object is not artificially created and sabda artha sambandha should be natural and eternal and this is explained as nithyasya sabdasya nithya arthena nitya sambandha. This is the uniqueness apouruseya sabda pramanam and veda pramanam. The word aupattikam means swabhavikam or natural. Veda should be not only u created and veda should be eternal also. if it is noneternal, the moment you say veda has to be created the word is created the relationship with the objects is created and you should know the word and the object and once the relationship between word and object is known then it will become pramanantara adhikatham and samanya will go. Nithya sambandha nithyena arthena is the uniqueness of veda sabdena and it is seconded by Advaidins. How the veda pramanam got affected and if devas have palm like human being, devas also will be subject to decay, aging and death. We are vighraha vandha and anithya and devatas also will become anithya then what will happen. Indra etc., are veda sabdah. Let us assume that they have got a abody and they will be anithyam. Now once devas go away and then nithya sabda is there the word Indra is there and sabda is there and the object is not there. sabda is nithya and artha is anithya. Indra sabda is nithya and Indra artha anithya and when artha is anithya what about the sambandha. the relationship also will go when one of them is gone. Without wife, wife husband relationship is not possible; so also the father son relationship. the sabda artha sambandha becomes anithya. The pramanya sambandha goes away. The pramanya goes means after Indra dies and the word Indra continues without an object and the word without object becomes apramanam and Veda will become an apramanam the object being not there. The word continues without an object and then the word is apramanam with the word no more revealing the object. Veda becomes an apramanam. the problem is Veda becomes apramanam and the problem two is when the object is not there and the word cannot do the function and the word cannot be used by anyone and the word also become the death. Word can be there only as long as it is capable of revealing the object and once the object is not there, there will be no need for the word and the word will wither and will not be of any use to us. That is why we say the word commonly

used will be used only as long as the object or person is there. Thereafter that word has no relevance. The word dies once the object goes. For this we have to give an answer.

Vyasacharya does not very clearly and directly present the answer. Adhi Sankaracharya has given the direct answer. Vyasacharya says this creation has come with the help of veda sabdas alone. Indra is created only through the word Indra and varuna is created through the word varuna. Veda sabda arthas are created from veda sabdas alone. It is not object is created first and thereafter words were created. This is the answer Vyasacharya said and he left it as it is.

By saying that all the objects are created through veda sabdas, it is said that veda sabda is anadhi. With the help of sabda alone Lord created all the devatas and other creations. Veda nityatvam is established by saying so. Even before creation of object this sabda was there.

The second thing to be established is veda pramanyam. Sabda was there before artha and sabda was not artificially created later and sabda artha sambandha is not artificially created later. It is not saangethikah. It is aupattikaha only and therefore it is pramanyam. Then the purva paksa says that this also will not solve the problem. Through the words alone objects are created you have established veda nityatvam. Sabda nityatvam you have established all right. Artha nityatvam you have not established. Indra with a body continued to be perishable veda may be nithya but artha is anithya embodied devata is anithya and perishable. For that Adhi Sankaracharya gives an answer. He analyses what a word reveals. Suppose I want to teach a child what a tree is. I say to the child that this is the tree. Child understands that tree sabda reveals the tree what it is. When the word tree reveals the object tree, does it reveal that particular tree, or does the word reveal the tree as a class or as a jathi. Now the question is whether the word tree reveals the particular tree or the universal tree in general. The word reveals a particular thing is called vyakti vadhah and when it reveals the general thing it is called jathi vyakti vadhah. Advaidin's vadhah is jathi sakti vadhah. When I have revealed a tree to a person, I reveal that particular tree and when any other tree that word cannot be used to reveal that tree. Yet he uses the word tree for all that tree. Since the word tree is universal and it is not vyakti there is a problem. when I say bring the cow we find that person that particular cow. If you say the word cow universal species how do you count this universal phenomniion. Jathi is the primary meaning of the word. but it has got the secondary meaning that particular man is the secondary meaning of the word man. Vachyartha kyathih and lakshyartha jathih. When we say this is the pot, you take the vachyartha and understand all the pots. When I say bring the pot you understand lakshyartha and the pot. Vachyartha jathi is enernal and particular pot is ephemeral and it is general. It is anithyam. Vachyartha anithyah and lakshyartha nithyah man represents the class of human being. Jathi is nithya and vyakti is anithjya. If sabda rtha refers to jathi it is nithyah. Hence Indra says as a particular Indra is perishable; and the veda sabda Indra does not talk of particular Indra name and form. prime minister is here throughout but how long he will be there depends upon other factors. Even though Indra vigrah is perishable Indra sabdah comparatively lives longer. More in the next class.

## BRAHMA SUTRA

Class 110

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

#### **Sutra 1.3.28[91]**

#### **Sabda iti chet, na atah prabhavat pratyakshanumanabhyam**

If it be said [that a contradiction will result] in respect of the word [we say] no; because [the world] originates from the word as is known from direct perception [sruti] and inference [smriti]

We will do the general analysis of this sutra in which we establish veda pramanyam. We have established the entire world came the sabda existed and sabdah nithyah. This established veda sabda nithyatvam. We also established the eternity of object nithyatvam through jathi sabdah. The word cow does not reveal the particular cow but the cow universal and this universal is nithyam while the particular cow is anithyam. Through sutra sabda nithyatvam as also artha nithyatvam have been established. Once we have shown nithya sabda and nithya artha their sambandha is nithyam we have established. Impermanence of Indra is anithya but the Indra position is permanent. Indra the particular is anithya Indra the universal jathi is nithyah even though particular nithya appear and disappear. Now we will go for word for word analysis.

The first word is purva paksa portion. First word is sabdah. and supply the word virodhah. Rama ate fruit and laxmana also means laxmana also means he also ate a fruit. Here 'ate the fruit' I drop and it is implied to be added in the next clause. If the word does not exist in the previous sutra and we supply in the context it is supplied word. purva paksa word is sabde virodhah means sabda pramanye and it in this context means veda pramanye with regard to the validity of the Vedas; virodhah means there will be contradiction. When will there be contradiction that is if devas had the body. How there is contradiction for veda pramanyam. Veda pramanyam requires nithyasya sabdasya nithyena arthena and deva had the body they will have death and devas will become anithya and sabda also will become anithyena arthena if devas had the body. Iti chet; it means suppose such an objection is raised that there will be veda pramanya banga is raised; the next word is na; it is not proper and such an objection is not valid; sabda pramanya virodhah nasti; athah prabhavat; athah means sabdad from sabda alone the word alone prabhavad means utpattihi origination emergence of the artha the objects because the objects are born out of the words alone. This means from Indra sabda alone Indra is born and buh sabda alone buloka is born; etc., sabdebyam eva arthanam utpatteh the significance of this statement is that when Vyasacharya says arthas are born of sabdas alone he means sabdas already existed and sabdas are anadhi and therefore sabdas are anadhi and they are nithya sabdas. It is sabda nithyatvam. Artha nithyatvam we have to supply based on Adhi Sankaracharya explantion. Artha is eternal. From eternal sabda and eternal artha Indra etc., are created. Nithya Indra sabdad nithya Indra arthad Indra utpannah. If nithya Indra arthah is nithyah how can you say Indra utpannah. How can you talk about origination of artha. When you say Indra arthah nithnyah here arthah refers to Indra the universal and from there if I say Indra is born means Indra vyakti utpannah jathih nithjya and

vyaktih is anithyah. Before creation Indra sabda and Indra jathi and the relationship between Indra sabda and Indra jathi also existed. There is sambandha existed but Indra vyakti did not exist for it was born out of Indra sabdah. Nithya arth aukta nithya sabda vyaktayah utpatyah. This is the significance of atha prabhavad. Pratyaksa anumanabhyam. Here the word pratyaksam means sruti pramanam. It does not mean sruti pramanam. Anumanam means smriti pramanam. Why so? Adhi Sankaracharya says sruti and pratyaksam have one common feature. Sruti is independent pramanam. That student is a lion means he has the same features of the lion. Because of the common feature we call him a lion. Therefore pratyaksam means sruti. We also see commonness between anumanam and pratyaksam. Anumanam requires pratyaksam. Without pratyaksam we cannot have anumanam. You should perceive the smoke then alone you can make an anumanam. Similarly smriti gets validity only because it is backed by sruti. Without that backing smriti cannot get validity. Therefore pratyaksa anumanabhyam means because of sruti and smriti support, atha prabhavatvam that the creation is born out of nithya sabdah is supported by sruti pramanam. Bu sabdad bu utpatti vitpanna. The creation is born out of nithya sabdam. We have not seen the creation and with regard to this we get sruti and smriti support. Sruti and smriti where does they support. That too Adhi Sankaracharya has given many quotations. The sruti support is there in the II.2.4.2.Taittiriya Upanishad that the god uttered the word buh and then created the bhoomi. The smriti is taken from manu 1.21 *nama rupeca bhutanam karamanca pratartanam karma namana bhutesu veda sabdebhyah isvarah nirmanah god created the world with veda sabdah alone.* The whole world is born out of sabdah alone it is stated in the above manusmriti. Nithyatvam is established; devanam vigrahatvam is established. Purva paksa says there is contradiction with regard to veda's validity if devas are embodied. Then our answer suppose such an objection is raised it is not valid. It is so because the whole creation has emerged from nithya sabdad alone because the entire creation has emerged from eternal words because this is revealed by sruti and smriti pramanam. This is the word analysis of this sutra. Now we have to go to varieties of objections raised by purva paksa.

Now a purva paksa comes and asks and the word atha prabhavad the world is born out of eternal sabdas. In the beginning of Brahma Sutra you said the whole creation is born out of Brahman. now you say that the whole Brahman is born out of nithya sabdah. Tell me whether jagat karanam is Brahman or sabda. Brahman is said to be upadana karanam of entire creation and sabda refers to nimittam the supporting cause. Sabda means nithya sabda artha nithya sabda and therefore there is no problem. therefore there is no contradiction. Now purva paksa says that also I cannot accept. In your teaching you say that Brahman itself abhinna nimitta upadhana karanam of creation and also quote the spinder both intelligent and material cause and now you change the topic and say sabda is nimitta karanam and how do you this. For this we say that nithya sabda and nithya artha does not exist as a separate entity and it is included in Brahman. Isvara has the knowledge of nithya sabda and nithya artha. Brahman did not produce nithya artha and nithya sabda but it existed in Brahman all the time. The veda is supposed to be the very breath of Brahman and as breathing is continuously going on in us so nithya sabda and nithya artha eternally existed in Brahman and what is created is vyakti and vyakti will come and vyakti will go but nithya sabda and nithya artha permanently exist in Brahman. suppose someone says a potter says I want to create the pot he has the pot knowledge. without pot knowledge he cannot create the pot. Potter is aware of the word pot and not only he is aware of the pot sabdah and he also knows the object pot; pot jathi also he knows and that is the knowledge of the potter. Gata artha gata sabda and gata sambandha he knows. Artha is not particular pot but it is pot jathi and he only creates the individual pot. If I say I want to build a house means I have house sabda, house artha and house sambandha I have all the time and I only create a particular house which I call it mine. The word means

jnanam alone and the Lord has the word with him means He has the sabda, artha and sambandha. artha refers to rupa and sabda refers to sabda. universal exists for ever and the vyakti the individual unit comes and goes. The objection and the reply is given.

Now Adhi Sankaracharya enters into another topic. When we say the world is created out of sabdah, what do we mean by the word sabdah. Sabdah means word in English and it is not the sound. From the word Indra Indra is created; from the word boomi boomi is created. Now what is the word we want to know. Word has got two concepts which Adhi Sankaracharya analyses here. What is the normal definition of a word. aksara samudhayah sabdah. Or varna samudhayah sabdah. It is a group of alphabets arranged in a particular order. it contains syllables or letter and it is a group and it has a particular order and that unitary word itself a collection of letters and it produces a unitary meaning and the object called for example an elephant. This is our concept of sabda. a particular purva paksa grammarians have got a philosophy vyayakarana darsanam and according to them this conclusion is not correct and they refute our theory and introduce a new theory spota vadhah. They also give a reason for this spota vadhah. They say that our theory is not sufficient to explain the phenomenon of verbal communication; he says that a word as a unitary entity can never exist at any time. It is so because you utter the letters one by one. That means at any time there is only one letter. A group of letter never exists at a particular time. Varna samudhaya nama nasti eva. A single letter cannot become a word and group of letters does not exist and how can group of letter form a uniform symbol and become unitary object. Just as sound is not unitary and it is a flow the thoughts also will be a flow only. Vrittis are a continuous flow. It never exists at any time. Can you say that letters form samskara is unitary? He says you can never talk samskara produce a meaning because samskara vasanas are invisible and invisible vasanas cannot communicate. Therefore that also will not work. Can you say the samskaras produce memories? Can memories produce unitary word? He says it is not possible; samskaras can get converted into memory in chronological order only. it cannot be simultaneous. It can be one at a time, it is also in continuous flow one following the other and thus group of memory vritti is not possible. Therefore varna samudhayah is not possible. So we have spota vadhah. It means when words are utters in particular order when the last letter is uttered in the mind some thing happens; something is produced in the mind as a unitary entity. By the letters uttered in a particular order, and when the last letter is uttered and concluded these letters invoke a symbol or a new entity called spotah. Spotah is one invoked by one unit by the letters. That unitary entity which is invoked which is activated which is manifested when certain letters are uttered in particular order and this spotah is eternal and it is one unit and it is not produced by letters but invoked by the letters. That one unit produces or reveals the meaning. varna samudhaya does not reveal the meaning but varna abhivyakta spotah artham bothayathi. This spota alone is called sabdah. This is their argument which we will analyse in the next class.

## BRAHMA SUTRA

Class 111

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

#### **Sutra 1.3.28[91]**

#### **Sabda iti chet, na atah prabhavat pratyakshanumanabhyam**

If it be said [that a contradiction will result] in respect of the word [we say] no; because [the world] originates from the word as is known from direct perception [sruti] and inference [smriti]

We see the 28<sup>th</sup> sutra wherein Vyasacharya established veda pramanyam nithyasya veda sabdasya nithyena arthena veda sambandhah. Just as veda sabda and veda artha are nithya and so Parvathi Parameswara it is said. Devata jathi universal is nithya and devata vyakti is anithya and that sariram may be perishable that does not matter and therefore devatas have adhikara to do veda study. What do we mean by the word sabda. according to us the word is nothing but varna samudhayah. The group is called sabdah. It is seen as one unit called word. Joined to gather the letters becomes sabda and that unit sabda is varna samudhayah. This idea of ours is challenged by spotavadhi. He argues word as one unit cannot exist in your theory. There is no question of your word revealing one unit. Unitary symbol is required for forming one unit and therefore we have to introduce a unitary symbol, which they call as spotah. The group of letters he argues does not exist together at any time. When first is uttered the second is not there and still it is useful since letters are not unitary they cannot give unitary meaning but the letters are useful for creating spotah and that becomes manifest and this symbol reveal the unitary artha. Letters lead to spotah and spotah leads to communication. Letters can manifest spotah and the latter alone can communicate and not letters. Letters cannot understand the sabda and sabda should be understood as spotah pramana. When you say veda sabdah means veda sabdah spotah. Letters can never be eternal. Letters flow continuously. First defect is it cannot communicate and second is veda cannot be eternal. Since letters are ephemeral and words are ephemeral and since words are ephemeral Vedas are ephemeral. This is the purva paksa, which we saw, in the last class. Now we have to refute the spotavada.

The first argument that he gives is this. Purva paksa says that letters do not exist as a group at any time. Since they do not exist as one group it cannot give the unitary meaning. But it has to reveal one unitary object. We have to posit or propound or create a unitary symbol called spotah. Tell me what reveals or manifest the unitary spotah. He has to say that letters manifests the unitary spotah. And the unitary spotah symbol reveals the unitary artha. If you say letters reveals unitary spotah which letters or group of letters reveals which spotah. Spotah is revealed by which letter first, second third or last letters. You cannot say first letter reveals the unitary spotah to reveal the elephant. E can stand for any number of words. E cannot reveal can the la reveal and le also indicate element or elephant. Therefore which particular letter will reveal the spotah. You cannot say part of the elephant. That is also not possible for partial spotah cannot be seen and it may be in the mind of the speaker and it is not the mind of hearer. Partial spotah cannot reveal because the total spotah is not known. Total

spota cannot be known because partial spota alone is revealed with many options being there which are not identifiable. Therefore if the varna samudhaya does not exist to reveal a unitary meaning that means varna samudhaya does not exist for the existence of spota also. For that he gives the answer no. he says letters have got mysterious power. Even though one letter cannot communicate the total spota as even it is uttered the total spota can gradually manifest and when the final letter is uttered the full or unitary spota can take place. That unitary spota reveals the meaning. then we argue if you suppose the letters have mysterious power and invokes mysterious spota you have to assume that letters have mysterious power and that invoke mysterious spota and thus you presume two things. Letters have mysterious power and the letters manifests mysterious spota. You assume two mysterious spota, which will reveal the meaning. Why do you introduce a mysterious spota and then you introduce mysterious power to reveal the meaning but we introduce only one mysterious letters power alone. Why do you complicate the interpretation by bringing the mysterious power of letters and the mysterious power of the spota formed by the letters and why not you accept a simpler interpretation of accepting the mysterious power of letters alone that reveal the meaning. letters have to be uttered to invoke the unitary spota should the speaker know all the letters? He should know the last letter or the last syllable and the order in which the letters are to be uttered. All the syllable from beginning to end in a particular order should be there to invoke the spota in the mind of the speaker tell me varna samudhaya exist in the mind of the speaker or not. Therefore varna samudhaya as unitary group in the mind of speaker and therefore you cannot refute the varna samudhya.

The third argument is when the speaker utters the letters to invoke the symbol in the mind of the listener and the spota is invoked and does the listener tells he listened the spota or varna samudhaya or the word he says. The listener also tells the word elephant and he does not talk of any spota. What is invoked is not unitary spota and what occurs is series of syllable in the speakers mind and also the listener's mind also the unitary meaning.

The fourth and final argument is which Adhi Sankaracharya emphasizes in his bashyam is that spotavadhi argument is based on one assumption. When you hear the word we are not hearing the whole word simultaneously but in parts. Therefore we listen part by part how can one unit word can exist. The basic question is has the mind has the capacity to synthesize the parts of the words and can the mind listen to the parts and join all of them and take it as one word. This is the question. If the mind does not have the capacity you have to form a spota. We have to assume the capacity to synthesize the parts of words and understand the whole. That is why instead of saying I listened the mind is capable of saying I heard one word. Many syllables I heard but I say I heard one word. also when the words are heard and patched them and ultimately the mind says I heard one sentence. Again the mind has the capacity to patch all sentence and say one para and add all para and say one book etc. therefore you need not invent a spota to communicate. He adds if you don't accept the synthesizing capacity of the mind you have more problem. Making the parts and join together and make it in one fold. If you do not accept this, and invent a spota you may invent a spota to synthesize the word in the field of sabda and what will you do in the field of rupani or perception. In the field of perception also we have the total vision where the mind does not see everything simultaneously. Have you ever perceived asthika samajam in one perception? How do develop unitary perception of asthika samajam. The mind is capable of systhesis many parts and combine all to make it one unitary concept of asthika samajam. So also sena army, the forests, a long queue etc. eyes perceive one at a time but mind synthesise the unit and make a unitary entity. So also is in the case of sound and darsanam also. if at all if you want to invent a theory don't invent a theory for sabda Prapancha only and also invent for rupa

Prapancha. have one theory for all the total perception. Our theory is not based on the mysterious power spota or anything but it is mysterious power of intellect. Intellect has the mysterious capacity to unite all the letters and form one word and that word alone is called sabda and not spotah.

Now we have to answer the second objection. Words have varna samudhaya inside the mind. the second objection is if the letters form the words and the words veda and letter being anithyam and words being anithyam veda also is anithyam. Since varnas have got utpatti and nasa, formation and destruction they are anithya evidently. Veda is anithyam and pramanyam will go. Let us not go to that. The answer is that letters are nithyam and who said it is anithyam. In your own theory spota is nithyah. He goes to the extent of one with Brahman. Now in your own philosophy you say spota is nithya and you say when letters are addressed even though spota is nithya you invoke the letters by the mind takes place when one utters the letters. In the same way varna is nithya and nithya varnas are manifest and not produced. Nithya varnas are manifested. Therefore varnah nithyah and varna samudhaya nithya and veda is nithyah and the proof for varna nithyatvam is that purva paksa said that varnas comes and goes. If it is nithya it should not come and go. How do you prove nithyam. To prove this Adhi Sankaracharya gives an argument. The continuity of an object is proved by recollection of an object. The recollection is called pratyavijna. It is pramanam for continuity for anything. What is recollection? I will talk about three phenomena. Suppose I see this cloth for the first time. First time perception of cloth is called perception. The uniqueness is cloth is right in front of me and the vritti is there in the mind. After sometime when the cloth is not there and the remembrance is second type of phenomena and it is called smriti. The cloth thought is there but the object is not there. Now there is a third phenomenon. That is when you see the cloth for the second time is it not the cloth that you saw before. That cloth is this cloth. That person is this person. that is this and will this come under pratyaksam or smriti. In pratyaksam it is the first perception. Soyam cannot come. saha will not come in the pratyaksa. Can you say it is memory? In memory the object is in the mind and it is not the front. This means the object is in front. It is not memory. Therefore soyam is neither pratyaksam nor smriti. In perception that won't be there this will be there. in memory this wont be there that alone be there. Here that perception is this cloth. This is other than perception and memory and it is called recognition. Recognition. Re and cognition means you connect the past cognition. What does it reveal? When I recognize the cloth I connect the cloth with the past time and I connect the cloth with the present time and the recognition connects the object with present and past and if it is a new cloth you cannot recognize the cloth. If you connect the object with the past and present you continue the object with the past and present. You saw a friend thirty years ago. And now you have seen him after three years. You have recognized him now. This means the friend existed thirty years ago and he exists now reveals that he existed all the thirty years during the period when I had not seen him. All the changes I did not experience. Thirty years before cognition helped me to spot him. Thirty years after re-cognition helped to identify him. This implies that during the thirty years and I come to know that he continued to exist all the thirty years. Recognition proves continuity. Now Adhi Sankaracharya wants to say words and letters are recognized every time when uttered. The recognition of letters proves the continuity. Details in the next class.

## BRAHMA SUTRA

### Class 112

#### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

#### **Sutra 1.3.28[91]**

#### **Sabda iti chet, na atah prabhavat pratyakshanumanabhyam**

If it be said [that a contradiction will result] in respect of the word [we say] no; because [the world] originates from the word as is known from direct perception [sruti] and inference [smriti]

We have completed the 28<sup>th</sup> sutra in which we established that there is no violations of validity of Vedas by accepting the embodiment of devas. That the veda sabda is nithyam by showing that the entire world emerged by sabda. words reveal not individual but reveal the universals, the jathi will continue. The embodied vyakti may perish the embodied jathi will not perish. Adhi Sankaracharya takes up what is the meaning of sabdah or vedah. Here he negated spotavadi's arguments and the spotah symbols. Adhi Sankaracharya established that veda is eternal. Recognition is a pramana for continuous existence of recognized object or thing. Recognition is a proof for continuous existence of recognized object. Adhi Sankaracharya says words and letters are eternal. When it is uttered second time we say I heard the same before. I recognize the word. when I repeat the sentence again you don't cognise as new sentence but you recognize it as the same word, same sentence and you know that the word existed before and it exists now and during the period it existed in invisible form. I don't produce new letter every time. It eternally exists. I don't produce the letter when I utter the letter a. when I utter it again I don't say new word or new letter but I only recognize the letter. Nithya letters are manifested by vak indriyam we say. That is why the alphabetical letters are called aksaram. Sabda is the property of Akasa in unmanifest form and that form is called aumkara. They are not produced. Aksaram nithyam, sabda nithyah and therefore vedah nithyah. Purva paksa says I cannot accept. The letter a is born when one opens the mouth and it is not there when he closes the mouth. The letter akara is heard differently at different times. Because when I chant in low sruti 'a' has different sound. The tone changes. The letter 'a' uttered by different times by different persons at the same time also differs and how can you say there is one nithya akara.

Adhi Sankaracharya says the letter akara or ikara has got two aspects. One is a, u etc. the letter part is there. the second part is the pitch or dhvani. Every letter has got aksara amsa and dvani amsa. It varies from time to time and person to person. Changes in dvani do not mean change in letters. For manifestation of letters dvani or pitch is require and when the frequency varies it appears as though the letter vary. Dvanis are many but aksara is one and nonvarying. He supports that by pointing out the idea prevailing in the grammar. One letter is made many on the basis of dvani. Dvanis may be many and aksara is only one. all svara bedas are dvani bedas. Our conclusion is that aksaram is nithyam. Mouth does not produce a letter and mouth manufactures a letter. Plurality belongs to the dvani alone. Spotavadha is not required to

establish the eternity of Vedas. Meaning of the words is varna samudhayah eva sabdah na tu spotah. With this sutra no. 28 is over.

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

#### **Sutra 1.3.29[92]**

#### **Ata eva cha nityatvam**

From this very reason also there follows the eternity of the Vedas

A side issue is deduced from sutra 28. the eternal nature of vedic words is also established from the same reason adduced in sutra 28 i.e., because those words signify permanent types.

This sutra is almost an extension of the previous sutra. There it was pointed out the world was born out of sabda. therefore it was veda pramanyam was established. Human being did not invent Veda sabda. Veda sabda existed even before world existed. Vyasacharya comes to another conclusion since veda existed before creation we can say veda is eternal. The validity of veda was established in the previous sutra. Here eternal nature of veda is established here. That is why a cha is added in this sutra. Veda nityatvam has to be said because veda pramanyam required nityatvam. This is the general analysis of this sutra.

Now we go to word for word analysis. Ata eva cha nityatvena supply the word sabdasya. Reread it as ata eva sabdasya nityatvam cha; atah eva means because of the same reason alone; that being purvo sutrotra hetuna eva ata eva means atah prabhava eva it means since the word is born out of veda sabda; or if you rearrange since veda sabda existed even before the creation; creation of the individual or universal the universal also is eternal; before the creation of the world means the creation of a pot means does he create individual or universal and pot universal is already there in the mind of the potter the jathi is already there; because the veda sabda even before creation of the creation of the whole world since veda existed; nityatvam sabdasya the eternity of sabda means veda sabda; the topic is Vedas; cha means also. the eternity of veda sabda also bhavati. Why also? this is another reason already given in the previous sutra where the validity is established. The broad vision of this is that vaidhikam sabdas and vaidhika arthas are eternal and varuna post Indra posts etc., are eternal. Even varuna etc., posts are not created even by god. Then it has been existed in bhagavan all the time. during sristi bhagavan did not invent Indra sabda the unmanifest Indra sabda is brought into manifestation. Brahmaji does not create Indra jathi and even Brahmaji created only Indra vyakti. In pralaya kala it exists together as a part of maya. maya includes all the sabdas and arthas in potential form. that is why we quoted in sastra yoni adhikaranam the Vedas and other scriptures are naturally existed in bhagavan as breathing is natural to the human beings. Hence Indra varuna etc., have body and they also have the condition for Vedanta vichara and they have adhikara for doing Vedantic study.

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

**Sutra 1.3.30[93]**

**Samana nama rupatvat cha avrittavapyavirodho darsanat smritescha**

And on account of the sameness of the names and forms in every fresh cycle there is no contradiction [to the eternity of the words of the Vedas] even in the resolving of the world cycles as is seen from the sruti and smriti.

An argument in favour of Sutra 29 is given in this sutra

We will do general analysis of this sutra. I said veda pramanam required a condition in the earlier sutras. Basing on this we say loukika sabdas do not come under pramana sabdah. By compromise we call it loukika sabda pramana. nithyasya sabdasya sabda is eternal and artha meaning of the word is also eternal. Object also should be eternal. Vyasacharya has established the eternity of the sabda in the previous sutra. But Vyasacharya has not established the eternity of the artha, the objects. Even though Vyasacharya has not established Adhi Sankaracharya has established it in his commentary. It is by the theory of jathi sakti vadha. Jathi sakti vadha is not individual but it is universal. The word man does not indicate a particular man but it shows the man the jathi the man-ness of the universe. So also the pot. A word reveals the universal alone and not individual. By this theory Adhi Sankaracharya has established nithyatvam of the object. Here Vyasacharya establish artha nithyatvam through jathi sakti vadha.

Vyasacharya says even though individuals are destroyed the universal continue to exist therefore the words are meaningful valid and purposeful. I need not destroy the word pot because one pot is destroyed. Even if pot is destroyed in one generation there is next generation. So also the devatas. If devatas are destroyed in one generation, devatas exists in potential form. purva paksa may ask when all individuals are destroyed how the universal can exist. It is because universal exists on the basis of the individual alone. Universal manness etc., is defined as nithyam ekam anekatmikam samanyam eternal one inherent in every individual. In pralayam all individuals perish and without individual how there be universal. If universal also is perished on pralayam artha nithyatvam is not there and if so veda pramanyam will not be there. how can there be universal in the case of destruction of individuals. Individuals are there at the time of pralaya in unmanifest form. all the castes etc. also exist during pralaya also. it is from this the next creation emerges. It is the next group of individuals is created. For this Adhi Sankaracharya gives sruti pramana, smriti pramana and anubhava pramana. Every creation continues and it resembles in the next creation because of the avyakta rupa. Our Sushupti avastha confirms the continuity of the universe.

## BRAHMA SUTRA

Class 113

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

#### **Sutra 1.3.30[93]**

#### **Samana nama rupaivat cha avrittavapyavirodho darsanat smritescha**

And on account of the sameness of the names and forms in every fresh cycle there is no contradiction [to the eternity of the words of the Vedas] even in the resolving of the world cycles as is seen from the sruti and smriti.

In these sutras Vyasacharya establishes that there is no problem regarding the validity of the Vedas by accepting the embodiment of devatas. For this he establishing the veda pramanyam veda sabda nityatvam veda artha nityatvam and veda artha sabda sambandha nityatvam were established. Here veda sabda artha nityatvam the objects of the world are external is established here. The individual may perish at the time sleep world resolves and at the time fo pralayam world resolves and vyakti nasah we do accept and what we say is in the next creation the individual comes and individuals may be different but the individual will belong to the same class. Indra vyakti is perishable and manusya jathi is imperishable. Manusya jathi will be there in every sruti but manusya individual will not be there. Vedic words do not belong to the individual but vedic words belongs to the universal which is unperishable. Therefore artha jathi nityatvam sambhavidham. In every sruti the universals are the same but not the individuals.

We with out limited human intellect cannot remember the previous sruti and cross check what happened in the previous sruti. Therefore to prove the nityatvam of individual we have to believe the sastra pramanam alone. He points out sastra based logical support as also our experiential support.

First is the sruti support. Surya chandramasou yatha akalpayatu purvam the sun and the moon the creator created and yatha purvam as the sun and moon were there in the previous sruti. Sun and moon differed individualally but in general the namarupa remained. There is smriti support also and Adhi Sankaracharya quotes shanty parva in Maha Bharata. Abimanah devah smpradayah devah adhitati devaihi tulyah devas of current sruti is same as that of previous sruti. Sastra pramana supports the eternity of the devas. Now he gives the anubhava pramana also. vaidhikas do yagas to get punya phalam, the various lokas for their karma phalam. it is based on sukha bhalam that is promised. It is created by indriya visaya sambandha sukha phalam. by the combination of indriya and vishaya sukham one gets desire for more and more desires. He wants to gain punya to enjoy the sukham many he enjoys in the present sruti and many in the next sruti. It is based on sukham experienced in the present sruti. He wants the same sukham ithe next sruti also. suppose in the next sruti visayam also different. He wanted swarga to see urvasi and by the time he went to swarga in the next sruti he found urvasi a donkey. If the punya should produce sukham indriyams should be similar and the ramba and urvasi also should be similar. For dharma sastra to be valid the creation should be

similar. If the creation becomes dissimilar the sukha hetu will become dukha hetu. You take masala dosa and having found it very tasty you order for another masala dosa keeping in mind the next one also would be as tasty one as before. The same vyakti you cannot keep in mind. you are not asking for the same masala dosa of the same jathi with the hope that it will give the same sukha. If the other person prepares the totally different one then sukha hetu will become dukha hetu. By doing punyam you want to get the same pleasure and he may create the same kind of creation and not different one for the punyam to give the same sukha in the next creation. therefore jathi nityatvam is supported by logic also. Adhi Sankaracharya gives another logic also. even though individual perish it cannot be total destruction. They all must exist in potential form. all human and devata species go back to unmanifest condition only and not total destruction. All the devas and manusyas go into avyakta or unmanifest form and get to vyakta or manifest form in the next creation. the Adhi Sankaracharya gives anubhava pramanam. This is Sushupti anubhava. In deep sleep state the words or worlds do not exist in deep sleep and everything is resolved and in the next day everything comes into being sabda artha sambandha and saba and artha continue. Sabda continues artha continues; but if sambandha is not there for someone then there will be problem. the communication problem will create difficulty. After waking sabda, artha and sambandha continue so also the pralayam, which is a cosmic sleep. Individual sleep is called layah and cosmic sleep is pralayah. In sleep we accept everything continue because we remember it the next day. How can we show that in pralaya the whole thing continue? How can we know. And how can we say it is eternal when we don't remember the whole things. Adhi Sankaracharya says just because you don't remember that it is anithyam. Just because one person don't remember the previous sristi, we cannot say the same thing comes back in the next janma. Between one sruti and another sruti humanity forgets veda and Brahmaji remembers veda blessed by Bhagavan. And Brahmaji sends Vedas to the humanity. Humanity has forgotten veda but Bhagavan does not forget Vedas. Rishis can recollect Vedas belonging to the previous sruti. That is they are called mantra drastarah. The same veda existed in the previous sruti. As we recollect table now and later so also the Vedas comes back and reemerge in the yugas to yugas. At the end of previous yuga Vedas go to potential form and rishis recollect by performing tapas blessed by Brahmaji rishis recollect sabda, artha and also sabda artha sambandha and pralayam is cosmic sleep and nothing is destroyed. Thus sabda artha sambandha is nithyah.

Now we will go into word for word analysis. The sutra contains many words. Samana nama rupaivat cha avrittav api avirodho darsanat smriteh cha and we have to supply sabde from sutra 28 has to dragged. First portion is sabde avirodah with regard to the validity of Vedas there is no contradiction at all. Avirittou abhi even in the next cycle of creation. abhi means also not only there is no creation but also in the next creation there is no contradiction because of the samana nama rupaivat since the absence of creation nama rupa belongs to the same universal. Indra nama rupa varuna rupa etc., continue and individual vyakti is perishable and not the universal. Since nama rupa belongs to the same universal. Then darsanat as supported by sruti vakyam here darsanam means sruti pramanam. It is equated to sruti pramanam because darsanam also is independent pramanam and sruti also independent pramanam so word darsanam is used to denote sruti pramanam. The rik veda 10.1.93 is kept in mind here. It occurs in the maharayan Upanishad also. it is supported by smriti pramanam also the Maha Bharata shanty parvata. The final meaning of the sutra that there is no contradiction with regard to validity of veda in the next janma also since individual nama rupa is same as supported by sruti and smriti pramanam. Therefore Indra's embodiment can be accepted and therefore Indra has got right to study.

## Topic 8 Devatadhikaranam [Sutras 26-33]

The Devas also are entitled to the study of Vedas and to meditate on Brahman

### Sutra 1.3.31[94]

### Madhvadishvasambhavadanadhikaram jaiminih

On account of the impossibility [of the gods being qualified for Madhu Vidya etc., Jaimini [is of the opinion that the gods] are not qualified [either for Upasana or for the Brahma vidya or for the knowledge of the Self]

Another objection to sutra 26 is raised.

Another purva paksha has come to establish that devatas do not physically exist and Vedantins want to exist that they physically exist. Karma virodha problem we refuted. Then the veda pramanya virodha has been refuted. Now another problem is introduced by purva paksha. In previous context we mentioned that devatas are not qualified for Karma Kanda. They have no right to do rituals. The reason mentioned was that the very yaga means offering oblations to the devatas. Therefore in every yaga devatas are in receiving end and manusyas are in the giving end. Therefore primary condition for yaga to be yaga devata should be bogta and if devata becomes karta where the bogta will be there. they can be receivers and not givers of oblations. Advaidins do not want to argue. That because of the same reasons devatas cannot do Upasanas it is said because of the same reason. Here also there are upasya devatas in every Upasana. Then how can devata do the Upasana on themselves. Devatas are objects of Upasana and they can never be subject of Upasanas. If you look at Vedanta in Vedanta also there are many Upasanas. In taittiriya Upanishad the entire siksha valli is full of Upasanas. So also is the case in other Upanisads also. Vedanta contains Upasanas and devatas cannot do Upasanas and therefore devatas cannot study Vedas. This is the purva paksha, which is raised here. Vyasacharya gives one Upasana for example that is Madhu vidya, which occurs in 3.1.1 of Chandogya upanisad that reads as *om asau va adityo devamadhu tasya dyaureva tirascinavamsa'ntariksamapupo maricayah putrah*. The meaning of the mantra is the sun over there is honey to the gods. Heaven is the crossbeam, the midregion is the beehive and the rays are the eggs Adhitya devata is the source of happiness here. Honey is sukha hetu. Deva madhu means devanam honey and it is adhitya and Surya bhagavan is the source of happiness. Therefore his inference Brahma Vidya na devata vishayah vidyatvad madhu vidyavad. It is not relevant for devata and they cannot resort to madhu vidya so they cannot do Brahma vidya. This is the question. The entire sutra is purva paksha sutra and the answer will come in the 33<sup>rd</sup> sutra alone. This is the objection in general.

Now we will go word for word analysis. Madh adishu asambhavat anadhikaram jaimini and we have to add devanam and vadhati. Jaimini devanam anadhikaram vadhati. Jaimini maharisi vadhati asserts devanam anadhikaram disqualification for Vedantic study jaimini asserts the disqualification of devatas for the study of Brahma Vidya because of their incapability with regard to Madhu vidya. Here Madhu vidya means Surya Upasana. The object of meditation is devata and subject of meditation is devata so the devatas cannot study Brahma Vidya. Vyasacharya has chosen an Upasana in Vedanta or the Upanisads portion. This is the objection. 4.3.1 *vayuvava samvargo yad va agnirudvayati vayumevapyeti yada suryo'stameti vayumevapyeti yada candro'stameti vayumevapyeti* the meaning of this mantra is the air swallows everything. When fire is extinguished it disappears into the air. When the

sunsets, it disappears into the air and when the moon sets it disappears into the air. There is another Upasana is suggested and it is vayu Upasana. In one form or another devatas are the object of meditation and not subject of meditation.

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

#### **Sutra 1.3.32[95]**

#### **Jyotishi bhavacca**

And [the gods are not qualified for vidyas] because [the words sun, moon etc., spoken of as gods] are used in the sense of mere spheres of lights.

An argument in support of the objection raised in sutra 31 is given.

The objection is raised by Purva Mimamsaka. Devatas are not there. they do not accept heaven and hell. They say they are all symbolic. Whenever a person says like this, he is not Advaitins but Purva Mimamsakas. they even say devas and asuras are not there and they say that they are all symbolic. We can present symbolically all right but not we negate what sastra says. adhithya devata means inert sun alone symbolized as devata. Then how can one do meditation? They also say chandra devata do not exist and they say all devatas are luminaries in the sky. There is no sentient Surya devata but it is inert sun. so also the case with moon and stars. This is the second purva paksa which we will see in the next class.

## BRAHMA SUTRA

Class 114

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

#### **Sutra 1.3.32 [95]**

#### **Jyotishi bhavacca**

And [the gods are not qualified for vidyas] because [the words sun, moon etc., spoken of as gods] are used in the sense of mere spheres of lights.

This sutra refutes the arguments in the previous two sutras and concludes the discussion.

We see the 32<sup>nd</sup> sutra of devatgadhikaranam, which is an extension of the previous adhikaranam that deals with the eligibility of, devas for Brahma vidya. Manusyadhikara is the subject of previous adhikaranam and now devata's eligibility is considered in this adhikaranam. The various objections raised in this regard is refuted by Vyasacharya. Now he takes up the last objection raised by Jaimnini who is incidentally Vyasacharya's own disciple. The answer is given in the 33<sup>rd</sup> sutra.

It was pointed out that devatas couldn't perform vedic rituals as they are the receivers of the rituals. Devatas themselves perform the rituals that will receive the oblations. They cannot be object of karmas and they cannot be subjects. Vedanta sastra has got various many vidyas. Some of them are called devata vidyas in which devatas are meditated upon particularly Madhu vidya. Similarly we have samvarga vidya the Vayu rupa Upasanam. How can devatas become subject of vidyas. Purva paksa says for devatas are unqualified for all the Upasana, karma and also the Brahma vidya. Brahma Vidya is also a vidya in Vedanta sastram and hence they devatas cannot do certain vidyas including Brahma Vidya. These devatas refer to various natural forces Surya, sun, chandra the moon etc. They are all luminaries or in general various inert things of the creation. Therefore they are achetana jada vastu only. Only symbolically they are seen as living being. Therefore picturisation as living being should be taken only as symbolism or arthavadha and should not be taken literally and they are achetana vastu. None of the chetana vasuts cannot do namaskaram and how can they do rites etc. How can they do sravanadhikam and gain liberation.

Mow I will go for word for word analysis. There are three words jyotishi as mere spheres of light bhava because used in the sense ca. We have to complete the sutra by adding some words and they are devata sabdanam and devatanam Brahma Vidyayam adhikarah nasti. Now the final sutra is devata sabdanam jyotishi bhava ca devatanam Brahma Vidyayam adhikarah nasti. Devata sabdanam means the words revealing devata; adhitya the word candra the word Agni etc; here sabda means words; bhavad means operation or function; it refers to because of the operation or function then jyotishi means luminary or shining object; they are sun, moon, stars, fire, lightening etc., the common factor is inertness; it is inert luminary; in the field of inert luminary; if you join the three words because of the operation of the words revealing devatas or devata revealing words; in the filed of inert luminary; in simple language

since sun moon etc., reveal only inert luminary; up to this is hetu and then come to the conclusion ca means also already in the previous sutra one reason has been given and now second reason is given; devatanam Brahma Vidyanam adhikarah nasti it means devas are not eligible to pursue Brahma Vidya. With this purva paksha is over. Now we have to come to siddhanta sutra.

## Topic 8 Devatadhikaranam [Sutras 26-33]

The Devas also are entitled to the study of Vedas and to meditate on Brahman

### Sutra 1.3.33 [96]

#### Bhavam tu baadarayano'sti hi

But Baadarayana on the other hand [maintains] the existence [of qualification on the part of the gods for Brahma Vidya]; for there are [passages indicative of that; body, desires etc., which qualify one for such knowledge do exist in the case of the gods]

This sutra refutes the arguments in the previous two sutras and concludes the discussion.

We will do the general analysis of this sutra. Here Adhi Sankaracharya gives answer to the objection raised in the previous two sutras. Vyasacharya's answer is very simple. And he says that they have the eligibility so assets Vyasacharya. The reason is that there is evidence or vedic support for my conclusions. Adhi Sankaracharya elaborately discusses in support of Vyasacharya's conclusion. One is 1.4.10 of Brihadharaynaka upanisad; the portion of the mantra reads as *yatha pasur evam sa devanam yatha ha vai bhavah pasavo manusyanam bhunjyuh* the gods are no pleased that men should know the ultimate turth for then they would know the subordinate place the gods hold and give up making them offerings; whoever gets Brahma jnanam will become Brahman whether he is a devata or manusya or rishi. Sruti very clearly says devas can gain Brahma jnanam and get liberation. The next is from Chandogya upanisad VIII.7.2 which reads as *tadd hobhaye devasura anububudhire; te hocuh; hanta tam atmanam anivcchama, yam atmanam anvisya sarvams ca lokan apnoti ssarvams ca Kaman iti; indro haiva devanam abhipravavraja, virocano'suranam tau ha samvidanav eva samit-pani praja-pati sakasam ajagmatuh* the meaning fo the mantra is that the gods and demons both heard it and said 'well, let us seek that Self, the Self by seeking whom one obtains worlds and all desires.' Then Indra from among the gods went forth unto him and Virocana from among the demons; then without communicating with each other, the two came into the presence of Prajapati fuel in hand;

Here we see that Brahma and Virojana goes to Brahmaji for gaining Self knowledge. Even if you discard asura raja, Indra got the knowledge. This is quoted by Adhi Sankaracharya. We can give further quotation. We see in IV.3 of Keno Upanishad *tasmad va indro'titaramivanyan devan, sa hy enan nedistham paspasrsa sa hy enat prathamavidamecakara brahmeti* therefore Indra surpasses greatly, as it were, other gods He, indeed has come into close contact with Brahman. He indeed for the first time knew that [it was] Brahman. Indra got Self-Knowledge from Umadevi and other devatas followed suit.

Now we will see word for word analysis. We gave bhavam; tu; baadarayana; asit and hi and we complete the sutra by adding devatanam adhikarasya and then adhikara karanam; you rearrange the sutra baadarayana tu devatanam adhikarasya bhavam manyate; the next

sentence hi adhikara karanam asti. This is the final arranged sutra. Baadarayana means Vyasacharya; sishya jaimini is purva paksa and Baadarayana is guru Vyasacharya. He refers to his own name. Then the next word is tu which means however; here the significance of the word is to eliminate the purva paksa; unlike jaimini Vyasacharya accepts eligibility; next word is manyate means accepts; bhavam adhikarasya the existence of adhikarasya of eligibility or right in the pursuit of Brahma Vidya; hi means because adhikara karanam asit there is evidence or vedic support the Brihadharaynaka upanisad and Chandogya upanisad and keno Upanishad vakyas etc. With this sutra part is over. Adhi Sankaracharya continues by giving more evidence. Now Adhi Sankaracharya gives the vedic support that devatas have got embodiment which gives them eligibility. He elaborately establishes that devatas have got body and they can go to guru and study Vedanta. Purva paksa has given two reason that devatas are ineligible and this has to be negated and elaboration of vedic evidence.

Purva paksa was given in sutra 32 and 33 that say Vedanta contains Upasana rupa vidya and jnana rupa vidya also. Vedanta is a mixture both Upasana and jnana vidya and since devatas cannot do Upasana vidya they cannot follow jnana vidya also. They are not eligible for Upasana vidya because they are the object of Upasana and how can they be subject and object of Upasana simultaneously. Therefore they cannot do Upasana vidya and therefore they said they couldn't do jnana vidya also. Just because they are unfit for Upasana rupa vidya how can you say they are not eligible for jnana vidya also. Partial ineligibility cannot prove total ineligibility. They need not study brahmananda valli and but study other valli which do not contain Upasana rupa vidya. In support of this contention he gives reasons. Let us take Karma Kanda itself. In Karma Kanda is any person eligible for all rituals. No. Rituals are based on varnasrama qualification. Raja suya yaga can be done by a raja. Brahmana can do Brahaspati saha only. Vyaya sthoma can be done by vysya only. Agnihotra can be done by grahastha and not by brahmachari. Nobody is eligible for all ritual. Partial eligibility is total ineligibility means you have to totally remove Karma Kanda. Whoever is eligible for whichever sadhana that person follows that sadhana? If this is your contention why cannot you extend yatedhikara jnaya in jnana kanda also? Let devata follow Brahma Vidya since they are not eligible for Karma Kanda and Upasanas also. Then the next purva paksa in sutra 32, all devatas reveal natural and inert natural forces. Devatas are not there and there are people who love symbolism. They say pandavas refer to noble thoughts and kauvaravas refer to evil thoughts. We accept pandavas with symbolic meaning as an additional factors. Advaidins accept swarga as real. Because Surya etc., are inert they are not eligible for Self-Knowledge. Even though devatas have got a loukika artha there is a satriya artha also. While studying sastra we should take satriya artha for words and not loukhika artha. Loukika artha of adhithya is inert sun but satriya artha of word adhitya is the adhistanam devata the intelligent principle or chetana tattvam behind the Surya sariram. Visible sun is the body and behind the body there is intelligent jivah. Behind every sariram there is chetana jivah similarly Vedanta accept behind Surya mandalam there is chetana devata; so also behind the chandra mandalam there is chetana devata at the adhistanam. When we do sandhyavandanam the sun rises seeing the world; the sun means not the solar disc but the solar devata; seeing is not possible for the inert devata sum; behind achetana Surya mandalam chetana Surya devata. Similarly chandra mandalam has got Agni devata; chetana part is devata; sariram part is inert sun. Therefore veda talks about all the devatas speaking etc., is pramanam for chetana tattvam. Veda says sun approached. All these vedic statement talks about chetana devatas and not inert ones. Purva paksa achetana jyotih but we say chetana devatas. That is why we worship panca bhutas. We worship water; the very fact the veda prescribes prayer for inert bhutas it is because that we are asked to pray the adhistanam devata. There is an elaboration of vedic evidence that devatas have got adhikara. Here Adhi Sankaracharya proves that devatas

have got embodiment. Previously he talked of devatas gained knowledge and now indirect evidence that devatas have got embodiment and therefore they can gain knowledge. Purva Mimamsa are so emphatic that devatas do not have body because Adhi Sankaracharya is emphatic to prove that devatas have got the body. Purva Mimamsa say that there is no person called Indra. What about Indra swarupam and according to Purva Mimamsa Indra has got sabda swarupam but he does not have artha swarupam. Whenever you write the word rama it is not sabda swarupam and it is artha swarupam. They always go together. But Purva Mimamsa in the case of devatas only there is a unique law. Indra swarupam is sabda swarupam and Indra does not have body or artha swarupam. This we will see in the next class.

## BRAHMA SUTRA

Class 115

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

#### **Sutra 1.3.33 [96]**

#### **Bhavam tu baadarayano'sti hi**

But Baadarayana on the other hand [maintains] the existence [of qualification on the part of the gods for Brahma Vidya]; for there are [passages indicative of that; body, desires etc., which qualify one for such knowledge do exist in the case of the gods]

This sutra refutes the arguments in the previous two sutras and concludes the discussion.

We see the last sutra of this adhikaranam. Here Vyasacharya points out that devatas also have the eligibility to study Brahma Vidya. Vyasacharya has refuted the objections raised by Jaimini. He asserts the fact because there are many vedic evidences in support of the devatas' eligibility to study Brahma Vidya. One is direct evidence and the other is indirect evidence. Brihadharaynaka upanisad 1.4.10 he mentions that Upanishad clearly says that anyone who gains Self-Knowledge is liberated whether that one is jiva or devata. In this devas are also included in the sruti vakya. Having given the direct evidence now we will see the indirect evidence that devas have got sariram. Because they have got body and they are embodied and they have problem of samsra and they can also attain moksa by gaining Self-Knowledge. Adhi Sankaracharya gives six proofs to establish that devatas are embodied to reveal that devatas have got forms and body. Adhi Sankaracharya establishes this vehemently because Purva Mimamsa vehemently refutes that devatas do not have the body. Purva Mimamsa says devatas are sabda swarupam in the absence of the body. Similarly Indra is sabda matram and Indra does not have any body. Vedanta says the word Indra there is corresponding artha. Having understood purva paksa we have to see the various supports Adhi Sankaracharya gives here.

All scriptures describe the forms of devatas. Mantra arthavadha vedic descriptions, ithikasas, and puranas give devata swarupam. That is why we have the description in the dhyana sloka. We often quote Vajra hasthah purandaraha. Purandaraha means indrah and vajra hasthah means holding vajrayudhah in his hands. If Indra is to hold ayutha in his hands he must have the body and limbs. Here we face a problem. Purva Mimamsa raises an objection. He says that I am aware of the vedic statements. But I don't accept them as facts. I don't accept them as valid means of knowledge. I don't negate the statements but I negate the validity of these statements. Some of the rules of the Purva Mimamsa we should know before taking up the subject. Purva Mimamsa is one who specializes the ritualistic portion of Vedas and who does not accept the Vedantic portions of the Vedas. They divide the Vedas into two types of statements. One is statements of commandments dos and don'ts. They are called vidhi vakyani. Second types of statements are the statements of descriptions where there are no injunctions. Description of heaven, devatas etc., come under this category. They are called arthavadha vakyani.

He says vidhi vakyas alone should be taken as pramanam valid source of knowledge because veda is serious about vidhi vakyams alone. All the statements of description veda is not at all serious. Since Veda is not serious about descriptive statements they should not be taken as valid source of knowledge. They are apramana vakyani. How did Purva Mimamsa discover veda is serious. Only vidhi vakyams produce results. Statement of injunctions has got utility because either I get dukha nivritti or sukha praptih. Artha vadha vakyas do not produce any benefit. I don't get any benefit by getting description of anything. Based on this he says all the description of devatas comes under vidhi or artha vadha vakyas is the question. We say that they do not belong to the vidhi vakyams. Since they are aprayocanam and they are not valid source of knowledge and therefore devas embodiment should not be taken as serious and such statements are non-valid statements and they are not facts since they do not come under vidhi vakyams. Hence the devatas need not study Vedanta. We also studied in 1.3.3 of Brihadharaynaka upanisad we studied the topic. We have to establish that the statement of description also can be valid source of knowledge. Purva Mimamsa says that statement of commandments alone is valid source of knowledge. But we want to establish that statements of description also are the valid source of knowledge. He says statement of description is not valid source of knowledge because they don't have any utility. Purva Mimamsa takes the utility as the criterion for validity of the statement. Vedantins argue who says that utility is criterion for validity of the knowledge. Utility is not the criterion at all for the validity of the knowledge. I see a star in the sky. What utility this has. The perception is a fact because the eyes are valid means of knowledge but I don't see any utility from the knowledge. Therefore the knowledge is useful although it may not have the immediate use from that knowledge. Just because it has no utility I cannot say eyes have revealed a false knowledge. There are so many instances are there that we see many are not useful and many are useful. We cannot say arthavadha statements are useless because there is no utility from that knowledge. If utility is the criterion of validity how do you know that the knowledge is not erroneous or right knowledge? There are two criteria for any source of knowledge one anagathitvam, which means it is a knowledge, which is not attained, by any source of knowledge. For example eyes are accepted, as valid means of knowledge especially of colours and the knowledge that we gather by eyes cannot be got by any other source of knowledge. Anumana cannot give the source of that knowledge. Therefore we say the first criterion is anagathitvam. This is condition number one.

Second is abaditvatvam. Anagathitvatvam is uniqueness is a source of knowledge which can be gained through any other means of knowledge. Anagathitvatvam means unnegatability. It should not be negated by another means of knowledge. That is rajju sarpah, or swapna padhartha. Rope snake is known through eyes alone but it is negated later and hence it is false source of knowledge. Anagathitvatvam and anagathitvatvam are two source of knowledge.

Next we come to arthavadha vakyani. It is divided into three types. They are statements of descriptions. Example number one; Agni himasya beshayam heat is a remedy whenever you feel cold. This is arthavadha vakyam because there is no commandment. We should take it as pramana vakyam or apramana vakyam. It should have unique knowledge. And it should not be negated later. You know this particular statement does not produce any new knowledge and it only restate what is already known. It does not have anagathitvatvam. It is anuvadha artha vadha vakyam and it is a restatement of already known fact. They are not considered apramana vakyam because the knowledge is already known. It is apramana vakyam. Then let us take second type of statement. There is another vakyam. Puruso bhava goutama Agni the man is fire. Woman is fire; this is another Vedic statement. This is vidhi or arthavadha vakyam. There is no commandment. It is only a statement. The idea conveyed is man is fire.

We have never learnt anywhere man or woman is fire. Anagatitvatvam is there. It is a unique idea. But is the second criterion for validity there. It should not be negated by another means of knowledge. Here the statement says man is fire. If you accept this as a statement, can you replace to cook food keeping the vessels on the head of the man who is fire? The pratyaksa pramana negates the idea conveyed by the statement. Therefore it is not valid statement of knowledge. It is called gunavadha arthavadha vakyam. Gunavadha arthavadha vakyam abaditva abavad apramanyam. In the first case no uniqueness is there and in the second case the statement is falsified. Adhithyah vyupah.

The third one is relevant thing for us. Vajrahasthah purandarah. Indra devata has got vajrayudham in his hands. Now we have to find out whether it comes under anuvadha or gunavadha. I have never experienced Indra before. How can I know whether he had vajrayudha or not. Anagatitvatvam varthate the uniqueness is there. It is not anuvadhah. Second criterion is that Indra devata has got vajrayudha. None can negate and none has seen whether he has vajrayudha or not. No inference also can be possible. There is no data available. It cannot be negated also. Since both criterion are fulfilled it must be third type of arthavadha it is neither restatement nor contradictory and such statements are called bhudhartha vadha. It means anuvadha gunavadha binna arthavadha. It reveals something unique which is never negatable. Then. We accept it as pramanam and therefore bhudhartha vadhanam anagatitvatva abaditva bhavad pramanyam. Bhudharthavadha is valid and unfalsified knowledge. All such statements are valid. Purva Mimamsa says all arthavadha vakyam are apramanam. Vedantins says anuvadha and gunavadha vakyas are apramanam and bhudhartha arthavadha vakyas are pramanam. Devatas head hands etc., come under bhudharthavadha vakyam and therefore such statements are valid and they are pramana vakyams. If it is falsified it is gunavadha if it is restatement it is anuvadha and if both other two are not there, if it neither anuvadha or gunavadha, it is bhudhartha vadha and arthavadasya triasmida. Purva Mimamsa has to accept the description of all devatas and therefore accept their embodiment. This is the first argument.

Second argument is that Adhi Sankaracharya quotes a vedic injunction which says before offering oblations during rituals one should meditate upon the devata who is to receive the oblations. Adhi Sankaracharya asks the veda itself ask the person to meditate upon devata and if the devata has no embodiment or form of the devata how could they meditate upon the devata. You cannot meditate upon the sound but you have to meditate upon the form only. If devatas do not have embodiment the dhyana vakyam cannot be implemented.

The third argument is in the scriptures it is said that many yogis and rishis have contacted and perceived the devatas by their supra sensuous perception. It is yogic pratyaksam. These yogis are supposed to have seen devatas and talked to them. Since yogic pratyaksa pramana implies vigrahatvam for devatas you have to accept the embodiment of devatas.

The fourth argument is from yoga sutra. There is a sutra, which says swadyayad ishta devata samprayogah. Chapter 2.44 the sutra says by[or from] Self study union with the desired deity. The nature of the communion will differ according to the temperament and capacity of the sadhaka and the nature of the ista devata. The study of the scripture connected to any devata that person will get contact with ista devata. That devata will come to him and he can have conversation. Saint Thyagaraja is supposed to have had dialogue with Lord Rama. This indicates the devata has embodiment and has sariram. Yoga sutra support our argument.

Krama mukti vakyani. Krama mukti is if a person is not able to study Vedanta he can do Upasana and that will give deva sariram and there in swarga get knowledge in devata janma and getting liberation. Krama mukti is possible only if devata is able to get liberation. It is said Brahmaji himself takes classes in Brahma loka. To attend the class body should be there.

Next is loka or chitrakara prasiddhih. Among the painters the devatas are wellknown as vighraha vandhana. Seventh is except in the case of Purva Mimamsa our worldly experience that every word has got corresponding object. Sabda artha bedah is prasiddham and how can you say in the case of devata sabda is there and artha is not there. Because of these seven arguments devatas have got bodies and they can study Vedanta. More in the next class.

## BRAHMA SUTRA

Class 116

### **Topic 8 Devatadhikaranam [Sutras 26-33]**

The Devas also are entitled to the study of Vedas and to meditate on Brahman

#### **Sutra 1.3.33 [96]**

#### **Bhavam tu baadarayano'sti hi**

But Baadarayana on the other hand [maintains] the existence [of qualification on the part of the gods for Brahma Vidya]; for there are [passages indicative of that; body, desires etc., which qualify one for such knowledge do exist in the case of the gods]

This sutra refutes the arguments in the previous two sutras and concludes the discussion.

With the 33<sup>rd</sup> sutra Vyasacharya completes his discussion on devatadhikaranam and we have seen all the sutras of this adhikaranam. The subject matter of this adhikaranam is devatas, the celestial beings. Samsayah the doubt with regard to them is whether they have got Brahma Vidya adhikarah or not. Then the third step is purva paksha the view so the opponent who is against us. They say devatas have no right for Brahma Vidya. The reason he gives for this conclusion is that there are no persons called devatas and they do not have body, mind sense organs and so such persons or personalities called devata. He claimed that devatas exist in the form of sound alone. That is why according to them even devatas do not bless the people for they do not bless the people and only rituals are capable of blessing the people. The rituals are capable of giving the phalam. The creation and the laws and rituals give the ritual and we don't require intelligent people to bless the people. This is Purva Pakshi view. Siddhanti is the fourth step is devatas have got right for Brahma Vidya because they have embodiment. Every devata has got an embodiment as proved by scriptures themselves. They are not proved by perception or inference for we don't have data. It is only sastra pramanam. Vyasacharya has given many supporting proof. Every nama should have corresponding nami and it should have corresponding form or arthah. Sabda artha yoho beda urpa hetuh is the supporting hetu. Fifth step is sangathi the connection between this and the previous adhikaranam that it is in the right position only. In the previous adhikaranam Vyasacharya said manusyas have right to pursue Brahma Vidya and in this adhikaranam he decides to discuss whether devatas have right or not to pursue Vedanta. This knowledge is not require and even though it is not require it is called the 8<sup>th</sup> and 9<sup>th</sup> are said to be a digression which is not required for Vedantic student. Now we will enter into the next adhikaranam.

### **Topic 9 Apasudradhikaranam; [Sutras 34-38]**

The right of the sudras to the study of Vedas discussed.

#### **Sutra 1.3.34 [97]**

#### ***Sugasya tadanadarasravanat tadadravanat suchyate hi***

[king janasruti] was in grief on hearing some ontemptuous words used about him by the sage in the form of a swan; owing to his approaching Raikva overwhelming with the grief Raikva called him sudra; for it [the grief] is pointed at by Raikva.

The discussion on the privilege of divine meditation begun in sutra 25 continued.

This is the 9<sup>th</sup> adhikaranam known as abasudradhikaranam consisting of five sutras. First I will give you a general introduction of this adhikaranam. When we study the scriptures, they talk about the varieties of karmas. Kayika karmani vachika karmani manasika karmani and the results achieved through these karmas. Scriptures point out or prescribes who should do the karmas and as a part of that scriptures point out some condition to perform those karmas. And only those people who fulfill those conditions can perform those karmas and they have got the competence to do the karmas. Those who do not fulfill these conditions cannot do the karmas and they are prescribed by sastras and these conditions are called satriyam samartham.

For example there is a ritual called agnihotram. Sastra says only a married person can do this. Suppose there is an unmarried person has got all worldly competence that he has physical body and he has desire and money to do the ritual and also has got the knowledge and despite having all the worldly knowledge, he cannot do it unless he is a married man prescribed by the sastras. So also a sannyasi with all the conditions he cannot do the agnihotra rituals according to the scriptures. Any karma requires satriya samartham to do any karma. One should have loukika and satriya samartham to do any karma. If in want to get a passport I have to fulfill the condition. Or else we cannot get the passport. I should have loukika samartham to do any worldly action. Satriya samartham is required for completion of any satriya karmas. Agni hotra ritual can be done only when one fulfills the satriya samartham and worldly conditions. Loukika samartham is not sufficient and he should be married man and he should do the Agni adhanam and I get a special title ayidagni and then only he is qualified to perform agnihotra ritual.

Loukika samartham we can know by common sense. Sastrya samartham can be known only through sastras only., veda adyayanam is considered to be a satriyam karma because it is a vidhi prescribed by sastra. Learning to chant the Vedas comes under satriyam karma. Then veda mimamsa the study of the meaning and the bashyam of Vedas, vedanta vicara also is called satriyam karma. The rituals prescribed by Vedas and performance of the rituals also comes under satriyam karma. Veda adyayanam, mere chanting of Vedas; veda vichara means artha grahanam analysis of the meaning of veda mantras and veda karma anustanam means performance of karmas prescribed by Vedas and all the three come under satriyam karma. And once you put them under satriyam karma you have to apply the first law. All of them require not only loukika competence but also satriyam samartham to perform the rituals. Then I should have vak indriaym, physical competency. Satriyam samartham is apyutatvam. Now what is the satriyam samartham for veda adhyayana, veda vichara and veda anustanam to perform the karmas or rituals. Satriyam karma can be decided by sastra alone. What is sastric decision. Two conditions are to be fulfilled for satria samartham. The first condition is upanayana samskara the sacred thread ritual is condition number one. The second one is nithya karma anustanam. I will call it simply anustanam, these are the two conditions give the sastrya samartham. Such a person is called qualified human being to do rituals etc. Such a person is also known as dvijah or samskrta manusyah. Suppose a person does not fulfill either of the two conditions, that person is asamskrta manusyah unprepared unqualified human being. Suppose a person has not fulfilled the first condition, he is called

sudrah. He comes under asamskṛta manusya lacking sastrīya samarthyam. There is another person who has fulfilled the first condition but does not fulfill the second condition is known as dvija banduh. He is a fake dvijah. This bandu also come under asamkṛta manusyah and he lacks sastrīya samarthyam. Both together we call asamskṛta manusyah. Sudra and dvija bandu is asamskṛta manusyah and both cannot do the threefold sastrīyam karma veda parayana veda vicara and veda karma anustanam. Incidentally you should note that asamskṛta manusya has no right for the three sastrīyam karma so this division asamskṛtya and samskṛlita we make between manusyah only. This division is not there for rishi, devas and rishi patnis do not come under this category at all. They do not come under manusya category. The proof is there in Brihadharaynaka upanisad tad yo yo devanam praty vidyate tada devanam tada manusyanam. If rishi, manusya or deva gets the knowledge they get liberated. Sastra look upon devas and rishi panis under different category. Devas get adhikara need not fulfill these two conditions. Rishi patnis also samskṛta by being rishis they have sastrīyam samarthyam. With regard to manusya alone sastrīyam samarthyam is required. Veda adyayana veda vicara and veda karma anustana is called srouṛta sadhanani or you can call it vaidhika sadhanani and we insist upon the samskṛta manusya and this rule does not apply to smārtha sadhanani and all the nonvedic scriptural discipline. Suppose one wants to purana vicara purana adhyayana and purana anustanam this restriction the sastrīya samarthyam samskṛta manusyatvam is not required for smārtha sadhanani. Therefore in this ad\kartritvam Vyasacharya points out that all human being can follow smārtha sadhanani chanting of nonvedic scriptures performance of sadhana of nonvedic scriptures and all can get siddha suddhi through smārtha sadhanas and all can get moksa also through smārtha sadhanas. It is like going to any state in India without any restriction. If you want siddha suddhi you can follow smārtha sadhana and if you want samskṛta sadhana you should have the necessary qualification. This is the topic of apasudra adhikaranam. Asamskṛta manusyas are twofold one is sudra and the other dvija banduh. Here we discuss about sudra who is none but asamskṛta manusya adhikaranam. They are not incompetent for gaining moksa. Why the word apa and this indicates unqualified. This is a section that discusses the qualification for using vedic sadhanas. Asamskṛta manusya cannot do vedic sadhanas and samskṛta manusyas alone can do vedic sadhana. For this Vyasacharya takes a mantra that is going to be vishya vakyam. This mantra occurs in 4.2.3 of Chandogya upanisad. This we will discuss later. In Chandogya upanisad in the fourth chapter in the first three chapter discusses the samvarga vidya. These three sections deal with samvarga vidya means Vayu devata Upasanam. This is discussed in the form of guru sishya samvadhah. Guru is raikva and the sishya is Gnana srutih. Here there is story connecting the guru and sishya.

Gnanasruti is a great king and he gives plenty of danam and food to people. Therefore he has acquired lot of punyam and Brahma tejas also. This gnana sruti king was relaxing on the terrace of the palace. At that time some devata was passing by the palace. Then when one bird was flying above gnana sruti one was telling the other don't fly very low above him and he has so much tejas and if you fall within the range of his tejas you will be burnt. The bird answers why you glorify Janasruti so much as though he is as great as raikva. Gnanasrtui heard what the birds were speaking. Janasruti was satisfied when first bird glorified but was unhappy when the other bird insulted him. The king asked am I as great as raikva. The king tells him the glory as told by the bird in front of the other person. Raikva happens to be a great upasaka. He acquired all punyas acquired by all karmas by all the people will not be equal to the punyams acquired by raikva. The charioteer finds that he sits under the cart possessing nothing. Even though he does not possess anything he could get much without doing anything and by doing Upasana. The raikva says that the daksina is not enough. He

brings more daksina and also gives his daughter. This is the topic discussed here more in the next class.

## BRAHMA SUTRA

Class 117

### **Topic 9 Apasudradhikaranam; [Sutras 34-38]**

The right of the sudras to the study of Vedas discussed.

#### **Sutra 1.3.34 [97]**

#### ***Sugasya tadanadarasravanat tadadravanat suchyate hi***

[king janasruti] was in grief on hearing some ontemptuous words used about him by the sage in the form of a swan; owing to his approaching Raikva overwhelming with the grief Raikva called him sudra; for it [the grief] is pointed at by Raikva.

The discussion on the privilege of divine meditation begun in sutra 25 continued.

I gave you the general analysis of this adhikaranam consisting of five sutras. Through this adhikaranam Vyasacharya analyses as to who is qualified for sroudha sadhanani and smartha sadhanani. Through this adhikaranam Vyasacharya establishes all people are qualified for nonvedic discipline smartha sahdanani and through this all can get Self-knowledge and all can gain moksa also. Moksa is universally accessible. The vedic discipline or sroudha sadhana is not accessible for all people and only those who are specially eligible alone can get access to it. They are samskrta manusas aor dvijas and who have gone through upanayana and nithya karma anustanam. This is being established here by Vyasacharya in this adhikaranam.

To establish this idea Vyasacharya is analyzing the story occurring in Chandogya upanisad fourth chapter. Here Janasruti is relaxing in his terrace. Two birds converse between himself or herself while one bird glorifies, the other insults saying that he is not as glorious as Raikva the Brahmana who practices Upasana. When he overheard this he develops two powerful emotions one is pains caused by insult and second is the deep urge to study the Vayu Upasana the cause of raikva becoming great. With these two emotions he approaches Raikva who denies him complaining insufficient daksina. The Upanishad presents Raikva as great Brahmana and all should be positively interpreted. The denial also should be positively interpreted. Acharyas in old days tested the disciples in different ways and asking for large daksina is also to check the earnestness of gnana sruti. This appears to be negative method but the underlying factor is positve method of checking the earnestness of Janasruti. Janasruti brought greater daksina and also his daughter to Raikva and learnt Vayu Upasana from Raikva. In Chandogya upanisad Vayu Upasana is given a special title samvarga vidya. This helps us to establish samskrta manusya alone is eligible for samskrta sadhanani, which is the subject of this adhikaranam.

In this story there is a mantra occurring in this Upanishad. This occurs in Chandogya upanisad fourth chapter. While the Upanishad presents the story it makes a statement and it occurs in 4.2.3 of Chandogya upanisad and it is this statement which triggers the controversy and the debate. The mantra reads as *tamu ha parah pratyuvacaha haretva sudra taviva saha gobhirastviti tadu ha pounareva janasrutih pautrayanah sahasram gayam*

*niskamasvatariratham duhitaram tadadaya praticakrame* raikva said to him, 'you sudra, the necklace and chariot along with the cows – let all these be yours', janasruti left and then again came back – this time with one thousand cows, gold necklace a chariot drawn by mules and his own daughter.

The context of the statement is Janasruti is approaching Raikva for the first time and he gets the teaching second time only. He approaches with two powerful emotions caused by pain because of the insults heaped by the bird and the curiosity towards Raikava's learning. He brings cartloads of ornaments, his daughter to be his wife and also a village in which he lived and thousand cows and a chariot drawn by mules etc.

The controversy is that while making the statement raikva makes a statement oh sudra purusah. Here it is stated that Janasruti is not a king but he is asamskrita manusyah. Even though he is denied the knowledge, the same Janasruti was given vedic Vayu Upasana later. This is sroudha sadhana. The Guru Raikva has taught Asamskrita Janasruti smaskrta sadhana. It is evident from this that even without upanayanam all people can practise sroudha sadhana. Vyasacharya wants to point out asamskrita manusyas cannot gain the knowledge of sroudha sadhana. Vyasacharya has to establish that Janasruti is ksatriya alone and then alone his idea can be validated. He faces now a problem. In this statement Janasruti is addressed as sudra. Now he has to explain the meaning of sudra. This is the problem here. The entire adhikaranam is the analysis of sudra sabdah.

Vyasacharya has to establish that the word sudra does not indicate asamskrita manusatvam. Here Vyasacharya establishes two things that Janasruti is a ksatriya and he is not a sudra. This is the general introduction to this entire adhikaranam.

The first sudra Vyasacharya establishes that the word sudra should not be taken in its primary meaning and you should take only the secondary meaning for which he take the contextual support. The primary meaning of the word sudra is upanayana rahita asamskrita manusyaha a person who does not have the sacred thread therefore he is not fully qualified. The secondary or contextual meaning is that Janasruti has got two powerful emotions the insult heaped by the bird. Second is he does not want to be inferior and he wants to be either equal or better than Raikva and he wants to become Vayu upasaka. This mental state of Janasruti is not religious state. Raikva is also a mental reader. He knew that Janasruti was a sorrowful runner, which Raikva knew. Hence Raikva uses the word su and ra, which means sorrowful runner. Su mentions soha and ra represents runner. Therefore even though Raikva addressed him as sudra which had the meaning of sorrowful runner. Vyasacharya says we have to take the secondary meaning. In Sanskrit there is a word ajah which means goat. The secondary meaning is Atma is ajah. We should know what meaning should be taken where. Here Janasruti is sudra which means sorrowful runner.

We will see the word for word analysis. We have to supply two words. One is utpannah. Sugasya is to be split as sukh and asya; next is tad anadarasravanat; and tada adravanat and suchyate and hi. I will rearrange the words. Sukh means sorrow; asya means of this Janasruti king; then supply the utpanna which means which was born or which arose; the sorrowful state of Janasruti which arose; tad anadarasravanat means tad means the hamsa word the devata appearing in bird form; anadara means inflicting words the insulting statement; sravanam means hearing; the meaning is by hearing the insulting words of the birds; the sorrow of the king Janasruti which was born by hearing the insulting words of the hamsa bird and then hi means is indeed. The significance of this letter I will explain later; suchyate

means is revealed. Next is sudra sabdena means by the expression sudra. The sorrow of Janasruti which is born by hearing the insulting words of bird is revealed by the expression sudra. This only shows the sorrowful state of Janasruti and not the upanayanam or the nondivija status. Hi means the primary meaning of the word is more powerful than the secondary meaning. This is the general law. When both meanings are possible one should take primary meaning but he takes the secondary meaning. Vyasacharya compromises with an important law. There is another law we should know. If the primary meaning does not fit contextually, then the secondary meaning can be taken by dropping the primary meaning. The contextual secondary meaning is better than non-contextual primary meaning. This superceding nyaya is indicated by the word hi in this sutra. This is the first part of the sutra.

The sutra conveys the idea that Janasruti convey the meaning that he is a sorrowful runner. How does the word convey such a meaning. For that Vyasacharya says tadadravanat. This contains two words tad adravanam tad means sukh and adravanam means running. Since Janasruti was running with sorrow, he is called sudra and letter su referring to soha and ra referring running. Therefore sudra means ksatriya sorrowful runner and so Janasruti is not asamskrita manusyah and he is a ksatriya king and he deserves Vayu Upasana. With this the first sutra is over.

## **Topic 9 Apasudradhikaranam; [Sutras 34-38]**

The right of the sudras to the study of Vedas discussed.

### **Sutra 1.3.35 [98]**

#### ***Kshatriyatvavagateschaottaratra chaitrarathena lingat***

And because the kshatriyahood [of Janasruti] is known from the inferential mark [supplied by his being mentioned] later on with Chaitraratha [who was a Kshatriya himself]

An argument in support of sutra 34 is given.

We will take up the general analysis of this sutra. Here Vyasacharya proves that Janasruti is a ksatriya. In the previous sutra he proved that Janasruti is not a sutra. But here he proves that he is a ksatriya. He takes three statements from the veda. First is that there was a king known as Chaitrarathih. The next statement is that the Brahmins belonging to kapi gotra were the priests for the kings belonging to chitraratha family. Third is from Chandogya upanisad story itself 4.3.5 that reads as *atha ha saunakam ca kapeyamabhipratarinam ca kaksasenim parivisyamanau brahmacari bibhikse tasma u ha na dadatuh* once sounaka the son of Kapi and abhipratarin the son of Kaksasena were being served their meals when a brahmacharin appeared and begged for some food. They however refused to give him any. Using these three statements we are going to establish Janasruti is a ksatriya. More in the next class.

## BRAHMA SUTRA

Class 118

### **Topic 9 Apasudradhikaranam; [Sutras 34-38]**

The right of the sudras to the study of Vedas discussed.

#### **Sutra 1.3.35 [98]**

#### ***Kshatriyatvavagateschaottaratra chaitrarathena lingat***

And because the kshatriyahood [of Janasruti] is known from the inferential mark [supplied by his being mentioned] later on with Chaitraratha [who was a Kshatriya himself]

An argument in support of sutra 34 is given.

We do the general analysis of sutra 35 and the Chandogya upanisad statement 4.2.3 in which the Upanishad talks about Janasruti who is a student of Vayu Upasana and we want to find out who is the Janasruti. We want to find out whether he is a sutra or someone else. Vyasacharya wants to establish that the word sutra does not mean sutra in primary sense but should be taken as sorrowful runner. He is really a ksatriya one and Vyasacharya wants to establish Janasruti as ksatriya and will establish him as dvijah and he has upanayana samskara. And then he is eligible for samvarga vidya. In this sutra Vyasacharya and Adhi Sankaracharya want to do a very important textual analysis. Several ideas are given and each one is going to be connected to arrive at the conclusion.

First we have to take three statements, which Adhi Sankaracharya quotes in his commentary. First one is a king named chaitraratha and second statement is from tandya Brahmanam only. The meaning of the statement is that Kapeya kapi vamsa Brahmana and they priest and advisers of Chitrarathi vamsa ksatriyas. Third is taken from 4.3.5 of Chandogya upanisad. This third statement introduces two person as a part of the story. One is Kapeya and Adhiprathari. They were taking food together and someone was serving food. When they were taking food a brahamchari came asking for biksa. For our analysis the details can be omitted. We are interested in kapeya and adhiprathari were together. Having got the two statements, in the first statement the veda introduced chitrarathi as a king. All the members belonging to chitrarathi king is chaitrarathas. Non-only the contemporaries but also the future generation are called chaitrarathas. First idea is chaitra ratha belongs to king family.

The second idea we derive that family of priests advised all chaitra ratha kings named kapeya the descendents of kapi gotra or kapi vamsa the family of brahmanas.

The third idea to be derived is all the kapeya Brahmins were associated with chaitra ratha kings. Thus there is a flow of Brahmana and ksatriya families.

Coming to the third statement the Upanishad says that kapeya and abhiprathari were together. Since kapeyas were always associated with ksatriya kings abhiprathari must mean the chaitra ratha king. Family wise he belongs to chaitra ratha family and abhiprathari must be a chaitra

ratha. Abhiprahari must be his personal name but he belongs to ksatriya family of chaitra ratha.

What Adhi Sankaracharya and Vyasacharya say is that this pair Brahmana and ksatriya king is introduced as a part of story. Where does the story occur? This story occurs as a part of samvarga vidya or Vayu Upasana. The purpose of the story is that through the story the Upanishad wants to glorify the Vayu Upasana, we already have a previous story in samvarga vidya is Janasruti and Raikva.

The first story is to reveal Vayu Upasana and the second story is to reveal the glory of the Vayu Upasana. Now Vyasacharya and Adhi Sankaracharya says that in the second story we have a Brahmana and ksatriya pair. That means in the first story also which is occurring in the same context of samvarga Upasana we should have the similar pair only because that is the style of the veda. Raikva happens to be a Brahmana and Janasruti should be ksatriya and therefore the word sutra should not be taken as upanayana Purusa but should be taken as sorrowful runner. This is the essence of the sutra.

Now we will do word for word analysis. Ksatriyatva avgateh is one word. Next word is ca; then uttratra; the next is chaitratha; then lingat. First I will rearrange the words. Lingat means an indication, a clue for concluding that Janasruti is a ksatriya we have an evidence or proof. This is an internal textual evidence occurring in samvarga vidya itself. Next is the supplied words Janasruteh samvaibvyabavah the meaning is sruti mention of Janasruti. Chaitra rathena which means along with chaitra ratha king; Janasruti occurs in the mantra 4.2.3 and Chaitra ratha occurs in 4.3.5 of Chandogya upanisad. Thus because of the evidence in the form of Janasruti along with chaitra ratha; when Vyasacharya says vedic mention of Janasruti along with chaitra ratha you will find that in 4.3.5 chaitra ratha is not mentioned at all. There only word abhiprahari is there. Then we have to conclude tha bhiprahari is none but chaitra ratha vamsa king. Then next word is uttarathra means in the latter part of the text 4.3.5 of Chandogya upanisad. Compared to 4.2.3, 4.3.5 is latter text. Janasruteh ksatriyasya avagathah. Janasruti is proved to be a ksatriya from this story. One part of the sutra is over.

Now we will come to the second part of the sutra. Ksatriyasya avagatheh because of our knowledge of the ksatriya status then you supply three words Janasruti is not a sutra. He is not upanayana samskara rahitah; ca means also joining the previous sutra. The our conclusion is that vedic sadhana is meant for samskrita manusya alone and not for asamskrita manusya. With this the sutra is over. Now we will go to the next sutra.

## **Topic 9 Apasudradhikaranam; [Sutras 34-38]**

The right of the sudras to the study of Vedas discussed.

### **Sutra 1.3.36 [99]**

#### ***Samskaraparamarsat tadabhavabhilapacca***

Because purificatory ceremeonies are mentioned [in the case of the twice born] and their absence is declared [in the case of the sutra]

The discussion on the privilege of Brahma Vidya on the part of sudra is continued.

Now we will do the general analysis of this sutra. Here Vyasacharya wants to give certain general argument in support of his conclusion that samskrita manusya alone can perform samskrita sadhana and it has nothing to do with samvarga vidya. There are various references to upanayana samskaras in the context of sroutha sadhana and not in the context of smartha sadhana. Veda adhyayana veda vicara and veda anustanam comes under sroutha sadhana. The significance of the upanayana samskara is bringing a guru and sishya together acharya sishya sangamah samyohaha. When a vedic student and teacher comes together and it is a formal affair involving lot of formalities. It involves sacraments, prayers etc. This can be presented in twofold angle. From the standpoint of acharya acceptance of sishya it is called. Acceptance or admission is called upa nayana. I take sishya near me. Nayanam means sweekaranam. Upa means near. If you present the same coming together from the point of disciple means the formal approach of the student. The word used for formal approach is upa sadhanam or upa gamanam. Both indicate the formal coming together of vedic student and Vedic teacher. Every student who reads veda should know the two innocent words of upa and nayanam. I go to America means that includes getting the passport, getting visa, getting ticket, getting overseas insurance etc. This formalities everyone is familiar and hence one knows from the innocent statement that I go to America means he has undergone all the hassles of getting the passport etc. So also in ancient times people were familiar with the samskaras like upa nayanam etc. Adhi Sankaracharya gives references in 2.1.14 Brihadaranyaka upanisad, 6.2.7 of Brihadaranyaka upanisad; 7.1.1 of Chandogya upanisad all indicate upanayana samskara that indicate samskrita manusya alone has the eligibility.

The second part is that not only scripture refer to samskrita manusyas also they refer to asamskrita manusyas also equally vehemently. One such reference is occurring in Goutama Dharma sutra 2.1.51 where it is said sudra eka jathi which means upanayana samskrara rahitah. Once a person takes to upanayana samskara he is called twice born. He is dvijah. There are two births one is before and after. Before it is called physical birth from physical mother and the second is spiritual birth from spiritual mother gayatir. She is called spiritual mother. This upanayana samskara rahita is called sudrah and he is asamskrita manusyah. These two connections are made in several cases. Such people cannot do vedic sadhana. Therefore Janasruti must come under dvijah alone and not eka jathi sudrah.

Now we will do the word for word analysis. Samskara paramarsat tat abhava abhilapat and cha. Samskara paramarsat means upanayana samskara paramarsat means vedic mention; because of the vedic mention of upanayana samskaras in several places or in the context of vedic sadhana; tad abhava abhilapat; tad means that upanayana samskara; abhava means the absence of upanayana samskara; abhilapat means scriptural mention of the absence of upanayana samskaras sudresu in the context of sudra or with regard to sudra. Because of the scriptural mention of upanayana samskara with regard to Vedic sadhana and because of the mention of upanayana samskara with regard to sudra combining the two the Sudra is asamskrita manusyas are not eligible for Vedic sadhana More in the next class.

## BRAHMA SUTRA

Class 119

### **Topic 9 Apasudradhikaranam; [Sutras 34-38]**

The right of the sudras to the study of Vedas discussed.

#### **Sutra 1.3.36 [99]**

#### ***Samskaraparamarsat tadabhavabhilapacca***

Because purificatory ceremonies are mentioned [in the case of the twice born] and their absence is declared [in the case of the sutra]

The discussion on the privilege of Brahma Vidya on the part of sudra is continued.

In this adhikaranam Vyasacharya analyses who is the adhikari with regard to sroudha sadhanas or vedic pursuits and want to establish that only those who have vedic qualification have the right to pursue the vedic sadhanas. One who does not have upanayana samskrlita does not have eligibility for vedic pursuits. In the three sutras he gives general conclusions in support what is stated above.

In the second part Vyasacharya says asamskrita do not have upanayana samskaras. Because of scriptural mention that asamskritia do not have upanayana samskara and therefore they are ineligible for pursuit of vedic pursuits.

I have given relevant sruti supports in the last class. The second part of the sutra is there is scriptural support for asamksrita manusyas cannot pursue the sroudha sadhana. They can purify the mind, gain Self-Knowledge and also gain moksa only through smartha sadhana. Smartha sadhana is following non-vedic sadhana ithikasa, purana sadhanas etc.

### **Topic 9 Apasudradhikaranam; [Sutras 34-38]**

The right of the sudras to the study of Vedas discussed.

#### **Sutra 1.3.37 [100]**

#### ***Tadabhavanirdharane cha pravritteh***

And because the inclination [on the part of Gautama to impart knowledge is seen only] on he ascertainment of the absence of sudrahood [in jabala satyakama]

The same discussion on the sudras' right is continued.

Here Vyasacharya refers to the story of Satya Kama jabalah occurring in Chandogya upanisad 4<sup>th</sup> chapter 4<sup>th</sup> section, here he refers to a mantra 4.4.5 *ktam hovaca naitadabrahmano vivaktumarhati samidham somyaharopa tva nesye na satyadaga iti*

*tamupaniya krsanamabalanam catuhsata ga nirakrtyovacemah somyanusamvrajeti ta abhiprasthapayannuvaca nasahasrenavarteyeti sa ha varsaganam provasa ta yada sahasram sampeduh. Iti caturthah khandah* the meaning of the mantra is no Brahmin could speak like this [therefore you must be a Brahmin] O somya go and get me some fuel [for the sacrificial fire] I will initiate you [as a Brahmin by presenting you with the sacred thread], as you have not deviated from truth. After the initiation he selected from hundred feeble and famished cows. Addressing Satyakama Gautama said 'O somya take these cows away and look after them. As Satyakama was taking them away he said, 'I will not come back until there are a thousand of them.' He lived away for many years until they had become a thousand. The point is no matter what Satyakama's birth was, he had the qualities of a Brahmin love of truth and learning. Though he had to suffer much hardship living in the forest looking after the cows, he was more concerned with keeping his word than with seeking physical comforts.

Satyakama is a young boy and wants to gain vaidhika sadhana in the form of Sagunam Brahman Upasana and went to a guru. The guru asked for his gotra and the family lineage. This to check whether he had the cultural background for pursuing the vedic study. Self-knowledge cannot be taken and plant anywhere and this can grow only where the culture is there and this can be known by knowing the parampara. This is very well said in Upadesa sahasri. Vedanta gives the knowledge and the mental make up is given by mental make up for vedic culture.

This boy said that I don't know my gotra and even my mother does not know my gotra. I should be called satya kama jabalah. My mother's name is jabala. The guru says that you must belong to a cultured gotra only that I infer because you said that I don't know when you don't know. That means you did not choose to bluff and the very fact that you told the truth even though truth may lead to lot of rumours. No body wants to tell truth as that would bring ill fame to the family. The conditions to be a samskrita manusya is sathyam vadha speak the truth. The first qualification to speak the truth satya kama had. The first test is character test. You are a moral person a refined person. Even Karna did not tell the truth without bothering whether the speaking truth is advantageous or disadvantageous. Having ascertained the cultural qualification the guru did not teach and invited him for upanayana samskara and make him a samskara and gave him the second qualification. Having ascertained that the boy had complete qualification, only he taught him Brahma Vidya. Therefore the essence is that we come to know a teacher teaches vedic sadhanas only after ascertaining the absence of disqualification. This is the background of this sutra.

We will go in word for word analysis. Tad abhava nirdharane cha pravritteh there are four words in this sutra. Pravritteh means the commencement of the vedic teaching; by whom and to whom the sutra does not say. The commencement of teaching to satya kama jabalah; because of haritrumatas commencement of vedic teaching to satya kama jabala cha means also; in addition to the reasons in the previous sutra; tad abhava nirdharane consists of tad, abhava and nirdharanam; tad means disqualification; abhava means absence and qualification; nirdharanam means ascertainment making sure that the student has the absence of disqualification. The student has presence of qualification. It also indicates that the guru has the responsibility to ascertain the qualification of the new sisya or student. In the previous sutra qualification is required and in this sutra it is said that the guru should ensure that the guru has the desired qualification for the imparting of the Brahma Vidya. Only after the ascertainment of the absence of disqualification; because of this it is evident that asamskrita manusya is not eligible for sroudha sadhana.

## Topic 9 Apasudradhikaranam; [Sutras 34-38]

The right of the sudras to the study of Vedas discussed.

### Sutra 1.3.38 [101]

#### *Sravanadhyayanarthapratishedhat smritescaha*

And on account of the prohibition in Smriti of the sudras hearing, studying and understanding the veda and performing vedic rites they are not entitled to the knowledge of Brahman.

The same discussion on the sudras' right is concluded here

I will do the general analysis first. Here Vyasacharya points out the smriti support. The smriti itself mentions what are the shrouha sadhana. Smriti goes one step further even veda sravanam listening to is a shrouha sadhana and all the four shrouha sadhana requires samskriti. Vashista smriti says the vedic chanting should not be done very near a asamskrita manusya. This means asamskrita manusya should not hear the vedic chanting. Then the next one is Gautama Dharma sutra says that the artha vichara and artha anustanam cannot be practiced by asamskrita manusya. Sravana, adhyayana, vichara and anustana cannot be done by the asamskrita manusyas. Since smriti negates the shrouha sadhanas we should conclude that asamskrita manusyas are anadhikaris.

Now we will do the word for word analysis. Sravana adhyayana artha pratishedhat smriteh and cha; smriti refers to smriti pramana vashista dharma sutra and Goutama dharma sutra. Sravana adhyayana artha pratishedhat vedic hearing, vedic chanting, artha vichara and artha anustana, the analysis and the practice of rituals; pratishedhat means negation. The final meaning is because of the smriti pramana also, which negates vedic hearing, vedic chanting vedic enquiry and vedic rituals asamskrita manusyas are anadhikarai are not eligible for shrouha sadhanani. Adhi Sankaracharya mentions a few more points worth noting. Thus it is concluded Janasruti is samskrita manusya eligible for vedic study.

Adhi Sankaracharya adds another reason to prove that Janasruti is a ksatriya only. The support Adhi Sankaracharya gives is that if you read Janasruti story you come to know that he built many choultries where annadhanam was promoted throughout the country means he had lot of wealth and to find Raikva he sent his charioteer and if you read the puranic stories you come to know that chariot served only the ksatriyas only. The how can there be a chariot for any other person other than ksatriyas. The very word chatta indicates that Janasruti belongs to ksatriya community only. He had a status by which he commanded not only wealth but also the chariots. Then Adhi Sankaracharya makes another general observation. There is Mahabharat statement that says one should teach scriptural knowledge to all the four varnas. That means Mahabharat does not make any difference between samskrita and asamskrita manusyas. That means you contradict Mahabharat. It does not say shrouha sadhanani and it refers to vedic sadhana and it is applicable to smartha sadhana and therefore there is no restriction for smartha sadhana. This is there to enable all the people to benefit from the vedic study. Through shrouha or smartha one can get siddha suddhi and Self-Knowledge and moksa. The restriction is with regard to the route that is taken shrouha sadhana or smartha sadhanam both taking one to the Self-Knowledge and ultimate liberation. Then Adhi Sankaracharya makes a compromise in his bashyam. Now he says that I will relax a bit. Let us assume that Janasruti is a sudra or asamskrita manusya and even if he assumes

that our conclusion must be samvarga vidya is an exceptional vidya in the case of which asamskrita has an eligibility. The general rule for shroudha sadhana and samvarga vidya should come abhavada rule and never take an exception as a general rule and Adhi Sankaracharya technically presents this. In the Vedas there are two statements first is sudra that asamskrita manusya is not eligible for vaidhika karmas and there is another sruti statement that the tribals, hunters a tribal architect etc., asamskrita manusyas do not have upanayana samskrita and he should be assisted in the performance of yaga. He should be guided in the performance of vaidhika karmas. He should be assisted by other eligible persons. Our attitude towards vedic statement is veda statement cannot be negated. There is only one way validating both statement that the first rule is general and the second is an exception that asamskrita manusyas are ineligible for vaidhika karama and the second rule that asamskrita manusyas can be assisted in the performance of vaidhika karmas by other eligible persons. This is the essence of this sutra. Even if Janasruti is asmaskrita manusya we accept him as exceptional case allow him to pursue the study of Brahma Vidya. More in the next class.

## BRAHMA SUTRA

Class 120

### **Topic 9 Apasudradhikaranam; [Sutras 34-38]**

The right of the sudras to the study of Vedas discussed.

#### **Sutra 1.3.38 [101]**

#### ***Sravanadhyayanarthapratisedhat smritescaha***

And on account of the prohibition in Smriti of the sudras hearing, studying and understanding the veda and performing veidc rites they are not entitled to the knowledge of Brahman.

The same discussion on the sudras' right is concluded here

In the last class we completed the 38<sup>th</sup> sutra this particular adhikaranam is over. I will give you a summary of this adhikaranam. Vishayah samsayah purva paksah siddhantah and sangathi. Vishayah is Brahma Vidya shroudhya Brahma vidya as obtaining in original Vedas or Upanisads Brahma Vidya as shroudhya sadhanam is subject matter. The doubt is whether it is sarva manusya vishayah or not. Is it accessible to all or to some human beings. Purva paksa says it is available for all manusyas. He has two reasons in the mind that devatadikaranam and even though they have no right for karma and still they had right over Brahma Vidya. All human beings have adhiraka. Purva paksa is ready to samskrita asamskrita beda and accept all of them have right to pursue samvarga vidya. But in Chandogya upanisad uses the word sudra and Janasruti addressed as sudra and made him ineligible for Brahma Vidya. Siddhanti wants to say that Brahma Vidya as shroudhya sadhanam is accessible to samskrita manusya alone. Brahma Vidya as smartha sadhanam can be pursued by one and all samskrita and asamskrita manusyas. Brahma Vidya as smartha is accessible to all. As part of siddhanta the word sudra was said to belong to samskrita manusya as an exceptional case. Next is sangathih its position and it is rightly placed in the first chapter third adhyaya. With this, this adhikaranam is over. I will make some general observations. I would like to make two points.. One view is that when we study shroudhya and smartha sadhanam the latter appears to be superior to the former. Smartha sadhanam is more advantageous than shroudhya sadhanam. It does not discriminate manusyas. The discrimination causes complexes. One is samskrita and another is asamskrita manusya and it makes social confusion. Smartha sadhana does not create any problems. Therefore smartha sadhana seems to be superior and better and it does not have much vaidhika mantras. Learning sruti mantras creates problems and it is time consuming and it is painful while the person doing smartha sadhana is always easy. Thirdly these two advantages are there in smartha sadhana. When you talk about prayojanam shroudhya sadhana should give more prayojanam. Again smartha sadhana and shroudhya sadhana give the same benefit. In fact it is better to abolish the shroudhya sadhanam because it does not create any problem in the society. This doubt can arise. The answer is that smartha sadhanam has got all advantages and it is a fact. Also shroudhya sadhanam is not universally acceptable and smartha sadhana is less fire and no smoky problem also. This is true. But still shroudhya sadhanam has certain unique feature, which is not there in smartha sadhanam. As far as utility is concerned both are efficacious. Yet shroudhya sadhanam has got some unique features. Shroudhya is based on sruti and smartha is based on smriti. Sruti has originality and

smriti does not have originality. Anything original has got it has got its own original glory in terms of its originality, which is recognized by all sensible human beings. Original things are preserved for long time. If you study the original car and the present one the original one has better value. Even though there are many disadvantages the original will fetch better prize than the present car. The original car will to even be used for driving although the buyer is ready to pay a fabulous price to have that car. Everyone would like to preserve the original car. From utility value is forgotten the original car has got better value though not utility. When you want to have the original or the duplicate one would prefer to have the original rather than the duplicate. What makes one to respect the original and it has got its own value. Veda has got its originality. With all the disadvantages, it is made insignificant because it is original. Greater price is in the form of samskara, which is subtle price. If anyone asks whether shoudha sadhana or smartha sadhana is better, I will ask from what angle you ask the question. The second feature of veda is shroudha sadhana is associated with originator directly. The originator is the Lord. Veda is the very breath of the Lord. All others are pouruseya pramanam. It is connected with Lord indirectly. The content is borrowed from veda but the words are from manusyas alone. Every letter of veda is associated with originator Lord. Human beings value anything associated with a great personage. Simplem association is enough to make one happy. Imagine veda associated with bhagavan and how great is the veda? Such a Lord veda is associated. What should be the greatness of the Vedas? It is something unimaginable. The value is not tangible and it has different dimension and it requires particular eye to recognize. One stotra says the main guru is ten times more respectable than the secondary guru like visiting professors; acharyanam satam pitha one's own father is hundred times more respectable than acharya; mother is more respectable than father thousand times more than the father; Adhi Sankaracharya in his bashyam says sruti veda mata is more respectable even than the mother. It has a status. The superiority is not based on the utility and it is from the angle of association with the great people. Some are glorious because of original and some because of association and veda is glorious because it is original and it is associated with Lord. Some has to preserve the original. Let all follow smartha sadhana and original shroudha sadhana must be preserved by some members of society and use it as moksa sadhana and majority can use smartha sadhana and gain moksa. Thus veda has got some uniqueness and all discussions are needed because of the value not because of the utility. We all said that shourda sadhana has to be preserved. Preservation requires greater price. We also saw that samskrita manusyas must have two conditions. Now we face an unique problem in the society and it is samskrita manusya species has become endangered one. Number of people interested in upanayana samskara is going down. They do it for society and it more done as mockery or false and even if sacred thread is put they don't care for it. They don't do the sandhyavandanam etc. There are some people who do not want to preserve it. The upanayana samskara is coming down. Even now there are some people want to preserve the thread follow the nithya karma anustana. Parents cannot advise the youngster because the father himself do not follow and do the nithya karma. Samskrita manusyas will not be there in the time to come. Therefore if we go on insist upon samskrita sadhana rule it is difficult to preserve the shroudha sadhana and most of the people including the acharya that there should be relaxation with regard to the rules regarding the samskrita samskara. Sastra also gives some relaxation also. Only thing is that the rules are relaxed on different reasons. Some say rules are wrong. Some say the rules should be revised. There is other who says the rules are not wrong. They say that they are right and they cannot maintain. This is the consensus. Some declare openly and relax it and some don't have the courage and implement it without declaring. It is not done openly. Many do not protest relaxation and in fact the rules are relaxed and even the relaxations are appreciated. Previously it was objection then it was neutrality and now it has become appreciation. Once we accept relaxation and

what should be the degree of compromise. There are no clear-cut rules regarding the degree of compromise. Once there are sastric norms for the degree of compromise that will decide the degree of compromise in the absence of sastric norms. In other religion one head is there. In Hinduism there is no one head. The question is who will decide the degree of compromise since there is no one single head. Different people talk about different degree of compromise. Lot of subjectivity has come in this field. One will say with regard to sravanam we need not be strict about the rules and when it comes to the adhyayanam there must be rules. Other person may say with regard to chanting we can relax the rules and we may not relax the rules when the anustanam,. Why should we be so rigid why not we be rigid about ritual etc. This is a field you cannot say anything about right or wrong. We cannot find what is right and what is wrong. The second thing is the degree of compromise no one is to decide. What I should do is the question posed by somebody. It is intimately connected with me. What norm I should use. You cannot say right and what is wrong. If I have the capacity to judge and decide my course of action independently with confidence I can relax the rule as I wish dictated by the conscious. Suppose I am diffident and I don't know the social condition then he can take the guidance of someone who is superior and who is informed and whom you trust. This is most important thing. And ask that person to guide. You need not feel guilt. If you seek guidance from another person two conditions are important. If you seek guidance follow that guidance. And when you follow that this guidance is right and others are wrong etc. Never judge, once you have sought the guidance from the person you trust don't cross check whether what you do is right or wrong. One will say one thing and another will say another thing. Therefore if you want to follow a norm if you are confident enough or take the guidance without judging him or others and this is only solution to this problem. More in the next class.

## BRAHMA SUTRA

Class 121

### **Topic 9 Apasudradhikaranam; [Sutras 34-38]**

The right of the sudras to the study of Vedas discussed.

#### **Sutra 1.3.38 [101]**

#### ***Sravanadhyayanarthapratisedhat smritescaha***

And on account of the prohibition in Smriti of the sudras hearing, studying and understanding the veda and performing veidc rites they are not entitled to the knowledge of Brahman.

The same discussion on the sudras' right is concluded here

With 28<sup>th</sup> sutra Aasudradhikaranam is over. This goes outside the flow of the main topic of this chapter. This is an incidental diversion. The main topic is all the Upanisads reveal Brahman as chetana upadana karanam of this world. this is revealed in the first pada second and third pada and in the eight and ninth only there is diversion as to who is the adhikari for shroutha vedanta sravanam. Even we discussed devas are eligible for the study in another we studied whether sudras are eligible for this study. Therefore these two adhikaranams are diversion. After the diversion Vyasacharya comes back to the main discussion. Therefore the coming adhikaranam should be read after the 7<sup>th</sup> adhikaranam being 8<sup>th</sup> and 9<sup>th</sup> being diversion adhikaranam. We now enter the kampanadhikaranam. Interesting thing is the diversion adhikaranam is difficult` adhikaranam. with this background we will go to the tenth adhikaranam.

### **Topic 10 Kampanadhikaranam; [Sutras 39]**

The prana in which everything trembles is Brahman

#### **Sutra 1.3.39 [102]**

#### ***Kampanat***

[Prana is Brahman] on account of the vibration or trembling [spoken of the whole world]

An argument in support of Sutra 24 is given here.

This is the tenth adhikaranam and it is one sutra adhikaranam. here Vyasacharya enquires into Kathopanisad mantra. II.4.2 that reads as *yad idam kinca jagat sarvam prana-ajat nihsrtam, mahad bhayam vajram udyatam ya etad vidur amrtas te bhavati* this whole universe evolved from the Brahman, moves [vibrates] in the Prana [in the highest Brahman]. The Brahman is a great terror, like an uplifted thunderbolt. Those who know this become immortal.

This mantra talks about Brahman. the gist of this mantra is whatever there is in the whole world has come out of prana and trembles in the prana. The prana is a great terror, a raised thunderbolt. Those who know it become immortal. The entire world revolves around Brahman. Everything in creation moves according to certain laws. The planet moves about according to some laws. And galaxies themselves move in the cosmos according to certain laws. All are regular and chaotic movement. The seasons come and go because of the movements. The day and night move because of the movement. This cosmic functioning is called revolving. The universal laws are inviolable laws. The entire universe functions according to the will of Brahman. The Brahman is frightening like a person who has a powerful weapon. The Brahman is cause of fear because the entire universe function without violating the laws. All the devatas are observing their limits and the very observation is the indication of fear. The traffic is regular because of the police only and nobody follows the signal. Yatra yatra orderliness tatra tatra policeness. The universal police is Brahman or Isvara. the Brahman is bhaya karanam. First Brahman is jagat seshta karanam. Whoever knows this Brahman becomes immortal the sruti says. from this we come to know that the Brahman is the cause of immortality also. it is the cause of universal functioning and universal fear and universal liberation. Why this mantra appear in Brahma Sutra. The mantra does not use the word Brahman. on the other hand it uses the word prana denoting Brahman. on hearing prana we take it as Vayu only. it refers to loka prasiddha pranavayu or Brahman the jagat karanam is the question posed here. Prana is Brahman only. This is the general introduction.

We will do the general analysis of the sutra. Vyasacharya says prana is Brahman only. the reason is kampanat. It means jagat seshta hetuh. The final meaning is the cause of universal harmony. In all Upanishad we find Brahman alone is the cause of universal functioning it is not only sristi karanam but also sthithi karanam. We have to control and prana is the universal controller and it is Brahman and not Vayu tattvam. Brihadharaynaka upanisad mantra III.7.15 reads as *yah sarvesu bhutesu tisthan sarvebhyo bhutebhyo'ntarah, yam sarvani bhutani na viduh yasya sarvani bhutani sariram ah sarvani bhutanyantaro yamayati eso ta atmantaryamyamrtah ityadhibhutam; athadhyatmam*. The one who inhabits all beings yet is within all beings whom all beings do not know, whose body is all beings, who controls all beings from within, that is your Self; the inner controller the immortal. This is with reference to the beings; now with reference to the body. The Upanishad clearly says Brahman alone is the inner controller of everything.

Again in Brihadharaynaka upanisad mantra 3.8.9 that reads as *etasya va aksarasya prasasane gargi suryacandramasau vidhrtau tisthatah etasya va aksarasya prasasane gargi dyavaprthivyau vidhrte tisthatah etasya va aksarasya prasasane gargi nimesa muhurtamahoratranyardhamasa maasa rtavah samvatsara iti vidhrtastisthanti etasya va aksarasya prasasane gargi pracyonya nadyah syandante svetebhyah parvatebhyah praticyonyah, yam yam ca disamanu etasya va aksarasya prasasane gargi dadato manusyah prasamsanti yajmanam devah darvim pitaro'nvayattah*. Verily under the rule of this imperishable O Gargi the sun and moon are held in their respective courses. Sky and earth are held in their respective positions; moments, hours, days and nights, fortnights, months, seasons and years are held in their respective positions; the rule of this Imperishable some rivers flow to the east from the snowy mountains, others flow to the west each keeping to their respective directions under the rule of this Imperishable people praise those who give, the shining ones depend on the sacrificer and the departed ones on the independent offering. In the presence of Brahman alone heaven remains where it is; sun remains where it is; moon

remains where it is; river flows according to the order; mountain remains where it is etc. because of this we conclude prana alone is Brahman.

We will see the word for word analysis pranah eva kamanat. Word prana occurring in kathopanisad is jagat karanam Brahman because it is because of the universal orderliness or universal functioning; there is a better reference in Bhagavad Gita sloka 18.61 that reads as *isvarah sarvabhutanam hrddesa 'rjuna tisthahi brahmayan sarvabhutani yantrarudhani mayaya* the Lord abides in the hearts of all beings causing them to turn round by His power as if they were mounted on a machine; the Supreme is the innermost Self of our existence. All life is a movement of the rhythm of His life and our powers and acts are all derived from Him. The whole universe is the puppets and Isvara controls everything through his strings of karma. Pranah is Brahman and he is the controller of everything.

Adhi Sankaracharya says it is jagat bhaya hetutvad. Isvara alone is the cause of universal fear and in Taittiriya Upanishad it is said *bhisasmad-vatah pavate, bhisodeti suryah bhisa-smad-agnis-candras-ca mrtyur-dhavati pancama iti* through fear of Him blows the wind. Through fear of Him rises the sun. Through fear of Him again fire and moon and lastly the fifth death proceeds to their respective duties..... Brahman alone is presented as bhaya hetu and here prana is presented as bhaya hetu and therefore prana must be Brahman. then there is a third reason also prana eva Brahman because it is said to be the cause of immortality.

Elsewhere it is pointed out Brahman is amrita hetu. 3.II.9 of Mundaka Upanishad says *sa yo ha vai tat paramam Brahma veda Brahmaiva bhavati nasyo Brahmavit kutle bhavati tarati sokam tarati papmanam guha granthibhyo viukto 'mrto bhavati*. He who knows that Supreme Brahma becomes Brahma and in his line [family] none who knows not the Brahma will ever be born. he crosses grief, crosses sin and being free from the knots of the heart becomes immortal. It is clearly said Brahman is amritasya hetu and here prana is said to be amritatva hetu and hence prana is Brahman.

Now comes Purva Pakshi and says I don't agree with you. I don't want to accept prana as Brahman and prana is only Vayu tattvam both samasti and vyasti which is widely understood by all the people. Why do you give up the widely known meaning and give some other meaning. purva pakshi says prana itself can be cause of three hetu. You say prana is jagat seshta karanatvad; prana is bhaya hetutvad and prana is amritatvad. I have got enough Upanisadic support to conclude in this manner.

In Prasna Upanishad second chapter prana glory is talked 2.13 of the Upanishad says *pranasyedam vasa sarvam tridive yat pratisthitam mateva putran raksasva sris-ca prajnam ca vidhehi na iti* the meaning of the mantra reads as whatever exists in the three world is all under control of the prana and prana protect us like a mother protects her sons. Give us prosperity and wisdom. The entire creation is under the control of prana. in individual level we know prana control all our action. If prana stops even involuntary action stops. All vyasti acts are controlled by vyasti prana and samasti prana Vayu tattvam alone controls everything. Hiranyagarbha sutra alone is the controller of everything. Just as a thread keep all the beads together in harmony, Hiranyagarbha sutratma keeps everything in their place. Vayu tattvam jagat seshta hetuh. There is another mantra just as the hub of the wheel sustains the wheel the universal wheel is sustained by the prana alone mantra 2.6 of Prasna Upanisad.

Then Purva Pakshi says that prana is bhaya hetu also. in mantra 2.10 the Prasna Upanishad says *yadi tvam abhi varsasya themah prana te prajah ananda rupas tisthanti kama yannam*

*bhavisyatiti* prana when you cause the rain to shower down, these creatures of thy glory sit delighted, hoping that there will be as much food as they desire. It says prana alone is responsible for the rain. In the form of Vayu tattvam prana brings cloud together and it is responsible for lightening and the rain to come. Vayu is the cause of the rain and Vayu is cause of thunder also. This thunder causes fear even today. Vayu through thunder causes fear.

Then there is another mantra also, this Vayu alone is Indrah etc. prana as Indra tattvam carries thunder and because of this it is the cause of fear. Prana is amritatva hetu and it is cause of immortality. You need not bring Brahman and prana Vayu tattvam is cause of immortality. Mantra 3.11 of Prasna Upanishad says *ya evam vidvan pranam veda na hasya praja hiyate'mrto bhavati todesa slokah* this wise man who knows the prana thus will not have to suffer his offsprings do not perish and he becomes immortal; here is the following verse about it.

The concluding mantra of the third chapter says 3.12 of Prasna Upanishad *utpattim ayatim sthanam vibhutyam caiva pancadha adhyatmam caiva pranasya vijnaya mrtam asnute vijnaya mrtam asnuta iti* the meaning of the mantra is he who knows the Origin, the entry, the seat the all pervasiveness, the fivefold distribution of the prana and the internal state in the body obtains immortality; yes he attains immortality. All the glories of prana know becomes immortal. Therefore these three reasons fit with Brahman as also prana. Purva Pakshi says that I have got better argument. now Purva Pakshi says that I have got extra support. When prana is taken as Brahman that is unpopular or secondary meaning and not primary meaning. you give in the primary meaning and take secondary meaning. but you take the secondary meaning. between the two prasiddha artha is more powerful. Therefore I conclude prana is Vayu tattvam.

Now siddhanti has to give the meaning. he says I will give up the primary meaning. he says that you also take the secondary meaning in an worse manner. Let us take three hetus. First is jagat seshta hetu and you say Vayu is sustainer of everything. We say Brahman is sustainer of everything. When you say prana is sustainer of everything and everything you mean totally everything and prana is sustainer of everything other than prana and therefore the word everything has got restricted meaning and it is only relatively everything. But when we say Brahman is seshta hetu it means everything including everything.

In Kathopanisad mantra 2.iv.5 says *na pranena na apanena martyo jivati kascana itarena tu jivanti, yasminn etav upasritau* not by prana not by apana does any mortal live; but it is by some other, on which these two depend that men live. He says prana is only a relative controller for Brahman controls prana itself. Therefore the word sarvam you give restricted meaning when you take prana is all you give restricted meaning and when we say sarvam and when we say Brahman is sarvam it gives unrestricted meaning. Vayu may be the controller of everything and it cannot be the controller of Akasa and during the pralaya Vayu get dissolved and how can Vayu be the controller of everything.

You say prana is bhaya karanam and we say Brahman is bhaya karanam. Prana is bhaya karanam of everything except prana. Whereas Brahma is sarva bhaya karanam when we say the sarva includes prana also. Even prana is afraid of Brahman bhaya hetutvam also has got restricted meaning but in our interpretation it is everything including prana.

Then again you say prana is amritatva karanam and we say Brahman is amritatva karanam. When you say it is abeshika amritatvam is not the real moksa and it is only Brahma loka

prapti. it gives long life and it does not make one immortal. Compared to life on this earth the life in Brahma loka is longer. Brahman is adhyanta amritatva karanam. Here also you have restricted meaning under your interpretation. Prana you take vachyārtha and we take lakshyārtha. You compromise more and I compromise less.

Second thing is that we say it is a compromise because prana as Vayu is popular in the world but prana as Brahman is sastra prasiddhah. Sastra uses the word in the meaning of Brahman alone. Mantra 1,2 of Keno Upanishad says *srotrasya srotram manaso mana yad vaco ha vacam sa u pranasya pranah caksusas caksur atimueya dhirah pretya smallokad amarta bhavanti* the meaning is the peceptor it is ear of the ear, the mind of the mind; the tongue of the tongue and also the life of the life and eye of the eye. Having abandoned the sense of Self or I-ness in these and rising above sense life, the wise become immortal. Brahman defined as pranasya prana. therefore we have taken sastra prasiddha artha.

In the context of sastra study we should take sastra prasiddha artha alone and not take loukikha artha. Therefore our interpretation is supported by the sruti.

The third argument is sandamsa nyaya when particular mantra is vague then you study the previous and later mantra and whatever be the previous and later mantra that alone must be the topic of the vague mantra. Here our vague mantra is 2.6.2 *yad idam kinca jagat sarvam prana ejati nihsrtam mahad bhayam vajram udyatam ya etad vidur amrtas te bhavanit* where it is said the whole universe evolved from the Brahman, moves in the prana. The Brahman is a great terror, like an uplifted thunderbolt. Those who know this become immortal. As this mantra is vague, we have to take the context by reading the previous and later mantras according to sandamsa nyaya. Here the mantra 2.6.1 *ibid* says *urdhva mulo 'vak sakha eso 'svatthah sanatanah tad eva sukram tad Brahma tad eva amrtam ucyate tasmin lokah sritah sarve tadu natyeti kascana etad vai tat* the meaning of the mantra is this is the ancient asvatha tree whose roots are above and branches spread below. That is verily the pure, that is Brahman and that is also called the immortal. In that rest all the worlds and none can transcend it verily this is that. The latter mantra 2,6.3 reads as *bhayad asya agnis tapati bhayat tapati suryah bhayad indras-ca mrtyur dhavati pancamah* the meaning of this mantra is the fear of Him the fire burns for fear of Him shines the sun for fear of Him do Indra, Vayu and death the fifth proceed with their respective functions. In the third mantra as above it clearly talks about Brahman, which is the cause of fear including Vayu. Third mantra makes it very clear that the Upanishad does not deal with Vayu but Brahman only. first mantra and third mantra deal with Brahman and hence the middle mantra deal with Brahman alone.

The very context is Brahma prakaranam and this mantra is Yama Dharma Raja's teaching to Naciketusa. He asks for something beyond cause and effect, which is beyond past and future and the entire kathopanishad, is answer to that. prana here is above cause and effect and that can be Brahman alone and not Vayu tattvam. Therefore prana in this mantra has to be Brahman and therefore pranah Brahma kamanat.

Visayah is prana; samsaya is prana is Brahman or prana Vayu; Purva Pakshi says prana is Vayu; siddhanti says it is Brahman. Therefore prana is Brahman. more in the next class.

## BRAHMA SUTRA

Class 122

### **Topic 10 Kampanadhikaranam; [Sutras 39]**

The prana in which everything trembles is Brahman

**Sutra 1.3.39 [102]**

#### ***Kampanat***

[Prana is Brahman] on account of the vibration or trembling [spoken of the whole world]

An argument in support of Sutra 24 is given here.

With the 39<sup>th</sup> sutra the 10<sup>th</sup> adhikaranam is over. now from 10<sup>th</sup> adhikaranam talks about Brahma samanvayah. There are certain adhikaranams dealing with upasya Brahman and some neyam Brahman. neyam Brahman is Brahman as an object of knowledge and it relates to jnana kanda. Upasya Brahman deal with upasana kanda.

### **Topic 11 Jyotiradhikaranam [Sutra 40]**

The 'light' is Brahman

**Sutra 1.3.40 [103]**

#### ***Jyotir darsanat***

The light [is Brahman] on account of that [Brahman] being seen [in the scriptural passage]

The argument in support of sutra 24 continued.

I will give the general introduction to this adhikaranam which is called jyotiradhikaranam. Here Vyasacharya analyses 8.12.3 of Chandogya upanisad *evamevaisa smaprasado'smacchariratsamutthaya Param jyotirupasampadya svena rupenabhinispadyate* this is relevant portion of the mantra that is discussed in this adhikaranam. the meaning of this mantra is in the same way the joyful Self arises from the body and attaining the light of the cosmic Self, appears in his own form. here the guru is teaching Indra the disciple and he teaches Brahman through avasthatriya viveka and turiyam.

Now Brahmaji has come to turiya pratipadanam and not only turiyam is revealed but also the benefit of this knowledge is revealed in this mantra. And the mantra says esah samprasadah asmat sarirat which means jivah in Sushupti avasthayam jiah is that who merges into samasti Isvara and therefore jivah gets the name samprasadah. Asmat sarirat samucchaya the jiva comes out of this body and here coming out means coming out of the body abhimana. Knowing that I am not Sookshma Sariram and I am not even karana sariram I am not visva tajasa and prajna and knowing that I am not Visva Taijasa and Prajna I come out of that and

there is no action involved and he comes out cognitively in terms of knowledge. and the moment I know that I am Visva Taijasa and Prajna vilaksanah paranjothi upa samyajna the jiva becomes one with paranjyoti turiyam and once I negate my visvatvam, taijatatvam and prajnatvam. Becoming one with turiyam is not a process but it is a cognitive change. I have disowned the vachyartham of I and I have owned up lakshyartham I. this is known as I have become turiya Chaitanyam. It is not an action in time. jivah comes out in his own original nature by discovering oneness with turiyam. This mantra we did analyse in the previous context that is 19<sup>th</sup> sutra. There we said svena rupena is an important role and turiya state is not new status and it is coming back to original status. We think that visva status is original and turiya status is incidental but the truth is that turiya status is original and it is my nature while visva etc., status is my incidental nature, which comes and goes. This is the meaning of svena rupena abhinabinispatdyate. The doubt here for it to find a position in Brahma Sutra is the vagueness here. The Upanishad does not use the word turiyam or Chaitanyam but it uses the word paramjyoti. The word jyoti is a confusing word because any fire or light can be called jyoti. Often sunlight is called paramjyoti. The debate paramajyoti is turiya Chaitanyam or Surya jyotih. Surya jyoti is called boudhika jyoti. Chaitanya jyoti is called aboudhika jyoti. Is it material light or spiritual light is the doubt here. This is the background of this adhikaranam.

Vyasacharya says this jyoti relates to aboudhika jyoti only. he says the context reveals that Brahman is the subject matter and not adithyah. Prajapathi vidya begins in 8<sup>th</sup> chapter 7<sup>th</sup> section. It is another name for Brahma jnanam. Prajapathi happens to be the guru and therefore it is called Prajapathi vidya. Prajapathi defines Brahman the Paramatma. Brahma laksanam he gives and he says whoever gains that knowledge will attain everything. This is given as general statement. After hearing this devaraja and asura raja asked for knowledge. After the first level of teaching virocana goes away. Indra comes back to learn second time. Each time he had to serve for 35 years. in the first stage he teaches visva; in the second stage he teaches taijasa and in the third stage he teaches prajna and in the fourth stage he teaches turiyam each time there is 35 years of service Indra had to render to his guru Prajapathi. The beauty is after each stage he goes back and Indra says that I am not satisfied because as long as sariram is there, there is problem; Sthoola Sariram creates problem and Sthoola Sariram creates problem and karana sariram also gives problem in potential form and that also is samsara. Here Indra asks Prajapathi to teach something to gain moksa. First Brahman is taught as means of moksa; thereafter wards each time Brahman says that the whole thing is moksa prakaranam. Then he says that the samsara is embodiment and asariratvam is moksa. From all the discussion we come to know that subject matter is beyond sariram and it relates to moksa. It is going beyond Sthoola Sariram Sookshma Sariram and karana sariram. Prajapathi takes Indra beyond sarira triyam and he goes to turiya Chaitanyam level and definitely not to Surya status. Then how can you talk about adithya jyothi after transcending all the sariram. the Upanishad talks about moksa phalam also for Indra wants moksa. Will adithya jyothi give moksa or chaitanya jyoti give moksa. Adhithya jyothi has got birth and death and hence it cannot give moksa and param jyothi the Brahma jyothi alone can give moksa or liberation. therefore the argument in the sutra is jyoti is Brahman and Brahman is the subject matter of this section.

It has two words jyoti and darsanat. Jyotih is equal to the light mentioned in 8.12.3 of Chandogya upanisad and you have to supply the word Brahman. then supply the word brahmanah darsanat. This means since Brahman is seen the you supply vishaytvena as the subject matter of that section the Prajapathi vidya section which begins with 7<sup>th</sup> section and ends in 12<sup>th</sup> section of Chandogya upanisad. Therefore subject matter of Prajapathi vidya.

The final meaning is light mentioned in the mantra is Brahman as the Brahman is seen as the subject matter of that section 8.7.1 and 8.12.1 of Chandogya upanisad indicate that the whole subject matter is Brahman indicating that the subject matter of this mantra is Brahman alone.

Now comes the purva paksha. to understand this you should know the background of the 8<sup>th</sup> chapter. Here Brahma Vidya is taught twice from section 1 to section 6 and in this section Brahma Vidya is known as dahara vidya. And second time Brahma Vidya is given from section 7 to section 12 and in the second section Brahma Vidya is given in the name of Prajapathi vidya. Not only that in both section Brahman is given the same definition. There the mantra is 8.1.5 Chandogya upanisad here Brahman definition is given in dahara vidya portion. The same definition is given in 8.7.1 of Chandogya upanisad Brahman definition is given. We get the phalam for Brahma Vidya in both the sections. This mantra is the controversial mantra. Our mantra is 8.12.3 of Chandogya upanisad we get Brahma Vidya phalam only, Brahma Vidya phala mantra alone we have the problem. purva paksha says whenever you get confusion you go to a parallel sutra. You say dahara vidya gives the same phalam. if there is confusion here you compare the Brahma Vidya phalam there.

Brahma Vidya phalam is given in 8.6.5 of Chandogya upanisad which reads as *atha yatraitadasmacchariradutkramatyathaitaireva rasmibhirurdhvam aksramate sa omi va hodva miyate sa yavbatksipyenmanastavadadityam gacchatyetadvai khalu lokadvaram vidusam prapadanam nirodho'vidusam* the when a person leaves the body, he goes upward with the help of these rays. If he dies while meditating on om, his going up is assured; otherwise not. In the amount of time it takes his mind to move from on thought to another he can reach the realm of the sun; the sun is the gateway to Brahmaloaka. Those who know the meaning of Om and think of it at the time of death enter Brahmaloaka but those who are ignorant of it have no chance of entering.

Brahma Vidya phalam is said to be that this jiva comes out of the sariram. Coming out of the body is the phalam of dahara vidya as also prajapathi vidya as well. He says that jiva travels through the rays of the sun. When you say rays it is the rays of adhithayh. Therefore rasmi refers to adhithya rasmi and jiva goes through rays of sun to go to the sun. therefore that mantra indicates that the jiva who takes to Brahma Vidya through the rasmis alone and the paramjyoti should refer to adhithya jyothi alone. Therefore paramjyothi is adhithya jyothi alone as supported by 8.4.5 of Chandogya upanisad. In vishistadvaidam moksa is not possible and it is going to the Vishnu loka only. therefore it looks as though Brahma Vidya phalam is Surya loka praptih.

The answer Brahman was define in both dahara and Prajapathi vidya portion. The Brahman discussed in Sagunam Brahman and nirguna aspect of Brahman. therefore dahara vidya and Prajapathi vidya also Brahman is discussed both saguna and nirguna Brahman. dahara vidya is Sagunam Brahman Upasana. But the Prajapathi vidya the focus is Nirgunam Brahma jnanam. in dahara vidya the phalam travel after death but in Prajapathi vidya there will be no travels but realize Atma swarupam and gain liberation. Upasana phalam you take to jnana bhalam and how can both the equated.

Vishayah is the word jyothi the light occurring in 8.12.3 of Chandogya upanisad. Then samsayah doubt is that jyothi is boudhikam jyothi or aboudhikam jyothi whether it is material light or spiritual light. Adhithya varnam is visible and is bhagavan is visible> the word light is figurative. It is aboudhikam jyothi. Purva paksha says boudhikam jyothi is seen in this

mantra. Siddhanta says jyothi is aboudhikam chaitanya jyothi eva keeing in view of the context. Santgathih the position is all right.

## Topic 11 Arthantaradvadyapadesadhikaranam

The Akasa is Brahman

### Sutra 1.3.41 [104]

#### *Akaso'rthantaradvadyapadesat*

Akasa [is Brahma] because it is declared to be something different etc., from names and forms.

An argument in support of sutra 24 is given here.

Here Vyasacharya enquires into another Chandogya upanisad vakyam. 8.14.1 is the vishaya vakyaha. The mantra runs as *akso vai nama namarupayaornirvahita te yadantara tadbrahma tadamrtam sa Atma prajapateh sabham vesma prapadye yasoham bhavami brahmananam yaso rajnam yaso visam yasohamanuprapatsi sa haham yasang yasang syetamadatkamadatkam syetam lindu mabhigam lindu mabhigam iti caturdash khandah.* The meaning of the mantra is that which is described as space manifests names and forms. These names and forms are within Brahman. Brahman is immortal it is the Self. May I attend the court of Prajapathi. May I attain the fame of a Brahmin, and also of a prince and a merchant I wish to have real fame; I want to be famous among all the famous people. May I not have to be born again and have a body covered with blood and dirt, which is toothless and at the same time always wanting to eat. Brahman is Akasa and Brahman shines everywhere. Space is also called akasah because it shines everywhere. It is very well known as the creator or the projector of all the names and forms. And therefore all the namarupas exist in Brahman only. all namarupas are within Brahman. no nama rupa can exist beyond Brahman. nama rupa adhistanam is Brahman. that Brahma alone is immortal. That Brahman is the very Self of the jivah.

What is the problem here? The problem here is teacher could have said Brahman but it uses the word akasah. Here Akasa refers to Brahman? why cannot it be taken as the well known space. for this we give the answer in this adhikaranam. this is the general introduction and we will continue this in the next class.

## BRAHMA SUTRA

Class 123

### **Topic 11 Arthantaradvadyapadesadhikaranam**

The Akasa is Brahman

**Sutra 1.3.41 [104]**

*Akaso'rthantaradvadyapadesat*

Akasa [is Brahma] because it is declared to be something different etc., from names and forms.

An argument in support of sutra 24 is given here.

In the 41<sup>st</sup> sutra Vyasacharya analyses Chandogya upanisad mantra 8.14.1 in which Akasa is used by the sruti. It is analysed whether it is bhutakasa or chitakasa. We point out it is Brahman only. Chaitanyam Brahman is the creator of all the names and forms. All namarupas are within chitakasa and that chitakasa is Self of all and that Self is Brahman alone. This has got only one sutra. In this sutra Vyasacharya says Akasa is Brahman alone because sruti clearly shows the distinction of Akasa from all the namarupas. All namarupas are within the Akasa it is said. Sruti says all the namarupas are within Akasa. All nama rupas are contents and the Akasa is the container. Akasa is the product as per sruti. Bhuta Akasa also must be one of the namarupas. Since Akasa is born Akasa also must be along with all the namarupas. It should be within the contents or the container. Bhuta Akasa is nama rupa and it should fall under the content only and what should be the container and the container is chidakasa which is not nama rupa,

### **Topic 12 Arthantaradvadyapadesadhikaranam**

The Akasa is Brahman

**Sutra 1.3.41 [104]**

*Akaso'rthantaradvadyapadesat*

Akasa [is Brahma] because it is declared to be something different etc., from names and forms.

An argument in support of sutra 24 is given here.

In the 41<sup>st</sup> sutra Vyasacharya analyses Chandogya upanisad mantra 8.14.1 in which Akasa is used by the sruti. It is analysed whether it is bhutakasa or chitakasa. We point out it is Brahman only. Chaitanyam Brahman is the creator of all the names and forms. All namarupas are within chitakasa and that chitakasa is Self of all and that Self is Brahman alone. This has got only one sutra. In this sutra Vyasacharya says Akasa is Brahman alone

because sruti clearly shows the distinction of Akasa from all the namarupas. All namarupas are within the Akasa it is said. Sruti says all the namarupas are within Akasa. All nama rupas are contents and the Akasa is the container. Akasa is the product as per sruti. Bhuta Akasa also must be one of the namarupas. Since Akasa is born Akasa also must be along with all the namarupas. It should be within the contents or the container. Bhuta Akasa is nama rupa and it should fall under the content only and what should be the container and the container is chidakasa which is not nama rupa,

Vyasacharya says there are other reasons also besides the above reason. Akasa is supposed to be the creator of all the namarupas. Now the question is whether it is chitakasa or bhutakasa. Bhutakasa also is one of the namarupas created and it cannot be the creator Akasa. If it is created Akasa it is bhutakasa and if it is creator Akasa it is chitakasa only.

That Akasa which is the creator of namarupa and that Akasa which is the created bhutakasa and that Akasa the container of Akasa is immortal. Bhutakasa is immortal or chitakasa is immortal. It is chitakasa is immortal and bhutakasa is marthyam and chitakasa is amritatvam.

The Akasa is said to be atman. Chitakasa is atman while bhutakasa is jada vastu. Self is a conscious being. Fifth and final reason is atmatvam and because of these things Atma is Brahman.

Akasah is the first word. The word Akasa occurring in 8.14.1 of Chandogya upanishad is Brahman. it is not elemental space. Then the next word is arthantatvadi vyapadesat. The sruti declaration of Akasa is distinction and then supply the word namarupapyam from names and forms. Here the word arthantaratvam adi vyapadesat is a compound word. sruti's declaration in the same portion. Namarupa is content and Akasa is the container and from this we have to deduce container is different from the content bhutakasa. Arthantaratvam means difference or distinction from all the namarupa, which includes bhutakasa also. All other four supporting statements is declared by the word adhi.

Now we will see the purva paksa. Purva Paksi says I don't agree with you. Why cannot you take Akasa as the regular elemental space? Any word should be given the primary meaning first and should not look for the secondary meaning. Primary meaning you should apply because it is primary. The Upanishad itself why nama which indicates prasiddhartha. When sruti uses well known and we should take the meaning well known and the inside space is not said but we should take bhutakasa only is the contention of the purva paksa. here muktyartha fits in properly because Upanishad says namarupayo nirvahita means the creator or even accommodator and the purva paksa argues Akasa is both a creator as also an accommodator because of the sruti support itself. From Akasa alone Vayu is created and Vayu water is created etc. Akasa is the creator and is the accommodator also which is the second meaning of nirvahita. We know Akasa as the sustainer of all namarupas and we know all namarupas are within the space and therefore why cannot you take Akasa as bhutakasa and why do you go in for Chaitanyam. This is purva paksa.

Siddhanta says you can take Akasa as elemental space. latter part of the mantra you cannot satisfactorily explain and you have to compromise with the mantra. You have to limit the meaning. Upanishad says Akasa is the creator of all namarupa. When you say bhutakasa is creator of all namarupas other than bhutakasa. Therefore Akasa except Akasa creates all namarupas. But when you say chitakasa is creator of all namarupas and all namarupas include bhutakasa also. in our interpretation namarupa has the absolute meaning. Similarly when you

say bhutakasa is accommodator of all namarupas means again you have to say it is the accommodator of namarupa other than Akasa. Upanishad says that bhutakasa is a product and any product is subject to decay and it is only a namarupa and it has the restricted meaning and only if we take Akasa as chidakasa it has unrestricted meaning and therefore Akasa is nothing but Brahman. When the Upanishad says tad Brahman, it will be clear that bhutakasa can never be Brahman and Chidhabasa alone is Brahman. On closer analysis even that compromise is not a compromise because we have to take sastra prakasa Akasa and not loukika Akasa. Therefore there is no real compromise at all. If you are taking Akasa as elemental space you have to divide into two portion and first portion talks about bhutakasa and the second portion talks about the chidakasa. In one mantra itself one part will talk about bhutakasa and another about Brahman and there will be no connection. The sudden entry of bhutakasa has no relevance at all. Chidakasa creates namarupa and it will fit in with our discussion and therefore purva paksa is wrong and this adhikaranam is over.

Vishayah is akasah occurring in Chandogya upanisad 8.14.1. then samsayah is whether Akasa referred to there is chitakasa or bhutakasa or it is chitakasa Brahman or bhutakasa the elemental space. Purva Paksi says it is elemental space because it is primary meaning. siddhanta says it is chitakasa eva for it is different from all namarupa including bhutakasa.. it occurs in the proper place only. in the three adhikaranam the discussion was prana is Brahman and jyotiradhikaranam we said light is Brahman and here we say Akasa is Brahman. But all these three topics we have already discussed in the first pada. We have discussed 1.1.8 to 1.1.10 all the three topics in different mantra. Prana is Brahman jyoti is Brahman and Akasa is Brahman. We might have a doubt when these have already been discussed why we should discuss now here. We can give an answer the mantras are different and the next question is topic being the same why cannot you put closer to that adhikaranam. sangathi vichara can go to pages by sub commentators. why not bring the earlier topics near this adhikaranam. The reason is that in the first context, there is indication to reveal Brahman.

When we have already discussed in the first pada why should it be discussed here. We can give an answer that the mantras are different and here certain set of mantras are discussed. This we call the positional enquiry. sangathi vichara goes and sub commentators discuss it very elaborately. Why cannot it be in first pada or bring the first topics here. For that that the reason the sub commentators say that in the first pada the indications are powerful indications. In the first pada the reasons that we gave are powerful prana is Brahma jyoti is Brahma etc are clear reasons. Here we face different problem and here Brahman indicating reasons are there and equally non-Brahman indicating reasons are also there. Therefore Brahma lingams are aspasta Brahma linga vakyani. Purva paksa has also got equally powerful reason. Therefore sangathi is correct only. With this, this adhikaranam is over. Now we will go to the next adhikaranam.

### **Topic 13. Sushuptyutkrantiyadhikaranam**

The Self Consisting of knowledge is Brahman

**Sutra 1.3.42 [105]**

#### ***Sushuptyutkrantiyobhedena***

Because of the highest Self being shown as different [from] the individual soul] in the states of deep sleep and death.

An expression from the sixth chapter of the Brihadharaynaka upanisad is now taken up for discussion.

We enter the next and final adhikaranam of the third pada. I will give you a general introduction to this adhikaranam. this adhikaranam has got two sutras and here Vyasacharya analyses Brihadharaynaka upanisad mantra IV.3.7 which reads as *katama atmeti; yoyam vijnanamayah pranesu hrdyantarjyotih Purusa; sa samanah sannubhau lokavanusanancarati, dhyayativa lelayativa; sa hi svapno bhutvemam lokamatikramati mrtyo rupant* the meaning of the mantra is ‘which is the Self? The Purusa, which is reflected in the intellect and is in the midst of the pranas, the Self-effulgent light within the heart [intellect]. Assuming the likeness of the intellect, it wanders between the two worlds, meditating as it were and moving, as it were. Being identified with dreams, it transcends this waking world, which represents the forms of death [ignorance and its effects] this we see in the swayam jyothi Brahmanam which is in the form of janaka Yajnavalkya samvadha Brahmanam. Here Yajnavalkya goes to Janaka and janaka asks for the boon which being the discussion on Vedanta. janaka is saving grace for all the grahastha and Maitreyi Brahmanam is saving grace for all the ladies. Janaka did not I have no time but ever prepared to take discussion on Vedanta. He asks what is the light the basis of which we transact. In the day sun is the light, in the night moon is the light and on amavasya day it is fire that provides the light. And when Agni is not available, vak functions as jyothi. Somebody helps you to do the job by directing you through words. When all are not functioning what is that light that helps you and he says that it is the light of Consciousness that helps transact business. Then janaka asks the question in 4.3.7 of Brihadharaynaka upanisad that reads as *katama atmeti; yoyam vijnanamayah pranesu hrdyantarjyotih purusah; sa samanah sannubhau lokavanusanancarati, dhyayativa lelayativa; sa hi svapno bhutanam lokamatikramati mrtyo rupani* the meaning of this mantra is the Purusa which is reflected in the intellect and is in the midst of the pranas, the Self effulgent light within the heart [intellect]. Assuming the likeness of the intellect, it wanders between thentwo worlds, meditating, as it were, and moving as it were. Being identified with dreams, it transcends this waking world which represents the forms of death ignorance and its effects.

What is Self is the question and for that Yajnavalkya gives his answer. He says Atma is chaitanya swarupa. This is known as purusah and which is antarjyothi, which is the inner light; it is the inner light residing in the heart that illumines every indriaym. It is intimately associated with every organ. the tree is on the rock means it is closely related to the rock. Thus Yajnavalkya defines Atma in the above mantra. The Upanishad uses the word Atma and we doubt whether it is Jivatma or Paramatma. Which Atma is talked about is the question and the conclusion is Paramatma because of the following reason. This is the general introduction.

In the first sutra Vyasacharya takes two particular portions occurring in the swayamjyoti Brahmanam. The mantras are 4.3.21 *tadva asyaitadaticchanda apahatapapmabhayam rupam tadyatha prtyaya striya sampartsvakto na bahyam kincana veda nataram evamevayam purusah prajna atmana, sampartsvakto na bahyam kincana veda nantaram; tadva asyattadapta kama atmakamam akramam rupam sokantaram*, the meaing of the mantra is that indeed is its form – free from desires free from evils free from fear; as a man fully embraced by his beloved wife knows nothing that is within, nothing that is without so this Purusa when fully embraced by the Supreme Self knows nothing that is within nothing that is without.

That indeed is its form in which all the desires are fulfilled in which all desires become the Self and which is free from desires and devoid of grief which talks about Sushupti and 4.3.35 which reads as *tadyathanah susamahitamutsarjadyayat evam evayam sarira Atma prajnenatmananvarudha utsarjan yati, ya traitadurdhvocchavasi bhavati* the meaning of the mantra is just as a fully loaded cart moves along creaking even so, the Self identified with the body being presided over by the Supreme Self moving along groaning when it is struggling for breath thus the mantra talks about ukranti the maranam or death.

This jiva the individual in Sushupti has become one with Atma; and because of the embracing merger into Atma this jiva does not know either the external world or himself neither he has the objective knowledge or the subjective knowledge. the Mandukya Karika no 12 reads as *na'tmanam na Param'caiva na satyam napi canrtam pramanah kincana samveti turyam tat sarvadrk sada* the meaning of the mantra is prajna does not know anything of the turth or the untruth, nor does prajna know anything of the Self or of the non-Self; prajna knows nothing. But Turiya is ever and it is always the all knowing the all seeing.

In this Upanishad says jiva has merged into Atma. If the Upanishad says jiva has merged to Atma means jiva must be different from jiva. And that should be Paramatma alone and therefore jiva has merged into Atma means jiva has merged with Paramatma and Atma her is used in the meaning of Paramatma alone. Here Atma cannot be jiva then jiva will merge with jiva and this is not correct. The word Atma is used in the meaning of Paramatma which is distinct from Jivatma. This is Sushupti context.

The same is the case with ukranti also. at the time of maranam jiva travels along with Atma it is said. It changes the house like a cart traveling with lot of materials. The carriage makes lot of noise. It is because one is ready for prayanam. The idea is that it travels with Atma which means Atma is other than jiva and that is Paramatma alone.

## BRAHMA SUTRA

Class 124

### **Topic 13. Sushuptyutkrantyanadhikaranam**

The Self Consisting of knowledge is Brahman

**Sutra 1.3.42 [105]**

#### *Sushuptyutkrantyanobhedena*

Because of the highest Self being shown as different [from] the individual soul] in the states of deep sleep and death.

An expression from the sixth chapter of the Brihadharaynaka upanisad is now taken up for discussion.

We do the general analysis of sutra 42 in the final adhikaranam of the third pada and in this adhikaranam Vyasacharya analyses 4.3.7 of Brihadharaynaka upanisad. Yajnavalkya has pointed out that Atma is the light in whose presence all the transactions take place and when he talks of Atma jyoti he asks for what Atma is. Yajnavalkya answers that Atma is Purusa which is nothing but Consciousness obtaining in the hridayam. He uses the word Atma here and there is confusion whether it is Jivatma or Paramatma. We have establish that it is Paramatma alone. We keep in mind two mantras occurring in the same Brahmanam 4.3.21 and 4.3.35 of the same Upanishad. in this context Upanishad uses the word prajnena Atma samparrishatvaha and prajnena Atma anvarudah at the time of Sushupti the Jivatma or jiva merges into Atma. Jiva merges into Atma is the expression., if the expression Jivatma merges into Atma it cannot be Jivatma and jiva merges into Jivatma cannot be accepted and therefore Atma should be translated to Paramatma and extend it as Jivatma merges into Paramatma. The carrying on Atma jiva travels from one body to another and jiva travels mounting on the Atma means Atma cannot be translated into Jivatma in which jiva mounts on Jivatma and travels is meaningless. Therefore we must take it as Jivatma travels on Paramatma are the right expression. and it is clearly Jivatma is different from Paramatma. This is the general analysis. Now we will take up the word for word analysis.

We have to supply certain words. First is Atma. The word Atma occurring in 4.3.7 of Brihadharaynaka upanisad is Brahman. it is Paramatma only. vyapadesat and we have to borrow from the previous sutra. Since it [Atma] is said; bedena to be different; then you supply Jivatmanah from Jivatma shushupyukrantyo in the statement dealing with sleep and death 4.3.21 and 4.3.35 of Brihadharaynaka upanisad dealing with sleep and death Sushupti vakya is 4.3.21 and utkranti vakya is 4.3.35 of Brihadharaynaka upanisad; bedena vyapedesat.

Now purva paksa comes and says that you conveniently quote those mantras where it is see Atma as Paramatma. Here itself there are mantras which refer to Atma as Jivatma and how do you choose to interpret Atma is Paramatma. He has enough quotation. In 4.3.7 itself Upanishad says Atma is in the hridayam and Atma is given a location indicating that Atma is in hridayam. Where the location comes it refers to Jivatma alone. It is closely associated with

indriyas or organs. It is closely connected with prana and prana means here indriyas. Prana sambanda indicates Jivatma location indicates it is Jivatma. That very same Atma jayamanah means is subject to birth and further it is said that it is associated with papam. Thus it gets associated with papas and exhausts papas and quits and all are descriptions of Jivatma alone. In the next mantra the Upanishad says that Atma is associated with three avasthas also. all are associated with Jivatma alone. Later in another mantra Upanishad says this Jivatma experiences punyam and papam in jagrat and swapna avastha and it clearly refers to Jivatma alone and hence purva paksa says Atma means Jivatma only.

Now siddhanti answers and we do not say Jivatma is not talked about. But what we say Yajnavalkya's subject matter is Paramatma alone. Subject matter of revelation here is Paramatma alone. The purpose of the prakaranam is Paramatma, which is distinguished in the two mantras as above, is our conclusion. Then purva paksa asks the question that Jivatma is talked about and Paramatma is also talked about and how do you know that Paramatma is subject matter and not Jivatma. When different topics are discussed and when there is vague idea, on analysis we come to know that Jivatma is not an unknown thing for Yajnavalkya to teach. It is already known and we have aparoksa jnana nishta and Jivatma is not apurva vishaya and jivatma is not anagathi vishaya and what is unknown is apurva vishaya is only Paramatma and therefore that alone can be the subject matter of the swayam jyothi Brahmanam. During the course of the dialogue off and on janaka says very nice Yajnavalkya I like your teaching etc. thousand cows he gives as guru daksina. He further asks the guru several times to teach him further to gain liberation. then again Yajnavalkya starts and so the teachings continue. The tatparyam is moksa sadhana bodhanam can Jivatma jnanam give moksa and if that is so we would have been liberated long before. The purpose of the teaching is the teaching of Paramatma and getting liberation. now purva paksa puts another question. There is no tatparya in it, Paramatma alone is moksa sadhanam. If Jivatma is known and need not be taught why should that be taught here. Yajnavalkya could have taught Paramatma itself and would have avoided confusion by not discussing Jivatma. Why all this confusion. This is purva paksa question. Now siddhanti says that Jivatma is talked in the beginning and Paramatma is talked about in the end because unfortunately or fortunately Jivatma and Paramatma are not totally different and Paramatma with attributes is Jivatma and Jivatma minus attributes is Paramatma. I am Paramatma if my attributes are negated. Saguna Chaitanyam minus attributes is nirguna Chaitanyam. Saguna Chaitanyam is Jivatma and nirguna Chaitanyam is Paramatma. That is why the Upanishad introduces Jivatma with attributes and then negates attributes and reveals Paramatma. Introduction of Jivatma is called anuvadah. If you see mantra 4.3.7 itslef it talks of Jivatma associated with organs it does variety of activities and in this context the Upanishad uses a very important layati eva leyalati iva by saying that it is as though involved in activities indicating the activities are as though activities and don't take it to Jivatma. Bogta minus bogtritvam is Paramatma karta minus kartritvam is Paramatma. Again later it does talk about three avasthas and Upanishad talks about sukha dukha anubhava. Later it says Atma experiences pleasures and pains etc and Upanishad makes a statement that whatever Jivatma experiences there it is not associated with those sukha and dukha. And why it does not stick to that is asangohi ayam Purusa and Jivatma is asangah and it does not have punyam and papam and Jivatma minus punya papa is Paramatma. It introduces Jivatma with punya papam and it concludes Jivatma minus punya papam is asanga Paramatma. It is to reveal the Paramatma Jivatma with attributes is introduced.

Then comes purva paksa why should Upanishad take to indirect method to reveal nirguna Chaitanyam. First introduce saguna Chaitanyam and remove the attributes and then reveal

nirguna Chaitanyam. Why this wasteful exercise? Why not reveal nirguna Chaitanyam directly. For that siddhanti answers unfortunately nirguna Chaitanyam is uncommunicable by any means. Nirguna Chaitanyam requires a container called guna and Chaitanyam is brought to us and afterwards asked to remove the container and drink the content the nirguna Chaitanyam. I say bring water. You bring the water in a glass. Automatically you bring water in a glass when I have not asked you to bring a glass. Then again you drink the water and return the glass. Because both know that water cannot be brought by itself and even than he has to bring in his hand. The idea is handva mouthva the container is needed and water means water plus container when I ask you to bring water. Suppose I say I drank water, I take water only and not the glass. I cannot take the tumbler. This is nirupathika water when I drink water and bring water means it is soupathika water. We should always drop the gunas and take only nirguna Chaitanyam. You should take Consciousness obtaining in the body but remove the location which belongs to the body and mind etc, part and when I aham Brahma asmi means you should take Brahman only and should not take the attributes and this filtering job am bagathyaha laksana. Bring banana means you bring banana with skin but when I say I ate banana it is the skin that I don't take. It is bagathyaha laksana. Jivatma is anuvada vakyam and Paramatma is tatparya vishaya and therefore there should not be any confusion at all.

### **Topic 13. Sushuptyutkrantadhikaranam**

The Self Consisting of knowledge is Brahman

#### **Sutra 1.3.43 [106]**

#### ***Patyadisabdebhyah***

The being referred to in sutra 42 is Brahman because of the words Lord etc., being applied to Him. 'He is the controller, the ruler, the Lord of all. Brihadharaynaka upanisad IV.4.22

The argument in support of sutra 42 is given.

Purva Pakshi is not convinced in spite of various clarifications. Vyasacharya gives further support. The subject matter of Atma started in 4.3.7 of Brihadharaynaka upanisad. The discussion continues in 4<sup>th</sup> Brahmanam also [sarira Brahmanam]. He talks about punar janma of Jivatma. Just as a worm leaves from one leaf to another so also Jivatma leaves one body to another after death. The topic is completed in the mantra 4.4.22 of Brihadharaynaka upanisad. This a very important mantra and it is long mantra also. here we find *yoyam vijnana mayam pranesu ya esibatargrdata ajasastasnubcgeta* Atma within the body along with sense organs and the same is *yoyam vijnanamaya* is said in 4.3.7 *yoyam atmanam vijnanamaya pranesu hradyantarajyotih purusah* [Brihadharaynaka upanisad]. Sava esah mahan ajah Atma this Chaitanyam obtaining in the heart is not located in the body and it is sarvagathah Atma. And not only that it is ajah means na jayate. This shows that there no real birth at all and Atma ajah nithyah. Further it says *sa sarvesvarah sarvasya vasi sarvasya sanah sarvasya athipathih*[*ibid*] Jivatma is dasa Paramatma is athipathih the Lord of the creation. not only that *sa sadhunam karmana bhuyan no evasadhuna kaniyan* it is not affected by good deeds or bad deeds that is papa punya, *esa sarveshvarah esa bhutadhipatih esa bhutapatah esa seturvidharana esam brahmana vividisanti* [*ibid*] the mantra goes on and on all indicating Atma is Paramatma alone. It is to know this Atma people take to various type of sadhanas. It is not affected by anything. It indicates that Atma introduced is not miserable Jivatma but what it indicates is glorious Paramatma. This is the general analysis.

Now we will go to word for word analysis. First we have to supply the word Atma occurring in 4.3.7 of Brihadharaynaka upanisad; is Brahman is Paramatma only; patyati sabdebyah because of the usage of expressions like the Lord etc., in 4.4.22 of Brihadharaynaka upanisad; and the expression kept in mind is sarvasya athipathih esa bhutatibathih etc., the one which maintains the order of creation indicates the Atma sabda indicates Paramatma only; pathi adhi sabdah; pathi means Lord bhutatibathi adhi means etc., sarvasya isanah sabdah means expressions. Because of these expressions Atma is Paramatma only. with that this adhikaranam is also over.

The subject mater of the adhikaranam is Atma occurring in 4.3.7 of Brihadharaynaka upanisad; samsaya is it is Jivatma or Paramatma; purva paksa says it is Jivatma only because of location; association with organs, avasthas punar janma etc., fourth siddhanta says Paramatma only the Atma refers to. The main reason is Yajnavalkya question that it is moksa prakaranam therefore Paramatma alone can be the subject matter. then sangathi is that it is occurring in the right position alone. With this last adhikaranam is over. with this third pada is also over.

We had said that the first pada is spasta linga Brahma vakyam and second and third deal with aspasta linga Brahma vakyam. In all the three padas we only take statements in which Brahman is not clearly revealed. in all of them we prove Brahman only through Brahma lingani the indicators. In the first pada the indicators are very clear. In the second and third padas the clues are very vague and unclear. Brahman vague in all the three padas.

The question is second pada also deals with aspasta Brahma linga and third pada also deal with aspasta Brahma linga vakyani. Why there is difference between the second and third pada. This is a difficult issue. In second pada it deals with the Upasana phala vakyani and in the third pada it deals with aspasta Brahma linga jnana phala vakyani. Here also we get into problem. We get in second pada also Upasana phala and jnana phala vakyas are there. This we see in third pada also. Can we say that more Upasana phala vakyas are there? That is also not correct. Really speaking second third pada division is unexplainable.

In the second pada there are seven adhikaranams of that 1,4,7 [adhikaranam] are Upasana param adhikaranam and 2,3,5 and 6 [adhikaranam] are jnana param vakyas are there. In the third pada 4 and 5 are Upasana param and 8 and 9 are adhikara param and the rest of the nine are jnana Param. In both jnanam and upasanam are there. They say in the second pada 1 and 7 are Upasana Param and therefore it is Upasana predominant and in the 3<sup>rd</sup> pada does not begin and end with upasana Param and so we do not say that is upasana Param.

## BRAHMA SUTRA - Chap: 1, Pada: 4

Class 125

### **Introduction to the fourth pada**

We have completed the first three padas of the first chapter. Now we enter the fourth pada. Now I will give you the general introduction to the fourth pada. In the previous padas revealed that jagat karanam brahman samanvayah. All vedanta revealed jagat karanam brahman, this was established in the three padas. First it was spasta brahma linga vayani and in the second and third aspashta pada brahma linga vakyani. The consistency in revealing brahman is revealed in the three padas and in fourth also the same consistency in revealing continues. Here vyasacharya will take certain significant words occurring in the upanishad for discussion. There is confusion in interpreting some words while samkya philosophers interpret in their own way while siddhantis reveals the exact meaning while refuting the samkya views. Therefore pada vichara is going to be highlight of the fourth pada. Vakya vichara was the highlight of the three previous padas. In fourth pada also vakya vichara will be there but the highlight is pada vichara. Therefore it is called pada vichara pada. This has got eight adhikaranam or topics and 28 sutras. This is the background of the fourth section.

Now I will give you the general introduction of the first adhikaranam. It has seven sutras and it is called anumadhikadhikaranam. Before going to the details of this adhikaranam we will read the first sutra.

### **Topic 1; anumadhikadhikaranam {sutras 1-7}**

The mahat and avyakta of the kathopanisad do not refer to the samkya tattvas

#### **Sutra 1.4.1 [107]**

***Anumanikamapyekeshamiti chet na sarirarupakavinyastagrihiter darsayati cha***

If it be said that in some [recensions of the vedas] that which is inferred [i.e, the pradhana] [is] also [mentioned], [we say] no, because [the word 'avyakta' occurring in the kathopanisad] is mentioned in a simile referred to the body [and means the body itself and not the pradhana of the [samkyas]; [sruti] also explains [it]

Here samkya philosophy is being refuted in this adhikaranam. Samkya darsanam has got many things common to the vedanta. It is closely appear to be vedanta. Many similarities are there. Names of the philosophy are common and vedanta is often called samkyam. This is the first common feature. The second chapter of gita is samkya yoga. With regard to the name of philosophy there is similarity. Samkya philosophy is authored by kapila. Bhagavan kapila is revealer of samkya in bagavatam. Kapila is common to vedanta as also to samkya. There are many words common to vedanta and samkya and they are purusa and prakriti. Purusa is chetana tattvam conscious principle and prakriti is inert principle and both are anadhi. Avyaktam is there in both samkya as also in vedanta. Avyaktam means unmanifested matter,

which evolves into manifest universe. Therefore prakriti is common purusa is common; avyaktam is common; in both prakriti is presented as karanam of universe.

It is very material cause of the creation. 4.10 of svetasvatara upanishad says *mayatu prakritim viddhi, mayinam tu mahesvaram tasyavayava-bhutais tu vyaplam sarvam idam jagat* the meaning of the mantra is know then that prakriti is maya and the wielder of may is the great lord. This whole world is pervaded by beings that are part of him.

All the product are born out of prakriti. Thus these are the common features. These words are used in veda itself. In bhagavad gita 13.19 it is seen *prakrtim purusam cai'va viddhy anadi ubhav api vikarms ca gunams cai 'va viddhi prakrtisambhavan* know thou that prakriti [nature] and purusa [soul] are both beginningless; and know also that the forms and modes are born of prakriti [nature]

All the products are born out of prakriti. Thus these are the common features and they are used in veda itself. Therefore samkya can claim vedic support for their philosophy. It is veda pramanam. They have the support of veda. Veda uses the word purusa, prakriti and avyaktam and there are so many common features including vedic concurrence. So they claim vedic support for samkya philosophy. Here we want to show that they don't have vedic support and we say it is not vaidhika darsanam and it is seemingly vaidhikam and samkya is avaidhikam. At the same time we don't say it is nasthika darsanam. Buddhism is nasthika darsanam as they don't accept veda pramanam at all. Therefore they are nasthika darsanam. Samkya is not nasthika darsanam because it accept sabda and veda pramanam. For samkya philosophers veda is secondary support and not primary support for him. For him tarka and logic alone is primary support for them. Smkya, naiyayika, yoga etc., are tarka darsanam while vedanta alone is asthika darsanam. They take veda pramana and veda pramana does nto have prominence and they have tarka prominence and they have pouruseya darsanam. Vedanta is primarily veda based and therefore it is apouruseya darsanam and tarka is subservient to sruti and it is supporting sruti and samkya becomes pouruseya darsanam and it is not vedic teaching and veda based human teaching and it is avaidhika darsanam.

Now we will see what are the dissimilarities based on vedic pramanam and those relevant difference that is applicable to this study. Prakriti is basic matter which evolves the universe. Avyaktam is common to both. Prakriti is known as pradhanam in samkya philosophy. He calls the basic matter as pradhanam because it is a storehouse in which entire universe is located in potential form. In fact every seed can be called pradhanam. In the seed the entire plant or tree is located in potential form. This word pradhanam we do not use in vedanta. We should understand as basic matter as seen by samkya philosophers. In vedanta also we have got another word for prakriti which is unique to vedanta and that is maya, sakti, avidya etc. They are synonyms to prakriti in vedanta. Maya is unique synonym for prakriti used only in vedanta. Maya is basic matter as seen by vedantins. Prakriti and maya both are basic matter only.

Now we will see some conceptual similarity. In samkya philosophy prakriti is a totally independent principle. It is as independent as purusa is. Purusa is independent and prakriti independent and both are equally real and therefore they are parallel reality and they are essentially dvaidins aonly. They accept prakriti, purusa, and consciousness separately. Prakriti alone is material cause of creation. Purusa cannot be the material cause of the creation. In vedanta there is a difference. In vedanta also very often we say prakriti is material cause of creation. We put our hand on his shoulder and say that prakriti is the cause of

creation. We look upon prakriti as dependent principle and dependent on purusa. It cannot therefore function independently; prakriti is dependent on purusa both for existence and function. Prakriti is more like sakti or instrument of purusa in vedanta. It is a power of purusa. Whatever prakriti does can be attributed to purusa himself. It is because prakriti is after all a power of purusa an instrument of purusa whatever power does it belongs to the powerful and whatever instrument does it belongs to the owner of the instrument. The pen is writing and pen alone is designed to write. Pen cannot write independently and it requires one to write the notes. When you write the notes, you say i write the notes through the pen. Prakriti cannot evolve independently and it is more an instrument of purusa and purusa creates the world through prakriti and in vedanta purusa is said to be karanam. Ultimately purusa is karanam and brahman is jagat karanam in vedanta and it is not accepted by samkya. For samkya it is achetana karana vadha and for vedanta it is chetana karana vadha. For vedanta chetanam brahman alone through prakriti creates the whole universe. That is what vyasacharya presented through second sutra. Tad chetana karanam brahman. This is the same if you look at prakriti as sakti and sakti produces the world and we attribute the karanatvam to sakti possessor of brahman. When i speak that is but manifestation of speaking power. And the power alone evolves into speech. But i don't say speaking power speaks but i say i say i speak because speaking power is dependent on me. So brahman alone is jagat karanam ultimately. This is the primary teaching of vedanta. Prakriti is the cause of creation is compromise solution. Since this can create certain doubts i will add some more feature to avoid certain possible doubts.

I said prakriti is dependent on purusa. In samkya prakriti is independent. Swatantra prakriti is samkya and paratantra prakriti is vedanta. Prakriti is dependent on purusa and what kind dependent it is. We say the dependence is sathya mithya sambandha the higher form of reality and lower form of reality. We will discuss in detail later. Therefore when we say brahman is karanam through maya or prakriti and prakriti is mithya less real than brahman and prakriti evolved world is also less real than brahman and karana status of brahma is also less real. Karana status of prakriti is also less real. Karana status of brahman is because of less real prakriti. Prapancha mithya prakriti is mithya prakriti karanatvam is mithya prakriti dvara brahmana karanatvam is mithya. From vyavaharika angle brahman is karanam through prakriti. Therefore vyavaharika dristya we are chetana karana vadhinah. Whereas achetana karana vadhinah. These are some of the important and relevant portions of the adhikaranam. Sakmya achetana karana vadha he wants to take the vedic support. Wherever there are words supporting him, he will quote them in support of his plea. One such support he takes is from kathopanisad mantra and it is 1.3.10 and 11<sup>th</sup> mantra. The mantras reads as *indriye bhyah para hy-artha arthebhyas-ca param manah manasas tu para buddhih, buddher atma mahan parah manatah param avyaktam avyaktat purusah parah, purusan na param kincit sa kashtra sa para gatih* the meaning of these mantra is beyond the senses are the sense objects beyond these objects is the mind; beyond the mind is the intellect and beyond the intellect is the great self. Beyond the great [mahat] is the unmanifested [avyaktam] beyond the avyaktam [prakriti] is the purusa; beyond the purusa there is nothing; that is the end ; that is the highest goal. These are the to mantras where purusa is revealed by applying sakachandra nyaya. I will give you the meaning of the mantras briefly. Upanishad starts with indriyam. Superior to sense organs are the sense objects; from one angle superior to sense organs are sense objects for they influence the sense organs by creating desires. Therefore sense objects are more powerful than sense organs. Superior to sense objects is mind. He quotes a brihadharaynaka upanisad vakyam sense organs are called grahah. The ghosts are called grahah. It keeps people under the control of the ghosts. Sense organs are the ghosts and they control the individuals. Sense objects are called adhighrahah ghosts of the ghosts. The sense objects

control the sense organs. Sense objects possess the sense organs and sense organs possess the individual. Each organ is supposed to be the gragrah and adhgrah control the sense organs and sense objects are superior to sense organs. [artha bagha brahmanam of brihadharaynaka upanisad] superior to sense objects is the mind. Superior to mind is the intellect because mind is controlled by the intellect. Superior to intellect is the total intellect mahat tattvam that is samasti buddhi. This portion is relevant to us. Superior to mahat is avyaktam the causal matter prakriti. Superior to prakriti is purusa. Mahat prakriti purusa is the gradual order. Here the portion to be focused is mahat avyaktam purusah. Three words are common to vedanta and samkya also. Whether veda talks vedanta philosophy or samkya philosophy. That is the question. We will refute samkya philosophy. There is a tug-of-war between vedantins and samkya. More in the next class.

## BRAHMA SUTRA

Class 126

### **Topic 1; anumanikadhikaranam {sutras 1-7}**

The mahat and avyakta of the kathopanisad do not refer to the samkhya tattvas

#### **Sutra 1.4.1 [107]**

*Anumanikamapyekeshamiti chet na sarirarupakavinyastagrihiter darsayati cha*

If it be said that in some [recensions of the vedas] that which is inferred [i.e, the pradhana] [is] also [mentioned], [we say] no, because [the word 'avyakta' occurring in the kathopanisad] is mentioned in a simile referred to the body [and means the body itself and not the pradhana of the [samkyas]; [sruti] also explains [it]

In this adhikaranam vyasacharya analyses a kathopanisad mantra 1.3.10 and 11 *indriye bhyah para hy-artha arthebhyas-ca param manah manasas tu para buddhih, buddher atma mahan parah manatah param avyaktam avyaktat purusah parah, purusan na param kincit sa kastha sa para gatih* the meaning of these mantra is beyond the senses are the sense objects beyond these objects is the mind; beyond the mind is the intellect and beyond the intellect is the great self. Beyond the great [mahat] is the unmanifested [avyaktam] beyond the avyaktam [prakriti] is the purusa; beyond the purusa there is nothing; that is the end; that is the highest goal. Three words occur in the same order mahat purusah and avyaktam and our question is whether they refer to the concept of samkya philosophy. Therefore our analyses whether they refer to samkya or otherwise. We will concentrate on the word avyaktam occurring in the katha mantra. According to samkya avyaktam means karana prapancha. In veda also the word avyaktam means karana prapancha. Veda supports the samkya concept or veda we have to analyse. We are going to say that the word avyakta means karana prapancha. In samkya and vedanta karana prapancha means the world in potential form. But the meaning of karana prapancha under samkya and vedanta are different conceptually. Samkya karana prapancha avyaktam is real entity and independent entity. In vedanta when we talk about karana prapancha is both dependent and unreal. It is para tantranca and mithyanca. In samkya it is sathanca and independent. This is the general analysis introduction.

Now we will see the general analysis of the adhikaranam. First part is purva paksa and the second part is siddhantha part. Purva paksa says the veda uses the word avyakta in the meaning of karana prapancha which is exactly same as samkya. So veda supports samkya. When purva paksa says veda uses avyakta in the meaning of karana prapancha which is identical with samkya philosophy, siddhantis say it is not so. The real answer is that avyakta means karana prapancha and according to us it is mithya and unreal. The real answer is given in the third sutra. In the first and second sutra he gives a mischievous answer. In kathopanisad above mantra avyakta occurring in 1.3.11 means karana prapancha only. Vyasacharya establishes avyakta means sthoola sariram and not karana prapancha. I say it is mischievous because 1.3.11 avyakta means karana prapancha only. Yet just for teasing the samkya avyakta means sthoola sariram only. He gives a temporary answer with lot of difficulty. How can the word avyakta mean the physical body. Avyakta means invisible and that which is not

perceptible to sense organs. Here avyaktam means sthoola sariram and we know that sthoola sariram is available for perception. Therefore how do you say that the word avyakta means physical body? Its primary meaning is un-manifest and by implication avyakta means sthoola sariram. We have to take the implied meaning in this context instead of primary meaning. The whole section supports our interpretation. Now the next question how does this section supports our meaning. Before revealing the purusa that is the step-by-step observation, the whole thing talks about spiritual journey the upanishad talks about chariot imagery. The chariot imagery is six factors are introduced. Number one is vishayah means sense objects. Sense objects are comparable to the roads of journey. The physical body is compared to the chariot, which travels. Sense organs are compared to the horses that drag. Fourth factor is manah the mind that reins that control the horses. The intellect is compared to the driver that holds the rein. The jivatma is the traveler who sits behind. These are the six factors introduced in chariot imagery [mantra 1.iii.3 and 1.iii.4 of kathopanisad].

Now vyasacharya says in this spiritual journey talks about six things. Artha, indriyam, manah buddhi, avyakta and purusah; here also are six factors and in the chariot imagery also there are six factors are there. In both the concepts of samkya and vedanta there are sense objects are there; then indriyams are there in both; mind is there; buddhi is there and purusa is there in both; chariot image rathi and purusa tally. There are avyaktam is standing out in spiritual journey. Here sariram is there and their avyaktam is there and so avyaktam refers to sariram. This is the only argument we have to take to prove that avyakta refers to the body. But it will raise the other question as how the avyaktam will refer to the body. For those questions vyasacharya answers in the next sutra. Here it is said that avyakta means sariram. Otherwise the imagery and teaching will tally. This is the general analysis of the first sutra.

Anumanikam abhi samkya pradhanam also is [revealed in the mantras]; belonging to certain [branches of the vedas]. Iti chet if this is argued thus it is not so; sarirrupaka vinyasta gethiter physical body or sarira introduced by the avyaktam in katha 1.3.11 is supplied idea; this is the running meaning. Anumanikam means the pradhanam of samkya philosophy; he uses the word anumanikam because in samkya philosophy pradhanam or karana prapancha is known through inference only but in vedanta avyaktam or prakriti is known through sastra pramanam. Both talk about karana prapancha. Ours refers to sastra pramanam and his refers to inferred entity that is anumanikam that is samkya pramanam. This was discussed in sutra 1.3.18 and 1.3.3 the same word anumanam is used in the meaning of pradhanam. Both mean samkya pradhanam. Abhi means also; not only your brahman is revealed but also my pradhanam also is revealed. The next word is ekasam sakayam means in certain branches of the vedas; in sanskrit eka is singular number but in plural it becomes certain; when he says in some branches means kathopanisad mantras. Iti chet means it is not so; then comes the next word sarira rupasya vinyasta grihitech; sariram means the physical body; rupakam means simile ratha rupakam chariot imagery; vinyaktam means presented grihitih means mentioned; rupaka viyaktam means introduced in chariot imagery. It is adjective to sariram; the physical body which is introduced in the chariot imagery. This is how sanskrit words communicate our idea. Darsayath veda itself clarifies that through the chariot imagery. That avyaktam and sariram tally. Now we will go to the next sutra.

## **Topic 1; anumanikadhikaranam {sutras 1-7}**

The mahat and avyakta of the kathopanisad do not refer to the samkhya tattvas

### **Sutra 1.4.2 [108]**

### *Sukshmam tu indarhatvat*

But the subtle [body is meant by the term avyakta] on account of tis capability [of being so designated]

An objection to sutra 1 is refuted

First we will have the general analysis of the sutra. The previous sutra has complicated. Hence we have the second sutra because we have said avyakta means sthoola sariram. Vyasacharya says the word avyakta means sariram karana sariram in potential form. The body in un-manifest form is vachyartha and by implication it reveals sthoola sariram and karana sariram alone later becomes sthoola sariram. Primary meaning is causal body and by implication it is sthoola sariram. Cause can imply effect. For that different examples are given. In the sastra the word sattvam is used in the meaning of the mind. In the gita 16.1 it is said *abhayam sattvasamsuddhir jnanayogavyavasthitih danam damas ca yajnas ca svadhyayas tapa arjavam* the meaning of the sloka is fearlessness, purity of mind, wise apportionment of knowledge and concentration, charity, self control and sacrifice, study of the scriptures, austerity and uprightness. How can sattvam refer to the mind? It is convention of the sastra a word in the meaning of a cause is used in the meaning of the effect so he says avyaktam has the meaning of karana sariram and it can be used in the meaning of sthoola sariram also. Karana sariram is avyaktam and avyakta primary meaning is karana sariram and by implication it is sthoola sariram. This meaning is given in brahma sutra only and not in kathopanisad.

One more problem is there. We accept avyakta means sthoola sariram. In the graded hierarchy how can sthoola sariram be subtler than indriyam, manah buddhi etc. For that we answer karana sariram and sthoola sariram are same ultimately and by implication it is turned to karana sariram. Thus avyaktam is sthoola sariram only. This is the meaning of this sutra.

Now we will go to the word for word analysis. Sukshmam the body in the causal state is primarily meant by the word avyaktam here; however avyaktam means body in causal state here; tad arhatvad it is appropriate meaning of the word avyaktam. And you supply the next sentence the physical body and its paratvam are implied. However the body in causal state is primarily meant for avyaktam the physical body is implied. The word sookshmam means the body in causal state the karana sariram. Avyakta sariram is directly talked about; tad arhatvad tad means avyakta sabdah arha means the appropriate meaning; karana sariram preserves the word avyaktam; karana sariram is the primary meaning of the word avyaktam; we have to add sthoola sariram is revealed by implication. With this second sutra is over.

### **Topic 1; anumanikadhikaranam {sutas 1-7}**

The mahat and avyakta of the kathopanisad do not refer to the samkhya tattvas

#### **Sutra 1.4.3 [109]**

### *Tadadhinatvat arthava*

On account of its dependent [on the lord such a previous seminal condition of the world may be admitted because such an admission is] reasonable.

The argument in support of sutra 1 continued.

Now the problem we have seemingly solved. We have said in the katha mantra avyakta sabda is used in the meaning of sthoola sariram by implication. In this process we have accepted avyakta means physical body by implication. We have accepted the primary meaning is karana sariram. Even in the other parts of the veda the word avyakta is used as karana sariram only. Therefore purva paksa says in this context it may mean sthoola sariram and you have to accept where avyakta means karana prapancha. Therefore in other places veda supports avyakta as karana prapancha. Thus, avyakta word supports samkya philosophy. From the third sutra alone it is anumnika adhikaranam. Our karana prapancha is dependent entity but samkya's karana prapancha is independent entity. More in the next class.

## BRAHMA SUTRA

Class 127

### **Topic 1; anumadhikaranam {sutas 1-7}**

The mahat and avyakta of the kathopanisad do not refer to the samkya tattvas

#### **Sutra 1.4.3 [109]**

#### ***Tadadhinatvat arthava***

On account of its dependent [on the lord such a previous seminal condition of the world may be admitted because such an admission is] reasonable.

The argument in support of sutra 1 continued.

We do the general analysis of anumadhikaranam. We analyse the word avyakta occurring in kathopanisad mantra. Here purva paksa is samkya philosopher and he claims avyakta refers to pradhanam of samkya philosophy which is none other than jagat karanam or karana prapancha. We establish that the word avyakta samkya pradhanam jagat karanam. In the first two sutras a peculiar meaning was given as sthoola sariram. While giving that particular meaning we admitted that the word avyakta means karana prapancha alone. We said contextually the word avyakta means karana avastha or karana prapancha. This is the gist of the first two sutra.

Thereafter wards samkya philosopher continues their argument. They accept that the word avyakta in 1.3.11 of kathopanisad is sthoola sariram only by implication that vedantins agree that the word avyakta means karana avastha only. It is karana avastha means the entire universe which means jagat karanam. Thus scripture supports the samkya philosophy. Therefore it should refer to pradhanam. Even if in this context avyakta means sthoola sariram there are so many places where avyakta means karana prapancha.

The occasions are brihadharaynaka upanisad 1.4.7 the upanishad uses the word avyakritam that is karana prapancha. In bhagavad gita 8.18 also krishna says *avyaktad vyaktayah sarvaha prabhavanty aharagame ratryagame pralyante tatrai'va'vyahtasamjnake* at he coming of day all manifested things come forth from the unmanifested and at the coming of night they merge in that same, called the unmanifested; here the unmanifested is prakriti.

In samkya philosophy avyakta means karana prapancha and samkya supports sruti and smriti. For this answer is given in this sutra. It brings out one of the main difference between samkya and vedanta. In fact because of this primary difference alone vedanta is called advaidam and samkya is called dvaida philosophy. This primary difference is shown in this sutra.

Now we do accept the word avyaktam means karana prapancha. In kathopanisad 1.3.11 avyakta means sthoola sariram and it only meant samanya artha. It is basic matter or basic energy and we do accept that the samkya philosophy also karana prapancha is basic matter and we use common words. We say avyahritam and we also use the word pradhanam and we also use the word avyaktam; samkya also uses the words avyahritam, pradhanam and

avyaktam and moola prakriti. All are used both in samkya and vedanta with a common meaning karana prapancha. They say prakriti say prakriti is jagat karanam. We also say prakriti is jagat karanam. Then what is the dissimilarity? When we say prakriti or maya is jagat karanam is the secondary version. Our primary teaching is brahman is jagat karanam. This chetana karana vadha is primary teaching of the upanishad. It is fully supported by the upanishad. We give two arguments in support of our argument that chaitanyam alone is jagat karanam and the first argument is brahman is that from which all are born in which all sustain and into which all are resolved. Brahman is defined jagat karanam and that is the foundation of brahma sutra. Vedanta primary teaching is vyasacharya presents chetana karana vadha alone and in support of argument he quotes ii.1.2 of taittiriya upanishad that reads as *tasmad va etasmad Atmana akasah sambhutih aksasad-vayuh, vayor-agnih, agner-apah, adbhyah prthivi, prthivya-asadhayah, asadhibhyo-‘nnam annat-purusah* the meaning of the mantra is from that [which is] this Atman, is space born; from akasa, air; from air, fir; from fire water; from water, earth; from earth, herbs; from herbs, food and from food man... this also reveal atma is jagat karanam and that reveals chetana jagat karanam. Only if brahman is accepted as karanam eka vijnanena sarva vijnanena is possible. Karna vijnanena samstha karya vijnana prapancha bhavati. If prakriti is accepted as karanam and eka vijnanena sarva vijnanam will come and brahman need not be known at all. This itself is going to be analysed later. Because of this reason also brahman has to be accepted as the ultimate cause. In samkya achetana prakriti is jagat karanam and in vedanta chetana brahma is jagat karanam. The second point is when we accept brahman as the jagat karanam the first advantage is sruti support is there and eka vijnanena sarva vijnanena principle is accepted but at the same time there is some problem also. The problem is sruti says brahman is karya karana vilaksanam. To be a karanam it has to undergo a change. But brahman is not subject to any modification. How can brahma karnavadha when brahman is not subject to any change. We point out that brahman has got sakti. Brahman alone is jagat karanam and kevalam brahman cannot be jagat karanam and brahman requires sakti to be jagat karanam and that sakti is called maya, avidya etc. The difference between samkya and vedanta is prakriti is cause of the universe according to samkya and prakriti is not the cause of the world and prakriti is the sakti of brahman with which it becomes the jagat karanam. The second difference is prakriti is independent entity but in vedanta prakriti is a sakti dependent on brahman, when the saktiman is brahman. This is the second point to be noted. Prakriti is dependent principle with brahman being independent.

Except a brahman, sakti by which brahman is jagat karanam. Sakti is resting with brahman and sakti also must be eternal as eternal as brahman how do you talk about advaidm. Brahman and brahma sakti maya is another. Even if you say sakti is part of brahman and then brahman will be with parts and be subject to swagatha beda. Brahman is substance and brahman has got sakti. Then how can we talk about nirgunam brahman. Anantah we do accept. Sakti continues even during pralaya. Sakti or maya is eternally present with brahman. Even though both are real one is eternally real and the other is eternally unreal. One is paramarthikam and another is vyavaharikam. Jnanam knows eternal brahman and eternal maya. He will accept the eternal brahman and maya and he will not count maya as real. He accept maya but he will count it. Because of maya i have everything. Experientially he counts maya and he will not count really. The maya should not be counted along with brahman is the realization of brahman. Maya loses its countability statys. Even after losing its countability it does not lose its experience-ability. The sunrise has lost its reality but it has not lost its experiencability. Maya or prakriti is mithya for Vedanta and for samkya prakriti is swatantram for samkya. Now we will go to the word for word analysis.

Being dependent on brahman avyaktam is not independent pradhanam of samkya. Arthavad it is purposeful also. It means dependent avyaktam is purposeful also. Tad adhinatvad tad and adhinatvad. Tad means brahman adhinatvam means dependent. Tad adhinatvad means brahman dependence. Because of brahman dependence; because of the brahman dependence of avyaktam our avyaktam has got brahman dependence but samkya's avyaktam is independent hence our avyaktam is difference from samkya's avyaktam. The words are similar and the concepts are dissimilar. Athavat means it is purposeful. Avyaktam is purposeful. Maya is purposeful. Adhi sankaracharya explains avyakta is purposeful in what way. In samkya avyakta is jagat karanam. In vedanta avyakta is purposeful in making brahman the jagat karanam. Therefore avyakta is only an assistant of brahman. It is like the wife of the olden days. All the glory goes to purusah. Avyakta is purposeful not creating but assisting. Brahma karanatva siddhyartham avyaktam arthavat bhavati. Tasmad swatantram brahman karanam avyaktam bhavati. It does not have independent existence. Our avyaktam does not have swatantra satta.

### **Topic 1; anumanikadhikaranam {sutas 1-7}**

The mahat and avyakta of the kathopanisad do not refer to the samkhyas tattvas

#### **Sutra 1.4.4[110]**

#### ***Jneyatvavachanaccha***

And because it is not mentioned [that the avyakta] is to be known [it cannot be the pradhanam of the samkhyas]

The argument in support of sutra 1 continued.

First we will do general analysis. Again there is a beautiful argument. Vyasacharya says in samkya philosophy purusa and avyaktam both are important and both have independent existence and hence they believe in dvaidam. All are dvaidam except vedantins. In fact vishistadvaidam also dvaidam. To attain moksa one should know both purusa and prakriti distinctly and now we know them in general manner. The samkya philosophy gives dvaidam vastu jnanam and purusa as also prakriti one should know clearly and also the difference one should know clearly. In samkya both purusa and prakriti should be known. In vedanta purusa alone should be known. We only say brahma vijnanena moksa. We don't say maya vijnana moksa. Kevala brahma vijnanena moksa. Therefore samkya and vedanta differs. Their avyaktam is jneyam and in vedanta avyaktam should be dismissed and we should know purusa. Mahatma prada avyaktam avyaktad purusa paraya. As even you go to higher and higher stages previous stages should be negated.

Avyaktam is not an end but it is only a means to reach brahman. Avyaktam also should be known. Therefore avyaktam is equally important. For that we answer if both are equally important the next mantra will not be there. In the next mantra the upanishad says having talked about various stages 1.3.10 and 11 of kathopanisad it talks about mahat, avyaktam and purusa; and finally it says you should know brahman. Even though all the things are talked about esah that brahman alone should be known finally. Esah purusah drisyashe. You have to sharpen your mind. This is the second difference between the avyaktam of samkya and vedanta avyaktam. Now we will go to the word for word analysis.

Jneyatva avachanat cha. Cha moreover; jneyatvavachanat since avyaktam is not mentioned as something to be known; avyaktam is not pradhanam of samkya. The last portion is to be supplied. This is the word meaning. First word is jneyatvavachanat. Jneyatvam means knowability a thing to be known for liberation. In samkya prakriti is to be known and in vedanta brahman is to be known for liberation; avachanat means non-mentioned; the if you literally translate because of the non-mention of knowability of avyaktam avyaktam is not pradhanam. Cha is conjunction because this sutra gives another reason in addition to the previous sutra.

## BRAHMA SUTRA

Class 128

### **Topic 1; anumanikadhikaranam {sstras 1-7}**

The mahat and avyakta of the kathopanisad do not refer to the samkhya tattvas

#### **Sutra 1.4.4[110]**

#### ***Jneyatvavachanaccha***

And because it is not mentiuned [that the avyakta] is to be known [it cannot be the pradhanam of the samkyas]

The argument in support of sutra 1 continued.

We have completed the fourth sutra of anumanika adhikaranam the fourth pada of the first chapter. The discussion is with regard to the word avyaktam. Samkya claimed avyaktam is un-manifest form of universe. That which is not revealed by sense organs is called avyaktam. Whatever is not revealed by sense organs is apratyaksam and it can be known by anumanam only. This world must have been in potential form before manifestation. Samkya also says the same thing when they say avyaktam. Avyaktam is common both to samkya and vedanta. Samkya says their philosophy has veda pramanam.

No doubt avyaktam reveals un-manifest matter and the universe. Up to this part we don't have any disagreement with samkya philosophy. Only with regard to the status of avyaktam we have some problem. For them the basic matter is swatantram and it has independent existence, which means the consciousness has a separate reality and that means there are two parallel reality one is matter and the other is spirit. Samkya is exactly middle between science and philosophy. Consciousness depends on matter and that is why they consciousness is phenomenon on brain.

In vedanta it is the otherway round. Consciousness is independent and matter depends upon consciousness. Samkya says why one should depend upon other and they say two independent reality and prakriti is independent matter and purusa is independent consciousness. If you use avyaktam you refer to independent mattern and vedanta use avyaktam we talk of dependent matter. Tad adinatvad chaitanya adhinam is matter. That is why your philosophy does not have vedic support. In samkya the matter and spirit enjoy equal important and moksa require the knowledge of both. One require prakriti knowledge as also purusa knowledge also. Jneyatvam is common to both. The necessity of the knowledge of both is required.

In vedanta we say brahma jnanatvad mokсах. Maya is not a thing to be known but a thing to be rejected as avidya. We use maya as a stepping-stone to reach brahman and we should reject after reaching brahman. Mahat superior to that avyaktam and superior to avyaktam is brahman. In 12<sup>th</sup> mantra upanishad says *esa sarvesu butesu, gudho'tma na prakasate, drsyate tvagryaya buddhya, suksmaya suksma darsibhih* this Atman hidden in all beings reveals [itself] not [to all], but is seen [only] by seers of the subtle through sharp and subtle

intellect. This purusa tattvam chaitanyam tattvam is hidden in everyone and this hidden purusa has to be known only by subtle intellect. One should know the purusa to gain moksha the upanishad says. One should not stop with knowing mahat and purusah and one should ultimately realize purusa which is nothing but brahman so vedantins say. Veda does not talk about avyaktam a thing to be known, the avyaktam is said but it is meant here brahman alone.

## **Topic 1; anumanikadhikaranam {sutras 1-7}**

The mahat and avyakta of the kathopanisad do not refer to the samkhya tattvas

### **Sutra 1.4.5[111]**

#### ***Vadatiti chet na prajno hi prakaranat***

And if you maintain that the text does not speak [of the pradhanam as an object of knowledge] we deny that, because the intelligent [supreme] self is meant on account of the general subject matter.

An objection to sutra 4 is raised and refuted,

First we will do the general analysis. Samkya philosopher is nor ready to give up. We said avyaktam is not enough to be known for getting liberation. Avyakta is not presented to be known for liberation. Samkya philosopher says who says so. He says you don't know how to study veda properly. He says avyaktam is an object of knowledge and it also presents that knowledge is liberating knowledge. We ask them where it is said. He says that 1.iii.15 of kathopanisad says *asabdam asparsam arupam avyayam tatha rasam nityam agandhavat ca yat; anadya nantam mahatah param dhruvam, nicayya tan mrtyu mukhat pramucyate* the meaning of the mantra is he, who has realized that [atman] which is without sound, without touch, without form, without decay and also without taste, without smell without beginning, without end beyond the mahat [great] eternal and unchanging, is freed from the jaws of death. This is oft quoted mantra.

This is a very important mantra. This is in the hands of samkya philosopher. He says avyaktam prakriti only. We say it talks about purusa the brahman. But he says it talks about avyaktam only. Every description tallies with avyaktam un-manifest universe which we call prakriti is asabdam, asparsam anvayam etc. It is nithyam because in pralaya kale it is in un-manifest form. It is anadhi anandam and the crucial word is mahatah param the word used in the mantra.

That means it is beyond mahat. In 1.3.11 the mantra says mahata param avyakta param superior to mahat is avyaktam. 1.3.15 talks about prakriti or pradhanam only and not only veda commands to know about avyaktam but also by knowing that one will transcend mortality and will get moksha. Therefore samkya philosophy is correct interpretation. This is purva paksa of samkya. Veda does talk about avyaktam one should be known.

Vyasacharya gives the answer in the second part of the sutra. He says 1.3.15 talks about purusa alone and it does not talk about avyaktam the prakriti. It talks about purusa the conscious principle. If you study the flow of the upanisadic teaching you will come to know it talks about purusa. In 11<sup>th</sup> mantra upanishad talks about mahat, avyaktam and brahman. 12<sup>th</sup> mantra talks about atma the purusah and it does not refer to avyaktam at all. This atma

should mean purusa alone and not to avyaktam then 13<sup>th</sup> mantra talks about atma only and how can one know it by resolving everything. Each one is resolved into next superior one and ultimately all will resolve into atma the purusa and 14<sup>th</sup> mantra says that it is not easily understood and atma jnanam is like walking on the razor's edge. All the three mantras talk about atma jnanam only and the 15<sup>th</sup> mantra should talk only about atma jnanam and how can talk about avyaktam. Therefore asparsam avyavan etc.

Refer to atma alone and not avyaktam. If it talks about purusa how does it use the expression mahatah param. Superior to mahat is avyaktam only. Superior to mahat is avyaktam and superior to avyaktam to brahman only. Purusa can be said to be mahata param and superior to mahatah is brahman alone. Then two mre argument are there. In all vedic mantra we talk of brahma jnanat moksa and we don't find prakriti jnanat moksa. Even kathopanisad talks of atma jnanam alone as the means of moksa.

Third and final argument is this. Let us assume that 1.3.15 of kathopanisad talks about prakriti or pradhanam and the last line of the mantra says knowing that prakrit one gets moksa will be the meaning of 1.3.15. Even if that be the meaning of the mantra it does not talk of samkya philosophy because samkya philosophy never says prakriti jnanat moksa. It does not talk about samkya philosophy. This is the general analysis. Now we will go to word for word analysis.

Vadati sruti speaks of avyaktam; as something to be known in 1.3.15 of kathopanisad. This is the quote of samkya philosopher. Iti chet if it is argued thus na it is not so; parjnahi purusa is indeed; spoken of katha 1.3.15; prakaranat because that is the topic. Vadathi it is said by the samkya philosopher. Avyaktasya jneyatvam kathopanisad bhavati iti chet na etc., we have seen the meaning; prajnah is used in the sutra in the meaning of nirgunam brahman only. Here prajna means chaitanyam. Then hi is emphasis. The previous and later portions always decide topic. The context is atma jnanam and not prakriti jnanam.

## **Topic 1; anumanikadhikaranam {sutas 1-7}**

The mahat and avyakta of the kathopanisad do not refer to the samkhya tattvas

### **Sutra 1.4.6 [112]**

#### ***Trayanameva chaivamupanyasah prasnascha***

And these is question and explanation relating to three things only [not to the pradhanam]

The objection raised in sutra 5 is further refuted.

First we will do the general analysis of this sutra. This is more an elaboration of the previous sutra. The context vyasacharya explains here. It can be interpreted in two ways. One is my interpretation. This is simpler one. When you study the context you will find tha entire kathopanisad is the answer to the three question asked by naciketetus. First is the father's peace of mind 1.1.10; 1.1.11 of kathopanisad is the answer; second is the ritual for attaining heaven the question was asked in 1.1.13 and answer was given in 1.1.15 of kathopanisad. Third boon was for atma jnanam, which he asked twice in 1.1.20 and 1.2.14. 1.2.14 he asked does on survive after death; 1.2.14 he asked about atma vidya. Third question is answered in the rest of the upanishad. What happens to atma after death. Yamadharma answers what happens to

the ignorant one and the wise one. This was elaborately discussed. The three question deals with father's peace of mind, a ritual to gain heaven and thirdly to gain atma jnanam. Nowhere yama dharma raja did answer any thing about pradhanam. There is no pradhana vishaya or question. There is no pradhanam. This is a simple approach.

Now we will see vyasacharya's approach. What adhi sankaracharya does is when sutra talks about three questions and the questions deal with ritual for reaching heaven; jivatma is question number two and paramatma is question number three. Father's peace of mind is not taken into account at all here. 1.1.20 is the question about jivatma and the answer for that is 2.5.7. *Yonim anye prapadyante sariratvaya dehinah sthanam anye 'nusamyanti yatha karma yatha srutam* the meaning of this mantra is some souls enter the womb to have a body, others go to the plants, just according to their work and according to their knowledge.

The question regarding the jivatma was whether the jivatma dies or not and what happens to that. For that upanishad answers that it takes rebirth; the third question is *anyatra dharmad anyatra adharmad anyatra asmakritad* and it is about paramatma. Most of the kathopanisad is all about the paramatma. Whether you take those three questions or these three questions and either way there is nothing about pradhanam. Adhi sankaracharya talks about the complication, which he elaborates now.

Now we will see word for word analysis. Evam similarly; prasnah question upanyasah cha and answer; prayanam eva with regard to three topics only are found here; cha there are two chakaras therefore pradhanam is not mentioned here; cha means therefore; pradhanam is not mentioned and it is to be supplied. Trianam eva three topics are talked about. What are the three topics? I took father's peace of mind, jivatma and paramatma; adhi sankaracharya does not take father's peace. He talks about swarga ritual, jivatma and paramatma. Prasnah means questions upanyasah means answer. Evan means by topic analysis. By studying the context we come to know three questions and three answers but pradhanam is not mentioned here.

Now I will briefly mention the complication only. Purva paksa asks is jivatma and paramatma identical or separate according to you. And either way you are in trouble. If you say jivatma and paramatma are identical you cannot count as three questions and it will be only two questions; therefore you are in trouble. To avoid you should say jivatma and paramatma are separate then he says if you say they are separate i will ask you the question how many boons yama gave.

Three boons were given. One is father's peace and second is swarga ritual and third one is either jivatma or paramatma. How can yama talk about paramatma, which is not included in the boon? If you say third boon is jivatma how did yama talk about paramatma, which is not in the boon? If you say he talked about paramatma, which is not in the boon, i will say that he included pradhanam also which is not in the boon? More in the next class.

## BRAHMA SUTRA

Class 129

### **Topic 1; anumanikadhikaranam {sutras 1-7}**

The mahat and avyakta of the kathopanisad do not refer to the samkhya tattvas

#### **Sutra 1.4.6 [112]**

#### ***Trayanameva chaivamupanyasah prasnascha***

And these is question and explanation relating to three things only [not to the pradhanam]

The objection raised in sutra 5 is further refuted.

Vyasacharya says swatantra pradhanam does not have support of veda prmanam. Vyasacharya talks of atma and not pradhanam at all. In support of that vyasacharya gives further argument in this sutra. By analysis of the topic of kathopanisad there is no scope for pradhanam at all. Only three questions have been asked and entire upanishad is the answer for the three questions. There is no mention of pradhanam in any of the three question or in the answers. Vaidhika karma jivatma and paramatma are the three topics and where is the question of pradhanam? Now purva paksi asks you have the problem

The problem is that when you ask question of jivatma and paramatma do you mean jivatma and paramatma aikyam or jivatma paramatma beda. Purva paksi say either way you are in trouble and if they are identical vyasa sutra is in trouble. It talks of three question and you say karma jivatma and paramatma are identical and that means there are two questions and the sutra is wrong. There will not be three questions.

To avoid this if you say jivatma and paramatma beda then there will be no problem in sutra and all the three question are answered but the upanishad problem will be there. In the upanishad three boons are given. And through the first boon father peace of mind and through the second boon ritual given and through the tell me third boon jivatma is discussed or paramatma is discussed. If you say jivatma and paramatma are two then paramatma topic will be outside the boon and if you say the paramatma is outside and then one will be short. How can there be three boons and four topics be there. The purva paksi asks this. Yama dharma raja asked three boons and fourth one is bonus topic is the only answer we can give. For that samkya philosopher says if you can add a bonus topic why cannot i add a bonus topic of pradhanam. That bonus pradhanam is added in 1.4.15 of the kathopanisad. There will be dosha in three questions or dosha in three boons either way. Adhi sankaracharya riddles out somehow.

While discussing three boons we have to assume jivatma and paramatma aikyam. While discussing three questions we have to assume jivatma and paramatma bedah in brahma sutra. In his commentary he says the first is father's peace of mind and the second is jivatma and the third is jivatma and paramatma aikyam. Adhi sankaracharya elaborately proofs jivatma vishaya varam and paramatma vishay varam. While discussing vyasa sutra adhi sankaracharya says jivatma and paramatma beda should be taken in to account.

Samkya will ask how can you do all the mischief. While talking of varam you talk of aikyam and while talking of questions you talk of beda. When you talk of aikyam how can you talk about beda. How can you take aikyam and beda. Vedantins can very comfortably talk about aikyam and very comfortably talk about beda also. Vyavaharika and paramarthika dristi beda. Paramarthika drishtya jivatma and paramatma refer to upahita chaitanyam and vyavaharika dristya it refers to vishista chaitanyam. Vachyartha drishtya bedah and lakshyartha drishtya aikyam; when you talk of varam it is paramarthika drishya and when you talk of vyavaharika drishtya it is about questions and either way pradhanam is not discussed in the mantras.

Three questions either way whether on the basis of questions or on the basis of varams, it does not make any difference because either way pradhanam is not talked about here. With this sixth sutra is over. Now we will go to the seventh sutra

### **Topic 1; anumanikadhikaranam {sutras 1-7}**

The mahat and avyakta of the kathopanisad do not refer to the samkya tattvas

#### **Sutra 1.4.7 [113]**

#### ***Mahatvaccha***

And [the case of the term avyakta] is like that of the term mahat.

An argument in support of sutra 1 is given. Just as in the case of mahat, avyakta also is used in the vedas in a sense different from that attached to it in the samkya.

First we will do the general analysis of this sutra. Here vyasacharya discusses in the upanishad talks about mahat also which is a word used by samkya philosopher. In the upanishad also we have mahat, avyaktam purusah. Samkya philosophers use these three words also. Let us look at the mahat occurring in the mantra. Once we know mahat is used in different meaning from the samkya meaning we can extrapolate the meanings of other two words also. As mahat is different from samkya mahat the word avyakta also different from samkya sabda can be proved. This is the approach of vyasacharya.

Here vyasacharya says it is different from samkya mahat. The word mahat is used in mantra is mahan atma. It is used in 1.3.10 is used as mahan atma and in 1.3.11 of kathopanisad is mahat. Mahan atma is there that focus on the word atma and the word atma can be used in a chetana vastu. Reflective noun can be used only to a conscious entity. Clip will never use the word self. It is achetanam. Only chetanam can use the word self. I self etc is chetana mahat tattvam, which is equivalent to hiranyagarbha principle, which is a chetana tattvam. In samkya mahat is used to inert matter prakriti modification. Samkya mahat is achetanam and vedanta mahat is chetana hiranyagarbha tattvam and the word atma gives the clue to the chetana vastu. If vedanta mahat is different from samkya mahat vedanta avyaktam is also different from samkya avyaktam. Now will go to the word for word analysis.

First we will take the word cha moreover; mahadvad means like the word mahat occurring in 1.3.10 and 1.3.11 of kathopanisad does not reveal samkya pradhanam; moreover like the word mahat occurring in upanishad word avyakta also does not reveal samkya pradhanam 1.3.10 of kathopanisad. The significance of the word cha is another reason added to the reason given in the previous sutra. 'madh' is given in the meaning of comparison. Mahat sabdah eva

avyakta sabda abhi samkya sabda na bodhayati. Adhi sankaracharya gives another example saying that mahan is used for atma also in 1.2.22 of kathopanisad. Here mahan atma refers to brahman itself. Sometimes mahan atma refers to hiranyagarbha sometimes paramatma itself whether it is hiranyagarbha or paramatma it reveals only chetana vastu but does not reveal achetana pradhanam. With this 7<sup>th</sup> sutra is over. This adhikaranam is also over.

The subject matter is the word avyaktam occurring in 1.3.11; samsayah is avyaktam is samkya pradhanam or it is anything else. Purva pakshi says that the word avyaktam reveals samkya pradhanam only. Samkya pradhanam is the basic matter principle, which has got an existence independent of consciousness. It is swatantra achetana tattvam. The support he says that upanishad also uses three words mahat, purusa and avyaktam. Samkya philosophy also uses the three words.

Samkya philosophers assert that the three words relate to pradhanam alone. The word avyaktam refers to the physical body alone which is indicated in ratha chariot imagery. This is the primary approach. The second approach is we can take avyaktam as the basic matter. A compromised version of avyaktam is basic matter or energy which is dependent on consciousness and it does not talk about independent matter. It is paratantra moola prakriti. Whether the first meaning or second meaning we do not accept pradhanam as per samkya philosophy. It is in the appropriate place only. The first adhikaranam is over,

## **Topic 2; chamadhikaranam {sutras 8-10}**

The aja of svetasvatara upanishad does not mean pradhanam.

### **Sutra 1.4.8 [114]**

#### ***Chamasavadavisheshat***

[It cannot be maintained that 'aja' means the pradhanam] because no special characteristic is stated, as in the case of the cup.

An expression from svetasvatara upanishad is now taken up for discussion in support of sutra 1.

The author next refutes another wrong interpretation given by the samkyas of a verse from the svetasvatara upanishad.

I will give you the general introduction to this second adhikaranam. It has three sutras. Here vyasacharya analyses a mantra 4.5 of svetasvara upanishad. The mantra read as *ajam ekam lohita sukhla krsnam bahvih prajah srjamanam sarupah ajo hy eko jusamano'nusete jahaty enam bhukta-bhogam ajo'nyah* the meaning of the mantra is the one unborn, red, white and black who produces manifold offspring similar in form [to herself], there lies the one unborn [male] delighting., another unborn gives her up having had his enjoyment.

It is a well-known mantra often quoted by adhi sankaracharya. Both in brahma sutra and sankara's bashyam many of the svetasvara upanishad mantra is quoted. Many people say the available sankara bashya is not his own. The mantra in question not only occurs in this upanishad but also it occurs in mahanarayana upanishad with slight modification.

Why do we take this mantra for analysis? Samkya philosopher takes this mantra for vedic support for he wants to take independent purusa tattvam and independent prakriti tattvam. This is samkya philosopher aim. They want to say that there is independent consciousness and independent matter and both are reality. It is sat chit and ananda swarupam.

Matter is also defined just as ours. Samkya wants basic support from veda. Vyasacharya is ready to accept purusa as nirgunam and prakriti as sagunam and vyasacharya is not ready to accept both as real. He says purusa is real and prakriti is unreal. For real prakriti samkya philosopher want support and samkya philosopher quotes this mantra in support of their view. In support of their view, they interpret this mantra in four ways.

Samkya philosopher gives one interpretation and three interpretations belong to vedantins. One is not acceptable. In all the interpretation we will focus the word 'aja'. For the word 'aja' there is an adjective lohita shukla krishna; this also we will analyse in detail. Samkya philosopher gives first interpretation of this mantra. He says aja means swatantra prakriti the basic matter which is independent and real. The nature of prakriti is lokita shukla krishna. It means red colour signifies rajo guna; shukla means white colour, which signifies sattva guna and krishna, signifies black or dark colour; samkya philosopher refers to this last one to tamoguna. This prakriti creates many products. It creates many effects.

A karyam is called praja. Karyam according to samkya philosopher is mahat, ahankara, mana, panca bhutani, panca jnanendriyani karmendriyani etc. The products are similar to the cause; the similarity is that all of them are trigunatmakam. Prakriti also trigunatmakam. Karanam is sagunam and karyam also is sagunam. The word aja means jivatma. And ekah ajah means one jivatma and one jivatma means some jivatma.

They go after the prakriti; they serve the prakriti certain jivatma goes after prakriti nourish prakriti and enjoy prakriti and go along with prakriti and undergo samsara and punarbi maranam and punarabi jananam and they go after prakriti and suffer whereas the other intelligent jivas make use of the prakriti intelligently to get all purusarthas and they make use of purusarthas and having got all the purusarthas through prakriti they give up prakriti and they are intelligent people; second set of people use the prakriti intelligently and throw away.

Here the first word aja means swatantra prakriti and second aja means jivatma; prakriti means aja because it is anadhi and birthless. Therefore prakriti is called aja and it is anadhi and similarly jivatma is ajah and jivatma is purusah and also birthless. Aja prakriti aja purusartha and veda talks about samkya philosophy and the we have to vedantic interpretation which we will see in the next class.

## BRAHMA SUTRA

Class 130

### **Topic 2; chamadhikaranam {sutras 8-10}**

The aja of svetasvatara upanishad does not mean pradhanam.

#### **Sutra 1.4.8 [114]**

#### ***Chamasavadavisheshat***

[it cannot be maintained that 'aja' means the pradhanam] because no special characteristic is stated, as in the case of the cup.

An expression from svetasvatara upanishad is now taken up for discussion in support of sutra 1.

The author next refutes another wrong interpretation given by the samkyas of a verse from the svetasvatara upanishad.

We are in the second adhikaranam of the fourth pada of the second adhikaranam. In this adhikaranam vyasacharya analyses well-known svetasvara upanishad 4.5. In this mantra the word aja is given focus and samkya philosophers say that the mantra reveals pradhanam of samkya philosophy. Vyasacharya establishes that this mantra does not reveal samkya philosophy at all. I said this mantra has four interpretations. Therefore if we get the idea of four interpretations we will get a better idea to appreciate the discussion. I gave you the first interpretation in the last class.

The word aja means birthless one and according to samkya philosophers. Sattva rajas tamoguna prakriti vartate and this prakriti is capable of creating anything and all of them are swarupa and similar to prakriti. This is the interpretation of the first line. Here ekah ajah means a particular jiva. First line aja means jiva and second line aja means jivatma some jivatma runs after birthless prakriti and some other intelligent jivatma do not run after birthless prakriti and make use of the prakriti to gain moksha; he gives up the aja.

Samkya also claims since ekah aja purusa and anyah aja purusa and it is support of atma bahutvam also. The prakriti is trigunatmaga and purusas are many and purusas are beginningless and prakriti is one and prakriti is also beginningless. Some purusa run after prakriti and some makes use of prakriti and attain moksha and get rid of prakriti. Shukla krsihna aja is equal to gunatriya vishishta swatantra pradhanam. This is the first interpretation given by samkya to claim that his claim is backed by sruti pramanam.

The second and third interpretations refer to vedantic interpretation only. Here we also accept aja as prakriti or pradhanam exactly like samkya philosophers. And they say lohita shukla krishna represents three gunas and we also agree with that. Where do we differ. While they say swatantra prakriti, we say it is pratantra prakriti. Swatantra means independent and pratantra means dependent. The first one is samkya and second is vedantic interpretation. There is no controversy in the later three padas.

Adhi sankaracharya gives the third interpretation in this adhikaranam. It is not svetasvara upanishad commentary. According to him aja means paratantra prakriti only. Paratantra means dependent. The word lokita shukla krsihna adhi sankaracharya has taken as three colours and not as three gunas. Lokitam is red shuklam means white and krishna means black means varnatriya vishishta paratantra prakriti.

First interpretation is gunatantra vishishta swatantra prakriti; second interpretation is gunatriya vishishta paratantra prakritih is aja and the third interpretation is varnatriya vishishta paratantra prakriti. Then comes the fourth interpretation, which is given by vyasacharya in this adhikaranam. This adhikaranam interpretation is given by vyasacharya through this sutra. He says aja does not mean prakriti at all.

Aja means bhutatriyam Agni, apah and prithvi. And lohita shukla krishna aja means varnatriyam; here aja means varnatriya vishishta bhutatriyam. For one aja sabda four meanings are given. Of these four interpretation, the third and fourth are given in this adhikaranam.

The first is purva paksa interpretation and second does not occur in this adhikaranam. One three and four are in siddhanti's interpretation. The essence is the upanishad does not support the samkya philosophy. The details of the third and fourth interpretation I give later.

With this general introduction we will go for the general analysis of the first sutra. Vyasacharya says the Svetasvara mantra is very general mantra, which does not specifically support any philosophy. aja the birthless can be taken for anything. Atma can be taken as ajam; Brahma can be taken as ajam; Jivatma can be taken as ajam. How can this be taken as one of samkya philosophy? All philosophers interpret to suit their philosophy. The word lohita shukla Krishna also is very, very general word and it represent three colours. This can be defined in any manner one likes symbolism can be interpreted in any manner they like. Therefore symbolism can be used anything in any manner. There is no vyavastha at all.

The word aja and gokila shukla Krishna there is no norm to define and sastra should be taken as the norm as the mantra occurs in the Vedas. Symbolism should be closer to the sastra. in some places sastra explains symbolism. Where sastric vyakyanam is there, we can take that vyakyanam. Seven types of annam is defined in Brihadharaynaka upanisad. If you go by that samkya has no support at all.

Vyasacharya refers to Brihadharaynaka upanisad example. The word chamaka is a ladle to offer material in the yaga. Second meaning is a vessal. Upanishad talks about a vessal. This comes in Brihadharaynaka upanisad 2.2.3 says *tadesa sloko bhavati arvagbilascamasa urdhvabudhnaah tasminyaso nihjilam visvarupam tasyasata rsayah sapta tire vagastamt brahmana samvidna iti* the meaning of the mantra is there is a bowl with its opening below and bulging above; in it manifold knowledge has been placed; what does the mantra say. There is a vessal, which is upside down; its bottom is up; it is an upturned vessal and it is filled and manifold glory is there in the vessal. On the sides of the vessal seven rishis are seated. Not only there is eighth rishi is also there. The organ of speech is the eighth rishi. You can interpret this in any manner you like. Please tell me what is upside down vessal full of glory with seven rishis sitting around. We better go by sastra and fortunately Brihadharaynaka upanisad itself explains that. idam sirah eve. Your own head is set upside down; if you cut the head there is an opening at the bottom. The glory is the knowledge received from sense organs; knowledge belongs to the head. It is called visvarupam because

knowledge is also manifold. Prana vai yaso vai yaso visvarupam; the holes are taken as sense organs; prana vai rishayah; Upanishad gives the names of the rishis; since the mouth is eating all the time atri rishi is mentioned. There is no question of right or wrong. We accept it as it is sastra anusari. You interpret ajaha also generally.

Now I will give the word for word analysis. Chamasavat like the cup avisheshat because there is no special characteristic; the word aja in svetasvara Upanishad does not reveal samkyas pradhanam because there are no specific references chamasavat as in the case of chamasa in Brihadharaynaka upanisad 2.2.3; this is the meaning of the sutra. Aviseshat any specific indication is not there in the mantra itself. Mantra says birthless of what is not defined or specifically mentioned. Which birthless thing aja says we do not know? Gokula shukla Krishna also do not indicate anything except mentioning the colours. Chamsa mantra also does not give any clue. A clueless mantra you cannot define as you wish. When you go by sastra how do you prove that it reveals Vedanta. that we will see in the next sutra.

## **Topic 2; Chamadhikaranam {sutas 8-10}**

The aja of Svetasvatara upanishad does not mean pradhanam.

### **Sutra 1.4.9 [115]**

#### ***Yotirupakrama tu tatha hyadiyata eka***

But [the elements] beginning] with light [are meant by the term aja] because some read so in that text.

This is explanatory to sutra 8.

We will do the general analysis. We said in the previous sutra that the mantra was too general and we have to study sastra further. Wherever doubts are there read the sastra further. Now we have to interpret keeping the interpretation of sastra itself. Adhi Sankaracharya's interpretation is the third interpretation. Adhi Sankaracharya says the word aja means a beginningless entity. Since it is in feminine gender it should refer to prakriti. the question this birthless prakriti is swatantram or para tantram. The mantra does not say anything about it. we cannot blindly take anything to suit our view. In beginning svetasvara mantras give us some clue. 1.3 gives some clue here the idea is that it talks about the power of Brahman by which Brahman is able to create, preserve and resolve the universe. The mantra reads as *tu dhyana yoganutata apasyan devatma sahtim sva gunair nigudhaam yah karanani nihhilani tani balatma yuhtany adhitisthaty etah* those who followed after [were devaoted to] meditation and contemplation saw the Self-power of the divine hidden in its own qualities. He is the one who rules over all these causes from time to the end. That sakti is devatma sakti and later we find the elaboration of that power and that power is said in our sutra as 'aja'. Sakti can never exist independently and sakti has to depend upon saktiman and sakti is never swatantram. Your thinking power cannot exist independent of you. Your speaking power cannot exist independent of you. Hearing faculty cannot exist independent of the hearer. Therefore prakriti being sakti, it can never be swatantra and it is para tantra only. This interpretation is correct because it is based on the same Upanishad itself. Then Adhi Sankaracharya gives another mantra of the same Upanishad [4.10] *mayam tu prakrtim viddhi, mayinam tu mahesvaram tasyavayava-bhutais tu vyaptam sarvam idam jagat* the meaning of the mantra is know then that prakriti is maya and the wielder fo maya is the Great Lord. The

whole world is pervaded by beings that are parts of Him. The present mantra is 4.5 and in support of this Adhi Sankaracharya quotes one previous as also later mantra. The purva mantra is 1.3 and 4.10 is the apara mantra. Apara mantra says maya is prakriti and the nature of maya is mahesvarah [called mayi] and is one who controls maya. that mahesvara keeps maya under its control and Isvara means controller; from this mantra we come to know that maya is equal to prakriti and prakriti is under the control of Isvara and therefore prakriti is para tantra and not swatantra prakriti. thus Adhi Sankaracharya concludes aja is para tantra only. lohita shukla Krishna do not refer to gunatriyam but varna triyam. Upanishad talks about the same thing in the same Upanishad. that is Chandogya upanisad there is a mantra 6.4.1 reads as yadagne rohitam rupam tejasastadrupam yacchuklam tadapam yatkrnam tadannasyapagadgneragnitvam vacarambhanam vikaro namadheyam trini rupanityeva satyam which means the red colour of gross fire is from subtle fire, the white colour si from subtle water and the dark colour is from subtle earth. Thus that which constitutes the fireness of fire is gone. All changes are mere words, in name only [i.e., fire is only a name indicating a certain condition]. The three colours are the reality. When fire is gross it has a red colour, which comes from its subtle aspect; but there is also a white colour in it, which comes from the sutle water element. Similarly sometimes it has a dark colour, which comes from the subtle earth element. The Upanishad says in reality fire is nothing beyond these three colours red, white, and black. This proves falsity of the idea of the gross fire. Chandogya upanisad talks about three colours and they represent three elements the red the fire; the white the water and the black represents anna tattvam the Prithvi tattvam. in Chandogya upanisad three element tattvam is talked about. Bhutatriyam is talked about. First is Agni sristi. Adhi Sankaracharya says I will choose bhutatriyam, which has got Upanishad support. Gunatriyam has no Upanishad support. Then comes the problem. three colours belongs to three bhutas only and how do you say that the varnatriyam belongs to Prithvi alone. How Adhi Sankaracharya takes varnatriyam to Prithvi and for that Adhi Sankaracharya says that the bhutatriya has got three colours potentially and therefore lokita shukla Krishna represents bhutatriya only. more in the next class.

## BRAHMA SUTRA

Class 131

### **Topic 2; Chamadhikaranam {sutras 8-10}**

The aja of Svetasvatara upanishad does not mean pradhanam.

#### **Sutra 1.4.9 [115]**

#### ***Yotirupakrama tu तथा hyadiyata eka***

But [the elements] beginning] with light [are meant by the term aja] because some read so in that text.

This is explanatory to sutra 8.

Now we do the general analysis of sutra 9 of the fourth pada of the first chapter. This is the second sutra of chamasadhikaranam. This sutra analyses svetavatara Upanishad 4.5. the topic discussed in the meaning of the word gokila shukla krishna aja. This samkya philosophers quote this mantra in support of their view while Vyasacharya refutes their argument as seen in the last class. The word aja only means a birthless entity or a she goat. If you take the etymological meaning it is a brithless entity and it is too general entity to take it as birthless. Lokika shukla Krishna is also too general words to take to the support of samkya philosophy. It is a non-specific mantra and it does not give clinching evidence to take it as a swatantra prakriti. since the mantra does not give internal evidences where such evidences are lacking we have to go in for external evidences. Then we have to see the previous or later portions of purva apra vichara we will arrive at the context. The context will give external evidences in interpreting this mantra. How to interpret is given in the second mantra. We get two interpretations the first being Adhi Sankaracharya's interpretation based on contextual support and the other of Vyasacharya. Adhi Sankaracharya said the word aja means maya paratantra prakriti only. it cannot mean swatantra prakriti. What is the reason because we saw two mantras 1.3 and 4.10 of Svetasvara Upanishad mantra talks of paratantra prakriti [dependent] only? Why we say it should refer to paratantra is due to the fact that prakriti is Brahma sakti and we know that sakti has to be paratantra only depending upon sakti man. So Adhi Sankaracharya concluded that aja means paratantra sakti or Brahma sakti. Having interpreted aja as paratantra prakriti Adhi Sankaracharya analyses lokita shukla krsihna should be interpreted on veda mantra alone and he said in Chandogya upanisad 6.4.1 the Upanishad has talked about the three elements having three colours. Varnatriya vishista bhutatriyam is talked about Chandogya upanisad and the above refer to varnatriyam and not guna triyam. The next question is the Chandogya upanisad talks about three colours of elements only bhutani how can Adhi Sankaracharya take the three colours of prakriti. How do you interpret aja as varnatriya vishista bhutatriyam. Adhi Sankaracharya says that it can be very easily interpreted like that. aja is karanam and bhutatriyam is karyam and therefore karanam contains the karyam in potential form as seed contains the tree in potential form. if aja prakriti includes bhutatriyam it should have varna triyam also. bhutatriya rupa karya drishtya varna triyam siddhyadhi. The final meaning of the word is varna triya vishista maya or prakriti. this is the interpretation given by Adhi Sankaracharya. Now we have to go to the interpretation given by Vyasacharya. This is given in sutra 9 and 10. he says aja does not

mean prakriti. According to him aja does not mean swatantra prakriti or para tantra prakriti also. it does not mean maya at all. It means bhutatriyam. The three elements taken as a group is as one principle. Aja is equal to bhutatriyam. Kokila shukla Krishna is varnatriyam. Aja is equal to bhutatriya varna triyam Agni, water and Prithvi. From these three alone all boudhika vastus have emerged. Entire boudhika Prapancha has emerged from aja. We will go to the word for word analysis.

Tu means avadharane verily indeed; jyotrupakrama three elements beginning with fire is the meaning of the word aja; this portion must be in brackets. This is not in the sutra. Eke some vedic followers adhiyate read means they chant; tadahi means so in Chandogya upanisad 6.4.1; in Chandogya upanisad 6.4.1 is supplied idea and it is not there in the sutra.

This word consists of jyotih and upakramah jyotihn means the fire elements and upakrama means etc., and so on. In the etc., we have to include the other two elements jalam and Prithvi. Fire is in the beginning of the group of elements. Fire is in the beginning means he has Chandogya upanisad mantra in his mind. 6.2.1 of Chandogya upanisad *sadeva somyedamagra asidekamevadvitiyam; taddhaika ahurasadevadamagra asidekamevadvitiyam tas madasatah sajjayata* the meaning is somya before this world was manifest there was only existence one without a second; on this subjectsome maintain that before this world was manifest was only nonexistence, one without a second. Out of that non-existence, existence emerged. About the creation of elements, it does not talk about panca bhutani and it talks about three bhutas. In Taittiriya Upanishad, it is said *tasmad-va etasmad-atmana akasah sambhutih, akasad-vayuh, vayor-agnih, agner-apah, adbhyah prthivi, prthivya asadhayah, asadhibhyo-;nnam, annat purusah* it means from that [which is] this Atman is space born; from Akasa air; from ari, fire; from fire, water; from water, earth; from earth, herbs; from herbs food and from food man. That portion we should not bring here and we should bring only the portion of Chandogya upanisad. It talks about teja sristi app sristi and anna sristi means Prithvi sristi. When we talk about the sristi what about upakrama is jyotih. The Upanishad talks about three elements beginning with Agni tattvam and this is the meaning of aja. The reason for such an interpretation is that adjective given in the mantra is lokita shukla krisha. Since adjectives are same the noun also should be the same. Here noun aja should refer to bhutatriyam alone. Bring bhutatriyam from Chandogya upanisad and take aja as bhutatriyam in Svetasvatara Upanishad. the next word is tu and it for emphasis; in the previous sutra he pointed out that the mantra is vague allowing many interpretations. Vyasacharya wants to say that my interpretation alone is correct as it is based on the veda mantra. Veda based interpretation of mind alone is correct. Then the next word is eke means some vaidhikas; Vyasacharya wants to refer to sama veda chanters here. Support is from Chandogya upanisad and therefore eke means samavedinah especially who chant the Upanishad mantra 6.4.1. adhiyate means some read. They chant the mantra tatha hi means as I talk about. As I talk in the way Varnatriya vishishta bhutatriyam. So what I say is correct.

## **Topic 2; Chamadhikaranam {sutas 8-10}**

The Aja of Svetasvatara upanishad does not mean pradhanam.

### **Sutra 1.4.10 [116]**

#### ***Kalpanopadesaccha madhvadivadavirodhah***

And on account of the statement of the assumption [of a metaphor] there is nothing contrary to reason [in Aja denoting the causal matter] as in the case of honey [denoting the sun in Madhu Vidya for the sake of meditation] and similar cases.

The argument in support of sutra 8 is continued.

First we will do the general analysis. Purva paksa raises a question here. He has interpreted as bhutatriyam. I am not saying trini bhutani. I use the word bhutatriyam the group of three elements. We take three elements as one unit. It is because the mantra ajam ekam as mantra specifically state ekam aja. The controversy is about the word aja and how can you take bhutatriyam as aja. Adhi Sankaracharya took aja as paratantra prakriti and aja means birthless. When you take aja as bhutatriyam there is a contradiction. All the three elements are born and how can you use the word aja for ajata bhutatriyam. Vyasacharya asks who said aja means birthless? Vyasacharya says I don't want to take etymological meaning at all and I want to take the popular meaning of aja. Popular meaning is more powerful than etymological meaning. What is the popular meaning of the word aja. Aja means goat. What about ajaa? Ajaa means she goat. In the second line ajah means he goat. The mantra talks about he and she goat. Then purva paksa asks the question what the goats have got to do in the Upanishad. for that Vyasacharya says this is an imagery given. He goat and she goat should be taken as examples because the Upanishad conveys the teachings through imagery. It is kalpana upadesah. Vyasacharya says it is kalpana upadesa mantra. Here Upanishad wants to talk about intelligent jiva and unintelligent jiva and one is compared to one type of he goat and another type to another type of he goat and prakriti is compared to she goat and once she goat is attracted by the he goat and in another male becomes a sannyasi which is not attracted by the sense pleasures. One gets the vairagyam of renouncing the sense pleasures. One example is given in the sutra. Here Adhi Sankaracharya quotes a Chandogya upanisad 3.1.1 and here sun is compared to Madhu honey. The mantra reads as *asu sva adityo devamadhu tasya dyaureva tirascina vamso'ntariksamapupo maricayah putrah* the mantra reads as the sun over there is money to the gods, Heavens is the crossbeam the mid region is the beehive and the rays are the eggs. The sun is honey of gods. There is no connection between sun and honey but it is imagery. In kathopanisad the body is compared to chariot. Similarly jiva is not goat but goat imagery is given. As regard lokita shukla Krishna Vyasacharya says that you imagine lokita shukla Krishna goat. Not only is a she goat with three colours but it has many children also.

Now will go for word for word analysis. Cha is taken first and it means moreover. Kalpanopaesat it means since the teaching is through imagery madhvadivad like honey imagery for the [sun]. avirodhah there is no contradiction. This is the running meaning. now we will see the significance. Kalpana and upadesat it is a compound word. kalpana means imagery and upadesah means teaching. it is teaching through imagery. Kalpanopadesat because of this reason; sadhyam kept in mind is avirodhah is the conclusion for which the reason is kalpanopadesat. Cha means further supportive argument. the next word is madhu adhivad it consists of madhu and adhi. Madhu means honey. He keeps in mind the honey imagery given in 3.1.1. adhi means etc., not only honey imagery is there but also there are many imageries are there. physical body is compared to a tree in some place. As is the case of imageries in various other Upanisads goat imagery should be taken. There is no contradiction if aja is taken as birthless. instead of taking it as birthless we should take it as goatlike three elements there is no contradiction. Purva Paksi's problem is etymologically and Vyasacharya takes the popular meaning. if you take aja as varnatriya vishista prakriti there is no need of goat imagery. Adhi Sankaracharya's interpretation does not require goat imagery. It is taken

as birthless prakriti there is no problem. in the previous problem Avyaktam as body and here he translates aja as goat. Now we will complete the adhikaranam in traditional format.

Vishaya subject matter is aja sabda in svetasvara Upanishad; samsaya is whether ja represents samkya pradhanam or not; does it reveal samkya pradhanam or prakriti. the contention of opponent is that aja reveals beginningless cause of the word and therefore it is beginningless prakriti. lokita shukla Krishna refers to three gunas. Fourth is siddhanta that our conclusion is that word does not reveal samkya prakriti. the reason is because that interpretation is unvedic interpretation. it is not supported by veda because veda does not talk about independent matter. whereas samkya philosopher talks about independent matter. vedic interpretation is two fold which we saw aja must mean varnatriya vishista paratantra prakriti or varnatriya vishishta bhutatriyam. Thus samkya interpretation is wrong. This is the siddhanta. The fifth item is sangathi and the adhikaranam is in appropriate place in the Brahma Sutra. With this second adhikaranam is over and we will take up third adhikaranam in the next class.

## BRAHMA SUTRA

Class 132

### **Topic 3; Sankhyopasangrahadhikaranam [Sutra 11-13]**

The five fold five [pancha panchajanah] does not refer to the twenty-five Samkyan categories.

#### **Sutra 1.4.11 [117]**

#### ***Na sankhyapasangrahadapi nanabhavadatirekaccha***

Even from the statement of the number [fivefold five i.e, twenty-five categories by the sruti it is] not [to be understood that the sruti refers to the pradhanam] on account of the differences [in the categories and the excess over the number of the samkyan categories.

This sutra discusses whether the twenty-five principles of the samkyan philosophy are admitted by the sruti.

First I will give you the general introduction to this adhikaranam. this is also a small adhikaranam consisting of three sutras. Here a Brihadharaynaka upanisad mantra IV-4.17 is analysed. The mantra reads as *yasmin panca pancajana aksasca pratisthitah; tameva manya atmanam vidvan brahmamrto'mrtam* the meaning of the mantra is that in which the five aggregates and the Akasa rest, that Self alone I believe is the immortal Brahman, knowing which I am immortal. This mantra talks about Nirgunam Brahman, which Brahman is adhistanam for the karya karana Prapancha or vyakta Prapancha or avyakta Prapancha. Having divided into karya karana Prapancha the mantra says Brahman is the adhistanam of both of them and therefore it is different from both. Karya karana vilaksana Brahman. The mantra says that adhistanam Atma is myself. It is clean jivatma and Paramatma aikyam. Then the Upanishad gives the phalasaruti also. One who knows karya karana adhara Brahman becomes immortal. He becomes mukta. The first half talks about karya karana adharah is Brahman and the second half talks of jivatma and Paramatma aikyam and the one who knows that Brahman is immortal. The word panca janah means the karya padhartha the products. Panca panca janah means five fold karya padhartha which represents the entire karya Prapancha. five fold products signifies the entire karya Prapancha. not only the karya Prapancha is based on Brahman and akasah the karana Prapancha avyahruta Prapancha avyakta Prapancha also is based on Brahman. Akasa means one of the five elements is one meaning. Akasa is also avyakrutam the karana Prapancha that is sued on certain context. This is found in Gargy Brahmanam that is Aksara Brahmanam where Akasa is based on the substratum. Here Hiranyagarbha represents karya Prapancha; Akasa represents karana Prapancha and Aksara represents the basis of karya karana Prapancha; any way what I want to say in the context of Aksara Brahmanam Akasa means karana Prapancha. Akasa is also Brahman in certain context. Akasa is one element; Akasa is karana Prapancha and Akasa means Brahman. therefore yasmin Brahmani in Brahman both panca jana karya Prapancha and karana Prapancha are based. Karya Prapancha and karana Prapancha are based on Brahman. that karya karana vilaksanam Brahman is myself. Adhi Sankaracharya in Viveka Cudamani [sloka 260] says *ekameva sadanekakaranam karanantaranirasakaranam karya karana vilaksanam svayam Brahma tattvamasi bhavayatmani* that means that being one

only, is the cause of the multiplicity, superimposed. Itself it is not anything else. It is distinct both from the effect and the cause and exists by itself. That Brahma thou are; meditate on this in thy mind. Or it may be read as that which even though it is one existence is the cause for the many which refutes all others causes but itself is without cause which is distinct from cause and effect and is independent that Brahman thou art; meditate on this in your mind, tam atmanam manye. In the final portion it is said the knower of immortal Brahman becomes Brahman. Thus karya karana vilaksana Brahma aikyam and aikya phalam is the essence of the Brihadharaynaka upanishad mantra. This mantra occurs in the dialogue between Janaka and Yajnavalkya and after every teaching Janaka offers thousand cows. This is part of the rg veda mantra. Why should that mantra appear in this Brahma sutra. Yasmin is not a problem. panca panca jana is the one we focus in this sutra. It is fivefold karya padhartha. According to Advaitin one word is panca and the other word is panca jana, which means karya padhartha. Totally there are two words panca and pancha jana. This is interpretation of Advaitins. Samkya instead taking it as two words they take it as three words. Panca panca and jana. They take this as three words. We are going to say that is not the case. he says if you split in this manner panca panca will mean five fives which means twenty-five and therefore samkya says it means twenty five means samkya philosophy has got twenty five tattvams. The moment he finds twenty five samkya is happy and says that veda talks of samkya darsanam and he twists all other things also to suit him. He says Janaka you take as tattvam. panca panca as pancha vimsadhik. It talks of twenty-five principles of samkya is talked about here. We have discussed this earlier. The top one is Purusa who according to samkya philosophy is karya karana vilaksanah. Then mula prakriti is tattva number two. This is moola karanam. Then he talks about twenty-three products. Mahat tattvam, ahankara tattvam; from ahankara comes sixteen manah, panca jnanendriyani and panca karmendriyani and pancha sookshma bhutani and panca sthoola bhutani all that makes twenty three. Two non-products are mana and ahankara. Samkya says that this represents twenty five tattvam. samkya takes support from the Vedas. Here we will say that panca panca jana as twenty five categories is not acceptable. This is the general introduction. Not only we establish our interpretation but also negate samkya interpretation here.

Now I will enter the general analysis of the first sutra. Here Vyasacharya refutes samkya interpretation by giving two reasons. The first reason is that twenty-five tattvam of samkya cannot be meant here through panca panca. Upanishad uses the word panca panca and you take each group consisting of five members of five group. Vyasacharya argues that twenty-five tattvams cannot be made into five groups. If you are making into five groups each group should have some common factors. The twenty-five tattvam how can you make it five groups. Four groups you can manage panca jnanendriya, panca karmendriyani, panca sthoola bhutani and panca sookshma bhutani four groups are there and mana and ahankara will not form any group. Each member is distinct not allowing to form themselves to form a group. Therefore panca panca twenty-five tattvam and his group consist of four only. The first group consists of one Purusa; the uniqueness of Purusa is it is neither karanam nor karyam; the second is moola prakriti that is moola karanam it is only a cause; the third group consist of seven members they are mahat, ahankara, panca sookshma bhutani; they happened to be effects also and also happens to be the cause karya karana upayatmakam; from one angle they are products and from another they are karanam; then he talks about another group of sixteen are manah, panca jnanendriyani and panca karmendriyani and panca sthoola bhutani; and the unique characteristics is that they are all born and from them no tattvam is created. This grouping is done by samkya philosopher themselves. When you have made four groups of different numbers how can you call it panca panca. This is argument number one.

Next one is that we ask them to interpret the sutra. Samkya takes panca panca. We ask them to take the whole sloka. Panca panca refers to twentyfive principle. This is based on Atma. So the sloka talks about Atma, which is adhara of twenty-five principles. Not only those twenty-five tattvams are discussed but also Akasa is talked about. Twenty-five principles and Akasa are based on Atma. Now in this sloka twenty-seven tattvas are there. Where is samkya philosophy here. There are further problem also. In twenty-five tattvam Akasa is included or not. Akasa is included. Panca bhutani means Akasa is included. In twenty-five tattvam Atma is also included. How can the Upanishad say twenty-five tattvam and Akasa are based on Atma. Therefore how can Atma support twenty-five. Can you avoid by saying twenty-five talk about Jivatma and adhistanam talk about Paramatma. Unfortunately samkya do not have the concept of Paramatma. This is the second dosha. This is the general analysis of the sutra.

Now we will go word for word analysis. Because of severality ca adhirekat and excess na there is no vedic support for samkya; sankyopasangrahat api in spite of the mention of the numbers in Brihadharaynaka upanisad 4.4.17; this is the running meaning nana bhavat means severalty; what Vyasacharya intends is their incapacity to form into five groups. Nana bhava means not being able to make in groups; na is the sadhyam the next word is cha which means and this is to add the second reason. Then adhirekat means excess. The significance of the word excess is if you go by samkya explanation it will talk of twenty-seven tattvam and there will be excess of two Akasa and atmanam; then the next word is na means there is no vedic support. Samkya darsanam na vaidhikam. His interpretation is against the vedic interpretation. samkyaha uasangrahat the numbers mentioned by the Vedas; vedic mention of panca panca number. Api means in spite of; joining these words we get the meaning in spite of vedic mention of number in Brihadharaynaka upanisad 4.4.7 you do not have vedic support. This is the analysis of the first sutra.

Adhi Sankaracharya gives further reasons also. first he says samkya's splitting of the words into three words is improper. Panca panca jana; our splitting is panca pancajanah. Adhi Sankaracharya says when you split panca panca jana panca as five-second panca as five and jana as tattvam. panca is numeral adjective. Second panca is also numeral adjective. Third is noun tattvam; samkya takes first adjective as qualifying second panca and make it twenty-five. Adhi Sankaracharya says adjective should qualify nouns alone and adjectives are dependent one and nouns are independent one. one dependent one cannot dependent upon another dependent one. Therefore if you split the first five should qualify jana and second panca jana will make only ten and not twenty-five. Opposite of upasarjanam is pradhanam. More in the next class.

## BRAHMA SUTRA

Class 133

### **Topic 3; Sankhyopasangrahadhikaranam [Sutra 11-13]**

The five fold five [pancha panchajanah] does not refer to the twenty-five Samkyan categories.

#### **Sutra 1.4.11 [117]**

#### ***Na sankhyapasangrahadapi nanabhavadatirekaccha***

Even from the statement of the number [fivefold five i.e, twenty-five categories by the sruti it is] not [to be understood that the sruti refers to the pradhanam] on account of the differences [in the categories and the excess over the number of the samkyan categories.

This sutra discusses whether the twenty-five principles of the samkyan philosophy are admitted by the sruti.

We have completed sutra 1.4.11 of the first chapter fourth pada and Vyasacharya has refuted samkya approach through Brihadharaynaka upanisad mantra 4.4.17. Here the controversial portion as whether panca panca jana should be taken as three or two words. Samkya took panca panca to indicate samya tattvas and he wanted veda pramanam to his philosophy. He gave the reason also if taken as twenty-five tattvams Samkya has to divide into five group which is not available for grouping into five. If the first portion itself refers to twenty-five tattvams and adding Akasa and Atma totaling 27 the samkya interpretation is incorrect. I gave some more interpretation of Adhi Sankaracharya. The first argument that if panca panca janah is taken in this manner and panca and panca are taken the first panca is to be taken as adjective and it can qualify another noun only and the first panca cannot qualify for the second panca and it can qualify for the jana only and if it is taken as three words there will be two adjective and one noun and in that case there will be only ten and not 25 tattvams. To get twenty five the first panca should qualify the second panca which is grammatically incorrect and not possible. Hence samkya argument that the Upanishad talks of 25 tattvam is not correct.

Then Adhi Sankaracharya gives second argument also. If panca and panca are taken to mean twenty five the word jana the word referring to tattvam. It cannot be people and samkya is to interpret that the word represent tattvam. If it is taken as tattvam it can be taken as 25 tattvam assuming that first panca and second panca is twenty five. The I will ask you the question where is the word tattvam or principle occurring in the mantra for which samkya will have to answer the word jana means tattvam. Adhi Sankaracharya argument meant even if panca panca is taken as 25 the word jana is tattvam. It is too wild an imagination to fit it to your philosophy. Because of the two reasons panca panca jana cannot be taken as three words.

Then Adhi Sankaracharya gives two arguments in favour our interpretation. It should be taken as two words. The first word is panca and second is pancajanah and we have to form pancajana a compound word. Adhi Sankaracharya establishes by giving two arguments.

The first argument Adhi Sankaracharya gives is that from the study of swaras of the mantra we come to know that pancajana exists as a compound word in this mantra according to the rules of vedic mantra accent. Adhi Sankaracharya says when we apply a particular sutra pancajana is one word pancajana.

The second argument Adhi Sankaracharya gives to show that pancajana is compound word there is vaidhika prayoga sabda. Adhi Sankaracharya quotes taittiriya yajur veda mantra and rg veda mantra that is vedic usages to show that panca jana is a compound word. Therefore samkya splitting is acceptable to us.

### **Topic 3; Sankhyopasangrahadhikaranam [Sutra 11-13]**

The five fold five [pancha panchajanah] does not refer to the twenty-five Samkyan categories.

#### **Sutra 1.4.12 [118]**

#### ***Pranadayo vakyaseshat***

[The panchajanah] or the five people referred to are] the vital force etc., [as is seen] from the complementary passage.

The sutra is explanatory to Sutra 11

First we will do the general analysis. In the previous sutra we have concluded that panca jana sabda as compound word and now the question is what is the meaning of this compound word. We apply another panini sutra which is applicable to compound formation. According to the when a compound word is formed and this rule come into being when the first word of the compound is a number or a direction and when a compound word is formed. The compound word itself will become another noun and the number will lose its numeral significance.

The example given is sapta rishi. Seven rishi is the meaning. Sapta means a number; rishi means sages. Once you form a compound sapta rishi, the sapta rishi itself will become a noun another pathartha that is a particular group of rishies. Thus Vishista is a sapta rishi. Brigu is a sapta rishi. The word sapta has lost its significance. You may ask the question how many sapta rishis are there. And our answer will be seven sapta rishis are there. We will also say Visvamisra is not a sapta rishi.

Applying this rule pancajana is a new samjna a new noun referring to new padhartha. The word panca has no numerical significance. Panca panca jana means five padharthas are there. They are five karya padharthas are there. Now our discussion is if panca jana is a new padhartha what is that padhartha. Padhartha can be anything. Vyasacharya gives the answer in this sutra. He says that it refers to five padhartha mentioned in the very same mantra in the right context.

In the next mantra five organs are mentioned i.e, the next to the mantra which we discuss here i.e., 4.4.18 of Brihadharaynaka upanisad. The mantra reads as *pranasya pranamuta caksusascaksuruta srtrasya srotam manaso ye mano viduh; te nicikyurbrahma puranamagryam* the meaning of the mantra is those who know the vital breath [prana] of the

vital breath, the eye of the eye, the ear of the ear, kthe mind of the mind have realized the ancient, primordial Brahman. This panca refers to five organs such as prana, eye, ear, manah and annam; therefore Vyasacharya concludes that panca jana refers to five organs alone which are supported by Atma. The Atma is the substratum of panca jana.

Now we will go to the word for word analysis. Pranadayah means prana etc., are the five panca janas or the five pancajanah. Vakya seshat because of the next or latter mantra; prana caksur, manah and annam etc. The significance of the word pranadaya and vakyaseshat; pranah and adhi esam te panca janah pranadayah padharthah panca janah bhavanti. Prana means prana adhi means etc., this etc., is filled from the next mantra 4.4.18, which begins with pranasya prana etc., then vakya seshat is a compound word vakya is one word and seshat is another word which means because of the subsequent verse; vakya means section here in this context.

Sesha means the following left out portion; the final meaning is taken as the next mantra of the subsequent text. Because of the support of the subsequent text we come to know that the panca jana is but the five organs of the individual. There is a problem here. When you study the next mantra 4.4.18 purva paksha says we do not see five organs at all. If you look into the mantra there is a problem. Here only four items are mentioned prana, caksu, mana and srorta and how do you say panca pancajanah. There are only four pancajanah.

There are two versions of Brihadharaynaka upanisad. It occurs in two branches one is kanva saka and another is madhyantina saka. Of these two Adhi Sankaracharya has commented the kanva saka of Brihadharaynaka upanisad. For madyantina saka vidyaranya has written a commentary. Both are more or less the same except a few addition and deletion. Sometimes the two branches help us solve the problem. We go to madyantina saka 4.4.18 annam is included and in kanva saka annam is missing.

Then comes another question and if you go by madyantina saka you get five organs are mentioned. Fro this Vyasacharya gives an alternative method which we will read now.

### **Topic 3; Sankhyopasangrahadhikaranam [Sutra 11-13]**

The five fold five [pancha panchajanah] does not refer to the twenty-five Samkyan categories.

#### **Sutra 1.4.13 [119]**

#### ***Jyotishaikeshamasatyanne***

In the text of some [the Kanva recension] where food is not mentioned [the number five is made up] by light [mentioned in the previous verse].

The argument in support of Sutra 11 is continued.

Now I will give you general analysis. Here kanva saka only four panca janas are mentioned. Vyasacharya says look around a little bit more. He says you see the previous mantra. There we get one more thing that 4.4.16 which reads as *yasmadarvak samvatsaro'hobhah parivartate; taddeva jyotisam jyotirayurhopasatemrtam* the meaning of the mantra is below

which the year with its days revolves upon that immortal light of all lights the shining ones meditate as longevity.

In this mantra second line there is a reference to the word jyotih the tejas tattvam. Take jyotih from the previous mantra and another four from the subsequent mantra and thus five pancajanas are mentioned. This is the general analysis.

Now I will do the word for word analysis. Ekesham for some people the number is made up jyotisha by the light ane asati since food is not mentioned. Now I will give you the significance of the words. Ekesam means some people and he refers to those who follow kanva saka of Brihadharaynaka upanisad; the next word is jyotisah by the light the number is made by the light; with jyoti the number becomes five; this jyoti we get from the previous mantra 4.4.16 of Brihadharaynaka upanisad. The annam being not there jyoti of the previous manta is taken to make up panca jana. This is the word meaning.

Adhi Sankaracharya adds a few more notes, which I will give you here. I said previously that Adhi Sankaracharya refers to compound panca jana used elsewhere in Vedas. One is Taittiriya samhita panchanatva panca jananam the word panca jana sabda in the meaning of the celestials. Hence Adhi Sankaracharya says there is nothing wrong in taking panca panca jana as five types of heavenly celestials deva, pitru, gandharva, yaksa, raksa are the fivefold celestials of panca jana.

The same expression occurs in rg veda samhita also yad panca janyah visha; in his context the word panca jana is used as five types of human being. In this mantra panca pancajana means five types of human beings they are brahmana, ksatriya, vysya, sudra and nishada the type of people born out of mixed marriage. Panca jana means organs, celestials or human beings. Fivefold karya Prapancha is meant by panca panca janah. Thus this mantra does not support samkya philosophy. With this, this adhikaranam is also over.

We have completed 13<sup>th</sup> sutra. Now we will take up present this adhikaranam in technical format. Subject matter is the expression panca pancajana occurring in 4.4.17 of Brihadharaynaka upanisad; samsaya, the controversy is whether this expression talks about tattvas of samkya philosophy or not; purva paksa and purva paksa namely samkya philosopher says does talk about samkya tattvas alone because panca panca repeated twice reveals twenty five tattvas and take jana as the third word; jana means tattvani; because of this view samkya philosopher says his philosophy has got the vedic support; Siddhanta says that this expression does not talk about twenty-five tattvas at all. And we say that the expression should be split into two words and this expression refers to fivefold karya Prapancha and not twenty-five tattvas indicated by the word pancajana. Adhi Sankaracharya and Vyasacharya gave enough reasons in support of their argument. The main purpose is over by the first sutra and the second and third are incidental sutras explaining our interpretation. Since this expression does not confine to tattvas and samkya is avaidhikam only it is stated. Samkya believes in veda pramanam but his teaching is not in harmony with vedic teaching and therefore Vedanta is correct and not samkya philosophy. Sangathi is that the adhikaranam occurs in the appropriate place only. Having completed we will enter the fourth adhikaranam.

## BRAHMA SUTRA

Class 134

### **Topic 4; karanatvadhikaranam [Sutra 14-15]**

Brahman is the first cause.

#### **Sutra 1.4.14 [120]**

#### ***Karanatvena chakasadishyu yathavyapadishtokteh***

Although there is a conflict of the Vedanta texts as regards the things created such as ether and so on, there is no such conflict with respect to Brahman as the First cause on account of His being represented in one text as described in other texts.

The doubt that may arise from sutra 13 that different srutis may draw different conclusions as to the cause of the universe is removed by this sutra.

In the preceding part of the work the proper definition of Brahman has been given. It has been shown that all the Vedanta texts have Brahman for their common topic. It has been proved also that there is no scriptural authority for the doctrine of the pradhana. But now the samkya raises a new objection.

First I will give a general introduction to this adhikaranam. In this adhikaranam also samkya philosopher is refuted. In the previous adhikaranam samkya wanted to take vedic support and Vyasacharya successfully refuted their argument. Here samkya has turned against and say to Vedantins that you also don't have vedic support. We said Brahman is the central theme of the Vedantic teaching in the second, third and fourth adhikaranams in the first pada. This jagat karanam Brahman that is revealed by Vedanta should be known for gaining liberation. Jagat karanam Brahma alone is consistently talked about in Vedanta. There is an expression samanvay. Now samkya philosopher is going to attack that your Brahman is never been consistently revealed as jagat karanam Brahman. He says that there is inconsistency with regard to jagat karanam and there are other things also mentioned as jagat karanam. Since there is no consistency he says Brahman cannot be taken as jagat karanam. Hence he says that you don't have the support of Vedas. Since veda pramanam is not supporting either, we have to go to tarka or logical support. Then he says that I am a better tarkavadi. Pradhanam alone will be established as jagat karanam and not Brahman as the jagat karanam. Material cause should always be material and material is achetanam and any amount of logic you use and achetana karana vada only will stand logical stand. Your support is veda pramanam and once you come to tarka he says I am strong and achetana karana vadha will be established. He want to prove that there is inconsistency with regard to jagat karanam Brahman. The vishaya vakyam is all the sristi vakyams dealing with creation are to be taken up for discussion.

The sriti vakyam kept in mind are; the first one is 2.1.1 of Taittiriya Upanishad which reads as *om Brahma vid apnoti Param, tadesa'bhyukta satyam jnanam anantam Brahma yo veda nihitam guhayam parame vyoman so'snute sarvan Kaman saha brahmana vipasciteti*. We

find from this mantra that from the Self sprang Akasa from Akasa the ari etc. This passage shows that the cause of creation is Atman.

The next example is 6.2.1 of Chandogya upanisad that reads as *sadeva somyedamagra asi* before the world was manifest there was only existence one without a second. 1.4.7 of Brihadaranyaka upanisad starts as *taddhedam tarhyayakrtamasit*, which means that the universe was then unmanifested. It manifested itself only as name and form. 2.7.1 of Taittiriya Upanishad again reads as *asad-va idam agra asit* which means in the beginning was verily this non-existence. From that the existent was born. That created itself by itself. It is called the Self-made, or the well made. If you take all the five statements you will find five material causes are mentioned. First one says Brahman is jagat karanam. Second one says Atma is jagat karanam. Third one says sat is jagat karanam in Brihadharaynaka upanisad it says avyakrutam is jagat karanam and in the Taittiriya Upanishad the karanam is said to be asat. You talk about consistency and are you not ashamed so asks samkya philosopher. First two are chetana tattvam; third one we do not know chetanam or achetanam we are not sure; fourth one is achetana karanam and fifth one says nonexistence is the cause of the creation. Where is the question of consistency in the Upanishad. Then how can you call Brahman is jagat karanam. Now for inconsistency the samkya says viganam means opposite of samanvay or disharmony or disagreement for inconsistency with regard to jagat karanam. Therefore Brahman is not jagat karanam. Therefore that is not the subject matter of veda and therefore you come to tarka and I win says samkya philosophers. The entire first chapter of Brahma Sutra we heavily leaned on sastra pramanm and hence opponents think that we are weak in tarka. This is the general introduction to this adhikaranam.

Now we will do the general analysis of the first sutra. The answer that there is no inconsistency at all and there is no viganam or virodha. There is no asamanvaya. All sristi vakyam talk about Brahman only as jagat karanam. You got confused because the words are different but you should know that all the words refer to Brahman only. The first statement says Brahman is the karanam. Taittreya vakyam the word Atma is Brahman only. Atma cannot refer to Jivatma but it refers to Paramatma only. Jivatma is created only after. Jivatma came after sristi only and hence it means Paramatma before Paramatma remained even before creation. That Paramatma alone created the universe. So the creation process continued. Atma was there before creation means it is Paramatma only. Chandogya upanisad mantra says that sat refers to Brahman only because later in the discussion it says tat sathyam saha Atma. Tad sathyam means which tat the original cause and that sathyam is nothing but Atma. It does not say Brahman. Tad sathyam it is said but elsewhere it is said sathyam jnanam anantam Brahman it is said and from this it is derived sathyam is Brahman alone. Sat the jagat karanam is chetanam alone. Only samkya pradhanam cannot visualize because it is achetanatvad. My Brahman can visualize because it is chetanam. The avyakrutam is Brahman only and not prakriti. Not it is jada prakriti and avyakrutam is Brahman because if you study Upanishad says avyakrutam alone enters every body and experiences the world that means avyakrutam is chetanam Brahman alone. Avyakrutam means un-manifest and therefore Brahman is known as avyakrutam. Therefore Brahman alone is mentioned. Taittiriya Upanishad says asat means Brahman alone in which world is in potential form. Asat will be discussed in more detail. The word asat is used for Brahman because Brahman before creation was nbot available for vyavahara. When something is not available for vyavahara it is un-manifest form and it is not available 'as though'. The ghee is there in un-manifest form in milk. But he says the ghee is not there although he has milk. In the milk ghee is there in un-manifest form. It is there but since that ghee is not ready for vyavahara we say that ghee

is not there. So also the case with Brahman. There is no viganam and my philosophy is vaidhikam alone.

Now we will go to word for word analysis. The word karanatvena we will read twice. Yathan vyapadishta because of the mention of the same Brahman; karanatvena as the cause akasathisu with regard to space etc., na cha there is no inconsistency at all; here the word inconsistency is supplied additionally; karanatve that is the addition with regard to causal status of Brahman; sutra is because of the mention of the same Brahman as the cause with regard to space etc., with regard to the causal state of Brahman.

Karanatvena is to be read twice. First it is one word and the second time it is karanatva and na. Cha indicate the purva paksha nirakatka the negation by purva paksha. Akasathisu means with regard to the creation of the space etc., the creation is understood; siddhanti also agree with the statement Akasa etc. Brahman is the karanam; yatha vyapadista ukteh; it means the same entity. It means as in one Upanishad so in other Upanishad also; it means samanam the same; the same means the same Brahman pointed out in our examples as above. Ukteh means mentioned. Thus the first sutra refutes viganam.

#### **Topic 4; karanatvadhikaranam [Sutra 14-15]**

Brahman is the first cause.

#### **Sutra 1.4.15 [121]**

#### ***Samakarshat***

On account of the connection [with passages treating of Brahman, non-existence does not mean absolute non-existence].

Some texts from the Taittiriya, the Chandogya upanisad and Brihadharaynaka upanisad are taken up for discussion.

We will do the general analysis. In this sutra Vyasacharya particularly deals with taittiriya vakyam asatva idam agra asit. Vyasacharya deals with this mantra taking the word asat Brahman appears to be far fetched. We can take sat as Brahman all right and how can I take 'asat' as Brahman. Vyasacharya says context supports my interpretation. He says do not take the statement out of context. When you take the statement out of context the statement is terrific. The Taittiriya Upanishad wanted to teach Brahman and later Brahman was revealed as Atma panca kosa vilaksana atma. Then in the sixth anuvaka the section of the same valli, Upanishad strongly warns that Brahman should not be taken as 'asat' and be taken as 'sat' only. From this it is very clear that Brahman is not existence at all. If you study further it is not non-existent at all. This we will see in the next class.

## BRAHMA SUTRA

Class 135

### **Topic 4; Karanatvadhikaranam [Sutra 14-15]**

Brahman is the first cause.

#### **Sutra 1.4.15 [121]**

#### ***Samakarshat***

On account of the connection [with passages treating of Brahman, non-existence does not mean absolute non-existence].

Some texts from the Taittiriya, the Chandogya upanisad and Brihadharaynaka upanisad are taken up for discussion.

We do the general analysis of the 15<sup>th</sup> sutra the second sutra of this adhikaranam. Here samkya philosopher wants to say that Vedantins also does not have the support of veda pramanam. I may not have veda pramana support and you also don't have veda pramana support according to me. On the analysis of sruti vakya Brahman cannot be jagat upadana karanam. There is inconsistency in sruti vakyam. There is disagreement and inconsistency and he gave several sruti vakyas in support of his argument. This we discussed in the last class. In the first sutra Vyasacharya established that there is no viganam. Even though words are different, all of them represented only Brahman alone. Even the word asat is Brahman. Now purva paksa partially accepted Vyasacharya conclusion had difficulty in accepting asat as Brahman. This word occurs in Taittiriya Upanishad. To answer the doubt of purva paksa, Vyasacharya writes this sutra. Vyasacharya means that you have to arrive at the meaning of asat from the flow of the teaching and that will give you the context and the context will give the right meaning. This we saw in the last class. The very title is based on Brahman alone. It is also said that Brahman alone is Atma residing in the cave of the heart etc. Then the Upanishad talks about the recognition of jagat karanam Brahman through panca kosa vivekah. Then at the end of fifth anuvahda Upanishad said that Brahman should never be taken as 'asat'. And the Upanishad strongly condemns those people who take Brahman as 'asat' and in fact those who talk Brahman as asat, the Upanishad says that person is 'asat'. Then Upanishad talks about the creation. The student asks some doubt and once again jagat karanam Brahman is introduced. In the Taittiriya Upanishad jagat karanam is discussed throughout the Upanishad. Then it has positively criticized that this Brahman should not be taken as asat at all. From this it is very clear that the Upanishad confuses. Therefore Adhi Sankaracharya argues if the sruti uses the word asat it must be in different meaning. Sruti has said that Brahman cannot be nonexistent. If the same Upanishad introduces asat, means asat is taken in different meaning. Previous negation is in the meaning of nonexistent and if that is so then it must be given a different meaning. So Adhi Sankaracharya says that asat means avyavakaram principle. Word asat has two meaning which is criticised in 5<sup>th</sup> anuvaka. The next is karanam avyakta tattvam in the 7<sup>th</sup> anuvaka. If you understand Brahman is the subject matter, 7<sup>th</sup> anuvaka also discusses Brahman alone. The flow supports that in seventh anuvaka asat means only the un-manifest Brahman alone. Some may argue that topic may have changed from first to seventh chapter. If you study the last sentence of 5<sup>th</sup> anuvaka, tad apy

sloko bhavati says that the next para talks about the same Brahman, which is talked in the earlier chapter. You cannot claim the seventh anuvaka talks differently. That asat cannot be non-existent is our conclusion from the flow of the topic.

Asatva idam agra asit it means was existing. If asat means non-existence before the creation nonexistence was in existent. It is contradiction. Because of the presence of asit the verb does not refer to nonexistence but it refers to the existence in un-manifest form. Here the ghee example is given, potential ghee is as though non-existence. This is the second argument. The verb asit indicates that the verb asat is not nonexistence.

In Chandogya upanisad 6.2.2 positively condemns nonexistence as jagat karanam. Some people claim nonexistence is jagat karanam but it cannot be and Upanishad clearly negates the nonexistence is jagat karanam. Thus we conclude the word asat means Brahman alone in un-manifest form. Thus the vedic support is there for us.

Now I will give you the word meaning. Samakasrsat because of reference to Brahman the word asat in Taittiriya Upanishad 3.7 does not mean non-existence. In this because of the reference to Brahman is sutra artha and the rest are in brackets. It is difficult to literally comment the sutra. Here Brahma is mentioned and you draw that Brahman and give that meaning for the word 'asat' or because of the reference to Brahman.

I will discuss one more topic before concluding the sutra. Vyasacharya discusses the consistency of jagat karanam Brahman. The consistency is that all Upanishad uniformly refer to Brahman although different names are used to denote Brahman. Now Adhi Sankaracharya introduces another purva paksa. Purva paksa is samkya philosopher himself. There may be consistency with regard to karanam Brahman. If you study the process of creation in the Upanishad there is differences with regard to the arrival of the creation. Karanam and karyam put together is called sristi. Since karanam part there is consistency but there is inconsistency with regard to karyam. Wherever there is viganam karanam goes away. He says the creation in any Upanishad. In some it is krama sristi and in some it is akrama sristi and in some other places it is vikrama sristi. There is gradation from subtle to gross creation. After the creation of bhuta Prapancha and then there is creation of boudhika Prapancha. It is beautifully graded creation. Three elements are mentioned in Chandogya upanisad. This is called krama sristi. In other Upanishads we find everything simultaneously appearing as in dream. Brahman became everything and there is no order at all. In some Upanishad the creation we find in reverse order. After boudhika sristi the Upanishad talks about bhuta sristi. This is the purva paksa introduced by Adhi Sankaracharya even though this topic is not there in the sutra. He gives two answers.

There is no inconsistency in karyam also. This is established in the second chapter of Brahma sutra 2.3.1 and Vyasacharya establishes in karyam also. The second answer Adhi Sankaracharya gives is that let us assume there is inconsistency with regard to the order of creation and even if there is inconsistency there is no defect at all. The Upanishad is not interested in the order of creation at all. Sruti is not serious about teaching the creation or the order of the creation because creation means dvaidam and sruti does not have the intention of teaching creation. The tatparyam is not in Dvaidam and not in sristi. In the beginning and end the Upanishad talks of Advaidam only. It begins with Advaidam and ends with Advaidam and in the middle Dvaidam comes as a passing phase. It negates sristi, as it is not a valid thing. What is negated later cannot be really there. Similarly repetition is karanam Brahman and not karyam Brahman. Even without sruti we know Dvaidam. There is no teaching needed

for dvaidam darsanam. Advaidam alone is new and we need Vedas to learn. For sristi jnanam no phalam is mentioned. If you see glorification sristi is never glorified. On the other hand sristi is condemned. Dvaidam sristi is condemned and finally logic also supports that karya Prapancha is mithya and Upanishad does not teach the mithya vasthu. Thus all the tatparya linga reveals sristou tatparya nasti. In maths class the teacher asked the student if one pencil costs fifty paise what will be the cost of fifty pencils. To this one student asked the cost of pencil is two rupees and not fifty paise. One should know the aim of the maths class is to know the arithmetics and not see the price of the pencil is right or wrong. In the same way in Vedanta what we are interested is the Brahma jnanam and not the incidental jnanam of the sristi. Tatparyam is Brahma jnanam and sruti is not interested in five elements or three elements etc. Sruti does not have any tatparyam in sristi. The sruti does not have tatparyam why introduce the sristi at all. For that our answer sristi is introduced as a means and not an end in itself. This topic is beautifully analysed in advaida prakaranam of Mandukya Upanishad. Sristi is not for establishing sristi but to reveal the adhistanam Brahman. When they want to build a floor we have the supporting bamboo. You introduce the bamboos for the setting of the floor and once the floor is set the bamboos are removed and you don't decorate it. You need bamboo for construction of the floor. Introduction of bamboo is adhyaropah and removal of bamboo is apavadah. In the same way introduction of sristi is adhyaropah and negation of sristi is apavadhah. If there is inconsistency in sristi it is not a defect in Advaida and it is only favourable to Advaidam. So Vedanta supports the Advaidam alone and not dvaidin samkya.

Now we will sum up the five factors. The subject matter is sristi vakyani. Jagat karana Brahma bodhaka vakyani is the vishaya. The doubt is whether there is consistency in revealing jagat karanam. Then purva paksha says there is inconsistency in Brahman status because several Upanishad uses several words. Siddhanta says that there is no inconsistency and it is 'seeming inconsistency' and all Upanishad reveal that chetanam is karanam. Vedanta alone talks of the 'Consciousness as the material cause' of the universe. Normally we think that matter is material cause and Vedanta alone has the unique teaching chetana jagat karanam. Not only words are differently used and in some Upanishad other words are used yet the adhistanam is Brahman whatever the word is used for jagat karanam. Sangathi is that this adhikaranam occurs in its appropriate place alone. We will see the next adhikaranam in the next class.

## BRAHMA SUTRA

Class 136

### **Topic 5; Balakyadhikaranam [Sutra 16-18]**

He who is the maker of the sun, moon, etc., is Brahman and not prana or the individual soul.

#### **Sutra 1.4.16 [122]**

#### **Jagadvachitvat**

[He whose work is this is Brahman] because [the work] denotes the world.

A passage from the Kaushitaki Upanishad is now taken up for discussion.

Having refuted the samkya philosophy in the four adhikaranam, Vyasacharya shows that Brahman alone is subject matter of Vedanta. Now we enter the fifth adhikaranam and it consists of only three sutras and here Vyasacharya analyses a mantra from Kaushitaki Upanishad which belongs to rg veda. The mantra taken is from fourth chapter. The fourth chapter of the Upanishad is in the form of Gargya Ajata Satru samvadha. This samvadha is almost the repetition of Gargya Ajata Satru samvadha of Brihadharaynaka upanisadm second chapter. In this samvadha 19<sup>th</sup> mantra is taken for analysis.

The part of the mantra 19 taken up for discussion is *yo vai balaka etesam purusanam karta yasya vai tat karma*. Now we will see the background and the meaning of the mantra. The chapter begins with Gargya approaching Ajata Satru who has got another name Balaki. That is why the adhikaranam is known as Balakiadhikaranam. We had a similar adhikaranam before. There we analysed the third chapter of Kaushitaki Upanishad. {Pratardanadhikaranam} in both the places the adhikaranam is based on the name of the student. This Balaki was not only learned but had the half knowledge. He was arrogant also. An ignorant person there is no problem. Totally learned person also there is no problem. Balaki was not fully learned and he was arrogant. This Balaki went to Kasi raja. He told him that he would teach him Brahman. Ajata Satru had a problem. During Ajata Satru time Janaka maharaja was popular as wise jnani. Ajata Satru was feeling a bit. Therefore Ajata Satru says even before balaki started teaching raja asked his servants to give thousand cows to Balaki. Ajata Satru himself was a learned scholar. Unfortunately Balaki begins his teaching he introduces adhithya devata as Brahman for he did not know Nirgunam Brahman. He knew only limited Brahman and he thought all devata was Brahman. Balaki says I meditate adhithya Purusa as Brahman. Ajata Satru says adhithya is not total Brahman but he is a partial Brahman. Then balaki introduces many devatas and at the end of every devata introduction Ajata Satru says it is only soupadhika Brahman and karya Brahman and not Nirgunam Brahman. After ten or eleven devatas Balaki exhausted all devatas and he kept silence. And then Ajata Satru asked only that much he knew and raja says that he knew only karya Brahma and he did not know karana Brahman. The raja said that you wanted to teach Brahman but you have taught partial Brahman and not total Brahman. The Ajata Satru says that everything changed and he accepted Balaki as his sishya and he began teaching Balaki Brahma Vidya. A ksatriya accepted a brahmana as his sishya. The Ajata Satru says I shall teach you the real Brahman. In Brihadharaynaka upanisad both of them go together to a

sleeping person and they wake him up and there is an analysis of sleeping person and Brahman is taught in Brihadharaynaka upanisad and the same thing is repeated in Kaushitaki Upanishad. Just before going to sleeping person Ajata Satru gives an introductory statement and this introductory statement is the vishaya vakyam of this adhikaranam. This is the background to this adhikaranam.

What he says is yo vai balake saha vedi tavyah if you want to know Brahma you should know karanam Brahman and not karyam Brahman like adhithya devata etc., and what is the glory of karanam Brahman is not adhitya devata or chandra devata but karanam Brahman is the creator of all the devatas. He is adhi purusanam. Know the creator of adhithya devata and not adhithya devata. You should know that karanam Brahman whose creation is the entire universe. Karma means creation in this context. Etad means this prathyaksa jagat this visible universe or the objective universe. That jagat karana Paramatma you should know and that is Paramatma. Sarva devata karanam Brahman jagat karanam Brahman.

Now the question is what is controversy here. The problem is that the word Paramatma or Brahman is not mentioned in this mantra. Mantra uses the pronoun. Saha veditavyah. He is to be known and who is 'He'. That He is vaguely mentioned as Brahman and not distinctly. The word karma is also vague. The word etad is pronoun. The word saha is pronoun. The word karta is producer. So what is subject matter to be known is presented in this adhikaranam. Our conclusion is that saha means Paramatma alone; purva paksa will take other stand which we will see in due course. Here we will see siddhanta portion.

Now we will see general analysis of this sutra. Through this sutra Vyasacharya establish saha means jagat karanam Brahman. Karma means creation. Etad means this universe. You should know that Paramatma whose creation is this universe. Mantra talks about the creator of this universe alone and creator of universe means Brahman alone is the creator of universe and none else. So we conclude that the creator has to be Brahman.

Now we will go to the word for word analysis. Jagat vachitvat. Since the mantra refers to the universe Brahman is the object of knowledge. Here Brahman is the object of knowledge is not said in the sutra and therefore we have to supply within bracket. Now we will see the analysis of the words. Jagat means this universe and vachi means referring to. The word karma occurring in the vishaya vakyam is jagat vachi. Since the word creation refers to the universe the Upanishad is talking about the universe as the creation as the subject matter and if the creation is by somebody and that somebody has to be Brahman alone. Hence this refers to Brahman. Purva paksa argues that you have interpreted karma as creation. If the word karma is taken as creation then it refers to Brahman. Purva paksa argues in which dictionary you get the meaning of karma as Brahman. Karma means one is action; the second meaning is punya papa adhrisam. . Therefore the word karma means either action or adhrisam and therefore the mantra does not refer to Brahman. The word karma does not refer to creation and your interpretation is incorrect and wrong. This is the purva paksa. It is karma word analysis in this adhikaranam. Adhi Sankaracharya accept that the primary meaning of the word is action or punya papa adhrisam. But the problem is that this primary meaning does not fit in this context. Adhi Sankaracharya says I want to take the primary meaning but that meaning does not fit in. Before the word karma there is a pronoun etad. Adhi Sankaracharya asks the question if the pronoun this is used it must refer to something referred to in this section. But Adhi Sankaracharya in the entire section the Upanishad has not talked about any action at all. Then etad karma will refer to specific action. If punya papa adhrisam is talked about, then etad can be taken for punya papa adhrisam. There is no adhrisam topic discussed

anywhere. Etat does not refer to any specific action or adhristam. Even the word etat cannot refer to devatas also because of the grammar problem. Therefore word etat cannot refer to purusas, any action, or any punya papa adhristam. Therefore the way out is that the word refers to anything that is in the front. What can be referred to by the pronoun without specifying any particular thing and Adhi Sankaracharya says that it can refer to the universe alone. 'This' mean without any specification it can refer to only objective universe. 'That' means without any previous reference it means Brahman only. Therefore karma should be interpreted as in the secondary meaning a product. Etat means this universe and karma means creation and universe is the creation of that person which is Paramatma. That Paramatma is Brahman you should know hey Balake. Suppose the mantra talks about the entire universe this creation includes everything. The first part of mantra says etesam purusanam karta. This means Paramatma is the cretor of adhithyadi devata. Next part of mantra says the creator of this universe and the creator of purusas and also the entire jagat. If Paramatma is presented as the entire universe why should it refer to the creator of purusas. The world includes purusas or devatas also. This is purva paksa. He says it is required because balaki has taken these purusas as Brahman and the teacher has to reveal Brahman and also make it clear that the purusas are not real Brahman but they are only kartas. They are separately mentioned because they have to be negated as not Brahman. With this the first sutra is over.

### **Topic 5; Balakyadhikaranam [Sutra 16-18]**

He who is the maker of the sun, moon, etc., is Brahman and not prana or the individual soul.

#### **Sutra 1.4.17 [123]**

#### ***Jivamukhya ranalinganneti chet tad vyakhyatam***

If it be said that on account of the inferential marks of the individual soul and the chief Prana [Brahman is] not [referred to by the word 'matter' in the passage quoted], [we reply] that has already been explained.

An objection to sutra 16 is raised and refuted; the objection has already been disposed of under 1.1.31 ibid.

We will do the general analysis of this sutra. Purva Paksi comes into the picture. The first portion is Purva Paksi portion and the second portion belongs to siddhanti.

There are two people who are going to object our conclusion. Upanishad uses a pronoun in this mantra. He is to be known. Who is that he? Purva Paksi says that when I read the latter portion of the mantra that I find clear references to jiva alone and not Paramatma. Bogta jiva is talked about here says the Purva Paksi. Secondly we meet with the term prana in a complementary passage; 'then he became one with the prana alone [Kaushitaki Upanishad IV.20] *so esa prana eva prajnatmedam sariram atmanam anupravista alomabhya anekhebyah* the word prana refers to the vital force. It is the conscious being that experiences the world. This refers to jivah. Gumte verb indicates bogta. Saha vedi tavyah refers to jivah. How will you fit it with vishaya vakyam. Purva paksa says I will mänge to fit it. This jiva is creator of adhithyati devata. This is well known. Thirdly the word prana is the maker of all the persons the person in the sun, the person in the moon etc. Jiva cannot create devata. How will you manage. Purva Paksi says that all devatas have come because of the punya karmas of jivahs. So we can say jiva is the creator of devata. More in the next class.

## BRAHMA SUTRA

Class 137

### **Topic 5; Balakyadhikaranam [Sutra 16-18]**

He who is the maker of the sun, moon, etc., is Brahman and not prana or the individual soul.

#### **Sutra 1.4.17 [123]**

#### ***Jivamukhya ranalinganneti chet tad vyakhyatam***

If it be said that on account of the inferential marks of the individual soul and the chief Prana [Brahman is] not [referred to by the word 'matter' in the passage quoted], [we reply] that has already been explained.

An objection to sutra 16 is raised and refuted; the objection has already been disposed of under 1.1.31 *ibid.*

We are doing the general analysis of sutra 17, the second sutra of Balakiadhikaranam. Here Vyasacharya is analyzing the statement occurring in Kausitaki Upanishad 4.19. We should know that principle which is created with all devata and that which associated with this karma. The debate is what is that principle. In the first sutra Vyasacharya established that principle is Paramatma, which is the creator of all devatas and this karma. Now the question is 'this karma'. Since no karma is referred to any karma in the text, it is taken as this creation in the absence of no other noun being mentioned. The word karma also can etymologically mean creation. Product here is creation.

The principle associated with creation is Paramatma alone. When this conclusion was given in the first sutra, Purva paksa raises a question that I cannot accept saha as Paramatma because in the latter portion the Upanishad it mentions Jivatma. It is chetana tattvam which experiences the world is talked about and tht chetana tattvam is Jivatma alone. Since Jivatma is referred to in the latter portion the vishya vakya mantra should refer to jivah alone. How do you vive the meaning of the vishaya vakya, which is *yo vai balaka etesam purusanam karta, yasya vai tat karma, sa vai veditavya.* 4.19 of Kaushitaki Upanishad. Who is the creator of all the devatas and who is associated with the karma. This is the interpretation of purva paksa. He himself explains further that in his interpretation the following question comes. How can jiva be the creator of devata. Two answers are given in this regard. Jivah is creator of devatas because jiva alone becomes devatas by punya karma. How do you say jiva is the creator of devata. Jiva has to exhaust punya papa karma. Exhaustion of punya papa karma is possible only through sukha dukha anubhava. And sukha dukha anubhava requires the following things such as sense organs, a world to give sukha and dukha and third devatas to preside over sense organs. All the three are required for the karma exhaustion. That is why we saw in Bhagavad Gita 18. *adhistanam tatha karata karanam ca prthagvidham vividhas ca prthakcesta daivam cai 'va'tra pancamam* the meaning of the sloka is the seat of action and likewise, the agent, the instruments of various sorts, the many kinds of efforts and providence being the fifth.

All human transactions require not only sense organs etc., but also adhistana devatas also and only then we can experience the world and only when we experience the world we can exhaust the sukha and dukha. Bhagavan created the world because we have to exhaust the punya papa karma. If we did not have karma, Bhagavan would not have created the universe. I am responsible for Creation of the world and devatas are require for sukha and dukha anubhava and if devatas do not preside over sense organs would not function. Even devatas are meant for our sukha and dukha anubhava. Therefore jivah is responsible for the arrival of devata. Bogta eva bogha upakarananam karta. All the factors required for bogha and one of the factors is devata. This is the argument of purva paksa. The indirect creators of devata is jivah. According to Purva Paksi etat karma means punya papa karma. One should know that jiva who is the indirect creator of devata and who is associated with punya papa karma is jivatma. Purva paksa first part we have seen.

Now we will see the second Purva Paksi. When we analyse the latter part of mantra it talks about prana. Vishaya vakyam talks about prana and not Paramatma. How does Purva Paksi justifies this interpretation. He says prana is the principle which is the creator of all devatas. Why do you bring in Paramatma? He says prana at the samasti level means Hiranyagarbha. And Hiranyagarbha is none other than samasti devatas. Therefore Purva Paksi argues being samasti devata out of samasti only vyasti individual devatas came.

2.1.9 of Kathopanisad says *yatas codeti suryo astam yatra ca gacchati tam devah sarve arpitah tadu na atyeti hascana etat vai tat* and that from the sun rises and into which it merges, on that all the devatas depend and no one goes beyond, this is indeed that. And from Hiranyagarbha devas emerged and unto Hiranyagarbha devatas resolve. With that the principle alone is etat karma. One should know that prana who is the creator of all devata and who is associated with all actions that prana one should know.

And therefore prana is associated with all karma that prana one should know. Because of this reference of prana and jiva and vishaya vakyam talk about jiva and prana alone and not Paramatma. Vyasacharya says the answer has been already given. Vyasacharya refers to the previous portion and the same answer is given and that 1.1.28 of Brahma Sutra Patardadhikaranam. The same purva paksa comes in the previous sutra also.

The answer given there is three answers are given. One section cannot give anything. One section can concentrate on one topic alone. You cannot say one talks about many topics, Jivatma and prana etc. If there are many topic one will be registered and others not. One event cannot focus on two things. One will be focused and the other thing is implied. What is not focused is never registered and what is not registered is never remembered. Therefore there should be one topic and it should be Paramatma, Jivatma or prana.

Second argument Adhi Sankaracharya gives is once we have concluded that topic is only one and everything should be connected to the one topic only. The beginning and end should be one topic only. Balaki wanted to take about Brahman and not only that 4.1. Is upakrama and 4.20 is upasamhara and in the end it talks about the phalam of this knowledge as moksa. Form this we can conclude that subject matter is Brahman only. neither the jiva jnanam nor the prana jnanam can ever give moksa. Brahma jnanam alone can give moksa. This is the second argument.

Third argument is if the jiva or prana is taken as creator, they are not relative creator but not absolute creator. Hiranyagarbha is relative creator because he himself is created by

Paramatma. In fact Mundaka Upanishad begins with the birth of Hiranyagarbha. Jiva and Hiranyagarbha are creators but they are relative creators. The absolute creator is Paramatma alone.

The fourth argument is how do you account for jiva and Paramatma in that section. They occur in 4.20 of Kaushitaki Upanishad. This mentions or talk about jiva only. The word prana is used for Brahman also in certain context. III.i.4 of Mundaka Upanishad asserts *prano hyesa yah sarva bhutair vibhati vijanan vidvan bhavate nativadi arma krida Atma ratih kriyava nesa Brahma vidam varisthah* the meaning of the mantra is knowing Him – the Prana, reveling in all beings the wise man stops all the blabbering. Sporting in Self delighted in Self and doing acts [enjoined] this man is the best of those who know the Brahman.

In Vi.8.2 of Chandogya upanisad we find *pranamevopasrayate prana bandhanaam hi somya mana iti* it is said that when it [Brahman] fails to get a resting place anywhere, it surrenders itself to prana the vital force indicating prana is but Brahman. In Kenopanisad also there is a well-known mantra *srotrasya srotrati manaso mano yad vaco ha vacam sa u pranasya pranah* suggestive of preceptor the Brahman is the pranasya prana the life of life points out that prana is Brahman. Brahman is called here pranasya prana. Therefore prana reference can be taken as prana. Even jivah reference can be taken as Brahman because jiva has got both vachyartha and lakshyartha. Jivatma can refer to Jivatma or Paramatma. When we talk about jiva birth death cycle it is vachyartha jivah and when Adhi Sankaracharya says you are Brahman there jiva refers to lakshyartha. In some places jivah Brahma beda is there where there is vachyartha and jivah and Brahma abeda is there when lakshyartha is taken. This is the general analysis.

I will give you word for word analysis. Because of reference to jivah and main prana; Brahma is not the subject matter of 4.19. Of Kaushitaki Upanishad; na alone is there the rest we have to supply. Iti chet if it is argued thus; tad vakyadham it has been answered before. [in 1.1.31 Brahma Sutra]

The significance of the word is jiva mukhya prana linga; mukya prana means primary prana; in sastram sense organs are also called prana; in Mundaka Upanishad [III.i.8]says *sapta pranah prabhavanti tasmad saptarcisah samidhah sapta homah sapta ime loka yesu caranti prana guhasaya nihitah sapta sapta* from him are born seven prana-s the seven flames sevenfold fuel, the seven fold oblations, as also the seven worlds where the pranas move in the cave of living creatures seven and seven.

Since prana can refer to two things, panca prana and sense organs we should know which one is meant in what place. So when we say mukya prana we mean panca prana and when we say gauna prana we mean sense organs. Here Vyasacharya wants to make sure and hence mukya prana is mentioned. Linga means references to jivah and references to mukya prana. Tayoh lingam reference to jivah and reference to mukya prana. [Kaushitaki Upanishad IV.20] *so esa prana eva prajnatmedam sariram atmanam anupravista alomabhyah anekhebyah* the word prana refers to the vital force. It is the conscious being that experiences the world. Because of the reference to jiva and mukya prana na means Brahman is not the subject matter; up to this is purva paksha. Iti chet if this is the argument of purva paksha tat such an objection is negated. Now we go to the third sutra

## Topic 5; Balakyadhikaranam [Sutra 16-18]

He who is the maker of the sun, moon, etc., is Brahman and not prana or the individual soul.

### Sutra 1.4.18 [124]

#### *Anuvartham tu jaiminih prasnavyakhyanabhyamapi chaivameke*

But Jaimini thinks that [the refernce to the individual soul in the text] has another purpose on account of the question and the reply; moreover thus some also [the vajasanyasins] [read in their text or recension]

An argument in support of sutra 16 is given.

Now in this sutra further support is given to our conclusion. Here Jaimini gives the support. Vyasacharya is taking the help of his disciple. Jaimini acharya evam vathati. No doubt there are references to jiva and prana in this section. Even when jiva and prana is distinctly talked about is only to reveal Paramatma only. On is the waking a sleeping person. That person is shaken and woken up. Jivah did not wake up when called; where was the jivah lying dormant in sleep and from where does he come up when out of sleep. This deals with the adhara of jivah. What is the place jiva goes back in sleep and how he comes back when he gets up. Gargya did not know the answer and Ajata Satru gives the answer that jivatma merged with Paramatma in sleep and he comes back from Paramatma when woken up. Daily we come from Paramatma and we enter into Paramatma. Jivatma is talked and prana is discussed all not for their sake but for the sake of Paramatma it is asserted in the dialogue between Balaki and Ajata Satru in Kaushitaki Upanishad, which is repeated in Brihadharaynaka upanisad as well in the second chapter.

## BRAHMA SUTRA

Class 138

### **Topic 5; Balakyadhikaranam [Sutra 16-18]**

He who is the maker of the sun, moon, etc., is Brahman and not prana or the individual soul.

#### **Sutra 1.4.18 [124]**

#### *Anuvartham tu jaiminih prasnavyakhyanabhyamapi chaivameke*

But Jaimini thinks that [the refernce to the individual soul in the text] has another purpose on account of the question and the reply; moreover thus some also [the vajasanayins] [read in their text or recension]

An argument in support of sutra 16 is given.

We are doing the general analysis of sutra 18 which is part of Balakyadhikaranam in which Kaushitaki Upanishad fourth chapter is being analysed. The central theme of the fourth chapter is Paramatma only from upasamhara and phala sruti that is the beginning and the end. The references to Jivatma is connected for which two answers are given and the other by Jaimini and both answers are all right depending upon the context. It is important because of the analysis but also the general rule to be followed while studying Vedanta. In all the Vedantic books the primary theme is Paramatma; what is the role of discussion of Jivatma; wherever Jivatma discussion occurs what is its role. This has to be carefully understood and the role will differ from context to context. The word Jivatma is referred in two different meaning. One context is when we take lakshyartha the implied meaning of the word Jivatma in which context Jivatma means Chaitanyam minus the mind Chidhabasa etc., in such a context Jivatma discussion is identical with Paramatma discussion. In lakshyartha point of view jivatma and Paramatma are identical. And therefore you can say Paramatma is the theme, which is nondifferent from Jivatma. The lakshyartha jivatma and Paramatma has got abeda sambanda and you can call it Jivatma or Paramatma and both words are interchangeably used.

In some other cases Jivatma is used in common meaning vachyartha where we take into account mind, bogta, karta punya papavan etc. Here Jivatma and Paramatma no more identical and their relationship is karya karana sambandha. In such a context Jivatma cannot be the theme of the section. Samsari cannot be theme of the section. In such places Jivatma is used as a means to reveal Paramatma. In vachyartha through Jivatma one realizes Paramatma. In the context of lakshyartha Jivatma topic is identical with Paramatma topic. In this sutra jaimni says when there is vachyartha Jivatma, Jivatma is used for revealing Paramatma. It is a means to an end. The means is Jivatma and Paramatma is the end. The central theme mean cannot be the central theme and end can only be central theme. Whether the first context or second context from the point of view of lakshyartha or vachyartha the main theme is Paramatma alone which is revealed by the means of Jivatma. Vachyartha context is used and two birds are introduced and Jivatma bird becomes the means to reveal the Paramatma bird. Then jaimini extends the same principle is used in Brihadharaynaka upanisad also second chapter.

There also vachyartha Jivatma has been taken and it used to reveal lakshyartha Paramatma. When a sleeping person is woken up, then Ajata Satru from where did Jivatma come and where did Jivatma go during sleep. Jivatma comes from Paramatma and Jivatma goes to Paramatma and therefore the definition is Paramatma is that karnam from which Jivatma comes and into which Jivatma goes and that support is called Paramatma. We take vachyartha or lakshyartha. In sleeping person example we see vachyartha only and we say Jivatma arises from Paramatma and Jivatma goes back to Paramatma.

The Upanishad uses the word vijñana maya Purusa to indicate vachyartha Purusa to indicate vachyartha Jivatma and here Jivatma is used as means to reveal Paramatma. The numbers are 2.1.16 [*sa hovaca jatasatruhm yatraisa etatsupto'bhudya esa vijñanamayah purusah kvatsa tadabhat kuta etadagaditi, tatu ha na mene gargyah* which means when this Self that is associated with the intellect was thus asleep where was it then? Whence did it come?

Gargya was not aware of that ]and 2.1.17 [*so hovacajatasatruh yatraisa etatsupto'bhudya esa vijñanamayah purusah tadesam prananam vijñanena vijñanamadaya ya eso'ntarhrdaya akasatasminchete; tant yada grhnatyatha hattatpurusah svapiti nama; tadgrhita eva prano bhavati, grhita vak, grhitam caksuh, grhitam srotam grhitam manah* when this Self that is associated with the intellect is thus asleep, it withdraws by its specialized knowledge the functions of the organs and lies in the supreme Self that is within the heart. When it withdraws the organs it has the name of svapiti. Then verily the nose is withdrawn, the organ of speech is withdrawn, the eye is withdrawn, the ear is withdrawn and the mind is withdrawn] of Brihadharaynaka upanisad wherein Jivatma is used not as identical with Paramatma but as a means to reveal Paramatma.

Now we will see the word for word analysis. In the sutra anyartham tu is there. Anyartham tu; tu however; jaiminih considers that the references to Jivatma anyartham is for another purpose; prasnavyakhyanabhyam which is proved by answer api cha moreover eke some other branches of veda also evam reveal thus. However jaimini considers that reference to Jivatma is for another purpose for question and answers some other part also reveals thus.

Now I will come to the significance of the words in the sutra. Anyartham means for another purpose. What jaimini says is jiva is discussed for the purpose of something else that is Paramatma bodhartham; in this context Jivatma has no important and it serves only as a means; tu is to indicate the interpretation of jaimini to be different from the interpretation of vyasacharya; Vyasacharya said Jivatma is Paramatma and jaimini says Jivatma is a means to reveal Paramatma. When lakshyartha is taken we have to take the first one and if we take vachyartha we have to take the second example is to be taken. Then jaimini means the jaimini disciple of Vyasacharya prasna vyakhyanabhyam this is proved by questions and answers occurring in the Upanishad; when jaimini refers to question and answers he refers to 4.18 and 4.19 of the second chapter of Kaushitaki Upanishad from where does Jivatma goes in sleep and where from he comes on waking is discussed; apicha moreover eke another branch of the veda also. He keeps in mind Brihadharaynaka upanisad. Jivatma takes rest in Paramatma while in sleep. Thus Jivatma is a means to reveal Paramatma. With this, this sutra and the adhikaranam is over.

Now we will sum up the adhikaranam. Subject matter is what is to be known by saha; samsaya whether it is Paramatma, Jivatma or pranah; purva paksa says Jivatma is the subject matter or another purva paksa says prana is the subject matter; siddhanti says that it refers to Paramatma alone is the subject mater and not Jivatma. If at all there is a reference to Jivatma

either it is identical with Paramatma or a means to realize Paramatma or ultimately Paramatma is to be known. The same is true with prana also. That means prana also has got vachyartham and lakshyartham. When lakshyartham prana is used it is identical with Paramatma and vachyartham prana is used and prana also becomes karyam to reveal karana Paramatma. With this the fourth factor is also over. The fifth factor we have a uniform answer that this adhikaranam occurs in the right pada and right adhyaya.

## **Topic 6; Vakyanvayodhikaranam [Sutra 19-22]**

The Atman to be seen through hearing etc., of the Brihadharaynaka upanisad II.4.5 and not Jivatma.

### **Sutra 1.4.19 [125]**

#### ***Vakyanvayat***

[the Self to be seen, to be seen, to be heard etc., is the Supreme Self] on account of the connected meaning of the sentences.

A passage from the Brihadharaynaka upanisad Mantra 4.5.6 is now taken up for discussion. Yajnavalkyamwants to take to sannyasa. He is already knowledgeable. It is vidvat sannyasa. When sannyasa is taken for knowledge it is vivida sannyasa and when sannyasa is taken after knowledge it is vidvat sannyasa. If Yajnavalkya has attained jnanam why should he take sannyasa at all. It is meant for nishtaratham and it is nididhasana pradhana sannyasah. He is no more interested in sravanam or mananam. He is the model example for vidvat sannyasa. He had two wives and he had some possessions also and before leaving he wanted to apportion the property and give them both. He wished to give the share to each. Maitreyi asked whether she would get amritatvam by taking the wealth. Yajnavalkya says no. if you have possession you can have comfortable life and comfort is an external condition and happiness is an internal condition. You can be comfortable but you need not be happy. Then maitreyi already sadhana chatustaya sambanna and comfort is not a must at the cost of amritatvam she said. She asked her husband that if you are happy to leave everything and take to sannyasa what is that which make him happiness by leaving the wealth. Then Yajnavalkya says that I am happy and he accepted his wife as his disciple. He addresses her as dear one. he begins then teaching. then comes 2.4.5 mantra of Brihadharaynaka upanisad. He say that you never love anything for others sake and everything is loved for one's own sake only. therefore everything else is conditionally loved and Atma alone is unconditionally loved he declares. Atma is the object of unconditional love and all others are conditional love and if they are not favourable I will push them like a hot potato even if it is god. When they suffer they do not love even god. Whatever is the object is a source of ananda. Yaha prema vishayah saha ananda swarupah. We find Atma is eternal source of ananda. Since Atma is ananda swarupa therefore Atma va arey drastavyah and that ananda swarupa Atma you should know. Not only that. by knowing that Atma everything else is known it is said. Eka Atma vijnanena sarva vijnanam. This is the mantra. Why should we discuss this in Brahma Sutra. We have to introduce confusion because non-existence of present confusion is not thoroughness. Even in future confusion should not arise. After fixing a pole, pole is shaken to check the pole is not shaking. So also one should nevet get confusion and it is for that purpose one is confused and the cause of confusion is cleared. This is also another shake up. The Upanishad uses the word Atma. The question is whether Atma refers Jivatma or Paramatma and through this adhikaranam we have to conclude that Paramatma alone is the subject matter of this

adhikaranam. this is the essence of the adhikaranam. Now I will enter into the general analysis of the first sutra. the trend of all the sentences occurring in this section reveal Paramatma; anvayah mean the movement one after the other leads to Brahman alone. From the direction and drift of the sentences we find that it leads to Brahman alone. For this Adhi Sankaracharya takes four sample sentences and then he studies. The first one is 2.4.3; 2.4.5 2.4.7 to 2.4.11., of Brihadharaynaka upanisad. The teaching is that Atma jnanam, which will give amritatvam, vide 2.4.3 of Brihadharaynaka upanisad. Since maitreyi asked for amritatva prapti and Yajnavalkya teaches Atma jnanam then Paramatma jnanam alone is amritatvam. We have to conclude that the trend indicate that Paramatma alone is talked about in the mantra.

The Brihadharaynaka upanisad mantra 2.4.6 *atma va are drastavyah srotavyo mantavyo nididhyasitavyo; maitreyi atmano va are darsanena sravanena matya vijnanenedam sarvam viditam.*

## BRAHMA SUTRA

Class 139

### **Topic 6; Vakyanvayodhikaranam [Sutra 19-22]**

The Atman to be seen through hearing etc., of the Brihadharaynaka upanisad II.4.5 and not Jivatma.

#### **Sutra 1.4.19 [125]**

#### ***Vakyanvayat***

[The Self to be seen, to be seen, to be heard etc., is the Supreme Self] on account of the connected meaning of the sentences.

We see the general analysis of sutra 19 which is the first sutra of vakyanvayodhikranam and there we take Brihadharaynaka upanisad mantra 2.4.5. *Atma vijnanena sarva vijnanam. na va are sarvasya kamaya sarvam priyam bhavati, atmanas-tu kamaya sarvam priyam bhavati; atma va are drastavyah srotavyo mantavyo nididhyasitavyo; maitreyi atmano va are darsanena sravanena matya vijnanenedam sarvam viditam* The discussion what is conveyed by the word Atma whether it is Jivatma or Paramatma. The reason he gives is due to the trend in the significant statement occurring in the section. Adhi Sankaracharya in his commentary mentions four places where it occurs to come to the conclusion.

First portion is 2.4.3 wherein Maitreyi asks Yajnavalkya to teach that knowledge with which she can gain moksa. What I will do with that property which will not give me immortality. Therefore this portion introduces the immortality giving jnanam. we know amrtitvatva prapti can be got only through Paramatma jnanam and not through Jivatma jnanam. *Sa hovaca maitreyi yenam namrta syam kimaham tena kuryam? Bhagavanveda tadeva me bruhiti* Maitreyi asks what shall I do with that money thorough which in I cannot be immortal and she asks tell me venerable sir of that alone which you know to be means of immortality

So, now I shall speak to you, the secret of all these things. *Vyakhyasyami te; vyacaksan asya tu me nididhyasvasva iti* [mantra 2.4.4 of Brihadharaynaka upanisad] : Listen to me with rapt attention. I shall tell you the secret of this great problem that you have posed before me; the question that you have put; the difficulty in the ascent on the part of people to become permanently happy, which is not possible by possession of wealth.”

Next is .2.4.6 of the Upanishad mantra reveals sarvatma bhava. It says Atma is everything. *brahma tam paradat yoanyatratmano brahma veda. ksatram tam paradat yo'anyatratmanah ksatram veda. lokas-tam paradur yo'anyatratmano lokan veda. devastam paradur ya'anyatratmano devan veda. bhutani tam paradur yo'anyatratmano bhutani veda, sarvam tam paradad yo'anyatratmano sarvam veda. idam brahma, idam ksatram, ime lokah, ime devah, imam bhutani, idam sarvam yad ayam atma.*

The essence of the mantra reveals that this Brahmana thisn ksatriya these worlds, these gods, these beings and this all are only the Self. You know anything as different from you that object will reject you or isolate you. Anyatra atmanah veda that object will reject you;

therefore if you don't want to be rejected by anything know yourself as myself. it is impossible the remedy for sense of rejection is sarvatma bhava and it is explicitly said in the final portion of the mantra saying that everything in the creation is Atma and this Atma cannot be Jivatma and you have to say that this is Paramatma alone.

The fourth instance Adhi Sankaracharya quotes is that Atma as jagat sristi sthithi laya karanam by giving three different examples. 2.4.10 of Brihadharaynaka upanisad *sa yathardraidhagnerabhyahitatprthagdhuma utniscaranti, evam va are'sya mahato bhutasya nisvasitam etad yadrgvedo yaur veda, samavedo'tharvangirasa itihasah puranam vidya upanisadah so'loka sutranyanuvya khyanani vyakhyanani asyaivaitani nisvasitani* as various kinds of smoke proceed from a fire kindled fwith damp fuel even so my dear the rg veda, yajur veda, sama veda, atharva veda, history, mythology, arts, Upanisads, verses, aphorisms, elucidations and the explanations are the breath [as it were' of this limitless Reality. They are [like] the breath of it alone.

And for sthithi karana the drum and sound coming from veena, the Upanishad denotes sankha and dundhubi drastandha. these examples are subtle example. This particular sound you cannot hear without hearing the general sound. You recognize then genral voice and then particular. Every specific existence depends upon general existence. Man existence pot existence and vishesha sabda depends upon samanya sabda. vishesha sabda cannot exist separate from samanya sabda. this is the tatparyam. In the same way vishesha satta cannot exist from samanya satta. Samanya satta is sthithi karana for vishesha satta. Brahman is samanya satta and vishesha satta means jagat. without Brahman nothing can exist. Thus Atma is said to be laya karanam. just as all rivers merge into samudra similarly all objects in creation resolve into Atma. This is called laya prakriya through samudra dristandha. All these three examples are given from 2.4.5 to 2.4.11 of Brihadharaynaka upanisad. If Atma is jagat karanam that Atma can only be Paramatma and not Jivatma. This is the general analysis. Now I will give you word for word analysis.

Vakyanvayat from the trend of the statements in the section, the word Atma of Brihadharaynaka upanisad 2.4.5 is to be understood as Paramatma. From the trend of the statement in the section is the meaning of the sutra and the rest the [word Atma] is supplied and it is to be understood as Paramatma.

Now I will give you the significance of the words. The word vakyam refers to all the statements of the sections. And anvayah means flow or the trend. The movement of one after another. This means the flow or direction. Vakyanam anvayah means the drift of the statement because of this trend we conclude that Atma this is the main sutra of this adhikaranam. now we will go to the next sutra. 19.33

>

## **Topic 6; Vakyanvayodhikaranam [Sutra 19-22]**

The Atman to be seen through hearing etc., of the Brihadharaynaka upanisad II.4.5 and not Jivatma.

### **Sutra 1.4.20 [126]**

### ***Pratijnasiddherlingamasmrthyah***

[The fact that the individual soul is taught as the object or realization is an] indicative mark which is proof of the proposition so Asmarathya thinks.

An argument in support of sutra 19 is given. The indication is that the individual soul is not different from Brahman, the ultimate cause of which it is a ray. Hence to know Brahman the cause is to know all that.

Vyasacharya answers a possible objection, which is in expected lines only. now we will do the general analysis. While establishing that Atma is dealing Paramatma only Adhi Sankaracharya quotes a significant statement revealing Atma refers to Paramatma alone. Now purva paksa quotes some statement that Atma refers to Jivatma alone. He gives three instances, which are 2.4.5, he says Yajnavalkya begins the mantra saying that nobody loves wife for wife's sake for one's own sake. One loves one for one's own sake. When Upanishad says one loves wife, purva paksa says for the sake of Self alone one loves wife and there is no question of wife, putra etc., the very fact a list of things of object of enjoyment or bogya vishaya the Self talked about must be bogta Atma alone. Bogtatma is Jivatma. This is the instance number one.

Next instance is 2.4.12 of Brihadharaynaka upanisad. *sa yatha saindhava-khilya udake prasta udakam evanuviliyeta na hasya udgrahanayeva syat, yato yatas-tvadadita lavanam eva, evam va are idam mahad-bhutam anantam aparam. vijnana-ghana eva; etebhyo bhutebhyah samutthaya, tanyevanuvinasyati; na pretya sam jnasti, iti are bravimi, iti hovaca yajnavalkyah.* In this mantra Upanishad talks about vijnana gana Atma Chaitanyam, a Chaitanyam which rises along with the body and which resolves with the body. There is no life and no recognition of things after death. Jivatma Chaitanyam alone is active when body is alive and no more active when body is gone. it is anithya Chaitanyam and it cannot be Paramatma Chaitanyam but it is Jivatma Chaitanyam.

Next example is from 2.4.14 of Brihadharaynaka upanisad which reads as *Yatra hi dvaitam iva bhavati, tad itara itaram jighrati, tad itara itaram pasyati tad itara itaram srnoti, tad itara itaram abhivadati, tad itara itaram manute, tad itara itaram vijanati. yatra tv asya sarvam atmaivabhut, tat kena kam abhivadet, tat kena kam manvita, tat kena kam vijaniyat? yenedam sarvam vijanati, tam kena vijaniyat, vijnataram are kena vijaniyat iti* this refers to knower principle and pramata principle and purva paksa argues vijnatma is Jivatma the end of the mantra states upakrama upasamhara is Jivatma alone.

Purva paksa says that I will quote the same sutra and asks to explain the Jivatma reference in this section which is to be given by three different acharya. When Jivatma is talked about Paramatma is referred.

First Acharya Asnarathya [sutra 22], Audulomi [sutra 23] and Kasakritsna [sutra 24] support the Vyasacharya stand that the word Atma in the mantra refers to Paramatma alone. Then Vyasacharya will point out that sage Kasakritsna is the best explanation.

Asmarathya says eka vijnanena sarva vijnanena pratijna that is Paramatma vijnanena sarva vijnanena is the proposition of the sutra, which we have already established, in the last sutra. pratijna is the expression given here. If Paramatma vijnanena gives sarva vijnanam, then Paramatma vijnanam should lead to jiva vijnanam also. the the sage argues that this is

possible only under one condition that Jivatma should be nondifferent from Paramatma. Then only knowledge Paramatma should lead to Jivatma then Jivatma has to be nondifferent from Paramatma and since Jivatma is nondifferent from Paramatma in the place of Paramatma Jivatma can also be talked about. The Upanishad indiscriminately talks about Jivatma also where the topic is Paramatma. It is so because Upanishad wants to convey Jivatma can convey Jivatma is Paramatma because paramatma vijnanena pratijna is there. it is only an indicator of pratijna vakyam Paramatma vijnanena Jivatma vijnanena bhavati. This is the Asmarathya's method of justification.

Now we will do the word for word analysis. Lingam mention of Jivatma in the place of Paramatma in 2.4.5 of Brihadharaynaka upanisad is the evidence pratijna siddhe for the establishment of the proposition in the mantra. Asmarathyah the sage asmarathya considers so. In this when we give the meaning lingam the word evidence alone is the meaning lingam. Pratinja siddheh for establish of proposition; sage considers so we have to supply. Now we will go to the significance of the words.

Pratijna siddhe proposition eka vijnanena sarva vijnanena by knowing one Atma everything is known; 2.4.5 of Brihadharaynaka upanisad; then siddhi means establishment; it is for the sake of chaturthi or you can take it as sashti vibaktih connected with lingam; next word is lingam means evidence proof clue etc., the clue is talking about Jivatma in the place of Paramatma is the clue that Jivatma is non-different from Paramatma. Asmarathyah is the name of the sage.

## **Topic 6; Vakyadvayodhikaranam [Sutra 19-22]**

The Atman to be seen through hearing etc., of the Brihadharaynaka upanisad II.4.5 and not Jivatma.

### **Sutra 1.4.21 [127]**

#### ***Utkramishyata evambhavadityaudulomih***

The initial statement identifies the individual soul with Brahman or the Supreme Self because the soul when it will depart [from the body] is such [i.e., one with the Supreme Self] thus Audulomi thinks.

The argument in support of sutra 19 is continued.

We will do the general analysis and here Audulomi says that jivatma is 'would be Paramatma' only. the proof is 3.2.8 of Mundaka Upanishad *yatha nadyah syanda manah samudre 'stam gacchanti nama rupe vihaya tatha vidvan nama rupa vimuktah parat Param purusam upaiti divyam* the meaning of the mantra is as flowing rivers get themselves disappeared in the ocean losing their special names and distinct forms so the wise man free from all his identifications with names and forms goes unto the highest of the high – Supreme Divinity.

Audulomi takes the support of nadhi drastandha that every river is nothing but ocean for every rivers rushing towards ocean. Similarly Jivatma is Paramatma because Jivatma is to ultimately merge with Paramatma.

Now we will see word for word analysis. Audulomi says as follows. Jivatma is mentioned in the place of Paramatma because that will be the nature that Paramatma-hood will be the nature utkaamishyata which is going to transcend the nama rupa.

The significance of the words is utkrmishyata means transcending Jivatma; transcend varna ashrama limitation, nama rupa limitation; for the jiva who is going to transcend the nama rupa in future evam bhavati means this nature is going to come; that is Paramatma swarupat since transcending Jivatma is going to shed limitation and become Paramatma he calls himself Paramatma. Iti Audulomi so says Audulomi,

Also we read in srutis that serene being arising from this body appears in its own form as soon as it has approached the highest light Chandogya upanisad VIII.12.3

### **Topic 6; Vakyanvayodhikaranam [Sutra 19-22]**

The Atman to be seen through hearing etc., of the Brihadharaynaka upanisad II.4.5 and not Jivatma.

#### **Sutra 1.4.22 [128]**

#### ***Avasthiteriti kasakritsna***

[The initial statement is made] because [the Supreme Self] exists in the condition [of the individual Soul] so the sage Kasakritsna thinks

The argument in support of sutra 19 is continued.

Kasakritsna rishi says Paramatma alone obtains in the form of Jivatma in the body and only nama beda na tu nami bedah. Unenclosed Atma is called Paramatma and the same Paramatma obtaining in the body is Jivatma. He takes Chandogya upanisad vakyam 6.2.3 *tadaiksata bahu syam prajayeyeti tattejo'srjata tatteja aiksata bahu syam prajayeyeti tadapo'srjata tasmadyatra kvaca 'socati svedate va purusastejasa eva tadadhyapo jayante* the meaning of the mantra is that existence decided I shall be many. I shall be born. He then created fire; that fire also decided I shall be many I shall be born; then fire produced water; that is why whenever or wherever a person mourns or perspires, he produces water. All the anupravesa sthuthi confirms the view that Paramatma alone is in the form of Jivatma. Paramatma thought let me create the body and let me myself enter the body and function as Jivatma. Paramatma himself assumed the name of Jivatma after having entered the body.

First I will give word for word analysis. Saint Kasakritsna says as follows. Since Paramatma alone remains in the form of Jivatma in the body; Jivatma is mentioned in the maitreyi Brahmanam in place of Paramatma. Avasthithi means remaining or residing; Paramatma is residing in the form of Jivatma we have to supply; so says kasakritsna. Adhi Sankaracharya will acknowledge and approve of the third justification which we will see in the next class.

## BRAHMA SUTRA

Class 140

### **Topic 6; Vakyanvayodhikaranam [Sutra 19-22]**

The Atman to be seen through hearing etc., of the Brihadharaynaka upanisad II.4.5 and not Jivatma.

#### **Sutra 1.4.22 [128]**

#### ***Avasthiteriti kasakritsnah***

[The initial statement is made] because [the Supreme Self] exists in the condition [of the individual Soul] so the sage Kasakritsna thinks

The argument in support of sutra 19 is continued.

We have completed all the four sutras of vakyanvidhadhikaranam. Through this Vyasacharya has established that Atma talked about in Brihadharaynaka upanisad is Paramatma alone and not Jivatma. The question came if Paramatma is centra theme of this Brahmanam why it started with Jivatma in the beginning, in the middle and the end and we have to justify and three sages justified as to why we conclude that Atma referred to therein related to Paramatma and not Jivatma in the three sutras 20 to 22. of the three justifications Adhi Sankaracharya considers Kasakritsna's justification best.

While dealing with why should Jivatma be introduced is the question. Asmarathya said Jivatma introduction is meant to support prtinja vakyam. Pratinja is eka vijnanena sarva vijnanena which means eka vijnanena sarva vijnanena and sarva includes Jivatma also. this is possible under one condition that Paramatma vijnanam Jivatma vijnanam is possible only if Jivatma is nondifferent from Paramatma. Therefore the Upanishad wants to convey Jivatma is nondifferent from Paramatma. Hence in the place of Paramatma Jivatma is discussed to show Jivatma is nondifferent from Paramatma. Adhi Sankaracharya says we are not happy with this justification because the pratijna is eka vijnanena sarva vijnanam. Sruti says Paramatma is karanam and Jivatma is karyam is pratijna. That is why in example mirth karanam and pot is karyam has been explained. If we extend this pratijna principle if you say what will amount to Paramatma vijnanena and Jivatma vijnanam and it will become Paramatma will become karanam and Jivatma will become karyam and therefore when asmarathya says what is in his hind is karya Jivatma is nondiffernt from karana Jivatma. Therefore Paramatma is karanam and Jivatma will be taken as karyam. And then jivatma and Paramatma will have karya karana sambandha, which we do not want. We want non-difference not in total identity and karya karana sambandha is not absolute aikyam but partial aikyam and therefore we don't accept this justification. When we say that Asmarathya followers argue why don't you take Jivatma as karyam and Paramatma as karanam as we have several sruti statement to show that Jivatma is karyam and Paramatma is karanam. III.i.2 of Taittiriya Upanishad says *imani bhutani jayante yen jatani jivanti yat pratyantya bhisamvisanti tad-vijijnasasva tad brahmeti sa tapo'tapyato sa tapas taptva* which means which means crave to know well that from which these beings are born; that by which, having been born, that by which, having been born these beings live and continue to exist;

and that into which, when departing they all enter. Here in this mantra bhutani means Jivatma living being is the contention of Asmarathya and hence he opines Jivatma is karanam and Paramatma as karyam. Thus in Brigu valli it is made very clear Jivatmas are born out of Paramatma.

Similarly II.i.1 of Mundakopanisad says *tad etat satyam yatha suditat pavakad visphulingah sahasrasah prabhavante sarupah tatha'ksarad vividhah somya bhavah prajayante tatra vaivapi-yanti* which again means this is the truth; as from the flaming fire thousands of sparks, similar to its form [nature] issue forth; so from the Immortal [Brahman] diverse [manifold] beings [jivas] originate and they find their way back into it. this mantra also confirms Jivatmas are born out of Paramatma as the thousands of sparks originate from the flaming fire. Therefore Asmarathya followers argue Paramatma is karyam and Jivatma is karyam. That is the question again. For that our answer is jivatma and Paramatma has got karya karana sambandha only with regard to the sariram and from swarupa drishtya there is no sambandha but jivatma and Paramatma is aikyam and not that one is born out of the other. Since jivatma and Paramatma aikyam is taught in Vedanta, we should not talk of jivatma and Paramatma sambandha. And if jivatma and Paramatma is identical we cannot say Paramatma vijnanena Jivatma vijnanam. But we should say Paramatma vijnanam eva Jivatma vijnanam. It is not that one knowledge leads to the other knowledge but one knowledge itself is the other knowledge. eka vijnanena sarva vijnanam cannot be used for Jivatma vijnanam. Prapancha you can say Paramatma vijnanena Prapancha vijnanam. When you talk of Jivatma you should say Paramatma vijnanena Jivatma vijnanam because Jivatma and Paramatma have no sambandha and Paramatma is itself is Jivatma so says Kasakritsna. It is see that while Asmarathya talks of partial identity of jivatma and Paramatma and kasakritsna talks of total identity of jivatma and Paramatma. Hence Asmarathya's contention is not acceptable and Kasakritsna's argument is acceptable to us. Audulomi says Jivatma is talked of Paramatma is because Jivatma is a would be Paramatma once the Jivatma gains Self-knowledge. Here future participle is used. Adhi Sankaracharya says that he is not happy because Jivatma is going to become Paramatma which means Jivatma is not Paramatma now. Therefore you will become Paramatma. First defect is Jivatma is not Paramatma now and secondly Jivatma will become Paramatma in the next state. Jivatma is in a lower state and it will reach in higher state a Paramatma. Higher and lower state belongs not to the Consciousness but it refers to the thinking. Ignorant state of mind is called lower state of Consciousness and wise state of mind is figuratively called higher state of Consciousness. This is not acceptable to us because Consciousness is nirvakaratvad. There is no lower and higher state of Consciousness. Then there is time factor is involved for Jivatma to become Paramatma. Vedanta says that you are now Paramatma alone. Whether you like it or not or whether you are pure or impure, you are Paramatma. The second justification also is not acceptable. In the first argument the aikyam is partial and in the second justification aikyam is a future event. Therefore both are not acceptable to us. Kasakritsna's justification the aikyam is total and immortal. Avasthithe means Paramatma alone dwells in the body as Jivatma. Adhi Sankaracharya votes for Kasakritsniya matham. Purva paksa quoted an in-between mantra where the Upanishad talked about temporary Consciousness. This has a reference to 2.vi.12 of Brihadharaynaka upanisad that says *sa yatha saindhavakhitya udake prasta udakamevanuvithyete na hasyodgrahanayeva syat, yato yotastvadaditaiavanameva. Evam va ara idam mahadbhutamanantamaparam vijnanaghana eva. Etebhyobhutebhyah samutthaya tanyevanu vinasyatt, nba pretya samjnastityare bravimiti hovaca Yajnavalkya* the meaning of this mantra is as a lump of salt thrown into water only dissolves into the water, and none can at all pick it up. But from whichever part one taken the water; it has only a saline taste. Even so my dear, this great endless infinite reality is only homogeneous

intelligence. On account of these elements [the Self] stands out [separately] and as soon as these are destroyed, [its separate existence] is also destroyed. After attaining [isolation] it has no [particular] Consciousness. He asked the question when Upanishad talks of temporary Consciousness how do you justify the temporary Consciousness quoting the above Brihadharaynaka upanishad mantra. Maitreyi got confused as per this statement. Yajnavalkya does not resolve the confusion. He said things are clear but you are confused. Adhi Sankaracharya points out Consciousness is permanent and when he talks about temporary Consciousness, he talks of manifest Consciousness or pratibimba Consciousness which rises in jagrat swapna and resolves in Sushupti. The prajna, the Consciousness does the transaction and is subject to arrival and departure and for the non-transactional Consciousness there is no question of up and down or the coming and going. Therefore, Chidhabasa is but the manifestation of Paramatma only. Hence we can call it an avatharam of Paramatma and therefore the Upanishad talks about Chidhabasa Consciousness.

Finally Adhi Sankaracharya justifies the last quotation given by purva paksa. 2.4.14.of Brihadharaynaka upanishad that talks about knower Jivatma when the topic is Paramatma.the mantra reads as *Yatra hi dvaitam iva bhavati, tad itara itaram jighrati, tad itara itaram pasyati tad itara itaram srnoti, tad itara itaram abhivadati, tad itara itaram manute, tad itara itaram vijanati. yatra tv asya sarvam atmaivabhut, tat kena kam abhivadet, tat kena kam manvita, tat kena kam vijaniyat? yenedam sarvam vijanati, tam kena vijaniyat, vijnataram are kena vijaniyat iti.*the meaning of the mantra is Where there is an object of knowledge, well, naturally it can be known. Where there is something other than the eye, the eye can see. Where there is something outside the nose, the nose can smell is true. Where the sound is outside the ear, the ear can hear the sound. Where the spoken word is outside the speech itself, one can speak about something. Where the thought is different from the object that is thought, it is possible to think. Where the object of understanding is different from understanding, it is possible to understand that object.

Here also the answer is the same. Paramatma alone is manifesting as Paramatma. Paramatma alone conditioned by upadhi prajna the vijnata, tajasa the vijnata and prajna the vijnata and who is manifesting is the turiyam appearing as santa prajnah, bahish prajnah and ganaprajnah. This Brahmanam talks about Paramatma alone. This adkm is also over.

The subject matter here what is the meaning of Atma occurring in 2.4.5 of Brihadharaynaka upanishad? The doubt is does the word Atma refer to Jivatma or Paramatma. Third factor is purva paksa says Atma means Jivatma only because in the proximity husband, wife, children are there; near them Jivatma alone is there and not Paramatma. This is flow of the text support.. If at all if there is reason is that Paramatma alone is in the form of Jivatma we say. The sangathi is that this adhikaranam is in its appropriate place. Now we will enter the 7<sup>th</sup> adhikaranam.

## **Topic 7; Prakrtyadhikaranam [Sutra 23-27]**

Brahman is both the efficient and the material cause.

### **Sutra 1.4.23 [129]**

***Prakritischa pratijna drishtantanuparodhat***

[Brahman is] the material cause also on account of [this view] not being in conflict with the proposition and the illustration [quoted in the sruti]

This sutra states that Brahman is the efficient as well as the material cause of the universe.

This is slightly big adhikaranam with five sutras. This is the penultimate adhikaranam the central topic of the first chapter is samanvayadyaya to show that Upanishads reveal Brahman as unique object to be known. The unique object means something, which cannot be known by any other pramanam. He establishes that Brahman is the central theme of Vedanta. Thus Vedanta becomes a unique pramanam for the unique subject of Brahman. Therefore if one wants Brahma jnanam one has to resort to Vedanta jnanam and it is choiceless. If a person wants to gain moksa he should gain Brahma jnanam. if he wants to gain Brahma jnanam he should come to Vedanta sastra. This is the background of samanvaya adhyaya. We can say Brahman is the subject matter of Brahma Sutra also. Vyasacharya begins the chapter with the definition of Brahman and he concludes the chapter with the definition of Brahman. The actual teaching begins from the second sutra and Brahman is jagat karanam Brahma. The teaching concludes in 7<sup>th</sup> adhikaranam of the fourth chapter. Here Vyasacharya repeats Brahma laksanam and here also he says jagat karanam Brahma. This can be taken for all purposes the repetition of second adhikaranam of pradhama pada. Even though it is a repetition he wants to clarify certain points. Brahman has been defined as jagat karanam. The natural question that comes to mind is nimitta karanam or upadana karanam. From common sense point of view we know it is material and upadana karanam. nimitta karanam is distinct. Therefore the question that will arise in the mind is if Brahman is karanam whether it is nimittam or upadanam. Also we know if Brahman is nimitta karanam it cannot be upadana karanam and if it is upadana karanam it cannot be nimitta karanam. Either way Advaidam cannot be established, from our common experience we find mittam and upadanam are always different. When there is such a question whether Brahman is nimittam or upadanam and majority takes it as nimitta karanam. Brahman being a chetana tattvam it should be taken as nimitta karanam and he alone plans and executes creation. we have one set of people saying Brahman is only nimitta karanam saying god is only intelligent cause. There is another group of people saying that Brahman is sristi sthithi laya karanam, which means upadana karanam. nimitta karanam can never be sristi sthithi laya karanam. nimitta karanam means he is intelligent karanam alone. Carpenter is only nimitta karanam alone. Nimitta karanam is only sristi karanam. Sristi sthithi laya karanam is upadana karanam. Brahman is sristi sthithi laya karanam. These people accept Brahman as upadana karanam and there is no talk about nimitta karanam. One group says Brahman is nimitta karanam matram and another group says Brahman is upadana karanam matram. But Vyasacharya says that Brahman is both nimitta and upadana karanam of creation. he is both material and intelligent cause of creation. Vyasacharya will focus on Brahman as upadana karanam. God is the material cause, which is emphasized in Vedanta. the entire Karma Kanda we have worshipped god as intelligent cause. We have prayed god as sristi kartaa. Hence Vedanta has to take god as upadana karanam, when we take god as intelligent cause we add to plurality and we do not eliminate plurality. Previously Jiva and jagat was there and now by taking Isvara as upadana karanam we have added to the plurality and now we have jiva, jagat and Isvara are there. When I see Brahman, as nimitta karanam moksa is not possible. For moksa we want Brahman as upadana karanam and the entire creation is karyam. The entire karyam is not possible without the Brahman as the karanam. this is the second karanam. Through this we gain advaida siddhi.

Third reason is as upadana karanam is unique to Vedanta. nyaya and other systems have already accepted as nimitta karanam. Paramatma as upadana karanam is unique teaching of Vedanta. Material cause is matter. Consciousness god as material cause is unique to Vedanta/ Consciousness god is the material cause is unique to Vedanta darsanam and therefore Vyasacharya wants to show it is nimittam also. More in the next class.

## BRAHMA SUTRA

Class 141

### **Topic 7; Prakrtyadhikaranam [Sutra 23-27]**

Brahman is both the efficient and the material cause.

#### **Sutra 1.4.23 [129]**

#### ***Prakritischa pratijna drishtantanuparodhat***

[Brahman is] the material cause also on account of [this view] not being in conflict with the proposition and the illustration [quoted in the sruti]

This sutra states that Brahman is the efficient as well as the material cause of the universe.

I am giving you the general analysis of this adhikaranam and I have said that this is the final adhikaranam for practical purposes. Vyasacharya wants to tally the upakrama and upasamhara the beginning and the end that the Vedanta sastra is Brahma Vidya. Just as prava bagha is karma vidya, the Vedanta relates to Brahma Vidya. When we talk about Brahman, there is a confusion as whether Brahman is nimitta karanam or upadana karanam and Vyasacharya here establishes that Brahman is both nimitta and upadana karanam of the whole creation. Janmadhi adhikaranam the jagat karanatvam has been revealed but here Vyasacharya gives some more support for jagat karanatvam of Brahman for the whole creation. In the last class I said Brahman is nimitta and upadana karanam but we focus Brahman is upadana karanam because nimitta karanam Brahman has been focused in the purva bagha. The second reason is that by knowing Brahman as nimitta karanam duality is not resolved and therefore moksha is impossible. When I know Brahman, as nimitta karanam, Brahman stands separate from the product just as potter is different from pot; goldsmith is different from ornaments etc. if God is taken as nimitta karanam we will conclude God is different and such a God is called tatasta Isvara and tatasta Isvara who is away from the creation. By knowing tatasta Isvara I don't resolve duality and duality-based bhayam will be there. nimitta karanam Isvara cannot remove fear and even if fear is removed it is temporary. For removal of duality Brahman should be the upadana karanam and then there is cause for duality and duality caused fear. Ananyatva siddharthan beda akarartham brahmana jagat upadana karanatva avasya varthate. This will be discussed elaborately in arambanadhikaranam. Therefore also it is said that Brahman is upadana karanam. The third reason for taking Brahman as upadana karanam makes Vedanta a unique sastra. Brahman happens to be chetana tattvam or conscious principle and in Vedanta alone the conscious principle is material cause and in all other systems the matter alone is material cause. Conscious being an intelligent cause all darsanam will accept and there is no problem, all other darsanams accept Brahman as nimitta karanam but Vedanta alone takes Brahman as the upadana karanam and thereby asserts Brahman is non-different from the entire creation. Out of six darsanams four of them hold that matter is material cause and Vedanta alone says Consciousness is the material cause. As regards Purva Mimamsa there is no question of cause because they say world was as before and there is no cause for the world to come into being. In Sanskrit it is called chetana karana vadha. This has been discussed in Janmadhiadhikaranam.

This adhikaranam Brahman is nimitta karanam and upadana karanam and thereto focus is on upadana karanam.

Now I will do the general analysis of the first sutra. here Vyasacharya emphasizes that Brahman is upadana karanam or material cause of creation and he gives two arguments. First is the proposition given by the Upanishad Brahman is upadana karanam. The pratijna is *eka vijnanena sarva vijnanena* the knowledge of everything is knowledge of one thing and on analysis we find that this is possible under one condition is *karana vijnanenda sarva karya vijnanam bhavati* and here again which karanam you should know and that is *upadana karana vijnanena sarva karyam bhavati*. Therefore eka upadana karana vijnanen aneka karya vijnana bhavati. If *Brahma vijnanena sarva vijnanam bhavati*. If we join these two we can conclude that *Brahma vijnanena sarva vijnanam bhavati*. This is a powerful reason to establish Advaidam. Where is the pratijna given. In three Upanishad this pratijna we find. First one from Mundaka Upanishad in which the very question by the student itself is *kasmin na bhagavo vijnate sarvam-idam vijnatam bhavatiiti*; this mean what is that, having known which all these become known? [I.3 of Mundaka Upanishad]

We find the same pratijna occurs in Chandogya upanisad 6.1.3 *yenasrtam srutam bhavatyamatam matamajijnatam vijnatamiti katham nu bhagavah sa adeso bhavatiiti*. The meaning of the mantra is that teaching by which what is never heard becomes heard, what is never thought of becomes thought of, what is never known becomes known? The essence is *eka vijnanena sarva vijnanam*.

Third is Brihadharaynaka upanisad 2.4.5. in fact this vakyam we have seen in the previous adhikaranam. *Atma vijnanena sarva vijnanam. na va are sarvasya kamaya sarvam priyam bhavati, atmanas-tu kamaya sarvam priyam bhavati; atma va are drastavyah srotavyo mantavyo nididhyasitavyo; maitreyi atmano va are darsanena sravanena matya vijnanenedam sarvam veditam* The discussion what is conveyed by the word Atma whether it is Jivatma or Paramatma. The reason he gives is due to the trend in the significant statement occurring in the section. Here also *Atma vijnanena sarva vijnanenam bhavati* is established. All these pratijnas emphasise the fact that Paramatma is material cause of creation.

The same view alone Krishna reemphasizes in Bhagavad Gita *yaj jnatva na punar moham evam yasyasti pandava yena bhutany asesena draksyasy dimany atho mayi* when though has known it, thou shall not fall again into this confusion. For by him thou shall see all existences without exception in the Self, then in life. Once you know this nothing need be known is *eka vijnanena sarva vijnanam bhavati*.

We don't want to say maya is material cause of creation and then it will be *maya vijnanena sarva vijnanam bhavati*. Then the knowledge will be *maya knowledge*. then Brahman will become a product of maya. if *Brahma n* is not a product *maya vijnanena Brahma vijnanam na bhavati*. Maya as material cause is said in some places for some purpose. In certain context we do say *maya is upadana karanam* it is for certain cause only.

The second reason Vyasacharya gives is because of the examples given by the sruti. Refer to 1.1.7 of Mundaka Upanishad which reads as *yathorna nabhib srjate grhnate ca yatha prthivyam osadhayah sambhavanti yatha satah purnat kesalomani tatha 'ksarat sambhavatitha visvam* as the spider projects and withdraws itself the web, as the herbs and plants sprout out from the earth as hairs grow on the head and body of man so from the Imperishable Being comes out the universe. The example given is material cause example.

Spider is material cause of the word; earth material cause of plants and our body is the material cause of the hair.

Then 6.1 of Chandogya upanisad *yatha somyaikena mrtpindena sarvam mrnmayam vijnatam syadvacarambhanam vikaro namadheyam mrttikatyeva satyam* the meaning of the mantra is it is like this; by knowing a single lump of earth you know all objects made of earth all changes are mere words, in name only. But earth is the reality. The clay pot example is given which reveals the material cause only. Brahman is comparable to the clay. Not that the clay is ultimate truth and clay like Brahman is the ultimate truth.

Then in 6.1.5 of Chandogya upanisad the gold example is given which again is the example for material cause. *Yatha saomyaikena lohamanina sarvam lohamayam vijnatam syadvacarambhanam vikaro namadheyam lohamityeva satyam*.

Third example is in 6.1.6 of Chandogya upanisad *yatha somyaikena nakhanikrntanena sarvam karsnayasam vijnatam syadvacarambhanam vikaro namadheyam krshnayasamityeva satyamevam somya sa adesso bhavati* kristnayatha means iron and various products of the iron and iron is material cause and three example indicate Brahman is the material cause.

In Brihadharaynaka upanisad three examples are given one is fire smoke example to show Brahman is sristi karanam and dundhubi example for sthithi karanam and finally all the rivers merging into ocean is given example for laya karanam the Upanishad points out Brahman is sristi sthithi laya karanam which means upadana karanam. Sristi karana means nimitta karana, Mantra 2.4.8 of Brihadharaynaka upanisad for sthithi karanam; 2.4.11 of Brihadharaynaka upanisad for laya karanam and 2.4.10 of Brihadharaynaka upanisad for Sristi karanam. [these mantras and their meanings are given in the earlier adhikaranam in detail] this is the general analysis. Now we will go to the word for word analysis.

Prakritih cha the Brahman is to be known as material cause also; pratijna dristanta anuparodhat since it is in accordance with the proposition and the illustration. This the general meaning.

Prakritih means the material cause as opposed to vikriti the product. Material cause is prakrti because it is available to make various products. Gold is available for making many products. The next word is cha mean also; Brahman is material cause also means it is not only nimitta karanam but also upadana karanam or in addition to being the intelligent cause. Pratijna proposition which means a beginning statement which requires a future elaboration. In all the above statement is eka vijnanena sarva vijnanena pratijna. The Vyasacharya keeps in mind Chandogya upanisad, Brihadharaynaka upanisad mantras. In all the three Upanisads there are so many examples which we have already elaborated above. All these illustrations give the material cause alone. nuparodah means violation or contradiction; a-nuparoda means non contradiction. Or in accordance or is in agreement. Acceptance of Brahman as the material cause is in accordance with pratijna and Dristanta of the Upanishad. if you don't accept pratijna as also dristanta will be violated. So accept Brahman as the material cause.

Now further reasons are given in the following sutras.

## **Topic 7; Prakrtyadhikaranam [Sutra 23-27]**

Brahman is both the efficient and the material cause.

**Sutra 1.4.24 [130]**

***Abhidhyopadesacca***

On account of the statement of will or reflection [to create on the part of the Supreme Self it is the material cause.

An argument in support of sutra 23 is given ‘He wished or though may I be many, may I grow forth’. In this text the desire and reflection indicate that Brahman is the efficient cause.

I will give you the general analysis of this sutra. Here the vedic statement of Brahman visualization also supports my conclusion. The Upanishad talks about the sristi pratijna in several places. Before creation Brahman visualized. Before creation he visualized and this Vyasacharya calls it dhyanam. Such vast creation required purna dhyanam and not casual dhyanam. Now how does the bhagavan’s Vyasacharya’s conclusion. Baghusyam, which means let me, multiply into plurality. He did not say let me produce many things. He did not think of some material to make creation. Here bhagavan is material cause which multiplied into plurality. Carpenter does not multiply into furniture. Multiply means transorms into furniture. Since Bhagavan thought over that visualization indicates the Brahman is the intelligent cause also. Bhagavan’s desire is intelligent cause and bhagavans multiplication is the material cause. This we see in II.vi.3 of *Taittiriya Upanishad* the mantra reads as *so kamayat; bahu syam prjayeyeti sa tapo’tapyata, sa tapas, taptva, idagm sarvamasrjata yadidam kim ca, tat srstva tadeva nupravisat tadeva nupravisya sacca tyacca bhavat niruktam cani-rukataam ca, nilayanam cani layanam ca, vijnanam cavi jnanam ca satyam canrtam ca satyam abhavat, yadidam kim ca, tat satyam itya caksate tadapy esa sloko bhavati* the meaning of the mantra is He desired. “I shall become many and be born. He performed Tapas. Having performed Tapas, he created all this whatever [we see]. Having created it, He entered into it. Having entered it, He became the manifest and the un-manifest; the defined and the undefined; the housed and the houseless; knowledge and ignorance; truth and falsehood; and all this whatsoever that exists. Therefore it is called Existence.

The same idea is expressed differently in 6.2.3 of Chandogya upanisad as *tadaiksata bahu syam prajayeyeti tattejo’srjata tatteja aiksata bahu syam prajayeyeti tadapo’srjata taskadyatra kvaca socati svedate va purusastejasa eva tadadhyapo jayante* here the meaning is That Existence decided ‘I shall be many. I shall be born’ he then created fire; that fire also decided ‘I shall be many. I shall be born;/ then fire produced water; that is why whenever or wherever a person mourns or perspires, he produces water. *Tadaiksata* indicates intelligent cause and *bahusyam praayeye* indicates the material cause. Our focus is on bahusyam indicating the material cause.

Now we will go to word for word analysis. Abidhya upadesat cha because of the vedic statement of visualization also Brahman is to be known as the intelligent cause and material cause. Now I will come to the significance of the words. Abhidhyopadesat is a compound word abidhya means comprehensive meditation; in fact anyone before creating anything one has to visualize what he want to do; dhya means total meditation; upadesah means vedic statement. anena iti upadesah abidhyopadesah vedic statement of visualization. Cha means also in addition to reasons given in the previous sutra this reason also should be taken. We will go to the next sutra which gives further support.

## Topic 7; Prakrtyadhikaranam [Sutra 23-27]

Brahman is both the efficient and the material cause.

### Sutra 1.4.25[131]

#### *Sakshaccobhayamnanat*

And because the sruti states that both [the origin and the dissolution of the universe] have Brahman for their material cause.

The argument in support of sutra 23 is continued.

I will give you the general analysis of this sutra. here Vyasacharya points out that Brahman is presented as sristi karanam and laya karanam also in many places. Sthithi is also mentioned but we do not stress this. As we have seen before nimitta karanam can be sristi matra karanam and it can never be laya karanam. karpenter is only sristi karanam and not laya karanam. This does not happen. When you destroy something it does not go to the creator. Sristi karanam means it is nimitta karanam and upadana karanam. once you say sristi karanam, material cause alone can be sristi and laya karanam. Adhi Sankaracharya quotes 1.9.1 of Chandogya upanisad. *Asya lokasya ka gatirityakasa iti hovaca sarvani ha va imani bhutanyakasadeva samutpadyanta akasam pratyastam yantyakaso hyevaibhyo jyayanakasah parayanam* what is the end of this earth? Pravahana said 'space, for everything that exists arises from space and also goes back into space. Space is superior to everything. Space is the highest goal. this is a difficult quotation because here Brahman name is not mentioned. Now I have to prove Akasa is Brahman. Adhi Sankaracharya quotes this because we have already proved Akasa is Brahman. why cannot Adhi Sankaracharya quotes Brigu valli quotation III.i.3 *yato va imani bhutani jayante, en jatani jivanti yat prayantya bhisamvisanti, tad vijijnasasya tad brahmeti so tapo'tapyata, sa tapas taptva*. The meaning of the mantra is to him he again said 'crave to know well that from which these beings are born; that by which having been born, these beings live and continue to exist; and that into which when departing they all enter. That is Brahman. It is clear and direct. Adhi Sankaracharya did not quote this for two reasons. This is vishya vakyam for janmadhikaranam. Second reason is Vyasacharya talks about sristi and laya karanam and here sristi sthithi laya karanams are mentioned.

There is another example in II.1.1 of Mundaka Upanishad that reads as *tad etat satyam yatha sudptat visphulingah sahasrasah prabhavante sarupah tatha'ksarad vividhah somya bhavah prajayante tatra caivapi yanti* this is the truth; as from the flaming fire thousands of sparks, similar to its form[nature] issue forth; so from the Immortal Brahman O my beloved youth, diverse manifold beings [jivas] originate and they find their way back into it. again the word aksaram comes and this quotation we can take. The idea is Brahman is sristi laya karanam is possible if it is upadana karanam.

Now we will come to upadana karanam. cha sakshat ubhayamnanat; explicit mention of both origination and dissolution Brahman is the material cause. This is the running meaning.

The significance of the word is sakshat means direct; the next word is uphaya amnam uphaya means both; Adhi Sankaracharya takes it as both sristi and layam; or sristi karanatvam and laya karanatvam; amnaya means mention; a special word used for vedic statement

mentioned for both origination and resolution. Sruti statement is Chandogya upanishad and Mundaka Upanishad. more in the next class.

## BRAHMA SUTRA

Class 142

### **Topic 7; Prakrtyadhikaranam [Sutra 23-27]**

Brahman is both the efficient and the material cause.

#### **Sutra 1.4.25[131]**

#### ***Sakshaccobhayamnanat***

And because the sruti states that both [the origin and the dissolution of the universe] have Brahman for their material cause.

The argument in support of sutra 23 is continued.

We have completed sutra 25 relating to the 7<sup>th</sup> adhikaranam. the topic of the first chapter that all Upanisads reveal Consciousness as the very cause of the universe that is both intelligent cause and material cause of the world. this was indicated in the janmadhikaranam and the same topic is repeated for the purpose of conclusion. Even though Brahman is intelligent cause and material cause Vyasacharya wants to focus the material cause aspect. He uses the expression prakriti cha. The very adhikaranam is called prakrtiadhikaranam. He gives various reasons for his conclusion. Vyasacharya wants to give two more reasons for his conclusion.

### **Topic 7; Prakrtyadhikaranam [Sutra 23-27]**

Brahman is both the efficient and the material cause.

#### **Sutra 1.4.26[132]**

#### ***Atmakriteh parinamat***

[Brahman is the material cause of the world] because it created itself by undergoing modification.

The argument in support of Sutra 23 is continued.

First we will do the general analysis. Vyasacharya keeps a particular Upanishad in his mind. that is II.vii.1 of Taittiriya Upanishad that reads as *azad-va idam agra asit tato vai ajayata, tad atmanagm svayam akuruta, tasmad tat sukrtam ucyata iti* the mening of the stotra is in the beginning was verily this non-existence. From that the existent was born. That created 'Itself' by 'Itself'. Therefore, It is called Self-made, or the well made.

In this mantra third line is focused *tad atmanam svayam akuruta* Brahman created itself. Since the Upanishad says Brahman created itself means Brahman is the creator and Upanishad also says Brahman created itself from this we get the idea that Brahman is object of creation also. this means Brahman is the creater as alos the created. This is the significance

of the mantra and it is a statement of Self creation. through this Upanishad points out Brahman is created and creator and to put it in another language Brahman is cause and Brahman is the effect. The Upanishad also reveals the identity of the cause and the effect. Vyasacharya argument is cause and effect is identical under only one condition is when the cause happens to the material cause. Because you know material cause and effect are substantially the same. Clay and pot are cause and effect are essentially the same and the difference between them is *avastha bedah na tu vasthu bedah* there is difference in the condition that is one is un-manifest condition and the other is in manifest condition but we find that the substance is one and the same. Upanishad says Brahman was in the un-manifest form before creation and when Brahman is differentiated and takes the manifest form, we call it the universe. But the in essence Brahman is the very stuff of the very universe.

If this sentence is clear to any who is not able to make out the meaning sruti is more explicit in another place, which is in the same Taittiriya Upanishad II. Vi.3 that reads as *niruktam cani-rukatam ca, nilayanam cani layanam ca, vijnanam cavi jnanam ca, satyam canrtam ca satyam abhavat, yadidam kim ca, tat satyam itya caksate, tadapy-esa sloke bhavati* the meaning of the mantra portion is 'he became the manifest and the un-manifest, the defined and the undefined; the housed and the houseless; knowledge and the ignorance; truth and the falsehood, and all this whatsoever that exists. Therefore it is called Existence. The Upanishad uses the expression that Brahman itself transformed itself into universe. It is the concrete and moving, chetanam and achetanam universe. Vyasacharya argument if the Upanishad says Brahman transformed into universe is possible under only one condition only when the Brahman is material cause and intelligent cause can never become the effect. Carpenter never becomes the furniture or potter can never become the pot. In the beginning stage we says god created the world and in the next stage we say god became the world. The first sentence is talking about the identity of cause and effect and second sentence talks of the transformation of cause and effect both the sentence support our conclusion that Brahman is material cause of the universe.

Now we will do word for word analysis. Atmakrite parinamat because of the Self creation through transformation Brahma is both intelligent cause and material cause of the creation. now we will see the significance of the words. Atma kritih means Self creation and Vyasacharya uses the word ingeniously to indicate the created and creator; or the Self creation and when he uses the word Self creation he remembers sruti mantra of Taittiriya Upanishad. Brahman created Itself is Atma creation. Next word is parinamat is from the word parinama that is transformation or becoming. Here Vyasacharya keeps in mind the words *satyam canrtam ca satyam abhavat* occurring in the mantra II.vii.3 of Taittiriya Upanishad. First sathyam refers to vyavaharika sathyam and anritam is Pratibasika sathyam and third sathyam means paramarthika sathyam, which means paramarthika sathyam, became vyavaharika sathyam and pratibasika sathyam. That is indicated by the word abhavat the modification. Now Adhi Sankaracharya discusses a few points in this sutra. in the sruti statement *tad atmanam swayam akurutat* is there that is Brahman created itself by itself. Adhi Sankaracharya indicates here when Brahman says Brahman creates itself means Brahman created itself through transformation and for this transformation Brahman did not require any other intelligent cause *swayam* means itself transformed and significance of this word *swayam* is Brahman is intelligent cause also. the second point to be noted is this. Vyasacharya uses the expression *parinamat*. Brahman created the world through transformation.. this will disturb us. We have analysed elsewhere Brahman is not *parinama upadana karanam* and it is *vivartha karanam*. Since Brahman creates itself through 'apparent transformation' and that is why I told you elsewhere when we talk about creation we teach at

three level. For the first level student we say that **God created the world** this is for **mandha adhikari**. Then we say that the **God became the world** and this is **madhyama adhikari** and if the person becomes good then as part of final teaching we say **God appears as the world;** and this is for the **Uttama adhikari**. *First one empasises the nimitta karanam and the second one emphasizes upadana karanam and the third one reveals the vivartha karanam only at the third level Brahma sathya jagan mithya becomes very clear.*

Adhi Sankaracharya says that this one sutra can be taken as two sutras. If you split the sutra into two sutras [Atmakriteh and Parinamat] you read as ‘because of the identity of the cause and effect’ Brahman is the material cause of the world and the second sutra will mean because of the transformation Brahman is the material cause of the universe.

## **Topic 7; Prakrtyadhikaranam [Sutra 23-27]**

Brahman is both the efficient and the material cause.

### **Sutra 1.4.27[133]**

And because [Brahman] is called the source

The argument in support of sutra 23 is continued.

First we will do the general analysis of this sutra. first Vyasacharya established Brahman is the material cause of the universe on the basis of the Upanishad. one word Upanishad uses is the word yonih. Yoni is the womb of the mother in which the child is conceived and the child is born. the word yoni has got two meaning one is womb of the mother and the other is the material cause of the universe. If the physical baby is to be formed, food is required for the formation of the baby’s body outside and it is actually born. Outside, annam becomes the material cause only when the baby is born. Before birth mother gives the food to the baby. All these indicate that the womb or the mother represents the material cause of an object. Brahman as the nimitta karanam is symbolized as the father and maya is symbolized as the mother.

This is indicated in sloka 14.4 of Bhagavad Gita as *sarva yonisu kaunteya murtayah sanbhavanti yah tasam Brahma mahad yonir aham bijapradah pita* the meaning of the sloka is whatever are produced in any wombs whatsoever, great Brahma is their womb and I am the Father who casts the seed. Here Krishna very clearly says Brahman is the father and maya is the mother.

Brahman is called bhutanam yonih indicative of the material cause of the universe in 1.1.6 of Mundaka Upanishad as *yat tad adresyam agrahyam agotram avarnam acaksuh srotram tad apani padam niyam vibhum sarvagatam susuksam tad avyayam yad **bhuta yonim** pari pasyanti dhirah*. While signifying the various characteristics of Brahman the creator, the Upanishad calls it bhuta yonim, which means the Source of all creation. Thus Brahman as material cause is established in this mantra also.

Then in the same Mundaka Upanishad 3.1.3 reads as *yada pasyah pasyate rukma varnam kartaram isam purusam **Brahma yonim** tada vidvan punya papa vidhuya niranjanah paramam samyam upaiti* the meaning of the mantra is when the seer realizes the Self effulgent Supreme being ruler, maker and source of the creator even – then that wise on

shaking off all deeds of merits and demerits becomes stainless and attains the Supreme state of Equipoise. Brahma yonim indicates Brahman as the source of all creation or the material cause of the creation.

This is the general analysis and we will go to the word for word analysis. Hiyate Brahman is said to be yonisha source also that is the material cause also; hi therefore Brahman is the material cause of the creation.

Now Adhi Sankaracharya adds a few more points in this context. In the definition of Brahman given in the Brigu valli III.i.2 reads as *tam hovaca yato va imani bhutani jayante yat jatani jivanti, yat prayantya bhisamvisanti, tad vijijnasasya, tad brahmeti, sa tapo tapyata, sa tapas taptva*. The meaning of the mantra is 'crave to know well that from which these beings are born; that by which having been born, these beings live and continue to exist and that into which, when departing, they all enter that is Brahman. An analysis of the word yathah will show that Brahman is the material cause of the universe'. The next point Adhi Sankaracharya discusses is that samkya philosophers may raise an objection as to how can conscious Brahman be the cause of the creation. inert matter alone can be the material cause and how can the Consciousness be the material cause and there is no example to show that Consciousness is the material cause. We quote the example that the spider is the material cause of the web, the sentient being is the material cause of the hair and the nail. The samkya philosopher says that they are not right example. Spider produces the web, which is a matter, and it says inert cause alone produces inert web; so also hair and nail alone produces the material and how can you take it the example that Consciousness produces the materials. For this objection Adhi Sankaracharya says that the examples become important only when we prove something through logic and here we give our example not to prove anything but to assimilate the Upanisadic teaching through the example. Therefore we should that the example is a means of assimilating the scripture. Primarily we arrive at the meaning through the scriptures and not through the examples. Then they say that you don't use logic and example not to prove anything but you use it to understand the scriptures only. at least you use the logic to support the scripture. Your logic even does not support the scriptures. You try to understand it through the scripture that the Consciousness is the material cause of the creation. But it is not supported by logic. We divided logic into two first we are not using it for proving but at least it must be supporting logic, for this Adhi Sankaracharya says that first we negated the idea of proving logic. Now samkya philosopher says that the example should be supporting logic for the example. For this Adhi Sankaracharya says that the first chapter does not deal with supporting logic at all and for this purpose we have the second chapter exclusively for that purpose. We shall discuss the matter when we discuss the next chapter.

With this prakriti adhikaranam is over. now we will present it in our language. Subject matter is Brahman. doubt is whether Brahman is upadana karanam also or not. There is no controversy in accepting it as nimitta karanam. Purva Paksi says Brahman is nimitta karanam and not upadana karanam. our conclusion is Brahman is upadana karanam also. sangathi means appropriateness of the position of the adhikaranam and this is in appropriate position.

## **Topic 7; Prakrtyadhikaranam [Sutra 23-27]**

Brahman is both the efficient and the material cause.

### **Sutra 1.4.28[134]**

***Yetena sarve vyakhyata vyakhyatah***

By this all [the doctrines concerning the origin of the world which are opposed to the Vedanta texts] are explained.

The argument is concluded in this Sutra.

This is the final adhikaranam of the fourth section and also the first chapter also. until now Vyasacharya had shown that Brahman the chetanam is material cause of the creation. chetana karana vadha is established. While establishing chetana karana vadha he had to refute all the achetana karana vadha all those who claimed the matter as material cause of the creation. there are many philosophers are achetana karana vadhi the matter is the material cause. Vyasacharya did not refute all the system and that is samkya philosopher who is prominent achetana karya vadhi. Having elaborated samkya achetana vadhi Vyasacharya says having refuted one I have refuted all the other achetana karana vadhis. He has refuted samkyas pradhanam and nyaya's paramanu. This is the general analysis.

I will give the word for word analysis. Etena by refuting samkya philosopher all other achetana karana vadhis vyakhyata are answered or refuted. Vyakhyatad is repeated to show the end of the chapter. With this samanvaya chapter is over. vishaya is the entire Vedanta samsaya whether Vedanta chetana karana vadha or achetana karana vadha. Purva Paksi says achetnana karana vadha and siddhanti has proved it is chetana karana vadha.

First three adhikaranam seeming supported samkya philosophy and Vyasacharya negated them. The next four adhikaranam Vyasacharya re-establishes Brahman as the subject matter of Vedanta and it is jneya Brahma adhikaranam and lastly Vyasacharya refutes all the other philosophies. With this, this chapter is over. the next chapter we will take in the next class.

## **BRAHMA SUTRA**

Class: 143

### **Summary of the 1<sup>st</sup> chapter**

We have completed the I chapter of Brahma sutra known as samanvaya adhyaya. In this chapter, vyasacharya wants to present a systematic teaching of Brahman knowledge with the help of Vedantic pramanam. Therefore we should remember Vedantic teaching is not a philosophy of vyasacharya. The condition to be a philosophy should be a speculative teaching invented by human being unaided by any scriptures. The moment the scripture comes it no more can be called philosophy. It is a speculative system of teaching presented by Vedantic. It is a teaching extracted from Vedantic scripture. Therefore even though the teaching has come from vyasa it is not a pouruseya teaching it is apouruseya darasanam being based on apouruseya Vedanta pramana, the uniqueness of Brahma sutra serve as a thread to make a garland out of adhi sankaracharya statements.

Vyasacharya teaching is thread to teach the essential teaching of Vedanta. Using a method of analysis of mimamsas makes this essential teaching. That is why it is called utara mimamsa. Sutrani. Applying the principle of upakrami shad linga vichara did this mimamsa. Then you arrive at the central teaching of Vedanta. We have to arrive at the central teaching because it is not explicit.

Vedanta contains dvaita vakyas, vishistadvaita vakyas and advaita vakyas and each one interpret in their own matter. There are advaita, vishistadvaita and dvaita srutis etc., jivatma isvara beda, jiva isvara abeda and there are confusions and therefore we need an analysis. This method of teaching is called here samanvaya a technical word meaning consistency. We want to find the consistent teaching of Vedanta. This we call tatparya nirnayah. All this helps us arrive the central teaching of the Vedanta.

This process of arriving the central teaching is called sravanam, sravanam means hearing. Sravanam takes place in spite of you. It is active participation in the analysis of Vedanta with guidance of acharya. Through this mimamsa what is the teaching we arrive at. We come to know Vedanta is independent pramanam, which reveals the unique subject matter called Brahman. Just as Veda purva reveal the unique subject called dharma. That Brahman that is jagat karanam Brahma is the subject matter of the Vedanta.

This is a unique teaching because all other system of philosophy do not accept Brahman as jagat karanam. They accept the achetana vastu as jagat karanam. Vedanta alone says bhagavan alone is the material cause. Here Vedanta reveals Brahman alone became the whole universe and he is the material cause of the world which other systems of philosophies are not able to digest. Every snake every monkey becomes worshipful because of the fact that bhagavan has manifested all. God is the material cause is a unique thing in Vedanta.

With the knowledge of Brahman alone one gets liberation and by knowing this jagat karanam Brahma alone one get moksha. Brahma jnanam is not one of the means of liberation but it is the only means of liberation. Vedantic study is not the one of the means of Brahma jnanam Vedanta is the only means of Brahma jnanam. Vedanta is an independent and unique pramanam. Vedanta deals with Brahman alone and nothing else. Knowledge of Brahman

alone gives liberation and Vedanta vichara alone will give that knowledge. Aveda vid tam brahanta na manute one who does not study cannot gain moksa.

Vyasacharya advice is better study Vedanta and gains Brahma jnanam and gets liberated. The text is called Brahma sutra and that is why i don't say atma jnanam. Brahma jnanam is Brahma jnanam only when Brahman is known as 'i'. When Brahman is known anything other than me it will be reduced to an object of creation and an object can never be Brahman it cannot be Brahman because sruti says so. Whatever you objectify is not Brahman. All object falls within time and space and it does not deserve the status Brahman. Brahman is beyond time and space. Brahma jnanam is Brahma jnanam only when i know Brahman. Brahma jnanam is jivatma and paramatma aikya jnanam.

While establishing this siddhanta chetana Brahman jagat upadana karanam is the siddhanta or primary teaching and it called chetana karana vadha. While vyasacharya establishes the chetana karana vadha incidentally he refuted achetana karana vadha briefly. Primarily samkya achetana karana vadha was refuted.

First chapter focused on the establishment chetana karana vadha and also refuted the purva paksa of achetana karana vadha. These two were primarily done in the previous samanvaya adhyaya. There was another purva paksa called purva mimamsa purva paksa who claimed that karma is the theme of Vedanta and not Brahman. This purva paksa Vyasacharya did not refute and therefore Adhi Sankaracharya took the task of refuting the purva mimamsa in the fourth sutra of tattu samanvayad. He refuted Purva Mimamsa by way of commenting on one word 'tu'. In tattu samanvayad adhikaranam, samkya purva paksa was refuted by Vyasacharya in the sutras. This is the essence of samanvaya adhyaya.

If all these have been done why there is the need for the other three chapters. First chapter is enough for the uttama adhikaris; they are convinced and happy also and the commentators write maximum for the first chapter. If you go by the commentary wise we have one third of the Brahma sutra. If some are not convinced and unsatisfied they must be helped.

## BRAHMA SUTRA - Chap: 2, Pada: 1

Class: 143

The purpose of the second chapter does not have any new job at all. It gives only clarity and conviction to the teaching. This is done by two methods the first one is defending Vedantic teaching or reinforcing Vedantic teaching by answering all the possible objections. The objection alone weakens our knowledge. The objections may primarily come from my own buddhi and therefore some people claim you don't think. That cannot be the solution,

Thinking alone make you a human being. Else you will become an animal. Why you want to go to animal janma. I cannot stop thinking and if thinking creates problem stop the problem, by more thinking. Then there are purva paksas like other intellectuals capable of spinning their own teaching. We have to reinforce our siddhanta of chetana Brahma jagat karanam and also we should remove the objections from purva paksas. Objections can arise from three different ways.

First type of objection is sruti virodha dosha. Some one can say your teaching is not in line with Vedantic teaching. it is like teaching that jivatma and Paramatma aikyam and it is against sruti saying that your teaching against sruti itself.

Then the second objection can be in the form of smriti virodha dosha. In tradition we accept smriti also is valid source of knowledge and it has got pramanyam and validity being based on sruti. The teaching should not contradict smriti. Four philosophy samkya, yoga nyaya and vaiseshika are called smriti. Normally we call then other systems of philosophy and speaking they are also called smriti because their authors of those systems are vaidhikas. Kapila, Pathanjali, jaimini and kanadha munis are the authors of the other four systems of philosophies. They are rishis, they are asthikas, and their teachings are in keeping with Veda pramanam.

Anything based on Veda is called smriti. Brahma Sutra itself is a form of smriti only. it is in keeping with smriti. Samkya accepts and borrows Veda and so his is called samkya smriti. There are so many smritis including manu smriti. All of them are based on one vedic source and they should not contradict each other. If they contradict smriti themselves will become weak and the very sruti will become weak. The very validity of Veda will become invalid if we allow the contradiction amongst various smritis.

Third task is objection based on reasoning and logic should be removed. Buddhi always favours reasoning. Even that person who says logic is a problem and therefore give up for him even the rejection of logic is based on the logic. Some say greatest problem is thinking. But he forgets that the very dropping of logic is based on the logic alone. If I say I am guru, you are sishya, and you will accept. When Galileo established sun is the central and not the earth he had to be punished by the church. Because of the pain of accepting it, his intellect will not accept which the intellect thinks illogical.

When you think Vedanta is illogical and you cannot accept Vedanta. for strengthening the siddhanta you have remove the contradictions. Since contradictions are resolved in this chapter it is called the second innings of the one-day match. Therefore the first chapter is first

innings and the second innings we have to defend the purva paksa who is stronger. This is reinforcement of siddhanta.

We have got one more job in second chapter and that is weakening of the purva paksa by showing that whatever objections you raised in our teaching and you should say that all these defects are there in your purva paksa. This is weakening of the purva paksa. Strengthening of siddhanta and weakening of siddhanta is our job in the second chapter. This is done in not only second chapter but also the other two chapters. The second chapter shows that all other darsanams have full of defects. If the first chapter is equivalent of sravanam the second chapter is called equivalent of mananam. Therefore the approach is slightly different. In the first chapter we wanted to extract the teaching from Vedanta.

Every adhikaranam had a sruti vakyam taken from ten Upanisads. The aim was to extract the teaching. in the second chapter we don't extract the teaching. We don't have the vishaya vakyam in the adhikaranam. That is why I did not give you the chart for the second chapter. The second chapter is primarily answering the objections from others. if at all we require a vishaya vakyam I will point out well in advance. The second chapter also has got four padas.

The first pada concentrates on smriti nyaya virodha pariharah. The refutations of objections with the help of sruti and smriti are the essence of the second chapter. This is the topic of the first pada. With this pada we will enter the first adhikaranam of the first pada in the next class.

## **BRAHMA SUTRA**

Class 144

### **Topic 1 Smrityadhikaranam [Sutras 1-2]**

#### **Refutation of smritis not based on srutis**

Sutra II.1.1. [135]

*Smrityanavakasadoshaprasanga iti chet na anyasmrityanavakasadoshaprasangat*

If it be objected that [from the doctrine of Brahman being the cause of the world] there would result the defect of there being no room for certain smritis [we say] no. a dbec` [by the rejection of the doctrine] there would result the defect of want of room for some other smriti.

The conclusion arrived at in chapter I section IV that Brahman is the cause of the world is corroborated by smritis other than samkya. The earliest and most orthodox of these smritis is the smriti written by Manu.

In the last class I pointed out that the second chapter is primarily meant to give clarity to the teaching that has been established in the first chapter by negating between Vedantic teaching and other factors.

Other factors are three seen to be three and they are; one is Self contradiction doubt; second are the doubts or contradiction regarding the Vedantic teaching with other smriti grandhas and the asthika darsanas like samkya, nyaya, yoga and other darsanas; and thirdly the weaknesses regarding the seeming contradictions with tarka and nyaya etc. but if we see the contradiction then our knowledge will be weak and therefore we have to get the contradictions should be removed and this is done in all the four padas of the second chapters. Therefore this chapter is called smriti nyaya virodha parihara and the same forms the topic of the first pada.

Here Vyasacharya resolves nyaya and smriti virodha. When you say smriti, the four asthika darsanas are kept in mind, these four smritis are kept in mind. all darsanas believe in Veda pramanam. First I will give you a general analysis of the first adhikaranam.

Vyasacharya resolves smriti Vedanta virodha the contradiction between Vedanta and smriti. The word smriti has got a wide meaning here and this is primarily samkya smriti is kept in mind even though all the four smriti can be taken together. The essence of this adhikaranam is samkya smriti virodha pariharah.

Now I will come to the general analysis of the first sutra. The first sutra the first portion is purva paksa portion and the second portion relates to siddhanta. Through the first chapter it was established that chetana karana vadha says purva paksa. Brahma karana vadha and Consciousness is the material cause of creation. In addition, purva paksa says if you establish this teaching it will be contradictory to the samkya darsanam Brahma is the material cause of the creation. if there is a contradiction between samkya and Vedanta, it should be resolved for they should live together. Vedanta and samkya smriti should not have contradiction and if

there is one then the samkya smriti will become redundant. Redundence of samkya smriti is not happy news to us as it is a smriti grandha. You may reject Buddhism since it is outside the smriti and outside the scope of Vedantic darsanams. But you cannot do that with other darsanams. You should interpret smriti in such a manner as to accommodate samkya smriti but you have not done this properly. you reject achetana karana vadha and accept the chetana karana vadha, you reject one of the systems based on smriti grandha which is not proper. These are the arguments from the samkya vadhas.

For this answer is given in this sutra. Vyasacharya says what I can do. There are unavoidable in life because suppose I interpret Veda in such a way to accommodate samkya smriti, then I should establish achetana karana vadha. I should compromise in such a way that samkya smriti is also should be accommodated which is possible only when I accept achetana karana vadha. For the accommodation of samkya smriti if I accept achetana akarana vadhas there are some other smritis like manu, nyaya yoga etc., which talk about chetana karana vadha will become redundant and rejected. So the problem is not solved by achetana karana vadha interpretation. Then the problem will remain. Then I can take manusmriti is accepted then samkya smriti will be rejected. If accept achetana vadha, manu smriti etc., will be rejected. If the defect of rejection is common to both you cannot charge me with wrong interpretation. since the problem of defect is common how can you charge me with the defect. When two systems have similar defect one has no right to criticize the other system. Therefore you have no right to charge me.

Then comes the next question if either case we have to reject some smriti why did you choose to reject samkya smriti by taking to chetana karana vadha for which our answer is when I take to chetana karana vadha I reject only samkya smriti whereas when I take to achetana karana vadha not only manusmriti is rejected, in fact the very Veda will get rejected and it will be like cutting the tree in which I am seated. Therefore, I have to reject the one, the samkya smriti that does not stick to the vada. First, I will give you the running meaning of the sutra.

Smrityanavakasa doshah [if chetana karana vadha is accepted] the defect of redundancy of smritis like samkya will arise – chet - if it is argued thus na it is not so; anyasmrityanavakasadoshaprasangat – this is one word because there will be redundancy of other smriti like manu smriti if achetana karana vadha is accepted. This is the running meaning.

Smrityanavakasa doshah this is a compound word consisting of four words. Smriti, na, anavakasa and doshah; this refers to samkya smriti in particular and all achetana karana vadha smriti in general; anavakasa means non validity, or no scope; doshah the defect of smriti anavakasa doshah; the defect in the form of redundancy of samkya smriti. Our view is even if it is smriti if it is against Veda, we cannot accept it even if it belongs to smriti. Samkya feels that all should be accommodated. Dosah is according to samkya and we do not think it is a dosha. There is a possibility of defect in the form of samkya smriti; chet if this argument is made by you – na, there is no such defect and this also is a similar compound with five words, there is one additional word ‘anya’ this means other smritis that belong to the chetana karana vadha and which accepts chetanam Brahman alone is jagat karanam. If I accommodate samkya smriti naturally I will be displacing manu smriti and if you accommodate manu smriti you have to accommodate the samya smriti.

Now the samkya philosopher comes once again. He says that I will find out a method of accommodation. If you accept samkya smriti through achetana karana vadha, then the manu smriti will become redundant is your argument. Now samkya says that I will give you a solution thereby you can accept achetana karana vadha without manu smriti getting redundant or rejected. Manu smriti deals with Karma Kanda as also jnana kanda. It talks about manushya dharma, varnasrama dharma, Purusa dharma, sannyasa dharma, and so on. It also talks about philosophy. You interpret achetana vadha is right then samkya also will be accepted and manu smriti will not be totally rejected and only the philosophical portion will be rejected by accepting the dharma portion. What you should do is reject the philosophical portion of Manusmriti and accept the one dealing with dharma etc. but this you cannot do other way round, you cannot say for philosophy you follow manu and for way of life you take samkya smriti. Samkya smriti does not talk about dharma etc. and therefore if you reject samkya smriti, the entire samkya smriti will get be lost and if you reject manu smriti the entire manusmriti will not go away. This is a peculiar argument. when you reject the samkya smriti is totally rejected; it will of no use. Samkya smriti does not have anything other than philosophy. in manu smriti there is both philosophy and way of life and if you reject philosophy, the dharma portion will be there. When one is niravakasma and the other is savakasa, niravakasa stands better to hold. Savakasa is manu and samkya is niravakasa. Therefore, samkya smriti is to accept is their contention. Now we say that there is another rule. Between an invalid philosophy and valid philosophy valid one must be accepted. here samkya smriti goes against Veda teaching and therefore it is apramanam. but on the other hand manu smriti is within the ambit of Veda teaching and therefore it is pramanam. Hence between samkya smriti and manusmriti, manusmriti can be accepted and samkya can be rejected. While smriti is to get validity from sruti how can it contradict the Veda that gets support. Since sruti teaching is more powerful and since samkya smriti is contradicting it is apramanam. manu smriti accepts sruti and therefore chetana karana vadha is to be accepted. We also say that the first rule is valid both are pramanam. Niravakasa pramanam and savakasa pramanam should be there for us follow this rule. Here there is one pramanam and another is apramanam. Hence this cannot be accepted. pasu himsa is one vidhi in Veda. Ahimsa vidhi also is there. Now when himsa vidhi is there can we reject himsa vidhi taking to ahimsa vidhi occurring elsewhere in Veda itself. Here both are vedha vidhi. We cannot apply the pramana vidhi. We have to find out savakasa and niravakasa vidhi. Yaha himsa is niravakasa vidhi and this law cannot be applied anywhere. It is in the yaga context and if you do not accept in yaga context it will not be applicable anywhere. But ahimsa vidhi will be there in other context except yaga context and therefore ahimsa vidhi is savakasa vidhi and between savakasa and niravakasa, there is no himsa in yaga is the argument and this is quoted by Adhi Sankaracharya in his Gita bashyam. Arujuna rejecting ahimsa vidhi is not a dosha. Yuddhe himsa is niravakasa vidhi. So we say don't apply savakasa niravakasa vidhi and this does not apply and you should apply pramana and apramana and reject the one, which is apramanam.

### **Topic 1 Smrityadhikaranam [Sutras 1-2]**

#### **Refutation of smritis not based on srutis**

Sutra 2. [136]

*Itaresham chanupalabdheh*

And there being no mention [in the scriptures] of others [i.e. the effects of the pradhanam accordint to the samkya system] [the samkya system cannot be authoritative].

An argument in support of Sutra 1 is given.

Now I will give you the general analysis of this sutra. here a second argument is given in support of chetana karana vadha acceptance or rejection of achetana karana vadha. The controversy is chetana karanam or achetana karanam. Vyasacharya says let us forget the controversy of the karana field. Let us in the field of karya Prapancha that is closer to sruti. Then we will extend it to karya field also. When we see the sristi prakriya introducing the terms, which are not in keeping with the sruti.

They introduce Achetana mahat tattvam but sruti starts with Akasa sristi, sooksha sristi etc. Also Samkya introduces a peculiar mahat, tattvam, an ahankara tattvam, which are against sruti. From that ahankara tattvam alone emerges panca bhuta sristi says samkya philosophy. Between the original cause and the panca bhuta it introduces mahat and ahankara for which there is no pramanam at all. There is no apourushya aor pourusheya pramanam there is no sruti support also and that mahat and ahankara are unproved categories and therefore in the context of karya Prapancha is against Veda and extending that to karanam also it is against Veda. Since it is valid for karya Prapancha, it is valid in the field of karana Prapancha also.

Now we will see the word for word analysis. Anupalapde because of nonperception itaresham cah like mahat and ahankara also; there is no defect of smriti virodha. The significance of the words is itaresham other categories of samkya philosophy belonging to mahat and ahankara; anupalabdheh means non-perception; not perceptible to sense organs. Mahat and ahankara are not acceptable to sruti. How can I accept a philosophy that takes to imagination? Hence I can easily reject the samkya philosophy. More in the next class.

## **BRAHMA SUTRA**

Class 145

### **Topic 1 Smrityadhikaranam [Sutras 1-2]**

#### **Refutation of smritis not based on srutis**

#### **Sutra 2. [136]**

#### ***Itaresham chanupalabdheh***

And there being no mention [in the scriptures] of others [i.e. the effects of the pradhanam accordint to the samkya system] [the samkya system cannot be authoritative].

An argument in support of Sutra 1 is given.

We have completed the 2n sutra of first adhikaranam vyavaharika answers the objections raised by samkya philosophers. The Vedantic teaching contradicts samkya smriti. By contradicting the samkya smriti, we contradict the Vedas as well because samkya also belongs to a system based on sruti and Vedas. By rejecting the samkya smriti we do hurt Vedas as well. It is the argument of the samkya philosophers. But what we argue is that between Vedas and samkya darsanam based on smriti, we have to necessirly support Veda and reject samkya because samkya philosophy is contradicting Veda itself. Vyasacharya answer was there was no other way that we have got two types of smriti one near the vedic teaching and the other away from vedic smriti. One talks of Atma ekatvam and jagat mithyatvam and the other talking of Atma bahutvam and jagat sathyatvam. Therefore certainly one has to be rejected. Samkya and allied smritis had to be rejected because they went against the vedic teachings. In whichever aspect it contradicts Vedas we will reject and if samkya is contradicted it is not a dosha at all. Samkya smriti is more against Vedas not only with regard to karanam as also karya Prapancha also there is diversion. We are ready to accept the aspects which do not contradict the Vedas if the view of the siddhantins. Talking about sristi samkya introduced certain principle, which had no vedic support at all as said before. Whenever a philosophy introduces a category it should have some pramanam or the other or it should be supported by Veda pramanam. We accept swarga kija even though it is apourusheya. Mahat and ahankara are not available for apourusheya or pourusheya. They are not available for pancha pramanam or Veda pramanam. Swarga is apourusheya Veda pramana gocharam and hence we accept swarga loka. If you introduce any category with no pramana support and every one will become a philosopher and there is will be no vyavastha or support for such a system. mahat and ahankara are karyams but they belong to the apramana category. There is no pramanam as envisaged by samkya in the Vedas is the argument of Vedantins. Why mahat and ahankara is not supported by Veda. Mahat ahankara sruti pramanyam asit. This is the counter question raised by samkya philosopher. For this Adhi Sankaracharya says that you have followed the first chapter of the Brahma Sutra. We have already discussed before in 1.4.1 of Brahma Sutra whether the word mahat or Avyaktam etc., refers to samkya or different category. We have established that words are different but the meaning is different. Ahankara and mahat have got entirely different meaning under Vedanta while the meaning of the same words are entirely different with the one we have and the interpretation of ours is having the support of the Vedas themselves. Samkya ahankara is

the cause of five elements. In Vedanta five elements have come from Brahman itself and thereafter wards comes the ahankara from five elements themselves. Our ahankara is after five elements and their ahankara has come before five elements. This is one point.

Another point is this purva paksha somehow wants to validate the samkya smriti and wants to accommodate samkya philosophy and we have shown that samkya philosophy is against Veda. As such when we rejected the samkya smriti, they talk about the glory of the founder of the samkya system the Kapila Muni. When the philosophy does stand the scrutiny you drop it and talk about the author. He is a well-known rishi etc., and how can you reject a philosophy of a Maha Purusa. he says that you cannot doubt Kapila as Veda accepts Kapila muni as Svetasvara Upanishad he is much talk about. For this Adhi Sankaracharya says the word Kapila occurs in Veda and it has noting to do with Kapila the Kapila mentioned in Veda refers to Hiranyagarbha born out of Isvara. So Kapila does not have vedic support. What Manu has taught is a tonic to humanity. Now he says Kapila is supported by smriti pramanam. Kapila is greatly glorified as avatara of Vishnu. For that Adhi Sankaracharya says that avatara Kapila is different from samkya Kapila because the very teaching of avatara Kapila is different from samkya Kapila. This is evident from Bhagavatam. There Atma ekatvam is taught there but samkya Kapila teaches Atma ekatvam. He also teaches jagan mithyatvam by giving swapna dristanta. Even though objects are not there we do see them in dream and similar even though duality is not there we see maya avidya. avatara Kapila Atma eka jagan mithyatva vadhi and samkya Kapila is Atma bahutva jagan sathyatva vadhi. Samkya means wisdom. Even though they use the word for wisdom their wisdom means Atma anekatvam jagan sathyatvam and the samkya of Bhagavad Gita is different from samkya of Veda. The word samkya is same but the meaning as per samkya philosophy and Vedanta are different. Now they come out with the argument that Kapila is a siddha purusa. among the siddha I am Kapila so is glorified is Kapila. How can you reject the philosophy of siddha purusa is their argument. Adhi Sankaracharya says how did Kapila become siddha and how did he become a great person and this he did so only by following the vedic powers. When he has derived the powers from Veda, and having derived the powers from Veda how he negate the Veda itself from which he has gained the vedic powers. A power with lesser power he can no longer be given that glory as he deserved. Having derived powers from Veda how can he get the capacity to reject Veda from where he has derived the powers. Kanada also is given the title of sarvajna can I accept omniscience for both of them. If both are sarvajna how can there be deadly contradiction be between them nyaya and samkya. We cannot accept because of these reasons. You may not accept vedic and smriti support and at least do you believe in logic. Yes with limitation is our answer. samkya is clearly established on tarka foundation. Even if you don't accept I because of other reasons, you should accept on tarka basis. Then Adhi Sankaracharya says that in the next pada of second chapter I would analyse how much logical is samkya philosophy. and then I will negate that samkya is sruti, tarka vriuttanja. Therefore samkya smriti is not acceptable. Our tradition is not based on personality and none is greater than Veda. The title of muni etc., we are not going to blindly follow them. Even avatara is not bigger than Veda. The best example being Buddha himself. Even Buddha is said to be an avatara and we will not accept Buddha as avatara and we will negate Buddha also. never fall for personality cult. Krishna is accepted not because of avatara but because he respects Veda. It should not contradict sruti, yukti and anubhava day-to-day experience. Every traditional experience should pass the Veda text. If there are modern acharyas also, we give credence to them only when they follow Vedas. We lose Veda because so-called maha Purusa never followed Veda seriously. The person has become bigger than Veda and it is a worst calamity for the spiritual growth of India. That is why we say scripture should be learnt from those who have studied Veda. Reading other literatures

other than Veda, you will be in trouble and will not conform to the standards suggested by the Veda. Krishna generally follows Veda. Gradually karma will take to moksa, siddha suddhi, go to guru, jnana prapti and then achieve moksa. In the case of samkya majority of the people do not follow the primary teaching according to Veda. Vyasacharya and Adhi Sankaracharya do not accept the personality cult.

I have taught you dharma and until you learnt dharma sishta acharya would be your dharma that is sishya will follow the right and wrong of the guru. Guru says the sishya don't follow me in all respects as I am likely to commit mistakes. May be dharma, may be Bishma. Personality is guidelines up to a particular limit and sooner or later sastra should be your guidelines. Even with regard to dharma sastra, we don't believe in personality and take to sastra pramanam only. This is taught even by dharma sastra as also in the sastras. What is important is sastram is our support and that alone protects us and not the personality. That which protects humanity is sastram. There afterwards after liberation it is said that you should leave sastram also. First hold on to god; god will give you guru and guru will give you sastram and sastram will give you 'ourselves'. With this the first adhikaranam is over.

Since Upanisadic statements are analysed vishyah etc is not evident. Still the entire second chapter, the vishayah of all adhikaranam has got one subject matter. the samanvaya done in the first chapter is the subject matter here here. Brahman is the second chapter was proved in the first chapter that is the subject matter of the second chapter. Then the samsaya is whether the consistency is clearly established or not. Samanvaya siddha va or asiddha va. That is the question. Then purva paksha says samanvaya is asiddha. It is not clearly established. His reason is because of the virodhad. Virodhadnis contradiction is whether it is with sruti, or tarka or samkya. It changes from adhikaranam to adhikaranam. but what is common in all is some contradiction purva paksha will talk about. Siddhanta will say samanvaya is established being there is contradiction at all. Sangathi is a standard answer that the adhikaranam is in appropriate position of the second chapter. I will not deal with it in every adhikaranam.

## **Topic 2 yogapratyuktyadhikaranam [Sutras 3]**

### **Refutation of yoga**

#### **Sutra 3. [137]**

#### ***Etena yogah gratyuktah***

By this the yoga philosophy is [also] refuted

The yoga philosophy of Patanjali is refuted here. Yoga is called 'sasvara samya'

This is a small adhikaranam with one sutra known as yogapratyuktyadhikaranam. This is refutation of yoga philosophy. Now I will give you the general analysis of this adhikaranam. yoga philosophy is very close to Samkya philosophy. and they are called by a separate name because they have added new product to it. they are Samkya philosophy does not accept Isvara tattvam. they accept jiva they accept jagat and they do not accept Isvara. in Vedanta we reject Isvara from Paramarthika dristi. We accept it from vyavaharika dristi. In the empirical world of transaction we accept Isvara. Isvara is different and jiva is different. I need the grace of the Lord to protect me. In Vedanta vyavaharika Isvara is accepted and Isvara is as real as world. in Samkya philosophy they talk about jiva and Purusa and do not accept

Isvara. they say Isvara is not required and everything will happen. Matter and Consciousness are enough and matter will naturally evolve. It is very close to Darwinism. When one accept natural creation, Bhagavan became redundant. This is samkya philosophy. more about it I will discuss in second pada. Yoga said that the matter cannot evolve by itself without underlying principle. So prakriti Isvara and tattvam were introduced by the yoga. Yoga created Isvara. this is yoga philosophy. the second feature is ashtanga yoga discipline; practical discipline for sahdana. These are the two additional features. Rest are the same as samkya. That is why we call it samkya yoga. Hence Vyasacharya says since I had already rejected samkya I need not refute yoga separately because of the same reason.

Now I will come to the word meaning. etena ]by the refutation of samkya] yoga smriti also is negated or refuted. In this Adhi Sankaracharya adds a few points. One is even though philosophically we reject yoga and samkya ashtanga yoga discipline is a useful practice for integrating the personality and therefore we don't hesitate to borrow this idea. Therefore ashtanga yoga as practical discipline is acceptable to us. They say Purusa is asanga Chaitanyam. They say prakriti is trigunatmika yes. Thus ashtanga yoga is acceptable to us and we should know the role of ashtanga yoga. This we will see in the next class.

## **BRAHMA SUTRA**

Class 146

### **Topic 2 yogapratyuktyadhikaranam [Sutras 3]**

#### **Refutation of yoga**

#### **Sutra 3. [137]**

#### ***Etena yogah gratyuktah***

By this the yoga philosophy is [also] refuted

The yoga philosophy of Patanjali is refuted here. Yoga is called ‘sasvara samya’

We have completed the third sutra and second adhikaranam of this pada. Vyasacharya has pointed out in the two adhikaranams that Vedanta does not have any contradiction with samkya and yoga smriti. Where there is some contradiction we should reject and it is better to contradict samkya and yoga rather than contradicting Veda. Contradiction of yoga and samkya cannot be taken as defect in Vedantic teaching. Vedanta is not afraid of greater teachers like Kapila and Patanjali. We are interested in sastra pramanam alone. Adhi Sankaracharya says when we reject samkya and yoga philosophy or system we reject only those aspects contradictory to Vedantic teachings. The aspect that is in line with Vedanta we are ready to borrow. Both define Purusa as asanga Chaitanyam. We have no difficulty to accept this aspect. Prakriti has three gunas also is noncontradictory and we don't mind accepting. All smritis are partially acceptable those which are non-contradictory to Vedanta or logic. We do borrow ideas from them. Among them the four smritis the most important from which borrow most is samkya and yoga. In nyaya and vaisheshika we don't borrow much. But the Vyasacharya accept the fact that samkya and yoga are useful in several aspects. Hence both are called those smritis, which are heavily used by Vedantic acharyas. The Vedanta does not rely upon Whereas byaya and vaisheshikas. After glorifying samkya and yoga Adhi Sankaracharya gives a warning. Since from both are borrowed heavily we should know clearly what to be borrowed and what to be rejected. Therefore Adhi Sankaracharya says we should be extra careful in studying samkya and yoga and reject unacceptable portions. We borrow two things from samkya and yoga. One set of ideas, which are borrowed, are noncontradictory ideas. Similarly pranayama. Yama, niyama, asana etc., are accepted and borrowed from samkya yoga. Next item borrowed are nonessential features. They are for conveying certain ideas. That is samkya sristi prakriya. It is contradictory to Veda prakriya. Really speaking we should not borrow this. As this is borrowed by puranas, manusmriti and Gita, we do not contradict them. The ashtadha prakriti said in 7<sup>th</sup> chapter belongs to samkya darsanam. the question will come why do we borrow the contradictory portion. Sristi prakriya is not essential for Vedanta because we negate them ultimately. Sristi prakriya is adhyaropa and we negate the whole sristi. Since it is a negatable portion we accept it temporarily. It is non-essential feature. Adhi Sankaracharya wants we should be extra careful in this regard. In Veda and Gita samkya means Vedanta darsanam. when we use yoga it is not Patanjali meditation but vedic meditation. In spite of clear-cut warning both samkya and yoga we have borrowed some of the nonessential features. One such is nirvikalpa samadhi. According to us nirvikalpa samadhi is one of the optional methods for siddha

samadhanam. For this sadhana prapti nirvikalpa samadhi is an optional means., many present nirvikalpa samadhi as means of Advaidic jnanam and the knowledge is confined by Advaidic experience. According to them sravana jnanam is compelled through Advaidic experience and Advaidic experience is not possible without nirvikalpaka samadhi. It is the most prevalent view now and they justify logically. They say in the waking state, we have savikalpaka avastha there is division of subject, object and instrument and the triputi is there in the waking state. It is dvaidic avastha. In dvaidic avastha the Advaidic jnanam you get is theoretical and therefore For the Advaidic to become an experience the division must go and it goes only in nirvikalpaka samadhi. In sleep also the divisions go away but he is asleep. But in nirvikalpaka samadhi one is awake and division is gone and it is Advaidic experience and without Advaidic experience advaidic jnanam is incomplete. Suppose we assume that nirvikalpaka samadhi gives Advaidic experience confirming the Advaidic knowledge. The expounder is patanjali and he in his ashtanga yoga deals with nirvikalpaka samadhi as his prime topic. Yoga means siddha vritti nirodhah cessation of all thoughts, a thought less state; therefore siddha vritti yoga is yoga and culminating in nirvikalpaka samadhi. One remains in one's swarupam in that state. During that state he enjoys the wisdom. Yoga concentrates on nirvikalpaka samadhi as its central theme. If Patanjali is expounder of nirvikalpaka samadhi would he have experienced the nirvikalpaka samadhi. He should have been nirvikalpaka samadhi and nirvikalpaka samadhi is Advaidic experience and Patanjali is greatest Advaidic in the world having experienced the nirvikalpaka samadhi. Patanjali is exponent of a philosophy, which talks about Dvaidam, and he says atmas are many. He says the world is real. Atma is real and atmas are many. Nirvikalpaka samadhi, which he has expounded, has neither helped him to gain Advaidic knowledge nor the confirmation of Advaidic knowledge. From this it is clear nirvikalpaka samadhi can neither give Advaidic knowledge nor Advaidic experience. Adhi Sankaracharya says that I don't want you to insist upon yoga and samkya philosophy. If you find useful you follow. But always remember Advaidic jnanam comes from Vedanta vichara neither samkya nor ashtanga yoga. If it is useful to Sadhana Chadhustaya Sambatthi you can use it and attain jnanam through vichara and gain moksha. Nirvikalpaka samadhi is given more important than what is said by Adhi Sankaracharya. These ashtanga yoga biographies are coming out and people can conclude that only ashtanga yoga alone will give nirvikalpaka samadhi. It is a nonessential feature. You should have sufficient health and you should have values with nothing to do yoga sastra and you should do Sravanam Mananam Nididyanam for gaining jnanam and moksha ultimately. People give overemphasis for ashtanga yoga and nirvikalpaka samadhi. With this second adhikaranam is over. now we will go to third adhikaranam.

### **Topic 3 Na vilakshanatvadhikaranam [Sutras 4-11]**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 4. [138]**

***Na vilakshanatvadasya tathatvam cha sabdat***

[the objector says that] Brahman cannot be the cause of the world because [the world is of a different nature [from Brahman] and its being so [different from Brahma] [is known] from the sruti.

It is the third adhikaranam consisting eight sutras and it is called vilakshanatvadhikarnaam. Now I will give you the general analysis of this sutra. Previously samkya and yoga smriti were refuted. Here it will be established that there is no tarka virodha. Now we have to refute the illegality pointed out by the various darsanams. Tarka virodha as charged by the samkya philosophers.

Why should we discuss logicality and illogicality in Vedanta. When logic has no access in the field of reality when logic deals with objective world why should we talk about logic here. Adhi Sankaracharya says it is required unlike in Karma Kanda. in Karma Kanda emphasis is action and not knowledge. we require sufficient knowledge of performing yaga. I require minimum knowledge and I should concentration in doing the yaga etc. here we are supposed to gain swarga loka. It is anustana pradhana. but Vedanta is jnana pradhanam. we have nothing to do but we are required to know something. Jnanam puts an end to all the karmas. where knowledge and understanding becomes important we have to resolve seeming contradiction. They are seeming contradiction because Vedanta talks something which is already evident. It does not introduce a mysterious Brahman. Vedanta points that ever evident I the conscious being is Brahman. since it reveals an evident Brahman we have got conclusion about the 'I'. regarding the I, which is already evident I have several conclusions. I am different from body and mind. I also meditate I experience nirvikalpaka samadhi etc. one is sastra revealed conclusion and another is independently formed conclusion. As long as there is contradictory conclusions, that Atma is akarta but Atma is bokta; etc. and therefore Adhi Sankaracharya says since we have contradictory conclusion logic is necessary to find out which is right and which is wrong. The ultimate clarity is the intellectual process. Even nirvikalpaka samadhi seems to have produced wrong conclusion. That is why tarka is required. Mananam alone gives ultimate reality. Sravanam Mananam gives final knowledge and nididyanam is neither for knowledge nor for confirmation and nididyanam is only to eliminate my habitual problem. we get upset and we have problem. Vedantic knowledge is for the elimination of the habitual problem. tarka virodha is parihara. That is why it is included in Brahma Sutra. Samkya philosopher argues that material cause has got a nature which is similar to the effect. To put it in another language material cause and material effect have got similar nature. It is sa laksanyam in Sanskrit. Samana laksanasya bhavah sa laksanam. he proves it by analyzing any number of product. If it is a golden ornament the material cause will be gold alone. Gold alone produces golden ornaments. When the human beings get children, they get human children alone. We don't get animal children. Not only human beings human children and even their nature are hereditary. Even the disease becomes hereditary. Wood produces wooden furniture. Extending this logic the material cause of the universe should be necessarily matter alone and then alone sa laksanya niyama is vindicated. Not only it should be material and whatever feature we see should be there in the world. one is tamo guna [inertia feature] rajo guna [activity feature] and sattva guna [knowledge feature].since sattva guna tamo gunas are there material have the features and prakriti fulfills the condition. Prakriti is matter world is matter. prakriti is trigunamaka matter is trigunatmaka. Prakriti and Prapancha has got sa laksanyam. Your Brahman is totally vilaksanam Prapancha. prapancha is trigunam Brahman is agunam; Prapancha is achetanam and Brahman is chetanam; Brahman is nirvikaram and Prapancha is savikaram. It is impossible for any strength of imagination karya karana sambanda na sambavathi and therefore all of you change from Vedanta to samkya is the Samkya philosopher's view. More we will see in the next class.

## **BRAHMA SUTRA**

Class 147

### **Topic 3 Na vilakshanatvadhikaranam [Sutras 4-11]**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 4. [138]**

***Na vilakshanatvadasya tathatvam cha sabdat***

[the objector says that] Brahman cannot be the cause of the world because [the world is of a different nature [from Brahman] and its being so [different from Brahma] [is known] from the sruti.

There are eight sutras in this adhikaranam. the first and the second express the pp [objection] and the others express the true doctrine siddhanta.

We do the general analysis of third andhakaranam with eight sutras. Here Vyasacharya refutes samkya's charge against Advaitam. It is that Vedantic teaching is against logic. This logic is talked about the theme of the first chapter jagat karanam Brahman especially chetanam Brahman upadana karanam Brahman. It is tarka virodha according to samkya philosophers. The general law is called karya karana yoho salaksana niyamah. When we say karya karana yoho karya upadana karya yoho salkasana niyamah, which means law of similarity. The status of possessing common features means similarity between the material cause and the effect that is the products. Samkya philosopher establishes that material cause and the products are of similar nature. Gold produced the golden ornaments. If the material cause has a mixture of copper the ornaments also has the mixture of copper. In you extend to human beings the children happens to be human beings. This is our anubhava and experience and it is logical that the material cause alone manifests itself as the effect. In fact cause and effects are not substances but the same substance in different avastha. Between vasthu and the product there is similarity. Thus salaksanya niyama is experientially and also logically proved. If this law is accepted samkya sristi alone follow this particular law and vedabta sristi does not follow the law. Samkya talks of savikara prakriti as the material cause. The features are it is jadam, it is savikaram according to sakmya philosopher. The nature of prakriti is also savikaram and jadam and therefore the sristi also has the same characteristics. The pradhanam and Prapancha have got salaksanyam the similarity of features. In fact in every aspect prakriti and pradhanam are synonymous in samkya. Vedanta says jagat karanam is Brahman. that is how we started Brahma Sutra. Vyasacharya claimed sruti support for the Brahman being the jagat karanam and upakaranam. They have no salaksanyam and vilaksanyam alone. Their dissimilarity is clear that Brahman is nirvikaram Prapancha is savikaram; Brahman is nirvikalpam and Prapancha is savikalpam; Brahman is chetanam and Prapancha is achetanam; Brahman is Nirgunam and Prapancha is sagunam; they are so widely different that we have to conclude that the world is not product of Brahman but it is Brahma vilaksanam. This is the anumanam jagat na chetana karyam it is not a product of Consciousness or Brahman because chetana vilaksanatvad being dissimilar to chetana vasthu. It is achetanatvad or jadatvad. Vyapti is yat yad vilaksanam tad tat karyam na bhavati. If x is

dissimilar to x cannot be a product of y. I am a human being dissimilar to cow and I cannot be a product of cow. This is the purva paksa contention. The first two sutras are purva paksa sutras. The answer will come later. The purva paksa is samkya philosophers.

Now we will go to word for word analysis. Na; world is not a product of Brahman; asya vilaksanatvad because of its dissimilar nature; tatadvamca and that dissimilarity; sabdad is proved by sruti statement. Now we will go the significance of each word. Word na means na Brahma karyam world is not a product of Brahman. it is a product of prakriti or pradhanam. asya means Prapanchasya jagatah for this world vilaksanatvad there is dissimilarity from Brahman; all dissimilarities explained in the last para. Whatever is dissimilar to another, it cannot be product of the other. Tatadvamca and the dissimilarity is supported by sabda pramana itself. He need not quote sabda pramana. Dissimilarity is very clear and it is pratyaksa siddham. Brahman is Consciousness and inert world is dissimilar to Brahman and yet samkya philosopher says that world is achetanam. The difference in nature is also known from the statement of sruti 'Brahma became intelligence as well as non-intelligence [world] as stated in 2.6.3 of Taittiriya Upanishad *vijnanam cha avijnanam cha abhavat*. The world is non-sentient and it is very clearly supported by sruti. Samkya says the part to show that world is inert and the material cause is matter only.

### **Topic 3 Na vilakshanatvadhikaranam [Sutras 4-11]**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 5. [139]**

#### ***Abihimanaivyapadesastu viseshanugatibhyam***

But the reference is to the presiding deities [of the organs] on account of the special characterization and also from the fact of deity so presiding.

This sutra meets an objection to sutra 4. The word 'tu' [but] discards the doubts raised.

First we will do the general analysis. Here samkya continues with his purva paksa. in this sutra samkya is answering a possible objection to his statement. he is expecting an objection Vedanta ekadesi. He imagines an objection from Advaidin and even if you raise such a question I have the answer. he says that salaksanya niyama is not violated because the world is also chetanam only. this is a possible objection from advaidin. There is nothing called inert in creation and everything is chetanam. In some sentiency is more and in some less. Human beings are more aware, animals are less aware and plants much less aware. In this way the sentiency varies in degree only. this objectionist says that this is supported by Veda pramana itself. Brahman created Agni tattvam by visualizing Agni tattvam he created Agni; then Agni visualized what should be the next creation; Agni visualized and Agni is to visualize next creation then Agni created jalam. That jala tattvam visualized and created earth principle. Sruti talks of Agni tattvam and jala tattvam and from this it is clear they are chetanam only. The creation born out of five elements also are chetanam. Stone is chetanam; desk is chetanam. The difference between body and desk is one is more chetanam and the other is less Chaitanyam. It is like waking man and sleeping man. The entire creation is chetanam. Where is the violation of salaksanyam. This is the argument of objectionist to the samkya philosopher. Samkya says to the objectionist; the objection is not given in the sutra. The

answer is jagat is achetanam only; sruti itself has said vijnananca avijnananca. There is no question of chetanatvam of elements and elemental. What is all about the visualization statement the achetana vasthu visualizing the sristi? Samkya says Veda is pramanam and what you should know is that Agni is chetanam and what you should take is the lakshyartha of Agni and lakshyartha of Agni is Agni devata, which is adhistanam. It is also supported by the Upanishad itself, which talks about ekah devata. Sruti does not support Agni is chetanam and Agni is achetanam only. Samkya quotes some more sruti vakyams occurring in Kaushitaki Upanisad 2.14 which says 'the deities contending with each other for who was the best' all the deities recognized the pre-eminence in prana' and 1.2.4 Aitereya Upanishad that says Agni having become speech entered the mouth that shows that each organ is connected with its own presiding deity. the Chandogya Upanishad upanisad also show the existence of such presiding deity. The fire thought and produced water and so on. This indicates that the inanimate objects may be called god-having reference to its presiding deity. Behind the inert Surya Surya devata has entered. Behind inert chandra, chandra devata has entered; we are not praying to inert Surya and who will pray to inert Surya. Therefore Upanishad talks about the entry of devatas in every organ, which are inert, and therefore we have anustana devatas. One is Upanishad itself uses the word devata; there is a specification by using the expression devata Agni is inert fire and sentient devata and inert Agni is visible and sentient Agni devata is invisible. The specification supports that Agni means devata. There is inherent devata is there in every creation. for vaidhikas everything is worship-able. we do namaskarams to Ganga river and it not the river but the Ganga deity Ganga goddess. There is inert creation and sentient devata and therefore you should accept inert creation and sentient devata.

Now we will do the word for word analysis. Tu means but; abhimani vyapadesah means reference to the presiding deity; it is to be understood in relevant cases. Visheshanu gathiphyam because of such specification in the sruti and because of the inherence means pervasion; of the presiding deity. First word is tu is the refutation of purva paksa; purva paksa is eka desa vadhi and Samkya philosopher is negating; abhimani vyapadesah it means abhimani devata presiding devata; and vyapadesat means reference; the reference here is vedic reference in the context of the Veda says water thought of or fire thought of etc., it refers to the respective deity. Vishesha anugathipyam it is compound word vishesha and anugathih this means specification Veda itself uses the word devata in such context; either immediately before or after devata is used to indicate Agni devata is chetanam and Agni is achetanam. Then the next word is anugathi is inherence of devata in every inert object revealed by sruti itself. Our organs are inert accepted by samkya; then Upanishad says every organ has got respective devatas are present. All organs including devata go away at the time of death as revealed by the sruti. Because of these reasons objectionist plea is wrong. This achetana Prapancha must be created by chetanam Brahma. This is the contention. Now we have to go to siddhanta.

The essence of this adhikaranam as told by swamiji.

In this sutra subject matter is the world. samsaya doubt is whether the world is sentient or insentient. Purva paksa says world is sentient. Siddhanta says the world is insentient is siddhanta. Who is the Purva Paksi here and what is his intention. Here purva paksa is misguided Vedantins. Because he says world is sentient for real one will not say so. the intention is good when he says world is sentient. The intention is good by saying world is sentient, he says sentient Brahman is the cause of the world without violating salaksanya niyama. Since his goal is noble he is wise. The end is noble and so he is Vedanta. who is the siddhanti and he is samkya philosopher. Purva paksa is unreal Vedantins. By establishing the

world is insentient he want to show that insentient prakriti is karanam without violating salaksanya niyama. Siddhanta says the world is inert. That is the essence of the sutra.

### **Topic 3 Na vilakshanatvadhikaranam [Sutras 4-11]**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 6. [140]**

***Drishyate tu***

But it [such organization of life from matter] is also seen

Objection raised in sutras 4 and 5 are now refuted.

First we will do the general analysis though which samkya Vyasacharya refutes. Purva paksa is cause and effect must be similar and in Advaita this rule is violated and in samkya this rule is not violated. In Vedanta it is violated because cause is chetanam and effect is achetanam. In samkya both are achetanam. So tarka supports us. We have three answers at different level. I will enumerate the answers briefly.

We say salaksanya niyama is acceptable to us. Similarity between cause and effect is acceptable to us and it is not violated in Vedanta. this answer is given by Adhi Sankaracharya. Next salaksanya niyama is acceptable to us and it is not applicable to Vedanta. this is answer number two. There is no question of violation and Vyasacharya himself later in the Arambanadhikaranam gives this answer. The third answer is the salaksana niyama is not acceptable to us. Third answer is given by Vyasacharya in this sutra.

Answer number one is salaksanya niyama is acceptable to us and it is not violated by Vedanta as stated by Adhi Sankaracharya. Adhi Sankaracharya asks a question to samkya. You say cause and effect should be similar. When you talk about salaksanyam do you mean absolute similarity or partial similarity? Adhi Sankaracharya asks this to Kapila. Suppose samkya says absolute salaksanyam identical in all features, then the problem cause and effect will not be called cause and effect at all and it will be cause only and how you will call it an effect. There will not be two thing and cause will be effect and effect will be cause. Adhyantika salaksanyam even samkya cannot talk about. There will be some common features and there cannot be absolute commonness. If you accept some feature I can show between Brahman and creation there will be salaksanyam. How it is so? That we will see in the next class.

## **BRAHMA SUTRA**

Class 148

### **Topic 3 Na vilakshanatvadhikaranam [Sutras 4-11]**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 6. [140]**

***Drishyate tu***

But it [such organization of life from matter] is also seen

Objection raised in sutras 4 and 5 are now refuted.

We do the general analysis of the third sutra of third adhikaranam. in this adhikaranam Vyasacharya refutes logical contradiction in samanvaya of the first chapter and logic there is a contradiction which means samanvaya is illogical. This is the charge give by other systems of philosophies. In first two sutras samkya pointed out the contradiction that between material cause and effect there must be similarity in features that we see in anubhava. there is common feature between cause and effect and that is material cause and effect. This is called salaksanya niyama. Samkya charge that this nyaya is violated in Vedantic theory of creation and it is done so in samkya theory of creation. Here cause is prakriti and world the effect there are many salaksanyam. Both are material in nature and both are savikaram and savikalpam etc. in Vedanta Brahman is the upadana karanam and world is the product and we see more of vilaksanyam than of salaksanyam. Vyasacharya gives the answer from third sutra. I gave three answers. First we accept salaksanya niyama and we establish that it is not violated in Vedanta. salaksanyam is law of similarity between cause and effect. Second we accept the salaksanya niyama and it is not applicable in the law of creation. the third is salaksanya is not acceptable to us. First Adhi Sankaracharya gives one. Second one is answered in another adhikaranam. Vyasacharya gives the third reply in this sutra.

The cause is Brahman and effect is Brahman. Between them there is salaksanyam is there are not. When you say similarity should be absolute or certain features are common is our question to Samkya philosopher. If cause and effect are absolute, there is no need two separate words of cause and effect need not be there. Father and son are same in all respect there will not be father and son and there will be one person only. For this samkya will say that there are similar in certain respect and in certain respect difference is there. prakriti is avyaktam and Prapancha is vyaktam. Therefore salaksanya niyama means there are some similarities and sometime it is more and sometimes it is more. Sometimes it is so close and we will say son is exactly looking like son etc. the world has got five features.

Drg drsya viveka sloka 20 reads as *asti bhati priyam rupam nama cetyamsa pancakam adya trayam Brahma nipam jagat rupam tato dvayam* the meaning of the sloka is every einty has give aspects which are it is it shines, it is dear, its name and form; the first three belong to the Reality and the latter two to the world. asti is existence; bati it is evident; priyam rupam it is a source of joy; mame and form; sat chit ananda nama and rupa five features; three are

borrowed from Brahman only. In certain object existence alone is evident and in certain existence Consciousness are evident closer to Brahman and in the case of jivan mukta existence Consciousness and ananda are evident and so Brahman is similar to sat aspect and sat chit aspect or sat chit ananda aspect. So you cannot say there is no violation of salaksanya niyama. This is the first answer.

Second is more important answer. I said salaksanya niyama we accept but it is not relevant to the Vedantic creation. it is not applicable. The reason is this that Upanishad does mention karana karya sambandha which between world and Brahman and it is in the beginning stage of adhyaropa prakarana stage or sristi stage alone. Later in apavada prakarana the Upanishad itself negates karana karya sambandha. Therefore ultimately speaking Brahman is not a karanam at all. For this we have three supports and the first is sruti support. *Anyatra dharmad anyatra adharmad krita kritat anyatra bhutac-ca bhavyac ca yat tat pasyasi tad vada* that which thou seest as other than virtue and vice – as right and ‘unright’ as other than cause and effect as other than past and future tell me that. tad etat Brahma apurvam anantaram and abashyam that means that sruti tells that Brahman is not a karanam; because since Brahman is nirvikaram without any change it cannot become modified to become the effect and Brahman is not subject to change it can not become a product of the world; logic supports as that to become a material cause it has to modify to become an effect and it cannot become a product. Brahman is not a karanam and in intermediary stage it is cause means it is karanam ‘as though’ it is vivartha upadana karanam and it is said to be a cause for certain purposes. When you say a person is a lion and not that he is a lion in full sense of the term and he has the courage of a lion or he is a member of the club. How can be called a lion. Some samanya dharma is there and similarly Brahman is karanam because there is some similarity in karanam. When you study that, we should know what are the similarity and what are the dissimilarity not to be applied. When you say that he is pillar of the organization means without him the organization cannot survive and it should not be taken that he is pillar made of cement and mortar. We should know where we should take the comparison and where we should not take it. if we say Brahman has karana karya sambandha means what aspect we should take and what we should not take. Salsaksanya niyama we should take and this rule is not applicable. Between rope and snake salaksanya niyama is not applicable. Rope is vivartha upadana karanam. in arambanadhikaranam it is said that an effect cannot exist separate from the cause and therefore effect is independently existent mithya and cause is independent existing sathyam. Sathya mithya sambandha alone is indicated as karana karya sambandha and don’t extend karya and karana too much and don’t ask too many question as to sristi and karana karya sambandha means you should note one amsa that Brahma sathya jagan mithya and world cannot exist separate from Brahman. Brahman is eternally sathyam and world is eternally mithya; then why do call it karya and karana and we call so because karyam cannot exist separate from karanam and world cannot exist separate from Brahman and karyam is born means world is born don’t talk about those things and we are not interested.. Karana karya sambandha means sathya mithya sambdandha. Pot is only a nama rupa. Similarly world is only a nama rupa. Clay is only substance and so also Brahman is only a substance and the world is but a nama rupa. Therefore vivartha karana karya sambanda salaksanya niyama nasti and parinama karya karana sambandha asit and when salaksanya niyama is real it is applicable and when it is ‘as though’ salaksanya niyama is not applicable. This we will discuss in Arambandadhikaranam. This is the second answer.

In the first two answers we accepted the salaksanya niyama and in the third answer we say that the salaksanya niyama we don’t accept. In the first two cases we accepted the salaksanya niyama temporarily and gave our answer; and in the third answer we totally negate the

salaksanya niyama outright. He says you cannot talk about similarity between cause and effect comes out of Chaitanyam Brahman. Your argument is chetanam can produce chetanam only; achetanam can produce achetanam; chetanam cannot produce achetanam and achetanam cannot produce chetanam. Vyasacharya says this rule is violated in our experience. It is violated both ways. From Chaitanyam achetanam is created and from achetanam Chaitanyam is created. Of course we require only the first one chetanat achetana sristi is to be explained. For this Adhi Sankaracharya gives an example and he says from inert cow dung you see the worms coming. Here we find achetana cow dung we see chetana worms. This is an example for achetana chetana sristi. Then there is another example. Rope snake example is ready in hand. Rajju is achetanam and sarpa is chetanam. Don't say sarpa is unreal and then I will say world is unreal.

Similarly from chetana achetana sristi is also possible and for this sruti gives an example. It is seen in 1.1.7 of Mundaka Upanishad *yatharna nabhih srjate grhnate ca yatha prthivyam asadhyah sambhayanti yatha satah purusat kesalomani tatha 'ksarat sambhavatiha visvam* the meaning of this sloka is as the spider projects and withdraws [unot itself] the web as the herbs and plants sprout from the earth, as hairs grow on the head and body of men so from the Imperishable Being comes out the universe. From the body of a living hair comes; so also nails are born. hair and nails are achetanam. It comes from chetana human being. This is our daily experience. For this Samkya philosopher gives a reply. He says that your example I don't accept. He says the hair and nails are born out of body, which is a matter. hair and nails are also matter. from material body material nail and hair have come. both are material and both are jadam only. for this Adhi Sankaracharya gives an answer. if you say body is also inert and hair is also inert bring a blade I will test on you. How can you say body is inert and body is chetana matter and hari is achetana matter. this is experienced by us. How deos body becomes chetana is a different issue. Don't you agree that body is chetana matter and hair is achetana matter. there is big difference between chetana matter and achetana matter. between chetana matter and achetana matter there is no salaksanya niyama at all and there is big vilaksanyam and even then they have karana karya sambandha. Adhi Sankaracharya argues all the transactions are possible because of the difference between chetana matter and achetana matter. your Body Mind Complex is chetana matter and it employs achetana matter the chair. If the chair is chetanam, the chair will feel uncomfortable you being seated for a long and time and will adjust itself and then you will be in trouble. Think of a situation if the dress becomes chetanam and you have to take care that dress does not strip away from you. Bogya Prapancha beda itself is because chetana matter and achetana matter vilaksanyam only. and therefore there is a big difference between chetana and achetana matter and even then it has karana karya sambandha. this is the third answer given in this sutra. now I will come to word for word analysis.

Tu` but drishyate the dissimilarity between cause and effect is seen. This is the meaning of the sutra. the significance of the word is tu means the rejection of samkya purva paksa; drishyate means the violation of the rule is experienced directly. Violation of salaksanya niyama between karya and karana and the rule held by Samkya philosopher is experienced. When Vyasacharya says experienced he does not say where. It is experienced in hair and nail. Otherwise you can never cut the hair or the nail. It is pratyaksa pramana to negate the samkya salaksanya niyama. So Brahman can happily be jagat karanam. in chetana Brahman becoming achetana jagat karana is established in samanvaya adhyaya. Samanvaya established is stabilized without being shaken by any argument. with this the third sutra of this adhikaranam is over.

## **BRAHMA SUTRA**

Class 149

### **Topic 3 Na vilakshanatvadhikaranam [Sutras 4-11]**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 6. [140]**

***Drishyate tu***

But it [such organization of life from matter] is also seen

Objection is raised in sutras 4 and 5 are now refuted.

We have just completed sutra 6 of second chapter. Vyasacharya here establishes that there is no defect of contradiction that is no defect in the form of contradiction in Vedanta teaching. Vedantic teaching is free from the defect in the form of contradiction. The teaching has been established in the first chapter. The samanvaya has been established in the firsts chapter. That samanvaya is the subject matter of the whole second chapter. The analysis here is whether the samanvaya is endowed with contradiction or whether it is without the definition of contradiction. Samsaya is contradiction here. Is there is contradiction defect is there or not is the question. Purva paksa says that in samanvaya there is contradiction and we say that in samanvaya there is no contradiction. What is the difference in different adhikaranam. in each adhikaranam the purva paksa will raise a particular type of contradiction. The internal differences in particular contradiction will be pointed out and in another adhikaranam it will be another type of contradiction. In some it will be smriti virodha secondary scriptural differences. In certain adhikaranam it will be sruti virodha. This will be the purva paksa's argument. we have to resolve seeming contradiction. And finally it will be about logical contradiction posed by samkya philosopher. Virodha parihara adhyaya. Now we see the third adhikaranam. first we saw samkya sruti virodha parihara. In second we saw yoga virodha parihara. They were negated in the first two adhikaranam. now we have entered the third adhikaranam named vilaksanadhikaranam. It has eight sutras. Now Vyasacharya sees the refutation of the charge of logical contradiction. It is imputed to Vedanta or Advaitam by different systems of philosophy. the logical argument given by the purva paksa will have their own set of logical defects. We should note when we do the one parihara will not satisfy all the people. We have to individually negate their charges. Here samkya philosophers give the charges of logical defect alone. For charging Vedantins he used an important nyaya karya karana yogo salaksanya nyaya and this is upheld only in samkya philosophy. in samkya philosophy karanam is prakriti and karyam is Prapancha. so salaksanya niyama in not upheld by Vedanta. Karanam is Brahman and karyam is Prapancha. Vyasacharya refuted that in these sutras. Now we are going to assume Vedantins has indicated that Brahman the Chaitanyam alone is jagat karanam and Vyasacharya has proved that prakriti cannot be the material cause of the creation. once we establish this Brahman is material cause in these sutras now Samkya philosopher will come with further arguments in the following sutras in the same adhikaranam. the world cannot come out of Brahman is their argument. I will now give some general notes as to why people have difficulty in accepting Vedanta. why other

darsanams are not able to accept Vedanta. to talk about creation out of Brahma the basic question that arises is was this creation present in Brahman before origination. The samkya asks Vedantins. Samkya wants to show that we would be in trouble. Suppose we say that world was not there and if Brahman has created the world afresh means this vadha is called asat karya vadha. [This topic is elaborately discussed in Mandukya Upanishad II and III chapter]. If you say the world was nonexistence before creation samkya says the fresh world is created or armabavadha. The basic law of conservation of matter will be refuted. The law of conservation of matter is that matter cannot be created or the matter cannot be destroyed. Asat karya vadha cannot be accepted for this simple reason. To avoid this problem if we accept if the world did exist in Brahman in potential or un-manifest form you call it maya or any name and you have to accept matter before creation. in which case Advaidin has got another problem. Before creation he accept Brahman and the world also. chetanam Brahman and achetanam Prapancha in potential form and how Advaidin will accommodate dvidam; how it will accommodate the world which is a matter and according to samkya, Advaidin will not be able accommodate this potential universe. Now the question is whether the potential world is different from Brahman you enter into duality if potential world is accepted, as identical Brahman will be achetanam like potential world like the potential matter and to avoid this problem if you say potential world is part of Brahman and that potential world comes into existence. There is no advaida hani in this proposal. But part of Brahman cannot be there because Brahman is part of Brahman. This answer will not satisfy me says samkya. If Advaidin accepts the world as part of Brahman, then Brahman is endowed with parts. Then Samkya philosopher counters that you very clearly say that Brahman is nirvakalpam Brahman is niravayavam and Brahman is without parts and how can you say now that the potential world is part of part-less Brahman. if you say that the potential world is not there and then they would ask how the world came out of nothing. Therefore your creation theory is wrong is what is kept in mind when Samkya philosophers attack advaidic philosophy. if you say world is sat then there is problem and if we say asat also there is some problem with no third possibility. You think that there are no possibility sat and asat and as long as you have only two possibility then there will be difficulty with cosmology and only solution is the third possibility and world is neither sat nor sat but is is mithya. Samkya does not accept mithya; yoga does not accept mithya; vaiseshika Purva Mimamsa vishistadvaida dvidin do not accept mithya and they are not able to assimilate Advaida and they have to understand Brahman and also the concept of mithya. Advaidin answers the world was existence in Brahman potentially. That potential world alone comes to manifestation and we only say the un-manifest world comes to manifest form. it was existent in Brahman. if you accept the world in Brahman will you not get into problem of dvidam. In one place you say Brahman is without part and another place you say world was part of Brahman of the part-less Brahman. For this we say world was part of Brahman and still Brahman is part-less. When we say the 'world' is part of Brahman we mean it is mithya part of Brahman and it is as good as not a part of Brahman. It is in Brahman but you should take it 'as though' it is; for the world is mithya, which means it is of lesser order of reality. Mirror reflection is seen but you don't count it as a second thing. Dream experience is like real but you don't count it as reality. It is like swapna or dream. When we give swapna example, the example has got a limited application. If an example can be totally applied the example will be equal to original. Swapna example has got limited application. Their problem is that they extend the example. Swapna can be experienced but it should not be counted. But the vishistadvaidins count and if unreal elephant is seen swapna, then they should have seen the real elephant in waking. So they say the unreal swapna world is not possible without seeing a real world. we should take the example for the example sake and it should not be extended further. When you say man is pillar of the organization I want to extend this much that as the pillar collapses the building

collapses so the person is important. In the same manner we should take the world and the creation also. Brahma sathyam jagat mithya. Brahmas jagat karanam and in Brahman un-manifest mithya world and manifest mithya world becomes un-manifest mithya world. This mithya world expands and contracts and the whole mithya world rests on Brahman. it is neither sat karya vadha nor it is asatkarya vadha. It is ajati vadhah and no understanding this Samkya philosopher is going to go against Advaidins. Keeping this in view, if you read the sutra you can understand clearly. The whole problem is acceptance and non-acceptance of mithya sristi.

### **Topic 3 Na vilakshanatvadhikaranam [Sutras 4-11]**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 7. [141]**

*Asaditi chet na pratishedhamatratvat*

If it be said [that the world, the effect, would then be] non-existent [before its origination or creation], [we say] no, because it is a mere negation [without any basis]

An objection to sutra 6 is raised and refuted.

First we will do general analysis of this sutra. There are two parts first is purva paksa and from iti chenna it is siddhanta. Purva paksa is Samkya philosopher. He says o! vedantin if you refute my philosophy you will end as asat karya vadha. You say Brahman is jagat karanam and world arise out of Brahman and you say Brahman is suddha chetana tattvam and you say from that Chaitanyam Brahman achetanam jagat is originated. He argues like this as he does not accept the mithya concept. He takes suddha Brahman is jagat karanam and if you say that from that Brahma world has come then you indirectly say that nonexistent world arises out of Brahman. Before sristi achetanam jagat would be nonexistent in your philosophy. According to him he accept pradhanam is jagat karanam, which is achetanam. In pradhanam world can be potentially there. Before creation the world cannot be there in Brahman and as such you have to become an asatkarya vadhi is the argument of Samkya philosopher to the Advaidins. Before creation you have to accept world is non-existent in Brahman. this is the purva paksa part. now siddhantins says na you cannot argue like that. Your statement is negation of the world without validity. Now Advaidin asks a question to samkya. According to Advaida philosophy the conclusion is negation of the world in Brahma before sristi. If world is accepted before creation then enter dvaidam. When you mention the negation of the world what type of world you ask? Is it sat world or asat world or mithya world negation. Then Advaidins say that the world before sristi cannot be negated. If the world is sat, it can never be negated. Advaidin does not negate asat world before creation. asat world means nonexistent world. it is already nonexistent and why should it be negated. The third possibility is mithya world and Advaidin does not negate the mithya world before creation because Advaidins accept that there was a mithya world before creation. only note he adds is that there is a mithya world in potential form. in fact mithya world is called maya. Before creation mithya world was there in Brahman in the name of maya in potential form and therefore whenever I say Brahman is jagat karanam I mean Brahman plus maya is jagat karanam. Maya here is potential universe. Where is asat karya vadha. No. Samkya will ask that Brahman plus maya is jagat karanam. Advaidins say yes. Then he will say that

Brahman plus maya is jagat karanam, and then he will say you are Dvaidam. Advaidin will have a big smile. In Advaidic mathematic one plus one is equal to one. Brahman plus maya is Brahman only. Maya is lower order of reality. One person says dream world came to out of waker. From one angle dream world came out of waker because arrival of dream world cannot be taken as arrival of anything. Negation of sriti before srist has no validity and we should accept this as maya. more in the next class.

## **BRAHMA SUTRA**

Class 150

### **Topic 3 Na vilakshanatvadhikaranam [Sutras 4-11]**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

Sutra 7. [141]

#### ***Asaditi chet na pratishedhamatratvat***

If it be said [that the world, the effect, would then be] non-existent [before its origination or creation], [we say] no, because it is a mere negation [without any basis]

An objection to sutra 6 is raised and refuted.

We are in the 7<sup>th</sup> sutra of third adhikaranam. here samkya philosopher tries to point out in Vedantic teaching of creation. We pointed out that samkya theory of creation is inappropriate and said that Brahman alone is the cause of creation. if you take in this way, Samkya philosopher says that it would involve some logical problem. he raises some logical questions and suggests certain answers. He says that those answers would not be logically satisfactory. The question he raises is as to whether the creation potentially existed in Nirgunam Brahman or not. If the creation existed you will have the problem of advaida hani the existent Brahman and existent world. The acceptance of the existence of the world before creation is called sat karya vadha. If you become a sat karya vadhi and accept the potential world you will become a sat karya vadhi and you have to give up this to be remain an Advaidin. Then you have another alternative you will be a satkarya vadha although he does not know that there is another third choice. Asat karya vadha is that the world was not existent in Brahman and there is no problem of dvaidam. That is the charge he gives in this sutra. Advaidins problem is that neither he can say he is an asat karya vahdi or sat karya vadhi. Accepting and taking shelter as sat karya vadha and world was nonexistent before creation and the origination of non existent world is against the scientific theory of the law of conservation theory. The matter cannot originate out of nothing. Energy cannot originate from nothing. Samkya philosopher dubs ua as asat karya vadhi. I don't say the world is potentially non-existent. We also don't say world is existent before creation. Then our answer is that the world is as though existent before creation and therefore it does not come under existent category also and also it comes under non-existent category also. Now also it is seemingly existent; before creation the world was seemingly existent; now also the world is seemingly existent. You say world is seemingly existent before creation; seemingly existent after creation. What is the difference between the world is 'seemingly existent' before creation and world is 'seemingly existent' after creation. For that we answer before the world is 'seemingly existent' in unmanifest form and after creation the world is 'seemingly existent' in manifest form. Final point is after sristi since the mithya Prapancha is vyaktam or manifest vyakta mithya Prapancha is manifest so we talk about creation in addition to Brahman not because it is sathyam but because it is vyaktam. Before creation it is mithya only and we cannot talk about mithya Prapancha because it is avyaktam. Before it was avyakta mithya and it is now vyakta mithya. Since mithya Prapancha is avyaktam we need not talk about it and hence we say

Brahman is cause of creation. what we should have said Brahman plus avyakta mithya Prapancha but what is avyaktam we don't say. It is like that we don't say milk has got potential butter. Milk having butter in potential form is a fact we know and we see and hence we do not explicitly say the fact. What is avyaktam we don't talk about. When we see clay we don't say we see clay and potential pot in it. this potential mithya Prapancha will neither come under sat or asat and you cannot allege me that I have become an asat karya vadha in my approach. You should not asat karya vadha a term relates to samkya philosophy; asat karya vadha belongs to nyaya philosophy and mithya Prapancha belongs to advaيدا philosophy. Cosmology is the study of origin of creation of the world. we have three cosmological theories of sat karya vadha of nyaya philosophy; asat karya vadha of samkya philosophy and mithya Prapancha of advaيدا philosophy. All these three should be in your fingertips to enjoy the class. I have elaborately discussed in Mandukya karika third chapter. This topic will come repeatedly later also. Vyasacharya wants to teach Vedanta. Not only he want to teach but also he wants to show the difference between the samkya, nyaya and Vedanta. There is one difference in the theory of creation. All believe many atmas are there. there are so many other differences also and in Brahma Sutra Vyasacharya focuses one difference that is cosmological difference, difference in the theory of cosmological difference. Now we will go to the word for word analysis.

Asat the universe must be nonexistent before its creation; itichet if it is argued that; na it is not so; pratishedha matratvat because of your statement is a mere negation without validity. Mere negation is in the sutra the rest of the words is supplied by us. Universe must be nonexistent before creation, if it is argued so it is not so because your statement is mere negation without validity.

Now we will take the word and see its significance. Sat means nonexistent; what is nonexistent is jagat asat; world is nonexistent before its creation; this essentially means asat karya vadha. Who tell whom is samkya philosopher says Vedanta vadha is asat karya vadha. Why he concludes like that is because in his mind that there are two theories are possible sat and asat karya vadha and Vedantins have negated sat karya vadha and therefore you have to come to asat karya vadha. It is alleged asat karya vadha. Up to this purva paksa. Iti chet na; if such an allegation is made by samkya philosopher we don't accept it. If it is alleged it is not so. Pratishedha matratvat it is a mere negation of the world; it means it is only alleged negation of the world and we have no proof and we accept the world and we have not done so. There is no evidence for the negation of the world. We accept the world. We accept the mithya world. Adhi Sankaracharya feels the vagueness of this sutra and he says that if you don't understand the significance of the sutra don't worry and we will thoroughly analyse this in detail in arambanadhikaranam. The word analysis is over. We will go to the next sutra.

### **Topic 3 Na vilakshanatvadhikaranam [Sutras 4-11]**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 8. [142]**

### *Apitau tadvatprasangadasamanjasam*

On account of the consequence that at the time of pralaya or great dissolution [the cause becomes] like that [i.e., like the effect], the doctrine maintained hitherto [that Brahman is the cause of the universe] is absurd.

A plausible objection against Brahman being the cause of the world raised here.

This is a purva paksa sutra. one is kevala purva paksa sutra and kevala Vedanta sutra and also misra sutra which has purva paksa and answer from Vedanta as well. In Vedantic teaching the misra sutra will have iti chenna. It will have both purva paksa portion and Vedanta portion as well. Here it is a typical example of visvato muhatvam of the sutra. The significance of the sutra one and the same sutra we can interpret differently by looking at it in different ways. For this sutra purva paksa is going to impute four dosham on Vedanta. We have to understand four doshas and we have to negate each one of them separately.

First I will give you the general analysis. Here samkya is purva paksa who is going to charge Advaita in the context of pralayam.

First dosha he says is during pralyam all jivas will have to merge into Brahman, as according to you Brahman is jagat karanam. Jivas are full of doshas which means the defects punya papa etc. if they don't have punya papa dosha they will be Isvara. they are full of punya papa and others as well. When jivas merge into Brahman, all the punya papa dosha will pollute Brahman, at the time of pralyam Brahman will get polluted. Brahman is nithya suddhah and Brahman is supposed to be nithya suddhah. In pralayam Brahman will become asuddhah with merger of jivas with punya papa.

The second dosha he says is to avoid the first problem is that you have to say that at the time of pralayam not only jiva merges into Brahman and all the punya papa doshas also will merge into Brahman and Brahman will not have any asuddha or impurity and this must be your answer to avoid my charges. If you say so there will be a problem. The problem will be if all punya papa also resolve all jivas will get liberated in pralayam without studying Vedanta. Then there will be no more jagat and re-creation will not be there. Neither the world will come nor jivas will come. When punya papa gets resolved jivas, jagat will not emerge after pralayam.. There will no more creation. Even with no punya papa the creation will come; this we have to assume for the next creation will be without any punya papa. Samkya says if you say so there will be another problem. If all jivas and jagat will be reborn without punya papa and the \problem will be that even liberated people will be born again and liberation will not have any meaning. We say a liberated person is not reborn because he does not have any punya papa, and suppose you change your philosophy and jivas will be reborn even without punya papa then even the jivan muktas will be reborn again without punya papa and then the mukti will not have any useful meaning. This is the third dosah alleged to by purva paksa.

The fourth dosha he points out is that to avoid the problem you the advaitin may give this reason. In pralaya kala jiva does not merge into Brahman. Jivas continue to have their individuality and punya papa will continue with Jivas. Then, you say that during pralayam Jivatma does not merge into Brahman. The last answer you have to give is that during pralayam jivas do not merge into Brahman. this possible answer also is not right because and samkya counters that if jivas do not merge into Brahman during pralayam also what will not be difference between sristi, sthithi and pralayam because during sristi the jivas enjoy their

individuality and during pralayam also they enjoy the individuality and if the distinction of karyam continue in pralayam and you cannot distinguish between sthithi and pralayam. Therefore that answer also does not stand to reason. Therefore our conclusion is that there are four defects and whatever the reason you may give is not proper. This is the general analysis of the sutra. now I will give you the word for word analysis.

Tatvatprasangad since Brahman becomes impure like the world apitau at the time of pralaya or the great dissolution; asamanjasam Vedantic teaching is improper; this is the running meaning. now we will see the significance of each word. apitau means at the time of dissolution; tadvat prasangat the word tatvat alone is interpreted differently and prasangat is also interpreted differently; the first interpretation is asuddhi dosa prasangat means at the time of pralayam when karya Prapancha merges into Brahman just as karya Prapancha is impure when it gets merged with Brahman, Brahman will get the impurities of the karya Prapancha; the possible answer is you have to say that all punya papa also dissolved into Brahman and if such an answer is given tatvat prasangat tatvat means karana Brahmavad prasangat means punya papa apava prasangat; it means when karya Prapancha totally dissolves into Brahman punya papa also merges into Brahman and jivas also gets merged into Brahman, totally like even the potential punya papa and that is the dosah the problem will be the punar utpatti will not be there and there will be no future creation. if punya papa are absent creation cannot come again and without punya papa creation comes even the liberated persons will be reborn and the liberation will have no meaing. Tadvad means sthithi vad prasangat means vibaga prasangat suppose to avoid all problems you say that jivas do not merge into Brahman at the time of pralayam also as in the case of sthithi jiva will be different from Brahman and karya karana distinction will continue as at the time of creation. more in the next class.

## **BRAHMA SUTRA**

Class 151

### **Topic 3 Na vilakshanatvadhikaranam [Sutras 4-11]**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 8. [142]**

#### ***Apitau tadvatprasangadasamanjasam***

On account of the consequence that at the time of pralaya or great dissolution [the cause becomes] like that [i.e., like the effect], the doctrine maintained hitherto [that Brahman is the cause of the universe] is absurd.

A plausible objection against Brahman being the cause of the world raised here.

We had just completed the 8<sup>th</sup> sutra of the first pada. The entire sutra is purva paksha sutra and samkya pointing various logical fallacies in chetana Brahma karana vadha. Some of the fallacies were pointed out in the last class. Since someone complained last class was very difficult to follow I will summarise the last class briefly.

Samkya is taking the case of pralayam. All agree that pralayam is nothing but the effect merging into karanam. in Vedantic teaching karyam is the world and karanam is Brahman. In pralayam world must be merging into Brahman. incidentally the world is full of impurities and since it includes jiva and it includes karmas and punya papa are also included. Brahman according to Vedanta is pure including karma impurities. At the time of pralayam impure world merges into pure Brahman. Samkya philosopher says when impure world merges with Brahman there are three possibilities can be there. there are logical fallacies. First is when the impure world merges into pure Brahman both become impure. It is because impurities of world may be dominating the purity of Brahman.

When the pure and impure merge together, both become pure; Brahman and the world get pure at the time of pralayam. Third possibilities when impure world merges into pure Brahman both remain as they are retaining their individuality the Brahman remain pure and the world remaining impure as it is without any change. You cannot think of the fourth possibility. Whatever possibility you take you are in trouble says Samkya philosopher. What are the logical fallacies? When pure and impure merge both become impure. Samkya philosopher says if Vedantins admits the first possibility he will have problem and he says Brahman becomes impure because of association with the world and Brahma becomes impure mean it contradicts your statement that Brahman is nithya suddham. We have to say then Brahman was pure. To avoid the problem Vedantins has to say the second possibility. When Brahman and impure jiva merge together both become pure. Then samkya philosopher says here also you will be in trouble and it means world becomes pure then it means world is free from all impurities including karma impurities and world will become free from karma and all jivas will become free from karma at the time of pralyam and if all jivas become free from at the time of karma then jiva will not have karma for punar janma and all will become

free and then all will become free. Suppose you say even with karma all jivas will be reborn, then the jnanis will also be reborn then also jnanam will become redundant. Both become free means karma will not be there and then the fresh creation will not be there. to avoid both the problems, Vedantins has to vote for third possibility that is at the time of pralayam when the impure world merges into pure Brahman, both remain as they are and without losing individuality. The third possibility we vote for then what happens is you will have another problem. during problem also both retain their individuality Brahman remain pure and world remain impure and how can you call that as pralayam at all. In sristi also world keeps its individuality and in pralayam also the world keeps its individuality; and Brahman is Brahman in sristi and also in pralayam also Brahman is Brahman and the world is world; then what is the difference between sristi and pralayam? The fallacy is that there will be distinction between sristi and laya. All possibilities are fallacious and you cannot explain pralayam and therefore it is asamanjasam that Vedantic teaching on creation is improper. This is the purva paksa. now we have to give the siddhanta. We will read the next sutra.

### **Topic 3 Na vilakshanatvadhikaranam [Sutras 4-11]**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 9. [143]**

***Na tu drshtantabhavat***

The objection raised in sutra 8 is refuted

By the word 'tu' [but] the possibility of the objection is set aside.

First we will do a general analysis. These are the important portions of vedantic cosmology that is asat karyavadha and sat karya vadha.

What is our answer. Samkya philosopher said at the time of pralayam the world merges into Brahman and you are not able to explain that merger. Vedanta is not capable of explaining merger of world into Brahman is defective according to samkya. The answer is Vedantins ask samkya Samkya philosopher that you talk of merger of world into Brahman as though there is a merger. You think that Brahman and world are physically merging as the river going a long way to merge with the ocean. You have a wrong notion in this regard. River merging into ocean we can conceive of because river originates thousands of miles away and ocean is somewhere and river merges ultimately. So you think world is somewhere and it goes and merges with Brahman. this is not so. World was never away from Brahman for it to merge into Brahman there is no question of world merging into Brahman and therefore I need not explain the merger. Where is the need to explain or not explain a nonexistent merger of the world into Brahman. world is always located in Brahman either in un-manifest form or manifest form. if you have to understand this very clearly we have an example to convey this to you. When we say pot merges into clay please tell me where is the merger. Can you say clay merges into clay? You cannot say there is only 'one clay' and where is the question of clay merging with clay.

Can you say the pot nama rupa merges into clay? Pot nama rupa merges into clay can you say. This we cannot accept. Nama rupa merging with clay as though nama rupa is somewhere

else and it decided to come to the clay with a view to merge. Nama rupa merges into clay because nama rupas are located in the clay in only. Before creation of pot the pot nama rupa was located in clay in lump form. Sphere is nothing but the potential aspect of all geometrical forms. Pot nama rupa was in potential form before pot came into existence and takes the manifest form when the pot is made. Pot nama rupa exist after the creation of pot also. nama rupa need not merge and it is ever in the clay in manifest or un-manifest form. Then where is the question of explaining the merger? The pot is created means the potential pot has become the manifest pot; when the pot is broken, the pot loses its name and form and it becomes one with clay. So the cycle of pot making and breaking and then pot making and clay becoming the pot and the pot becoming the clay is a cycle. The nama rupa always exist in manifest or un-manifest form. Nama rupa always is there in the clay. In the same way the entire world is located in Brahman either in manifest or un-manifest form. There is no question of world merging into Brahman at the time of pralaya and in fact the manifest world becomes un-manifest at the time of pralayam and un-manifest world becomes manifest at the time of creation. Therefore there is no difficulty in explaining pralayam and creation. Un-manifest jivas becomes manifest jiva at the time creation. Manifest jiva and the world become un-manifest at the time of pralaya. For the so-called merging of pot into clay and for clay becoming a pot we have an example. Refer to 6.2.3 of Chandogya upanisad. Here it is stated that we are born again and again till we overcome our ignorance and attain Self-Knowledge. Death, for an ignorant person, is not liberation; it is like going into deep sleep. And when you are reborn it is as if you are waking up. You die again and again, and again and again you are reborn. This goes on until you attain Self-Knowledge. Once you know the Self you are free and free from birth and death.

The entire world resolve into Brahman and when jiva wakes up the entire world comes into being. if you say the world never merges with Brahman then how do you differentiate sristi and pralayam. World is never away from Brahman. How do you explain creation and resolution? When you say world is located in Brahman, it is figuratively said that the world has merged into Brahman. But the world is supposed to have merged with Brahman when world is in un-manifest form and we use the expression merger and when the world is unmanifest it is not perceptible and it is taken as though merged into Brahman. at the time of pralyam world takes the un-manifest form and it is not visible to us and we know that whatever is invisible is taken as 'as though' nonexistent. During creation also world is located in Brahman only. But it is in the manifest form. but during pralaya the world is again located in Brahman only but now it is in an un-manifest form which is invisible to us. When the world is in manifest form, we are able to see the individuality. Clay is common both in sristi and sthithi kale and nama rupa is there in un-manifest form in resolution and it is manifest form in sristi. We don't normally don't say the clay as the namarupa pot dominates. World in sritti kala also the world is in manifest form and world is there in sthithi kala also it is in manifest form but in pralaya kale world is in un-manifest form, in sristi kale the un-manifest form or the mama rupa plays a dominant form and we call it a pot and when in pralaya or resolution we say clay is there because the clay dominates while the pot nama rupa is not seen by us. Now also Brahman is there and Brahman is overshadowed by nama rupas. In pralaya kale nama rupa is overshadowed by Brahman with nama rupa missing whether it is sristi or layam, nama rupa is there and in sristi it is in manifest form and in pralaya it is in un-manifest form but one thing we should note that in both states the adhistanam is Brahman alone. When it is manifest form we are able to experience and when it is in un-manifest form it is invisible and it is not available for experience.

Where is the question of merger. If you say the world is always located in Brahma whether it is sristi sthithi or laya will not impurity of the world taint adhistanam Brahman. world is always in Brahman then will not Brahman become impure because of the associationship. That also is not there because it is like asking the question will not the pot taint the clay or will not wave polluting the ocean. If world is always in Brahman will not Brahman become impure due to association. That is not there it is like asking the question taint the clay. Will not the wave taint the water. It is like asking such a question. There is no question of polluting the Brahman. Effect do not exist as separate entity to pollute the cause. Pot cannot affect clay because pot does not exist separate from clay. World cannot affect Brahman because world cannot remain separate from Brahma. Mithya world cannot affect sathyam Brahman. Mithya snake cannot affect the sathyam rope. Mithya fire in the dream cannot burn the sathyam waker. Dream rain does not wet the sathyam waker. Sathyam Brahman is there and mithya world is there. there is no question of dvaidam and mithya cannot counted along with sathyam Brahman

In the case of jnani because of his knowledge his karmas are destroyed and his karma does not go to potential condition. Jnani's karma is burnt or destroyed. Ajnani's kama goes to potential form and there is rebirth.

Now we will come to the word analysis. Na tu Vedantic teaching is never improper; dristantabhavat; there are examples to validate. We will see the significance of the words. Tu is in the meaning of emphasis. Na means not na eva means never. Dristantabhavat dristanta means example bhava means availability; there is no question of merging into clay. Pot was pot is and pot will be. Sleep example is given to show that whatever has gone to un-manifest form in pralaya is prone to become manifest in creation. Chandogya upanisad gives an example that a lion goes to sleep and it gets up as lion. There is no merger and world is in manifest and un-manifest condition. Mithya world cannot pollute Brahman. Samkya charged logical invalidity and Vedantins defended. Defending Vedanta was done in sutra 9. Now in the 10<sup>th</sup> sutra Vyasacharya instead of defending he offends and he accuses that the logical fallacies are there in samkya philosophy. Therefore now Vedantins charges samkya with all logical fallacies. How does Vedantins hit samkya. Now let us see how samkya will explain pralayam that is karyam merging with karanam. now Vedantins ask what is your definition of pralayam. He says that world resolving into prakriti is pralaym. Now he asks how will you explain world merging into the prakriti. According to Samkya philosopher is prakriti is free from sabda sparsa etc. he says world is sabdadhi rahitam. When sabdadi sahitam world merges with sabdadi rahitam prakriti three possibilities will take place. One is both will become sabdadi rahitam; or both will become sabdadi sahitam and or both will maintain their individuality. Vedantins says whatever be the option you take you will have the problem and all the problems you charged me will be your problem. This we will do in the next class.

### **Topic 3 Na vilakshanatvadhikaranam [Sutras 4-11]**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 11. [145]**

***Tarkapratishtanadapi anyathanumeyamiti chet evamapyanirmoksha prasangah***

If it be said that in consequence of the non-finality of reasoning we must frame our conclusions otherwise; [we reply that] thus also there would result non-release

Objections raised in Sutra 4 and 8 are further refuted.

Now I will give you the general analysis of this sutra. this sutra is \in the form of a dialogue between samkya and Vedantins. First part is Vedantins's statement and the second part if samkya's statement and the third part is Vedantins's statement. in the first part Vedantin says that samkya's statement is invalid and you cannot charge advaidin's view logical contradiction at all. For this samkya's reply is that he says that improper logic is invalid and proper logic is valid. And therefore through proper logic I can charge with logical contradictions. And therefore I will charge you Vedantins with logical contradiction with proper logic. This is samkya's argument for which Vedantins reply. Even if you use proper logic it is not free from invalidity defect. What is the idea behind the statement? The idea is with regard to then worldly matter we can talk of improper or proper logic. Improper logic is invalid and proper logic is valid with regard to the loukika vishayah. When it comes to the reality or Brahman or sarva adhistanam we say the improper as also the proper logic also invalid for the proper logic has no access to the spiritual matters. We can talk about two types of eyes, it will be invalid and with proper eyes if you read, the reading will be valid. With regarding to the writing on the board, we will say the reading with the improper eyes is invalid and reading with proper eye is valid. But with regard to Brahman improper and proper eyes will be invalid as `Brahman is not accessible for the proper or improper eyes both. In the same way tarka is valid or invalid and neither proper nor improper logic can have any access to Vedanta. since logic is invalid, the samkya's answer is by improper logic it will be invalid and through another logic or by proper logic I can establish logical contradiction of Vedanta. I can charge you with logical contradiction. Evam api means Vedantins says even if you use proper logic anirmoksa prasangah; moksa means freedom from invalidity and anir moksa means freedom from invalidity is not there even you use proper logic. Still it continues be invalid and here it means the logic. Even the proper logic is not free from invalidity. Vedanta is not available within the range of logic for logic to sit in judgement. The inconclusiveness of logic is arrived at by particular reasoning. An idea is logically derived by a philosopher with lot of effort. And that philosopher is a great logician arrive at some conclusion by logic but after some time some new philosopher will come and they will demolish the previous conclusions and they are greater logician and they will conclude something different and they will say they are the founders of truth until the previous conclusion is changed by new

conclusion. The cause of the creation can never be arrived at my pure logic. There are certain topics in the world, which are inaccessible to logic. And a logician should know what are the fields where the logic can work. They are beyond logic. Having known that it is beyond logic intelligent logician will not break his brain in applying logic in such field. If that invalid logic is used in the field, which can get over doubtful conclusions. By using logic in the field, the conclusion will be a question mark and you won't get doubtless knowledge. A knowledge is a knowledge only when it is doubt free. That is why we have two-system samkya, which is propounded by Kapila who is one of the best logicians at that time. And by using tarka he has arrived at a conclusion that prakriti is jagat karanam. on the other side we have Kanada muni and he is also known as sarvajnah and siddhah and he also would have used the best and proper logic. But Kanada arrived at the atomic theory and he said the cause of creation is paramanah and he refuted Kapila muni. I cannot say one is superior both are munis and both are sarvajnah. From this it is clear that tarka cannot claim the jagat karanam. both the minis are sarvajnah. If both are sarvajnah how do they contradict each other both using perfect logic. One rejects the other but what we find is advaidin alone use the proper logic. This is the first interpretation of this sutra.

Now I will give you the second interpretation. It is in the form of a dialogue. First let us come to the Vedantins statement. Since logic is invalid, prakriti cannot be logically proved as jagat karanam because logic is invalid. It means prakriti can be inferred as jagat karanam through proper logic. Samkya says improper logic may be invalid and through proper logic prakriti can be inferred as jagat karanam. If argued thus, still, there is no freedom from samsara. Still there is no freedom from samsara; it means that you may use proper logic and may arrive at prakriti as jagat karanam but still the knowledge will be doubtful knowledge only. It is so because Kanada muni has concluded the paramanu as jagat karanam using the same proper knowledge. Therefore your confusion will be to accept Kapila or Kanada Muni. We cannot accept either because they both are mutually against each other. If you use the logic, you may get knowledge and that knowledge will not give you liberation. Never use logic to arrive at paramanau, never use logic to arrive at prakriti, never use logic to find fault with Vedanta; then comes the last question. The logicians may ask if you conclude that tarka is invalid why do you accept tarka in your reaching. Why should Manus smriti mention tarka as important tool in its philosophy? you yourself talk about sruti, anubhava, logic etc., if logic is invalid. In fact Brahma Sutra itself is called nyaya pradanam. For that our answer is tarka as independent source of knowledge is not acceptable with regard to jagat karanam; what we say is tarka backed by sastra collecting data from sastra do tarka and without sastra independent is dry logic and I will not work. Collect data from sastra and use tarka. Nyayicka and vaiseshika collect data from world and use tarka, which is not acceptable to us. Source of data decides it is dry or proper logic. Thus Vedantins alone is right and Vedantins uses tarka properly.

#### **Topic 4 Sishtaparigrahadhikaranam**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 12. [146]**

***Etena sishtaparigraha api vyakhtatah***

By the [i.e., by the arguments against the Samkyas] [those other theories] not accepted by the wise or competent persons are explained or refuted.

Other views or theories not accepted by the Vedas are refuted.

Now I will give you the general analysis of this sutra. This is a small adhikaranam with one sutra. This is called adhidesa sutram. It means extension of the previous one to this particular sutra. In the previous adhikaranam we refuted samkya philosopher both in offensive and defensive manner. Samkya cannot use logic to criticize us and we also said that samkya's conclusion prakriti as jagat karanam also we negated their philosophy. we also said depending on logic by samkya is also invalid. Who is the vaiseshika philosopher? He is the one who also says that the cause of the universe is matter only. By using salaksanya niyama, he says that Brahman is cannot jagat karanam and matter alone is jagat karanam. he says jada karanam is not prakriti but jagat karanam is atom or parmanus. His main contention is that karanam is jadam. Vedanta says the defects found in samkya are there in vaiseshika also. they use things to arrive at something which is beyond logic.

Now we will go to word for word analysis. Yetena by this sishta pargrahaha api other system unrecognized by the wise like nyaya, and vaiseshika also vyakyatat are refuted. The significance of the words is etena means samkya philosopher also has used defective logic as a tool in a field where logic should to be used; a wrong tool has been used by samkya. Vaiseshika also used logic as tool and the mistake is common to both and both have used improper tools. Then sishta aparigraha is the name for nyaya and vaiseshika philosophy. you will understand this only when you know about the six systems of philosophies. Samkya and yoga, nyaya and vaiseshika and purva and utara mimamsaka/ first pair says chetanam is jagat karanam; nyaya and vaiseshika also says achetanam is jagat karanam but achetana paramanu is jagat karanam; what is common to both is that both says achetanam is jagat karanam. they are achetana karana vadha; the second common feature is all the four use logic as primary instruments of knowledge; the uniqueness of the last pair is that we don't use tarka as primary instrument. we argue and establish that by argument you reach no where and dismiss tarka. By doing so we negate all the four philosophies. Purva and utara mimamsaka are Veda pramana and others are tarka pradhana. first two pairs arrive at wrong conclusion and we find that samkya yoga pair has got some conclusions closer to yoga. Because of that many vaidhikas borrow ideas from samkya yoga. Samkya yoga pair is partially accepted by vaidhikas and it is called sishta parigraha pair. Krishna himself borrows samkya sristi. As far as yoga is concerned by us we talk about ashtanga yoga etc. nyaya vaiseshika is not only wrong but it does not have even some conclusions acceptable to us. It is not even partially borrowed by advaidins. The next adhikaranam we will see the next class.

## **BRAHMA SUTRA**

Class 154

### **Topic 4 Sishtaparigrahadhikaranam**

**Brahman can be the cause of the universe although it is of a contrary nature from the universe**

**Sutra 12. [146]**

#### ***Etena sishtaparigraha api vyakhtatah***

By the [i.e., by the arguments against the Samkyas] [those other theories] not accepted by the wise or competent persons are explained or refuted.

Other views or theories not accepted by the Vedas are refuted.

While studying the second chapter of Brahma Sutra we should remember two systems one is known as samkya yoga system, nyaya vaiseshika system and Purva Mimamsaka and utara mimamsaka system. Between the first and second, there are several dissimilarities and main is that samkya system adopts sat karya vadha and the second as asat karya vadha system. This topic is discussed in detail in second, third and fourth chapter of Mandukya karika. In spite of differences they have one common point of agreement and both are achetana karya vadhis, which means both say that matter alone is material cause of the universe unlike Vedantins that Consciousness is the material cause of the universe. Samkya yoga system claims achetana prakriti is the main cause and nyaya vaiseshika says that paramanu is the material cause of the universe. Both are against chetana karana vadha. Both heavily criticize Vedanta, which falls under chetana karana vadha. In criticizing Vedantins, both of them join together. In spite of differences between samkya and nyaya vaiseshika they criticize and criticism is tarka virodha. Joining together they get some advantage and at the same time we also have come advantage. I can refute by giving the same arguments to negate both samkya and yoga as also nyaya vaiseshika systems. Before going further just to consolidate the four adhikaranams I want to point out that in the first adhikaranam Vyasacharya refuted samkya philosophers; second adhikaranam was yoga philosophy refutation by pointing out that yoga philosophy is similar to samkya and there is no need to refute yoga separately. In the third adhikaranam. samkya yoga refuted through logical discussion. Nyaya vaiseshika was refuted as was done in the case of samkya yoga system. This is presented as smriti virodha as also tarka virodha pariharah. Even though all of them were negated and samkya system is called sishta parigraha system and nyaya vaiseshika system is called sishta aparigraha system. Samkya yoga is popular even today is because of the limited blessings of vedantins alone because of the close affinity between samkya yoga and advaiddam. Nyaya vaiseshika far away from Vedanta and it is far less required than samkya system. Even nyaya vaiseshika system we don't reject fully but we do borrow whatever good it has. With this fourth adhikaranam is over sruti virodha and tarka virodha pariharah is over.

### **Topic 5 Bhoktrapattyadhikaranam**

**The distinctions of enjoyer and enjoyed do not oppose unity.**

**Sutra 14. [148]**

***Bhoktrapatteravibhagascet syallokavat***

If it be said [that if Brahma be the cause and then] on account of [the objects of enjoyment] turning into the enjoyer non-distinction [between the enjoyer and the objects enjoyed] would result. We reply that such distinction may exist nevertheless as is experienced commonly in the world.

Another objection based on reasoning is raised against Brahma being the cause and refuted.

Having refuted nyaya vaiseshika system and Vyasacharya comes back to samkya system which comes with another dosha on Vedanta. it is pratyaksa virodha dosha. Here pratyaksa virodha parihara is done in one sutra.

Now I will give you the general analysis of this sutra. They say that in the world we clearly see a distinction between the subject and object bokta and bogyam one being chetana and the other being achetana. It is pratyaksa siddham. In samkya yoga system it is very clearly brought out. They say Purusa is bokta chetana tattvam is boktru tattvam and prakriti is modified to become the Prapancha and the modified prakriti is the bogya tattvam. this is clearly brought out in Bhagavad Gita verses 13.19 and 20 which read as *prakritim purusam cai'va viddhy anadi ubhav api vikarams ca gunama cai 'ca viddhi prakritisambhavan karya karana kartrive hetuh prakrtir ucyate purusah sukhaduhkhanam bhoktrive hetur ucyate* that reads as know thou that prakriti [nature] and Purusa [soul] are both beginningless; and know also that the forms and modes are born of prakriti [nature]. Nature is said to be cause and effect, instrument and agent [ness] and the soul is said to be cause concerning the experience of pleasure and pain. Samkya jumps with joy on seeing Bhagavad Gita statement. in the Purusa prakriti are eternal and eternally real and eternally distinct and both are anadi. Samkya yoga has justified and validated the boktru and bogya vivadha. But you don't accept that the two principles are there in the sristi. you don't say matter is cause of the world and you say chetana boktru has come from chetanam Brahman and achetana bogyam also has come out of Brahman. but we do not accept that view. For both cause is chetanam. Because of this approach the difference between bokta and bogya is not very clear because both of them under your system are born out of Brahman. this view we do not accept is the Samkya philosopher's view. Therefore Brahma rupena bokta and bogyam will become indistinguishable. Bokta is equal to Brahman and bogya is equal to Brahman and bokta is equal to Brahman it becomes. This cannot be acceptable. This indistinguishability of subject and object is the problem in Vedanta. it is a problem because it is pratyaksa virodha because pratyaksa pramanam shows chetana achetana vibhagah and in Vedanta this chetana achetana are vibhagah is not distinct. For this we give two answers one for unintelligent samkya and after wards a very serious and important answer is given in the next adhikaranam for an advanced student.

The first reply is comparable to vishistadvaida reply and second one is Advaida approach. The answer given is this and even there may be one karanam there can be differences in karyams, products. Just because karyams have distinction, still they can have one common cause. All ornaments are different but gold is one. Nama beda is there earrings and the chains etc., are nama beda but the cause here is the gold. Names are different forms are different and even functions are different; but still they have one karanam. ocean, bubble and froth are different one is different from the other and still they are born out of one common

cause of samudrah. In the same way Brahman is one cause and the entire creations are different and they are various effects of Brahman. all are essentially Brahman bokta and bogyam Brahman and bokta bogya vibhaga can be there. this is the answer/

Now we will do the word for word analysis. Boktrapanteh since subject that is bokta becomes identical with object avibagah there will be no distinction between the subject and the object. This is purva paksha samkya yoga's charge. Now Vedantins answers chet if this is the objection it is not valid; syat means subject object distinction will be there. lokavat as seen in the world. Now we will the significance of the words. Bhoktrapatteh is bokta becomes bogyam and bogyam will become bokta being both are Brahman because of the absence of bokta bogya differences. Avibhagah become identical in Vedantic teaching; chet if this charge is imputed on Vedantic teaching syat means what they say is not is. What is objected by samkya is not there. They say vibhaga abhava means vibhaga is there in Advaidam. Here we don't make distinction between vishistadvaidam and Advaidam. Lokavat means as seen in the world. with this bohoktrapattyadhikaranam is over. here vishistadvaida advaida difference we need bother. This will be taken up in the next adhikaranam.

## **BRAHMA SUTRA**

Class 155

### **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 14. [148]**

***tadananyatvamarambhanasabdadibhyah***

The non-difference of them [i.e., if cause and effect] is shown here.

Now I will give you the general analysis of this sutra. this is a big adhikaranam consisting seven sutras. It is a very important adhikaranam. this is called arambanadhikarnam. This is very significant because it answers pratyaksa virodha dosha posed by samkya and vaiseshika,

The purva paksa have pratyaksa pramanam, which goes against advaidic teachings. This is the purva paksa that comes to even the nonprofessionals because beda is seen everywhere whn plurality is rampant in the world. The pratyaksa pramana is supposed to be the eldest pramana as any other pramanam depends upon the pratyaksam. Anumanam, upamanam, arthapatti, anupalapti and even Veda to function you should have pratyaksa pramanam. In the absence of pratyaksa pramana, nothing can be proved. So they ask how do you get the courage that you can negate the pratyaksam. What is the parihara, which we will see in brief. The most significant word in advaidam is sadananyatvam. This is the main topic in Brahma Sutra. when we talk about chetana karana vadha you should have understanding of this term. Achetana jagat is karyam. Between Brahman and jagat between chetanam Brahman and achetanam jagat there is karana karya sambandha the scripture says. When we go deep into the scripture, we find that we are not very serious about karana karya sambandha, it is only taken as intermediary stage, and it is a temporary stand taken. Why we are not serious about is due to the fact Brahman cannot be karanam really speaking because any karanam should undergo change.

On an analysis, we find that Brahman cannot be karanam at all. To be a karanam one should be subject to modification and subject to time and since Brahman is beyond time and modification, Brahman cannot be karanam at all. It is pointed out in Upanishad also. it is neither karanam nor karyam. All the sruti statements directly point out that Brahman cannot be karanam. We cannot establish world as karyam also. When we try to prove world as karyam we miserably fail to do it. That is why we have sat karya vadha and asat karya vadha. Mandukya Upanishad discusses this aspect in detail. World can therefore, never be proved to be a karyam. If world is not a karyam and Brahman cannot be karyanam and then how can there be karana karya sambandha between Brahman and the world. when this being so, why should Upanishad talk about the world being product of Brahman. for that our answer is we talk about karana karya sambandha and we say the meaning is different. We say that the man is a lion, we should to take the word lion literally and we should take it as the man is like a lion in bravery. this is called gauna prayoga. Here Brahman is as though karanam and world is as though karyam. What is the common feature between Brahman and any karyam? We find that karanam alone is substantial and this belongs to karanam alone. When we say

Brahman is karanam means Brahman is the substance of the creation. World is karyam means that it is not a substance and it is only a name and form. Name and form does not have substantiality of their own. Karanam is substantial and karyam is not substantial. Similarly Brahman is the substance of the world creation and world is not substantial.

The second point is since karanam is substantial and karyam is non-substantial the karyam cannot exist independently and it depends upon karanam for its existence. Karanam can exist independently. Whatever can independently exist is called sathyam and whatever cannot exist independently is called mithya. So we conclude Brahman is sathyam and jagan mithya and this is the idea we derive from karana karya sambandha. once we arrive at this, we have to forget about karana karya sambandha. since we have to forget all other feature, then don't ask how mithya Prapancha came to existence. We say Brahman is eternally there and mithya Prapancha is ever there from the very beginning. Sathyam Brahman is anadhi and mithya prapancha is also anadhi and one is sathyam and another is mithya and don't have an idea that the mithya prapancha came from Sathyam Brahman. This is amply supported by the sruti. Mithya Prapancha will be eternally there either in manifest or un-manifest form. this never comes from Brahma. This Vyasacharyam supports with sruti quotation. This is supported by 6.1 of Chandogya Upanishad. three examples are given here one is clay, next is gold and iron are given. Here gold, iron and clay are termed as sathyam. All the products like pot, ornament or iron products are vacharambanam vikarah namadeyam which means they are karyam and Upanishad says vikarah namadeyam and a product is but a mere name, a verbal existence and what is the name. Your tongue initiates any product, it exists only in your tongue, and it does not exist outside. It does not have substantial existence and its existence is confined to name and form. therefore the karyam the products are called mithya. Thus we conclude that sathya mithya sambandha between world and Brahman is conveyed. There is no other significance of karyam and karanam. all the sruti statements have conveyed the idea that Brahma sathyam jagan mithya. There is Brahman alone all over and the world is but only made and form. how do you explain boktru bogya sambandha. we say that there is only one adhistanam Brahman and it is on this adhistanam Brahman boktru and bogya rest for their survival. It is finally confirmed that bokta as also bogyam are Brahman as their adhistanam. With this background we will do the word for word analysis.

Tad ananyatvam its non-difference from Brahman; it means Prapanchasya is understood arambana sabdadityah from the statements like vacharambanam vikaro namadeyam Chandogya upanisad 6.1. now we will see the significance of the words. Tad ananyatvam is compound word of tat and ananyatvam; tad means sathyam Brahman; ananyatvam means non-difference; we supply karya Prapanchasya - of the world from Brahman or nondifference from Brahman is tad ananyatvam; here we mean sathyam mithya sambandha. is independent existence; tad ananyatvam alone brings the truth of sathyam mithya sambandham. Avagamyate means understood; sathya mithya sambandha is not explicitly stated in this sutra but we should understand the meaning in the context of the sutra. what is implicit in the Upanishad is they have not invented sathya mithyatvam. But it is already there. arambana sabda indicates the entire statement. since it is a sutra Vyasacharya does not want to quote the entire sentence; so world arambanam indicates the whole sentence. Sabda adhithya means the other similar sentences. Nena nanaci kincana is another quotation from sruti which is quoted by Adhi Sankaracharya. Even now plurality is not there and their existence should not be counted. If the world is not counted means world must be mithya. Kaivalya Upanishad says *na bhumi-<sup>ap</sup>o vahnir asti na canilo me 'sti na cambaram ca evam veditva paramatma rupam guhasayam niskalam advitiam* the meaning of this mantra is for me there is neither earth nor water nor fire nor air nor ether. Thus realising the nature of the Paramatman the on

who is the cavity of the heart, who is without parts without a second the witness of all beyond both existence and non-existence one attains the very nature of the Paramatman. If the Upanishad should negate the world it is only by the means of mithya and hence the relationship between world and Brahma is sathyam mithya sambandah. Sathyam Brahma is eternal and mithya world is also eternal and mithya world cannot stand on its own. Now he brings a purva paksa who is a beda beda vadha which existed in those days. Beda beda vadha has been propounded by many acharyas bodayanacharya, Batruprapancha acharya and they talked of beda beda vadha. Vishistadvaidam which is propounded to very close to beda beda vadha only. Adhi Sankaracharya never discusses vishistadvaidam because it did not exist in his time. but he discussed about beda beda vadha being very close to vishistadvaidam. First we will see what is their argument. they say you study the same Chandogya upanisad vakya 6.2.4 that reads as *yatha somyaikena mrtpindena sarvam mrnmayamvijnatam syadvacarambhanam vikaro namadheyam mrttiketyena satyam*, the meaning of the mantra is it is like this; by knowing a single lump of earth you know all objects made of earth/ all changes are mere words, in name only. But earth is the reality. In other words, it says if you know a single thing made of earth for instance a pot, then you know all things made of earth. How? The word 'pot' is merely a name; the real object is earth. Earth may assume different names and forms, but it remains the same earth. To understand and the world sruti gives the gold and ornament example. Also gives iron and iron product example. In the entire example gold, the cause is modified to become the ornaments. They argue the gold actually changes or get modifies to become the ornament. It is not superimposition it is not unreal appearance and Brahman itself has modified itself to be universe and all the beda beda vadha are Brahma parinama vadha and karana parinama. In this regard, they give another example of a tree to understand this aspect better. They give the example a big tree and the say that various parts of the tree modifies itself to many branches, and out of the branches evolves the leaves; out of that evolves the flowers; out of that evolves the fruits and all these products are evolved from one tree. Similarly from one Brahman, all the creations have evolved themselves to be the universe. Karyam karana akarena parinamate ekam karanam aneka karyam parinamate.

The next point they derive from this is since the leaves etc., are the products of one tree they can be looked upon as part of the tree and all the products become various parts of the one cause that is the tree, the whole. Thus not only tree is a cause and the tree is also the whole and the branches are not only karyam but they also are the limbs or the parts of the tree and not they have karana karya sambandha sambandha they have avayava avayavi sambandha the part and whole sambandha.

The next point they derive is that if you understand this way you can see Advaidam and Dvaidam. From the standpoint the whole it is Advaidam and from the standpoint of branches it is anekam and eka aneka sambandha is there dvaidam advaidam sristi we see. One is Brahman and many are the creation; when the cause is one that is Brahman, we see Advaidam and when we see various creations as branches and leaves of one tree are seen, we see dvaidam in the creation. dvaidam is correct and Advaidam is also to be accepted. Don't be uniform dvaidam and don't be uniform advaidam and be beda vishista abeda.

When you look at the tree and branches, you see equally real which is karanam and which is advaidam; dvaidam avayava karyam is also real and therefore one should accept both the Brahman as also the jagat as reality and why should you call one as real and the other as unreal, which disturbs me says the purva paksa. advaidam is sathyam and Dvaidam also is sathyam is the fourth point.

They say that Vyasacharya teaches this teaching alone by saying sadananyatvam, the part cannot exist separate from the tree. Hands, legs, and finger cannot exist separate from the whole, the person. sadananyatvam means part whole sambandha and part does not exist separate from the whole. It is not sathyam mithya sambandha. Being part of the whole, both the part and the whole are real. It is not real and unreal as projected by the advaidins. God is non-dual. The dualistic world exists as part of the non-dual god. Not only that he says this particular approach is supported by the sruti also. sruti clearly talks about advaidam. Sruti talks about Dvaidam also. Everywhere Dvaidam is there/ even the part whole idea is mentioned in the sruti. They talk about gataha srutis are the ones that reconciles Dvaidam and Advaidam. The entire Antaryami Brahmanam is seen as gataha sruti, Bhagavan is treated as the whole, and the entire world is seen as the part. India is one country and all the states are the parts. Both are real so quotes beda abeda vadhi.

He also says the entire Karma Kanda is also acceptable in the beda abeda darsanam. if you are interested in abeda you can go to jnana kanda and if you are interested in both you can follow Karma Kanda as also jnana kanda. if you reject dvaidam, then Karma Kanda is rejected; if you reject Advaidam then you reject jnana kanda; if accept both and take to beda abeda you accept both Karma Kanda as also the jnana kanda. the rejection of Karma Kanda by advaidin and the rejection of jnana kanda by dvaidin tantamount to rejecting the part of the Veda itself which is seen as contrary to scriptural teaching. vishistadvaidins validate the whole Veda. The whole Veda is valued by us only and they say that Dvaidin and advaidins mutilate Veda argues vishistadvaidins.

Lastly he says if you reject Dvaidam and hold on to Advaidam only you do another injustice and you reject the pratyaksa pramanam which is most powerful pramanam because all other pramanams depend upon the pratyaksa pramanam. Even for Vedanta pramanam to operate you need pratyaksa pramanam. Since it is clearly revealed and whatever is clearly revealed is to be accepted as sathyam and only the philosophy that accepts the world as sathyam, which is available for pratyaksam, is the real philosophy. Because of all the reasons, beda abeda vadhi recommends the relationship between Brahman and universe as beda abeda vadha in stead of rejecting one as unreal and accepting the other as real. More in the next class.

## **BRAHMA SUTRA**

Class 156

### **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 14. [148]**

#### ***Tadananyatvamarambhanasabdadibhyah***

The non-difference of them [i.e., if cause and effect] is shown here.

I analyse the Acharya's bashyam of purva paksha raised by beda abeda vadhi. Imagine the samkya philosopher, yoga and vaiseshika philosopher stand in front and Vyasacharya stand here with Adhi Sankaracharya behind him and a beda abeda vadhi or vishistadvaida vadhi. Both Ramanujacharya and Adhi Sankaracharya follow Vyasacharya. All except Vyasacharya and Adhi Sankaracharya and Ramanuja argue that the world is a product of matter and Vyasacharya claim that the world is not a product of matter and claims the world is a product of Consciousness. He is alone is chetana karya vadhi. Therefore, Vyasacharya says jagat is Brahma karyam bhavati the world is a product of Brahman. The next question is when you say Brahman is a product of Brahman. What is the significance is the question. Here Vyasacharya redefines Brahma karyatvam as Brahma ananyatvam. By saying the world as product of Brahman and what we say is that the world is not far away from Brahman.

Now the discussion is between two sishyas Adhi Sankaracharya and Ramanujacharya and Vyasacharya and one is abeda vadha and the other is beda vadha. Both agree Brahman is jagat karanam. World is non different from Brahman also both of them agree. Now the problem starts when they take up what is the significance of the world non-different from Brahman. Brahma ananyatvam is like our snake, which is not away from rope or non-different from rope. Alternatively, technically it is rajju vivarthatvam. That means world is of lesser order of reality. That is world enjoys the degree of lesser order than Brahman. Hence world is not separate from Brahman exactly like dream is not separate from waker and snake is non different from rope. Interpreting in this manner, they say that the world is mithya. It is interpretation of sadanatyam by Advaidin. Beda abeda vadhi says no sadananyatvam does not mean sad vivarthatvam but it means world is part of Brahman or sad visheshanatvam or take it as an attribute of Brahman because part cannot exist separate from the whole and attribute cannot remain separate from the substance. World is part or property of Brahman either way the world is taken as part or world is taken as property and the world is as real as Brahman. Part is as real as whole; branch is as real as the tree; my fingers are part of me are as real as me. World is not of lesser order of reality and it is as real as Brahman. Property is as real as substance and the red colour of the cloth is as real as the cloth; property cannot remain separate from the substance but the property and substance are equal order of reality. Similarly the world if taken as the part of Brahman, it the part of the whole Brahman and if the world is taken as an attribute of Brahman, the attribute cannot remain separate from Brahman. Therefore, we cannot say that the world is of lesser order of reality. World should

be taken as sathyam only. There is one Brahman as part of non duality and the world with bedas are part of Brahman. So they are called beda abeda vada. We have sruti support both in favour of Advaidam as also Dvaidam. Dvaidam is as a part of Advaidam. Antaryami Brahmanam of Brihadharaynaka upanisad is seen to supporting the beda abeda vadha. Dvaidam and Advaidam have been reconciled. Not only world is part of Brahman but also jivah too is part of Brahman. This view has the support of Bhagavad Gita sloka 15.7 which reads as *mamai 'va' mso jivaloke jivabhutah sanatanah manahsasthani 'ndriyani prakritisthani harsati* the meaning of the mantra is a fragment [or fraction] of My own Self, having become a living soul, eternal, in the world of life, draws to itself the sense of which the mind is the sixth, that rest in nature. Jiva is also part of Brahman and jagat is also part of Brahman and Brahman is nondual Advaidam. When the part is real and the whole is real has been confirmed by sathyasya sathyam pranavai sathyam tesamesa sathyam in 2.1.20 of the Brihadharaynaka upanisad.. Lord is also sathyam and Lord is defined as sathyasya sathyam and not mithya Prapanchasya sathyam. In this everything will become valid Karma Kanda taking about karma is valid and jnana kanda is valid and prathyaksa anubhava of duality also will be met and this is the poser of purva paksa in the form of vishistadvaidam and beda abeda vadhi of the times of Sankaracharya and Vyasacharya.

Now comes the turn of the Vedantins to defend himself against beda abeda vadhis. Three will be eleven sruti contradictions and nine are brought out here and two elsewhere in beda abeda vadhi.

*Nirvikara sruti virodhah.* What do the beda abeda vadhi says. They compare Brahman to a tree and the branches etc., evolve and they are true and part of the tree. Similar from Brahman jagat the world evolves and they say the branches are part of the tree so the various creations are part of Brahman; they say Brahman is real so also the various creations and the jagat are real. We say that tree can evolve into braches leaves etc., because the tree is subject to modification. Tree can produce real branches, real fruits, real leaves etc by undergoing parinama or modification. In parinama vadha cause and effect are equally real and you cannot extend that theory to Brahman for Brahman cannot undergo any modification to evolve into the real world, which means the same order of reality. Advaidin quotes a sruti statement in 1.ii.18 of Kathopanisad that reads as *na jayate mriyate va vipascit nayam kutascin-na babhuva kascit, ajo nityah sasvato 'yam purano na hanyate hanyamane sarire.* The meaning of the mantra is 'the intelligent Atman is not born, nor does he die; he did not spring from anything and nothing sprang from him; this unborn, eternal, everlasting, ancient is not slain even when the body is destroyed. You cannot talk about Brahma parinama vadha is not acceptable because Brahmanah nirvikaratvad.

Then beda abeda vadhi asks how do you say that parinama vadha is not acceptable when the sruti gives three examples in Chandogya upanisad. First example is the clay modifying into pot; the second example is the gold modifying to become ornaments and the third is the iron modifying to become various utensils. The Brahma parinama vadhi argues that all the three examples talks of the cause modifying to become the creation. He argues that rope snake example is your own you Advaidins and sruti gives the examples of pot, ornaments and the utensils where the parinama or modification theory is talked about. All supports the parinama vadha only. If the modification is not there, the potter need not do anything. So is also the case of gold and iron. The three examples prove the Brahma parinama vadha only. Adhi Sankaracharya says you say all the three are parinami and so Brahman is also parinami. Adhi Sankaracharya says all the three examples are achetana vasthu only. Clay, gold and iron is all achetana karanam and will you accept Brahman is achetanam. For that the purva paksa

answers that even though karanam is achetanam and that part of the example you do not take and that is not intended by the sruti. Stru declares Brahman is chetanam and hence achetanatva part of the example you should not take it. Adhi Sankaracharya says that sruti says Brahman is nirvikaram; since Brahman nirvikaram from the example don't take changing part of the example. Accept BrahmaIn as karanam and it should be vivartha karanam even though examples are parinami karanam because it is sruti vriuddham. Brahma parinama vadha is not correct and tree evolving etc., is all right and the same is not applicable to Brahman.

The second dosha is *Niravayavatva sruti virodhah*. In Brahma parinama or beda abeda vadha that is the world and jiva are taken as the organs of Brahman. Similar they say beda or division are part of Brahman. Adhi Sankaracharya says sruti very clearly says Brahman is niravayavam.

In Mandukya Upanishad 3.Karika 7 reads as *na kasasya ghotakaso vikara vrttyavan yatha naiva tmanah sada jiva vikara vayavau tatha* the meaning of the karika is the space in a pot is neither an evolved effect nor a part of the All pervading space, so too the individualized ego [Jiva] is neither evolved from nor is it a part of the spirits i.e., Supreme Self. The Akasa does not have the part and the whole and Brahman is compared to Akasa and Brahman does not have part and the whole.

In Mundaka Upanishad mantra II.ii.9 reads as *Hiranmaye pare kose virajam Brahma nishkalam tac-chubhram jyotih tad yadatma vido viduh* the meaning of the mantra is the stainless indivisible Brahman, the pure, the light of all lights is in the innermost sheath of the golden hue – the highest. That is what then knower of the Atman know. Brahman is said to be nishkalam.

The third one is *nithyatva sruti virodhah*. When the world and jiva are beda is taken as part of Brahman we say Brahman is savayavam endowed with avayavam or limbs then Brahman will become anithyam because there is a law *yad yad savayavam tad tad anithyam*. Look at the world anything they are savayavam and they are anithyam. Akasa is also subject to birth and therefore subject to death. Even Akasa has sooksmavayavam. Akasa is expanding and from this it is very clear Akasa is savayavam. You cannot say let Brahman be anithyam because sruti says Brahman is nithyam. In support of nithyatvam there is a sruti support in 1.3.18 of Kathopanisad *na jayate mriyate va vipascit nayam kutascin-na babhuva kascit ajo nityah sasvato'yam purano na hanyate hanyamane sarire* the intelligent Atman is not born, nor does He die. He did not spring from anything and nothing sprang from him. The unborn, eternal everlasting, ancient, is not slain even when the body is destroyed.

The next one is *sathyatva sruti virodhah*. One clay alone has modified and has become earthenware or parts and they are but name initiated by your tongue and the Upanishad makes a very important statement clay alone is reality by which sruti wants to point out karanam eva sathyam. If sruti karanam eva sathyam what happens. If I say this person is intelligent, the other person is taken as not being not intelligent. Then if I say this person alone is intelligent I exclude the other person. Here karanam eva sathyam beens karyam is mithya. Karyam is only a namadeyam and it has only verbal existence. When it talks about atman, the Upanishad says tad sathyam that one the karanam Brahman is sathyam and Upanishad positively exphasises indirectly telling that the world is mithya. 6.8.1 is at the level of example and 6.8.7 of Chandogya upanisad is drastanta level. Here sruti makes it clear that we see all these forms before us. They are constantly changing. But that which we cannot see,

which is the essence of everything does not change. And that is our real identity. ‘that thou art’- this is the final message that Vedanta has to give. That Self, that essence. That pure spirit, is your real identity. Therefore this will be contradicted if the world is taken as sathyam

Fifth one *dvaidam nisheda sruti virodhah*. If dvaidam and Advaidam have got equal status the sruti will give respect to both because both of them are sathyam. avayavam is as sacred as avayavi and if Dvaidam and Advaidam are same the sruti should have equal regard to both. But sruti ignores Dvaidam in different ways. One method sruti uses is wherever Advaidam jnanam comes sruti says whoever does have that knowledge will be liberated. Whereas dvaidam jnanam topic comes, sruti does not provide any benefit. Wherever there is sruti sthithi topic comes the sruti does not mention any prayojanam which indicates that dvaidam is of lesser order of reality. Not only for dvaidam jnanam prayojanam is not given but sruti criticizes those who have the leaning to Dvaidam. 2.1.11 of Kathopanisad reads as *manasaivedam aptavayam neha nanasti kincana mrtyoh sa mrtyum gacchati ya iha naneva pasyati* the meaning of the matra is ‘by intuitive mind indeed one perceives that many do not exist at all; one who perceives many as existing He goes from death to death’. If Dvaidam is as real as Advaidam, why should one have fear and get into mrtyu by seeing truth. In II.4.7 of Taittiriya Upanishad reads as *udaram antaram kurute, m, atha tasya bhayam bhavati tat tveva bhayam viduso manvanasya tadapy-esa sloko bhavati* when however, this makes even the slightest distinction to Brahman, then there is danger for him. That very same Brahman Himself becomes the source of fear for him who makes a difference and who reflects not. Even little bit difference a person feels, even part whole difference one feels he will have the fear. If a person says Brahman different and I am different and if one has beda between himself and god, he does not know. Upanishad uses derogatory words that he is devanam pasuh. Sruti negates plurality explicitly. It is the most powerful vakyam. If Advaidam as also Dvaidam is real and then sruti should to negate both but sruti with vehemence negates Dvaidam. *Neha nanasti kincana* 2.1.11 of Kathopanisad. There is no duality at all it is said in Kathopanisad. The very definition of truth is that which cannot be negated; anything that is negated cannot claim to be sathyam. 1.1.23-24 of Kaivalya Upanishad upanisad says *na bhumi apo na ca vahnir asti na canilo me'sti na cambaram ca, evam veditva paramatma rupam guhasayam niskalam advitiam* the meaning of the mantra is for me there is neither earth nor water nor fire, nor air nor ether. Thus realizing the nature of the Paramatman - the one who is in the cavity of the heart who is without parts, without second, the witness of all beyond both existence and non-existence one attains the very nature of the Paramatman. Plurality is not there. Still more is neti neti vakyam of Brihadharaynaka upanisad. By negating duality, the Upanishad negates Dvaidam. If the world is taken as part of Brahman, dvaidam niveda sruti virodhah will come. Thereby abeda or advaidam is established positively.

Next is *sarva vijnana sruti nishedah*. If Advaidam and Dvaidam and if Brahman and the world are equally real then by knowing one others cannot be known because others independently as separate entity and what exist as separate entity cannot be known by knowing one. If beda is nithya, then eka vijnanena sarva nijnanam is possible. This aspect of by knowing a single lump of earth you know all objects made of earth. All changes are mere words, in name only. But earth is the reality. It is extended that if you know a single thing made of earth for instance, a pot then you know all things made of earth. The word pot is merely a name. The real object is earth. It is like this. By knowing a single lump of gold you know all objects made of gold. All changes are mere words in name only. So also is the case with Brahman. All the creation are but name with Brahman alone being the reality which is the adhistanam for all the products seen in the entire world including jivas.

Next is *aikya sruti virodhah*. If the world is taken as part of Brahman and Brahman is the whole, then jiva can never be identical with Brahman. Sruti says you are Brahman. Partness is only mithya. You are identical sruti 6.8.7 of Chandogya upanisad says that which is the subtlest of all is the Self of all this. It is the truth. It is the Self. 'That thou are' here again it is emphatically made clear that Self alone is Brahman showing that Brahman is non-different from jivah or the entire Prapancha. Any beda vakyam is against the truth is established here.

Next is *jnana sadhanatva sruti virodhah*. If the world is as real as Brahman, then jivah is also like that and sariram is real; punya papa is real and then samsara also will be real. The sathyam cannot be destroyed by jnanam. Sathya vastu cannot be negated by knowledge. If the snake is real it cannot be negated by knowledge. Only rope snake can be negated and not the real snake. If the world and the problems are sathyam, then no amount of knowledge can remove such worldly problems. 2.1.1 of Taittiriya Upanishad categorically declares that *Brahmavid apnoti Param tad esabhyukta satyam jnanam anantam Brahma* that says the knower of Brahman attains the Supreme. And adds that he who knows Brahman as the real as knowledge and as the Infinite as placed in the transcendental space within the secret cavern enjoys all desires along with the attainment of Brahman the all pervading. With mere knowledge, the problems go means problems are mithya in nature.

Next one is *tatkara drastanta sruti virodhah*. In Chandogya upanisad 6.16 a story is given. Suppose a person is accused of stealing something and he is brought to the kings' court. He says that I have not stolen and we have to find out whether the statement is right or wrong. The person is asked to hold a burning rod. If his statement is false the fire will burn his hand; if the statement is false his hand will be burnt. Truth will insulate the person and still worse not only his hand will be burnt and he will be arrested also. If he tells the truth and having said so, *tat tvam asi* is a factual statement and will liberate you the Upanishad says *tat tvam asi* is a fact. *Abeda* is a fact. Then *beda* must be taken as mithya. Nine sruti virodhah have been pointed out. Rest we will see in the next class.

## **BRAHMA SUTRA**

Class 157

### **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 14. [148]**

#### ***Tadananyatvamarambhanasabdadibhyah***

The non-difference of them [i.e., if cause and effect] is shown here.

Now we analyse the interpretation of the word tad ananyatvam occurring in sutra 14. Two interpretations are possible one is as given by Advaidins abeda vadhi and the other one given by beda abeda vadhi or the Vishistadvaidin. According to Advaidins tad ananyatvam means when world is non-different from Brahman means Vyasacharya intends to say that the world is mithya and Brahman is sathyam. And according to this approach the world will enjoy lesser order of reality compared to Brahman is called mithyam. But according to beda abeda vadhi tad ananyatvam means the world is part of Brahman and being a part it cannot exist separate from Brahman the whole. It is like that our limb cannot exist separate from our body the whole. So also, the world is part of Brahman and the world cannot exist separate from Brahman, which is the whole. This means world is part of Brahman. According to this interpretation, Brahman and world enjoy same order of reality. Sathyam Brahman is here called avayavam. Adhi Sankaracharya looks into beda abeda vadh and say if you have this approach you will have several problems. In his commentary. He talks of many sruti virodha and I said two more we can add to that even though he has not explicitly mentioned here.

Asangatva sruti virodhah. The Upanishad points out that Brahman is asangah. This occurs in 4.3.15 of Brihadaranyaka upanisad declares *asangohyayam purusah* which means that Atma is unaffected by whatever it sees in that dream state for this person is so attached. That Purusa after enjoying and wandering in the dream state and merely witnessing the results of good and evil, remains in a state of profound sleep and again hastens back in the reverse way to its previous condition. If the world is taken as part of Brahman and the world has got the same degree of reality all the guna doshas, which belongs to, the world also will become an integral part of Brahman and Brahman will become sangah. It is like if there is some problem in Kerala, we cannot say that there is no problem in India for kerala is part of India and any problem anywhere will be the problem of India the whole country. Similarly if the world is part of Brahman as of any state in India, the problems of the world will be problem of Brahman. Similarly if there is a wound in finger, I cannot say I am not affected. From this it is very clear if the world is taken as integral part of Brahman all the samsara will belong to Brahman which will contradict Brahmanah asangatvam.

The last one is the corollary of the previous one. Nirvishesha sruti virodhah. All the sruti statements and nirvishesha statement those sruti that declares as nishkalam and is without attributes all declare are free from attributes and the most popular statement is presented in 3.8.8 of Brihadaranyaka upanisad that reads as *sa hovaca etadvat tadaksaram gargi Brahmana abhtvadanti asthulam ananvahrasmadiringham, alohitam, ssnehamacchayam,*

*atamo'vayvanakasam asangamarasam agandhamacaksuskam asrotram avagamano'-tejaskam apranamamukham amatram, anantaram, abahyam, na tadasnati kincana, na tadasnati kascana.* Here Brahman has been defined as it is neither gross nor subtle, neither short nor long, not glowing [like fire] nor moist [like water], neither reflection nor darkness, neither air nor space. It is unattached. It is without taste or odour without eyes, without ears, without tongue, without mind. It is non-effulgent without vital breath, without mouth. It is without measure, without interior or exterior. It does not consume anything nor is it consumed by anyone. Twenty-three items are said and all of them are negated.

The definition of Brahman vividly explained in 3.8.8 of Brihadharaynaka upanisad is repeated in a brief format in 1.iii.15 of Kathopanisad that reads as *asabdham asparsam arupam avyayam tatha rasam nityam agandhavat ca yat; anadya nontam mahatah Param dhruvam nicavya tan mrtyu mukhat pramucyate.* The meaning of the mantra in brief is that 'He who has realized that [Atman] which is without sound, without touch, without form, without decay and also without taste, without smell, without beginning, without end, beyond the Mahat [great] eternal and unchanging, is freed from the jaws of death'.

If the world is taken as part of Brahman, then Brahman will have all the problems, we should take world as lower order of reality, and all that lower order has will not go for the higher order of reality that is Brahman. Thereafter wards, the beda abeda vadhi does not leave and says that he can also point out many sruti virodha in Advaidam also. Adhi Sankaracharya takes a few prominent sruti virodhas pointed out by beda abeda vadh. First one he points out is drastanta sruti virodhah which I had hinted before. Upanishad gives three examples the clay, gold and iron in Chandogya upanisad. Beda abeda vadh says in all of them karana parinama vadha has been talked about and from this we should assume Brahman modification and therefore you cannot say the world is superimposed on Brahman but actually the modification on Brahman has taken place. Advaidins say that the example should be taken to the extent possible and it should not be extended further. Here in the examples, all the three are achetana or jada vasthu. Since jada drastanta is given, you cannot say Brahman is jadam as revealed by Veda Brahman is chetanam. You should not take parinama modification part of example should not be taken because Brahman is nirvikara and from the drastanta we have to take karana karya aspect and we should not jada or parinama aspect. If you take karana karya aspect it will only mean adhistana adhyasa sambandha. So drastanta sruti virodha is not there.

The next charge is karanatva sruti virodha. He says that Brahman is Nirgunam and sathyam and Brahman can be karanam for anything. Therefore, according to you Brahman is karya karana vilaksanam. You also say the world is really speaking is not a karyam and the world is eternally existing in vyakta or avyakata rupena. According to Advaidam sathyam Brahman cannot produce mithya Prapancha. Sathyam Brahman is not karanam. Therefore no karana karya sambandha is possible between sathyam Brahman and mithya Prapancha. That being so, how would you explain in which Brahman is presented as karanam. The second sutra of Brahma sutra itself Brahma karanatva has been brought out. . Actually speaking we do not say that sathyam Brahman produces mithya Prapancha. The mechanism is like this. Mithya Prapancha always exists and during pralayam also mithya Prapancha exists. Sathyam Brahman need not produce and sathyam Brahman cannot produce mithya Prapancha because mithya Prapancha ever exists even during the pralaya kale in avyakta form. The world was there in un-manifest form and comes into manifest form in sristi kalam. When it is vyakta rupam it is called Prapancha and when the world is in avyakta rupam it is called maya and the world is mithya. Maya is mithya. The very same world in avyakta rupam is called mithya.

Between maya and Prapancha there is only vasthu beda one being in manifest form and the other in un-manifest form. It is exactly like ice and water. The Advaidin says avyakta maya alone becomes vyakta Prapancha alone goes back to avyakta maya avastha. Really speaking avyakta maya is the seed of the universe which is mithya. What is really the karanam is maya. Prakriti is another name for maya. During pralaya maya is there in avyakta form. Maya is mithya and mithya is nondifferent from sathyam. Karanatvam status of maya is seen in Brahman, maya evolves itself into Prapancha. Karanatvam of maya is transferred to Brahman until the teaching is over. Brahman is karanam means Brahman is sathya adhistanam of the mithya maya which is karanam. Brahman is sathya adhistanam of mithya maya which is the karanam for all the karya Prapancha. Therefore until the real Brahman is revealed Brahman is told as karanam.

The next sruti virodha as pointed out by beda abeda vadhi is that Veda purva which reveals Dvaidam and which talks about Dvaidam will prove to be invalid if a person talks about Advaidam Brahma sathyan jagan mithya etc. It will falsify Veda. How can you falsify Veda? This is not acceptable. Adhi Sankaracharya strongly criticize that the purva paksa is bouddha in disguise. Now Adhi Sankaracharya gives the reply. If you say that for Advaidin Karma Kanda becomes apramanam and he knows Brahma sathyam jagan mithya. For those Advaidin Karma Kanda has become apramanam we say it is perfectly all right. For the jivan mukta Karma Kanda is apramanam and even though it is apramanam for jnanis but for all the others Karma Kanda is very much valid and pramanam. In fact, throughout the Veda, it is like that. Any portion of the Veda is relevant for total humanity. A particular portion of Veda is relevant for particular portion of humanity alone. Putrakameshti yaga is relevant for only those who have no children. It is irrelevant for the people who have children. In the same way all the karma anushtanam prescribed for brahmachari is not relevant for grahasthas. Similarly, the rites prescribed for grahastha are not relevant for brahmachari and sannyasis. What is prescribed for sannyasins are not relevant for grahasthas and brahmacharis. Therefore, Adhi Sankaracharya's contention is that any part of Veda is relevant for some and not relevant for others. In the same way, any yaga for getting copious rain is not relevant for Brahmaputra region where there is a need to stop rain. However, the yaga for getting rain is relevant for Tamil Nadu. Those people who have deha abhimana, karma kanda is pramanam. It is pramanam for ajnanis. For jnani who have claimed apramani swarupam Karma Kanda is not relevant to them. Even though jnanis and ajnanis live together, Karma Kanda is relevant for ajnanis and jnana kanda is relevant for jnanis. Vedas become aveda for advaidins and jnanis who have gained jivan mukta status.

The next sruti virodha is pratyaksa pramana virodhah. You talk of Advaidam etc., but I don't see advaidam any time. On the other hand, sense organs etc. Reveal Dvaidam only and being everything is pratyaksam. We don't say pratyaksa is relevant from the standpoint of deha abhimana. From the angle of visva the waker, the pratyaksa pramanam is relevant as long as one is in the waking state. One who is identified with dream sariram or for tajjasa, who is in dream world, the dream sense organs are pramanam and if he is traveling he will use dream sense organs and for tajjasa swapna pratyaksam is relevant. But for the prajna the pratyaksa of the waking as also the pratyaksa of the dream state are not at all relevant to him when the person is deep sleep. That is why Advaidin says as long as you do Vyavahara in the world you operate with the body, the world is pramanam and world also is real. All the things that exist in the world are real in Vyavahara state and it is called vyavaharika pramanyam. Advaida vakyam is pramanam only when you raise yourself to the advaida status and cross over from Vyavahara status to the Paramarthika status when you forget the body and identify

with Brahman the adhistanam. From deha abhimana dristi Dvaidam is sathyam and deha abhimana rahita dristi Dvaidam is mithya and Brahman is sathyam.

You say that Brahman alone is sathyam and the whole world is mithya superimposed on Brahman. The whole Prapancha is mithya or adhyasa. If that were true what about Vedanta sastra is mithya or sathyam. For that we say anything other than Brahman is mithya. Even Isvara is seen as mithya. What about sastra? Sastram is also mithya. Then he asks how can mithya sastra reveal sathyam. For that Adhi Sankaracharya gives two answers. Adhi Sankaracharya quotes a Chandogya upanisad vakyam when a person is doing a kama karma and in between he sleeps, suppose he sees a dream and in the dream a woman comes then sastra says that kama karma is blessed. [5.2.8 of Chandogya upanisad] the ritual will be successful. The success of the karma is done in jagrat avastha and success should belong to jagrat Prapancha. This jagrat Prapancha phalam is revealed in swapna which is mithya. A mithya swapna is able to reveal sathyam karma phalam. If you say wrong you negate sruti.

Then 3.2.4 of aitereya Upanishad. Suppose in swapna a person sees a dark person. Not only the person is dark and his teeth are also dark. That swapna indicates maranam. Jagrat maranam soochakam. That person will die soon. Jagrat maranam is revealed by mithya maranam. Then Adhi Sankaracharya gives another example. We have got alphabetical letters. They are sabda only. We know sabda has not form. But what we have done for the sake of communication for every sound we have written a form. Ekaika sabdasya abhi a form is attributed to every letter and this form does not belong to the sound. A form is only imagined superimposed akarah, which does not belong to the sound. Now our question is whether akarah is sathyam or mithya. Since sound does not have any akarah, all the attributes attached to the word is mithya rekastram. Even though rekaksaram is mithya it is able to reveal sathyam sabdah which is beyond our imagination. On one sound there is superimposition of many forms. All of them are mithya and all of them reveal my word sound parinama vadha which is sathyam. There is no problem at all. More in the next class.

## **BRAHMA SUTRA**

Class 158

### **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 14. [148]**

#### ***Tadananyatvamarambhanasabdadibhyah***

The non-difference of them [i.e., if cause and effect] is shown here.

We analyse until now the important word tadananyatvam and this word is interpreted by Advaidins as 'tad adhyatatvam' that the world is mithya and superimposed on Brahman. Adhi Sankaracharya critically analyses the interpretation of beda abeda vadh and they say the world is as real as Brahman. Now Adhi Sankaracharya has indirectly analysed vishistadvaida system also which is close to beda abeda vadh. In addition, Adhi Sankaracharya points out several sruti contradictions between beda abeda vadh and even though talks about the draw backs of vishistadvaidin and staunch vishistadvaidin never agree with the strong criticisms of advaidin. While samkya, nyaya vaiseshika etc., philosophy is confined to books, vishistadvaidam is a live religion even today. Therefore you should remember all the arguments have not convinced the vishistadvaidin and vishistadvaidin has become more vehement about advaidam., the debate between Advaidam and vishistadvaidam continue as to which has the full support of sruti/sutra and anubhava. Both the system have been parallely coming hand in hand and none is able to come to a final decision. Both the system bring out sruti support etc., how to break the tie and find out a tie breaker between vishistadvaidam and Advaidam. Both claim that their lords have certified their own system. Which one am I to accept? Unfortunately, we cannot accept both. It means I have not understood either. The basic tenets between the two systems are different. In Advaidam, vishistadvaidam and Advaidam all the three are based on Vedanta sampradhaya and are supported by sruti, yukti and anubhava. Advaidam says world is different from Brahman and is as real as Brahman; vishistadvaidam says world is part of Brahman and is as real as Brahman; Advaidam says world is supported by Brahman and it is less real than Brahman. Since the fundamental tenets are different, the acceptance of one results in the rejection of the other two. What is the tiebreaker? All the three are live systems. Everything Advaidin does Advaidin does and everything Advaidin does the vishistadvaidin does. The tiebreaker is your own intellect. In the case of every human being his intellect alone can be the guiding factor. All pramanams can support, sruti can give its data, anubhava can give its data; logic can give its data; each data has to be processed by the intellect and it is the intellect that has to decide what system you decide to choose among the three systems that are live systems. My intellect has to be convinced. Your life is governed by your buddhi. All our sastras say never be the intellectual slave of either Sankara or Ramanuja or Madhva or any religious leader. Be independent in your intellect and be intellectually honest. An intelligent human being is guided by any one's intellect. If it is a question of achara intellect need not be used. You need not go by your intellect. Go by what your acharya says. Which madham should be your Kula guru. Follow that Matham to be your Kula guru. Even the vocabulary, you choose what your acharya says. You can follow traditions in all other matters but in teaching you go by your

own intellect and ask the question which once convinces you. After all the agreement you come to the conclusion that vishistadvaïdam is good and acceptable and if you are convinced of that you can go by what your intellect says. In such cases, the view of Advaidin's attitude towards any one for accepting any other system will be that he does not look upon Dvaïdam and vishistadvaïdam are opposed to Advaidam. On the other hand Advaidin claims that Dvaïdam and vishistadvaïdam are only the promoters of Advaidam. They are the means to come to Advaidam even though he rejects both of them as the end, he accept both as means to the end called Advaidam. In the vision of Advaidam all the seekers are categorized at three levels. Mandha adhikari, madhyama adhikari and uttama adhikari. One is good student, next is better student and third category is the best student. According to Advaidam Dvaïdam is the only means for the conversion of mandha adhikari to madhyama adhikari and vishistadvaïdam is only compulsory means for converting madhyama adhikari to uttama adhikarai. Dvaïdam and vishistadvaïdam beautifully convert the mandha and madhyama adhikari to uttama adhikari and uttama adhikari will have such an intellect will without any protest or any resistance will appreciate the teachings of Advaidam. Vishistadvaïdam and Dvaïdam will bring every seeker of sagunam Brahman to the platform of Nirgunam Brahman ultimately. Sagunam is rejected as an end but it is accommodated as means and one may follow Sagunam as vishistadvaïdins do and come ultimately to Nirgunam Brahman as advaidin. Whereas for Dvaïdins and vishistadvaïdins reject Advaidam totally. The means is also Sagunam Brahman, end is also Sagunam Brahman, and therefore Advaidam in the form of Nirgunam Brahman is totally rejected. But for Advaidin both are accepted as Sagunam Brahman is only the means. If somebody says I accept vishistadvaïdam or I accept Dvaïdam, Advaidins will say it is wonderful and advaidin will not reject and continue vishistadvaïdam and advaidins will say that one day he would come to Advaidam if not in this janma but in the future janma. Therefore *tadananyatvam* you take *tadavayavatvam* it is o.k. This idea Gauda Pada brings out in his Mandukya Karika no 16 that eads as *Asramas trividha hina Madhya motkrsto drstayah upasano 'padisteyam tadartha manu kampaya*. The meaning of the karika is 'on the basis of different degrees of intellectual capabilities such as the lower, the middle and the higher, life itself can be divided into three stages; the scripture out of compassion and consideration has taught this method of worship or discipline for the benefit of those who are not yet enlightened.' Ultimately one has to come to Advaidam it is stated. With this we conclude arambana sutram. Now we will go to the next sutra.

## **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 15. [149]**

***Bhave chopalabdheh***

And [because] only on the existence [of the cause] [the effect] is experienced.

The argument began in Sutra 14 as to how it follows that the effect [world] is inseparable from its material cause, Brahman is continued.

The following sutras also convey the same idea that Brahman is karanam, the world is karyam, and the world the karyam is non-different from karanam Brahman. This is the topic discussed in this and the following sutras. Now Vyasacharya gives further supporting argument, now I will give general analysis.

Here Vyasacharya gives further supporting argument/ he says karyam the effect is non-different from karanam the cause. If karanam and karyam were two separate entity you would have experienced them separately and experienced one even without the other like clip and clock. You can experience the clip without the watch and the watch without the clip. We know of the two one is different from the other. When you come to the pot and clay, we say pot is non-separate from clay. We can never talk about an independent existence of the pot. If pot can independently exist even after the removal of the clay, the pot 'is' the 'is-ness' of the pot belongs to the clay. The pot cannot separate from the clay. You cannot have a separate perception of the pot; this means whenever you perceive whether you like it or not you perceive the clay; pot perception presupposes clay perception. Since the existence of the pot and the perception of the pot are possible only in the existence and the perception of the clay and we conclude that the pot is non-separate from the clay. Try to look at the wave without the perception of the ocean. Both the existence and perception are dependent on existence and perception of the clay. This is the argument given here.

Now I will give you the word for word analysis. Upalabdheh because of the existence; and because of the existence and perception of the effect only during he existence and perception of the cause and the effect is non-separate from the cause. Now I will gie you the significance of the word. Bhava during the existence; only during he existence of the cause the effect exists. Only during the existence of the clay the pot exists; you have to add one more karana upalabdou eva only during he existence of the cause the effect can exist. Cha is a conjunction joining these two; upalabdheh you supply karyasya upalabdheh and also karyasya bhava only during he existence of the cause the effect exists because of these two karyam is non-separate from karanam.

Now Adhi Sankaracharya in his commentary has got another reading for this sutra. The other reading is bhavad ca upalabhdeh. First I will give general analysis of the reading. Vyasacharya says the non-separateness of the effect from the cause is proved by the pratyaksa pramanam itself. Pot is never separate from clay. Cloth is never separate from thread. Wave is never separate from water. Because pratyaksa pramanam itself this idea is proved. You don't require sastra or anumana pramanam. Now you look at the word for word analysis. Bhavad because of the evidence upalabdeh of the evidence of pratyaksa pramanam cha also then complete the effect is non-different from the cause. That is why Vedanta says to perceive that the world you have to perceive the Brahman. Whether you like it or not you all the time perceive Brahman. We perceive Brahman is proved when ever you see a thing two things happen. When you see a clip you come to know of the awareness of the clip and then you talk about the existence of the clip; the awareness belongs to Brahman and the existence belongs to Brahman. The awareness and existence are sat and chit are Brahma darsanam and nama and rupa are the world darsanam. We see Brahman all the time. Nama rupa Prapancha is not separate from Brahman. Experience the world without the sat can chit. It is never possible. Pratyaksa pramanam proves that world is non separate from Brahman.

## **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 16. [150]**

***Sattvaccavarasya***

And on account of the posterior [i.e. The effect which comes after the cause] existing [as the cause before creation]

The argument began in Sutra 14 is continued.

First we will do a general analysis. Here Vyasacharya once again goes to sruti pramanam to prove that world is non-separate from Brahman. We refute that world is not a product of matter and world is non-different from Brahman. Now scripture accept the world existed before its creation. The world did not exist in manifest form but it existed in avyakruta rupam or in un-manifest form or invisible form. Upanishad accept the law of conservation of energy and the matter can never be destroyed even by the god. And the scriptures are very clear that Brahman was karanam for the creation before sristi. Brahman the cause and the world in un-manifest form existed before creation. Brahman and the world existed before. Instead of enumerating two, Upanishad enumerates only Brahman. What is the significance of this? If you analyse you can arrive at that before sristi the world was existence non-separate from Brahman. Therefore Upanishad says world was existent in the form of Brahman. Pot existed before in the form of clay which means it was nondifferent from clay. When we say that world was nonseparate from Brahman before creation from, that we conclude that world is non separate from Brahman after creation, now also. This is the general analysis.

Now we will see word for word analysis. Cha means moreover; attvat because of the existence avarasya of the effect; in the form of the cause before the creation the effect is non-separate from the cause. Now we will see the significance of the word. Sattvat because of the existence; avarasta means karya Prapancha; effect is seen as avaram the later. Effect is called avaram because the effect comes later. This is backed by two sruti statement Chandogya upanisad 6.2.1 and Aitereya Upanishad 1.1.1. More in the next class.

## **BRAHMA SUTRA**

Class 159

### **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 16. [150]**

#### ***Sattvaccavarasya***

And on account of the posterior [i.e. The effect which comes after the cause] existing [as the cause before creation]

The argument began in Sutra 14 is continued.

In the second chapter of Brahma Sutra known as avirodha adhyaya Vyasacharya defends the teaching already presented in the chapter I through samanvaya. By defends we mean that this teaching does not contradict any pramanam. This establishment of pramana virodha abhava is defended. Various purva paksa tried to point out various virodhas and we tried to establish that there is no pramana virodha. By way of this first Vyasacharya established the Vedantic does not contradict any sruti pramanam. In this samkya, yoga, nyaya and vaiseshika sruti were taken, parihara was done, and yukti virodha parihara was negated. After smriti virodha yukti virodha parihara Vyasacharya has entered into pratyaksa virodha parihara. This is being done in 5<sup>th</sup> adhikaranam and also in the 6<sup>th</sup> adhikaranam. We are in the middle of the sixth adhikaranam. As a part of pratyaksa virodha parihara Vyasacharya discusses the status of the world according to Vedantic teachings. Here he says that the world is Brahma karyam. It enjoys the status of being the product of Brahman. Jagatah Brahma karyatvam varthate. This Brahma karyatva status Vyasacharya refines by pointing out that Brahma karyatvam is Brahma ananyatvam. It means that the world is non-separate from Brahman. In Sanskrit it is called ananyatvam. Vishistadvaidin, Advaidin, and Advaidin define this differently. For vishistadvaidin will interpret the non-separateness as the world is part of Brahman; it means the property or the part of Brahman. But in Advaidin nonseparateness means superimposition which is unique approach of Advaidin. In fact, if Adhi Sankaracharya wrote adhyasa bashyam and the source for adhyasa abashyam is arambanadhikaranam. Therefore we will not bother about differences between vishistadvaidin and Advaidin. We will use a common word acceptable to both is non-separateness. The proof to show that the world is nonseparate from Brahman is given in sutra 14 of this chapter. The scripture presents the world as nama rupa only. Once the world is given nama rupa status, it gets the nama rupa status. In the 15<sup>th</sup> sutra Vyasacharya gives out own experience. The experience is that a product is non-separate from its cause. We experience non-separateness of furniture from the wood. The non-separateness from cause and effect is our experience. On the above analogy, Brahman is the cause and world is the effect and world, the effect is non-separate from Brahma the cause. Now the third proof is given in the 16<sup>th</sup> sutra. Here once again Vyasacharya gives the sruti support itself. The world is non-separate from Brahman. Sruti talks about the world before creation. If we understand the status of the world before creation and we can extend the idea after creation also. The sruti vakyam taken into account *sadeva somyedamagra asidekamevadvitiyam* which means this world as we see it with its names and

forms was only existence one without second. The concept of nonexistence is added only to make it clear what is meant by existence. Mantra 1.1.1 of Aitareya Upanishad says *om Atma va idameka evagra asit nanyat kincana misat*. The meaning of the mantra is in the beginning verily Atman [Self] alone was this [the Universe] nothing else active whatsoever. 1.4.10 of Brihadaranyaka upanishad says *Brahma va idamagra asit, tadatmanamevavet aham Brahmasmiti* which means this Self was verily Brahman at first. It knew only itself as 'I am Brahman' because of that it became the entire universe. This is the status of the world before sristi. Idam asit means the world was there. Agre means sristeh purvam. The world was existent before creation. Bhagavan never produces the world. It is said here that the world was in existence before the creation. How was the world existent before creation? Ad eva asit world was existent in the form of Brahman. The world was existent in the form of Atma. Here we have to note that the Upanishad does not say that the world was in existent in Brahman. We should not say world was in Brahman but we should say the world was Brahman. The world is also nominative case and Brahman also in nominative case and both are in samanadhikaranyam. Both have the same case ending. Vyasacharya wants to confirm that before creation world was Brahman. Before creation ornaments were gold. Then Vyasacharya says that before creation world was Brahman should be understood as before creation the world was non-separate from Brahman. Thus, all the sristi vakyam reveals non-separate ness of the world from Brahman. Samanadhikaranyam reveals ananyatvam. Now we will see the word for word analysis.

The sutras has got three words sattvat, cha and avarasya; sat and cha`. Because of the existence of the world in the form of Brahman, the world is non-separate from Brahman. The significance of the words is sattvat, cha and avarasya. Sattvat means sattva sravanat; because of the mention of the existence of the world in the sruti. The Upanishad says idam agre asit, which means the world, was existent before. The word Brahma indicates not only the world was existent but also asat karya vadha is negated. The second part to be focused the world existed as Brahman indicators non-separateness of world from Brahman. Then cha is a conjunction because two reasons were given and now one more reason is given. The next word is avarasya, which means later one or inferior one. In this context we should take it as karyam for the product is always later. Further product is inferior to the cause. Up to this, we saw in the previous class.

Adhi Sankaracharya gives another interpretation to the same sutra. The effect also enjoys eternal existence just as the cause enjoys eternal existence. On enquiry, we see the effect also enjoys eternal existence. This idea is repeated in Bhagavad Gita sloka 8.18 which reads as *avyaktad vyaktayah sarvah prabhavanty aharahame ratryagame praliyante tatrai 'va'vyaktasamjnake* the meaning of the mantra is this very same multitude of existences arising again and again merges helplessly at the coming of night and streams forth into being at the coming of the day. This periodic emergence and dissolution of all existences does not affect the Lord of all existence. The same idea is seen in sloka 28 of II chapter of Bhagavad Gita that reads as *avyaktadini bhutani vyaktamadyani bharata avyaktanidhanany eva tatra ka paridevana* the meaning of the mantra is beings are un-manifest in the middles and un-manifest again their ends. What is there in this for lamentation? He insists the creation exist always. Sristi sthithi laya are accepted in keeping with the confusion of the people. World was there before in un-manifest form; and now it is in manifest form and will be in un-manifest form in future. So never ask why Bhagavan created the world because Bhagavan never created the world. World is eternally existent either in avyakta or vyakta rupa. Brahman is also eternally existent..the world enjoys eternal existent. We study the relationship between the Brahman and world. We have another information, which we have

to apply here. We know the existence is only one from sruti, yukti anubhava pramanam. Brahman enjoys eternal existence; world enjoys eternal existence. There is no pramanam to prove plurality of existence. There is no pramanam, which reveals the plurality of existence. Keeping this information since the existence is one and since Brahman is eternally existence and world is eternally existence and we conclude that world share the existence of the Brahman. This shared existence is possible only if the world is non-separate from Brahman. Two brothers lie down. Both are covered by blanket. Blanket is only one. It is possible only if two brothers in separate room or separate cot and we know that blanket is one and both lie together is proved by the covered-ness and one blanket. Both have existence, both share the existence, and to share the existence they must be non-separate. Moreover, because of the existence in the form of the cause because of the eternal existence of the effect, the effect is non-separate from the cause. Now we will go to the next sutra.

## Topic 6 Arambanadhikaranam [sutras 14-20]

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 17. [151]**

*Asadyapadesanneti chet na dharmantarena akyaseshat*

If it be said that on account of [the effect] being described as that which is not [the effect does] not [exist before creation] we reply 'not so' because the term 'that which is not' denotes another characteristic or attribute [as is seen] from the latter part of the text.

The argument that the world had no existence before creation is refuted.

We will do the general analysis of this sutra. In the previous sutra, we analysed that the world was existent in the form of Brahman before creation. From that statement we derived two ideas that before creation the world was existent and the world was non-separate from Brahman. Of the two ideas we now focus upon the first idea. The world was existent before creation which means the effect was in existence before production. This approach is called sat karya vadha. We had discussed this in Mandukya Karika. Sat karya vadha is effect was existent before creation. This is not accepted by nyaya vaiseshika philosopher. They say that the effect does not exist before its creation. This theory is called asat karya vadha. In the previous discussion Vyasacharya has said the world is in existence before creation. Nyaya philosopher is extremely disturbed and nyaya vaiseshika philosopher pose the question. They say that the world was not existent before creation. In support of this he quotes sruti vakyam. The objection has sruti pramanam also. He quotes II.7.1 of Taittiriya Upanishad *asad va idam agra asit tato vai sad ajayata tad atmanagm svayam akuruta tastmat tat sukrtam ucyata iti* with the meaning 'in the beginning was verily this nonexistence, from that the existent was born. That created itself by Itself. Therefore, it is called the Self-made or the Well-made. The world was non existence before creation. Naiyayika says when the world was nonexistence where is the question of non-separateness of Brahman. Adhi Sankaracharya says asat does not mean nonexistence. The word asat here is used from different standpoint. The word asat means only 'as though' nonexistence. As though nonexistent means potentially existent and un-manifestly existent. When a thing is potentially existent, it does not have any utility at all. Avyavaharyatvad is potentially existent thing. For example in all waterfall electricity is potentially existent and as long as electricity is existent what is the use to us unless we have hydro electric projects. The potentially existent electricity should be made useful by having a

hydroelectric project and in the absence of any project; the electricity potential is no use to us. Similar when milk is there ghee is potentially there. We say milk is there but we do not say ghee is there. So also, in the case of clay pot is potentially there but we say clay is there and we do not say pot is there. To put it in another language the pot is potentially there which we call it 'as though' pot is existent. Potentially existent world is termed as though existent. Asat means potentially existent. Purva paksa asks the question why do you interpret potentially existent and why do not you say it is not existent. For this Vyasacharya says that the latter statements support my interpretation that asat is potentially existent. Adhi Sankaracharya says patiently study the Upanishad. Tad atmanam svayam ahruta this is the statement. Asat was there before creation; that asat transformed itself into the world. Tad atmanam itself ahruta transformed itself into the world by itself; Adhi Sankaracharya says that if asat means nonexistent how can nonexistence transforms itself to something. Abhava cannot do any job much less transformation of itself and if it is to transform itself, it has to be potentially existent to transform itself into manifest world. Therefore asat means not nonexistent but potentially existent. This is the general analysis and the word for word analysis we will see in the next class.

## **BRAHMA SUTRA**

Class 160

### **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 17. [151]**

***Asadvyapadesanneti chet na dharmantarena akyaseshat***

If it be said that on account of [the effect] being described as that which is not [the effect does] not [exist before creation] we reply 'not so' because the term 'that which is not' denotes another characteristic or attribute [as is seen] from the latter part of the text.

The argument that the world had no existence before creation is refuted.

We see the 17<sup>th</sup> sutra which is a part of arambanadhikaranam which gives the karana karya sambandha between jagat and Brahman. The significance that is revealed in this adhikaranam is that karana karya sambandha means karya karana anyatvam that karya does not exist separate from karanam. We karya is adhyasam and karanam is adhistanam. Satya anrita sambandha is also extracted from anyatva sambandha is presented in his introduction as adhyasa bashyam. While establishing this anyatva sambandha Vyasacharya uses a sruti statement 16 that the world existed before creation but before creation also the world is non-different from Brahman. Anyatvam is not only sristi and this state continued before sristi and the anyatvam existed before sristi should be extended after sristi. Both before sristi and after sristi the world existed in Brahman. Before sristi it was in un-manifest form and after sristi the world exist in manifest form. The difference in manifestation and un-manifestation and in both condition the world is non-different from Brahman. One is the world existed and it existed it was non-different from Brahman. When this idea was revealed the nyaya philosopher got disturbed. He forgot the primary discussion the world is non-different from Brahman. The world was existent before sristi and the existence was non different from Brahman. When we say that the world existed before sristi is called sat karya vadha. The sat karya vadha is a red raf for nyaya philosopher because he is a asat karya vadhi. For him before creation the world was nonexistent. So he asks why when the world is nonexistent before creation why talk of whether the world was potentially existent in Brahman. For this he quotes a statement asat va idam agra asit. On this sruti statement, Vyasacharya gives the answer in sutra 17. I will give you the meaning of the word and the significance of the sutra.

Asat vyapadesat because of the expression asat in 2.7 of Taittiriya Upanishad that is brahmananda valli. The effect is nonexistent before the creation; itichet if it is argued thus; na it is not so; dharmantarena the expression asat is used in Taittiriya Upanishad from another standpoint. Vakya seshat this is evident from the following portion of Taittiriya Upanishad 2.7. This is the running meaning of the sutra.

The significance of the word is asat vyapadesat vyapadesa means expression, statement etc. The expression asat; it means because of the expression asat. This is the quotation of nyaya philosopher. This occurs in Taittiriya Upanishad. The conclusion he arrives at is na it means

negation; the question is what is negated by naiyayika philosopher is that he negates the world before creation; naiyayika negates because in the previous sutra Vyasacharya used the word saying that world existed before sristi. Up to this is purva paksa. Iti chet is siddhanta statement. If nyaya says such an argument Vedantins say that he negates naiyayika argument; he negates because he says dharmantarena it means to complete the idea you complete and say asat expression is given from another standpoint; word asat can be taken from two standpoint; naiyayika standpoint should not be taken and another standpoint should be taken. Normal standpoint is asat means nonexistent. Normally the word sat and asat are used from the standpoint of existent. Naiyayika unfortunately takes the normal meaning and translate asat as nonexistent. Adhi Sankaracharya says that the word sat does not denote the existent at all and the word sat means 'as though' existent which means 'potentially existent' before sristi. It is from the standpoint of manifestation and unmanifestation; sat means manifest universe and asat means un-manifest universe. Why say un-manifest universe is asat? For this Adhi Sankaracharya says the Upanishad uses the word asat because any un-manifest thing is not useful to us. What is not available for transaction purposes. A child in womb is not taken for census purposes but immediately one hour afterward if when the child is born it is taken for census purposes. This indicates un-manifest state of the baby before birth and manifest state of baby after birth. Then comes the word vakya seshat. I said asat can either indicate a non-existent thing or un-manifest thing. Naiyayika took nonexistent meaning and we have taken un-manifest thing. Now naiyayika may ask when both meanings are possible why cannot you take the popular first meaning. So Vyasacharya says that the context demands the second meaning that is determined vakya seshat the latter statement in Taittiriya Upanishad tad atmanam svayam ahruta. There tad atmanam svayam ahruta that asat transformed itself into the universe. From this we understand if the asat is nonexistent how can nonexistent entity can transform itself into universe. Our standpoint is that the un-manifest universe before sristi got transformed itself into manifest universe. Therefore the world was existent before sristi and it was non-different from Brahman also.

## **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 18. [152]**

***Yukteh sabdantaracca***

From reasoning and from another sruti text [the same is clear. This relation between cause and effect is established].

That the effect exists before its origination and is non-different from the cause follows from reasoning and from a further scriptural or another text of the Vedas.

First we will do the general analysis of this sutra. Here Vyasacharya negates the asat karya vadha of nyaya philosopher. In the previous sutra itself Vyasacharya negated asat karya vadha with sruti pramana. Now in this sutra asat karya vadha is logically negated. Adhi Sankaracharya considers this a very significant sutra. Negation of nyaya philosopher is a difficult job. Only when all the five darsanams are negated the Vedanta can get the medal. Any darsana negation is important. Adhi Sankaracharya writes a very elaborate bashyam on this sutra.

To understand the negation you should know what is meant by *asat karya vadha*. This I discussed elaborately in *Mandukya Karika*. *Asat karya vadha* is any effect is nonexistent before its production. Thought is nonexistent before it is produced. *Sat karya vadha* is any effect is existent before its production. *Nyaya naiyayika* philosophers give out *Asat karyavadha* and *Vedantins* negates *asat karya vadha* and joins *sat karya vadha*. By *asat karya vadha* negation we accept *sat karya vadha* and then we negate *sat karya vadha* and we talk about *adhyasa vadha* or *ajadi vadha* is sued. Our present job is negation of *asat karyavadha* and establishment of *sat karya vadha*. There are six arguments to negate the *asat karyavadha*.

*Visesha karana upadanat* is the first argument. Now we ask the question before the pot is created whether the pot existed in the clay or not. We say that pot existed in the clay in the potential form and the potter brings the potential form into existent thing. However, the *naiyayika* argues that the butter did not exist in the milk and it is freshly created product. We say that if you say if the butter did not exist in milk, whether it existed in the sand, wood, milk or water. In all of them, the butter is uniformly nonexistent. Why should a person go to milk to create butter? If you can produce butter from milk in which butter is nonexistent, why cannot you churn oil, sand or anything other than the milk? Even though butter is nonexistent in all the things including butter as per the views of the *naiyayika*, philosophers why we choose milk to churn out butter. There is some specialty in milk to give butter by churning and that special quality we call it potential existence of butter in milk in un-manifest form. In that *karanam* some specialty is there and that specialty we call potential existent. When I want oil, I go to the oilseed where alone the oil is there in potential form. This we call *visesha karanam*. Specific cause we take for specific effect. Specific effect exists in potential form in the specific cause. *Adhi Sankaracharya* has not presented in this exact form. Now you say that the nonexistent pot is born out of clay because of the operation of the potter. Similarly nonexistent butter is born out of milk. This argument is purely grammatical argument. The pot originates is the sentence. *Adhi Sankaracharya* asks the question and any sentence should have the subject and verb should be there. Subject can be openly mentioned or otherwise. Verb represent a *kriya* and it requires a *karta*. *Adhi Sankaracharya* says my dear *naiyayika* the statement is nonexistent pot originates. Subject is nonexistent pot. If you say a nonexistent pot means it does not exist which means the subject of the sentence is nonexistent. When nonexistent pot is the subject, the subject is nonexistent. My question is when the subject itself is nonexistent how can there be origination an action. How can there be an action without a subject which is nonexistent.

Then comes the third argument which takes to definition of origination accordint to *naiyayika*. A particular definition of creation is negated here. The pot was nonexistent and it did not enjoy the existence. When the potter creates a pot a new mechanism takes place. That is the pot was originally nonexistent. When the pot started doing something, nonexistent pot became an existent pot. The clay is existent. He says the caly has the existence all the time even before. At the time of potters' operation the nonexistent pot because of the association of *karana satta* the nonexistent pot gets existence. All because of the association with *karanam*. Then *Adhi Sankaracharya* calls the *naiyayika* as fool and he asks you say at the time of potters operation the nonexistent pot gets associated with existent clay. How can a nonexistent port get associationship with the existent clay and because of the association the nonexistent pot get existence. Any association is possible between tow existent things. Between two existent thing *sambanda* is possible. But *sambanda* between one nonexistent thing and another existent thing is not possible. This is the third argument.

Next is teasing argument. Naiyayika says karyam was nonexistent before and came to existence later. Before its production there was nonexistent pot only. Adhi Sankaracharya says in this idea you connect with nonexistent pot with the past time. Now the pot is existent. Purva kala sambanda abhavad. Any sambandha relation is possible only between two existent things either in the past, now or later. The pot was nonexistent is itself is wrong.

Now we will go to the fifth reason. In sat karya vadha we say that the butter is existent in potential form. So we do the operation with the milk. The churning process is called karaka vyaparah. It is operation in the cause. It is operation in the cause in which the milk is potentially existent. By that operation the un-manifest product comes to manifestation; unmanifest nama rupa in the clay takes the manifest nama rupa. Adhi Sankaracharya asks in asat karyavadha there is no operation on the milk because the milk does not contain butter the nonexistent thing. As the churning the sand is utterly useless to get milk, so also it should be that milk churning should not give butter. The naiyayika may say that the nonexistent becomes existent with the help of the operation. How can there be any operation on the nonexistent pot. Operation on the clay is useless and operation on nonexistent clay is useless.

Fifth and final argument is that the universe exists in potential form non-different from Brahman. Only if world is there non-different from Brahman can be Brahma vijnanena sarva vijnanam bhavati. In asat karyavadha the cause is different and karanam is also a new product and how can the nonexistent karanam give effect to the existent karyam just by any operation. In karana karyam is not in potential form. Kaya is a new product. If karanam and karyam are different, by karana jnanam karya jnanam is not possible. Because of the six reasons, asat karyavadha is not correct and we conclude that world existed in un-manifest form and manifest form after creation. In both the cases the world remained non-different from Brahman.

## **BRAHMA SUTRA**

Class 161

### **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 18. [152]**

#### ***Yukteh sabdantaracca***

From reasoning and from another sruti text [the same is clear. This relation between cause and effect is established].

That the effect exists before its origination and is non-different from the cause follows from reasoning and from a further scriptural or another text of the Vedas.

We now see the 18<sup>th</sup> sutra occurring in arambanadhikaranam. It is primarily clarifying karana karya sambandha obtaining between the universe and Brahman pointing out that karana karya sambandha is ananyatva sambandha. We have seen this as sathya mithya sambandha or adhyasa adhistana sambandha. While doing so Vyasacharya has taken a diversion in which he negates the asat karyavadha of nyaya and naiyayika philosophers. Asat karyavadha means the effect does not remain in the cause before production and since the effect is not there in the cause, the effect is new production. According to asat karyavadha new substance is created and that is why asat karyavadha is called aramba vadha. Adhi Sankaracharya strongly condemns the asat karyavadha and he gives six main reasons in his bashyam against asat karyavadha's views. Because the word yukteh means reasoning, because of the reasoning the asat karyavadha does not stand scrutiny. Adhi Sankaracharya also discusses one more technical topic. The topic is that asat karyavadha points out that pot is a new substance created and he says that pot comes to existence as a new substance and hence asat karyavadha accepts that there are two distinct substances the causal substance clay and the new thing created pot. But Advaidins say that the cause and effect are one and the same, asat karyavadha says that cause and effect are two one old substance clay and new substance created is in the form of pot. Only one is in un-manifest and the other is un-manifest substance. We say that before production the substance is in un-manifest form and after production, the things come to manifest form and the change from un-manifest to manifest form we call as sristi or production. This is advaidin's point of view. But asat karyavadha says that there are two substances one before production in the form of clay and the other new substance created in the form of pot. He calls the cause as karana dravyam, which was there before production and he calls the pot as karya dravyam, which came to existence after the operation of production, and therefore he accepts karana dravyam and karya dravyam and clay, is different substance and pot is a new different substance. He calls karana dravyam as avayava dravyam and calls karya dravyam avayavi dravyam. I mention the names that Adhi Sankaracharya uses these names in his commentary. Since naiyayika uses two substances naturally, he has to talk about their relationship. In our vision, there is only one dravyam and we have no relationship at all. In Advaida we need not talk about relationship at all. In nyaya philosophy there is samavaya philosophy or in English we call it inference. Avayava avayavi dravya madhye samavaya sambandha is naiyayika concept. Adhi Sankaracharya in his

commentary heavily criticizes this samavaya sambandha and he calls it most illogical concept of logicians. It shakes the foundation of nyaya philosophy. Every darsanam has a foundation stone. The foundation stone of Advaita is adhyasa. All the other people try to attach the adhyasa. For vishistadvaitam the foundation stone is parallel to samavaya apritak siddhi. Adhi Sankaracharya says that there is no logical support for samavaya. With this yukteh part of the sutra is over.

The second part of the sutra is the negation of asat karyavadha by the sruti. Naiyayika introduced a sruti quotation in his argument in sutra 14. He points out that the world was nonexistent before creation. Asatva idamagra asit is the quoted sruti. Adhi Sankaracharya quotes another sruti quotation 6.2.1 of Chandogya upanishad. Here Upanishad clearly says that this world was existent even before sristi. Having said this much Veda visualizes the naiyayika philosopher coming later. Veda says taddeha ahuh idam agra asit which means that some people think asat eva idam agra asit that the world was nonexistent before sristi. Veda quotes nyaya philosopher as purva paksa and Veda itself answers that how can the people have such a philosophy and the Upanishad says that it is not true and never say that the world was nonexistent before and the world was existent before. Then we will not blame Bhagavan also. Bhagavan never created the world. The world was and the world is. Sruti itself change the word from 'asat to sat'. Chandogya Upanishad says the world was not asat before and was sat only. This is the general analysis of the sutra. Now I will take up word for word analysis.

Yukteh from reasoning ca sanda antarata and other sruti statements then complete the sentence the existence of the effect before the creation and its non-separateness from the cause are established. Now we will see the significance of the words. Yuketh means reasoning and by reasoning we mean the six reasons I discussed in the last class; sabdantarata means by other statements; when you say another statement you must have one statement in mind; another with regard to what; naiyayika quotation asat eva idam agra asit is a confusing quotation which was seemingly supporting naiyayika. This I mentioned in the previous sutra. It is a confusing statement and because it is confusing sruti makes it clear sadeva soumya idam agra asti iti Chandogya upanishad vakyam. General vague sruti statement should be understood with clear sruti statement. Thus it refers to sruti pramanam. Cha is the conjunction just the combination between yukti and sruti pramanam. Because of sruti and yukti pramana asat karyavadha is untenable and our vadha alone is correct. More about asat karyavadha we find in Ghata bashyam of Brihadharaynaka upanishad. The statement is naiva iha kincana idam agra asit of Brihadharaynaka upanishad. The difference between naiyayika and sunya vadha is this. Before creation the effect is not there but the cause is there whereas sunyavadhi says before effect as also the cause was not there. Naiva eva kincana agre asit. Sruti seems to support both naiyayika and Buddha. So Adhi Sankaracharya wrote a big bashyam on this topic. He take the example of pot in this bashyam. Ghata dristanta bashyam. Here asat karyavadha is negated more elaborately then here. Now we will go to the next sutra,

## **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 19 [153]**

***Patavacca***

And like a piece of cloth

An example in support of sutra 17 is presented.

I will give you the general analysis on this sutra. Here Adhi Sankaracharya comes back to the main discussion that an effect is not a new product and the effect is non-different from the cause which itself is manifesting itself. Nothing is created. Brahman alone appears it is said. If effect is non-different from the cause why give two separate names. Why use two words karanam and karyam. If one substance is there why use two separate words. We say that superficial differences are there we do agree. One is in the very appearance. And differences in measurement are there. In karanam it is in un-manifest form and clarity is not therein the form. When the baby is small we cannot say how it will look like when grown up. Karanam aspastam karyam spastam. Spasta aspasta rupa superficial differences are there. Similarly second difference is parinama beda the measurement. Seed is small dot but the karyam the tree is very big. It stretches and extends. The difference in measurement is second superficial difference. Alpa mahatva bedah vartate although both are of same substance. The person is one and the same although he undergoes changes from baby to an old man. Vyasacharya gives cloth example. Cloth has got two states vestitha patah folded cloth and vistita patah means unfolded cloth. Are there differences between the folded and unfolded cloth. He says there are superficial differences and not real difference. When folded you know what type of fabric it is. Spastatvam and aspastatvam is there and this you know when it is stretched out. The second difference is parinama beda the measurement differences. Folded one is smaller and unfolded cloth has got larger measurement. Folded cloth has got limited parinama. Even though parinama beda is there we know both are one cloth only. In the same way Brahman alone is world and world alone is Brahman. Folded world is Brahman and expanded Brahman alone is the world. In pralya kala I fold and in sriti kalam I unfold. This is the general analysis of the sutra.

I will give the word for word analysis. Patavat just as the unfolded cloth is non-different from the folded cloth cha so also the effect is non-different from the cause. Interestingly Adhi Sankaracharya makes point. Because of the superficial differences, when the baby is small it is your child and when grown it is not your child. In fifth year it is your baby and in 50<sup>th</sup> year it is not your baby. So Adhi Sankaracharya says to naiyayika not to take the difference seriously. Patavat means like a cloth. When Vyasacharya says like a cloth unfolded and folded forms. Cha means conjunction so also karyam and karanam are essentially one.

## **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 20 [154]**

### ***Yatha cha pranadi***

And as in the case of the different pranas or vital airs

Another illustration in support of sutra 17 is given.

Here the Vyasacharya's aim is to show that the effect is non-different from Brahman He gives another example and as the karanam is in potential form ti cannot do all the functions and karyam can do all the functions. The functional differences re also superficial only. Lump clay cannot be used for carrying water. But when clay is made as pot it can be used to carry

water. Thus function is there in karyam but it is not there in karanam. If you see in terms of function or utility, the shocking discovery is Brahman is not useful for anything but the world has got maximum utility. Vyasacharya shows the functional differences being essentially one. He gives the example of panca pranas. Nirutta and anirutta avasthas are discussed. It is unrestrained state or operational state. Even though prana is the same, in nirutta avastha its function is minimal. When one is in meditation, the heartbeat etc., is minimal. In the case of animal, when it goes into hibernation they appear to be dead and after six months of severe winter gets life and be active. They are barely alive and it is the function of nirutta prana. When the very same prana is activated after nirvikalpaka samadhi the prana becomes fully operational and its function is sarva vidha vyaparah. Even though functional differences are there pranah ekah and Brahman is like nirutta prana and world is anirutta prana.

Now I will give you the word for word analysis. Yatha pranadi like unrestrained pranas are non-different from restrained prana. So also the effect is non-different from the cause. The difference from the previous sutra and this sutra is in the previous sutra parimana beda is shown and here superficial beda is shown on functional basis. In spite of superficial differences, the substance is the same. With this arambana adhikaranam topic is over. More in the next class.

## **BRAHMA SUTRA**

Class 162

### **Topic 6 Arambanadhikaranam [sutras 14-20]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 20 [154]**

#### ***Yatha cha pranadi***

And as in the case of the different pranas or vital airs

Another illustration in support of sutra 17 is given.

We have completed the sixth adhikaranam. Yet there is an alternative reading of the 20<sup>th</sup> sutra also. It can be read as pranadih. There is no difference in the final meaning whether pranadi or pranadih. There is no difference in the final meaning.

The significance of this adhikaranam is that the karana karya sambandha obtaining between Brahman and jagat is clarified in the form of adhyasa adhistana sambandha.

From this it is clear that Brahma parinama vadha is acceptable as an intermediary level of teaching. Brahma vivartha vadha is the ultimate teaching. We give three statements; the statement number one is God creates the world statement number two is God becomes the world; the third statement is the God appears as the world. The first one is for mandha adhikari; the second one is for madhyama adhikari and the third one is for uttama adhikari; in the first one we see Brahman as the nimitta karanam; in the second we see Brahman as parinama upadana karanam and in the third statement one we see Brahman as the vivartha upadana karanam. In the first one Brahman and world are equally real it is called dvaidam and in the second one also Brahman and the world are equally real and it is called vishistadvaidam and the third one Brahman is more real than the world which we call Advaidam. Whether we take the Brahma parinama or vivartha vadha the same purva paksa is negated in both the vadhas purva paksa being pratyaksa virodhah have been negated. . There can be empirical plurality and the adhistanam is one and the same. The doubt in all the adhikaranam is samanvaya is established or not or whether it is valid or not aor whether it is acceptable or not; purva paksa uniformly argue samanvaya asiddhah; the reason is uniform virodhah because of contradiction. It will be either sruti virodha, or smriti virodha or yukti virodha or pratyaksa virodha. Siddhanta will say samanvaya siddhah. Samanvaya siddhah avirodhah is the argument of the siddhantins. Argument. Noncontradiction is established nu the siddhantins.

### **Topic 7 Iaravyapadesadhikaranam [Sutra 21-23]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 21[155]**

### ***Iaravyapadesaddhitakaranadidoshaprasaktih***

I will introduce this adhikaranam. It is a small adhikaranam with three sutras, here also there is a general objection to the Vedantic teaching. They say Vedantic teaching seem to be most funny and absurd teaching. To show the seeming absurdity of teaching he brings four main features of the Vedanta and show how funny it is. We will take those four statements which he presents to show the absurdity. You say Brahman is the creator of the world of problems ahiveivika, Adhyatma, adhi boudhika problems. The commentators say the hells are also part of the problems. Then the Body Mind Complex problems janma, mrithyu jara problems. We can say that general Brahman is the creator of all the problems.

Second statement is that the Vedanta accepts the problems and talks about the moksa and liberation. Jiva experiences the world of problems

Third main teaching of Vedanta is Brahma and jiva aikyam quoting the support of sruti statements. This is the third statement, which is acceptable to Vedanta.

The fourth statement is Brahman creates problem; jiva experiences the problems jiva and Brahman are identical. Hence Brahman creates problems for itself. Purva paksa asks can there be anything more absurd than this. Why create problems for oneself. No one deliberately create problems for oneself. Problems can be due to some conditions. I may be forced to do some action, as I am the control of someone. Or out of ignorance a person may create problems for oneself. Or out of limited power one may create problem for oneself. Many people want to get out of some habits but may not be in a position to get out of it. What about Brahman. Brahman is swatantram Brahma; Brahma is sarvasaktiman how can the independent omniscient and omnipotent Brahman create problem for oneself. There is something serious about it. They say prakriti should be the cause is purva paksa's view. This is the essence of the first sutra.

Now I will give you the word for word analysis. *Iaravyapadesat* because of the oneness of jiva with Brahman *hita akaranadi doshaprasaktih* there is a possibility of defects like causing harm to oneself. The first word is *itara vyapadesat* the word itara means jivah; in this context, jiva refers to jiva aikyam. That means oneness with Brahman. *Vyapadesat* means teaching; because of the teaching that Brahman jivah aikya *pratibadanat*. This much alone is given by purva paksa here. Absurdity comes in the next part of the sutra. It causes harms to oneself that is Brahman itself. Isvara is causing harms to itself. Brahman creates problem. Brahman himself as jiva suffers. It is ridiculous. You describe Brahman as sarvajnam yet why should he suffer and such a thing is absurd in Vedantic teaching. Brahman is injuring himself. Ahita karanam dosha is pointed out here by the purva paksa. Itara vypadesat the teaching of the aikyam you said. It is tat tvam asi. Vyapadesat refers to the maha vakyam. Siddhanta's reply is in the next sutra.

### **Topic 7 Iaravyapadesadhikaranam [Sutra 21-23]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 22[156]**

### ***Adhikam to bhedanirdesat***

But [Brahman, the creator is] something more [than the individual soul] on account of the statement in the srutis of difference between the individual soul [and Brahma]

The objection raised in sutra 21 is refuted.

I will give you the general analysis of the sutras. Vedantins says that your statement is all right. If you look at superficially, you are correct. If you study properly then you will know that you are wrong.

Statement number one is Brahman creates the world of problems Adhideivika, Adhibootha and Adhyatmika problems. Further, the jiva experiences the worldly problems. Now Advaidins ask the question the first and second statements are accepted totally in which levels of reality. We have many of realities such as Paramarthika, vyavaharika, pratipasika, etc. As long you don't know this there will be problems. The first two problems are vyavaharika level. Jiva experiences the problems and this is also vyavaharika problems. From Paramarthika there is no problems at all. Neither creates nor jiva is the experiencer of the problems. You have made two statements from vyavaharika angle. The third statement is jiva Brahma aikyam and Advaidin should be careful that jiva Brahma aikyam is a fact at Paramarthika level which you have unfortunately mixed up with vyavaharika level. In keeping with first and second statement, my statement would be is that jiva is different from Brahman because Brahma is sarvajna and jiva is alpajna; Brahman has sattva pradhana upadhi jiva is rajo pradhana upadhi. The fourth statement is that we cannot say Brahman is creating problem for itself only when Brahman and jiva are identical. Brahman and jiva are different from vyavaharika level and therefore Brahman never suffers and they are poles apart from vyavaharika dristi and jiva suffers the problems of his own making dur to punya papa karma. The mistake is mixing up of the degrees of reality. And therefore let us know that Brahman is superior to jiva and jiva is inferior to Brahman. When we talk about vishistadvaidam and Dvaidam we talk at the level of vyavaharika plane and join with them. I am a wave of who am a part of you and I am not part of the whole so Adhi Sankaracharya says in one of his sloka. Wave belongs to the ocean and ocean does not belong to me. When you come to the Paramarthika there is no part or the whole Adhi Sankaracharya firmly refutes in Mandukya Upanishad says that you are Brahman yourself. Thus he says there is no absurdity in the statement. Now we will go to word for word analysis.

Tu indeed; adhikam that superior Brahman is the cause of the universe; beda nirdesat because of the sruti's mention of its difference [Brahman's] from the jiva. This is the running meaning; the word tu indicates the negation of the purva paksa of absurdity given in the previous sutra. Adhikam means superior it means superior Brahman; that means jiva is inferior in the context of creation. Never talk about jivatma and Paramatma aikyam when you talk at vyavaharika plane. Therefore superior Brahman creates and superior Brahman does not suffer. The inferior jiva alone suffers and inferior jiva never creates. The creator is different from jiva and the creator and sufferer are different and where is the question of absurdity. Beda nirdesat means because of the sruti's mention of jiva Brahma beda Chandogya upanisad Mantra 8.7.1 says Brahman is the goal to be achieved and you are the sadhaka. Then question will come what do you say? Sometimes you say jivatma and Paramatma aikyam. Then you say in sometimes call Jivatma Paramatma beda. What exactly you want to say? Here you say *bedanirdesat*. In some places, you talk of *aikya nirdesat*. Whenever you talk of jiva aikya beda, you are at the vyavaharika level and whenever you talk

of aikyam you are at the Paramarthika plane. The very goal of Vedanta study is aimed at raising the jiva from the vyavaharika level to the Paramarthika level. From vyavaharika plane jiva is sufferer and Isvara is the creator. This is from vyavaharika dristya. Form Paramarthika there is no beda at all. Hence, there is no absurdity in my teaching. More in the next class.

## **BRAHMA SUTRA**

Class 163

### **Topic 7, Iaravyapadesadhikaranam [Sutra 21-23]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 22[156]**

#### ***Adhikam to bhedanirdesat***

But [Brahman, the creator is] something more [than the individual soul] on account of the statement in the srutis of difference between the individual soul [and Brahma]

The objection raised in sutra 21 is refuted.

Here Vyasacharya answers the general objection given to the Vedantic teaching as to the problems by accepting Brahman and jivah are identical. Why should Brahman creates the world and suffer all problems in the form of jivah is the first question raised by the purva paksa. Brahman can avoid because Brahman is sarvajnan. This purva paksa calls ti hita aharati dhosa. It causes harms to Brahman himself. Here ahita harana adhi dosha which I will explain now. Adhi means etc. What do we mean by etc. First creating the world problem is the first defect, why should Brahman create aging, the body that is prone to sickness; why should Brahman choose to enter and identify with that body? Is the second dosha? At least after seeing the problem Brahman can choose to come out of it. Even after seeing that the body has got all problem why should he continue to be with that body without getting out of it. Brahman seems to continue is the third dosha. Brahman forgets that I am sresponsible for the whole dristi and how can that Brahman his own creation. Therefore dismarana dosha. Finally, delusion and confusion caused by sarira abhimana dosha is there. Another dosha is seeing one particular body is problematic why cannot Brahman replace that with another body. All these thing Brahman could have done when Brahman is jagat karanam. Then something is wrong in jivatma and Paramatma aikyam. Why not all these doshas be removed being Brahman as omniscience, omnipotent and omnipresence.

For that our answer is once we come to creation, we should look at the creation at vyavaharika plane. From Paramarthika distya there is Brahman and jivha. Aikyam. Brahman in vyavaharika dristi is called Isvara. Brahman's name at bome is Brahman. Brahman when he comes to office the body, he is called Isvara. Isvara is the creator, Isvara is karma phala dada, jivah is alpajnah, and he is sufferer of all the karmas. Thus tere is n o absurdity as claimed by the purva paksa.

### **Topic 7, Iaravyapadesadhikaranam [Sutra 21-23]**

**The world [effect] is non-different from Brahman [the cause].**

**Sutra 23[157]**

### ***Asmadvacca tadanupapattih***

And because the case is similar to that of stories, etc., [produced from the same earth], the objection raised is untenable.

The objection raised in stura 21 is further refuted.

In the previous sutra we pointed out jivatma and Paramatma aikyam is from Paramarthika standpoint and Jivatma Paramatma beda is from vyavaharika dristi. One Brahman appears as vyavaharika jvah and vyavaharika Isvara. One Advaidam Brahman appears as alpajna jiva and sarvajna Isvara and jada Prapancha. Jiva jagat Isvara is there in vyavaharika plane. Ekata eva Brahmanah appear differently as jiva, Isvara jagat. All the three are three extremes. Three are widely different is jiva with limitations, Isvara the sarva saktiman, omnipresent, omniscient and omnipotent; jagat the achetana vasthu but the adhistanam of all the three is but one Brahman. It is not impossible in the world we see such examples. The example Vyasacharya gives is this. One earth appears in the form of worthless stones; the very same earth appears as precious stone the diamonds and gems, vajra rupena, etc., the diamond also is carbon and the coal is also carbon because some structural change one is costly jewell and the other is carcoal. Similarly, jiva is worthless one and Isvara the costly one. This is the general analysis of the sutra. Now I will give you the word for word analysis.

Cha means moreover; asmadvat as in the case of ordinary and precious stones tad anupapattih the objections are unreasonable. The first word is asmadvat is a precious stone like diamond etc., vat means like that; one earth appears like manifold stones ordinary and precious; cha Adhi Sankaracharya takes the word cha as an indication of further supportive causes. We have other supportive causes in support of one Brahma appearing different things like jiva, jagat and Isvara. First one is pratyaksa anubhava. Whether Brahman can appear or not cannot be decided by logic. You should not take the worldly example. Take sastra pramanam. Then another mantra is 2.2.12 of Kathopanisad even though he remains as one Brahman he himself appears as small bacteria and Hiranyagarbha the greatest. If Brahman is actually divides itself into three you can ask how can this be possible more so when Brahman is indivisible; but here Brahman apparently appears in many forms just as the rope apparently appears as the snake. Here neither the snake wishes to appear as the snake not it changes itself into a snake for the time being but the snake appearance is solely due to the ignorance of the beholder the jiva. How can this change in appearance be blamed on the rope; so also Brahman appears as in many forms not because Brahman changes himself but due to the ignorance of the beholder or experiencer of Brahman? The third reason is swapnavad sambhavat. In swapna we divide ourselves into many without actually diving ourselves. We ourselves become subject object we get angry etc. The three additional support is indicated in the word cha. Tad anupapattih dosha anupapattih anupapattih means it is not possible; the defect mentioned by Purva Paksi is not there and it is not possible. With this the 7<sup>th</sup> adhikaranam is over. Now we enter the 8<sup>th</sup> adhikaranam.

### **Topic 8, Upasamharadursanadhikaranam [Sutra 24-25]**

**Brahman is the cause of the world.**

**Sutra 23[157]**

***Upasamharadarsananneti chenna kshiravatddhi***

An objection that materials are necessary for the creation of the world is refuted.

First I will give you the general introduction to this adhikaranam. This is a small adhikaranam with two sutras only. Here another general objection is answered. Specific objections were answered in the earlier sutras. Now general objections given by anyone is answered. In Vedanta Brahman is said to be jagat karanam. What type of karanam is Brahmanam. Is it material cause or upadana karanam. It is this aspect of Vedanta which is objected and answered by Vyasacharya. Here purva paksa assumes that Brahman is upadana karanam and raises an objection. In the 25<sup>th</sup> sutra purva paksa takes Brahmaa as nimitta karanam and we answer both of them. Now we will see the general introduction to this sutra. In the first sutra purva paksa assumes Brahman is upadana karanam and raises an objection and in 28<sup>th</sup> sutra purva paksa assumes Brahman as nimitta karanam and purva paksa raises an objection.

Now we will enter the general analysis of this sutra. Purva Paksi says that let us assume that Brahman is the upadana karanam and he says that normally that no material ever becomes a product by itself and it requires many accessories to become a product. Among the accessories a carpenter is required and also the instrument are involved in the material wood to become a product the furniture. If you say Brahman is the material and how can that Brahman without agent and without instrument made use of by the agent make a product. Upasamhara means conclusion but here it is used in the meaning of employment of accessories. Upasamhara means taking to resorting to something to get something done. The material becomes a product after employment of accessories. Vyasacharya answers by giving an example. He categorises the material cause into two types. One is which does not have intrinsic or natural capacity to become a particular product wood, cotton or gold etc. One has to produce that particular effort to convert the material into a product. Another material cause has the intrinsic capacity to become a product. The milk becomes curd and a person need not know the chemical changes that convert the milk into curd. You don't require skill and extraordinary knowledge to convert milk into curd. The addition of something is not your conversion but you induce the conversion sakti for the milk to convert it into curd. The transformation sakti to become curd is already there in the milk, we need not do anything except adding a portion of curd in the milk, and the milk automatically becomes curd after some time. Similarly, Brahman has that extraordinary and natural power to convert himself into jagat and that power we call in Vedantic language as Maya sakti. Therefore, do not take Brahman like wood or gold and compare it with the milk. Then there is another problem. When an example is given, the perverted brain will quote the example to places where it is not applicable. Every example has some thing uncommon to the original. He is a lion means there is some sadharmiyam and vaidharmiyam. In majesty, he is like a lion; this is called sadharmiyam. Vaidharmiyam is he does not have manes. He walks on the four. Where the milk example should be extended to mention the swabhavika sakti or the intrinsic sakti the milk has to convert itself into milk. In the case of milk even though the intrinsic sakti is there we use some external inducement to activate or induce the sakti to convert itself into curd. Here an inducer is required to activate the power. In the case of Brahman, the intrinsic power is there and you need not do anything to induce Brahman to convert itself into jagat. However, Brahman does not require anyone induce to convert himself into jagat. When Brahman converts into universe and it is not parinami karanam and it is vivartha karanam. There you require something to induce to convert the intrinsic power to become jagat. That intrinsic power of Brahman we call as maya. In the case of the milk also the milk has got the intrinsic power to convert itself into curd but it requires an inducer to help the milk to convert

itself to curd. Thus you do not extend the example. What is common to both milk and Brahman is that both have got the power which we call maya sakti. This view is expressed in II.K-12 of Mandukya Upanishad that reads as *kaplayaty-atmana''tmanam Atma devah sva mayaya sa eva budhyate bhedan-iti vedanta – niscayah* the definition of this karika is this the definition conclusion of the Vedantic philosophy that the Atman, the Self luminous, through the power of its own delusion [maya] imagines in itself by itself all the objects, and its individual existences both in the world outside and within. It alone is the knower of the objects so created. This is the first sutra tasmāt Brahman is upadana karanam and he does not require no agent or no instrument and because of the intrinsic power transform himself into the universe.

Upasamhara darsanat because of our observation of the employment of accessories for creation; na Brahman is not the material cause; up to this is purva paksa objection; it chet if this is the objection na it is not valid; kshiravat because it is possible as in the case of milk; upasamhara darsanat is the first word; the employment of accessories; karaga prayogah; accessories means carpenter and the chisel hammer etc., are require for the wood to convert itself into furniture. This is the pratyaksa anubhava. Na means because of the experience of ours na means Brahman cannot automatically become creation without somebody working on Brahman. They are not available. Therefore Brahman cannot be material cause. Iti chet if this objection is raised by purva paksa and the objection does not stand scrutiny because you keep in mind one type of material cause and you don't keep the milk example; here nobody need work. Your argument is invalid as in the case of milk. Now we will go to the next sutra.

## **Topic 8 Pasamharadursanadhikaranam [Sutra 24-25]**

**Brahman is the cause of the world.**

**Sutra 25[159]**

### ***Devadivadapi loke***

[the case of Brahman creating the world is like that of gods and other beings in the world in ordinary experience.

The argument in support of sutra 24 is brought forward.

First we will do the general analysis. Here purva paksa attacks the nimitta karanam of Brahman. He let us assume that he is the creator of the world. Purva paksa argues the creator, skill are not sufficient for creation and he requires the material to create the world. Where will he find the material? You say that there is no second thing other than Brahman. Vyasacharya answers that other than the gold ornaments and furniture and also the milk and the curd Vyasacharya gives the examples of God and the Rishis, when the rishi or deva create something, at sankalpa matram without going for any material. We know from the puranas that Visvamitra created trisanku without any source materials, so to say. So also devas create bodies without any material. We have got the upanisadic example of spider and it make the web without any material or instrument. So Brahman is upadana karanam Brahman nimitta karanam. Brahman is seemingly born as creation without really becoming the creation and such upadana karanam is called vivarth upadana karanam. **When a cause is seemingly becomes an effect and without really becoming an effect is called vivartha upadana**

**karanam. When the cause really becomes the effect, it is called parinami upadana karanam. Really becoming something else is parinama karanatvam.**

Vivarta karanatvam is without destroying itself remaining as it, it seemingly becomes something else. That is how the intellect should assimilate. Parinama karanatvam and nityatvam cannot coexist; but parinama karanatvam and vivarta karanatvam and nityatvam can coexist, when the cause is a vivarta karanam the product is of lesser the order of reality. When the karanam is of parinama karanam, the product is of the same order of reality. Curd and milk have the same order of reality because it parinama karanatvam.

But vivarta karanam is of higher order and the karyam is of lesser order of reality. For this swapna loka is given as the best example. You become a river in the dream without becoming a river; you become a mountain without becoming a mountain. This is given by the Upanishad itself. Brahma vivarta karanam can have nityatvam anityatvam simultaneously.

Now Vedantins gives a counter question to the purva paksa. He asks the purva paksa why do find fault with my teaching. He says that I cannot accept your Brahman as nityatvam and karanatvam. Nityatvam and karanatvam cannot go together. Now Vedantins accepts that Brahman cannot be nityatvam and karanatvam cannot go together as claimed by the samkya philosophers. Now samkya and nyaya vaiseshika philosophers are happy that Vyasacharya is in receptive mood to accept what the purva paksa's views. Now Vyasacharya asks the purva paksa what is their view of the pradhanam with regard to the creation. They say that Brahman is not the karanam but pradhanam is the jagat karanam.

Then Vyasacharya asks him whether his pradhanam is nityam or anityam. This terrible samkya yoga philosopher says that the pradhanam is nityam and it is also jagat karanam and that their pradhanam is nityam and adds that pradhanam is nitya karanam. Vyasacharya asks purva paksa how can the pradhanam have nityatvam and karanatvam while you object when I say that our Brahman has nityatvam and karanatvam. How can the pradhanam can have nityatvam and karanatvam while Brahman cannot have nityatvam and karanatvam it is like an employee is dismissed for not being a graduate and appoint another employee who is not a graduate. It is the height of fanaticism. When samkya and yoga are dismissed, the nyaya vaiseshika comes and you should follow me. He comes and tells that anuh is the jagat karanam. Then Vedantins asks the question whether the paramanu is nitya or anitya. He says paramanu is nityam. Nyaya vaiseshika's paramanu is also nityam and jagat karanam and how can they criticize Vedantins when they say Brahman is nityam and jagat karanam. Therefore we say whatever your answer, whatever be the reason with which you take pradhanam and paramanu is nityam and karanam and with the same reason we can accept Brahman's nityatvam and karanatvam of jagat sristi. As all the three cases enjoy the same status. Samkya says pradhanam is nityam and jagat karanam; nyaya vaiseshika says paramanu is nityam and jagat karanam; Vedantins say Brahman is nityam and jagat karanam. Either all the three must be equally right or all the three must be equally wrong since all the three enjoy the same status of nityatvam and karanatvam we say if all the three are equal we should vote for Brahman, alone which is supported by Vedic teachings alone. But pradhanam and paramanu have no support from the Vedas. Since Brahman has srotatvam, the vedic support, Brahman alone enjoys the nityatvam and karanatvam of jagat creation. Brahman can be abinna nimitta upadana karanam. There is no logical objection when nityatvam and karanatvam are together.

Lokah means pramanam through which we come to know about a thing. The word loka should be translated as mentioned in the scriptures. Finally Adhi Sankaracharya in his commentary give a supporting sruti statement also. He says that ultimate support is sruti statement that Brahman is nimitta and upadana karanam without any accessory. 6.8 of Svetasvatara Upanishad says *na tasya karyam karanam ca vidyate, na tat samas capy adhikasa ca arsyate parasya saktir vividhaiva sruyate svabhavikijnana bala kriya ca* the meaning of the mantra is there is no action and no organ of his to be found. There is not seen his equal or his better. His high power revealed is various indeed. The working of his intelligence and strength is inherent. [in him]. This statement is Brahman produces a creation without any material, accessory and even without a factory. Brahman does not have a factory and even Akasa is not born. Therefore, Akasa itself is not born and Brahman exists even before origination of the Akasa. Spider example is oorna nabi dristanta. With this sutra number 25 is over and this adhikaranam is also over. Now we will enter into the next adhikaranam.

## BRAHMA SUTRA

Class 164

### **Topic 9 Kritsna prasaktyadhikaranam [Sutra 26-29]**

**Brahman is the material cause of the universe though He is without parts.**

**Sutra 26[160]**

***Kritsna prasaktir niravayavatvasabdakopo va***

Either the consequences of the entire [Brahma undergoing change has to be accepted or else a violation of the texts declaring Brahman to be without parts [if Brahman is the material cause of the world.

An objection that Brahma is not the material cause of the world is raised in the sutra.

Now I will give you the general analysis of this adhikaranam. This has four sutras and this adhikaranam is very important in which vivartha karana vadha is established especially one of the most important teachings is vivartha karana vadha. In the previous adhikaranam we established Brahman is nimitta karanam and upadana karanam in general. Here we will establish that Brahman is vivartha karanam if vivartha karana vadha is understood, all the purva paksha will become redundant and absurd. This is meant to give conviction of vivartha karana vadha. If it is not known or accepted, avirodha adhyaya becomes important. In spite of elaborate commentary none accept the vivartha karana vadha which indicates any amount of study of avirodha adhyaya and in spite of the study people do not understand this. One of the corner stones of the teaching is vivartha karana vadha sthapanam. I will give you the particular teaching in a gist in different models. I will discuss Vyasa's teachings in different formats.

In the previous adhikaranam we said Brahman is the material cause and we gave the example of milk and curd. We have to study this adhikaranam from the standpoint of a person who does not know vivartha karanam or who does not accept vivartha karanam and in his mind he only knows the milk example. He extends the example further and his conclusion creates the problem. When the milk is the cause for producing the curd the milk has to destroy 'itself'. Upadana karanam destroys itself when it produces an effect. Seeds destroy themselves in the production of trees. Suppose the milk goes on producing curd and the milk continues to remain as it is, then the problem of milk buying everyday will not be there. Now purva paksha makes an important law. *Yatra yatra upadana karanam tatra tatra anityatvam*. Whenever a thing is a material cause, it is perishable and destructible and only by destroying itself it produces its effect. Karanatvam and nityatvam can never coexist the extension of previous law. Wherever karanatvam is there, nityatvam is not there. yad yad karanam yad tad anityam. Karanatvam and nityatvam are opposite attributes. These are the arguments of the purva paksha. therefore he says these are opposite attributes they cannot coexist in one substance. If there is karanatvam, it cannot have the attribute of nityam; if it is nityam it cannot have the karanatvam. All the samkya, yoga and visheshika say that your teaching is fundamentally illogical and defective. You say Brahman is nityam and karanam. nityatvam and karanatvam cannot coexist in one substance. Therefore, if you say Brahman is nityam and karanatvam, you fundamentally violate the important law that nityatvam and karanatvam

cannot coexist in one substance as enumerated above. Samanvayah asiddhah. The samanya established nithyam Brahma jagat karanam is your teaching in your first chapter. Purva paksa contention is that our teaching that Brahman is nithyam and karanam violates Advaitic teaching in the first chapter Brahman is jagat karanam in which case according to the law nithyam and karanatvam cannot go together, Brahman is nithyam and karanam does not hold water. This is the purva paksa's objection. Now our answer is that you should accept the basic agreement that we have. If you do not accept, the basic agreement there will be problem. You should know we discuss the problem of jagat karanam and not the cause of curd whether milk destroys itself to become curd or otherwise. This is the purva paksa.

We discuss the cause of space; time and we are in the field of cosmology. We know that with regard to the cause of universe perception and logic will not work which we have already agreed upon. If you take logic and perception, you will end up with sat karya vadha or asat karyavadha which we have discussed and negated the both in Mandukya Upanishad especially third and fourth chapter. Jagat karana vishaye pratyaksam and anumanyasya anumamanam. Adhideivam has logically proved that logic is defective. And it does not work with regard to jagat karana vishaya. There are things, which are beyond pratyaksam, and anumanam and we call this apourusheya vishayah. These things we have already agreed upon and there is no need to discuss here. Since pratyaksa and anumana is not acceptable, we have to depend upon only Vedas. All those which are beyond perception and logic, have to go to Veda and sruti pramanam only. **It is nicely said where physics ends metaphysics begins.** Therefore, whatever Veda teaches is the conclusion and we cannot question the conclusions of the Vedas. For science, the ultimate pramanam is sense organs. In the apourusheya vishaya Veda sastra is final and this has been accepted by the purva paksa that is nyaya, vaiseshika and samkya etc. now we should see what Vedas says about jagat karanam. Just as sense organs report is final in science, Veda reporting is final in spiritual matters. Veda says Brahman is both nithyam and karanam. for this there is sruti support in various Upanisads and Bhagavad Gita. Not only Brahman is nityam but also Brahman is karanam. Brahman can be both nithyam and karanam and never question the conclusion/ all logic should be used not to question the conclusion but it should be used to understand the conclusion, assimilate the condition but never question the conclusion. The mistake committed by the samkya is that samkya questions the conclusions of the Vedas. Vedantins says use logic to assimilate the condition given by the Vedas. How can I digest the conclusion that Brahman is nithyam and karanam. When you say Brahman is karanam it is upadana karanam, Brahman has become the universe. It is sruti statement number one. When you say Brahman has become the creation, it means Brahman has destroyed himself to become the creation. However, the second statement says that Brahman has not become the creation. if it becomes the creation the Brahman will destroy itself. Second statement is that Brahman has not become the creation. How are we reconciling these two statements? It has become the universe so Brahman is karanam. When Brahman has become creation means Brahman has destroyed itself to become creation. Second statement says Brahman is eternal which means Brahman has not become the creation. So Brahman has not become the creation because it is eternal.

This has been done by acharyas who studied the seemingly contradictory statement. Brahman has become the world without becoming the world. we will go in the right direction is proved by sruti itself. Ajaya mano without becoming the world bahudaya jayate it has become the world. Bhagavad Gita says *ajo 'pi sann avayayatma bhutanam Isvara 'pisan prakrtim svam adhisthaya sambhavamy atmamayay* the emanign of this sloka is though [ I am] unborn, and My Self [is] imperishable; though [ I am] the Lord of all creatures, yet establishing Myself in my own nature, I come into [empiric] being through My power [Maya]. Without being born, I

am born; ajah means without being born. How can I reconcile only in one way that Brahman is seemingly born apparently born as creation without really becoming creation and such upadana karanam is called vivartha karanam. When a cause seemingly becomes an effect without really becoming the effect, it is called vivartha karanam and when it really becomes an effect, it is called parinama Upadana karanam. Really becoming something else is parinama karanam. Without destroying itself remaining as it is, seemingly becoming something else is vivartha karanam. That is how intellect should assimilate. Whenever a cause is of vivartha karanam the product is of lesser order of reality. Parnami karanam and karyam has the same order of reality. Vivartha karanam vivartha karyam is one is higher order of reality and the other is lower order of reality. The Upanishad itself gives the swapna example. You become a river in dream without becoming a mountain. You become Brahma vivartha karanam and it can have nithyatvam also simultaneously. Here Vedantins counter questions the purva paksa. He asks samkya and nyaya vysesika philosophers. I am not able to accept your Brahman both as nithyam and karanam. One Brahman cannot be both nithyam and karanam also. This is your conclusion. I ask you what is the jagat karanam according to you. Vyasacharya asks the yoga philosophers. He has come to my point. Then Vyasacharya asks is your pradhanam is nithyam or anithyam. Samkya yoga philosopher says pradhanam is nithyam and jagat karanam. so nithya pradhanam is jagat karanam he says. When I say nithyam Brahman is jagat karanam and he says that how can Brahman be nithyam and karanam. but pradhanam is nithyam and karanam. when samkya and yoga are dismissed then nyaya vaiseshika comes and says you should follow me. Vedantins asks what is your jagat karanam. He says anuh jagat karanam. Then Vedantins asks the question is your paramanu nithyam or anithyam va. Here paramanu also both nithyam and karanam. Whatever be the reason you accept paramanu and pradhanam, you can accept Brahman also in the same manner.

As all the three cases enjoy the same status. Samkya says pradhanam is nithyam and jagat karanam; nyaya vaiseshika says paramanu is nithyam and jagat karanam; Vedantins say Brahman is nithyam and jagat karanam. Either all the three must be equally right or all the three must be equally wrong since all the three enjoy the same status of nithyatvam and karanatvam we say if all the three are equal we should vote for Brahman, alone which is supported by Vedic teachings alone. But pradhanam and paramanu have no support from the Vedas. Since Brahman has sroutattvam, the vedic support, Brahman alone enjoys the nithyatvam and karanatvam of jagat creation. Brahman can be abinna nimitta upadana karanam. There is no logical objection when nithyatvam and karanatvam are together. The same idea we will give in different format, which we will see in the next class.

## BRAHMA SUTRA

Class 165

### **Topic 9 Kritsna prasaktyadhikaranam [Sutra 26-29]**

**Brahman is the material cause of the universe though He is without parts.**

**Sutra 26[160]**

***Kritsna prasaktir niravayavatvasabdakopo va***

Either the consequences of the entire [Brahma undergoing change has to accepted or else a violation of the texts declaring Brahman to be without parts [if Brahman is the material cause of the world.

An objection that Brahma is not the material cause of the world is raised in the sutra.

We have entered into the 9<sup>th</sup> adhikaranam which is known as Kritsna prasaktya adhikaranam and this can be presented in two format of which the first one I mentioned in the last class. Parinami karanam and nithyatvam cannot coexist whereas vivartha karanam and nithyam can coexist and only thing we should note is that in the case of vivartha karanam the product will be lesser order of reality. If vivartha karanam is Paramarthika sathyam the vivartha karyam will be vyavaharika sathyam. Brahman is vkam` karya Prapancha is of lower order vyavaharika sathyam. The waker if Paramarthika sathyam and dream is parthipasika sathyam. It is based on this important principle Adhi Sankaracharya has written Brahma sathyam jagan mithya, which means lower order of reality. If the world is real, then Brahman is 'super real'. If swapna is real, then we will say jagrat is super is real and if jagrat is super real and Brahman will be maha super real. We are particular the order of reality differs. They are Paramarthika vyavaharika and pratipasika. There are two sathyams and one anritam which have been accepted by the sastra. this concept is not there in any of the eleven darsanams. This is the first format. The purva paksa says that if the entire Brahma becomes the world, then no Brahman will remain distinct fro the world and that if a part of Brahman becomes thew rodl, the scriptural text which declare Brahman to be without parts will be violated.

Now I will come to the second format of the same adhikaranam. In this format the purva paksa happens to be samkya philosophers and behind them line up the other purva paksas too. Instead of asking the question whether Brahman is savayvam va niravayavam, is whether Brahman is partless or with parts. Let us assume Brahman is partless or niravayavam. If Brahman is partless, to create the universe the total Brahman has to undergo a change to produce the universe. Unfortunately, samkya philosophers are not aware or accept the vivartha upadana karanam. Therefore, samklya's mind is fixed at parinami karanam alone. If Brahman has parts, one part of Brahman changes while the other part will be changeless. You cannot take the partial modification to be possible in the case of Brahma because Brahman has no parts. It is not like milk becoming curd. You cannot say that the top portion becomes milk and the other part becomes curd.

In the case of Brahman you cannot use part to become world and the other parts to be as it is. Till the whole Brahman become the world there is no question of Brahman is presented now.

When Brahman is not there but what is available is the world then there is no Brahman and when Brahman is not, there where is question of Brahma jnanam and when Brahma jnanam is not there where is the question of liberation or moksa. If there is no jnanam or moksa where is the question of pramanam? If Brahma jnanam is not there, there is no sastram, no karma yoga and no Brahma Sutra sastram. If Brahman is not there, there is jnanam and moksa. To solve the problem samkya give another suggestion. He says Brahman is savayavam. If you accept Brahman as savayavam your problem is not solved and you will have other problems. Savayavam means Brahman has parts. One part of Brahman will be in tact and the other part will be destroyed and world will be created.

Let the World be part of Brahman and another changeless part of Brahman be changeless. We know that Nirvikara Brahman and the jnanam of nirvikara Brahman will you moksa. This is the possible argument Advaidin may forward a possible solution in which Brahman is accepted as savayavam and consequently a part Brahman of Brahman be destroying itself becomes the universe and other part being one which is nirvikara, you can gain the Brahma jnanam and gain moksa. The samkya philosophers also suggest this possibility. This way samkya has pointed out that the solution of the universe emerging from the part of Brahman is untenable. To give this solution Advaidin has to accept Brahman as savayavam that is Brahman has parts. Samkya philosopher says that you cannot accept Brahman is savayavam because you have said that Brahman is niravayavam. In fact, that is one of the arguments you have given when you negated the concept of vishistadvaidam. If you accept the Brahma is without parts and yet the material cause of the universe, then we have to admit that the entire Brahma becomes modified into ue. Hence there will be nom Brahma left. The Brahma jnanam is not possible and moksa is not possible in the absence of Brahma. When Brahma jnanam is not there, sastra pramanam also will not be there. There is karma etc. Now Advaidins will give his answer. on the contrary, if it is said that a portion of Brahman only becomes the universe, then we will have to accept that Brahman is made of parts which is denied by the scriptural texts. 'he who is without pats, without actions, tranquil, without fault, without taint [Svetasvara Upanishad 6.19]; that heavenly person is without body, and he is both within and without not produced [Mundaka Upanishad 2.1.2] that great being is endless unlimited consisting of nothing but knowledge [Brihadaranyaka upanisad 2.4.12] he is to be described by 'neti neti' [Brihadaranyaka upanisad III.9.26] it is neither coarse nor fine [Brihadaranyaka upanisad III.8.8] all these passages deny the existence of parts or distinction in Brahman. Whatever has form or parts is perishable and so Brahman will become perishable or non-eternal if the concept of part Brahman is accepted.

Now siddhanti gives his answer. When you ask the question whether Brahman is savayavam or niravayavam and whether is from Paramarthika or vyavaharika dristi. We should not mix the orders of reality and Advaida will be enjoyable only if we do not mix up the degree of reality. As you talk of sristi. it must be from vyavaharika dristi alone and form vyavaharika dsiste Brahman is savayavam only. From the empirical angle, Brahman is savayavam. Brahman has two amsas one is chetana amsa and the other is achetana amsa,, sakti amsa, maya saksi para prakriti etc. once you look Brahman from vyavaharika dristi, generally with maya Brahman is Isvara. it is the modified Brahman with maya creates the world. when I say the world is born out of Brahman, it should be understood that it is with maya sakti the world is created. The sakti or maya is part of Brahman and it is savayvam Brahman. the original Brahman the chetanam Brahman continues to be in tact and when we talk about Brahma jnanam we talk of nirvikara amsa rupa the chaitanya rupa or changeless Brahman. once we realize that nirvikara chaitanya swarupam Brahman, we gain liberation. we say Brahman is niravayavam from Paramarthika dristi from whose standpoint of Paramarthika dristya maya

part of Brahman is not there. if there is no maya amsa there is no modification and there is creation; there is no creation; there is Brahma jnanam; there is no liberation. Paramarthika distya there is no maya, there is no sadhana, and there is no srusti etc. from Paramarthika Brahman is not karanam also. all the creation and that follows the creation are from vyavaharika point of view only. therefore there is no contradiction in accepting savayavatvam and niravayatvam one from Paramarthika angle and other the creation etc., from vyavaharika angle. We boldly admit we are vishistadvaidins from vyavaharika angle. Once we shift to Paramarthika angle we are in Advaidam. This is the important teaching conveyed in this adhikaranam.

Now I will give you the general analysis of the first sutra. the whole sutra is purva paksha sutra. the first part establishes the dosha if we take Brahman is partless and there will be total transformation and the Brahman will not be available. Second point is if Brahman is accepted as savayavam it will contradict the statement of niravayavam. Now I will give you the word for word analysis.

Kritsnapasaktih if Brahman is the cause there is the possibility of the total transformation of Brahman. va or niravayatva sabda kopah the contradiction sruti statement which reveals partlessness of Brahman. the significance of the words is krsitsnaparsaktih means total and by the world total samkya implies total transformation will come if you accept Brahman as niravayavam. The whole Brahman will destroy itself when you accept niravayavam. After destruction, Brahman will not be there and will be followed by absence of Brahman etc. this is the objection number one.

Then niravayatvam means partlessness of Brahman; sabda means sruti statements that reveals partlessness of Brahman.[given above].this is the violation of sruti statement when you claim Brahman is savayavam. Thus two doshas if you assume two niravayam and savayavam samkya has separated Purusa from prakriti. Neither prakriti nor Purusa get disturbed when the creation takes place. All systems accept more than one.

## **Topic 9 Kritsnaprasaktyadhikaranam [Sutra 26-29]**

**Brahman is the material cause of the universe though He is without parts.**

**Sutra 27[16]**

***Srutestu sabdamulatvat***

But [this is not so] on account of scriptural passages and on account of [Brahman] resting on scriptures [only]

The objection raised in sutra 25 is refuted.

Our answer to purva paksha is this. You ask how Brahmam is jagat karanam and our answer and Brahman being savayavam Brahma and maya amsa; the jada amsa ebocems creation and chetana amsa is ever in tact. To accept savayavatvam of Brahmam I have sruti support. The whole creation is seen to be part of Brahman. Brahman is beyond time and space. below Brahman time functions; Brahman is above time. I have got inferior and superior nature in me so says Gita. Brahman niravayam and it has got sruti support. Thus Brahman niravayam is supported by sruti. Brahman is nithyam too. How can you accept Brahman as niravayam

and savayavam. How can opposite attributes be found in one substance? How do you say Brahman is savayavam and niravayavam. Surti is pramanm for us and based on that we accept the both. Then purva paksa asks even if sruti says how can we assimilate this because of the logical contradiction. Buddhi refuses to accept and it can accept only the fact. That is why we have interpret it properly. Adhi Sankaracharya says there is only one method in which you can accept both savayavam and niravayavam and it can be accepted the lower and higher order of reality. Savayavam and niravayavam both sruti talks about Paramarthika is nirvishesam and savayavam is vyavaharika angle. In your mind let Paramarthika be in your mind and keeping it at the back you transact the business from vyavaharika dristi. As even go on doing the transaction let at the back you be fixed on aham Brahma asmi this is based on sruti. More in the next class.

## BRAHMA SUTRA

Class 166

### **Topic 9 Kritsnaprasaktyadhikaranam [Sutra 26-29]**

**Brahman is the material cause of the universe though He is without parts.**

**Sutra 27[161]**

#### ***Srutestu sabdamulatvat***

But [this is not so] on account of scriptural passages and on account of [Brahman] resting on scriptures [only]

The objection raised in sutra 25 is refuted.

In this adhikaranam purva paksa presents a problem in Vedantic teaching in the 26<sup>th</sup> sutra. He asks a question whether Brahman is savayavam or niravayavam is endowed with part or partless. Purva paksa pointed out in the previous sutra either way you will have problem. if you accept it as Savayavam Brahman will become perishable and anithyam being of parts. Our answer Brahman is both savayavam and niravayavam. We have sruti pramanam. In samkya philosophy, prakriti is independent entity but in Advaidam, sakti is integral part of Brahman. It is 'maya part' of Brahman undergoes changes to form the entire creation. All the panca pootham Sookshma Sariram Sthoola Sariram all are modification of prakriti or achetana amsa of Brahman, even after the arrival of jiva jagat, the chetana amsa of Brahman continue to the same and is available for realization of gaining moksa. With the help savayavam amsa of Brahman which is otherwise known as Brahman is behind the formation of the entire creation. in Bhagavad Gita sloka 10.42 Krishna says *vistabhya'ham idam krisnam ekamsena sthito jagat* which means I support this entire universe pervading it with a single fraction of Myself. Rg Veda *pado asya visva bhutani tripad asyamrtam* divi X.90.3 th Purusa sukta makes out that all this is only a description of His greatness, the Purusa himself is much greater than this. Therefore Brahman is savayavam sruti support there. Brahman is niravayavam for which sruti support is there. Brahman is nishkalam it is said in Chandogya upanisad. In many Upanisads niravayavatvam has been declared. How can Brahma be both savayavam and niravayavam be in one locus. Is it not illogical. For that Adhi Sankaracharya says that savayavatvam is of lower order of reality and it is part of Brahman but the same as Brahman. it is called mithya or it can be called vyavaharika sathyam. Vyavaharika sathyam is equal to mithya. It is avidhya kalpitam. Sakti part of Brahman is mithya. Prakriti part of Brahman is mithya. Savayavam status is also mithya. Isvara status is also vyavaharika status or mithya. Because of that creation has come and this creation is also other wise known as mithyam. So also dvida janya samsara is also mithya. Ultimately when I say I am liberated means the event of liberation is also mithya. From vyavaharika angle the creation, jiva, jagat, samsara and even the act of liberation and Isvara are mithya. But from Paramarthika angle niravayavatvam is sathyam. Jagat karanatvam api nasti and isvaratvam nasti.

Now we will see word for word analysis. 'tu' means the objection is not valid; sruteh because there are sruti statements revealing the partial transformation at vyavaharika level; sabda

mulatvad and because there are sruti statements [revealing the partlessness niravayavatvam] at Paramarthika level. therefore there is no contradiction.

The first word is sruteh because of the sruti statement; here the word srteh is used because there are sruti statements to show the niravayavatvam of Brahman. padah asya visva bhutani a part of Brahman maya part of Brahman is the whole creation. Three quarters are above creation and it is Brahma amsam. It is figurative use. The word tu indicates the negation of purva paksa objection. Sabda mulatvat means sruti pramanam. The final meaning is because of sruti pramanam. It talks of niravayavatvam of Brahman it is indicated in sruti pramanam. Mundaka Upanishad 2.29 is kept in mind in this regard. For Advaidin vyavaharika and Paramarthika beda becomes extremely important. In avidya avastha only karya karana beda, sadhaka sadhya beda etc., is there but once you gain knowledge all the bedas disappears and niravayavatvam is clear to the jnani with jnanam. in vidya avastha ekatvam is very clear. Paramarthika dristya Advaidam and vyavaharika dristya vishistadvaidam or Dvaidam is there.

## **Topic 9, Kritsnaprasaktyadhikaranam [Sutra 26-29]**

**Brahman is the material cause of the universe though He is without parts.**

**Sutra 28[162]**

***Atmani chaivam vichitrascha hi***

An because in the individual soul also [as in gods, magicians, in dreams] various [creation exists]. Similarly [with Brahman also]

The objection raised in Sutra 26 is further refuted by an illustration.

In this sutra Vyasacharya points out two order of reality are possible and it is not an unknown thing to us. vivartha upadana karanam is possible and is very much acceptable. God has given the example of swapna. Here waker does not change the vyavaharika status and without losing his status he projects a swapna Prapancha. I use nidra sakti and for jagrat I use the maya sakti. Individual power is nidra sakti and total power is called maya sakti. My creator status is real but the richness status governed by swapna status is unreal. With regard to swapna Prapancha I am the creator or I am the Isvara. swapna Prapancha is real at the level of dream and until I wake up swapna Prapancha is very much valid for swapna thirst can satisfy swapna hunger. It has the subjective reality. In it sown plane it has reality. My creative power is so much I can create everything including all jivarasis and other things. I create without undergoing any changes, without any help from anyone. The waker is Isvara in producing an apparent waking world. if ordinary jivah can create an apparent world and why cannot Isvara can create an apparent world. vyavaharika and Paramatma beda the subjective reality is an example to understand the absolute reality of Brahman. now I will give you word for word analysis.

Vichitrah manifold creation; is known or experienced atmani in the case of Jivatma in the form of dream and in the case of magician in the form of magical products. Hi therefore evam a similar creation is possible in the case of Brahman also.

Atmani means in the Self and here by using the word atmani it is individual Jivatma; atmani nidraya a world of lower order of reality compared to devas etc. cha indicates other example such as magicians or siddha Purusa. even means similar creation is possible for Brahman.vyavaharika Prapancha and patibasika swapna. Vichitrah cha manifold creation;in the waking I am limited by money. For dream the sakti is numerous.Adhi Sankaracharya need not give any sruti support. Whenever you see unreal it is always said it is swapna. For the swapna to be unreal you don't require sruti pramanam.

## Topic 9, Kritsnaprasaktyadhikaranam [Sutra 26-29]

**Brahman is the material cause of the universe though He is without parts.**

**Sutra 29[163]**

***svapakshadohacca***

and on account of the opponent's own view being subject to these very objections.

The objection raised in Sutra 26 is further refuted

Adhi Sankaracharya defended the Vedantic teachings against samkya and nyaya philosophers. If Brahman is nithyam it cannot be karanam and if Brahman is karanam it cannot be nithyam this is the arguments of the samkya and nyaya philosophers. To produce karyam, the karanam will get modified. Hence karanatvam and karyam cannot coexist. This was defended by us and we said it can be nithyam and karanam and only thing we said vivartha karanam and karyam can coexist.

Having defended ourselves, now Vyasacharya attacks his opponents. He asks what is the problem according to you. He says prakriti and not Brahman is the karanam. he asks the question is you prakriti is nithyam or karyam. Now he says my prakriti is nithyam and karanam and Vyasacharya asks how can you charge me with the same arguments. If there is no contradiction between prakriti being nithyam and karanam, so also Brahman can be nithyam and karanam. now we can say that we have sruti support which you opponents don't have. My teaching has got sruti yukti which you don't have. Then we go to the nyaya philosophers. Then we ask the same question and he says paramanu is the karanam. then we ask the question whether paramanu anithyam or karanam. as both prakriti and paramanu are nithyam and karanam, why should you againt Brahman which we say karanam and nithyam. vivartha karanam and nithya karanam you should accept and not stick to their views which is non-different from advaidins' views. It is also added that if pradhanam of samkya is capable of partition then it follows that the pradhanam cannot be eternal as contended by the samkya that Brahman cannot be eternal being a karanam for world creation. in the same way when one atom combines with another atom it must enter into combinations with its whole extent with another. It cannot enter into partial contact with antoehr. There will be entire interpretations. Hence there could be no further increase in the size. The compound of the tow atoms would not occupy more space than one atom. The result of the conjunction whould be a mere atom. But if you hold that the atom enters into the combination with a part only, that would go against the assumption of the atom having no parts. This being the case the opponents points of view cannot be acceptable because Advaidin's Brahman as karanam and nithyam has the sruti support in abundance.

Now we will do the word for word analysis. *Swapaksa doshat* in their own systems their objections are not valid. The significance of the word is their own that is the very people criticizing the Advaidm; they are four systems like samkya, nyaya, vaiseshika and yoga. We say neither paramanu nor prakriti is karanam and nithyam but we say Brahma is karanam and nithyam and this argument has got sruti support while others do not have sruti support. The order difference is not found any of the other system except in Advaidam. With this adhikaranam is over.

This discussion of order of reality especially miraj water or rope snake etc., relates to kyadhi vadha. It is about the status of rope snake. This itself is a very big discussion. It is kyati vadha or cognition of snake. In what category it comes, what is the status of perception and what is the status of cognized object or the rope snake and dream. Each philosopher has got his own theory. Five theories of error is there and vishistadvoid introduced their own theory. For them rope snake is as real as rope snake. There is no agreement between vishistadvoidam and advaidam. Advaidin's approach is anivachaniya kyati which is called two orders of reality. Vishistadvoidam approach is called sat kyatih means according to them rope snake is as real as rope itself. In rope snake we have no agreement and how can we have agreement on universal creation. vishistadvoidam does not accept adhyasa bashym. Now we will go to the next adhikaranam.

## **Topic 10, Sarvopetadhikaranam[Sutra 30-31]**

**Brahman is the material cause of the universe though He is without parts.**

**Sutra 30[164]**

***Sarvopeta cha taddarsanat***

And [Brahman is] endowed with all powers because it is seen from the scriptures

The objection in sutra 26 is being further refuted.

This is the tenth adhikaranam with two sutras. I will give you general analysis of the sutra/ we know Brahman has got ananta saktih. That ananta sakti is called maya. or prakriti and because of that Brahman beomces sarva saktiman Isvara. the maya respible for ananta saksi is of lower order of reality and hence Brahman is Advaidam and therefore it cannot be counted. It is like mirror image and we will talk about it but maya when it has entered into Brahman with lower order of reality. Because of this Brahman can create everything. Once Brahman enjoys this status and we use the term Isvara but we don't use the word till to day. It is beyond the means of human knowledge and the entire thing is given in sruti statements. Vyasacharya only keeps the thread and the flowers. Vyasacharya arranges and bundles them. Upanishad reveals the fact that Brahman has got ananta sakti. So the prakriti creates the entire universe. More in the next class.

## BRAHMA SUTRA

Class 167

### **Topic 10, Sarvopetadhikaranam[Sutra 30-31]**

**Brahman is the material cause of the universe though He is without parts.**

**Sutra 30 [164]**

#### ***Sarvopeta cha taddarsanat***

And [Brahman is] endowed with all powers because it is seen from the scriptures

The objection in sutra 26 is being further refuted.

We are in the 10<sup>th</sup> adhikaranam. this is a small adhikaranam with two sutras. The theme of the adhikaranam is to point out Brahman has all the resources to produce the creation. it has iccha, kriya and jnana sakti in itself and this sakti alone we call it as maya sakti and it is not a separate factor and hence we do not call it a separate entity. A person has hearing power, worrying power, talking power etc. but I do not separately enumerate them because it is not separate entity but it is part of him. Sakti means power and power does not exist from the powerful and therefore you don't count powerful and power as two entity. When I call power, I don't call power non-different from Brahman, hence Brahman has all the power, and when we see Brahman with power as Isvara. Brahman itself is called Isvara and Isvara is Brahman with power. In Brahma Sutra we do not use Isvara and we consistently use Isvara to indicate Brahman. sarva saktimad Brahman is Isvara alone.

Now we will do the general analysis of this adhikaranam. here Vyasacharya makes the statement that Brahman has got all the powers. That is why some people call it ananta representing ananta sakti. Ananta is coiled serpent and anything coiled has potential power. Kundalini is coiled power. Coil represents un-manifest power. Ananta sakti is behind the creation. The only pramanam to talk about Brahman is sruti being apouruseya vishaya. Brahman has all the qualities as per the sruti statement. Brahman is free from all the qualities here again it is sruti pramanam. When we Brahman have all the 'quality' and he has not qualities. When we say Brahman has all quality means it is Isvara with power and when we say Brahman has no quality nirgunah means it is Brahman with no maya sakti. Brahman has all the sakti from sruti pramanam. This is the essence of the first sutra. There are several and Adhi Sankaracharya quotes all actions, all powers of actions are in Brahman [Chandogya upanisad 3.14.4] *sarvakarma sarvakamah sarvagandhah sarvarasah sarvamidamabhyatto vakyanadara esa ma atmantarhrdaya etadbrahmaitamitah pretyabhisambhavitasmitya syadaddha na vicikitsastiti ha smaha sandilyah sandilyah iti caturdash khandah*. The meaning of the mantra is he who is the sole creator, whose desires are the desires of all, whose odours are the odours of all, whose tastes are the tastes of all, who is everywhere who has not sense organs and who is free from desires – he is my Self and is in my heart. He is no other than Brahman. When I leave this body, I shall attain him. He who firmly believes this has not doubt in this mind. [He will surely attain Brahman] this is what Sandilya has said. Svetasvara Upanishad mantra 6.8 reads as *na tasya karyam karanam ca vidyate, na tat samas capy adhikas ca drsyate parasya saktir nividhaiva srusyate*

*svabhavikijnana-bala-briya ca* there is no action and no organ of his to be found. There is not seen his equal or his better. His high power is revealed various; indeed the working of his intelligence and strength is inherent [in him]. *Parasya saktir nividhaiva srutyate svabhavikijnana bala briya* the power of Brahman is Supreme, infinite etc. not only it is great in terms of intensity as also variety also. the power of any person will have on power or few powers only but in the has of Brahman he has manifold power and in each power Brahman has got the gold medals. In each one of them, he is the best. Brahman did not undergo any training for that but in the case of jiva, one has to acquire the power but Brahman has got inherent power. Now we will word for word analysis.

Cha means moreover, sarvopeta endowed with all powers; tad darsanat because of the sruti revelation of such nature; this is the running meaning. sarvopeta is a compound sarva and upeta and here sarva means sarva saktih; ananta sakti consisting of iccha, kriya and jnana sakti. Normally sarvajnah and sarva sakti we separately enumerate and here both are included because jnanam is also a sakti and it includes the strength and skill that are required to produce anything. Upetat means endowed with all the sakti. Vyasacharya refers to here is Brahman. para devata in Chandogya upanisad means Brahman and para devata in Sanskrit is feminine gender. Cha is a conjunction. Taddarsanat means indicates the omnipotence of Brahman is revealed by sruti. Because of sruti revelation alone, we conclude Brahman is omnipotent and we have other pramanam to come to know of this.

## **Topic 10, Sarvopetadhikaranam[Sutra 30-31]**

**Brahman is the material cause of the universe though He is without parts.**

**Sutra 31 [165]**

***Vikaranatvanneti chet taduktam***

If it be said that because [Brahman] is devoid of organs, [it is] not [able to create], [we replay that] this has already been explained.

Another objection to Brahman being the cause of the world is refuted.

This sutra consists of a purva paksha and siddhanta portion. Someone raises an objection and answer is given in the latter portion of the sutra. first we will do the general analysis. He says normally we know every power is associated with one organ. If I have running power it is associated with leg and if I have singing power it is with the help of mouth. Every sakti should have an organ. a blind person does not have seeing faculty. You describe Brahman has no karanam. formless is god. Brahman has no instrument and how can Brahman have power without instrument. No doubt Brahman does not have any organ. but Brahman has got maya sakti in which all the faculties are hidden. Maya sakti has got all the multipurpose instrument. if jiva can create an instrument with multi-purpose use maya has got all the organs. Then we say Brahman has maya, the second objection is with maya Brahman will not be Nirgunam Brahman but Brahman is Sagunam Brahman with all qualities. Then we say Brahman is nirvisesham only. Vyasacharya says that he has answered this question earlier. Brahman is both nirvisesham and savishesham. Nirvisesham if without any property and savishesham is with property. Then our answer is Paramarthika dristya it is nirvisesham and from vyavaharika dristya it is with all attributes. When we talk of creation etc., we take only

Sagunam Brahman and we don't think of Nirgunam Brahman. that savishesam Brahma from vyavaharika angle Brahman has got all the powers.

Being without organs na Brahman is not have powers. Iti chet if this is the objection tad uktam it has been answered. Vikaranatvad Brahma is without any organs; the praman in purva paksa mind is Brihadharaynaka upanisad III.8.8 and svetasvara mantra 6.8 mundakopanisad 1.1.5. from these we come to kow Brahman has not powers. Na means Brahman does not have all the powers.since Brahman is not omnipotent, Brahman cannot create universe. Iti chet means if such an objection is realised by purva paksa. tad uktam tad means tasya uttaram answer to such an objection is given. [Sutra 27] organ lessness is from Paramarthika and vyavaharika dristi Brahma is not omnipotent. Brahman is not sarvajna from Paramarthika distya.

## **Topic 11. Prayojanatvadhikaranam[Sutra 32-33]**

**Final end of creation.**

**Sutra 31 [165]**

***Na Prayojanavattvat***

[Brahman is] not [the creator of the universe] on account of [every activity] having a motive.

Another objection to Brahman being the cause of the world is raised.

This is the 11<sup>th</sup> adhikaranam with two sutras. The theme of this adhikaranam is that why should Brahman create this world at all when no purpose need be served to Brahman. Brahman is fully satisfied and purnah should create the world. Any activity is born of desire. And Brahman being purnah what desire does he want to fulfill by creating this world. if the creation comes it is due to the desire of Brahman which is against sruti statement. What is the purpose of the creation? all the activities of human beings need not be backed by desire and there are many activities for which you cannot talk about desire. The rule that every action is backed by desire is negated by siddhantis.

Now we will do the general analysis of the first sutra. this is purva paksa sutra. the answer will be in the next sutra. purva paksa says that Brahman is all contentment all purnah. Since Brahman has no expectation, Brahman has no purpose to be served by the creation. every activity should have a motive. Sarvam karyam prayojanavad. Even illiterate person will not do any activity without expecting a result. If there is an action without a motive, that action comes from one a mentally deranged person. a sane person should have an activity with the result in view. Brahman does not have any result in view of creation. so Brahman cannot be the author of creation.

Now we will see word for word analysis. Na Brahman is not the cause of the creation. Brahman is not the creator. The creation presupposes a purpose. This is the purva paksa sutra. na means Brahman is not the creator. Prayojanavattvat it means endowed with a motive or purpose for the creation. Brahman cannot think of somebody else benefit also. The purpose is another word for desire. Only desire is followed by a purpose. Brahman does not have any desire or purpose. Prayojatvat means creation. since every action is based on kama, desireless Brahman cannot be the creator because creation presupposes desire. Any action need not be

backed by any desire or purpose. This is the argument of the siddhantis. Any jivan mukta works without expecting any result or desire. More in the next class.

## BRAHMA SUTRA

Class 168

### **Topic 11. Prayojanatvadhikaranam[Sutra 32-33]**

**Final end of creation.**

**Sutra 31 [165]**

***Na Prayojanavattvat***

[Brahman is] not [the creator of the universe] on account of [every activity] having a motive.

Another objection to Brahman being the cause of the world is raised.

We are in the 11<sup>th</sup> adhikaranam with two sutras of which we have completed the first sutra which happens to be purva paksa sutra. purva paksa is a general objection from all philosophers that Isvara cannot be the cause of creation the reason being any action that too any deliberate and serious action will have desire and purpose behind the action. I expect the result before the action and such expectation is called the purpose. Result is one after the action takes place and projected phalam is called the purpose. If desire and purpose are not there, the actor must be insane. The case of creation is an action a huge action of producing the very universe itself. The action comes from a sane person Bhagavan. If creation is an action originating from a sane person you must talk about the purpose. Unfortunately, the way you define Isvara is such you cannot attribute any desire or purpose being Isvara is purnah. The ever-fulfilled god cannot have kama or purpose which is expected karma phalam. Why did Bhagavan, create the world? Brahman has not created the world with no purpose and hence samkya says that pradhanam created the world.

Siddhanti can give two answers. One answer is given in the Brahma Sutra. The question is whether Bhagavan has got desire or purpose for the creation of this universe. Our answer is that Bhagavan did have a desire and purpose. This view is supported by the sruti. Loka sangrah is the purpose; the welfare of jiva and the world is the purpose of creation. we talk about twofold welfare. First reasons is that all karmas are to be exhausted by reaping the fruits of past karmas and the second purpose is to gain liberation are stated to be purpose of the creation of the world by Isvara. Thus karma exhaustion and moksa prapti is purpose and aim of the Bhagavan to create this universe with pleasure and pain. Two questions come out of this answer. Two questions follow are if Bhagavan does the job of creation with some purpose, then that Brahman becomes automatically a samsari. Not ordinary but a maha samsari with world full of problems/ on the other hand liberation or moksa is defined as renunciation of all the desires by the srutis. Bhagavan himself becomes a maha samsari by cultivating a desire to create and executing the job of creation. For this question siddhanti answers that when you say kama is samsara, we divide the kama into two types. They are suddha kama and asuddha kama. Suddha kama is non-binding desire and it is not born out of ajnanam or apurnatvam. Asuddha kama is binding and born out of desire and ajnanam and apurnatvam. they are binding kamas. Krishna tells in III.22 of Bhagavad Gita name *partha'sti kartavyam trisu lokesu himcana na'navaptam avaptavyam varta eva ca karmani* it means there is not formme any work in the three worlds, which has to be done, nor anything

to be obtained which has not been obtained; yet, I am engaged in work. Life of god and life of the world are not opposed to each other. I have to nothing to accomplish still I keep doing and it is not from apurnatvam and such kamas are born out of compassion and such kamas do not bind me and that is why it is called suddha kama. Iccha sakti becomes the alankara when it is suddha kama in the case of Isvara. You have desires and let that not be binding on you. Bhagavan has kama and it is loka sangrah.

When I ask about the purpose of creation you say it is meant for well-being if the jivah. If the karma exhaustion is the cause, then I will ask what is the purpose of first creation when you will not find any karma phalam. Then we say we do not accept the first creation at all and therefore we need not answer the question. How can we talk about Bhagavan producing the creation? The purpose of the Lord is to create thing for the exhaustion of the karma phalam of all the jivas. Bhagavan has nothing to gain or lose by the creation of the universe and it is done to help jivas to exhaust the karma phalam and to gain liberation.

Vyasacharya gives another answer, which is given in the next sutra.

## **Topic 11. Prayojanatvadhikaranam[Sutra 32-33]**

**Final end of creation.**

**Sutra 33 [167]**

***Lokavattu lilakaivalyam***

But [Brahman's creative activity] is more sport, such as is seen in the world [or ordinary life]

The objection raised in Sutra 32 is replied to.

The second answer is that we question purva pakshi's assumption itself. The assumption is that every action coming from a sane person should have a purpose. Vedantins say that there is no rule as such. We don't say all actions need not have a purpose. There are actions whose purpose we cannot talk about. They are two types of actions. One is nishprayojana seshta. Such activities arising out of an individual for which nobody including the individual can attribute any reason. We do have some actions without seeking any phalam. you may hum a song without any purpose and do hum without any aim or purpose. Swbhaviga seshta are those which are natural. The heart beat comes under this category. Nishprayojana and swabhaviga seshta happens in the normal course. In the case of minor seshta, it is an effortless thing. In the case of minor thing we can take it as seshta. Can we take the entire creation is just a seshta of god. A seshta for one person may be small and for another person it may be a great job. The world appears to be a very difficult` task for human being but for sarva saktiman Isvara it is a game, it is a fun and it is a joke and it is past time. leela means there is no particular purpose and it is fun for Bhagavan. It is as effortless as breathing of a person. more so for god such an action is very easy and effortless job.. another answer given in Mandukya karika is Bhagavan does not have any kama and creation is like breathing in and breathing out; breathing in is sristi and breathing out is pralaya. Mandukya Karika No. 9 reads as *Bhogartham srstir-ity anye kridartham-iti capare, devasyaisa svabhavo'Yam-aptakamasya ka sprha*; the meaning of this karika is others think that the world is being created for the purpose of God's enjoyments, while still others attribute it to a mere play of the Lord; But it is the very nature of the effulgent being, the Atman; for what desire is possible for Him

whose desires are always in a state of perfect fulfillment? Both the actions are as normal as our breathing. Like winking, it is natural for the Lord to create and destroy the world for the Bhagavan. That is called leela here.

Now we will see word for word analysis. Tu the objection is not valid; leela kaivalyam the creation is a mere sport or joke or fun or past time for Brahman; lokavat as seen in the world. the significance of the word is lokavat is the example loka means the world and in this world we see the violation of your law that every action should have the purpose as we do many action which are purposeless. Tu; is meant for negation of Purva Pakshi. So the objection is invalid; leela kaivalyam it is kevala leela means mere sports and there is no other motive is there. it is absolutely sport and there is no iota of any other intention. From this only we get Krishna Leela, Sakti Leela etc., leela is an action which has no purpose and you should not ask any question.

## **Topic 12. Vaisamyanaighryadhikaranam[34-35]**

**Final end of creation.**

**Sutra 34 [168]**

***Vaishamyanaighrinye na sapekshatvat tatha hi darsayati***

The accusation that Brahman is partial and cruel in His creation of the world is removed.

This is a small adhikaranam with three sutras. The central theme of this adhikaranam is answering a very important doubt based on the previous adhikaranam. There it was stated that the creation was a sport of the Bhagavan. However, when we see lot of problems in the creation when jivas are seriously suffering, separation, mental agony etc., and you say that this is a game of Bhagavan and our respect for Bhagavan is terribly affected. What is sport for one has become suffering for others and we may even conclude that Bhagavan is a sadist injuring others and enjoying that sport? No jiva enjoys and all the jivas are suffering while Bhagavan alone enjoy the creation. Two doshas are mention here one is partiality and cruelty. Who will accept Bhagavan as a kind hearted soul. Even some may say Bhagavan is unworthy of pujas etc.

Here it is said that disparity and impartiality among jivas in the world are not caused by Bhagavan's cruelty and impartiality and therefore Bhagavan is neither partial nor cruel as painted by the Purva Pakshi.

Now we will see the general analysis of this sutra. in the sutra Vyasacharya says Brahman does not have partiality and cruelty. The doubt comes because in the previous adhikaranam it was said that it was the sport of Bhagavan to create the world etc. if he want to create the universe. Lord being omniscient and omnipotent why did he not create all children are born rich, with all pleasures and with good parents etc., some are born poor, and some are born poor. Partiality is one dosha. It is called vaisamyam, which means partiality with respect to jivas. Why should young people die? Many think that Bhagavan is partial. The second dosha is that there some people get everything going fine; the creation is fine; having done the sristi he does the samhara of the whole creation which is another painful experience. Partiality is at the time of sristi and cruelty is at the time of nairghrinyam. The person who is not compassionate is called naighrinyah. Why should Bhagavan create the world with all

differences and suffer cruelty. Vyasacharya says Bhagavan is not cruel and partial and both are not because of the will of Lord and if he does that, Bhagavan will be cruel. The cause is different. Karma sapekshatvat jiva's karma is responsible for all the differences. Sristi is caused by karma and Bhagavan' Bhagavan is samanya karanam and karma is vishesha karanam. if a criminal goes to the jail for any crime, it is the judge responsible or the law book is responsible for his punishment. Law is jadam and law book is not responsible for the act of punishment. We say both are responsible. It is so, in the case of Bhagavan also. in the sastra they give another example. The rain is required, rain is samanya karanam, and after rain, alone all plants grow. The rain being uniform why different crops are raised and the seeds are responsible for different plants that grow. Rain is samanya karanam and the seed is vishesha karanam therefore there is no partiality or cruelty. This we come to know from sastram. Punya is responsible for higher janma and papa is responsible for lower janma. The combination of the both is responsible for manushya janma and one should not blame god for that. Brihadharaynaka upanisad mantra III.2.13 reads as *punyo vai punyena karmana bhavati papah papena* a man becomes virtuous by the virtuous deeds and sinful by his sinful acts. If you take Gita sloka 14.18 ,reads as *urdhvam gacchanti sattvastha madhye tisthanti rajasah jagghanyagunavrttistha adho gacchanti tamasah* the meaning of the mantra is those who are established in goodness rise upwards; the passionate remain in the middle [regions] the dull steeped in the lower occurrences of the modes sink downwards. The Lord makes him whom He wishes to lead up from these worlds do a good action. The Lord makes Him whom he wishes to lead down do a bad action [ Kaushitaki Upanishad mantra III.8]. If I have a healthy body and have all wealth etc., it is on account of previous punya karma and therefore Bhagavan is impartial and He is non-cruel. Details in the next class.

## BRAHMA SUTRA

Class 169

### **Topic 12. Vaisamyanaighryadhikaranam[34-35]**

**Final end of the creation.**

**Sutra 34 [168]**

***Vaishamyanaighrinye na sapekshatvat tatha hi darsayati***

The accusation that Brahman is partial and cruel in His creation of the world is removed.

The previous and this adhikaranam deal with the purpose of the creation by way of answering the purva paksha. we have got several answers depending upon the level of the student. The purpose of creation is jivanam karmakshya moksa prapti prayojanam the exhaustion and attainment of moksa is the main purpose of creation. The second one Vyasacharya gives is that the very creation is Bhagavan's leela, sport, fun, joke, or any action falling within the category an action with no purpose. The whole creation is the fun or sports for the God. If you say if the creation is fun for Bhagavan is terrible and unbearable for all the jivas. Such a Bhagavan cannot be accepted as compassionate Bhagavan with partiality and cruelly in creation. in the form of destruction Bhagavan is cruel. A Purva Pakshi makes this charge here.

The answer is differences in creation and jivarasis and destruction or maranam of jivas are not caused by the will of god but the karmas of the people. Sristi and pralaya or destruction are caused by Bhagavan based on the karmas of the people. Bhagavan is samanya karanam and karma phalam is vishesha karanam for both sristi and pralaya. the way in which the judge takes the case is on the basis of the case proceedings and the law code. Similarly Bhagavan also creates the individual sristi mainly on the basis of karma and karma phalam and the sristi is not based on whims of Bhagavan.

Na vaishamyanaighrinye – Brahman has no partiality at the time of creation and cruelty at the time of destruction; sapekshatvat as it is dependent on something else [i.e., karma of the souls];darsayati – revealed so in the scriptures; the significance of the word is vaishamyanaighrinye – vaishamyana means partiality; samam means equal and vishamam means unequal and vaishamyana is abstract noun partiality; naitghrinye means cruelty; two defects are imputed by Purva Pakshi; Bhagavan is impartial and cruel because I suffer. Na means not there that is the two defects are not there in Brahman. hetu is sabeksatvat because all the sufferings and differences in the creation are dependent upon other factors. Not caused by Bhagavan's wills but depends upon other factors which are punyam, papam and punya papa. Nothing is the will of God. Since creation is dependent on other factors other than the will of God. Tatha hi darsayathi – sruti reveals. This particular truth is revealed in this manner. The varieties in creation is not caused by Bhagavan's desire but depends upon punya papa of your own. Adhi Sankaracharya refers to punyena puna lokam bhavati 3.2.13 of Brihadharaynaka upanisad; some are born human being some are born plants etc., based on punya papa alone; yatha yatha karma yatha sukham; Bhagavad Gita quotation 14.18 ,reads as *urdhvam gacchanti sattvastha madhye tisthanti rajasah jagghanyagunavrttistha adho gacchanti tamasah* the meaning of the mantra is those who are established in goodness rise upwards; the passionate

remain in the middle [regions] the dull steeped in the lower occurrences of the modes sink downwards. II.5.7 of Kathopanisad says *yonim anye prapadyante sariratvaya dehinah, sthanum anye 'nusamyanti yatha karma yatha srutam* some souls enter the womb to have a body, others go to the plants just according to their work and according to their knowledge. your karma means you are responsible and blame yourself and not God or Bhagavan.

## Topic 12. Vaisamyanaighryadhikaranam[34-35]

**Final end of the creation.**

**Sutra 35 [169]**

***Na karmavibhagatiti chet na anaditvat***

If it be objected that it [viz., the Lord's having regard to the merit and demerit] is not possible on account of the non-distinction [of merit and demerit before creation. [we say] no, because of [the world] being without a beginning.

The objection against sutra 34 is raised and refuted.

First we will do the general analysis. The sutra has got two portion purva paksa objection and Vedantin's answer. the objection is general one raised by all people. People are born differently based on karma and do not blame God for such birth. If the present janma is based on past karma and how the past janma is decided and purva paksa asks \how the first creations on what basis jivas are born. They there is no purva karma for the first creation. in the case of first sristi karma is not the karanam because karma will not be there. if karma is not karanam in the first sristi then the Bhagavan alone is the karanam for sristi. The answer is that you will have eternal problem you hold first creation in your mind. You remove the mind the first sristi. Creation does not have any beginning at all. Creation is a cyclic process and there you cannot talk about the beginning. The answer is anaditvat. There is no beginning at all.

Now we will do the word for word analysis/ abhibagad being divisionless there is no karma with regard to the first creation that is kept in mind. iti chet if this is the objection; na – it is not valid; anaditvat because of the beginninglessness of the creation. Now we will see the significance of the words. Na karma means karma is not the cause of the creation. When he says karma is not the cause of creation he keeps in mind the first creation. the reasons being the karma distinctions are not there before first creation. even jiva vibhagas are not there before the first creation. No punya no papa or punya papa jiva nasti was there before the first creation. Purva paksa takes sruti support *sadeva somya idam agra asit ekam eva ditiyam tadd haika dhuh asad eedam agra asid ekam evadvitiam tasmad asatah saj jayata* in the beginning this was not being alone, one only; without a second. From that non-being being was produced. Where are the karmas to determine the varieties of creation. therefore karma cannot be the cause of the first creation. up to this is purva paksa. if this is the question we do not accept this objection because anaditvat the first creation we do not accept and therefore your question is wrong therefore your question is not correct.

## Topic 12. Vaisamyanaighryadhikaranam[34-35]

**Final end of the creation.**

**Sutra 36 [170]**

***Upapadyate chapyupalabhyate cha***

And [that the world] and also karma is without a beginning] is reasonable and is also seen [from the scriptures]

The argument on beginning-less-ness of creation continues.

Here in this important sutra Vyasacharya says that any intelligent person should accept the creation is beginningless whether he goes by logic or by sruti. First we will take the logic. The scientific reason is that nothing new can be created or destroyed by the Lord as per the law of conservation. If you talk of first creation, you violate this law. It is asat karya vadha you enter. They says that there can be modification and not production. If you talk of first set of jiva, then who will give the first set of karma. Without any basis Bhagavan has to distribute a set of experiences to the first set of jivas. These experiences will be without any cause. it is called causeless experiences. Causelessness itself a defect in the orderliness of creation. the third dosha is without cause or karma the first set of jiva are born. the dosha is called anirmoksa prasangah. The jiva follows karma yoga Upasana yoga destroys sanjita and prarpapta karma and he becomes a mukta. Normarlly the jivan muktas like this are not reborn because they have no karma. Without karma the first creation can take place and what is the guarantee the liberated person will not be reborn. Purva Paksi says the first creation is possible without karma and jivan mukta without karma can also be reborn. It will become anirmoksa prasangah and none will have interest to gain moksa. These are the doshas and therefore you should not talk about the first creation. He also says thata sruti says there is no beginning.Surya chandra masou data yata purvam akalpayat. It is from rg Veda Tattriya aranyakam. Lord created sun moon etc., exactly as he created in the previous sristi. yatha purvam makes it clear that creation is anadi. Bhagavad Gita says *na rupam asya 'ha tatho'palabhyate na'nto na ca 'dir naca sampratistha asvaittham enam suvirudhamulam asangasastrena drdhena chittva* it real form is not thus perceived here, nor its end nor beginning nor its foundation. Having cut off this firm rooted asvattham [peepal tree] with the strong sword of nonattachment. He says never talk about creation. this is the general analysis of this sutra.

Now we will see word for word analysis. Api cha means moreover; upapadyate beginninglessness of the creation is logical; cha upalapyate this is revealed in the scriptures. The significance of the words is upapadyate means it is logical or reasonable. This is given in general analysis above. Cha api is only a conjunction to club this sutra with the previous sutra. upalabhyate this gives sruti pramanam support. Found support in the scriptures. Therefore the creation is anadhi. We now get the last adhikaranam.

## Topic 13. sarvadharmopapattyadhikaranam [37]

**Final end of the creation.**

**Sutra 37 [171]**

***Upapadyate chapyupalabhyate cha***

Another reason to prove that Brahman is the cause of the world is brought forward.

This is the 13<sup>th</sup> and last adhikaranam of the first pada of the second chapter. It is an adhikaranam having one sutra. this is the winding up adhikaranam in which Vyasacharya concludes defending Vedantic teachings against nyaya, samkya and vaiseshika philosophers. He proves that vedanta is free of all doshas. Here Vyasacharya says jagat karanam requires certain attributes to be the cause of this universe. Jagat karanatvam requires certain dharma to be the cause of the creation. if you analyse and see that all the features requires fit well with Brahman alone. Prakriti cannot be the creation because it is independent. This is the general analysis.

Cha means moreover; sarva dharma upapatteh since all the characteristics or attribute or all virtues require for creation are possible in Brahma only. Brahman is the cause of the creation. the significance of the words is sarva dharma papattteh is compound word with three words. Dharma means qualification; for creating the universe; to maintain the universe. All such qualifications are possible will snugly fit into only with our Brahma. Upapatteh means possible in the word created by the Lord. With this this chapter is over.

Subject matter is conclusion of the first chapter. Conclusion is that Brahman fits with for the creation siddhanti says there is no virodha between the three portions that follow. In the first pada Vyasacharya defended vedanta.now Vyasacharya will give offensive arguments to Purva Paksis. This we will see in the next class.

## BRAHMA SUTRA - Chap: 2, Pada: 2

### Class 170

We have completed the first pada of the second chapter of Brahma Sutra. before taking up the second chapter we should know the background of the various chapters of Brahma Sutra. Vedanta talks about many things like Dvaidam, Advaidam, vishistadvaidam, karma, Upasana and jnanam. therefore we have to find out the central teaching. for this mimamsa rule was followed. By appropriate analysis, we have to arrive at the central teaching, which we call mimamsa or otherwise called sravanam. First chapter is equivalent to sravanam through which we absorbed the teaching of Vedanta. Veda uttarah means Vedanta. This methodology Vyasacharya referred to as samanvaya method of making the teaching harmonious. The central teaching is jagat karanam Brahman. it is consistent revelation or samanvayah. It is unique because no other philosophy arrived at this. All other darsans talk about jagat karanam and they say achetanam vasthu is jagat karanam. Some say pramanam and some say paramanu and uniformly everyone says that achetana vasthu is jagat karanam. They are essentially materialistic in nature and are almost comparable to the modern scientists. They say mater is beginning. For them Consciousness is the intermediary, incidental product which rises in time and disappears. Vedanta is a unique teaching where Consciousness is taught as the central theme of Vedanta. by revealing central theme itself, Vedanta gives moksa. In karma kanda by revealing rituals, Veda cannot give you the benefit because the implementation of the teaching is required. In the purva bagha, revelation is not an end in itself but it is a means to an end that is the karma phalams. But in Vedanta the very acquiring the vedic knowledge and realization of Brahman as jagat karanam and Brahman is adhistanam of the whole universe itself helps liberation. here the revelation of activation but it gives fulfillment to the jiva and it puts an end to all the activity because of fulfillment or purnatvam., jagat karanam Brahman is a means for liberation.

In the second chapter we don't learn anything new but it will reinforce the very teaching. when we fix a pole to tie a rope and after fixing and tying anything you have to make sure that pole is in tact and he shakes the pole and checks whether the pole is more firm. This is sthooana nikanana nyaya. Through sravanam the teaching has fixed the pole of Brahma jnanam. I can be Brahman also I can be part of Brahman also and I can be different from Brahman also. this vague idea is not all right and I would be clear wheter I am Brahman, I am part of Brahman or anything else. This knowledge cannot be applied. You should be sure what is centra theme of the teaching. the entire second chapter is mananam chapter. The vagueness can in our mind because of three reason. One is the doubt whether my understanding is in keeping with the sruti teaching or not. The second is regarding the smriti vorodhah. Contradicting sruti is indirect contradiction of the very sruti itself. Third and the most powerful is mukti virodhah, illogical and reasonable and logical and reasonable and logical. It will not work for me. In the first chapter sruti, smriti, yukti virodha pariharah was done. In the third and fourth chapter sruti virodha parihara will be done. This chapter is called virodha parihara adhyaya. The purpose is to remove the vagueness from my knowledge. convert prajna to sthiraprajna samsaya rahita jnanam. if padas one, three and four are meant for virodha parihara, the second pada there is a small diversion. In other padas we remove contradiction and establish Vedantic teaching and it is defensive approach. What Vyasacharya sees is that it is not enough that this teaching is right and he wants that this knowledge alone is the best to gain knowledge. first we say our darsanam does not have virodha and in the second pada we attack other darsanams and we prove all other darsanams

are nyaya virodha. We know six asthika darsanams and six nasthika darsanams do not accept Vedas. Of these eleven darsanams Vyasacharya takes samkya yoga darsanam we want to show the defects; and nyaya vaiseshika. Purva Mimamsa we do not take and this has been discussed in sutra 1.1.4. Thereafter Vyasacharya takes the nasthika darsanams which do not accept Vedas. Afterwards the agamas are taken for discussion. Agamas as systems of worship are useful but as philosophy, it is negated. This is the approach of the second pada. Adhi Sankaracharya asks a question when you dismiss other systems does not you have dvesha for others and does it not add to your dvesha or hatred towards them. We say there is difference between accepting the people and accepting the teaching. As far as people are concerned, you should accommodate all the people. Such an attitude is a virtue. With regard to teaching, accepting all of them is neither intelligent nor is it possible as they contradict each other. Several teaching is contradictory and accommodating one will automatically contradict the other. Wrong theories should be proved wrong and right is only right. This is the basis of science. We cannot accept all types of teaching. The rejection does not mean fanaticism. Dvesah does not come because we do not hate the founders but we only reject some of the ideas taught by their philosophy. it requires tremendous intellectual honesty. Adhi Sankaracharya respect all the founders like Pathanjali, Kapila, Jaimini, Kanadhana and others. Samkya darsanam is most powerful and closest to Vedanta. it is so because of two reasons. In all other darsanams Consciousness is considered to be the property of the matter. They consider that the matter is the fundamental and the Consciousness is the property of the matter. Samkya is most important philosopher who has separated Consciousness from the matter and has acceted that Consciousness as an independent entity. It is a very big step forward. He calls matter as prakriti and Consciousness as Purusa. but only thing is both are independent reality swatantram. Previously matter was more important and Consciousness was less important. Samkya says matter is important and Consciousness is as important as matter. in Vedanta we say Consciousness is more important and the matter depends upon Consciousness. There is total reversal from the first stage to the last stage. Samkya is in the middle stage. First is materialism and the third is spirituality and the second Samkya system is in transitional stage. It is because of that it is closer to Vedanta than all other people. Having doen Samkya he will do nyaya vaisesika also. now we will take up the first sutra.

## **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

#### **Sutra 1 [172]**

#### ***Rachananupapattescha nanumanam***

That which is inferred by the Samkya viz., pradhanam cannot be the cause [of the world] because [in that case it is] not possible [to account for the] design or orderly arrangement [bound in the creation]

An argument is brought forward to the effect that the pradhanam of the Samkya.

The main purpose of the Brahma Sutra is to show the purpose of the revelation of the truth in the Vedas. They aim also at refuting the wrong doctrines in the other systems of philosophy. in the previous portion the doctrine of the samkyas ahs been refuted here and there on the authority of the scriptures. Sutras 1 to 10 refute it through logical reasoning. it is a big adhikaranam consisting of ten sutras. It is Samkya madha nirahara adhikaranam. in the first

chapter Samkya darsanam has been negated. Why should it is taken again now in the second chapter. Adhi Sankaracharya defends and says there is difference in the first and the second chapter of the second part. in the first chapter the Samkya Philosopher claimed that their philosophy is Veda sammadha darsanam. in support of that he quoted sruti support. In addition, our aim in the first chapter was to show that Samkya did not have sruti support. Whatever sruti support he claimed was only a seeming support and not a real support. Here Samkya Philosopher claims the support of logic also and we show that he does not have logical support also. We negate their claim and say that the support is 'seeming support' and not the real support.

The subject matter is Samkya darsanam and we will see whether their philosophy has the logical support or not. They claim that it has the support of logic and we will say that it is not supported by logic. He says that the whole universe is born out of prakriti or pradhanam. the word pradhanam is prakriti only. in Samkya prakriti is independent and in Vedanta prakriti is dependent. Pradhanam is achetanam and it is the basic matter or energy. It is avyaktam, it is un-manifest, and it is in causal form. It is like the seed of a tree. It is an independently existent reality. Third feature he says is anumanam or anumeyam. This means that it can be arrived at through logic. Every effect has a material cause and it has basic ultimate moola karanam. finally he says pradhanam has got three gunas. They are sattva, rajas and tamogunas. Such a pradhanam alone evolves into the creation. pradhanam evolves into Prapancha independently without any intervention even without the blessings of Isvara. Samkya Philosopher does not accept Isvara. he says that there is Purusa and Purusa is not Isvara and it is asanga nirvikara Chaitanyam. It is unrelated and uninvolved changeless Consciousness. since it is uninvolved Purusa is not going to activate prakriti. then it will become involvement and activation means an action and it will mean change or modification of Purusa and it will become savikaram. But Purusa according to them is nirvikaram. Purusa does not activate and Isvara does not exist. This Vyasacharya negates in this adhikaranam.

Now we will see general analysis of the first sutra. the first reason is given in this sutra. an inert thing cannot naturally produce vast orderly intelligent and complex creation. Vyasacharya uses the expression rachana the world with wonderful design. Now we talk about design, which is a big job. The Lord even in the creation of the huge universe has done this great design. It is impossible to think of accidental formation of creation. Therefore we require intelligence. Wherever there is intelligent product there behind is intelligent cause. you have to accept achetana pradhanam cannot produce the universe.

Now we will do the word for word analysis. Rachana anupapatteh – means because of the impossibility of arrangement of the world; anumanam means pradhanam na it is the material cause of the universe. Now we will see the significance of the word. Rachana anupapatteh is a compound word rachana and anupapatteh. Rachana means this magnificent design mind-boggling design from micro to macro universe. Anupapatteh means impossibility. It cannot be done with intelligence behind it. cha means other reasons also. na means not and complete by adding pradhanam na jagat karanam and it cannot be the cause of the universe. Anumanam means pradhanam. anumanam means primarily pramanam. That is the vachyartham but the implied meaning of the word here is pradhanam. the connection between pradhanam and inference is pradhanam is arrived at and the means can infer the end. With this the sutra part is over. more we will see in the next class.

## BRAHMA SUTRA

Class 171

### **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

#### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

**Sutra 1 [172]**

#### ***Rachananupapattescha nanumanam***

That which is inferred by the Samkya viz., pradhanam cannot be the cause [of the world] because [in that case it is] not possible [to account for the] design or orderly arrangement [bound in the creation]

An argument is brought forward to the effect that the pradhanam of the Samkya.

As I said in the last class in the second pada Vyasacharya wants to show that all non-vedantic darsanam like samkya etc., do not have any logical support. In the first chapter it was proved that they do not have sruti pramanam. First Vyasacharya takes up samkya darsanam, which is very close to Vedanta and it seeming support, from the Veda mantra.

Vyasacharya pointed out earlier that pradhanam does not have vedic support. Samkya philosopher has pointed out that pradhanam does not have sruti any pramanam. Pradhanam is inert material with no capacity to think and act in a particular manner. Inert pradhanam is not even managed by the intelligent Lord for they do not believe in the Lord Isvara. Even Purusa is not of any use because it is uninvolved Consciousness and therefore it cannot handle or help prakriti in evolving the creation. pradhanam is not handled by karma also because they say pradhanam is swatantram and its activity is not governed by karma. If its activity is governed by karma, pradhanam cannot be called swatantram or independent. God is not there. Available Purusa is useless; karma does not control; what does it mean? Matter accidentally becoming a universe is their philosophy. when they introduce pradhanam as inert philosophy, when they talk about the role of pradhanam as though intelligent secretary to Purusa. pradhanam's job to assist Purusa in forming dharma etc. although they take pradhanam as intelligent and capable, but it is inert and it cannot intelligently work for the benefit of Purusa. How can an unintelligent blind pradhanam accidentally evolve into a universe, which is to be governed, and have to be controlled? This is the question posed by the Vedantins to the samkya philosophers. Therefore, what Vyasacharya says is samkya philosophy takes the creation of universe as an accidental creation. An accidental creation is not possible to form a complex universe by the inert prakriti. I ask you to paint 26 metal plates with all the 26 alphabets and drop them from the top floor of a building. I ask you to read the letters. You put them in such a way all 26 plates to fall in straight line. What are the chances and it is still remote. Then I put the third condition not only they should fall and all the letters to fall in the same order. we know it is almost impossible. When this is the case with the ordinary letter plates, how is it possible the complex world order, atoms and molecules, elements, Self jivatmas etc., getting arranged in the proper order that too by an inert and unintelligent pradhanam. this is the meaning of the sutra. cha in the sutra further refutes samkya theory of creation. Adhi Sankaracharya shows the fallacy of samkya

reasoning for creation. their philosophy is given in a book called samkya philosophy. samkya sutras are not available. We have samkya karika in verse form where the basic samkya philosophy is written by one Isvara Krishna. He has enumerated various reasons for his advocacy of an independent creation. Adhi Sankaracharya in his bashyam these reasons and shows the fallacy of their view on creation. One reason is that karya karana vibhaga avibhagabyam. In the creation, it is said that all the effects are born out of the cause and later effects merge into the cause. Such an action is called karana karyasya avibhagah. The separation of the effect from the cause and again the merger of the effect into the cause are indicated by them. All the trees, plants etc., merge into earth and earth merges into water and then reverse back and say water merges back to Agni and we find that all products emerge out of cause and merge back to the cause. There is one basic cause from which all effects are born and later all effects merge back to the cause which samkya calls it as Moola karanam. Emerging and merging we have to infer on one moola karanam. Since such karanam is required, we infer pradhanam as the moola karanam, which is the ultimate limit of karya karana flow. For this Vedantins say wonderful for they believe in one ultimate cause from which every effects take birth and it is there all the effects ultimately merge back. That there should be an ultimate cause is reasonable and what is the cause to be shown that ultimate cause is pradhanam and why not it be our Brahman. the controversy is whether it is pradhanam or Brahman. karya karana avibhaga is legitimate conclusion and what is objected by the siddhantis is how can an inert pradhanam is the moola karanam and why not it be the chaitanya swarupa Brahman.

the next reason is parimanat. Everything in creation is finite in nature. All finite things are born out of finite things and ultimately you have to come to the ultimate cause and it alone can be the cause of the whole universe. For this Vedantins argue and when you say every object should have cause because it is finite and ask what type of finite thing you talk for inference of the cause. Suppose you say desa pariccheda is condition for inferring the cause you will have a problem, with regard to Akasa. You say that Akasa is a product with a cause. But we know that the space cannot be limited by space itself. Akasa does not have desa pariccheda and still you talk about Akasa as a product even though it has desa pariccheda. Next, we cannot accept kala pariccheda, which is not included as one of the tattvams in your samkya philosophy. There is no principle of kalam at all in your philosophy. You have no right to talk about kala pariccheda. Do you talk about vasthu pariccheda, the propertywise limitation? That you cannot say. If it makes something a product three gunas themselves will have vasthu pariccheda. Sattva guna is sattva because it does not have rajo and tamo guna; rajo guna is rajo guna because it does have either sattva or tamo guna. to make an object a product three gunas themselves should be a product and pradhanam being a mixture of three gunas and pradhanam must be a product and if pradhanam itself a product it requires another karanam, and how can the pradhanam can have karanam. Then he gives third argument samanvayad. He says the creation three factors are inherent in the universe and they are sukha and dukha and mogah. These three factors experienced are but three gunas sattva, rajo and tamo guna in disturbed format. Sattva represents sukha anubhava; rajo guna represents dukha anubhava and tamo guna represents moha or the delusion. All the three sukha and dukha and moha pervades the entire universe. In the cause three gunas should be there. when they are in causal form it is in equilibrium and when activated it is in disturbed form with sukha dukha and mohatmam. Adhi Sankaracharya points out that we cannot agree. Sukha and dukha and moha are emotions possible only in the internal human being and they are not inherent external objects. There is no pramanam to show that they are there in the objects. The heat is there in the fire. Anybody touching it will feel. It is not the subjective feeling. The very same object because of the attitude of the person either give sukham or dukham. There

is nothing good or bad in the creation. since these three are not there, you cannot take three gunas are there. you can say pradhanam may be karanaam but you cannot say pradhanam is the ultimate cause and you cannot say the inert pradhanam is the case for this inert pradhanam cannot produce anything and for that we require intelligent and all powerful Isvara for creation. for Vedantins there is not problem for prakriti is managed by Isvara. here we establish a vyavaharika Isvara. other than Paramarthika Brahman we require a vyavaharika Isvara which samkya philosopher do not have in their philosophy. here the topic is vyavaharika Isvara other than the Paramarthika Isvara.

## **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

#### **Sutra 2[173]**

#### ***pravrittescha***

And on account of the [impossibility of] activity.

This is the argument in support of sutra 1

Pradhanam cannot be the cause of the world because it is also impossible for it to have an inclination for the creation.

We said that inert prakriti cannot thoughtfully create the universe. If the creation is already programmed in prakriti and this programmed prakriti creates the universe and then resolves. It is said that even if the prakriti is programmed, a person is required to switch on the programme. If it is off eternally, sristi cannot happen and if it is on eternally, pralayam cannot happen. For switching off and switching on that to create and resolve, an activating force is required within pradhanam. it does not have Self motivating force because it is an inert principle. Since the motive force is lacking even if the creation programmed, it cannot thoughtfully switch it off or switch it on. How the whole thing has started is a mystery. The origin of creation remains one of the mysteries in science and the problem, is threshold problem and only when organic molecule reaches high level of complexity it can start living. Pravrutti means the first motivating force. We require Isvara other than Nirgunam Brahman, or Chidhabasa Chaitanyam is required to handle the first creation. This is the essence of this sutra. The desire or tendency to create cannot be ascribed to the inert pradhanam. The inert chariot cannot move by itself. It is only the intelligent charioteer moves the chariot by directing the movement of the horse. Mud by itself is never seen to create a jar without the agency of an intelligent potter. There must be a directive intelligent Being or Entity for that purpose. The activity must be attributed to the directive intelligence rather than to the inert matter or pradhanam. every activity is seen as the result of an intelligent agent. Inert matter or pradhanam has not agency. Matter or pradhanam has no Self initiated activity of its own. If the objector says I don't see the chetana, our reply is that there is no activity without soul. Therefore first cause but not with the doctrine of a non-intelligent first cause pradhana of samkya.

Now I will word for word analysis. Cha moreover; pravritteh because of the impossibility of the motive force in an insentient object pradhanam cannot be the cause of the universe. Now we will see significance of the words. Now we will see the significance of the words.

Pravittah is switching on force that crosses the threshold. Impossibility is supplied in this sutra. It is because of the absence of the motive force. It is absent because of jada pradhanam. Because of this reason, pradhanam cannot create anything. In Vedanta, we say that there is motive force behind pradhanam, which we call as Isvara. The next word is a conjunction.

## **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

#### **Sutra 3[174]**

#### ***Payo'mbuvaccet tatra'pi***

If it be said [that the pradhana moves or spontaneously modifies herself into the various products] like milk or water [without the guidance of any intelligence], [we reply that] there also [if it is due to intelligence].

The argument in support of sutra 1 is continued.

If the objector says that there could be Self-activity of nature as in milk or water, we reply that even then there is the operation of an intelligent agent.

First we will do the general analysis. First portion relates to purva paksa and the second portion to siddhanti. Purva paksa says that motive force belongs to inert things also. There are many inert things functions and it is very useful to us. Milk in the body of a cow and he says that the milk is inert. Inert milk naturally flows out of the cow to help the jivas. The second example is water. Water is there in the Himalayan mountain. With the motive to serve people, Himalayan waters flow down. We see that water flows without any intelligent person so also pradhanam can flow down like river and milk to help the people.

Siddhanti says that the first example is the milk flowing out of cow. Even though milk is inert it is assisted by a chetana adhistanam. Then purva paksa says that dristanta supports him and not siddhantis. The details in the next class.

## BRAHMA SUTRA

Class 172

### **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

#### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

##### **Sutra 3[174]**

##### ***Payo'mbuvaccet tatra'pi***

If it be said [that the pradhana moves or spontaneously modifies herself into the various products] like milk or water [without the guidance of any intelligence], [we reply that] there also [if it is due to intelligence].

The argument in support of sutra 1 is continued.

If the objector says that there could be Self-activity of nature as in milk or water, we reply that even then there is the operation of an intelligent agent.

As a part of showing the logical fallacies in darsanams other than Vedanta Vyasacharya takes up some other darsanams for discussion. He has taken up first Samkya darsanam. it is not having sruti support has been negated in the first chapter. Vyasacharya attacks the concept of pradhanam which is stated to be the cause of creation. Pradhanam's activity is stated to be independent, purposeful and skillful. All the three adjectives attributed to pradhanam is being negated by Vyasacharya one by one.

The first adjective has been negated in the first sutra saying that the inert pradhanam cannot design and execute such a mind boggling and complex universe. Even we are not able to understand the nuances of the creation of universe and how can the achetana and inert pradhanam can ever design or execute the creation of universe. Pradhanam does not have the skill and implement the cosmic design and creation.

Having negated the skill, Vyasacharya has taken up the independent activity is not possible for pradhanam. He said that inert pradhanam could not have independent activity Samkya raises an objection as to why the inert pradhanam cannot act independently. He quotes some examples to prove his point. An inert thing can be active without human intervention is Samkya Philosopher's argument and in support of which he gives two examples. The first example is milk flowing from cow naturally. The milk is inert and it has the natural flow to serve others. second is the water flowing from mountain to serve the humanity. The first one is already refuted by us that milk flows from the cow that milk exists in a cow which is sentient. Milk is backed by chetana adhistitham achetanam. It is an achetanam activated by the cow which is chetanam.

Now he says that water flows from the mountain. Mountain is not chetanam. River water which is achetanam without being assisted by achetanam flows from mountain to the plains to serve humanity. The first answer temporarily accepting Samkya's view even though it is not acceptable to us. now Vedantins asks the question because achetana jalam acts without

being assisted by chetana intervention. Can we make a vyapti or generalization that wherever achetanam functions without being intervened by chetana thing. If you have an example for independent activity for achetanam I have got some other example where achetanam does not function independent. There is an achetana car, it does not move on its own, and that is the reason why we park the car on the road and you come to the class. Imagine the situation that the achetanam car starts moving on its own. The movement of the car depends upon the chetana jiva behind the wheel. Achetana ratham achetana car do not function without the help of chetana jiva behind. Vegetables do not work on its own and becomes a dish. Therefore I have equal number of examples to show achetanam functions dependently. When we have both examples you don't have a vyapti at all and which example you will apply to pradhanam. if you apply your example and I will apply my example. You do not have a clear general vyapti and anumanam cannot be applied at all. You can maximum say pradhanam may be independently active but you cannot have nicchaya jnanam. then when you go to the sruti, and if you come to sruti Vedantins win. Lord Krishna in Bhagavad Gita saus in sloka 10 of chapter IX *maya dhyaksena prakrtih suyate sacaracaram hetuna 'nena kaunteya jagad viparivartate* the meaning of the sloka is my guidance, nature [prakriti] gives birth to all things moving and unmoving and by this means o son of Kunti, the world revolves. The Lord intervenes in the activity of prakriti. assuming the water functions independently you cannot take that example of pradhanam because I have another example also. this is the first level argument.

I initially accepted that water functions independently without the involvement of chetana tattvam. Even though jiva intervention is not there, the Isvara's intervention is there in the functioning of the achetana vasthus. All the inert creations function with the blessings of the Antaryami tattvam. Antaryami Isvara is in the water and it functions behind the water and it operates through the law of nature. There is another mantra in Aksara Brahman. 3.7.4 of Brihadharaynaka upanisad *yo 'psu tisthann, adbhyo 'ntarah, yam apo na viduh, yasyapah sastram yo 'po 'ntaro yamayati, esa ta atmantaryami amrtah* he who dwells in the water, yet is within the water, whom the water does not know, whose body the water is, who controls the water from within, he is your Self the inner controller the immortal; further we see in 3.8.9 of the same Upanishad *etasya va aksarasya prasasane gargi suryacandramasau vidhrtau tisthatah; etasya va aksarasya prasasane gargi dyavaprthivyau vidhrte tisthatah, etasya va aksarasya prasasane garg;i* it says verily at the command of that imperishable, O Gargy the sun and the moon stand in their respective positions. All the command of that Imperishable O gargi the heaven and earth stand in their respective positions. So it is concluded that it is with the blessings of Isvara alone the rivers flow downwards. Thus we find that achetana jalam flows with the blessings of Isvara alone. Since one opinion based on pratyaksa praman and another on sastra pramanam, and a controversial thing cannot be taken as an example. An example should be that it should be non-controversial. The rule is that the example should be accepted by all without any restriction. The idea is the example should be noncontroversial. Our controversy is whether achetana pradhanam can function independently. Achetana jalam function independently is not correct. We have to correct whether achetana jalam functions independently or not. Since water itself is controversial, first we should resolve whether the natural happenings are acting independently or not. The noncontroversial thing is our vehicle. Samkya also accept a chariot cannot move independently. Chariort is non- controversial example. All the inert things function backed by the blessings of chetana tattvam. on the same line achetana pradhanam also functions backed by the blessings of Isvara alone. Finally to say achetana jalam functions blessed by Isvara behind the water may be their argument. Intelligence is perceptible in any case. we do not see intelligent principle but we see only the matter, intelligent is an inferred awareness and we cannot see through perception. Even

brain's death some reflexes continue. All these things show that jivatma stays behind the body. How can we discover Isvara is behind water. Just because there is no proof for jiva, you cannot say that proof is not there. absence of proof is not the proof of absence. Absence of proof for existence of god is not the proof for the nonexistence of god. Absence of proof means that you do not know and it shows your limitation. You don't see the dissolved salt in the water through your normal perception.. You use an exclusive pramanam the tongue. Similarly, Isvara is there throughout the creation but you cannot sense or see Isvara. you cannot through logic establish that there is no Isvara.

Now we will go to word for word analysis. payombhuvat like natural flow of milk and water; pradhanam evolves naturally. This is purva paksa part., chet if this is the contention it is not true or correct; tatrapa there is intelligence presiding over that also. the significance of the word payombhuvat means the milk and water like; the example is for the independent flow without the blessings of anything. Om the case pradhanam the natural evolution is taken here. Chet; means if this is the contention of Samkya Philosopher, in those cases also in the case of milk as also water do not function independently and intelligence is there behind water and milk. Nonperfection of intelligence is not 'nonexistence' of the intelligence.

## **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

#### **Sutra 4[175]**

#### ***vyatirekanavasthiteschanapekshatvat***

And because [the pradhanam] is not dependent [on anything], there being no external agent besides it [it cannot be active]

The argument in support of sutra 1 is continued.

First we will see the general analysis of the sutra. pradhanam cannot function independently we said. You cannot say Purusa supports pradhanam. Purusa is absolutely useless at the time of creation. nrvikaratvad, asangatvad and udhaseena Chaitanyam. How can that Purusa support pradhanam. other than Purusa there is not even Isvara they accept. Therefore Purusa cannot support asangatvad. Isvara cannot support abhavat; prakriti cannot stand on its own. Vedantins has got sasanga Chaitanyam other than asanga Chaitanyam. Now we will see word for word analysis.

Cha moreover; anabegatvad since pradhanam is independent vyatireka anavasthite due to the absence of external agency or support; pradhanam is not the cause of the universe. This is the running meaning. the significance of the word is vyatireka anavasthithethe vyatireka means a third factor other these two that pradhanam and Purusa; external agency like Isvara is not there because Samkya Philosopher does not believe in Isvara. Vedantins refutes Isvara at Paramarthika level and Vedantins accepts Isvara at vyavaharika level. At vyavaharika level there is no Isvara for the Samkya Philosopher. For Advaidins vyavaharika Isvara is there at vyavaharika prapancha or at vyavaharika plane. This is not the case with samkyans. Simply for samkyans Isvara abhavat. Anapeksatvat and therefore pradhanam is anapeksam this means supportless or without a backing. Pradhanam abeksa rahitam and supportless and it

cannot produce a creation. therefore independent functioning is not possible; others to back  
pradhanam is not available. With this the 4<sup>th</sup> sutra is over. more in the next class. .

## BRAHMA SUTRA

Class 173

### **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

#### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

##### **Sutra 4[175]**

##### ***vyatirekanavasthiteschanapekshatvat***

And because [the pradhanam] is not dependent [on anything], there being no external agent besides it [it cannot be active]

The argument in support of sutra 1 is continued.

It is a pada, which focuses on the negation of all the non-vedantic teaching, and it is also meant for reinforcement of our knowledge. Knowledge to be clear we should know what is right knowledge; we also should know why right is right; also we should know why the wrong is wrong; then alone knowledge is samyat jnanam. therefore parama nirakaranam is important and the aim is only clarity and it is not denigration of a particular person or group of people. It is not parihartham. We don't want to hate other people. We do not want to bring down the reputation of other people. I want to have clarity. Free to hold any view is allowed. We first has taken up Samkya darsanam and we have taken up the pradhanam of Samkya. It is also known as prakriti. prakriti is generally used in Vedanta and the pradhanam is rarely used in Vedanta.. because of commonness of the words one may think that both are same. Here common features of prakriti and pradhanam between Samkya and Vedanta have not been said in the Brahma Sutra. Both are anadhi both trigunatmam and both are achetanam. Most of the main ones are different. Here we highlight some of the differences. First we have taken the activity of the pradhanam. pradhanam is most active category. We dismiss one by one their concept of activity. First, we refuted skillful activity being a jada pradhanam cannot be skillful. Even partially skillful jiva is not able to guess the complexes of universe. How can pradhanam a jada vathu can have the skill to operate the universe. Then Vyasacharya takes up the independent activity of pradhanam. in Vedanta there is Isvara activates pradhanam. in Samkya there is no Isvara and pradhanam is independent and it is jadam. Samkya gave two examples the milk and the water in the mountain. Vyasacharya refuted both of them in the previous sutras. Incidentally Vyasacharya said even if pradhanam wants to take dependence no one is available and the available Purusa is useless and he is indifferent. Independent activity is not possible and dependence is not available. The same topic continues in the next sutra also.

### **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

#### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

##### **Sutra 5 [176]**

### ***Anyatrabhavaccha na trinadivat***

And [it can] not [be said that the pradhanam modifies itself spontaneously] like grass, etc., [which turn into milk], because of its absence elsewhere [than in the female animals]

The argument in support of the sutra 1 is continued.

This sutra is almost the extension of the third sutra dealing in the same topic. Here also purva paksa wants to establish jada pradhanam can have independent activity. He wants to give an example through that a vyapti and through vyapti he will say that pradhanam is cause of creation. trinavat it means the grass. What he intends is when the grass is eaten by the cow, it is converted into milk. Previously it was milk flowing from the cow. Now it is grass turning into milk and nobody plans or orders the cow to convert the grass into milk. This is the dristanta. Grass independent turns to milk and so pradhanam independently transforms into the universe. Vyasacharya gives his answer. if the grass has the independent capacity to become milk, it should change to milk anywhere. Even in the lawn you should get milk. It does not happen. If you say eaten grass turns to milk means anybody eating grass should give milk. The bull also eats grass and it does not give milk. Therefore there is no vyapti of the grass getting converting into milk. This is the general analysis of the sutra.

Now I will give word for word analysis. Cha means moreover; na – pradhanam cannot independently transform; trinadivat like grass etc; abhavat because of the absence of such transformation anyatra elsewhere; this is the running meaning. The significance of the words is trinadivat we have to understand like grass transforming into milk in the body of the cow; adhidivat it means the food being converted into blood in the body of the human being. This is the example given by purva paksa. Our example is na pradhanam cannot be transformed like grass and create the world. anyatra abhavat because it is not taking place elsewhere. anyatra means any other locus.

### **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

#### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

#### **Sutra 6 [177]**

#### ***Abhyupagame'pyarthabhavat***

Even if we admit [the Samkya position with regard to the spontaneous modification fo the pradhanam, it cannot be the cause of the universe because of the absence of any purpose.

The argument in support of the sutra 1 is continued.

First I will give you the general analysis of the sutra. skillful activity on the jada pradhanam was refuted; independent activity of jada pradhanam was negated and now Vyasacharya takes up the purposeful activity of jada pradhanam is being negated here. Here he says let us assume the first two stages are a possible and even then pradhanam cannot have purposeful activity. The reason is that purpose always indicates intention; so there should be intended result and intended beneficiary of the result. Not only the result should be envisaged in advance and visualization has two component first is the result of the activity and beneficiary

of the activity. Therefore visualization or intention is required for purposeful activity and it presupposes intelligence. Pradhanam` cannot visualize the activity being a jadam. A waterfall cannot visualize the generation of electricity which has to be done by the chetana jivas alone. The human being will benefit the electricity and you cannot say it is for the purpose of the waterfall. We make use of the electricity and the water cannot have a purpose in mind. result can be there for jada activity and purpose cannot be there for inert pradhanam. inert activity can have consequence and it cannot have a purpose. It is because pradhanam is jadam and pradhanam cannot have purpose because it is jadam. This is the essence of this sutra.

Now I will give you the word for word analysis. Abhyupagame means even if independent and skillful transformation is accepted in pradhanam since purpose is absent pradhanam cannot be the cause of the universe. This is the running meaning. the significance of the words is abhyupagame the pradhanam can skillfully and independently transform with inbuilt capacity to do such things; this is the assumption arth abhavad even then you cannot attribute the purposeful activity on the part of pradhanam. it is because artha abhavat artha means purpose; abhavat being absent. Both are not there in jada pradhanam. purposeful activity is not possible and therefore pradhanam is not jagat karanam. Adhi Sankaracharya says let us assume that there is purposeful activity. Then Adhi Sankaracharya's argument is let us assume that pradhanam creates the purposeful universe. He asks what is the purpose of the creation of the universe. Samkya Philosopher says purusasya prayojana sidhyartham. Pradhanam does nishkama karma for the enjoyment of the Purusa. pradhanam is a karta and pradhanam is not a bokta. The purpose is for the benefit of Purusa. the prayojanam Samkya calls it purusasya boga abhavartha siddhyartham. That Purusa alone is otherwise called jiva. bogah means dharma artha kamah or otherwise called preyah. Abhavartha means shreyah. Adhi Sankaracharya says it is fine and your system is so great. He asks how can Purusa receive any prayojanam from prakriti because Purusa is defined as asangah or asambandhah or it cannot be related to and it cannot be a receiver of any prayojanam. Purusa cannot have receiver received sambandha and such relation is not possible for Purusa as per Samkya philosophy. Purusa cannot get moksa also because asanga Purusa cannot have samsara sambandha. Therefore samsara sambandha is not possible. Where is the question of removing the sambandha. taking a relation is boga and removing relationship is abogah. Therefore, even if prakriti activity is purposeful Purusa is the beneficiary you cannot say. There is none to gain the benefit. The next concept of Samkya philosophy is not acceptable. Adhi Sankaracharya says let us assume that even though Purusa is a bogta and therefore capable of receiving the prayojanam. Adhi Sankaracharya asks the question the bogritvam of Purusa is natural or superimposed. Let us assume that it is natural for Purusa. if you say swabhavika bogritvam is there for Purusa and swabhavika kartritvam is there for prakriti and whatever is natural cannot be eliminated by jnanam. How can jnanam remove what is swabhavikam or natural. Since prakriti is eternal karta and Purusa is eternal bogta the Purusa will suffer for all the time. he cannot gain moksa. It is anir moksa prasangah. This samsaritvam will continue for ever. Your Samkya darsanam will become meaningless. Samkya Philosopher introduces his philosophy for gaining moksa and it is not possible under this condition. To avoid this problem he may say pradhanam cannot have natural bogritvam but arobika bogritvam and whatever arobigam can go through jnanam. if this is accepted where is dosha. Adhi Sankaracharya says that is called Vedanta and you talk of Vedanta only and say Purusa is abokta and akarta. What you claim as Samkya is good old Vedanta, once you say arobika bogritvam is giving up of one's own stand and unknowingly entering into the field of Vedanta. therefore give up the swabhavika bogritvam of Purusa. Now we will go to the next sutra.

## Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]

### Refutation of the Samkhyan theory of the pradhana as the cause of the world

#### Sutra 7 [178]

#### *Purushasmavaditi chet tathapi*

If it be said [that the Purusa or soul can direct or move the pradhana] as the [lame] man can direct a blind man, or as the magnet [moves the iron], even then [the difficulty cannot be overcome]

The argument in support of sutra 1 is continued.

Now we are entering to the next stage of discussion. We have discussed pradhanam skillful activity is not possible; independent activity is not possible; pradhanam pradhanam purposeful activity is not possible and also we have seen Purusa cannot be a bogta. Now we come to the argument that pradhanam is a karta. Pradhanam guided activity is also not possible. First we will do the general analysis. In the previous portion we have dismissed the idea of pradhanam being skillfully active; purposefully active and independently active because pradhanam is a jadam or an inert vasthu unbacked by chetanam. Since pradhanam cannot do that let us assume Purusa is activating the pradhanam. Guided by Purusa prakriti works and therefore Purusa alone is making prakriti work and Purusa receives the benefit. He gives tow examples. One is like a lame person and who cannot walk and he has got eyes. There is another person who has got legs in tact but he is blind. One is lame and another is blind and if both cannot independently reach the destination and the two had a joint venture and the blind man carried the lame person and lame person is capable of seeing. This is antha pantun nyayah. Sakti sambannah purusah and prakriti is anthah being jadam. Prakriti guided by Purusa and mutually they create universe. For that Vyasacharya answers still your problem is not solved. The problems here are many. First, you say Purusa guides prakriti and you can never say prakriti is independent. When it takes guidance how can you say prakriti is swatantram. You relinquish the idea of independence of prakriti. again Purusa cannot guide prakriti because guidance is a form of activity. Purusa being asangah being nirvkarah Purusa will be akartha only and you yourself has accepted Purusa is akartha. It is logical and accepted by your system. How can it guide prakriti. This is yukti virodha or swa abhyugama virodha. This is one set of problem. He is going to give another suggestion. Purusa does not guide by action but by mere presence, it activates prakriti. There is problem, which we will see, in the next class.

## BRAHMA SUTRA

Class 174

### **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

#### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

##### **Sutra 7 [178]**

##### ***Purushasmavaditi chet tathapi***

If it be said [that the Purusa or soul can direct or move the pradhana] as the [lame] man can direct a blind man, or as the magnet [moves the iron], even then [the difficulty cannot be overcome]

The argument in support of sutra 1 is continued.

In this firsts adhikaranam Vyasacharya negates Samkya Darsanam. the main focus of Vyasacharya is to point out the deficiencies in their pradhanam concept. now we see the 7<sup>th</sup> sutra general analysis. Vyasacharya first negated the skillful activity of pradhanam, then purposeful activity followed by independent activity on the part of pradhanam. it is so because pradhanam is jadam and is inert. Now we have taken the fourth concept that is guided activity on the part of pradhanam. Now we assume that pradhanam is guided by Purusa and let pradhanam function skillfully and purposefully. This is the fourth assumption and here also, Vyasacharya points out that there are deficiencies. If pradhanam is guided by someone who is the guiding factor. Samkya only has Purusa that is asangah, nirvikaratvam etc. he gives two examples in support of that like one blind person carries a lame person and jointly they reach their destination. Purusa guides the pradhanam and create Akasa etc. the second example is asmavat it is like magnet.

If you accept blind lame example, pradhanam is independent which is against your own siddhanta. Further, once you say Purusa guides pradhanam you accept activity on the part of Purusa. guiding pradhanam is an activity. Once you say Purusa guides means change is involved. That is against their own concept of Purusa for they say Purusa is nishkriya udhaseena Chaitanyam. How can indifferent Purusa take interest in pradhanam's activity. How can nishkriya Purusa changeless Purusa do any activity. These are two doshas if you take blind lame examples.

Next they say Purusa guides prakriti. Purusa does not do any activity. Being near the action takes place like a magnet attracting the iron. For this we say even if pradhanam receives guidance from Purusa from its mere presence even then it receives guidance which itself is not correct and it reveals dependence. The previous dosha continues whether Purusa actively guides or passively guides prakriti. Adhi Sankaracharya says if you say by the mere presence of Purusa prakriti will be active then the problem will be Purusa will be eternally present near prakriti and prakriti will eternally be active. There is no thinking involved either on the part of prakriti or on the part of Purusa with no thinking involved. If it is eternally active there will be no pralayam, there will be permanent sristi, prakriti will produce body, and even after liberation the body will be produced, as prakriti will be active. What is all about Vedanta? in

Vedanta other than asanga Purusa and other than prakriti we have got an Isvara who is involved in creation. this Samkya philosophy does not accept. This Isvara you may call prakriti1 pratibimba Chaitanyam and that Isvara is sarvajnah sarva saktiman and sarva karma phala dada. That Isvara will decide which jiva should be reborn and when pralaya should take place and which jiva should not be reborn. This Isvara is not there in Samkya philosophy.

Now we will see word for word analysis. Purushasmavat means Purusa activates prakriti. iti chet if this is the contention; tathapi still [add there are inconsistencies]. Now we will see the significance of the words. Purushasmavat it is a compound word of Purusa and asma and vat. It means a person and here it refers to a lame person who is on the top of blind person. second one is asamat here it means magnet. Purusa assists the blind prakriti. up to this purva paksa's view. Tatha and api means still even then in spite of such a contention [still there are problems] the problems kept in mind are prakriti will nomore be independent and Purusa will no more be inactive.

## **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

#### **Sutra 8 [179]**

#### ***Angitvanupapatteschaa***

And again [the pradhana cannot be active] because the relation of principal [and subordinate matter] is impossible [between the three gunas].

The argument is in support of sutra 1 is continued.

The next two sutras are almost repetitive sutras that pradhanam cannot be jagat karanam. Now the subject is discussed specifically than before. Samkya theory is Purusa and prakriti were there before sristi. That Purusa does not do anything to the creation. prakriti is guanthriya samya avastha pradhanam. All three gunas are in equilibrium, and they undergo change but there will not be change in the equilibrium. Then there is a change in the equilibrium of samya avasthas of three gunas, because of the disturbance in the equilibrium there is a change in the proportion, there is domination of one guna, and the other two gunas become subservient. This is called vaisamya avastha is called Prapancha or sristi. this vaisamya avastha in which one guna is dominant and they use another expression anga angi bhavah. Sattva become anga and the other two will become angi. This is the Samkya theory of creation. we are all created being and we have all the three gunas. This is their contention and Vyasacharya contends this idea. The disturbance of equilibrium cannot be explained by the Samkya Philosopher. What is the cause behind the disturbance no one knows. We cannot say prakriti is itself is the cause. why it suddenly get disturbed and create production. The only another category involved in Purusa and they say Purusa is triggering factor but unfortunately, Purusa cannot be the activating agent. Purusa is asangatvad and it cannot undergo any change as per their own tenets. But in Vedanta there is no problem. That agent here is Isvara Chaitanyam. All these are possible and Brahma Chaitanyam but vyavaharika Isvara do not do it. Unfortunately, Samkya Philosopher has no Isvara Chaitanyam to do the job. Hence, the Samkya Philosophers cannot explain the disturbance of equilibrium.

Now we will do the word for word analysis. Cha moreover; angitvanupapatteh because of the impossibility of the predominance of one guna over the other; pradhanam is not the cause. Now we will see the significance of the words. Angitvam means dominance of any one guna; anupapatteh illogical or untenable; if one guna has to become dominant the equilibrium will be disturbed and it is done only by an external agency and there is no external agency and therefore we cannot explain the changes. Everything in Samkya is acceptable except that they do not believe in Isvara. Vedanta accepts Isvara which is as real as jiva and as real as jagat. if at all Vedanta inegates Isvara it negates only that Isvara at Paramarthika level. In vyavaharika level we accept Isvara whether before or after jnanam. before jnanam pooja is to get jnanam and after getting jnanam pooja is to be done for thanking the Lord to gain liberation. that bakti or namaskara of Advaidin is more deeper than the other person. cha is to connine previous hetus.

## **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

#### **Sutra 9 [180]**

#### ***Anyathanumitau cha jnasaktiviyogat***

Even if it be inferred otherwise on account of the pradhana being devoid of the power of intelligence [the other objections in the pradhana being the cause of the universe remain in force]

The argument in support of sutra 1 is continued.

We will do the general analysis of this sutra. Samkya Philosopher tries to solve the problem that pradhanam cannot change the equilibrium and it requires an external agency, which is not there. If they say, that external agency is not there and if they argue that pradhanam has got in built system to get disturbed and regulate the equilibrium. For this Vyasacharya says still the problem continues. If your assumption is true, that all the problem attributed to pradhanam will come. How can that change naturally happen at the appropriate time; that independent change takes place; purposeful change and guided change is not acceptable because you do not have such a vyapti in your day to day experience. It is all because pradhanam is inert. Suppose he says why cannot I infer intelligence also is there in pradhanam. then Adhi Sankaracharya says that it is no more achetana karana vadha and you have to come to chetana karana vadha and it is nothing but Vedanta. you the vadhi unknowing become a pradhivadhi and you better accept intelligent cause and if you take intelligent and material cause then there is no problem.

Now we will go to word for word analysis. Cha anyatanumitau even if the inference is modified jnasaktiviyogat because of the absence of intelligence [the objection remains] the problem remains. The significance of the words we will see. anyatanumitih means a modified inference with regard to the nature of pradhanam; original inference is that pradhanam has got three gunas which never undergoes any change. It is in equilibrium at all times. What is the external factor, which will change pradhanam. the modified concept is that pradhanam has got in built capacity to change the equilibrium also without any external factor. Jnasakti viyogat it is chetana sakti, which means intelligence being absent. It is not intelligent enough to undergo change. Purva doshah anuvartante previously mentioned doshas continue. Skillful

activity, purposeful activity, guided activity and independent activity are not possible for the pradhanam which we have already established in the previous sutras.

## **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

#### **Sutra 10 [181]**

#### ***vipratishedhaccasamanjasam***

And moreover [the Samkya doctrine] is objectionable on account of its contradictions.

The argument in support of sutra 1 is continued.

With the previous sutra Vyasacharya concludes his criticism the pradhanam concept of Samkya philosophy. now here he says in addition to the major defect there are so many internal contradictions in Samkya philosophy. Adhi Sankaracharya mention a few of them. It is regarding the number of sense organs. Second thing he mentions about the panca sookshma bootha karanam, which is vague. Some say mahat is karanam and in some other places, ahankara is the karanam. in short they have so many internal contradiction. This is the general analysis.

Now we will do the word for word analysis. Vipratishedhat because of the internal contradictions also asamanjasam sakmya philosophy is inconsistent or defective. This si the running meaning. the significance of the word is vipratishedhat literally we mean contradiction but here it is internal contradictions. Asamanjasam means improper deficient, defective etc. cha is only to add to the previous reason. While writing the commentary on the sutra Adhi Sankaracharya introduces a purva paksa. Samkya philosopher says that Vedanta too has many contradictions. The main contradiction he mentions is how can one Chaitanyam Brahman can become Chaitanyam and achetana Prapancha. beda belongs to the vyavaharika plane and abeda is in Paramarthika level and in vyavaharika plane. One dream is divided into chetana and achetana Brahman so this is possible in real life also. ajadam is Brahma and mithya nama rupa is jadam. This Adhi Sankaracharya's answer.

Throughout the adhikaranam Vyasacharya has criticized pradhanam cannot be jagat karanam. there are few important defects emntione elsewhere. They say pradhanam is as real as Purusa. This is one big difference. In Vedanta we do not accept pradhanam as sathyam and it vyavaharika sathyam and it is not Paramarthika sathya,m. wherever two sathyams are there duality will be there and duality means samsritvam will be there. We also dismiss Purusa as bogta and that is asanga and changeless cannot experience anything for experience requires connection. Third, one is Purusa bagutvam. It is not one but Samkya philosopher says that there are many Chaitanyams which are all pervading. This also we dismiss based on sruti and the logic, which we will see during the course of discussion.

## BRAHMA SUTRA

Class 175

### **Topic 1. Rachananupapattyadhikaranam [Sutra 1-10]**

#### **Refutation of the Samkhyan theory of the pradhana as the cause of the world**

##### **Sutra 10 [181]**

##### ***vipratishedhaccasamanjasam***

And moreover [the Samkya doctrine] is objectionable on account of its contradictions.

The argument in support of sutra 1 is continued.

The atomic theory of the vaiseshika that formless, indivisible atoms enter into the composition of the world is now refuted. Through this adhikaranam Vedantic refuted Samkya Darsanam and even though Samkya Darsanam is very close to Vedanta it has got some fundamental defect that makes it different from Vedic teachings. The main differences we saw you should remember are Samkya Philosopher says that prakriti has got kartritvam and we accept kartritvam on the part of jiva and Isvara and not on the part of prakriti. second is we do not accept prakriti swatantratvam the independence of prakriti as it is inert in nature. Any inert thing has got to have the hacking of chetana tattvam. third is prakriti as sathyam not vyavaharika sathyam but Paramarthika sathya and claims prakriti is as real as Purusa and it is dvaidda darsanam. fourth dosha is purusasya bogtritvam. Purusa is another name for Jivatma in Samkya Darsanam. in Vedanta we do not accept bogtritvam on the part of jiva. fourth dosha is purusasya Jivatma bahutvam the plurality. In Vedanta we do not accept plurality of Jivatma and that the plurality of Jivatma is a delusion in Advaidam. Plurality of Atma means one travels from mortality to mortality. Any knowledge in which Atma is seen as plural comes under rajasa jnanam. because of these five doshas are defective. Now we will enter into the next adhikaranam.

### **Topic 1. mahaddirghadhikaranam [Sutra 11]**

#### **Refutation of the vaiseshika view**

##### **Sutra 11[182]**

##### ***Mahaddirghavadva hrasvaparamandalabhyam***

The world may originate from Brahman as the great and the long originate from the short and the atomic.

The atomic theory of the vaiseshika that formless, indivisible atoms enter into the composition of the world is now refuted.

I will give a general analysis of this adhikaranam with one sutra. in this adhikaranam Vyasacharya refutes a logical defect which is attributed to Vedanta darsanam. this is

attributed by nyaya vaiseshika philosophers. They attribute a yukti virodha to Vedanta. what is the virodha he points out is that out of the material cause and achetanam jagat the effect cannot come. from chetana achetana jagat cannot be born. Nyaya Vaishesika says when a cloth is produced out of white fibres the colour of the cloth will be white only. Samkya yoga philosopher also accept this view. It is an experienced fact. In explaining the phenomenon the Samkya philosopher says that there is whiteness of fibre alone appears in the cloth also. karana gunah karye anuvarthate. This is the Samkya yoga theory of creation. but Nyaya Vaishesika says it is not the whiteness of the fibre is not appearing in the fabric and fabric has got another whiteness which is different from the whiteness of the fibre. Fibre whiteness does not appear in the fabric. Then we ask if fibre whiteness does not appear and then how the white cloth we see. he says that fibre whiteness produces fabric whiteness. They are not identical but they are only similar. Fabric whiteness resembles fibre whiteness. Based on the he creates a law. Karna guna karye swa samana jathiyam gunantaram krijate. Property of the cause produces another property in the effect and whiteness of the fabric cloth. This another property is similar to the fibre property. The new whiteness will resemble the whiteness of the fibre property. That whiteness resemble this whiteness. This is distinct phenomena. This is karya utpatti niyama. Nyaya Vaishesika says that this law is violated in Vedanta sristi. it is very simple. You say Brahman is karanam and jagat is karyam`. If Brahman is karanam and jagat karyam and Brahman should produce a property which is similar to the property of Brahman. he says Brahman is chetana gunah. Sentiency is essential feature of Brahman. this Brahman produces jagat and naturally Brahman Chaitanyam gunam should produce another chaitanya gunam and not jadam. But our experience is that jagat is not chaitanya gunam. It is nyaya virodhah varthate and Brahman is not jagat karanam. therefore samanvaya established becomes defective. It is yukti virodha.

Siddhanta then gives the answer. the answer given by Vyasacharya is that this nyaya is not absolute nyaya and it is violated in your own darsanam. This rule is violated in Nyaya Vaishesika itself. Where is it violated? According to Nyaya Vaishesika philosopher paramanu is the jagat karanam and paramanu produces the universe. If Prithvi paramanu produces earth and Agni paramanu produces Agni. When Prithvi paramanu produces Prithvi there is gandha guna is there. When Prithvi paramanu produces earth, Prithvi paramanu guna will produce on earth the Prithvi paramanu guna earth and thus the law is maintained. Vyasacharya says it is wonderful. When you talk about guna he has given the possible attributes, he has enumerated twenty-four guna, and one of them is dimension or size the parimanah. He says paramanu has subtlety and minuteness as its property. It is invisible. He says the world is a product of paramanu. The world has got mahatvam and stholatvam as its dimension. Minuteness and subtlety are the property of paramanu. When paramanu is cause of the world, it should produce another product with the same attributes of minuteness and subtlety of the world. paramanu is endowed with property of minuteness and subtlety as the property of the world. But we find opposite attributes we see in the world that niyama is violated. Therefore Nyaya Vaishesika darsanam is wrong. He says that their law is general with some exception. He says the colour etc., we accept the law and in the case of dimension it will be different and parimana is exceptional one. this Nyaya Vaishesika should say and if you have exception some guna produce smana guna and some have exception. So Brahman also has got two guna; satta guna produces the existence property in the world and in this respect the niyama is followed and in the case of chetanatvam it is not applicable exactly like your parinama exception. Therefore you have no right to criticize our plea. We find in this andhakaranam Vyasacharya refutes yukti virodha attributed to Vedanta. the smriti virodha parihara and yukti virodha pariah has been the topic of the previous pada. In this pada defending is the aim but offending is the aim. If you remember in the pradhana pada,

Samkya philosopher pointed out by yukti virodha and we negated their argument. Here Nyaya Vaishesika points out the yukti virodha here. This adhikaranam better located in the previous pada. This is the general analysis to this adhikaranam.

Here we will see a little bit of theory of creation. they say before creation all the elements were in atomic form. this he calls paramanu. He accepts five elements and paramanus are four Prithvi, jala, Agni and Vayu. The paramanus are infinite in number. Akasa is not included in paramanu and it is eternally in the same form. as regards Nyaya Vaishesika Akasa is partless and nithyah. As regards Vedanta is concerned Akasa is not nithya. Because it is born Akasa also has got subtle avayavams. For all practical purpose, Akasa is also endowed with sookshma avayavas. He says Akasa is nithya nnd niravayavah. Other things existed in paramanu form at the time of pralaya. all jiva's karma which they call as adhristam. Paramanus do not have any motions but because of the adhristam paramanu moves and the paramanu join and a molecute is produced and in the first molecute that is produced, it is call dvianukam. Divanukam has got two paramanus. In English we can call it dyad molecule. It is combination of two paramanus. Then three dyads will combine and form trianukam. Even though we call trianukam and it means six anus will be there. it is called triad molecules. Further four triad molecules will produce chaturanugam. What Vyasacharya wants to show is that when you take the dimensions and analyse you find your own law is violated karana guna karye samana jathiyam. And to show this we should know the dimension of the each one. according to Nyaya Vaishesika theory the dimension of paramanu is called parimandalam. That is called minuteness. Or it is called parimandalah. We have a minute paramanu. To produces dyad paramanu and the dimentsion in this context is called 'smallness and shortness'. We have a small and short dyad molecule. Minute moleculite is father and it produces dyat and triad molecule. It produces big and long molecule. In Sanskrit we call it mahat dirgha trinugam anu tattva vyanukam parimandala paramanu. Minute atom produces small short dyad moleculite and small long dyad molecule. Here the substances involved are paramanu, atom producing dyat molecule and dyat molecule producing triyad moleculite. Each one has gunas also. Vyasacharya's argument if your law is to be upheld, the atom must be minute and dyad moleculite also must be minute, which is the property of the paramanu. But we find when atom produces triyad moleculite the property produced are different. So also is in the case of triyad moleculite. The law is either wrong or this is an exception. So from chetanam Brahma jada Prapancha is born. therefore yukti virodha doshah nasti. The word for word analysis will be taken up in the next class.

## BRAHMA SUTRA

Class 176

### **Topic 1. mahaddirghadhikaranam [Sutra 11]**

#### **Refutation of the vaiseshika view**

#### **Sutra 11[182]**

#### ***Mahaddirghavadva hrasvaparamandalabhyam***

The world may originate from Brahman as the great and the long originate from the short and the atomic.

The atomic theory of the vaiseshika that formless, indivisible atoms enter into the composition of the world is now refuted.

Generally many people consider Brahma Sutra as a dry subject. In that so-called dry subject, also the second pada of second chapter is considered very dry subject. Here we do not learn Vedanta we do not even defend Vedanta and we only examine other systems and after lot of struggle and examination and we put it in waste paper basket. Why should we study and leave is a question and people wonder about the content of this chapter. Often this chapter very often dropped. I chose to teach it because I wanted to go through and revise it for myself. Here we do the second adhikaranam where Vyasacharya refutes Nyaya Vaishesika system. He says that from chetana Brahman achetana Prapancha cannot come emerge based on the law *karana guna karye samana jathiyam gunantram utpayati*. The property of the cause never comes to the effect. In Samkya, yoga philosophy the property of the cause inheres in the effect. In Nyaya Vaishesika, the property does not inhere in the effect but the separate property in the effect comes into effect, which is similar to the property of obtaining in the cause. This is we have discussed in detail in the last class. Vyasacharya points out the violation of law in Vedanta and on scrutiny that the law is violated in your own theory. Atom produces smaller molecule and bigger molecule. Ma produces short small dyat. Short small dyat produces big long triad molecule. This is the creation. 'MA' is the property and atom is the subject; in the second SSD, SS is the property and dyat molecule is the substance and in the third layer, triad is the substance and bigness and longness is their properties. Here the minute property in the form of atom produces big molecule in the third range. Minute atom produces big molecule, the minuteness and bigness are very different attributes, and they do not belong to the same jathi. Minuteness should produce only minute molecule, [just as the white thread can produce another fabric of whiteness] alone as the property of molecule and one is unable to explain minuteness producing bigness and longness in vaiseshika matham if they say that the moment atom produces molecule that the minuteness is lost and bigness replaces the minuteness. This argument is not acceptable because minuteness of atom is eternal property and how can it be replaced when the substance with minuteness as property produces a molecule. This argument is not tenable. He can say that minuteness is not lost but when several atoms join together and when the several minutenesses join and the cumulative effect of all minuteness becomes large. So argues. Adhi Sankaracharya and Vyasacharya say that this can be argued by Samkya yoga philosophers but not by Nyaya Vaishesika philosophers and we accept the minutenesses join together make it large. Minuteness of atom

will be there in atom and minutenesses can join and can make joined item make the product molecule large. The Vaisesika philosophers cannot apply this to because they say karana guna karye na anuvartante minuteness of the cause cannot go to the molecule and how can it make the molecule large. Little drops makes an ocean is applicable to all the systems of Vedanta, Samkya and other but this rule does not apply to Nyaya Vaishesika because for the largeness is not an addition of minuteness but aa separate property produced out of minuteness. He will never be able to explain minuteness producing the smallness or the largeness. The Nyaya Vaishesika in the case of paramanu joining and making the product molecule large and big violates the general law 'karana guna karye samana jathiyam gunantram utpayati'. In the case of dimension the exceptions are there means Vedantins also would say in the case of Vedanta also there is an exception of chetana vasthu producing achetana Prapancha. Now we will see the word for word analysis.

Mahat dirghavadu like the origination of the big long diat unlike small short diat hrasvaparamandalabhyam out of small short dyat and minute atom respectively. The world is born of Brahman. the significance of the words is mahat dirghavadva mahat means big and dirghavad means long; like the big and long triad; va refers to the birth of small short dyat; just as small short dyat is born. these two are born out of hrasva paramandalabhyam short small dyat and paramandalabhyam means minute atoms. Out of chetanam Brahma achetanam Brahman can be happily born. with this the small adhikaranam is over.

### **Topic 3. Paramanujagadakaranatvadhikaranam;[Sutra 12-17]**

#### **Refutation of the vaiseshika view**

#### **Sutra 12[182]**

#### ***Ubhayathapi na karmatastadabhavah***

In both cases also [in the cases of the adrishta, the unseen principle inhering either in the atoms or the soul] the activity [of the atoms] is not possible, hence negation of that [viz., creation through the union of the atoms]

The argument against the vaiseshika system commenced in sutra 11 is continued.

First I will give you general introduction to this adhikaranam having six adhikaranam. it is called paramau jagat akaranatva adhikaranam or vaiseshika madha kandana adhikaranam. this Nyaya Vaishesika is discussed from the standpoint of creation theory. We differentiate Vedanta vaiseshika from the point of view of creation. Nyaya Vaishesika says the matter is material cause of creation and Vedanta alone says that Consciousness is material cause of the creation and it is mind boggling question. Therefore it is from this angle Nyaya Vaishesika system and it says paramanu is the basis of creation. we refute this theory. We say paramanu is not karanam for the creation. this is the general introduction to this adhikaranam.

Now I will give you general analysis of the sutra. vaiseshika cannot explain the creation and they say before creation there were atoms. Akasa is not anu and it is all pervading principle. Before creation, all paramanus stood isolated and all alone. They remain static without relationship. The time of karma ripening came which they call adrishtam a common name for both punyam and papam. When the adrishtam is ready the paramanus run and bombard at each other. They start joining together two atoms makes dyat; three dyat make triat etc. not

only they join together and form molecule and when they join further they become visible Agni, water, Earth etc., and out the elements the bodies emerge. This is their theory of creation. Here Vyasacharya asks as to how the inert atoms join together intelligently and form this wonderful creation, body, complicated brain, sense organs etc. then he says it happens because of the effect of adristam. It is that which pushes the paramanus to combine. Vyasacharya asks where is the adristam located. There are two possibilities. One is that it should rest in paramanu itself and the situation is not better because paramanu is jadam and adristam is jadam and karma and karma phalam is jadam and paramanu is jadam and how can jada paramanu guided by jada adristam form the creation. this doll is also jadam and how can the jadam doll drive inert car. No inert object can intelligently form as one to form a chetana vasthu. Then he says Atma is eternal paramanus are eternal. He says adristam resting in the Atma guide the paramanu to join so that the world is created for the benefit of Atma to have gala time. now Vyasacharya says there is problem. in their peculiar view of Nyaya Vaishesika Atma is jadam. Atma jada dravaym they say. How come we experience as live chetana vasthu. In Atma Consciousness is generated as property and only when Consciousness property is generated and after the generation only Atma becomes chetanam. Once the property goes the Atma is jadam. In sleep one is jadam. On waking, he becomes chetanam. One condition for Atma to become chetanam is physical body. This means before sristi the conditions were not there for existence of Consciousness. during pralaya there was no Consciousness in the Atma; Atma is jadam adristam located in Atma is jadam; and how can jada Atma with jada adristam form this wonderful creation. karma means intelligent combination and it is not possible because everything under Nyaya Vaishesika system is inert like adristam is inert, intelligence is inert; Atma is inert and everything is inert. Since atomic combination is not possible how can there be dyat, triads and how can there be four elements. Since first movement of atom is not there, the possibility of the creation is not possible under Nyaya Vaishesika system. Now we will do the word for word analysis.

Upayatha abhi either way na karma there is no motion in the atoms; therefore there is no combination of atoms. The significance of the words is upayatha abhi adristam resting on paramanu or adristam resting on Atma either way motion is not possible for paramanu. Prithvi paramanu should join Prithvi paramanu and not with jala paramanu. Athah therefore since motion is not there karma tad abhavat combination of atom to form molecules is impossible without the motion of atoms. Motion of atoms is not possible without chetana tattvam. if formation of molecules is not there how can there be formation of the universe.

## BRAHMA SUTRA

Class 177

### **Topic 3. Paramanujagadakaranatvadhikaranam;[Sutra 12-17]**

**Refutation of the vaiseshika view**

**Sutra 12[183]**

#### ***Ubhayathapi na karmatastadabhavah***

In both cases also [in the cases of the adrishta, the unseen principle inhering either in the atoms or the soul] the activity [of the atoms] is not possible, hence negation of that [viz., creation through the union of the atoms]

The argument against the vaiseshika system commenced in sutra 11 is continued.

We are in the third adhikaranam. here we have completed the 12<sup>th</sup> sutra in which we pointed out that paramanu can never intelligently and purposefully form the complex universe. Everything before creation happened to be inert in nature; even Atmas which exist before which are different from paramanu are also jadam according to them because Consciousness is only the property that comes after the creation why, even the adhrishta the punya and papa is said to be responsible for creation also is jadam. And whether you place in paramanu; or whether you loate adhrishta in Atma and jadam and jadam is equal to jadam only. There is no intelligence to direct the adhrishta as the soul is then inert; moreover, the soul is partless like the atoms. Consequently, there cannot be any connection between the soul and the atoms. Hence, if the adrishta inheres in the soul it cannot produce motion in the atoms, which are unconnected with the soul. it does not improve the position even after creation. We have also seen in Samkya philosophy says that inert pradhanam cannot create anything without backing of the Consciousness so also we say inert paramanus also cannot create any creation. There while discussing the Samkya philosophy, we negated the intelligent evolution and here while discussing Vaishesika philosophy Vyasacharya negates intelligent combination of paramanus, Atma and adhrishta and the resultant creation. ubhayathapi; karma movement leading to the combination is not possible and creation is not possible and therefore paramanu jagat akaravada is established and paramanu jagat karavada is established.

### **Topic 3. Paramanujagadakaranatvadhikaranam;[Sutra 12-17]**

**Refutation of the vaiseshika view**

**Sutra 13[184]**

#### ***Samavayaabhyupagamaccha samyadanavasthiteh***

And because in consequence of Samavaya being admitted a regressus ad infinitum results on similar reasoning [hence the vaiseshika theory is untenable]

The argument against the vaisheshika philosophy commenced in Sutra 11 continued.

In this sutra, Vyasacharya negates certain technical aspects of vaisheshika philosophy. Before negating this, we have to know what is the technical aspects. Let us now try to understand the vaisheshika system. It divides the whole system into seven padharthas. In English we can say category. The seven padharthas are as below; 1. substance dravyam in Sanskrit; 2. Property or guna; 3. Action or karma or universal or samanyam 5. the particular as opposed to universal or visheshah 6. inherence or smavayah 7. non existence or abhavah.

Dravyam means the substance that is the fundamental stuff of the entire creation; the solidity and tangibility of the universe depends on the substance. Substance is divided into many things. 2. it is the property; if the chair is the substance red. Blue, long or short the adjective in English refers to property or guna. property cannot exist independent of padhartha 1 the substance; this exists in substance inseparably; 3. it is action and activity is also inherent aspect of substance alone and you cannot separate activity from the actor the agent; if the speaking activity is to be there then the speaker has to be there. it is also resting in substance [1] inseparably. 4. The universal when we take the chair example we said chair is substance and it can have colour etc. It can also move; it has also got one universality and it has one thing in common is 'chariness' the universal unites the chair by showing that every chair has got oneness or the universality and it is called samanya oneness, manushyatvam etc. to quote a few examples. Vaisheshika points out that universal also cannot be separated from the substance [1]. It rests in dravyam; dravyam seems to be the foundation on which everything is dumped; 5. The particular is opposed to universal, universal unites all the members, and the particular separates the members. The thumb impression, the skull arrangements, the teeth arrangements etc., have particularity one from the other even though you happen to be samanya. Because visheshah is deeprooted subject the system is called vaisheshika. 2 to 5 are located in one. No padhartha singly exists and every padhartha exist in association with one. 6. it is samavayah or inherence which means the intimate relationship existing between two padharthas. Number 6 is relationship between 1 and 2, 1 and 3 and 1 and 4 and 1 and 5 is called samavayah inherence. Vyasacharya will attack this samavaya. This is a very fundamental concept of vaisheshika. It is like adhyasa the fundamental concept of Advaitam. Brahma Sutra starts with adhyasa which being the main topic on which Advaitam stands. Vishistadvaitam talks about seven types of illogicality or logical fallacy of adhyasa of Advaitam. Now there is philosophical debate between Vedanta and vaisheshika. Vyasacharya attacks samavaya. The last padhartha is absence or non existence. Vaisheshika divides non-existence into different types. There are four kinds of non-existence. Adhi Sankaracharya attacks this in his Upanishad bashyams. Abhava is attacked in Brihadharaynaka upanishad and Taittrya Upanishad etc.

Now we will find out the fallacies Vyasacharya points out here. Vyasacharya says not all the padharthas exist independently and everyone is associated with another padhartha. If all the padharthas are associated in the relationship of inherence samavaya 'itself' a padhartha and being a padhartha it also should exist in association with another padhartha. Sixth one is also a padhartha and this also should exist in number one. the sixth one inherence also should exist or be located in dravyam [1]. Suppose he says yes, Vyasacharya asks 2 is located in one in samavaya relationship; 3 is located in one in samavaya relationship; 4 is located in one in samavaya relationship and 5 samavaya is also located in one; now tell me what is the relationship of samavaya and it is located in number one; what is the relationship between the two. If he says inseparable relationship, then samavaya is resting in samavaya relationship and thus you have to introduce another samavaya. The second one where does it rest and what is

the relationship between the two. He has to refer to sambandha. he will have the defect called infinite regress and therefore he cannot explain samavaya relationship. The new samavaya will require another samavaya to connect it with the first and so on. Thus their theory is vitiated by the fault of navastha dosha or regresssus ad infinitum. The argument is faulty. Hence, the atomic doctrine which admits samavaya relationship for the union of the atoms is not admissible. It must be rejected as it is useless and as it is an incongruous assumption. Vaiseshika system circles around samavaya which suffers the above dosha. samavaya should have relationship with another padhartha like dravyam etc. you cannot explain what is the relationship between padhartha and samavaya. This is the general analysis. Now we will do word for word analysis.

Samavayabhyupagamat because acceptance of samavaya because of regresssus anavasthiteh ad infinitum and other categories so the combination of atom is not possible. This is the meaning of the sutra. samavaya bhyupagama means inherent or the sixth padhartha of seven padharthas of vaiseshika. Inseparable relationship; abhyugama acceptance; Advaidam does not accept samavaya sambadha but accepts adhyasa sambandha. samyat it means similarity; similarity between the other categories and samavaya category; this similarity creates the problem of anavasthiteh it brings regresssus ad infinitum; in their syatem samavaya is only one and here we find various samavaya which is not possible.

### **Topic 3. Paramanujagadakaranatvadhikaranam;[Sutra 12-17]**

#### **Refutation of the vaiseshika view**

#### **Sutra 14[185]**

#### ***Nityameva cha bhavat***

And on account of the permanent existence [of activity or non-activity the atomic theory is not admissible.

The argument against the vaiseshika commencing in sutra 11 is continued.

We have seen that the combination of atoms is not possible because they are inert in nature and some intelligent principle has to stimulate the action. Atma the same problem; they do not have Isvara and if they had accepted Isvara it would have solved the problem. The question is how will the motion of atom come. How it will produce the first motion. In science, the molecule or atom will remain in the same position unless such atom is compelled to change its position by an external force. Since he does not ave any intelligent being he will have to say that motion is the swabhava of the action. External agent is required for incidental property and for the intrinsic property. Supposer they claim they have motion inherently. Then Isvara is not required. If you say paramanu is the enteral motion and then you cannot accept the concept of pralaya where creation is dismantled or resolved. All paramanu gets separated and will remain in paramanu form without any combination. How will you explain pralya avastha where paramanu remain static? It the motion is inherent pralaya cannot be explained. If motionlessness is the inherent quality then sristi cannot be there. The integration and disintegration is an intelligent phenomena framed in the creation of law. This is the general analysis. Now we will see word for word analysis.

Cha means moreover; nithyameva because of permanent existence of the essential nature of atom your theory of creation is untenable. Eva is for emphasis. Nithyam means permanently; existence means essential nature. The only way is both of them are not essential nature and separation comes at the time of pralayam and once you say it is of incidental nature; then I will ask as to how bring the power to be of incidental nature. More in the next class.

## BRAHMA SUTRA

Class 178

### **Topic 3. Paramanujagadakaranatvadhikaranam;[Sutra 12-17]**

#### **Refutation of the vaiseshika view**

#### **Sutra 14[185]**

#### ***Nityameva cha bhavat***

And on account of the permanent existence [of activity or non-activity the atomic theory is not admissible.

The argument against the vaiseshika commencing in sutra 11 is continued.

In this second pada of the second chapter Vyasacharya primarily talks about the defects in the other systems of philosophy of which two are prominent in the asthika systems namely Samkya yoga and Nyaya Vaishesika system. Aasthika syatems accept vedapramana but do not accept Isvara. All others are only feeble purva paksa. Of these two also Samkya yoga is considered to be the main purva paksa to the Vedanta system. Samkya yoga has already been refuted from sutra 1 to 10. Now we are in Nyaya Vaishesika system. Vyasacharya points out the loophole in the system particularly in the theory of creation. It is from the creation angle Vedanta is introduced by Vyasacharya. Since it is creation based Vedantic teaching we hover around through the study. They the Nyaya Vaishesika could not explain the intelligent combination of paramanu because of the absence of intelligent principle behind Atma, paramanu, adhistam etc., which are inert in nature and they do not believe in God. Only one way they can try to escape by saying the movement of action is intrinsic nature of atom. Atom moment they said is natural and you do not require Isvara. If that is so it will be eternal and then the combination of atom will be eternal and the creation will be eternal and pralayam cannot be explained. Then we discussed paramanu samyoga, dyat, triyat etc., formation will be eternal without any pralaya. In case if they said took the plea that paramanu, atom etc., will be motionless then sristi cannot take place because according to them sristi is combination of atom, adhistam, paramanu. Dyat, triat etc. Intelligent motion should start at the time of creation and stop at the time of pralayam and it should coincide with the karma of each jivaris. Even managing the death one individual is difficult` and it should be connected with ten members of the family and each one is affected according to the karma of every individual. Then imagine the samasti pralayam.

### **Topic 3. Paramanujagadakaranatvadhikaranam;[Sutra 12-17]**

#### **Refutation of the vaiseshika view**

#### **Sutra 15[186]**

### ***Rupadimatvacca viparyayo darsanat***

And on account of the atoms possessing colour, etc., the opposite [of which nthe vaiseshika hold would take place] because it is seen or observed.

The argument against vaiseshika is continued.

First we will do the general analysis. Here Vyasacharya, points out that vaiseshika cannot explain the eternity of paramanu. There are many logical problems. The nature paramanu they say is eternal and it is the ultimate cause of everything<sup>1</sup>. They also say paramanu is niravayavam and it has properties depending upon the nature of the paramanu. If it is the paramanu of Prithvi then it has got sabda, rupa, gandha, sparsa and rasa; if it is jala paramanu it has got four properties; Agni three and Vayu three. Of these, four exist in the form of paramanu and it is aprathyaksam. Therafter it forms dyat, triyat etc., formation. Thus all the combination of paramanus will form Prithvi and in the end the entire universe. They say visibility starts from triyat only while paramanu and dyat are not visible at all. Dyat or triyat all will have the same guna of the cause on the effects. Panca gunas of the dyat will produce on the triyat and will there throughout the creation. All these characteristics of paramanu how do you come to know. What is the pramanam for this. That is why our philosophic system starts with the source of knowledge. Some system accept one pramanam and others accept two and some three etc. Prathyaksam is not pramanam because it is invisible; sastra is pramanam because sastra does not talk of paramanus. It talks of maya as pramanam. Nowhere sastra talks paramanu as pramanam. Only you have to go by anumanam. Samkya's prakriti is anumana pramanam. So also Nyaya Vaishesika. It talks through anumanam pramanam. Vedanta says prakriti is knowable through sastra alone; but Samkya says prakriti is proved through anumanam and they say sastra is secondary pramanam. Nyaya Vaishesika says paramanu is also inferentially proved. Based on experience all produces endowed with colour etc., is perishable. This is a valid vyapti, which we can gather from our experience of the universe. There is no exception at all. Once the vyapti is derived that an anumanam on your paramanu also. Paramanu anithyah. This inference you cannot refuse because it is based on vyapti, which is un-negatable. To show that paramanu is an exception you require evidence. Where is the evidence? To classify one an exception you require an anumanam. Inference does not support and sastra you do not believe. Therefore logic reveals that paramanu is of the nature that is opposed to your postulate that paramanu is nithyam but it is actually anithyam. Thus, it is proved that paramanu is anithyam. Now we will do the word for word analysis.

Cha means moreover; viparyayah atoms have an opposite attribute. Rupadhi matvad since they have properties like colour darsanat and since it is experienced so; the significance of the words is rupadi matvat because of the presence of colour etc., sound, touch etc., and these properties are in Prithvi with panca gunas Agni with four etc., cha is conjunction to join the previous sutra viparyayah means it has an opposite nature; here reverse means opposite attributes that is paramanu has got opposite attribute which is impermanence is the opposite attribute of permanence which vaiseshika claims. This logical impermanence is opposite attribute of their claimed permanence. Since paramanu has got colour etc., it is impermanent. Darsanat this is our experience. This experience refers to vyapti siuce vyapti is experience based. It is invariable coexistence. Vyapti that we experience is the co-existence is the colour and impermanence. In Vedanta, only permanence is Brahman, which is Nirgunam. Sagunatvad anithyam and nirgunatvad nithyah.

### **Topic 3. Paramanujagadakaranatvadhikaranam;[Sutra 12-17]**

#### **Refutation of the vaiseshika view**

#### **Sutra 16[187]**

#### ***Ubhayatha cha doshat***

And because of defects in both cases [the atomic theory cannot be accepted.

The argument against vaiseshika is continued.

First, we will do the general analysis. In this Vyasacharya says that vaiseshika cannot talk about the uniformity of the atoms. He says that the Prithvi paramanu, jala paramanu, Vayu paramanu and Agni paramanu are not minute and partless and therefore they are uniform. But Vyasacharya says that it is not so, because although they are paramanus, they have differences interms of the number of propertites; Prithvi has got four gunas jala three gunas and Vayu paramanu has got two gunas and since number of properties vary, the density vary and hence they are not uniform. When the paramanu form the core elements, in the visible elements we see the difference in density. Prithvi is solid; jalam is subtler; Agni is subtler and Vayu still subtler and we see the differences in bhutas in terms of gunas and the density and how can they be called uniform. Therefore sthoola taratamyam, Sookshma taratamyam will be there at the level of paramanu but they do not accept the gradation and they do not accept the fact. To avoid this they should say all the bhutas have got pancha gunas and then the problem is when all paramanus have got same panca gunas and when they become visible elements and they also will have equal pancha gunas. What is the guna at the karya level will continue in the karana level and the characteristics of paramanu alone will form the characteristics of the bhutas which being the combination of paramanus at different degrees. This is not correct. Then they may say that all the paramanus will have one guna and then the products will have only one guna. Since we have gradation at the bhuta level, there will be gradation at paramanu level also which the Nyaya Vaishesika do not accept, thus there is dosha at paramanu level of what Nyaya Vaishesika says. Now we will do the word for word analysis.

Cha moreover; doshat since there are defects; uphayatha either way [the vaiseshika system is wrong or defective]. Uphayatha means either way it means whether all the four paramanus have one guna whether all have more gunas or different gunas; doshat means there are defects. Complete it by adding paramanu karana vadha is wrong.

### **Topic 3. Paramanujagadakaranatvadhikaranam;[Sutra 12-17]**

#### **Refutation of the vaiseshika view**

#### **Sutra 17 [188]**

#### ***Aparigrahacchatyantamanapeksha***

And because [the atomic theory] is not accepted [by authoritative sages like Manu and others] it is to be totally rejected.

The argument against vaisheshika is concluded.

First we will do the general analysis of the sutra. Vyasacharya first said that Samkya philosophy has its own defects and now Nyaya Vaishesika has logical defects through this adhikaranam. Now he says both the systems have logical defects. Even then, Samkya yoga system has one plus point. That is because of its little bit closeness to Vedanta. Traditional acharyas have borrowed some ideas from Samkya and it is used in some of the smritis. In Gita also we find sristi prakriya based on Samkya yoga. 7.4 of Bhagavad Gita says *bhumir apo'nala-vayuh kham mano buddhir eva ca hamkara iti'yam me bhinna prakrtir astadha*. The meaning of this sloka is earth, water, fire, air, ether, mind, understanding, and self-sense – this is the eightfold division of My nature. So declares Lord Krishna. Para prakriti is Samkya based understanding. Again in 13.5 Gita says *mahabhutany ahamkareo buddhir avyahyam eva ca indriyani dasai 'ham ca panca ce ndriyagocarah* the meaning of the sloka is the great [five gross] elements, Self sense, understanding, as also the unmanifested, the ten senses and mind and the five objects of the senses. In fact, even in Tattva bodha sristi prakaranam of Samkya is discussed. Chaturvimsadi tattva is based on Samkya. Nyaya Vaishesika does not have even the partial acceptance. Therefore, Nyaya Vaishesika system very useless for it and us is to be negated in Toto. He says it is an intellectual exercise for sharpening the brain. This is the general analysis. Now we will go to word for word analysis.

Aparigrah means because of the non-acceptance by traditional acharyas. Vaisheshika system is totally rejected. Aparigrah the ideas of Nyaya Vaishesika are not at all borrowed by any other system. They have evolved a system of anumanam or inference that is how to logically see things. They also talk about the logical fallacy. The logical and anumana portion of Tarka sastra is useful and other than that, their system of philosophy is not useful to us. The very definition of Brahman is jagat karanam and world has come out of Brahman. Since this is the primary definition and from this angle only Vyasacharya wants to see the other systems of philosophy. With regard to jagat karanam alone, the main difference is there with other philosophies. Vyasacharya differentiates other darsanas from Vedanta only on single topic of jagat karanam. In one topic all other systems differ with Vedanta and the uniqueness is that chetana upadana karana is said to be Brahman in Vedantic system. In the last sutra Vyasacharya hints that not only jagat karanam but also various other differences are there without going to detail. Even though Nyaya Vaishesika, Samkya, and Vedanta have differences and in what way the difference is there in Nyaya Vaishesika, is that the difference between Vedanta and Nyaya Vaishesika is much more. No student need feel guilty if he had not studies other darsanams. You know only be thorough with what is said in Brahma Sutra about other darsanams it is sufficient it is said. But Adhi Sankaracharya in his commentary has pointed out one or two more difference in Nyaya Vaishesika system. This Nyaya Vaishesika philosopher talks of three dimensions. One is anu dimension and the other is vibhu dimension [parimanah] vibhu parimana means Infinite dimension. Anu is Infinitely small and vibhu is Infinitely large. Everything is in between anu and vibhu infinitely small, Infinite big and in between Infinitely small and infinitely big. Mind also in this system it is anu. All paramanus including mind is anu. There is one Akasa but atmas are Infinite all pervading atmas are there. Atma and Akasa re examples for vibhu and paramanu and mind are examples for paramanu. All of them come under madhyama parinama. They point out Infinitely small also is eternal and infinitely big is eternal. Infinitely small is eternal because it cannot be disintegrated further and similar Infinitely big Akasa is also eternal because Akasa cannot be assembled together and therefore it has to be eternal. Anu is not assembled, vibhu is also not assembled, and therefore both are eternal. All madhyama parinama are non-eternal. They formed by anu parinama and vibhu parimana and both are niravayava, which

means both are partless. Madhyama parinama vasthu are formed by building block and when combined it is block when disintegrated it is destroyed. What Adhi Sankaracharya says is once you accept niravaava Akasa, Atma, you cannot talk about the combination at all and the combination requires avayavam. You always combine one part with another part. Samyoga require avayavam or part and when part is not there then samyoga is not possible. The space is niravayava, it has not parts, and we cannot able to combine space with anything. Therefore Akasa samyoga rahitah and it is pratyaksam. We say paramanu also being niravayava cannot have sambanda with anything; Atma also cannot have any samyoga with anything. Paramanu is Infinitely small and it cannot have any samyoga with anything being niravayavatmam. Therefore the very creation starts with paramanu dvaya samyogah asambhavah. Therefore dyanukam is not possible.. In short the arrival of bogya Prapancha you cannot explain. Similarly according to Nyaya Vaishesika Atma is niravayavam and it is Infinitely big and partless; mind is Infinitely small and partless. Both are partless and unfortunately, both are inert in themselves. During pralaya it will be inert. When Atma and mind combine, Consciousness arises. Here also Adhi Sankaracharya points out many problems. First Atma is partless bit Infinitely big and mind is Infinitely small and partless and how can the samyoga possible between Infinitely small Atma and Infinite big mind. Because of the same reason Atma mana smayoga is not possible and therefore Consciousness cannot be generated. If Consciousness cannot be generated the bogtru jiva cannot be born. In Nyaya Vaishesika philosophy bogtru jivah cannot be explained and bogya Prapancha cannot be explained. He also points out talking about Atma manas samyoga is not possible with Atma Infinite and mind is Infinite. Any two finite things can combine and how could all pervading Atma and atomic mind combine. It is not possible. How can they have contact between them an event in time? When they combine how many atmas are there and how many minds are there. All atmas will encounter the entire mind and if I come in contact with some other person and there is lot of problems. I pointed out earlier substance property action universal and particular. All have inseparable relationship between one and 2,3 and four and five. Samavaya sambanda is nithya sambanda. Then one more is added to the list and that is between two dravyam the substances also sambanda is possible. Two substances can have eternal relationship under one condition. But this sambanda is not inseparable relationship. The condition is that when thesn two dravyams are related as karana karya sambanda or the cause and effect relationship. The pot and clay is the best example quoted here. Adhi Sankaracharya attacks this also. How can the karya dravyam and karana dravyam as though they are two relationships. Here there is not two substances pot and clay and substance is one only. Because of the peculiar theory of Nyaya Vaishesika they call clay and pot as separate substances and both have karana karya relationship as though they are two separate substances. Then also Adhi Sankaracharya asks they can have nithya sambanda. Karana dravyam and karya dravayam has nithya sambanda. Then the sambandhi should be nithyam. Karya dravyam being anithyam according to you how can there be nithya sambanda between nithya and anithya dravyam. Your very division of the category itself is found to be defective Adhi Sankaracharya says. When substances and properties are inseparable, why should you enumerate them separately? Why do you enumerate guna separately when it is inseparable from the substances? You have included samavayah a form of relationship is included in this category. A separable relationship he does not put in the category of the seven pointed out earlier. Why cannot you include the separable relationship in the above category? The very division of the universe is full of defects. This is a powerful attack from the Vedantins. Thus, there are so many problems and therefore after learning you try to forget the whole thing which being not of much useful for the study of Vedanta. With this vaiseshika madha negation is over.

Some of the other differences Adhi Sankaracharya has discussed in his bashyam, which we will see in the next class.

## BRAHMA SUTRA

Class 179

### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

#### **Refutation of the Bouddha realists**

#### **Sutra 18 [189]**

#### ***Samudaya ubhayahetuke'pi tadapraptih***

Even if the [two kinds of] aggregates proceeds from their two causes, there would take place non-establishment [of the two aggregates]

After refuting the atomic theory of vaiseshika the Buddhistic theories are now refuted

Before I go to the next adhikaranam I will give you the lay out of Brahma Sutra. We have twelve darsanams and six are asthika and six nasthika darsanams. One accepts Veda pramanam and the other do not accept Veda pramanam. Darsanam means a view. The conclusions arrived at through unaided reasoning is called philosophy. Here the scripture should not come under the study. Philosophy is speculative and it is part of the human intellect alone. The world philosophy is applicable to nasthika darsanams alone.

Six asthika darsanams are Samkya and yoga; nyaya and vaiseshika and purva and uttara mimamsaka. All the six are called asthika darsanams. Of this Samkya yoga accepts Veda and they are tarka pradhana and they are heavily tarka based. Similar Nyaya Vaishesika are also tarka pradhana. Since Nyaya Vaishesika is more tarka pradhana, they are far away from Vedas. All are called asthika. The first adhikaranam of Brahma Sutra tarka pradhana Samkya yoga was negated and later Nyaya Vaishesika is negated. Purva Mimamsa problem is other extreme and he is so Veda pradhana and he left out tarka totally and therefore many of his conclusions are difficult to swallow. He will say karma phalam is swarga and we cannot accept it being Veda vakyam. Therefore moksa is nothing but going to swarga by performing the rites. He does not want to question anything other than Vedas. Vedanta is different and he accept reasoning. Just as body can digest iron in the form of keera and you cannot eat iron. Buddhi can digest only the language that it can accept and understand. So he says shruti and buddhi should be taken up for consideration. Vyasacharya does not directly discuss Purva Mimamsa. Purva Mimamsa is also refuted in samanvaya adhikaranam. When we refute Purva Mimamsa or Karma Kanda of Vedas, we do not refute Karma Kanda of Veda but we refute wrong interpretation of Karma Kanda. Even analysis of ritual is required, Purva Mimamsa you can use nothing is wrong, and analysis of methods of performing the rituals you take it but do not take that kamra will give moksa but take it that it will purify the mind. He has said that Purva Mimamsa is important but at the same time he says that it should not taken for gaining liberation. All the five darsanams have been refuted and sixth being the Vedanta darsanam is ours and there is no question of negating it. Now we are ready to refute the nasthika darsanam. This we will see in the next class.

## BRAHMA SUTRA

Class 180

### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

#### **Refutation of the Bouddha realists**

#### **Sutra 18 [189]**

#### ***Samudaya ubhayahetuke'pi tadapraptih***

Even if the [two kinds of] aggregates proceeds from their two causes, there would take place non-establishment [of the two aggregates]

After refuting the atomic theory of vaiseshika the Buddhistic theories are now refuted

With the 17<sup>th</sup> sutra we have completed the first three adhikaranam of the second chapter of second pada. First was devoted to the negation Samkya yoga darsanam and later Nyaya Vaishesika darsanam and Purva Mimamsa was negated in the first chapter. In short all the five asthika darsanams have been critically analysed and we had negated the various defects observed in their philosophies and upheld Vedanta alone stuck to the Vedas in letter and spirit. After dismissing asthika darsanams, we enter the nasthika darsanams, which are six in number. Of them four schools of Buddhism belong to nasthika darsanam which negate Vedas. Fifth one is jaina darsanam and sixth is caravaka darsanams. Of these six darsanams Vyasacharya does not discuss caravaka. It discusses that the body is sentient because of the peculiar combination of the elements and they do not accept karana sariram, Atma, Sookshma Sariram etc. They consider that the birth of the individual and the death of the body is the death of the individual. Their philosophy is presented as enjoy as long as your are around and do not bother about purva janma punya papam and the effect of punya papam on the future janma. Have money to enjoy the pleasure and pain. They do not believe in next janma once the body is reduced to ashes. They do not believe in artha and kama and they do not believe in dharma and swarga or moksa. Such a kind of philosophy we do not even want to discuss about that for discussion on such a subject is considered a sin. In Brahma sutra Vyasacharya has discussed this subject. Of the five darsanams Bouddha darsanam has been discussed in detail. Now we enter the Bouddha darsanam in this adhikaranam.

First I will give you the general introduction to this adhikaranam. This is fairly big adhikaranam with ten sutras. This adhikaranam deals with Bouddha darsanam. In Mandukya Upanishad four of their vaibashika, choutrantika, yogachara and madhyantika madhams were discussed. Adhi Sankaracharya reduces the four madhams into three for the sake of our study. Here vaibashika and choutrantika madham and this group is called jnana artha ubhaya asthitva vadha. Jnanam means knowledge or ideas; all the vritti jnanam comes under this category; artha means object of the cognition; every cognition must have corresponding objects. In the place of padam we take cognition and object of cognition. Cognition is inside and object of cognition is outside; it is antaram and bashyam. Do we accept the existence of both of them? It is very big discussion in all the systems of philosophy. Ultimately the

discussion boils down to Consciousness and matter study. It is a system, which accepts both the cognition and the corresponding objects.

Naturally an aside discussion will come and that is whether vaibhashika and chourantika accept jnanam and artha and if so why should we subdivide them into two? I will give you a simple explanation. Of these two, one of them says that the object is there and it is inferred one; the other one says that it is perceived object. One talks of anumana pramana and the other one talks of pratyaksa pramanam. The existence of an external object they call that the external world is there whether it is inferred or perceived. This is called Bouddha darsanam one discussed in Brahma Sutra.

The next is yogachara madham. It accepts the jnanam alone and do not accept the corresponding objects. They believe in cognition and not accept cognized object. It is jnana matra arthitva vadha. The next one is called sunya vadha or madhyantika madham. Here they believe in jnana artha ubhaya nasthitva vadha. They don't accept cognitions as also cognized objects also and that is why it is called sunya vadha. One says two are there and one says one is there and third one says nothing is there. Of these three divisions Vyasacharya does not deal with the third one that is ubhaya nastitva vadha or sunyavadha. The reason is that there is neither the subject nor the cognized object and are you the purva paksi is there or not. If you say your madham is not there being neither the subject nor the object. To avoid the problem if you I the Purva Paksi is not there means why should I answer since Purva Paksi is sunyam. This argument is given by vidyaranya in his panca dasi. He says you can never negate everything for negator cannot negate the negator. It is not absence of everything else is the sunyam is talked about. Only jnana artha ubhaya arthitva vadha and jnana matra ubhaya arthitva vadha are discussed here.

What does the Jnana artha ubhaya arthitva vadha say about the creation is the topic of our discussion here. Creation is a combination. The object is also a combination and the subject is also a combination. Otherwise it is called aggregates. Since we explain the creation is a combination, we call it samudaya vadha or sangatha vadha. It is the theory of combination or aggregation. It is different from the asat karya vadha of Nyaya Vaishesika and sat karya vadha of Samkya yoga.

What is difference from Samkya theory of creation and nyaya theory of creation and Bouddha theory of creation. The matter modifies into universe or it called parinama avadha. The matter changes to become the creation are their theory. In Nyaya Vaishesika theory matter does not modify to become the world but matter produces the fresh world which was non-existence before. Since it talks of production of a fresh entity, it is called arambha vadha. In the Bouddha theory of creation, he does not talk about of modification or he talks about production but it is only a simple combination without any modification. When the milk becomes curd, there is modification but when you make fruit salad, nothing modifies and you take various fruits and combine them together and it is called combination or sangathah. Here nothing changes. We have parinama vadha, sangatha vadha and aramba vadha. We do not accept all the three. We do not accept parinama vadha theory because Brahman never undergoes any change; we do not accept arambavadha theory of creation because creation is anadi. There is no question of combination because Brahman is one. Vedanta has got vivartha vadha. Aramba vadha belongs to Nyaya Vaishesika; sangatha vadha relates to Bouddha madham; parinama vadha relates to Samkya philosophy and Vedanta vadha is vivartha vadha.

The Bouddha accepts the subject and objects and the subject as also the object are combination. He is absolutely similar to Nyaya Vaishesika and he also says paramanus are the blocks. They say that we have Agni paramanu, Prithvi paramanu, jala paramanu and Vayu paramanu and they are Infinite in number and the four paramanu combine and produce the entire world. The combination of all the four becomes the creation they say. But there is a difference between Bouddha and Nyaya Vaishesika . Nyaya Vaishesika says paramanus are eternal but Bouddha says that there is nothing eternal and everything is ksanigam. All the paramanus are ksanagam and therefore sarvam ksanigam they say. They say that the paramanus produce the elements and the elementals by some combination. Paramanu is of four types. What about the subject the individual? Individual is also another samudhayah or assemblage. This subject is assembly of four types of paramanus. Here we say the skandha and it is a technical name of buddistic philosophy. The basic unit is called skandha. They are five in number. When the five join together, you are assembled. Panca samudhayah makes the objective world and panca skandha samudhayah makes the subjects, the individuals. What are the five skandhas?

They are the following. 1. Rupa skandha; this means the sense organs; indriya skandha; 2. Vijnana skandha the cognition or the knowledge comes under this category; here vijñanam means momentary cognition. It has nothing to do with the nitya Chaitanyam of Vedanta; we see cognitions and cognitions; 3. Samjna skandha here it refers to identification or specification. The moment cognition takes place the job of the intellect is identification. Here jati guna etc., are the identification tag and this is called samjna and buddhi has got the slot where all the cognitions are noted within. That tagging is called samjna. 4. Vedana skandha. Once you tag the object you react or respond to the tagging you are happy, you are unhappy or you experience the both; one calls an incident happy another calls it unhappy and the third one call it is experience of both. 5. It is samskara skandha it is the experience of the feeling. You use the experience for the future. They include dharma and adharma in samskara skandha. Thus we have five skandhas. They are the building blocks on which the body is kept together. All these panca skandhas are also ksanigam and momentary. I am momentary and you are momentary. Continuity they call it a delusion and it is like a flame. Really speaking since the oil is exhausted we can infer it is not the same flame. The very fact that you add the oil indicates that the flame is a flow but to our eye it looks like a flame. It is also said that the body is like a river where there is a constant flow of water but it looks as if the water is the same. Even our body it is said changes continuously and the blood in our body goes on changing. In fact medically speaking your body now and two years before are totally replaced. It is only an assumption and it is not a fact. This is samudhaya vadha. This is a general introduction to this adhikaranam.

Now we will see general analysis. Vyasacharya says that the combination is not possible both in the case of objective world and in the case of the skandha panca samudhaya. The reason is the same. An inert thing cannot intelligently or purposefully combine in a well-directed manner. This is the argument we give to all the darsanams. Achetanatvad jadatvad. But this is true in the case of the skandha pancakam or individual combination because one of the five skandhas happens to be vijñanam. Why cannot combination happen intelligently? Combination is possible only if they join and before combination, cognition is not there. Therefore, both are not possible. Now I will give you the word for word analysis.

Samudaya means the aggregate; in the case of twofold aggregate or assemblage or combination ubhayabetuke api which has twofold cause their combination itself is inexplicable; the significance of each word I will explain in the next class.

## BRAHMA SUTRA

Class 181

### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

#### **Refutation of the Bouddha realists**

#### **Sutra 18 [189]**

#### ***Samudaya ubhayahetuke'pi tadapraptih***

Even if the [two kinds of] aggregates proceeds from their two causes, there would take place non-establishment [of the two aggregates]

After refuting the atomic theory of vaiseshika the Buddhistic theories are now refuted

Samkya yoga and Nyaya Vaishesika theory of creation has already been negated and now Vyasacharya has taken up the Bouddha madham. This poses a fundamental question whether Vyasacharya is after Buddha or Buddha was after Vyasacharya. Vyasacharya seems to belong to long before and how can he be there after Buddha. There is discrepancy here and many reasons are given. They that there are two Vyasa. One Vyasa existed before Buddha and the other Badarayana Vyasa is of latter century and according to them Brahma Sutra was written by the second Vyasa. They say that there is only one Vyasa who is the author of puranas or Brahma sutra. They never bother about the history. One answer they give is that vyasa is a sage of jnana dristi and he can refute things that comes in the future. Another argument is that Vyasa is chiranjivi and therefore he existed before and after Buddha. We need not bother about this because we do not have any clear proof in the matter.

We saw that the four schools of Buddhism are eka asthitva vadha, ubhaya asthitva vadha and ubhaya nasthitva vadha. Adhi Sankaracharya negates only the first two. As far as Adhi Sankaracharya and Vyasacharya are concerned that ubhaya nasthitva vadha is unfit to discuss in the Brahma Sutra. In this andhakaranam ubhaya adthitva vadha and eka jnana matra asthitva vadha will be taken up for discussion.

Ubhayam means sarvam or also it is called Hinayana Buddhism. Hinayana means inferior branch of Buddhism. Another one is called mahayanam the superior path. The hinayanam is subdivided into choutranika and vaibhashika. We discuss only vaibhashika Buddhism. Choutrantika Buddhism is pratyaksa bashayarta. Arthitva vadhi and the choutrantika is the anumana bashyarta arthitva vadhi. External world is there independent of cognition. This vadha hinayana is refuted in the samudhaya adhikaranam. The external world and the individual can never be created according to your theory of creation argues Vyasacharya. The subject or individual is combination of skandha samudhayah. Paramanu chatustaya samudhaya. Both cannot be explained. Paramanu caused external world and skandha caused subject also cannot be explained by you because the reason given in Nyaya Vaishesika that purposeful combination requires intelligent principle. An inert thing cannot combine without the backing of the intelligent principle. Now I will give you the significance of the words. Samudaye means combination. Otherwise, it is called sangathah. By the word samudhaya two types of combination, one is objective combination, which is otherwise called the bogya

Prapancha. The second samudhaya kept in mind is the subjective skandha samudhayah. One is paramanu samudhaya and another is skandha samudhaya bogya samudhaya and bogtrun samudhaya. Ubhayabetuke two samudhaya have got the material cause bogya samudhaya is one of paramanu samudhaya and the other is skandha samudhaya. The paramanu skandha samudhaya forms bogya Prapancha and bogtru the subject individual. There are two samudhaya formed of skandha and paramanus.tadaprapthih means combining process; this is untenable and it is incomprehensible. It will not take palce and it cannot be established. We have got only material cause and we do not have intelligent cause. Adhi Sankaracharya in his bashyam there are some additional points.one is the same argument given in vaiseshika case. Bouddha says the combining activity is the intrinsic nature of paramanu. Therefore paramanu includes the skandha also. In the case of intrinsic nature you don't require the intelligent factor. There is no need of Bhagavan. The nithyam eva cha abhavad. This argument has been given in Nyaya Vaishesika negation taken up in the earlier sutra. Constant creation leads to constant pralayam. Either activity should be of intrinsic nature or the inactivity should be the intrinsic nature. In the case of the former there will be no pralaya and in the case of the latter there will be no creation. If there is sristi for sometime and pralaya for sometime the activity comes and goes and if that is so, the activity if not of intrinsic nature. Then you require some intelligent principle and that being absent you cannot create. This is one point of argument.

Vaiseshika philosopher has said the world is born out of paramanu combination and Bouddha also says the world is born out of paramanu. The common problem between the two is that both do not have any intelligent principle. Vaiseshika says paramanu is eternal. And therefore paramanu can slowly and comfortabnly combine together and form the universe. And it is able enough to combine. Bouddha's paramanu is ksanicam and even as it occurs the next moment it is gone. It has enough time only to appear and disappear. Seeing the second paramanu and it does not exist for any activity to take place. It does not have even a second ksana for combination activity. So combination activity cannot take place and before it takes place the paramanu will disappear.

#### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

##### **Refutation of the Bouddha realists**

##### **Sutra 19 [190]**

##### ***Itaretarapratyayatvaditi chennotpattimatranimittatvai***

If it be said that [the formation of aggregates may be explained through [nescience] standing in the relation of mutual causality, we say no; they merely are the efficient cause of the origin [of the immediately subsequent links and not the aggregation]

An objection against sutra 18 is raised and refuted.

First we will do the general analysis of the sutra. Bouddha tries to answer the objection raised in the previous sutra. Vyasacharya refutes the answer given by the Bouddha. He says this combination can be formed even without Isvara. You say Isvara is required for the combination. I say that without Isvara such combination is possible. Our answer is that there is a causal chain, which is responsible for the formation of the sangathah, the world as well as the individual. When the causal change can explain the combination why do we require Isvara and that causal change is called nidhanam that is sued for the causal change. The

causal change consists of 12 changes. The causal change begins with avidhya, vijnana, nama rupa, vedana, Krishna, vyathi, jara and marana. This avidyadi dvadasa chakra is responsible that will lead to one sangatha and then another sangatha. This theory of causal circle is wellknown buddhistic theory. It is theory of dependent origination. It means each one originates depending upon the previous one and thus there are twelve members are there. Karma produces sariram and sariram produces karam. We have one two items but Bouddha system has got twelve items that comes in circle. For which Vyasacharya answers that these twelve nidhanams require a sariram for asraya. Their very existence presupposes a body or a jiva. We talk about avidhya. Ignorance is for the individual. Remember in Vedanta avidhya has got Brahman has got the locus and that Brahman is absent in Buddhism and avidhya is located in individual and avidhya presupposes already existent sangatha. There is a jiva and that jiva has got avidhya and because of avidhya he has all that follows. It can explain the sarira and its effect, existence of avidhya etc., but it does not explain the first sariram. Suppose you say avidhya is the cause of sangatha then avidhya cause should exist even before sangatha is formed, my parents should have existed before me. So avidhya is the cause and you cannot explain the existence of sangatha. Therefore, avidhya etc., are only explaining the 12 members of the causal change but they do not explain the sangatha of origination. From avidhya raga dvesah is understandable. You can say avidhya is responsible for causal change but you cannot explain as how avidhya came that you cannot explain. Avidya etc., can be the cause of the latter members of the causal change but it can never be the cause of sangatha, which is the locus of the causal change. This is the answer given by Vyasacharya. You give only the nimitta karana explanation but you do not give the upadana karana explanation. Now I will give you the word for word analysis.

Itaretarapratyayatvad means because of the cyclic change of causality [the formation or the combination can be explained] this is said by Bouddha purva paksa. If this is the contention na it is not acceptable. Utpattimatranimittatvat because the link of the causal change [each member of the causal change i.e. Twelve members] the links of the causal change are the causes of the next link only; [and not the cause of the sangatha]. This is the running meaning.

The significance of the word is itaretarapratyayatvad means mutual or one another in this context Buddhist terminology pratyayata means karanam; karanam runs to make the karyam. Each one is the cause of the next one and next one is the cause of the next one. Each one is cause of the other. Janma is the cause of karma and karma is the cause of janma. So also the twelve cycles of Bouddha philosophy. Because of the dependent origination. You complete the sentence for the Buddhist the combination can be established without Isvara. Utpattimatranimitat it means of the twelve member of the causal change one is responsible for the previous member; each one is the cause of utpatti of one of the twelve members. Sangatha is not any one of them and it is asraya where all other members are there. For samskara sangatha is there and asraya sangatha is taken for granted while talking of sangatha and it is not explained. It is like talking of the first jiva. How jiva is formed is our question. Karma janyam is Isvara. Uttara nithana utpattih tan matram utmantra nimmatam tvad because of the causal change id the cause for the birth of only the nnext member and not the sangatha which is the locus. Sangatha formation is not explained fully. Adhi Sankaracharya writes much more. He says that everything is ksanigam. This causal change is convincing. Who will work for bogha or moksa when I know that I will nt be there when bogha and moksa comes. What is the use of working for shreyas and preyas. I work for gaining liberation after some time and I will be there to enjoy. When in ksaniga vijnana one is alive for aksanigam and how is purusartha is there to reap the fruits of my karma. Therefore, in whose aid I am working and the Bouddha sastram is futile and useless. More in the next class

## BRAHMA SUTRA

Class 182

### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

#### **Refutation of the Bouddha realists**

#### **Sutra 19 [190]**

#### ***Itaretarapratyayatvaditi chennotpattimatranimittatvai***

If it be said that [the formation of aggregates may be explained through [nescience] standing in the relation of mutual causality, we say no; they merely are the efficient cause of the origin [of the immediately subsequent links and not the aggregation]

An objection against sutra 18 is raised and refuted.

In this adhikaranam Vyasacharya negates Hinayana Buddhism. According to them we have bashya Prapancha and adhyatmika Prapancha and both are conglomeration of anumana and skanda assemblage. Here Vyasacharya points out that there is formation or conglomeration. In the absence of intelligence, such conglomeration or combination is not possible. Bouddha has no belief in Isvara or any intelligent cause to back the combination. In this regard, Bouddha philosophers point out twelve factors that are behind the combination. He says that this cyclic change of the twelve factors will continue in one's life both present and future. Each one becomes the cause of the next one and we do not require a god they say. Each one depends upon the previous nidhanam. The causal change does not explain because like avidhya, knowledge etc., cyclic chain presupposes the existence of sangatha the individual body. You can talk of ignorance of the individual and even the formation of jnanam is based upon the individual. The cyclic change does not explain the causation of the individual. What happens after can be explained but one cannot explain how the first event happened. The answer is that the cyclic change exists before sangatha and how did the sangatha takes place is our problem, which has not been explained. If it existed before production where did it exist is our question. Where was the cyclic change before the sangatha which is not explained. One more possibility one can assume and answer. The possibility is that the causal change even before the sangatha was formed. We ask the question where did it exist. There is one possibility that before the assembly the causal change existed means it should be in paramanu or in skandha. Before sangatha assemblage is formed skandha existed and skandha is panca skandha and it existed before the formation of sangatha. Skandha must have existed before or you must place them in paramanu which are the constituents of the world. Why cannot we do that? Adhi Sankaracharya considers this possibility. Before the formation of sangatha even if the causal change existed in paramanu or skandha, everything would have been jadam. Therefore, skandhas are jadam and paramanus are jadam and causal cycle existed before also would be jadam and how can the three jadams cdan create an intelligent thing. How can paramanu a jadam and skandha is jadam and therefore it cannot be responsible for an intelligent formation. It is removing the foundation stone of the Buddha madham. The individual soul for whose enjoyment the aggregate of body etc. Exists is also evanescent or momentary. It cannot therefore be an enjoyer. As the individual soul is momentary whose is the liberation? As there is no permanent enjoyer, there is no necessary

for these aggregates. There may exist a causal relation between the members of the series consisting of nescience etc., but in the absence of the permanent enjoying should it is not possible to establish on that ground the existence of aggregates. Hence the doctrine of the momentariness of the Buddhist school of realists cannot stand.

#### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

##### **Refutation of the Bouddha realists**

##### **Sutra 20 [191]**

##### ***Uttarotpade cha purvanirodhat***

[nor can there be a causal relation between nescience etc.] Because on the origination of the subsequent thing the preceding one ceases to be.

The argument against Buddhistic theory commenced in sutra 18 is continued.14.13

First we will do the general analysis of this sutra. In the previous two sutras Vyasacharya has negated the very samudhaya possibility [external and internal combination] has been negated. They also did not have the logical explanation. In this sutra, the very Karya karana bhava is not possible in the Buddhistic philosophy. Unfortunately, they talk about the karya karana sambandha. In this sutra karya karana sambandha is negated. Because of ksaniga vadha thata everything exists only for a moment, when a thing comes into existence, the previous thing disappears which means at any moment there is only one thing. During the origination of a thing at a moment, the previous thing does not exist. When there is one thing at a time how can you talk of any sambandha or karya karana sambandha. For sambandha you need two things. Therefore you cannot talk about karya karana relationship at all. This is the essence of this sutra. Now we will do the word for word analysis.

Cha moreover; purva nirodhat since the previous or former one is absent uttarotpade during the origination of the latter one; complete by adding there is no cause effect relationship between them between the former and latter between the previous and the subsequent. Uttarotpade; utara means latter one; utpadah means origination; this happens every moment. Everything has one moment existence. Afterwards it disappears; cha is the conjunction to the previous negation; purvanidhat; the former one as opposed to utara nirodhah means nasah; the end of destruction of the previous one; because of the destrctuion of the former one during the arrival of the latter one, your theory is untenable. At no time there are two things at two different time. Hence cause effect relationship cannot be there. This is the answer. Adhi Sankaracharya in his commentary add a few more extensions. Purva paksa argues why should karyam and karanam exist simultaneously. Both should not exist simultanously. The very fact that x existed before and y exist now is the fact that the one existed and the other exist now. This is karana kaya sambandha. The object in the present moment is karanam and the object coming latter is karyam. This is the condition for karya karana sambandha. It is said karanam is that which exists prior to karyam a product. Therefore during this moment one thing is there, next moment another thing is there, previous thing is karanam, and later karyam is the effect. This is the question. For which Adhi Sankaracharya says mere existence in the prior moment does not mean it is the cause. Mere existence during the prior moment is the cause, then anything can become the cause of anything. To a cause to be cause, it should contribute something to be a cause. Karana vyapara is required to be the cause of something.

Even as a thing comes to existence, it has one thing to do and that is to disappear. Similarly in your theory no object can do any function because it exists only for a second. One second is for arrival, next second is not there, and it disappears. For this Bouddha says vyapara is not required. The mere fact that it existed during the previous moment is sufficient to enjoy the cause. For which Adhi Sankaracharya answers that whenever we talk about karana karya sambandha a thing is said to be the cause of something only when the essential nature of the cause inheres in the effect. The clay even after losing the lump form after losing the superficial nature the cause in its essential nature inheres in the effect. Similarly, when the seed produces the tree, the seed is destroyed and the mango-ness of the mango seed inheres in the new tree. If the mango seed is totally destroyed why should mango seed is needed for the mango tree. The causal destruction is of two types. One is sanvaya nasah and the other is niranvaya nasah. Nirvanvaya nasah means the total destruction in producing an effect. Anvaya means inherent. Nirvanvaya means it is without anything part of cause continuing in the effect. Sanvaya nasah means destruction of the part of the cause while producing an effect. Only superficial nature of nama and rupa and when nama and rupa goes, the essential nature of seed continues there. The mango seed goes but the mangoness continues. The total clay is not destroyed while clay nature goes away. When there is total destruction is there, how can you find what is the cause and what is the effect. The clay inheres in the furniture. In your theory, nothing can inhere in the product and be it does not continue to exist. Therefore if the clay is totally destroyed what will be there in the pot. One more point Adhi Sankaracharya adds is that you talk about an object being born and it cannot do anything immediately. In Buddhism one comes and goes. Adhi Sankaracharya asks the two features or the property of the momentary objects, do they exist simultaneously or one after the other. Alternatively, the utpatti vinasa is separate entity or property of the thing and if it is so whether it simultaneously exist or not. Suppose you say they are not property utpatti and vinasa, if they are separate thing and are not property of the world, the world will not have utpatti vinasa of the world. World will be nityah. If you say utpatti vinasa is the property of the world, then Adhi Sankaracharya argues if they are the property are they simultaneous or one after the other. If you say simultaneous, it is not possible because utpatti and vinasa cannot exist simultaneously because they are opposite attributes. Since they are simultaneously happening but happening one after the other, then you require two moments for utpatti and vinasa and you say that it is ksanigam. If you say utpatti sthithi means you need three ksanigam. Your philosophy is ksanigam and there is no question of karana karya sambandha.

#### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

##### **Refutation of the Bouddha realists**

##### **Sutra 21 [192]**

##### ***Asati pratijnoparodho yaugapadyamanyatha***

If non-existence [of cause] be assumed [while yet the effect takes place, there results contradiction of the admitted principle or proposition. Otherwise there would result simultaneity [of cause and effect].

The argument against Buddhistic theory is continued.

We will do the general analysis of this sutra. In the previous sutra Vyasacharya refuted karana karya sambandha. In first two sutra Vyasacharya he refuted samudhaya. Here to avoid

the problems mentioned in the previous sutra, Bouddha asks why should we produce and asks why not abolish karana karya sambandha itself. If this is the argument Vyasacharya it goes against our own system of philosophy. While introducing the system you have accepted karana karya sambandha and swa madha virodhah comes which Vyasacharya calls pratijna virodhah. Now you cannot remove karana karya sambandha Adhi Sankaracharya asks. Therefore karana karya sambandha they cannot negate because they have accepted. Now Bouddha says let me somehow explain karana karya sambandha. The only way of explanation is to negate the total destruction because karana should not be totally destroyed because karana inhere in the karya. Therefore you should accept sanvaya nasah only. Sanvaya nasah means the mangoness of the mango seed never gets destroyed and it continues to be there even if the tree or the seed is destroyed. Now karana karya sambandha explained. The essential feature of karana should exist in the karana and it inheres in the karya means it should be in the next moment and avter the arrival of karanam and simultaneous existence of karyam. Even after the effect comes the essential nature of pot continues to exist if you accept sanvaya nasah. Since the essential nature was existing before and it inheres in the effect and exist along with effect also means essential nature continued to exist and your theory of ksanikatvam virodhah. In total destruction karana karya sambandha is impossible and if it is not total destruction you accept continuity and then ksaniga vadha is gone. Either way you are in trouble.

Now we will do the word for word analysis. Asati in the absence of the cause; pratinjoparodhah there occurs or there will be violation of your own proposition. Anyata otherwise; [in the acceptance of a cause yougapadyam there occurs the defect of simultaneity [cause and effect] s the running meaning. The significance of the verse I will explain in the next class.

## BRAHMA SUTRA

Class 183

### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

#### **Refutation of the Bouddha realists**

#### **Sutra 21 [192]**

#### ***Asati pratijnoparodho yaugapadyamanyatha***

If non-existence [of cause] be assumed [while yet the effect takes place, there results contradiction of the admitted principle or proposition. Otherwise there would result simultaneity [of cause and effect].

The argument against Buddhistic theory is continued.

Sarva asthitva vadha of Bouddha madham is being refuted by Vyasacharya. Ksaniga arthitva vadha will be refuted in the following sutra. In the first sutra the formation of combination was refuted; dependent origination was refuted in the next sutra. In the third and fourth sutra Vyasacharya refutes karana karya sambandha; this is done in two sutras. We said to talk about karana karya sambandha you should accept karanana permeating in karyam and then only you can talk of karana karya sambandha. Therefore, karana karya sambandha acceptance requires inherence in the effect and the Buddhist cannot talk about permeation there should be first karana must be there and karana should be partially destroyed and it should be partially destroyed and the essential feature will inhere. Essential 'mango-ness' should be there in the tree. Continuity is important and continuity Buddhist cannot say because their axiom is sarvam ksanigam. Once they accept karana karya sambandha ksanigatvam cannot be there. Either they can have ksanigatvam or karana karya sambandha and they cannot have both. This is the idea conveyed here. They have accepted both and hence their system is defective. This is the idea we have to see the significance of the words. Asati means in the absence; here in the absence means in the non-acceptance of karana karya sambandha by the Buddhists and when we say karana karya sambandha is impossible and if you drop the problem would be that you forget your theory of Buddhism. If you drop the idea now, which was accepted in the beginning, it would go against the essence of your teaching. Pratijna hanih; then anyata it means otherwise; it means other than what was said previously karana karya sambandha abhave other wise means karana karya sambandha if you accept to avoid pratijna hani uparodha problem, the problem would be yougapadyam simultaneity of cause and effect you have to accept. This is presenting it in a roundabout form. If you accept it ksanigatvam will go away. Yougapadhyam means simultaneity of effect and the cause in its essential nature; even after karyam comes into existence, karana should coexist with the karyam as its very swarupam. Clay exist in pot as its swarupam. Once you say karana coexist with karyam then you have to accept that karana existed before and it exist now also means the continuity is there. Once you come to continuity ksanigatva hani is easy. Clay's continuation is accepted ksanigatvam goes. This is the meaning of yougaphadyam. With this the karana karya sambandha niraha is over. If they want to hold on to karana karya sambandha, the ksanigatva vadha is negated. Now we go to the next important vadha of Buddhism.

## Topic 4. Samudayadhikaranam [Sutra 18-27]

### Refutation of the Bouddha realists

#### Sutra 22 [193]

#### *Pratisankhyapratiskhyanirodhapraptiravicchedat*

Conscious and unconscious destruction would be impossible on account of non-interruption.

The argument against the theory of the Buddhism is continued.

First we will do the general analysis of this sutra. Buddhism [hinayana] talks about three kinds of 'nothingness'. Naiyayika talks of four kinds of nothingness. Nothingness means abhava and they translate it differently. Nirupakya means 'you can not talk about it' niswarupam, avasthu and thuccham. And abhava. Vyasacharya chooses a word different from all the five and he uses the word nirodhah. First kind of nothingness is pratisankya nirodhah, second one is apratisankya nirodhah; and the third is akasah the space. Akasa is nothingness or emptiness according to Buddhism.

Pratisankya nirodhah nothingness is caused by a deliberate destruction of a thing. Deliberate destruction I will call it as artificial end of things. It is like destroying a chair or killing a thing. It is hostility or enmity. You destroy a thing when you are not in favour of its continuance.

Apratisankya nirodhah there is no pratikula bhavana and the things has a natural end. It is an end not caused by pratikula bhavana. The word natural end indirectly reveals the nothingness caused by the natural end.

Akasah the space is nothingness but it is not caused by natural or artificial end but it is nothingness eternally existing nothingness. The third one is called uncaused nothingness and therefore it is nithya abhava.

These are the three types of nothingness is refuted by Vyasacharya. The first two are negated in two sutras and in the third sutra akasah is negated.

First one is artificial end. Vyasacharya says that Buddha cannot talk of artificial end because you don't require to deliberately destroy anything because in Buddhism everything gets destroyed in one second because it is ksanigam. There is no question of deliberate destruction and it is not required. Also deliberate destroyer is required. Then it will be destroyed. There is no question of deliberately destroying because before thinking of destruction, a thing is destroyed being ksanigam. More about it will be discussed in the next sutra.

Apratisankya nirodha or the natural destruction of the end. That also is not possible because when they talk about the natural end of a thing the end they talk about is the total destruction of a thing. They talk about absolute destruction or niranvaya nasa. It is done without a trace. We cannot talk about it because pratyaksa pramana is against it. Total destruction is not possible. Matter cannot be created or destroyed as per the scientists. Destruction of end is one of the modifications as accepted by us. When body is destroyed it is reduced to ashes. Even water evaporates and the vapour remains. Therefore niranvaya nasa is pratyaksa virodhah.

Niranvaya nasa is anumana viruddhah. Therefore once a thing exists it will continuously exist maximum the condition may change; it may be full manifest condition, or un-manifest condition or semi manifest condition and therefore there is no question of natural end of anything. Nothing is fully destroyed and you will go out of shape. Little bit more radical change is called death.

Now we will do the word for word analysis. Pratisankhya nirodha natural end is not possible; avicchedate because of the continuity or because of noninterruption; pratisankhya means pratikula bhavana or artificial; apratisankhya means natural; nirodhah means end which we should understand as nothingness. The word nirodhah must be added to both the words pratisankhya and apratisankhya. Apraptih means impossible; it cannot happen. Avicchedat means without any break. This is used when there is a flow and when the flow is stopped. When we say continuity we should know Buddhist also talks about vinasa. The word destruction we do not have any objection. The difference is when they talk about total destruction, which we do not accept. We say on destruction something else replaces the earlier ones. Adhi Sankaracharya analyses one or two more points. Adhi Sankaracharya asks the question when you talk about artificial or natural end are you talk of the end of the series or the end of a particular thing. When we say ganga is eternally there we don't talk of particular water. Are you talking of series or flow or are you talking about individual member. With regard to individual member, there is no artificial end because anyway things will die. In addition, there is no natural end and here total destruction cannot take place because something will continue to remain. Individual things or member cannot be artificially or totally destroyed. There is no question of destruction of series.

#### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

##### **Refutation of the Buddha realists**

##### **Sutra 23 [194]**

##### ***Uphayatha cha doshat***

And on account of the objections presenting themselves in either case

The argument against the Buddhistic theory is continued.

First we will do the general analysis of this sutra. Here Vyasacharya deals with a particular case of pratisankhya nirodhah the deliberate destruction or artificial end. In this sutra a particular pratisankhya is talked about. In fact, this is introduced for introduction of this particular case alone. This is introduced for the end of samsara. The end of samsara is pratisankhya nirodha. Buddhism has got an elaborate discussion on this subject. The end will take place by the destruction of twelve members of samsara nidhanam beginning with avidhya etc. [refer to 19<sup>th</sup> sutra] they do according to Buddhists they do the deliberate destruction of avidhya. By jnanam or enlightenment, the destruction of avidhya takes place. Avidhya removal will effect in the end of the entire cycle. Adhi Sankaracharya asks whether this samsara is ksanigam or not. He has to naturally answer that everything is ksanigam. Why should a person do destruction of a ksanigam. It is going to be naturally destroyed and where is the question of artificial destruction. The deliberate destruction of samsara does not exist at all. Hence sadhana is not required. To avoid that the Buddhists would say it would not naturally end and samsara will not end naturally. If you say so, that means you talk about

continuity of samsara chakra and once you talk of continuity ksanigatvam goes. Therefore, uphayadha if you accept ksanigatvam sadhana becomes meaningless and if you accept sadhana ksanigatvam becomes irrelevant. Now we will see the word for word analysis.

Doshat since there are logical fallacies; uphayatha in either case your system or your philosophy is defective. This is the running meaning. The significance of the word is doshat means logical fallacy and because of this your system is defective; uphayatha means in either case; if ksanigatvam is accepted or it is not accepted there is dosha. If sadhanas are accepted, there will be dosha. Acceptance of sadhana means pratisankya nirodhah. The pratisankya nirodha will not be there. If you accept sastra ksanigatvam has to be given up. Then continuity will continue. We will see the Akasa in the next class.

## BRAHMA SUTRA

Class 184

### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

#### **Refutation of the Bouddha realists**

#### **Sutra 23 [194]**

#### ***Uphayatha cha doshat***

And on account of the objections presenting themselves in either case

The argument against the Buddhistic theory is continued.

This adhikaranam known as samudayadhikaranam refutes Hinayana Buddhism. Vyasacharya refutes important features in this adhikaranam. The space here is defined as absence of things. Everything naturally ends every moment and where is the need for artificial ends. As regards the natural ends, also, we agree with them but we do not agree with the definition provided by Buddhism. They say natural end means total destruction but we say nothing can be totally destroyed nor created. We say radical modification is the end or destruction. It is a modification of an existent thing and we say even after destruction something remains. After destruction remains is ash and we say ash is Brahman. Ash symbolizes Brahman and that is why we apply ash. The idea to be noted is that even in total destruction ash remains and therefore there is no total destruction. Niranvaya nasa is illogical. Hence apradisankya is illogical. Two abhavas are negated. What is left behind is the third abhava. The third abhava is akasah. That is absence of things.

### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

#### **Refutation of the Bouddha realists**

#### **Sutra 24 [195]**

#### ***Aakase chaviseshat***

The cause of Akasa [ether] also not being different [from the two other kinds of destruction it also cannot be a non-entity.

The argument against the Buddhistic theory is continued.

First we will do a general analysis of the sutra. Vyasacharya does not give any reason for their concept of Akasa. He says that the third abhava is no better than the third, which is also equally illogical. He gives a general reason for extrapolation. Adhi Sankaracharya give in his bashyam gives a few reasons.

Now I will give you the word analysis of the sutra. Aviseshat being non different from twofold ends or abhava discussed before. You have to complete that your contention is untenable. Akasecha in the case of space also; this is the meaning of the sutra.

The significance of the words is akase means the third abhava. We should know Buddhist concept of Akasa, which is defined as the absence of things. This logic is extended to Akasa in addition to the previous abhavas the natural and artificial ends also. Aviseshat means the non-difference which means identity or identical. Being non different or because of non different. Between first second and third abhava there is no difference. This much is given in the sutra.

Now we will see Adhi Sankaracharya's bashyam in this regard. He says that sruti pramanam even though we need not give sruti pramanam because it is not acceptable to Bouddha. It is acceptable to us. Sruti clearly talks about origination of Akasa and nonexistence cannot originate at all. This is the reason number one. In all asthika system Akasa is stated to have the property of sound. They find that there are panca bhutani and panca guna. When you analyse these five substances and five gunas and each guna is located in each bhuta. Each bhuta has got one one guna as its character. The four gunas are four vishesha gunas of four elements. Guna requires a substance and substance requires a guna. Parishesha guna is sabda and the left over substance is Akasa and establishes Akasa is sabda gunah. If Akasa is asraya the support of a specific property and it is a positive substance and nothingness cannot be a locus of a property. Therefore Akasa should be taken as positive substance. It is bhava padhartha as is the case with other bhutas. In their own system in Buddhist system itself there is a series of dialogue elaborating which element has which guna. Prithvi has got asraya which is given as jalam Agni and the panca bhutas are mentioned. Last portion of the dialogue is Vayu. They themselves answers Vayu has the asraya. He says Akasa has the support of Vayu. Then it must be a bhava padhartha and it is Vayu in this case. Just as Vayu padhartha of jalam Agni etc., so also Vayu is bhava padhartha of Akasa also. He says that this Akasa which is abhava padhartha is nityah. Adhi Sankaracharya asks if you use an adjective nitya if it can be an attribute and how can you give this attribute to a nonexistent visheshyam. Nityatva guna vishistatvad is Akasa is the argument given by yourself. Next is specific argument given to their contention? Adhi Sankaracharya asks what is definition of space is absence of things. Avarana bhavah akasah. Incidentally we will see the significance of avaranam. The thing he translate as avaranam because absence of things is space and therefore presence of a thing removes space. Every object is inimical to space. If it is there the space is displaced. The presence of thing or things is concealment to the space. Therefore things are called avaranam because it hides the Akasa. The space is concealed by a person and the person is called avaranam. Therefore avaranam means anything. Now Adhi Sankaracharya asks the question suppose the bird flies in the sky. A bird is a thing or not and it is a thing. A thing is avaranam of space. The moment flies in the sky an avaranam has come and once avaranam has come the space is gone. Once avarana abhava is negated and a moment a bird flies the space is negated. Adhi Sankaracharya asks once the space is gone, the second bird cannot fly because the space is gone, avarana abhava is gone. Therefore the second bird cannot fly. Then Buddhist will say where the first bird flies there is avarana bhava; there is no avarana abhava. Where the bird is not flying there is avarana abhava. Therefore, he says that there is locus number two bird is not there. In locua one bird is there. The second bird can go to locus two. Now Adhi Sankaracharya says that you say in locus two there is avarana bhava where the bird can fly; the bird can fly in locus two and locus two is a locus where there is avarana abhava. Now Adhi Sankaracharya says I define locus two as space, which is the locus of avarana abhava, and avarana abhava is not the space but the locus

of avarana abhava is the space. Therefore Akasa is not avarana abhava but the asraya of avarana abhava. Akasa is a positive entity and in another space avarana abhava is there. Where the bird is there, the bird cannot go and where the bird is not there, the bird can go. Pakshi padana argument it is called. According to Buddhism, only one bird can fly in the sky and the second bird flying cannot be logically possible under Buddhistic philosophy. Thus it is concluded that Akasa is a positive entity. With this Akasa negation is over.

#### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

##### **Refutation of the Bouddha realists**

##### **Sutra 25 [196]**

##### ***Anusmritescha***

And on account of memory the things are not momentary.

The argument against the Buddhistic theory is continued.

First I will give you the general analysis of this sutra. With the previous sutras we have negated abhava triya nishedah that about which nothing can be postulated or talked about.

In this sutra Vyasacharya directly refutes ksanigatva vadha niradhah the refutation of theory of momentariness. When he says everything is momentary for him object as also the subject is momentary. At the objective level momentariness has already been refuted in the last sloka by the word yougapadhyam. As long as karana karya sambandha you have to accept the fact that the karana inheres in the karyam and inherence alone enjoys the karanatvam only because it inheres in all the ornaments. Inherence means continuity. Continuity is opposed to ksanigatvam.

In this sutra we will concentrate ksanigatvam on subjective level. The main argument is the existence of memory proves the continuity of the person because of the general rule preceded by the experience or anubhava. You can never remember what you have not experienced. Whatever you remember you have experienced. Whatever you experience you remember I cannot say. Whatever you remember, you experienced and whatever you experienced, you need not remember. Wherever there is, memory there is a preceding or past memory. Secondly, equally important principle is that the memory and experience cannot be simultaneous. They should be one after the other. You have to accept non-simultaneity of one after the other the first is experience and thereafter memory. Experience should precede the memory; memory and experience should have the same locus. If I experience something who can remember that; what I experience I alone can remember; the locus of experience and memory should be the same. You should accept a common locus for past experience and present memory and if it is not possible memory is impossible. Then what Buddhistic would say? Memory cannot be negated and it is anubhava virodhah; once you accept common locus, the common locus should have continued existence. This presupposes the existence of experiencer and rememberer and you cannot say experiencer and rememberer are different. Now we will go to the word for word analysis.

Anusmriteh cha because of the memory also ksanigatva vadha the theory of momentariness is illogical; anusmriteh means anubhava janaya smritih; this means memory born out of

experience, this only indicates continuous experience. Experience based memory anusmriteh because of the experience-based memory also cha means also; momentariness has already been negated earlier. Then Adhi Sankaracharya gives one more reasoning, which is close to sruti reasoning. Partya vijna means recognition; this we will see in the next class.

## BRAHMA SUTRA

Class 185

### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

#### **Refutation of the Bouddha realists**

#### **Sutra 25 [196]**

#### ***Anusmritescha***

And on account of memory the things are not momentary.

The argument against the Buddhistic theory is continued.

Vyasacharya negates the concept of hinayana Buddhism. The uniqueness of their theory is subject as also the object is ksanic. In then 25<sup>th</sup> sutra Vyasacharya refuted the momentariness of the subject. The observer has to be a continuous entity to keep the memory. The memory is possible only when the subject is a continuous entity both at the time of experience and at the time of remembering the event at future time. The experience belongs to the past and memory belongs to the future and they belong to two times and should be identical with the person who experience and who remembers. Therefore the asraya must be a continuous entity. The locus of the past experience and future memory should be identical. Adhi Sankaracharya has a few more points on this issue.

There is a very important concept called pratyak vijnanam which is different from pratyaksam and smriti. In English we call pratyakasam as cognition; the memory is translated as recollection and pratyak vijna is translated as recognition or recognition. These three words themselves indicate their difference. Cognized means cognized object is in front of the observer. There is no memory is involved here and it is fresh knowledge. In cognition memory is not involved and only contact between the subject and object is involved. The second one is recollection. Here I remember the past object. I recollect the experience and retrieve from archival source. The object is not in front. The sensory contact is not there. In cognition sensory contact is there and memory is not there. In recognition it is both cognition and memory. Cognition is involved because the person is in front. When you see the person you remember the person whom you experienced before and you connect the present experience with the 'past experience' that that person is this person. That person belongs to the past memory and this person belongs to the direct contact. It is called recognition. The recognition is perception plus memory. Therefore recognized object is an object which is a memorized and perceived object. Since it is memorized object it belongs to the past and as a perceived object it belongs to the present also. It is an object which existed in the past and which exist present also. Recognition proves the continuous existence of the object. It is proved because recognized object is proved by the memory. By this we destroy the theory of momentariness. This pratyak vijnanam is used in Vedanta to prove the continuity of object and also the subject. Pratyak vijnanam recognition is expressed in the form of soyam. Soyam vrikshah means that tree is this tree. Even though I did not see the tree, the continuous existence of the tree is proved by the second recollection and recognition. This pratyak vijnanam is taken as a pramanam and not as seventh pramanam and it is a form of pratyaksa

pramanam. Sureshvaracharya in the seventh verse of Dakshinamurthy strotam writes a varthikam about the pratya vijnanam. An object which was experienced in the past and the very same object which is present now also connecting the past and present through the expression soyam 'that is this' the past present connecting experience is called pratya vijnanam. This is with regard to the objective world. Buddhist gives an answer to our poser. He says that he does not accept pratya vijnanam as a pramanam. He says it is a type of brama. It is not that the object continuously exists but what happens is in the case of pratya vijnanam the second object looks the same with the past experienced object. The last week swamiji is gone and the next ksanam the same swamiji and on the seventh day you the swamiji the same as that of the one previously seen. Continuity is a delusion because of the similarity. A flame seems to be continuous flame and the flame of the first minute is not the same in the second minute. If the same flame is continuously, existing the oil used would be there but the oil goes on exhausting revealing the flame is different. You the flames are 'seeming continuity' because of the delusion. For this Adhi Sankaracharya gives his answer. Who recognizes the past flame and the present flame? To talk about the continuity someone has to register similarity. Similarity should be there between the past and the present one. One who talks must have experienced the past and must be experiencing the present and then talk about the similarity. Who talks about the similarity must be continuous. In ksaniga vadha you cannot have pratya vijnana branti also. There is no reason to establish the continuity of the branti. To establish a branti there should be a future pramana to establish the knowledge. Rope snake is called branti because latter it is negated by another pramanam. If pratya vijnanam is proved as branti, it should be negated with knowledge at a latter time. Therefore, the objective must be continuous. Thereafter we use the same argument for the subject also. The subject is also an object of pratya vijnanam. Do you have any doubt with your continuity of the person of the past Saturday and the present Saturday? The objection recognition is in the form of soyam and the subject recognition is in the form of soham. Aham is the same at all times. It is not different from one time to another time. Aham is a continuous entity and that continuous Atma is nithya Chaitanyam and not ksaniga Chaitanyam. Soyam pratya vijnanam proves the continuity of the object and soham pratya vijnanam proves the continuity of the subject. Of course is relatively continuous and subject is permanently continuous. So ksaniga vijnanam is full of defect.

#### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

##### **Refutation of the Bouddha realists**

##### **Sutra 26 [197]**

##### ***Nasatu'dristatvat***

[existence or entity does] not [spring] from non-existence or non-entity, because it is not seen.

The argument against the Buddhistic theory is continued.

First we will do the general analysis of the sutra. All the three sutras are meant to refute the ksanigatvam. Now ksanigavadi says that every object is destroyed every moment and a new object is created. When he talks about destruction, he talks of two types one is niranvaya nasa [absolute destruction without trace] and we say the matter cannot be totally destroyed and destruction is only going back to the un-manifest form. We say sanvaya nasah [partial

destruction] and they say niranvaya nasah. According to ksaniga vadhi vasthu number one and its destruction and vasthu number two is generated out of nothing. There will be nothing in the intermediary gap and there will be nothing in between the destruction and the origination of second thing. Ksaniga vadha indirectly says that out of nothing something is created. The abhava which exists between the deliberate or natural destruction and the new creation. In this there are so many defects and the primary defect is anubhava virodhah. Therefore ksaniga vadha is incorrect.

Now we will see word for word analysis. Na asatah. Na means nothing arises asatah from non-existence; adrishtatvat because it is not seen [by us] this is the running meaning. First word is na na utpatyate; nothing emerges or originates; the negation of new padharthah. Asatah means from non-existence. Buddhist does not directly say a thing is created out of non-existence. But what Vedanta points out is ksaniga vadha implicitly says that out of nothing something is created. The argument is given in the previous para. This is implicit in ksaniga vadha. Adrishtatvat is the reason for negating this. It is pratyaksa pramana abhavad. This is the essence of the sutra.

Adhi Sankaracharya gives a few arguments supporting further. First one na abhavat out of nothing, nothing can originate. How can sat can born out of asat? It comes in sixth chapter of Chandogya upanisad. If abhava, which is born out of by the end of the previous object why, should a person, take a particular cause to a particular effect. For curd, we take milk only. For mango, we take mango seed only. For ksaniga vadha particular cause is not required. Anyway, it has to go away. Mango seed destruction can be born what is the difference from the abhava caused by the coconut seed. There is no difference between what should take and what you get from the same seed? You can take any seed. This vadha has got the defect that a person should not take a particular material for production of particular object. This is the second argument.

The third argument Adhi Sankaracharya gives is that if abhava is the cause of the next object, the cause must be inherent in the effect. Your intellect says that the abhava is the cause of the latter effect. The abhava caused by purva ksana padhartha. The next object will have the inherence of abhava. Therefore, if that be so, if abhava is anuvruttam you will experience every object as non-existence or asat; our experience is book is pen is but according to ksanigavadhi everything is non existence but according to Vedanta everything 'is everything everything is' this is the third argument.

The fourth argument Vyasacharya gives in the next sutra. There is one more point. If karanam is not destroyed, there cannot be production of next object. Destruction alone can being a new object. Adhi Sankaracharya says sthira padhartha alone can be karanam and that should continuously exist in the effect. The clay is there before production; the clay exist in the karyam and even after the destruction of the karyam the clay continues to exist. Therefore, karanam is anuvarthamanam. Sthira padhartha alone can be karanam. Production is only a superficial avastha bedah, super configuration alone takes place, karanam continues to exist, and we expect the gold continue to be gold in the ornament. We all know karanam is sthiram. What happens in production is superficial configuration, changing configuration is not the karanam, and changeless substance alone is karanam. The gold alone is inherent in all avasthas. Ksaniga karanam cannot be the cause and sthira padhartha alone can be the cause.

#### **Topic 4. Samudayadhikaranam [Sutra 18-27]**

## Refutation of the Bouddha realists

### Sutra 27 [198]

#### *Udasinanamapi chaivam siddhih*

Thus [if existence should spring from non-existence there should result] the attainment of the goal by the indifferent and non-active people also.

The argument against Buddhistic theory is continued.

First I will give you the general analysis of this sutra. Vyasacharya refutes abhavat bhavotpattih which he has done in the previous sutra. He gives an additional supportive argument. Ksaniga vadha means he does not say directly but implicitly says abhavat bhavotpattih. If bhavotpattihi is universal law every one can accomplish anything without any effort. To produce a thing you need abhavat. You don't have rice at home and from that you can produce anything. Even you need not make any effort to do a thing. Not all these things can happen. All lazy people will be accomplishers and all you take efforts you will not accomplish anything. Therefore ksaniga vadha is improper.

Now we will do the word for word analysis, evam cha in such a case udaseenanam abhi even inactive ones siddhih will have accomplishment [of things]. This is the running meaning. Udaneenanam means inactive people and those who have plenty of abhava; material cause for getting things is abhava; that is the indication of the word which includes the abhava of knowledge, efforts and material etc. Udaseena people will have accomplishment of things. Evam means in your theory or according to your theory of karanam; even moksa will come like that. With this ksanigatva vadha niradha is over. Now what is left out is Mahayana Buddhism. Ksaniga vadha will be discussed in the next sutra which we will discuss in the next class.

## BRAHMA SUTRA

Class 186

### **Topic 5. Nabhavadhikaranam [Sutra 28-29]**

#### **Refutation of the Bouddha idealist**

#### **Sutra 28 [199]**

#### ***Nabhava upalabdheh***

The non-existence [of eternal things] cannot be maintained; on account of [our] Consciousness [of them]

The argument against the Buddhist theory is continued. From this sutra begins the refutation of Buddhist idealists.

This is known as nabhavadhikaranam. As I said before in this adhikaranam we take up jnana matra asthitva matrah. This philosophy has got several different names. Adhi Sankaracharya uses several names at several places. One is ksaniga vijnana vadhah or vijnana vadhah. The next name that is given is jnana matra arthithva vadhah. There is only knowledge and there is no object. Vijnana eka skandha vadhah is another name used by the commentators. among panca skandha here vijnana vadhi accept only vijnana skandha. He accepts only one category of knowledge. another name for this system is yogachara madham. They insist on yoga and acharah because they are called yogachara madham. It is a branch of Mahayanam. Buddhism is divided into Hinayanam and Mahayanam. Hinayanam is subdivided vaibashika and chourantika alone were refuted in the previous adhikaranam. mahayanam is also subdivided tino yogachara and sunyavadha madham. Only yogachara alone we take up for discussion. Sunyavadha is otherwise known as madhyantika madham. Yogachara madham says that there is no object other than the ksaniga vijnanam and there is no external world. when we talk about gata padhartha and gata jnanam we accept two things gata jnanam within you and gata padhartha outside. Normally we accept external object and internal knowledge. yogachara says that there is no external object at all. They say there is only internal knowledge alone. Not all the students or things are outside and the knowledge of them is inside. this cognition is momentary. The jnanams are infinite number of jnanams are there and each jnanam existing for one second. When gata jnanam is there, I get the illusion of the pot. When manushya jnanam is there, I have the illusion of seeing a man. This flow of Infinite momentary cognition alone is the reality. That alone is the meaning of Atma. Therefore there is nothing other than Atma. When he says there is nothing other than Atma it appears exactly like Vedanta. that is why many people mistake Vedanta to be Buddhism. Many people are angry because he also says there is no world other than Atma and we always say that there is nothing other than Atma. When he says Atma he means ksaniga vijnanam, a flow of thought when we talk of Atma we mean nithya Chaitanyam. The mistake he has committed is this. Even though he uses the word ksaniga vijnanam what he means unknowingly is the flow of thought that is occurring in the mind. he has mistaken thoughts as vijnanam. Moreover, he has committed the mistake because in jada vritti there is reflected Consciousness and because of the reflected Consciousness jada vritti glows with sentience. What he calls vijnanam is nothing but thoughts. Since thought is momentary, he says thought is ksanigam. Thus, the

parampara of momentary thought is seen to be the parampara of ksaniga vijnanam. When he says there is no external objects what he means is that there is nothing other than thoughts. He says thoughts alone are the object. There is no pot other than pot thought; there is no tree other than tree thought. There is no man other than man thought. Ksaniga vijnana vadhi's contention is there is no thing other than thought. Since thoughts are nothing but modification of mind, ksaniga vijnana vadha can be presented in another way also. Since thoughts are but modification of mind, what he means that there is no object other than the mind. He says mind alone is there. Therefore is no world other than the mind. There is no world other than ksaniga vijnanam other than the mind; there is no world other than the thoughts; this is the yogachara madham. What are we going to say?
